butcher linen [TEXT] A coarse, originally homespun linen that is now imitated in many synthetic fiber fabrics.

Butenandt unit [BIOL] A unit for the standardization of estrogens.

butene-1 [ORG CHEM] $CH_3CH_2CHCH_2$ A colorless, highly flammable gas; insoluble in water, soluble in organic solvents; used to produce polybutenes, butadiene aldehydes, and other organic derivatives. Also known as α-butalene; ethylethylene.

butene-2 [ORG CHEM] $CH_3CHCHCH_3$ A colorless, highly flammable gas, used to make butadiene and in the synthesis of four- and five-carbon organic molecules; the cis form, boiling point 3.7°C, is insoluble in water, soluble in organic solvents, and is also known as high-boiling butene-2; the trans form, boiling point 0.88°C, is insoluble in water, soluble in most organic solvents, and is also known as low-boiling butene-2.

3-butenenitrile *See* allyl cyanide.

α-butenic acid *See* crotonic acid.

***trans*-2-butenoic acid** *See* ethyl crotonate.

1-butine *See* ethyl acetylene.

Butler finish *See* satin finish.

butlerite [MINERAL] $Fe(SO_4)(OH)\cdot 2H_2O$ A deep orange, monoclinic mineral consisting of a hydrated basic ferric sulfate. Also known as parabutlerite.

Butler oscillator [ELEC] Oscillator in which a piezoelectric crystal is connected between the cathode of two tubes, one functioning as a cathode follower, and the other as a grounded-grid amplifier.

Butomaceae [BOT] A family of monocotyledonous plants in the order Alismatales characterized by secretory canals, linear leaves, and a straight embryo.

butopyronoxyl [ORG CHEM] $C_{12}H_{18}O_4$ A yellow to amber liquid with a boiling point of 256–260°C; miscible with ether, glacial acetic acid, alcohol, and chloroform; used as an insect repellent for skin and clothing. Also known as butyl 3,4-dihydro-2,2-dimethyl-4-oxo-2*H*-pyran-6-carboxylate; butyl mesityl oxide oxalate.

2-butoxyethanol [ORG CHEM] $HOCH_2CH_2OC_4H_9$ A liquid with a boiling point of 171–172°C; soluble in most organic solvents and water; used in dry cleaning as a solvent for nitrocellulose, albumin, resins, oil, and grease. Also known as ethylene glycol monobutyl ether.

butt [BUILD] The bottom or cover edge of a shingle. [DES ENG] The enlarged and squared-off end of a connecting rod or similar link in a machine. [MIN ENG] Coal exposed at right angles to the face and, in contrast to the face, generally having a rough surface. [ORD] Rear end of the stock of a rifle or other small arm.

butt cable *See* hand cable.

butt contact [ELEC] A hemispherically shaped contact designed to mate against a similarly shaped contact.

butte [GEOGR] A detached hill or ridge which rises abruptly.

butter [FOOD ENG] A fatty food product made from milk or cream or both and consisting of a solid emulsion of fat globules, air, and water.

butterfat [FOOD ENG] A mixture of glycerides derived from fatty acids; the natural fat of milk and butter.

butter finish [MET] The semilustrous surface produced with a mildly abrasive wheel.

butterfly [INV ZOO] Any insect belonging to the lepidopteran suborder Rhopalocera, characterized by a slender body, broad colorful wings, and club-shaped antennae.

butterfly bomb [ORD] A small fragmentation or antipersonnel bomb equipped with two folding wings which rotate and arm the fuse as the bomb descends; designed to be dropped in clusters, they are frequently fitted with antidisturbance or delay fuses.

butterfly capacitor [ELEC] A variable capacitor having stator and rotor plates shaped like butterfly wings, with the stator plates having an outer ring to provide an inductance so that both capacitance and inductance may be varied, thereby giving a wide tuning range.

butterfly damper *See* butterfly valve.

butterfly nut *See* wing nut.

butterfly valve [ENG] A valve that utilizes a turnable disk element to regulate flow in a pipe or duct system, such as a hydraulic turbine or a ventilating system. Also known as butterfly damper.

buttering [MET] Coating the faces of a weld joint prior to welding to prevent cross contamination of the weld metal and base metal.

buttermilk [FOOD ENG] A fermentation food product prepared by inoculating sweet milk with cultures of *Streptococcus lactis* and *Leuconostoc citrovorum*.

butter rock *See* halotrichite.

Butterworth filter [ELECTR] An electric filter whose pass band (graph of transmission versus frequency) has a maximally flat shape.

Butterworth head [MECH ENG] A mechanical hose head with revolving nozzles; used to wash down shipboard storage tanks.

butt fusion [ENG] The joining of two pieces of plastic or metal pipes or sheets by heating the ends until they are molten and then pressing them together to form a homogeneous bond.

butt gage [ENG] A tool used to mark the outline for the hinges on a door.

buttgenbachite [MINERAL] $Cu_{19}(NO_3)_2Cl_4(OH)_{32}\cdot 3H_2O$ An azure blue, hexagonal mineral consisting of a hydrated basic chloride-sulfate-nitrate of copper.

butt joint [ELEC] A connection formed by placing the ends of two conductors together and joining them by welding, brazing, or soldering. [ELECTROMAG] A connection giving physical contact between the ends of two waveguides to maintain electrical continuity. [ENG] A joint in which the parts to be joined are fastened end to end or edge to edge with one or more cover plates (or other strengthening) generally used to accomplish the joining.

buttock [MIN ENG] A corner formed by two coal faces more or less at right angles, such as the end of a working face.

buttock lines [ENG] The lines of intersection of the surface of an aircraft or its float, or of the hull of a ship, with its longitudinal vertical planes. Also known as buttocks.

buttocks [ANAT] The two fleshy parts of the body posterior to the hip joints. [ENG] *See* buttock lines. [NAV ARCH] The convex part of the stern end of a ship above the water line. Also known as counter.

butt-off [MET] To supplement ramming in the production of castings by either manual or pneumatic jolting.

button [ELECTR] **1.** A small, round piece of metal alloyed to the base wafer of an alloy-junction transistor. Also known as dot. **2.** The container that holds the carbon granules of a carbon microphone. Also known as carbon button. [MET] **1.** Mass of metal remaining in a crucible after fusion has been completed. **2.** That part of a weld which tears out in the destructive testing of spot-, seam-, or projection-welded specimens.

button balance [MIN ENG] A small, very delicate balance used for weighing assay buttons.

button die [DES ENG] A mating member, usually replaceable, for a piercing punch. Also known as die bushing.

buttonhead [DES ENG] A screw, bolt, or rivet with a hemispherical head.

buttonhook contact [ELEC] A curved, hooklike contact often used on feed-through terminals of headers to facilitate soldering or unsoldering of leads.

buttress [ARCH] An upright projection that supports or resists lateral forces in a building. [CIV ENG] A pier constructed at right angles to a restraining wall on the side opposite to the restrained material; increases the strength and thrust resistance of the wall. [PALEON] A ridge on the inner surface of a pelecypod valve which acts as a support for part of the hinge.

buttress dam [CIV ENG] A concrete dam constructed as a series of buttresses.

buttress sands [GEOL] Sandstone bodies deposited above an unconformity; the upper portion rests upon the surface of the unconformity.

buttress thread [DES ENG] A screw thread whose forward face is perpendicular to the screw axis and whose back face is at an angle to the axis, so that the thread is both efficient in transmitting power and strong.

buttress-thread casing [PETRO ENG] A drill casing in which the ends of the sections are buttressed together and held in place with a short threaded outer sleeve; used where greater than normal clearance, strength, and leak resistance are needed.

butt rot [PL PATH] A fungus decay of the base of a tree trunk caused by polypores (such as *Fomea* species).

butt weld [MET] A weld that joins the ends of two pieces of metal of similar cross section without overlapping.

butyl [ORG CHEM] Any of the four variations of the hydrocarbon radical C_4H_9: $CH_3CH_2CH_2CH_2$—, $(CH_3)_2CHCH_2$—, $CH_3CH_2CHCH_3$—, and $(CH_3)_3C$—.

butyl acetate [ORG CHEM] $CH_3COOC_4H_9$ A colorless liquid slightly soluble in water; used as a solvent.

butylacetic acid *See* caproic acid.

butyl acetoacetate [ORG CHEM] $C_8H_{14}O_3$ A colorless liquid with a boiling point of 213.9°C; soluble in alcohol and ether; used for synthesis of dyestuffs and pharmaceuticals.

butyl acrylate [ORG CHEM] $CH_2CHCOOC_4H_9$ A colorless liquid that is nearly insoluble in water and polymerizes readily upon heating; used as an intermediate for organic synthesis, polymers, and copolymers.

butyl alcohol *See* butanol.

butyl aldehyde *See* butyraldehyde.

***n*-butyl aldehyde** *See* butyraldehyde.

***n*-butylamine** [ORG CHEM] $C_4H_9NH_2$ A colorless, flammable liquid; miscible with water and ethanol; used as an intermediate in organic synthesis and to make insecticides, emulsifying agents, and pharmaceuticals. Also known as 1-aminobutane.

***sec*-butylamine** [ORG CHEM] $CH_3CHNH_2C_2H_5$ A flammable, colorless liquid; boils in the range 63–68°C; may be used as an intermediate in organic synthesis. Also known as 2-aminobutane.

***tert*-butylamine** [ORG CHEM] $(CH_3)_3CNH_2$ A flammable liquid; boiling range 63–68°C; may be used in organic synthesis as an intermediate.

***n*-butyl-*para*-aminobenzoate** [PHARM] $H_2NC_6H_4COOC_4H_9$ A white, crystalline powder with a melting point of 57–59°C; soluble in dilute acids, alcohol, chloroform, ether, and fatty oils; used as a local anesthetic, in burn treatment and ointments, and in suntan preparations to absorb ultraviolet light.

2-*tert*-butylamino-4-chloro-6-ethylamino-*S*-triazine *See* terbutylhylazine.

2-*sec*-butylamino-4-ethylamino-6-methoxy-*S*-triazine *See* secbumeton.

2-*tert*-butylamino-4-ethylamino-6-methoxy-*S*-triazine *See* terbumeton.

2-*tert*-butylamino-4-ethylamino-6-methylthio-*S*-triazine *See* terbutryn.

butylate [ORG CHEM] $C_{11}H_{23}NOS$ A colorless liquid used as an herbicide for preplant control of weeds in corn. Also known as *S*-ethyl diisobutylthiocarbamate.

butylated hydroxyanisole [ORG CHEM] $(CH_3)_3CC_6H_3OH(OCH_3)$ An antioxidant consisting chiefly of a mixture of 2- and 3-*tert*-butyl-4-hydroxyanisole and used to control rancidity of lard and animal fats in foods. Abbreviated BHA.

butylated hydroxytoluene [ORG CHEM] $[(CH_3)_3C]_2C_6H_2(CH_3)OH$ Crystals with a melting point of 72°C; soluble in toluene, methanol, and ethanol; used as an antioxidant in foods, in petroleum products, and for synthetic rubbers. Abbreviated BHT.

butylbenzene [ORG CHEM] $C_6H_5C_4H_9$ A colorless liquid used as a raw material for organic synthesis, especially for insecticides; forms are normal (1-phenylbutane), secondary (2-phenylbutane), and tertiary (2-methyl-2-phenylpropane).

butyl borate *See* tributyl borate.

***N*-*sec*-butyl-4-*tert*-butyl-2,6-dinitroaniline** [ORG CHEM] $C_{14}H_{21}N_3O_4$ Orange crystals with a melting point of 60–61°C; solubility in water is 1.0 part per million at 24°C; used as a preemergence herbicide. Also known as amchem; dibutalin.

butyl carbinol [ORG CHEM] $(CH_3)_3CCH_2OH$ Colorless crystals that melt at 52°C; slightly soluble in water.

butyl chloride [ORG CHEM] C_4H_9Cl A colorless liquid used as an alkylating agent in organic synthesis, as a solvent, and as an anthelminthic; forms are normal (1-chlorobutane), secondary, and iso or tertiary.

***tert*-butyl chloroacetate** [ORG CHEM] $ClCH_2COOC(CH_3)_3$ A liquid with a boiling point of 155°C; hydrolyzes to *tert*-butyl alcohol and chloroacetic acid; used in glycidic ester condensation. Also known as chloroacetic acid *tert*-butyl ester.

3-*tert*-butyl-5-chloro-6-methyluracil *See* terbacil.

4-*tert*-butyl-2-chlorophenyl-*ortho*-methyl methylphosphoramidate *See* crufomate.

butyl citrate [ORG CHEM] $C_3H_5O(COOC_4H_9)_3$ A colorless, odorless, nonvolatile liquid, almost insoluble in water; used as a plasticizer, solvent for cellulose nitrate, and antifoam agent. Also known as tributyl citrate.

2-*tert*-butyl-4-(2,4-dichloro-5-isopropoxyphenyl)-δ-2-1-1,3,4-oxadiazalin-5-one *See* oxadiazon.

1-*n*-butyl-3-(3,4-dichlorophenyl)-1-methylurea *See* neburon.

butyl diglycol carbonate [ORG CHEM] $(C_4H_9OCO_2CH_2CH_2)_2O$ A colorless, combustible liquid with a boiling range of 164–166°C; used as a plasticizer and solvent and in pharmaceuticals and lubricants manufacture.

butyl 3,4-dihydro-2,2-dimethyl-4-oxo-2*H*-pyran-6-carboxylate *See* butopyronoxyl.

2-(*sec*-butyl)-4,6-dinitrophenol *See* dinoseb.

2-*tert*-butyl-4,6-dinitrophenyl acetate *See* dinoterb acetate.

2-*sec*-butyl-4,6-dinitrophenylisopropyl carbonate *See* dinobuton.

4-butyl-1,2-diphenyl-3,5-pyrazolidinedione *See* phenylbutazone.

butylene [ORG CHEM] Any of three isomeric alkene hydrocarbons with the formula C_4H_8; all are flammable and easily liquefied gases.

1,3-butylene glycol [ORG CHEM] $HOCH_2CH_2CH(OH)CH_3$ A viscous, colorless, hygroscopic liquid; soluble in water and alcohol; used as a solvent, food additive, and flavoring, and for plasticizers and polyurethanes. Also known as 1,3-butanediol.

1,4-butylene glycol [ORG CHEM] $HOCH_2CH_2CH_2CH_2OH$ A colorless, combustible, oily liquid with a boiling point of 230°C; soluble in alcohol; used as a solvent and humectant, and in plastics and pharmaceuticals manufacture. Also known as 1,4-butanediol; tetramethylene glycol.

2,3-butylene glycol *See* 2,3-butanediol.

1,2-butylene oxide [ORG CHEM] $H_2COCHCH_2CH_3$ A colorless, water-soluble liquid with a boiling point of 63°C; used as an intermediate for various polymers. Also known as 1,2-epoxybutane.

butyl ether [ORG CHEM] $C_8H_{18}O$ A colorless liquid, boiling at 142°C, and almost insoluble in water; used as an extracting agent, as a medium for Grignard and other reactions, and for purifying other solvents.

butyl ethylacetic acid *See* 2-ethyl hexoic acid.

5-*n*-butyl-2-ethylamino-4-hydroxy-6-methylpyrimidine *See* ethirimol.

***N*-butyl-*N*-ethyl-α,α,α-trifluoro-2,6-dinitro-*para*-toluidine** [ORG CHEM] $C_{13}H_{16}O_4NF_3$ Yellowish-orange crystals with a melting point of 65–66.5°C; used as a preemergence herbicide for annual grasses and broadleaf weeds in crops. Also known as benefin.

butyl formate [ORG CHEM] $HCOOC_4H_9$ An ester of formic acid and butyl alcohol.

***tert*-butylhydroperoxide** [ORG CHEM] $(CH_3)_3COOH$ A liquid soluble in organic solvents; used as a catalyst in polymerization reactions, to introduce the peroxy group into organic molecules.

6-*tert*-butyl-3-isopropylisothiazolo-(3,4-*d*)pyrimidin-4(5*H*)-one [ORG CHEM] $C_{12}H_{17}N_3OS$ A white solid with a melting point of 198–199°C; insoluble in water; used as an herbicide for field corn, sweet corn, and sorghum.

6-*tert*-butyl-3-isopropylisoxazolo-(5,4-*d*)pyrimidin-4(5*H*)-one [ORG CHEM] $C_{12}H_{17}N_3O_2$ A white solid with a melting point of 227–229°C; insoluble in water; used as an herbicide for preemergence on sorghum, flax, sugarcane, and field and sweet corn.

butyl lactate [ORG CHEM] $CH_3CHOHCOOC_4H_9$ A stable liquid, water-white and nontoxic, miscible with many solvents; used as a solvent for resins and gums, in lacquers and varnishes, and as a chemical intermediate.

butyl mercaptan [ORG CHEM] C_4H_9SH A colorless, odorous liquid, a component of skunk secretion; used commercially as a gas-odorizing agent.

butyl mesityl oxide oxalate *See* butopyronoxyl.

2-*tert*-butyl-5-methyl-4,6-dinitrophenyl acetate *See* medinoterb acetate.

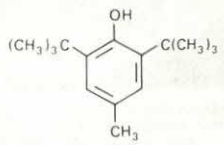
butyl octadecanoate *See* butyl stearate.

butyl oleate [ORG CHEM] $C_{22}H_{42}O_2$ A butyl ester of oleic acid; used as a plasticizer.

butylphen *See para-tert*-butylphenol.

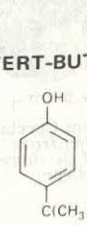
***para-tert*-butylphenol** [ORG CHEM] $(CH_3)_3CC_6H_4OH$ Needlelike crystals with a melting point of 98°C; soluble in alcohol and ether; used as an intermediate in production of varnish and lacquer resins, an additive in motor oil, and an ingredient in deemulsifiers in oil fields. Also known as butylphen.

BUTYLATED HYDROXYTOLUENE



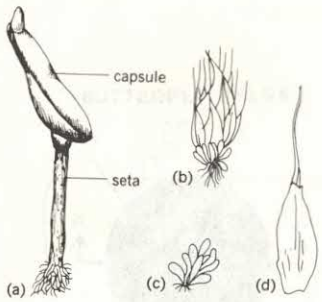
Structural formula.

PARA-TERT-BUTYLPHENOL



Structural formula.

BUXBAUMIALES



Morphological features of Buxbaumiales. *(a)* Sporophyte of *Buxbaumia aphylla (from W. H. Welch, Mosses of Indiana, Indiana Department of Conservation, 1957). (b) Diphyscium foliosum,* habit sketch, *(c)* leaves, and *(d)* perichaetial leaf *(from H. S. Conard, How to Know the Mosses and Liverworts, William C. Brown, 1956).*

BYTOWNITE

Bytownite, from Crystal Bay, Minn. *(Specimen from Department of Geology, Bryn Mawr College)*

para-tert(butyl phenoxy)cyclohexyl 2-propynyl sulfite *See* propargite.

2-*sec*-butyl phenyl-*N*-methyl carbamate [ORG CHEM] $C_{12}H_{17}NO_2$ A pale yellow or pale red liquid, insoluble in water; used as an insecticide for pests of rice and cotton. Also known as BPMC.

butyl propionate [ORG CHEM] $C_2H_5COOC_4H_9$ A colorless aromatic liquid; used in fruit essences.

6-*tert*-butyl-3-propylisoxazolo-(5,4-*d*)pyrimidin-4(5*H*)-one [ORG CHEM] $C_{12}H_{17}N_3O_2$ A white solid with a melting point of 217–218°C; insoluble in water; used as an herbicide on field corn, sweet corn, and sorghum.

butyl rubber [MATER] A synthetic rubber made by the polymerization of isoprene and isobutylene.

butyl stearate [ORG CHEM] $C_{17}H_{35}COOC_4H_9$ A liquid that solidifies at approximately 19°C; mixes with vegetable oils and is soluble in alcohol and ethers but insoluble in water; used as a lubricant, in polishes, as a plasticizer, and as a dye solvent. Also known as butyl octadecanoate.

butyl titanate *See* tetrabutyl titanate.

1-butyne *See* ethyl acetylene.

butynedial [ORG CHEM] $HOCH_2C{:}CCH_2OH$ White crystals with a melting point of 58°C; soluble in water, aqueous acids, alcohol, and acetone; used as a corrosion inhibitor, defoliant, electroplating brightener, and polymerization accelerator.

butyraldehyde [ORG CHEM] $CH_3(CH_2)_2CHO$ A colorless liquid boiling at 75.7°C; soluble in ether and alcohol, insoluble in water; derived from the oxo process. Also known as butaldehyde; *n*-butanal; *n*-butyl aldehyde; butyric aldehyde.

butyrate [ORG CHEM] An ester or salt of butyric acid containing the $C_4H_7O_2$ radical.

butyric acid [ORG CHEM] $CH_3CH_2CH_2COOH$ A colorless, combustible liquid with boiling point 163.5°C (757 mm Hg); soluble in water, alcohol, and ether; used in synthesis of flavors, in pharmaceuticals, and in emulsifying agents. Also known as butanoic acid; *n*-butyric acid; ethyl acetic acid; propylformic acid.

***n*-butyric acid** *See* butyric acid.

butyric aldehyde *See* butyraldehyde.

butyric anhydride [ORG CHEM] $C_8H_{14}O_3$ A colorless liquid that decomposes in water to form butyric acid; exists in two isomeric forms.

butyric ether *See* ethyl butyrate.

butyric fermentation [BIOCHEM] Fermentation in which butyric acid is produced by certain anaerobic bacteria acting on organic substances, such as butter; occurs in putrefaction and in digestion in herbivorous mammals.

butyrinase [BIOCHEM] An enzyme that hydrolyzes butyrin, found in the blood serum.

Butyrivibrio [MICROBIO] A genus of gram-negative, strictly anaerobic bacteria of uncertain affiliation; motile curved rods occur singly, in chains, or in filaments; ferment glucose to produce butyrate.

butyrolactone [ORG CHEM] $C_4H_6O_2$ A liquid, the anhydride of butyric acid; used as a solvent in the manufacture of plastics.

butyron *See* boturon.

butyrone *See* 4-heptanone.

butyron itrile [ORG CHEM] $CH_3(CH_2)_2CN$ A toxic, colorless liquid with a boiling point of 116–117.7°C; soluble in alcohol and ether; used in industrial, chemical, and pharmaceutical products, and in poultry medicines. Also known as butanenitrile; propyl cyanide.

Buxbaumiales [BOT] An order of very small, atypical mosses (Bryopsida) composed of three genera and found on soil, rock, and rotten wood.

buy-back crude [PETRO ENG] Oil in which the government of the production territory has a right to a share if it is a stockholder in the oil-producing company. Also known as participation crude.

Buys-Ballot's law [METEOROL] A law describing the relationship of the horizontal wind direction in the atmosphere to the pressure distribution: if one stands with one's back to the wind, the pressure to the left is lower than to the right in the Northern Hemisphere; in the Southern Hemisphere the relation is reversed. Also known as baric wind law.

buzz [AERO ENG] Sustained oscillation of an aerodynamic control surface caused by intermittent flow separation on the surface, or by a motion of shock waves across the surface, or by a combination of flow separation and shock-wave motion on the surface. [CONT SYS] *See* dither. [ELECTR] The condition of a combinatorial circuit with feedback that has undergone a transition, caused by the inputs, from an unstable state to a new state that is also unstable. [FL MECH] In supersonic diffuser aerodynamics, a nonsteady shock motion and airflow associated with the shock system ahead of the inlet.

buzz bomb *See* V-1.

buzzer [ELECTROMAG] An electromagnetic device having an armature that vibrates rapidly, producing a buzzing sound.

B virus [VIROL] An animal virus belonging to subgroup A of the herpesvirus group.

BW *See* bandwidth; biological warfare.

BWE *See* bucket-wheel excavator.

BWG *See* Birmingham wire gage.

BWO *See* backward-wave oscillator.

BWR *See* boiling-water reactor.

BX cable [ELEC] Insulated wires in flexible metal tubing used for bringing electric power to electronic equipment.

byerite [GEOL] Bituminous coal that does not crack in fire and melts and enlarges upon heating.

Byers process [MET] The principal process for manufacturing wrought iron; pig iron is melted in a cupola, desulfurized in a ladle, and refined in a Bessemer converter.

byon [GEOL] Gem-bearing gravel, particularly that with brownish-yellow clay in which corundum, rubies, sapphires, and so forth occur.

bypass [CIV ENG] A road which carries traffic around a congested district or temporary obstruction. [ELEC] A shunt path around some element or elements of a circuit. [ENG] An alternating, usually smaller, diversionary flow path in a fluid dynamic system to avoid some device, fixture, or obstruction.

bypass capacitor [ELEC] A capacitor connected to provide a low-impedance path for radio-frequency or audio-frequency currents around a circuit element. Also known as bypass condenser.

bypass channel [CIV ENG] **1.** A channel built to carry excess water from a stream. Also known as flood relief channel; floodway. **2.** A channel constructed to divert water from a main channel.

bypass condenser *See* bypass capacitor.

bypass filter [ELECTR] Filter which provides a low-attenuation path around some other equipment, such as a carrier frequency filter used to bypass a physical telephone repeater station.

bypass valve [ENG] A valve that opens to direct fluid elsewhere when a pressure limit is exceeded.

by-product [ENG] A product from a manufacturing process that is not considered the principal material.

Byrrhidae [INV ZOO] The pill beetles, the single family of the coleopteran insect superfamily Byrrhoidea.

Byrrhoidea [INV ZOO] A superfamily of coleopteran insects in the superorder Polyphaga.

bysmalith [GEOL] A body of igneous rock that is more or less vertical and cylindrical; it crosscuts adjacent sediments.

byssinosis [MED] A pneumoconiosis caused by the inhalation of cotton dust.

byte [COMPUT SCI] A sequence of adjacent binary digits operated upon as a unit in a computer and usually shorter than a word.

byte mode [COMPUT SCI] A method of transferring data between a peripheral unit and a central processor in which one byte is transferred at a time.

by the head *See* down by the head.

by the stern *See* down by the stern.

bytownite [MINERAL] A plagioclase feldspar with a composition ranging from $Ab_{30}An_{70}$ to $Ab_{10}An_{90}$, where Ab = $NaAlSi_3O_8$ and An = $CaAl_2Si_2O_8$; occurs in basic and ultrabasic igneous rock.

Byturidae [INV ZOO] The raspberry fruitworms, a small family of coleopteran insects in the superfamily Cucujoidea.

C

c *See* calorie; centi-; charmed quark; curie.

C *See* capacitance; capacitor; carbon; coulomb.

Ca *See* calcium.

CA *See* conflict alert.

Ca^{45} *See* calcium-45.

caatinga [ECOL] A sparse, stunted forest in areas of little rainfall in northeastern Brazil; trees are leafless in the dry season.

cab [ENG] In a locomotive, truck, tractor, or hoisting apparatus, a compartment for the operator.

caballing [OCEANOGR] The mixing of two water masses of identical in situ densities but different in situ temperatures and salinities, such that the resulting mixture is denser than its components and therefore sinks.

cabane [AERO ENG] The arrangement of struts used on early types of airplanes to brace the wings.

Cabannes' factor [ANALY CHEM] An equational factor to correct for the depolarization effect of the horizontal components of scattered light during the determination of molecular weight by optical methods.

cabbage [BOT] *Brassica oleracea* var. *capitata*. A biennial crucifer of the order Capparales grown for its head of edible leaves.

cabbage yellows [PL PATH] A fungus disease of cabbage caused by *Fusarium conglutinans* and characterized by yellowing and dwarfing.

cabble [MET] To break up into pieces preparatory to the processes of fagoting, fusing, and rolling into bars, as is done with charcoal iron.

Cabernet [FOOD ENG] A red dry table wine made from a grape variety that corresponds to Burgundy grapes.

cabezon [VERT ZOO] *Scorpaenichthys marmoratus*. A fish that is the largest of the sculpin species, weighing as much as 25 pounds (11.3 kilograms) and reaching a length of 30 inches (76 centimeters).

Cabibbo theory [PARTIC PHYS] A theory describing baryon beta-decay processes, according to which the amplitude for such processes is given by $G\{\cos\Theta\,[V(\Delta s = 0) + A(\Delta s = 0)] + \sin\Theta\, V(\Delta s = +1) + A(\Delta s = +1)]\}$, where Θ is the Cabibbo angle, Δs is the change in strangeness for the baryon, G is a universal beta-decay amplitude, and V and A are vector and axial vector amplitudes, respectively; it is experimentally determined that $\sin\Theta \approx 0.25$, so that $\cos\Theta = 0.97$.

cabinet file [DES ENG] A coarse-toothed file with flat and convex faces used for woodworking.

cabinet hardware [DES ENG] Parts for the final trim of a cabinet, such as fastening hinges, drawer pulls, and knobs.

cabinet saw [DES ENG] A short saw, one edge used for ripping, the other for crosscutting.

cabinet scraper [DES ENG] A steel tool with a contoured edge used to remove irregularities on a wood surface.

cable [ARCH] A convex molding within one of the vertical grooves of a column or pilaster. [DES ENG] A stranded, ropelike assembly of wire or fiber. [ELEC] Strands of insulated electrical conductors laid together, usually around a central core, and surrounded by a heavy insulation. [OCEANOGR] *See* cable length.

cable-and-trunk schematic [ELEC] A drawing which shows, in block form, the interconnection between all major electric circuits in an office.

cable armor [ELEC] One or more layers of extra-strength material, such as steel wire or tape, to reinforce the usual lead wall in cable construction.

cable bend [NAV ARCH] **1.** A small rope used to tie the end of a cable into a loop to secure an anchor. **2.** A knot used to attach a cable to an anchor.

cable buoy [ENG] A buoy used to mark one end of a submarine underwater cable during time of installation or repair.

cable chain *See* chain cable.

cable code *See* Morse cable code.

cable complement [ELEC] Group of wire pairs in a cable having some common distinguishing characteristic.

cable conveyor [MECH ENG] A powered conveyor in which a trolley runs on a flexible, torque-transmitting cable that has helical threads.

cable delay [COMPUT SCI] The time required for one bit of data to go through a cable, about 1.5 nanoseconds per foot of cable.

cable duct [ENG] A pipe, either earthenware or concrete, through which prestressing wires or electric cable are pulled.

cable fill [ELEC] Ratio of the number of wire pairs in use to the total number of pairs in a cable.

cablegram [COMMUN] A message transmitted over a submarine telegraph cable.

cable lacquer [MATER] Black, colored, or clear lacquer made from synthetic resins, having a high dielectric strength and being resistant to oils and heat; used to give a tough, flexible coating.

cable-laid [DES ENG] Consisting of three ropes with a left-hand twist, each rope having three twisted strands.

cable layer [NAV ARCH] A type of ship fitted with huge reels of submarine telephone cable and devices for paying out the cable to the sea bottom.

cable length [OCEANOGR] A unit of distance, originally equal to the length of a ship's anchor cable, now variously considered to be 600 feet (183 meters), 608 feet (185.3 meters; one-tenth of a British nautical mile), or 720 feet or 120 fathoms (219.5 meters). Also known as cable.

cableman [ENG] A person who installs, repairs, or otherwise works with cables.

cable messenger [ELEC] Stranded group of wires supported above the ground at intervals by poles or other structures and employed to furnish, within these intervals, frequent points of support for conductors or cables.

cable paper [MATER] A paper used to insulate electrical cables.

cable railway [MECH ENG] An inclined track on which rail cars travel, with the cars fixed to an endless steel-wire rope at equal spaces; the rope is driven by a stationary engine.

cable release [ENG] A wire plunger to actuate the shutter of a camera, thus avoiding undesirable camera movement.

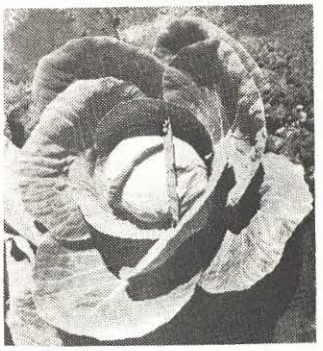
cable run [ELEC] Path occupied by a cable on cable racks or other support from one termination to another.

cable running list [ELEC] Drawing showing the code of cable, terminations, circuit names, and numbering of cables appearing in an office.

cable shield [ELEC] A metallic layer applied over insulation covering a cable, composed of woven or braided wires, foil wrap, or metal tube, which acts to prevent electromagnetic or electrostatic interference from affecting conductors within.

cable skidding [FOR] The use of a chain or cable choker to move tree lengths or tree segments for a short distance over unimproved terrain.

CABBAGE



Cabbage (*Brassica oleracea* var. *capitata*), cultivar Golden Acre 84. (*Joseph Harris Co., Inc., Rochester, N.Y.*)

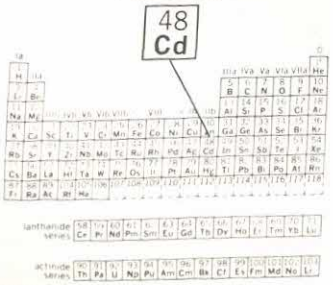
CACTUS

Mule cactus, with closeup of flower, maximum height of 6 feet (1.8 meters).

CADDIS FLY

Adult caddis fly.

CADMIUM



Periodic table of the chemical elements showing the position of cadmium.

cable-stayed bridge [CIV ENG] A modification of the cantilever bridge consisting of girders or trusses cantilevered both ways from a central tower and supported by inclined cables attached to the tower at top or sometimes at several levels.

cable stopper [NAV ARCH] A device, such as a short chain fastened to a pad on the deck and attached to the anchor chain, to take the strain off the anchor windlass when a ship is at anchor.

cable system [MIN ENG] A drilling system involving a heavy string of tools suspended from a flexible cable.

cable-system drill *See* churn drill.

cable television [COMMUN] A television program distribution system in which signals from all local stations and usually a number of distant stations are picked up by one or more high-gain antennas at elevated locations, amplified on individual channels, then fed directly to individual receivers of subscribers by overhead or underground coaxial cable. Also known as community antenna television (CATV).

cable tier [NAV ARCH] **1.** The part of a ship used to store spare rigging and cables. **2.** *See* chain locker.

cable tools [MIN ENG] The bits and other bottom-hole tools and equipment used to drill boreholes by percussive action, using a cable, instead of rods, to connect the drilling bit with the machine on the surface.

cable twist [SCI TECH] A yarn or rope construction in which each successive twist is in the opposite direction to the preceding twist.

cable vault [CIV ENG] A manhole containing electrical cables. [ELEC] Vault in which the outside plant cables are spliced to the tipping cables.

cableway [MECH ENG] A transporting system consisting of a cable extended between two or more points on which cars are propelled to transport bulk materials for construction operations. [MIN ENG] A cable system of material handling in which carriers are supported by a cable and not detached from the operating span.

cableway carriage [MECH ENG] A trolley that runs on main load cables stretched between two or more towers.

cabochon [LAP] One of two basic types of cutting styles used to fashion gemstones; the gem is cut in convex form, highly polished, but not faceted.

caboose [ENG] A car on a freight train, often the last car, usually for use by trainmen.

Cabot's ring [CYTOL] A ringlike body in immature erythrocytes that may represent the remains of the nuclear membrane.

CABRA numbers [MET] Copper and Brass Research Association number designations for various wrought copper and copper alloy grades.

cabretta [MATER] Tanned sheepskin leather.

cab signal [ENG] A signal in a locomotive that informs the engine operator about conditions affecting train movement.

cacao [BOT] *Theobroma cacao*. A small tropical tree of the order Theales that bears capsular fruits which are a source of cocoa powder and chocolate. Also known as chocolate tree.

cacao butter *See* cocoa butter.

cache [COMPUT SCI] A small, fast storage buffer integrated in the central processing unit of some large computers.

cachexia [MED] Weight loss, weakness, and wasting of the body encountered in certain diseases or in terminal illnesses.

cacimbo [METEOROL] Local name in Angola for the wet fogs and drizzles noted with onshore winds from the Benguela Current.

cacodyl [ORG CHEM] $(CH_3)_2As^-$ A radical found in, for example, cacodylic acid, $(CH_3)_2AsOOH$.

cacodylate [ORG CHEM] Any salt of cacodylic acid.

cacodylic acid [ORG CHEM] $(CH_3)_2AsOOH$ Colorless crystals that melt at 200°C; soluble in alcohol and water; used as an herbicide. Also known as dimethylarsinic acid.

cacomistle [VERT ZOO] *Bassariscus astutus*. A raccoonlike mammal that inhabits the southern and southwestern United States; distinguished by a bushy black-and-white ringed tail. Also known as civet cat; ringtail.

caconym [SYST] A taxonomic name that is linguistically unacceptable.

cacotheline [ORG CHEM] $C_{20}H_{22}N_2O_5(NO_2)_2$ An azoic compound used as a metal indicator in chelometric titrations.

cacoxenite [MINERAL] $Fe_4(PO_4)_3(OH)_3 \cdot 12H_2O$ Yellow or brownish mineral consisting of a hydrous basic iron phosphate occurring in radiated tufts.

Cactaceae [BOT] The cactus family of the order Caryophyllales; represented by the American stem succulents, which are mostly spiny with reduced leaves.

cactus [BOT] The common name for any member of the family Cactaceae, a group characterized by a fleshy habit, spines and bristles, and large, brightly colored, solitary flowers.

cactus alkaloid *See* anhalonium alkaloid.

CAD *See* computer-aided design.

cadalene [ORG CHEM] $C_{15}H_{18}$ A colorless liquid which boils at 291–292°C (720 mmHg; 95,990 newtons per square meter) and which is a substituted naphthalene. Also known as 1,6-dimethyl-4-isopropyl naphthalene.

cadang-cadang [PL PATH] An infectious virus disease of the coconut palm characterized by yellow-bronzing of the leaves.

cadastral survey [CIV ENG] A survey made to establish property lines.

cadaver [MED] A dead animal or human body to be studied by dissection.

cadaverine [BIOCHEM] $C_5H_{14}N_2$ A nontoxic, organic base produced as a result of the decarboxylation of lysine by the action of putrefactive bacteria on flesh.

caddis fly [INV ZOO] The common name for all members of the insect order Trichoptera; adults are mothlike and the immature stages are aquatic.

cade oil [MATER] A brown, viscous essential oil that has a tar odor and is slightly soluble in water; it is derived by dry distillation of the wood of the European juniper (*Juniperus oxycedrus*); used in antiseptic soaps, perfumes, and pharmaceuticals. Also known as juniper tar oil.

CADF *See* commutated antenna direction finder.

cadinene [ORG CHEM] $C_{15}H_{24}$ A colorless liquid that boils at 274.5°C, and is a terpene derived from cubeb oil, cade oil, juniper berry oil, and other essential oils.

cadmium [CHEM] A chemical element, symbol Cd, atomic number 48, atomic weight 112.40. [MET] A tin-white, malleable, ductile metal capable of high polish; principal use is in the plating of iron and steel, and to a much less extent of copper, brass, and other alloys, to protect them from corrosion and improve solderability and surface conductivity, and as a control absorber and shield in nuclear reactors.

cadmium acetate [ORG CHEM] $Cd(OOCCH_3)_2 \cdot 3H_2O$ A compound that forms colorless monoclinic crystals, soluble in water and in alcohol; used for chemical testing for sulfides, selenides, and tellurides and for producing iridescent effects on porcelain.

cadmium blende *See* greenockite.

cadmium bromate [INORG CHEM] $Cd(BrO_3)_2$ Colorless powder, soluble in water; used as an analytical reagent.

cadmium bromide [INORG CHEM] $CdBr_2$ A compound produced as a yellow crystalline powder, soluble in water and alcohol; used in photography, process engraving, and lithography.

cadmium carbonate [INORG CHEM] $CdCO_3$ A white crystalline powder, insoluble in water, soluble in acids and potassium cyanide; used as a starting compound for other cadmium salts.

cadmium cell [ELEC] A standard cell used as a voltage reference; at 20°C its voltage is 1.0186 volts.

cadmium chlorate [INORG CHEM] $CdClO_3$ White crystals, soluble in water; a highly toxic material.

cadmium chloride [INORG CHEM] $CdCl_2$ A cadmium halide in the form of colorless crystals, soluble in water, methanol, and ethanol; used in photography, in dyeing and calico printing, and as a solution to precipitate sulfides.

cadmium fluoride [INORG CHEM] CdF_2 A crystalline compound with a melting point of 1110°C; soluble in water and acids; used for electronic and optical applications and as a starting material for laser crystals.

cadmium hydroxide [INORG CHEM] $Cd(OH)_2$ A white powder, soluble in dilute acids; used to prepare negative electrodes for cadmium-nickel storage batteries.

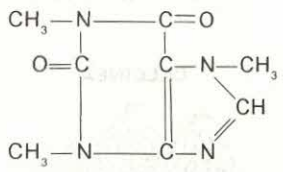
cadmium iodide [INORG CHEM] CdI_2 A cadmium halide that forms lustrous, white, hexagonal scales, consisting of two water-soluble allotropes; used in photography, in process engraving, and formerly as an antiseptic.

cadmium lamp [ELEC] A lamp containing cadmium vapor; wavelength (6438.4696 international angstroms, or 643.84696 nanometers) of light emitted is a standard of length.

cadmium metallurgy [MET] The extraction of cadmium from zinc ores, or from complex ores as a by-product of zinc, lead, and copper smelting.

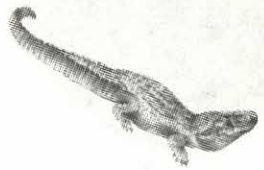
cadmium-nickel storage cell *See* nickel-cadmium battery.
cadmium nitrate [CHEM] $Cd(NO_3)_2 \cdot 4H_2O$ White, hygroscopic crystals, soluble in water, alcohol, and liquid ammonia; used to give a reddish-yellow luster to glass and porcelain ware.
cadmium ocher *See* greenockite.
cadmium oxide [INORG CHEM] CdO In the cubic form, a brown, amorphous powder, insoluble in water, soluble in acids and ammonia salts; used for cadmium plating baths and in the manufacture of paint pigments.
cadmium potassium iodide *See* potassium tetraiodocadmate.
cadmium ratio [NUCLEO] The ratio of the response of an uncovered neutron detector to that of the same detector under identical conditions when it is covered with cadmium of a specified thickness.
cadmium red [MATER] A pigment composed of a mixture of cadmium sulfide, cadmium selenide, and barite; used as a red pigment.
cadmium selenide cell [ELECTR] A photoconductive cell that uses cadmium selenide as the semiconductor material and has a fast response time and high sensitivity to longer wavelengths of light.
cadmium silver oxide cell [ELEC] An alkaline-electrolyte cell that may be used without recharging in primary batteries or that may be recharged for secondary-battery use.
cadmium sulfate [INORG CHEM] $CdSO_4$ A compound that forms colorless, efflorescent crystals, soluble in water; used as an antiseptic and astringent, in the treatment of syphilis, gonorrhea, and rheumatism, and as a detector of hydrogen sulfide and fumaric acid.
cadmium sulfide [INORG CHEM] CdS A compound with two forms: orange, insoluble in water, used as a pigment, and also known as orange cadmium; light yellow, hexagonal crystals, insoluble in water, and also known as cadmium yellow.
cadmium sulfide cell [ELECTR] A photoconductive cell in which a small wafer of cadmium sulfide provides an extremely high dark-light resistance ratio.
cadmium telluride [INORG CHEM] CdTe Brownish-black, cubic crystals with a melting point of 1090°C; soluble, with decomposition, in nitric acid; used for semiconductors.
cadmium telluride detector [ELECTR] A photoconductive cell capable of operating continuously at ambient temperatures up to 750°F (400°C); used in solar cells and infrared, nuclear-radiation, and gamma-ray detectors.
cadmium tungstate [INORG CHEM] $CdWO_4$ White or yellow crystals or powder; soluble in ammonium hydroxide and alkali cyanides; used in fluorescent paint, x-ray screens, and scintillation counters.
cadmium yellow *See* cadmium sulfide.
caducicorn [VERT ZOO] Having deciduous horns, as certain deer.
caducous [BOT] Lasting on a plant only a short time before falling off.
cadwaladerite [MINERAL] $Al(OH)_2Cl \cdot 4H_2O$ A mineral consisting of a hydrous basic aluminum chloride.
Cae *See* Caelum.
caecilian [VERT ZOO] The common name for members of the amphibian order Apoda.
caecum *See* cecum.
Caelum [ASTRON] A southern constellation, right ascension 5 hours, declination 40°S. Abbreviated Cae. Also known as Chisel.
Caenolestidae [PALEON] A family of extinct insectivorous mammals in the order Marsupialia.
Caenolestoidea [VERT ZOO] A superfamily of marsupial mammals represented by the single living family Caenolestidae.
caenostylic [VERT ZOO] Having the first two visceral arches attached to the cranium and functioning in food intake; a condition found in sharks, amphibians, and chimaeras.
Caesalpinoidea [BOT] A subfamily of dicotyledonous plants in the legume family, Leguminosae.
caffeic acid [ORG CHEM] $C_9H_8O_4$ A yellow crystalline acid that melts at 223–225°C with decomposition; soluble in water and alcohol. Also known as 3,4-dihydroxycinnamic acid.
caffeine [ORG CHEM] $C_8H_{10}O_2N_4 \cdot H_2O$ An alkaloid found in a large number of plants, such as tea, coffee, cola, and mate.
3-caffeoylquinic acid *See* chlorogenic acid.
caffetannin [MATER] One of the hydrolyzable tannins obtained from coffee berries and other plant products.
cage [CRYSTAL] A void occurring in a crystal structure capable of trapping one or more foreign atoms. [MECH ENG] A frame for maintaining uniform separation between the balls or rollers in a bearing. Also known as separator. [MIN ENG] The car which carries men and materials in a mine hoist.
cage antenna [ELECTROMAG] Broad-band dipole antenna in which each pole consists of a cage of wires whose overall shape resembles that of a cylinder or a cone.
cage guides [MIN ENG] Directive apparatus used to guide the cages in the mine shaft and to prevent their swinging or colliding with each other.
cage mill [MECH ENG] Pulverizer used to disintegrate clay, press cake, asbestos, packing-house by-products, and various tough, gummy, high-moisture-content or low-melting-point materials.
cage shoes [MIN ENG] Fittings attached on the side of a cage by bolts so that they engage the rigid guides in a shaft.
caging [NAV] The process of orienting and mechanically locking the spin axis of a gyroscope to an internal reference position.
cahnite [MINERAL] $Ca_2B(OH)_4(AsO_4)$ A tetragonal borate mineral occurring in white, sphenoidal crystals.
CAI *See* computer-assisted instruction.
Cailletet and Mathias law [PHYS CHEM] The law that describes the relationship between the mean density of a liquid and its saturated vapor at that temperature as being a linear function of the temperature.
caiman [VERT ZOO] Any of five species of reptiles of the genus *Caiman* in the family Alligatoridae, differing from alligators principally in having ventral armor and a sharper snout.
cainophobia [PSYCH] Abnormal fear of newness.
Cainotheriidae [PALEON] The single family of the extinct artiodactyl superfamily Cainotherioidea.
Cainotherioidea [PALEON] A superfamily of extinct, rabbit-sized tylopod ruminants in the mammalian order Artiodactyla.
cairn [ENG] An artificial mound of rocks, stones, or masonry, usually conical or pyramidal, whose purpose is to designate or to aid in identifying a point of surveying or of cadastral importance.
cairngorm *See* smoky quartz.
caisson [CIV ENG] **1.** A watertight, cylindrical or rectangular chamber used in underwater construction to protect workers from water pressure and soil collapse. **2.** A float used to raise a sunken vessel. **3.** *See* dry-dock caisson. [ORD] A two-wheeled, horse-drawn vehicle used for transporting ammunition and other military equipment.
caisson disease [MED] A condition resulting from a rapid change in atmospheric pressure from high to normal, causing nitrogen bubbles to form in the blood and body tissues. Also known as bends; compressed-air illness.
caisson foundation [CIV ENG] A shaft of concrete placed under a building column or wall and extending down to hardpan or rock. Also known as pier foundation.
cajeput oil [MATER] An essential oil with a blue-green color and a camphorlike odor; chief constituents are eucalyptol, pinene, and alpha terpineol; distilled from leaves and twigs of species of East Indian trees of the genus *Melaleuca*; used in perfumes and medicines. Also spelled cajuput oil.
cajeputol *See* eucalyptol.
cajuput oil *See* cajeput oil.
caju rains [METEOROL] In northeastern Brazil, light showers that occur during the month of October.
cake [MIN ENG] **1.** Solidified drill sludge. **2.** That portion of a drilling mud adhering to the walls of a borehole. **3.** To form into a mass, as when ore sinters together in roasting, or coal cakes in coking.
cake of gold [MET] Gold formed into a compact mass (though not melted) by distillation of the mercury from a mercury-gold amalgam. Also known as sponge gold.
caking [ENG] Changing of a powder into a solid mass by heat, pressure, or water.
caking coal [GEOL] A type of coal which agglomerates and softens upon heating; after volatile material has been expelled at high temperature, a hard, gray cellular mass of coke remains. Also known as binding coal.
cal *See* calorie.
Cal *See* kilocalorie.
CAL [COMPUT SCI] A higher-level language, developed especially for time-sharing purposes, in which a user at a remote console typewriter is directly connected to the computer and can

CAFFEINE



Structural formula of caffeine.

CAIMAN

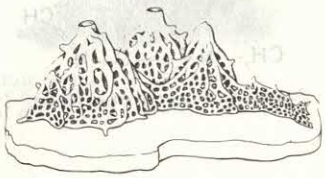


The broad-nosed caiman *(Caiman latirostris)*.

CALAMITALES

Scouring rush *(Calamites)* restored with whorls of branches at each joint of articulated stems. *(From R. C. Hussey, Historical Geology, 2d ed., McGraw-Hill, 1947)*

CALCINEA

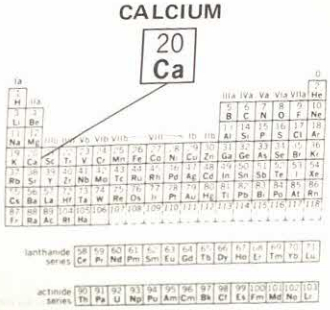


Clathrina clathrus, a calcinean sponge. *(After Minchin, 1900)*

CALCITE

Scalenohedral crystal of calcite from Joplin, Mo. *(American Museum of Natural History specimens)*

CALCIUM



Periodic table of the chemical elements showing the position of calcium.

work out problems on-line with considerable help from the computer. Derived from Conversational Algebraic Language.

calabarine *See* physostigmine.

Calabar swelling [MED] Edematous, painful, subcutaneous swelling occurring in the body of natives of Calabar and of other parts of West Africa, probably due to an allergic reaction to *Loa loa* infection.

Calabrian [GEOL] Lower Pleistocene geologic time.

calaite *See* turquoise.

calamanthia oil *See* marjoram oil.

calamine [MET] An alloy composed of zinc, lead, and tin. [MINERAL] *See* hemimorphite; smithsonite. [PHARM] A powder mixture of zinc oxide and ferric oxide, used in skin lotions and ointments.

Calamitales [PALEOBOT] An extinct group of reedlike plants of the subphylum Sphenopsida characterized by horizontal rhizomes and tall, upright, grooved, articulated stems.

calamus oil [MATER] A yellow essential oil that is slightly soluble in water; composed mainly of eugenol and 2,4,5-trimethoxy-1-propenyl benzene; derived by steam distillation of the roots of calamus (*Acorus calamus*); used in perfumery and medicine.

calandria [CHEM ENG] One of the tubes through which the heating fluid circulates in an evaporator.

calandria evaporator *See* short-tube vertical evaporator.

Calanoida [INV ZOO] A suborder of the crustacean order Copepoda, including the larger and more abundant of the pelagic species.

Calappidae [INV ZOO] The box crabs, a family of reptantian decapods in the subsection Oxystomata of the section Brachyura.

calathiform [BIOL] Cup-shaped, being almost hemispherical.

calaverite [MINERAL] $AuTe_2$ A yellowish or tin-white, monoclinic mineral commonly containing gold telluride and minor amounts of silver.

calc-alkalic series [PETR] Series of igneous rocks in which the weight percentage of silica is 55–61.

calcaneocuboid ligament [ANAT] The ligament that joins the calcaneus and the cuboid bones.

calcaneum [ANAT] **1.** A bony projection of the metatarsus in birds. **2.** *See* calcaneus.

calcaneus [ANAT] A bone of the tarsus, forming the heel bone in humans. Also known as calcaneum.

calcar [ZOO] A spur or spurlike process, especially on an appendage or digit.

calcarate [BOT] Having spurs.

Calcarea [INV ZOO] A class of the phylum Porifera, including sponges with a skeleton composed of calcium carbonate spicules.

calcarenite [PETR] A type of limestone or dolomite composed of coral or shell sand or of sand formed by erosion of older limestones, with particle size ranging from 1/16 to 2 millimeters.

calcareous [SCI TECH] Resembling, containing, or composed of calcium carbonate.

calcareous algae [BOT] Algae that grow on limestone or in soil impregnated with lime.

calcareous crust *See* caliche.

calcareous duricrust *See* caliche.

calcareous ooze [GEOL] A fine-grained pelagic sediment containing undissolved sand- or silt-sized calcareous skeletal remains of small marine organisms mixed with amorphous clay-sized material.

calcareous schist [PETR] A coarse-grained metamorphic rock derived from impure calcareous sediment.

calcareous sinter *See* tufa.

calcareous soil [GEOL] A soil containing accumulations of calcium and magnesium carbonate.

calcareous tufa *See* tufa.

calcarine fissure *See* calcarine sulcus.

calcarine sulcus [ANAT] A sulcus on the medial aspect of the occipital lobe of the cerebrum, between the lingual gyrus and the cuneus. Also known as calcarine fissure.

Calcaronea [INV ZOO] A subclass of sponges in the class Calcarea in which the larva are amphiblastulae.

calcemia *See* hypercalcemia.

calcic [SCI TECH] Derived from or containing calcium.

calcicole [BOT] Requiring soil rich in calcium carbonate for optimum growth.

calcicosis [MED] A form of pneumoconiosis caused by the inhalation of marble (calcium carbonate) dust.

calciferous [BIOL] Containing or producing calcium or calcium carbonate.

calciferous gland [INV ZOO] One of a series of glands that secrete calcium carbonate into the esophagus of certain oligochaetes.

calcification [GEOCHEM] Any process of soil formation in which the soil colloids are saturated to a high degree with exchangeable calcium, thus rendering them relatively immobile and nearly neutral in reaction. [PHYSIO] The deposit of calcareous matter within the tissues of the body.

calcifuge [ECOL] A plant that grows in an acid medium that is poor in calcareous matter.

calcilutite [PETR] **1.** A dolomite or limestone formed of calcareous rock flour that is typically nonsiliceous. **2.** A rock of calcium carbonate formed of grains or crystals with average diameter less than 1/16 millimeter.

calcimeter [ENG] An instrument for estimating the amount of lime in soils.

calcimine [MATER] A thin paint, white or colored, made of pigment, glue, and water. Also known as kalsomine.

calcine [ENG] **1.** To heat to a high temperature without fusing, as to heat unformed ceramic materials in a kiln, or to heat ores, precipitates, concentrates, or residues so that hydrates, carbonates, or other compounds are decomposed and the volatile material is expelled. **2.** To heat under oxidizing conditions. [MATER] Product of calcining or roasting.

Calcinea [INV ZOO] A subclass of sponges in the class Calcarea in which the larvae are parenchymulae.

calcined clay [MATER] Clay that has been heated to drive out volatile materials; a natural abrasive.

calcined coke [MATER] Coke that has been heated to expel volatile material.

calcined gypsum *See* plaster of Paris.

calcined limestone [MATER] Limestone that has been heated in a vertical-shaft kiln to drive off carbon dioxide.

calcined soda *See* soda ash.

calcining furnace [ENG] A heating device, such as a vertical-shaft kiln, that raises the temperature (but not to the melting point) of a substance such as limestone to make lime. Also known as calciner.

calcinosis [MED] Deposition of calcium salts in the skin, subcutaneous tissue, or other part of the body in certain pathologic conditions.

calciocarnotite *See* tyuyamunite.

calcioferrite [MINERAL] $Ca_2Fe_2(PO_4)OH \cdot 7H_2O$ A yellow or green mineral consisting of a hydrous basic calcium iron phosphate and occurring in nodular masses.

calciovolborthite [MINERAL] $CaCu(VO_4)(OH)$ Green, yellow, or gray mineral consisting of a basic vanadate of calcium and copper. Also known as tangeite.

calcirudite [PETR] Dolomite or limestone formed of worn or broken pieces of coral or shells or of limestone fragments coarser than sand; the interstices are filled with sand, calcite, or mud, the whole bound together with a calcareous cement.

calcite [MINERAL] $CaCO_3$ One of the commonest minerals, the principal constituent of limestone; hexagonal-rhombohedral crystal structure, dimorphous with aragonite. Also known as calcspar.

calcite compensation depth [GEOL] The depth in the ocean (about 5000 meters) below which solution of calcium carbonate occurs at a faster rate than its deposition. Abbreviated CCD.

calcite dolomite [PETR] A carbonate rock with a composition of 10–50% calcite and 90–50% dolomite.

calcitonin [BIOCHEM] A polypeptide, calcium-regulating hormone produced by the ultimobranchial bodies in vertebrates. Also known as thyrocalcitonin.

calcium [CHEM] A chemical element, symbol Ca, atomic number 20, atomic weight 40.08; used in metallurgy as an alloying agent for aluminum-bearing metal, as an aid in removing bismuth from lead, and as a deoxidizer in steel manufacture, and also used as a cathode coating in some types of photo tubes.

calcium-45 [NUC PHYS] A radioisotope of calcium having a mass number of 45, often used as a radioactive tracer in studying calcium metabolism in humans and other organisms; half-life is 165 days. Designated Ca^{45}.

calcium acetate [ORG CHEM] $Ca(C_2H_3O_2)_2$ A compound that crystallizes as colorless needles that are soluble in water;

formerly used as an important source of acetone and acetic acid; now used as a mordant and as a stabilizer of plastics.

calcium acrylate [ORG CHEM] $(CH_2CHCOO)_2Ca$ Free-flowing, water-soluble white powder used for soil stabilization, oil-well sealing, and ion exchange and as a binder for clay products and foundry molds.

calcium arsenate [INORG CHEM] $Ca_3(AsO_4)_2$ An arsenic compound used as an insecticide to control cotton pests.

calcium arsenite [INORG CHEM] $Ca_3(AsO_3)_2$ White granules that are soluble in water; used as an insecticide.

calcium bisulfite [INORG CHEM] $Ca(HSO_3)_2$ A white powder, used as an antiseptic and in the sulfite pulping process.

calcium-bomb process [MET] A former process to produce pellets of pure titanium metal by mixing titanium chloride with calcium in a steel bomb and heating.

calcium bromide [INORG CHEM] $CaBr_2$ A deliquescent salt in the form of colorless hexagonal crystals that are soluble in water and absolute alcohol.

calcium carbide [INORG CHEM] CaC_2 An alkaline earth carbide obtained in the pure form as transparent crystals that decompose in water; used to make acetylene gas.

calcium carbonate [INORG CHEM] $CaCO_3$ White rhombohedrons or a white powder; occurs naturally as calcite; used in paint manufacture, as a dentifrice, as an anticaking medium for table salt, and in manufacture of rubber tires.

calcium chlorate [INORG CHEM] $Ca(ClO_3)_2 \cdot 2H_2O$ White monoclinic crystals, decomposed by heating.

calcium chloride [INORG CHEM] $CaCl_2$ A colorless, deliquescent powder that is soluble in water and ethanol; used as an antifreeze and as an antidust agent.

calcium chromate [INORG CHEM] $CaCrO_4 \cdot 2H_2O$ Yellow, monoclinic crystals that are slightly soluble in water; used to make other pigments.

calcium cyanamide [INORG CHEM] $CaCN_2$ In pure form, colorless rhombohedral crystals, the commercial form being a gray material containing 55–70% $CaCN_2$; used as a fertilizer, weed killer, and defoliant.

calcium cyanide [INORG CHEM] $Ca(CN)_2$ In pure form, a white powder that gives off hydrogen cyanide in air at normal humidity; prepared commercially in impure black or gray flakes; used as an insecticide and rodenticide. Also known as black cyanide.

calcium cyclamate [ORG CHEM] $C_{12}H_{24}O_6N_2S_2Ca_2H_2O$ White crystals with a very sweet taste, soluble in water; has been used as a low-calorie sweetening agent.

calcium dihydrogen phosphate *See* calcium phosphate.

calcium fluoride [INORG CHEM] CaF_2 Colorless, cubic crystals that are slightly soluble in water and soluble in ammonium salt solutions; used in etching glass and preparing hydrofluoric acid.

calcium gluconate [ORG CHEM] $Ca(C_6H_{11}O_7)_2 \cdot H_2O$ White powder that loses water at 120°C; soluble in hot water but less soluble in cold water, insoluble in acetic acid and alcohol; used in medicine, as a foaming agent, and as a buffer in foods.

calcium hardness [CHEM] Presence of calcium ions in water, from dissolved carbonates and bicarbonates; treated in boiler water by introducing sodium phosphate.

calcium hydride [INORG CHEM] CaH_2 In pure form, white crystals that are insoluble in water; used in the production of chromium, titanium, and zirconium in the Hydromet process.

calcium hydrogen phosphate *See* calcium phosphate.

calcium hydroxide [INORG CHEM] $Ca(OH)_2$ White crystals, slightly soluble in water; used in cement, mortar, and manufacture of calcium salts. Also known as hydrated lime.

calcium hypochlorite [INORG CHEM] $Ca(OCl)_2 \cdot 4H_2O$ A white powder, used as a bleaching agent and disinfectant for swimming pools.

calcium iodide [INORG CHEM] CaI_2 A yellow, hygroscopic powder that is very soluble in water; used in photography.

calcium iodobehenate [ORG CHEM] $Ca(OOCC_{21}H_{42}I)_2$ A yellowish powder that is soluble in warm chloroform; used in feed additives.

calcium lactate [ORG CHEM] $Ca(C_3H_5O_3)_2 \cdot 5H_2O$ A salt of lactic acid in the form of white crystals that are soluble in water; used in calcium therapy and as a blood coagulant.

calcium metabolism [BIOCHEM] Biochemical and physiological processes involved in maintaining the concentration of calcium in plasma at a constant level and providing a sufficient supply of calcium for bone mineralization.

calcium naphthenate [ORG CHEM] Calcium derivative of cycloparaffin hydrocarbon (generally cyclopentane or cyclohexane base) that is a light, sticky, water-insoluble mass; used as a hardening agent in plastic compounds, in waterproofing, adhesives, wood fillers, and varnishes.

calcium nitrate [INORG CHEM] $Ca(NO_3)_2 \cdot 4H_2O$ Colorless, monoclinic crystals that are soluble in water; the anhydrous salt is very deliquescent; used as a fertilizer and in explosives. Also known as nitrocalcite.

calcium orthoarsenate [ORG CHEM] $Ca_3(AsO_4)_2$ A white powder, insoluble in water; used as a preemergence insecticide and herbicide for turf.

calcium oxalate [INORG CHEM] $CaC_2O_4 \cdot H_2O$ A salt of oxalic acid in the form of white crystals that are insoluble in water.

calcium oxide [INORG CHEM] CaO A caustic white solid sparingly soluble in water; the commercial form is prepared by roasting calcium carbonate limestone in kilns until all the carbon dioxide is driven off; used as a refractory, in pulp and paper manufacture, and as a flux in manufacture of steel. Also known as burnt lime; calx; caustic lime.

calcium pantothenate [ORG CHEM] $(C_9H_{16}NO_5)_2Ca$ White slightly hygroscopic powder; soluble in water, insoluble in chloroform and ether; melts at 170–172°C; found in either the dextro or levo form or in racemic mixtures; used in nutrition and in animal feed.

calcium peroxide [INORG CHEM] CaO_2 A cream-colored powder that decomposes in water; used as an antiseptic and a detergent.

calcium phosphate [INORG CHEM] **1.** Any phosphate of calcium. **2.** Any of the following three calcium orthophosphates, all of which are white or colorless in pure form: $Ca(H_2PO_4)_2$ is used as a fertilizer, as a plastics stabilizer, and in baking powder, and is also known as acid calcium phosphate, calcium dihydrogen phosphate, monobasic calcium phosphate, monocalcium phosphate; $CaHPO_4$ is used in pharmaceuticals, animal feeds, and toothpastes, and is also known as calcium hydrogen phosphate, dibasic calcium phosphate, dicalcium orthophosphate, dicalcium phosphate; $Ca_3(PO_4)_2$ is used as a fertilizer, and is also known as tribasic calcium phosphate, tricalcium phosphate.

calcium plumbate [INORG CHEM] $Ca(PbO_3)_2$ Orange crystals that are insoluble in cold water but decompose in hot water; used as an oxidizer in the manufacture of glass and matches.

calcium plumbite [INORG CHEM] $CaPbO_2$ Colorless crystals that are slightly soluble in water.

calcium pyrophosphate [INORG CHEM] $Ca_2P_2O_7$ White, abrasive powder, used in dentifrice polishes, in metal polishes, and as a food supplement.

calcium resinate [ORG CHEM] Yellowish white, amorphous powder that is soluble in acid, insoluble in water; made by boiling rosin with calcium hydroxide and filtering, or by fusion of melted rosin with hydrated lime; used for waterproofing, leather tanning, and the manufacture of paint driers and enamels. Also known as limed rosin.

calcium reversal lines [SPECT] Narrow calcium emission lines that appear as bright lines in the center of broad calcium absorption bands in the spectra of certain stars.

calcium silicate [INORG CHEM] Any of three silicates of calcium: tricalcium silicate, Ca_3SiO_5; dicalcium silicate, Ca_2SiO_4; calcium metasilicate, $CaSiO_3$.

calcium star [ASTRON] A term sometimes used to denote a star of spectral class F, which has prominent absorption bands of calcium.

calcium stearate [ORG CHEM] $Ca(C_{18}H_{35}O_2)_2$ A metallic soap produced as a white powder that is insoluble in water but slightly soluble in petroleum, benzene, and toluene.

calcium sulfate [INORG CHEM] **1.** $CaSO_4$ A white crystalline salt, insoluble in water; used in Keene's cement, in pigments, as a paper filler, and as a drying agent. **2.** Either of two hydrated forms of the salt: the dihydrate, $CaSO_4 \cdot 2H_2O$, and the hemihydrate, $CaSO_4 \cdot \frac{1}{2}H_2O$.

calcium sulfide [INORG CHEM] CaS In pure form, white cubic crystals, slightly soluble in water; used as a base for luminescent materials. Also known as hepar calcies; sulfurated lime.

calcium sulfite [INORG CHEM] $CaSO_3 \cdot 2H_2O$ A white powder that is soluble in dilute sulfurous acid; may be dehydrated at 150°C to the anhydrous salt; used in the sulfite process for the manufacture of wood pulp.

calcium tungstate [INORG CHEM] $CaWO_4$ White, tetragonal crystals, slightly soluble in water; used in manufacture of luminous paints. Also known as artificial scheelite; calcium wolframate.

calcium wolframate *See* calcium tungstate.

calclacite [MINERAL] $CaCl_2Ca(C_2H_3O_2)\cdot 10H_2O$ A white mineral consisting of a hydrated chloride-acetate of calcium; occurs as hairlike efflorescences.

Calclamnidae [PALEON] A family of Paleozoic echinoderms of the order Dendrochirotida.

calclithite [PETR] Limestone with 50% or more fragments of older limestone that was redeposited after being eroded from the land.

calcrete [GEOL] A conglomerate of surficial gravel and sand cemented by calcium carbonate.

calc-silicate hornfels [PETR] A metamorphic rock with a fine grain of calcium silicate minerals.

calc-silicate marble [PETR] Marble having conspicuous calcium silicate or magnesium silicate minerals.

calcspar *See* calcite.

calcsparite *See* sparry calcite.

calculated address *See* generated address.

calculated altitude *See* computed altitude.

calculating machine *See* calculator.

calculating punch [COMPUT SCI] A calculator having a card reader and a card punch.

calculator [COMPUT SCI] A device that performs logic and arithmetic digital operations based on numerical data which are entered by pressing numerical and control keys. Also known as calculating machine.

calculus [ANAT] A small and cuplike structure. [MATH] The branch of mathematics dealing with differentiation and integration and related topics. [PATH] An abnormal, solid concretion of minerals and salts formed around organic materials and found chiefly in ducts, hollow organs, and cysts.

calculus of enlargement *See* calculus of finite differences.

calculus of finite differences [MATH] A method of interpolation that makes use of formal relations between difference operators which are, in turn, defined in terms of the values of a function on a set of equally spaced points. Also known as calculus of enlargement.

calculus of tensors [MATH] The branch of mathematics dealing with the differentiation of tensors.

calculus of variations [MATH] The study of problems concerning maximizing or minimizing a given definite integral relative to the dependent variables of the integrand function.

calculus of vectors [MATH] That branch of calculus concerned with differentiation and integration of vector-valued functions.

caldera [GEOL] A more or less circular volcanic depression whose diameter is many times greater than that of the volcanic vent.

Caledonian orogeny [GEOL] Deformation of the crust of the earth by a series of diastrophic movements beginning perhaps in Early Ordovician and continuing through Silurian, extending from Great Britain through Scandinavia.

Caledonides [GEOL] A mountain system formed in Late Silurian to Early Devonian time in Scotland, Ireland, and Scandinavia.

caledonite [MINERAL] $Cu_2Pb_5(SO_4)_3CO_3(OH)_6$ A mineral occurring as green, orthorhombic crystals composed of basic copper lead sulfate; found in copper-lead deposits.

calefaction [ENG] **1.** Warming. **2.** The condition of being warmed.

calendar [ASTRON] A system for everyday use in which time is divided into days and longer periods, such as weeks, months, and years, and a definite order for these periods and a correspondence between them are established.

calendar clock [HOROL] A clock that shows day, date, month, and phases of the moon, in addition to time of day.

calendar day [ASTRON] The period from midnight to midnight; it is 24 hours of mean solar time in length and coincides with the civil day.

calendar month [ASTRON] The month of the calendar, varying from 28 to 31 days in length.

calendar year [ASTRON] The year in the Gregorian calendar, common years having 365 days and leap years 366. Also known as civil year.

calender [ENG] **1.** To pass a material between rollers or plates to thin it into sheets or to make it smooth and glossy. **2.** The machine which performs this operation.

calendered paper [MATER] Paper that has passed through the calenders of a paper machine.

calendering [TEXT] Mechanical finishing process to produce a hard, shiny fabric.

calf [OCEANOGR] *See* calved ice. [VERT ZOO] The young of the domestic cow, elephant, rhinoceros, hippopotamus, moose, whale, and others.

calf circumference [ANTHRO] An average of three measurements taken at maximum horizontal distance around the left calf as the subject stands with weight distributed evenly on both feet.

calf diphtheria [VET MED] Disease of calves caused by species of *Sphaerophorus* which affects the mouth and pharynx and develops into pneumonia and septicemia, resulting in death.

caliber [ORD] The diameter of a projectile or the diameter of the bore of a gun or launching tube; for example, a caliber .22 cartridge has a diameter of approximately 0.22 inch (5.6 millimeters).

calibrate [SCI TECH] To determine, by measurement or comparison with a standard, the correct value of each scale reading on a meter or other device, or the correct value for each setting of a control knob.

calibrated airspeed [AERO ENG] The airspeed as read from a differential-pressure airspeed indicator which has been corrected for instrument and installation errors; equal to true airspeed for standard sea-level conditions.

calibrated altitude [NAV] Indicated altitude corrected for instrument and installation errors.

calibrating tank [ENG] A tank having known capacity used to check the volumetric accuracy of liquid delivery by positive-displacement meters. Also known as meter-proving tank.

calibration curve [ENG] A plot of calibration data, giving the correct value for each indicated reading of a meter or control dial.

calibration fire [ORD] Preparatory fire to determine the separate corrections to be applied to the individual guns or launchers of a battery in order to cause all the weapons to hit the same point, or bursts or impacts to assume a desired pattern.

calibration markers [ENG] On a radar display, electronically generated marks which provide numerical values for the navigational parameters such as bearing, distance, height, or time.

calibration point [ORD] A point at which calibration fire is directed.

calibration radio-beacon [NAV] A special radio beacon operated primarily for calibrating shipboard radio direction-finders; it transmits either continuously during scheduled hours or upon request.

calibration reference [ANALY CHEM] Any of the standards of various types that indicate whether an analytical instrument or procedure is working within prescribed limits; examples are test solutions used with pH meters, and solutions with known concentrations (standard solutions) used with spectrophotometers.

caliche [GEOL] **1.** Conglomerate of gravel, rock, soil, or alluvium cemented with sodium salts in Chilean and Peruvian nitrate deposits; contains sodium nitrate, potassium nitrate, sodium iodate, sodium chloride, sodium sulfate, and sodium borate. **2.** A thin layer of clayey soil capping auriferous veins (Peruvian usage). **3.** Whitish clay in the selvage of veins (Chilean usage). **4.** A recently discovered mineral vein. **5.** A secondary accumulation of opaque, reddish brown to buff or white calcareous material occurring in layers on or near the surface of stony soils in arid and semiarid regions of the southwestern United States; called hardpan, calcareous duricrust, and kanker in different geographic regions. Also known as calcareous crust; croute calcaire; nari; sabach; tepetate.

Caliciaceae [BOT] A family of lichens in the order Caliciales in which the disk of the apothecium is borne on a short stalk.

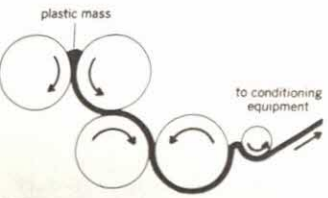
Caliciales [BOT] An order of lichens in the class Ascolichenes characterized by an unusual apothecium.

calico [TEXT] Any plain-weave or inexpensive figured cotton cloth.

California Current [OCEANOGR] The ocean current flowing southward along the western coast of the United States to northern Baja California.

California fog [METEOROL] Fog peculiar to the coast of California and its coastal valleys; off the coast, winds displace

CALENDER



A four-roll calender.

warm surface water, causing colder water to rise from beneath, resulting in the formation of fog; in the coastal valleys, fog is formed when moist air blown inland during the afternoon is cooled by radiation during the night.

California method [HYD] A form of frequency analysis which employs the return period, a parameter that measures the average time period between the occurrence of a quantity in hydrology and that of an equal or greater quantity, as the plotting position.

California polymerization [CHEM ENG] A polymerization process for converting C_3—C_4 olefins to motor fuel by utilizing a catalyst of phosphoric acid on quartz chips.

California sampler [MIN ENG] A drive sampler equipped with a piston that can be retracted mechanically to any desired point within the barrel of the sampler.

California-type dredge [MIN ENG] A single-lift dredge in which closely spaced buckets deliver to a trommel; oversize rocks are piled behind the dredge by a conveyor or stacker; the undersize are washed on gold-saving tables on the deck, and tailings discharge astern through sluices.

californite [MINERAL] $Ca_{10}Al_4(Mg,Fe)_2Si_9O_{34}(OH,F)_4$ A variety of vesuvianite that resembles jade; it is dark-, yellowish-, olive-, or grass-green and occurs in translucent to opaque compact or massive form. Also known as American jade.

californium [CHEM] A chemical element, symbol Cf, atomic number 98; all isotopes are radioactive.

Caligidae [INV ZOO] A family of fish ectoparasites belonging to the crustacean suborder Caligoida.

Caligoida [INV ZOO] A suborder of the crustacean order Copepoda, including only fish ectoparasites and characterized by a sucking mouth with styliform mandibles.

calina [METEOROL] A haze prevalent in Spain during the summer, when the air becomes filled with dust swept up from the dry ground by strong winds.

caliper [DES ENG] An instrument with two legs or jaws that can be adjusted for measuring linear dimensions, thickness, or diameter.

caliper gage [DES ENG] An instrument, such as a micrometer, of fixed size for calipering.

caliper log [MIN ENG] A graphic record showing the diameter of a drilled hole at each depth; measurements are obtained by drawing a caliper upward through the hole and recording the diameter on quadrile paper.

caliper splint [MED] A splint designed for the leg, consisting of two metal rods from a posterior-thigh band or a padded ischial ring to a metal plate attached to the sole of the shoe at the instep.

calite [MET] A heat-resistant alloy of iron, nickel, and aluminum which resists oxidation up to 2200°F (1204°C) and is practically noncorrodible under ordinary conditions of exposure.

calk *See* caulk.

call [COMPUT SCI] To transfer control to a specified closed subroutine.

call announcer [ELECTR] Device for receiving pulses from an automatic telephone office and audibly reproducing the corresponding number in words, so that it may be heard by a manual operator.

Callao painter *See* painter.

call by location [COMPUT SCI] A method of transferring arguments from a calling program to a subprogram in which the referencing program provides to the subprogram the memory location at which the value of the argument can be found, rather than the value itself.

call by name [COMPUT SCI] A method of transferring arguments from a calling program to a subprogram in which the actual expression is passed to the subprogram.

call by value [COMPUT SCI] A method of transferring arguments from a calling program to a subprogram in which the subprogram is provided with the values of the argument and on path leads back to the referencing program.

call circuit [ELEC] Communications circuit between switching points used by traffic forces for transmitting switching instructions.

Callendar and Barnes' continuous flow calorimeter [ENG] A calorimeter in which the heat to be measured is absorbed by water flowing through a tube at a constant rate, and the quantity of heat is determined by the rate of flow and the temperature difference between water at ends of the tube.

Callendar's equation [THERMO] **1.** An equation of state for steam whose temperature is well above the boiling point at the existing pressure, but less than the critical temperature: $(V - b) = (RT/p) - (a/T^n)$, where V is the volume, R is the gas constant, T is the temperature, p is the pressure, n equals 10/3, and a and b are constants. **2.** A very accurate equation relating temperature and resistance of platinum, according to which the temperature is the sum of a linear function of the resistance of platinum and a small correction term, which is a quadratic function of temperature.

Callendar's thermometer *See* platinum resistance thermometer.

callenia *See* stromatolite.

call fire [ORD] Fire delivered on a specific target in response to a request from the supported unit.

Callichthyidae [VERT ZOO] A family of tropical catfishes in the suborder Siluroidei.

callideic I *See* bradykinin.

Callier's Q factor [GRAPHICS] A relationship between the diffuse transmission density of a photographic negative, which measures the total light transmitted, and the specular density, which measures only the light passing directly through.

calligraphy [GRAPHICS] Elegant writing or penmanship as an art and as a profession.

call in [COMPUT SCI] To transfer control of a digital computer, temporarily, from a main routine to a subroutine that is inserted in the sequence of calculating operations, to fulfill an ancillary purpose.

call indicator [ELECTR] Device for receiving pulses from an automatic switching system and displaying the corresponding called number before an operator at a manual switchboard.

calling device [ELECTR] Apparatus which generates the pulses required for establishing connections in an automatic telephone switching system.

calling sequence [COMPUT SCI] A specific set of instructions to set up and call a given subroutine, make available the data required by it, and tell the computer where to return after the subroutine is executed.

calling song [INV ZOO] A high-intensity insect sound which may play a role in habitat selection among certain species.

Callionymoidei [VERT ZOO] A suborder of fishes in the order Perciformes, including two families of colorful marine bottom fishes known as dragonets.

Callipallenidae [INV ZOO] A family of marine arthropods in the subphylum Pycnogonida lacking palpi and having chelifores and 10-jointed ovigers.

Calliphoridae [INV ZOO] The blow flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Calyptera.

Callipic cycle [ASTRON] Four Metonic cycles, or 76 years.

Callisto [ASTRON] A satellite of Jupiter orbiting at a mean distance of 1,884,000 kilometers. Also known as Jupiter IV.

Callithricidae [VERT ZOO] The marmosets, a family of South American mammals in the order Primates.

call letters [COMMUN] Identifying letters, sometimes including numerals, assigned to radio and television stations by the Federal Communications Commission and other regulatory authorities throughout the world. Also known as call sign.

call number [COMPUT SCI] In computer operations, a set of characters identifying a subroutine, and containing information concerning parameters to be inserted in the subroutine, or information to be used in generating the subroutine, or information related to the operands.

Callon's rule [MIN ENG] The rule stating that when a pillar is left in an inclined seam for support in a shaft or a structure on the surface, a greater width should be left on the rise side of the shaft or structure than on the dip side.

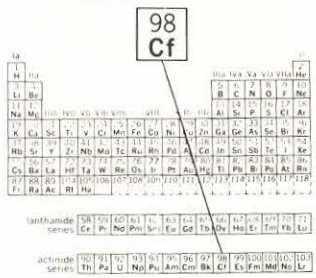
Callorhinchidae [VERT ZOO] A family of ratfishes of the chondrichthyan order Chimaeriformes.

callose [BIOCHEM] A carbohydrate component of plant cell walls; associated with sieve plates where calluses are formed. [BIOL] Having hardened protuberances, as on the skin or on leaves and stems.

Callovian [GEOL] A stage in uppermost Middle or lowermost Upper Jurassic which marks a return to clayey sedimentation.

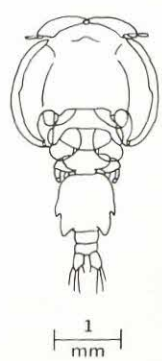
Callow flotation cell [MIN ENG] Nonmechanical apparatus for separation of floatable solid gangue from pulverized ore, with the mixture suspended in liquid and aerated by air bubbles coming up through a porous medium, so that the lighter gangue floats away from the heavier ore.

CALIFORNIUM



Periodic table of the chemical elements showing the position of californium.

CALIGOIDA



Pandarus satyrus Dana, male, a caligoidan.

Callow process [MIN ENG] A flotation process in which agitation is provided by the forcing of air into the pulp through the canvas-covered bottom of the cell.

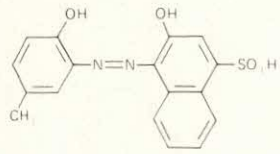
Callow screen [MIN ENG] A continuous belt system formed of fine screen wire that is used to separate fine solids from coarse ones.

callus [BOT] **1.** A thickened callose deposit on sieve plates. **2.** A hard tissue that forms over a damaged plant surface. [MED] Hard, thick area on the surface of the skin.

calm [METEOROL] The absence of apparent motion of the air; in the Beaufort wind scale, smoke is observed to rise vertically, or the surface of the sea is smooth and mirrorlike; in U.S. weather observing practice, the wind has a speed under 1 mile per hour or 1 knot (1.6 kilometers per hour).

calmagite [ORG CHEM] $C_{17}H_{14}N_2O_5S$ A compound crystallizing from acetone as red crystals that are soluble in water; used as an indicator in the titration of calcium or magnesium with EDTA.

CALMAGITE



Structural formula.

calm belt [METEOROL] A belt of latitude in which the winds are generally light and variable; the principal calm belts are the horse latitudes (the calms of Cancer and of Capricorn) and the doldrums.

calms of Cancer [METEOROL] One of the two light, variable winds and calms which occur in the centers of the subtropical high-pressure belts over the oceans; their usual position is about latitude 30°N, the horse latitudes.

calms of Capricorn [METEOROL] One of the two light, variable winds and calms which occur in the centers of the subtropical high-pressure belts over the oceans; their usual position is about latitude 30°S, the horse latitudes.

calomel [MINERAL] Hg_2Cl_2 A colorless, white, grayish, yellowish, or brown secondary, sectile, tetragonal mineral; used as a cathartic, insecticide, and fungicide. Also known as calomelene; calomelite; horn quicksilver; mercurial horn ore.

CALOMEL ELECTRODE

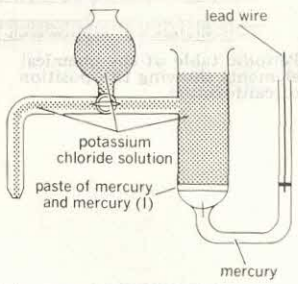


Diagram of calomel electrode.

calomel electrode [PHYS CHEM] A reference electrode of known potential consisting of mercury, mercury chloride (calomel), and potassium chloride solution; used to measure pH and electromotive force. Also known as calomel half-cell; calomel reference electrode.

calomelene *See* calomel.

calomel half-cell *See* calomel electrode.

calomelite *See* calomel.

calomel reference electrode *See* calomel electrode.

caloreceptor [PHYSIO] A cutaneous sense organ that is stimulated by heat.

calorescence [PHYS] The production of visible light by infrared radiation; the transformation is indirect, the light being produced by heat and not by any direct change of wavelength.

calorie [THERMO] Abbreviated cal; often designated c. **1.** A unit of heat energy, equal to 4.1868 joules. Also known as International Table calorie (IT calorie). **2.** A unit of energy, equal to the heat required to raise the temperature of 1 gram of water from 14.5° to 15.5°C at a constant pressure of 1 standard atmosphere; equal to 4.1855 ± 0.0005 joules. Also known as fifteen-degrees calorie; gram-calorie (g-cal); small calorie. **3.** A unit of heat energy equal to 4.184 joules; used in thermochemistry. Also known as thermochemical calorie.

calorific value [ENG] Quantity of heat liberated on the complete combustion of a unit weight or unit volume of fuel.

calorifier [ENG] A device that heats fluids by circulating them over heating coils.

calorimeter [ENG] An apparatus for measuring heat quantities generated in or emitted by materials in processes such as chemical reactions, changes of state, or formation of solutions.

calorimetric test [ENG] The use of a calorimeter to determine the thermochemical characteristics of propellants and explosives; properties normally determined are heat of combustion, heat of explosion, heat of formation, and heat of reaction.

calorimetric titration *See* thermometric titration.

calorimetry [ENG] The measurement of the quantity of heat involved in various processes, such as chemical reactions, changes of state, and formations of solutions, or in the determination of the heat capacities of substances; fundamental unit of measurement is the joule or the calorie (4.184 joules).

Caloris Basin [ASTRON] A large depression on Mercury, about 1300 kilometers in diameter.

calorizator [FOOD ENG] A device for heating beet juice; used in beet-sugar factories.

calorize [MET] To treat by a process by which a coating of aluminum and aluminum-iron alloys is produced on iron and steel (and, less commonly, brass, copper, or nickel), which coating protects the metal from burning in temperatures up to 1800°F (982°C).

calorized steel *See* aluminized steel.

calotte [BIOL] A cap or caplike structure. [INV ZOO] **1.** The four-celled polar cap in Dicyemidae. **2.** A ciliated, retractile disc in certain bryozoan larva. **3.** A dark-colored anterior area in certain nematomorphs.

calotype [GRAPHICS] An obsolete method of photography in which paper is treated with silver iodide, silver nitrate, and acetic and gallic acids; after exposure the paper is developed in a solution of silver nitrate and gallic acid.

calsequestrin [BIOCHEM] An acidic protein, with a molecular weight of 44,000 daltons, which binds calcium inside the sarcoplasmic reticulum.

calthrop [INV ZOO] A sponge spicule having four axes in which the rays are equal or almost equal in length.

calutron [NUCLEO] An electromagnetic apparatus for separating isotopes of uranium and other elements according to their masses, using the principle of the mass spectrograph.

calvarium [ANAT] A skull lacking facial parts and the lower jaw.

calved ice [OCEANOGR] A piece of ice floating in a body of water after breaking off from a mass of land ice or an iceberg. Also known as calf.

Calvé's disease *See* osteochondrosis.

calving [GEOL] The breaking off of a mass of ice from its parent glacier, iceberg, or ice shelf. Also known as ice calving. [VERT ZOO] Giving birth to a calf.

calx *See* calcium oxide.

calycanthemy [PL PATH] Abnormal development of calyx structures into petals or petaloid structures.

calyculate [BOT] Having bracts that imitate a second, external calyx.

calymma [INV ZOO] The outer, vacuolated protoplasmic layer of certain radiolarians.

Calymmatobacterium [MICROBIO] A genus of gram-negative, usually encapsulated, pleomorphic rods of uncertain affiliation; the single species causes granuloma inguinale in humans.

Calymnidae [INV ZOO] A family of echinoderms in the order Holasteroida characterized by an ovoid test with a marginal fasciole.

calypter [INV ZOO] A scalelike or lobelike structure above the haltere of certain two-winged flies. Also known as alula; squama.

Calyptoblastea [INV ZOO] A suborder of coelenterates in the order Hydroida, including the hydroids with protective cups around the hydranths and gonozooids.

calyptra [BOT] **1.** A membranous cap or hoodlike covering, especially the remains of the archegonium over the capsule of a moss. **2.** Tissue surrounding the archegonium of a liverwort. **3.** Root cap.

Calyptratae [INV ZOO] A subsection of dipteran insects in the suborder Cyclorrhapha characterized by calypters associated with the wings.

calyptrate [BOT] Having a calyptra.

calyptrogen [BOT] The specialized cell layer from which a root cap originates.

Calyssozoa [INV ZOO] The single class of the bryozoan subphylum Entoprocta.

calyx [BOT] The outermost whorl of a flower; composed of sepals. [ENG] A steel tube that is a guide rod and is also used to catch cuttings from a drill rod. Also known as bucket; sludge barrel; sludge bucket. [INV ZOO] A cup-shaped structure to which the arms are attached in crinoids. [MED] **1.** A cuplike structure. **2.** In the kidney, a collecting structure extending from the renal pelvis.

calyx drill [ENG] A rotary core drill with hardened steel shot for cutting rock. Also known as shot drill.

Calzecchi-Onesti effect [ELEC] A change in the conductivity of a loosely aggregated metallic powder caused by an applied electric field.

cam [MECH ENG] A plate or cylinder which communicates motion to a follower by means of its edge or a groove cut in its surface.

Cam *See* Camelopardalis.

CAM *See* computer-aided manufacturing.

cam acceleration [MECH ENG] The acceleration of the cam follower.

Camallanida [INV ZOO] An order of phasmid nematodes in the subclass Spiruria, including parasites of domestic animals.

camanchaca *See* garúa.

Camarodonta [INV ZOO] An order of Euechinoidea proposed by R. Jackson and abandoned in 1957.

camarodont dentition [INV ZOO] In echinoderms, keeled teeth meeting the epiphyses so that the foramen magnum of the jaw is closed.

Cambaridae [INV ZOO] A family of crayfishes belonging to the section Macrura in the crustacean order Decapoda.

Cambarinae [INV ZOO] A subfamily of crayfishes in the family Astacidae, including all North American species east of the Rocky Mountains.

camber [AERO ENG] The rise of the curve of an airfoil section, usually expressed as the ratio of the departure of the curve from a straight line joining the extremities of the curve to the length of this straight line. [DES ENG] Deviation from a straight line; the term is applied to a convex, edgewise sweep or curve, or to the increase in diameter at the center of rolled materials. [GEOL] **1.** A terminal, convex shoulder of the continental shelf. **2.** A structural feature that is caused by plastic clay beneath a bed flowing toward a valley so that the bed sags downward and seems to be draped over the sides of the valley. [NAV ARCH] *See* round of beam.

camber angle [MECH ENG] The inclination from the vertical of the steerable wheels of an automobile.

camber arch [ARCH] An arch with a slightly curved interior and horizontal exterior.

camber-keeled [NAV ARCH] Property of a ship whose keel is somewhat convex.

cambium [BOT] A layer of cells between the phloem and xylem of most vascular plants that is responsible for secondary growth and for generating new cells.

Cambrian [GEOL] The lowest geologic system that contains abundant fossils of animals, and the first (earliest) geologic period of the Paleozoic era from 570 to 500 million years ago.

cambric [TEXT] **1.** Tightly woven cotton with one side calendered to resemble linen. **2.** Linen with a sheen.

cam cutter [MECH ENG] A semiautomatic or automatic machine that produces the cam contour by swinging the work as it revolves; uses a master cam in contact with a roller.

cam dwell [DES ENG] That part of a cam surface between the opening and closing acceleration sections.

camel [VERT ZOO] The common name for two species of artiodactyl mammals, the bactrian camel (*Camelus bactrianus*) and the dromedary camel (*C. dromedarius*), in the family Camelidae.

camel hair [TEXT] A fine, natural textile fiber obtained from the bactrian camel.

Camelidae [VERT ZOO] A family of tylopod ruminants in the superfamily Cameloidea of the order Artiodactyla, including four species of camels and llamas.

Cameloidea [VERT ZOO] A superfamily of tylopod ruminants in the order Artiodiodactyla.

Camelopardalis [ASTRON] Latin name for the Giraffe constellation of the northern hemisphere. Abbreviated Cam; Caml. Also known as Camelopardus; Giraffe.

Camelopardus *See* Camelopardalis.

cam engine [MECH ENG] A piston engine in which a cam-and-roller mechanism seems to convert reciprocating motion into rotary motion.

cameo [LAP] A type of carved gemstone in which the background is cut away to leave the subject in relief.

camera [ELECTR] *See* television camera. [OPTICS] A light-tight enclosure containing an aperture (usually provided with an optical lens or system of lenses) through which the light from an object passes and forms an image, often on a light-sensitive material, inside.

camera cable [ELEC] Cable or group of wires that carries the picture from the television camera to the control room.

camera chain [COMMUN] A television camera, associated amplifiers, a monitor, and the cable needed to bring the camera output signal to the control room.

camera lucida [OPTICS] An instrument having a peculiarly shaped prism or a system of mirrors, and often a microscope, which causes a virtual image of an object to be produced on a plane surface, enabling the image's outline to be traced.

camera obscura [OPTICS] A primitive camera in which the real image of an object can be observed or traced on the wall of the enclosure opposite the aperture, rather than being recorded photographically.

camera-ready [GRAPHICS] A layout prepared for the offset printer; contains the actual material to be reproduced.

camera station [MAP] In aerial photography, the point in space occupied by the camera lens at the moment of exposure. Also known as air station.

camera study *See* memomotion study.

Camerata [PALEON] A subclass of extinct stalked echinoderms of the class Crinoidea.

camera tube [ELECTR] An electron-beam tube used in a television camera to convert an optical image into a corresponding charge-density electric image and to scan the resulting electric image in a predetermined sequence to provide an equivalent electric signal. Also known as pickup tube; television camera tube.

cam follower [MECH ENG] The output link of a cam mechanism.

Camilla [ASTRON] An asteroid with a diameter of about 210 kilometers, mean distance from the sun of 3.49 astronomical units, and C-type surface composition.

Caml *See* Camelopardalis.

cam mechanism [MECH ENG] A mechanical linkage whose purpose is to produce, by means of a contoured cam surface, a prescribed motion of the output link.

Cammett table [MIN ENG] A side-moving table for concentrating ore.

cam nose [MECH ENG] The high point of a cam, which in a reciprocating engine holds valves open or closed.

camouflage [ORD] The method of concealing things or people from the enemy by trying to make them appear to be a section of the natural background.

cAMP *See* cyclic adenylic acid.

Campanian [GEOL] European stage of Upper Cretaceous.

Campanulaceae [BOT] A family of dicotyledonous plants in the order Campanulales characterized by a style without an indusium but with well-developed collecting hairs below the stigmas, and by a well-developed latex system.

Campanulales [BOT] An order of dicotyledonous plants in the subclass Asteridae distinguished by a chiefly herbaceous habit, alternate leaves, and inferior ovary.

campanulate [BOT] Bell-shaped; applied particularly to the corolla.

cam pawl [MECH ENG] A pawl which prevents a wheel from turning in one direction by a wedging action, while permitting it to rotate in the other direction.

Campbell bridge [ELEC] **1.** A bridge designed for comparison of mutual inductances. **2.** A circuit for measuring frequencies by adjusting a mutual inductance, until the current across a detector is zero.

Campbell process [MET] An open-hearth steel manufacturing process in which ore and pig iron are used as raw materials in a tilting furnace.

Campbell's formula [ELECTROMAG] A formula which relates the propagation constant of a loaded transmission line to the propagation constant and characteristic impedance of an unloaded line and the impedance of each loading coil.

Campbell-Stokes recorder [ENG] A sunshine recorder in which the time scale is supplied by the motion of the sun and which has a spherical lens that burns an image of the sun upon a specially prepared card.

camp ceiling [BUILD] A ceiling that is flat in the center portion and sloping at the sides.

campestrian [ECOL] Of or pertaining to the northern Great Plains area.

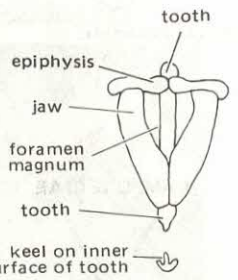
camphane [ORG CHEM] $C_{10}H_{18}$ An alicyclic hydrocarbon; white crystals, soluble in alcohol, with a melting point of 158–159°C. Also known as bornylane; dihydrocamphane.

2-camphanol *See* borneol.

camphene [ORG CHEM] $C_{10}H_{16}$ A bicyclic terpene used as raw material in the synthesis of insecticides such as toxaphene and camphor. Also known as 3,3-dimethyl-2-methylenenorcamphane.

camphor [ORG CHEM] $C_{10}H_{16}O$ A bicyclic saturated terpene ketone that exists in optically active dextro and levo forms and as a racemic mixture of these forms; the dextro form is obtained from the wood and bark of the camphor tree, the levo form is found in some essential oils, and the inactive form is

CAMARODONT DENTITION

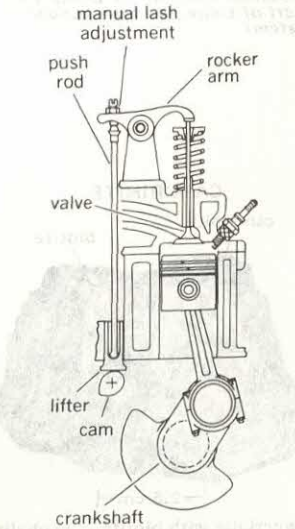


Jaw and tooth arrangement.

CAMBER ANGLE

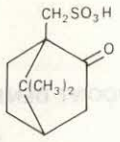
Front left wheel of an automobile viewed from driver's position. Angles are exaggerated.

CAM MECHANISM



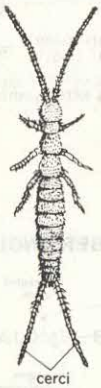
Cam mechanism for opening and closing valves in automotive engine. *(Texaco, Inc.)*

D-CAMPHOR-SULFONIC ACID



Structural formula.

CAMPODEIDAE

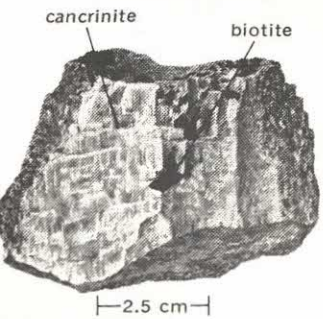


Campodea folsomi Silvestri, in the family Campodeidae.

CAN BUOY

A can buoy as a channel marker. *(Modified from Motor Boating's chart of United States buoyage system)*

CANCRINITE



Cancrinite with biotite in nepheline syenite rock, Bigwood Township, Ontario, Canada. *(Specimen from Department of Geology, Bryn Mawr College)*

obtained from an Asiatic chrysanthemum or made synthetically from certain terpenes.

camphoric acid [PHARM] $C_{10}H_{16}O_4$ A compound crystallizing in leaflets from water and in monoclinic prisms from alcohol; melting point is 186–188°C; used as a central respiratory stimulant. Also known as dextrocamphoric acid.

camphor oil [MATER] An essential oil obtained by steam distillation from the wood of the camphor tree (*Cinnamomum camphora*); used in the manufacture of camphor and safrole.

10-camphorsulfonic acid *See d*-camphorsulfonic acid.

***d*-camphorsulfonic acid** [ORG CHEM] $C_{10}H_{16}O_4S$ A compound crystallizing as prisms from ethyl acetate or glacial acetic acid; slightly soluble in glacial acetic acid and in ethyl acetate; used in the resolution of optically active isomers. Also known as 10-camphorsulfonic acid; camphostyl; camsylate; Reychler's acid.

camphor tree [BOT] *Cinnamomum camphora*. A plant of the laurel family (Lauraceae) in the order Magnoliales from which camphor is extracted.

camphostyl *See d*-camphorsulfonic acid.

Camp-Meidell condition [STAT] For determining the distribution of a set of numbers, the guideline stating that if the distribution has only one mode, if the mode is the same as the arithmetic mean, and if the frequencies decline continuously on both sides of the mode, then more than $1 - (1/2.25t^2)$ of any distribution will fall within the closed range $\bar{X} \pm t\sigma$, where t = number of items in a set, $\bar{X}$ = average, and σ = standard deviation.

Campodeidae [INV ZOO] A family of primarily wingless insects in the order Diplura which are most numerous in the Temperate Zone of the Northern Hemisphere.

camp-on system [COMMUN] A circuit control feature whereby a user attempting to establish a telephone call and encountering a busy station will hold the connection for a preset time, to the exclusion of other callers, in case the original conversation should terminate.

campos [ECOL] The savanna of South America.

cam profile [DES ENG] The shape of the contoured cam surface by means of which motion is communicated to the follower. Also known as pitch line.

camptonite [PETR] A lamprophyre containing pyroxene, sodic hornblende, and olivine as dark constituents and labradorite as the light constituent; sodic orthoclase may be present.

Campylobacter [MICROBIO] A genus of bacteria in the family Spirillaceae; spirally curved rods that are motile by means of a polar flagellum at one or both poles.

campylotropous [BOT] Having the ovule symmetrical but half inverted, with the micropyle and funiculus at right angles to each other.

camshaft [MECH ENG] A rotating shaft to which a cam is attached.

camsylate *See d*-camphorsulfonic acid.

can [DES ENG] A cylindrical metal vessel or container, usually with an open top or a removable cover. [NUCLEO] *See* jacket.

Canaceidae [INV ZOO] The seashore flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

Canada balsam [MATER] A transparent balsam useful for cementing together lenses and other optical elements because its index of refraction is in the same range as that of glass.

Canadian life zone [ECOL] The zone comprising the climate and biotic communities of the portion of the Boreal life zone exclusive of the Hudsonian and Arctic-Alpine zones.

Canadian Shield *See* Laurentian Shield.

canadol [MATER] A light petroleum naphtha fraction having a specific gravity slightly higher than petroleum ether; used as a solvent and an anesthetic.

canal [BIOL] A tubular duct or passage in bone or soft tissues. [CIV ENG] An artificial open waterway used for transportation, waterpower, or irrigation. [DES ENG] A groove on the underside of a corona. [GEOGR] A long, narrow arm of the sea extending far inland, between islands, or between islands and the mainland. [NUCLEO] A water-filled trench or conduit associated with a nuclear reactor, used for removing and sometimes storing radioactive objects taken from the reactor; the water acts as a shield against radiation.

canal boat [NAV ARCH] A long, narrow boat used on canals, with nearly vertical bow and stern giving it a large cargo capacity.

canal cell [BOT] One of the row of cells that make up the axial row within the neck of an archegonium.

canaliculate [BIOL] Having small channels, canals, or grooves.

canaliculus [HISTOL] **1.** One of the minute channels in bone radiating from a Haversian canal and connecting lacunae with each other and with the canal. **2.** A passage between the cells of the cell cords in the liver.

canalization [ENG] Any system of distribution canals or conduits for water, gas, electricity, or steam. [MED] Surgical method of wound drainage without tubes by forming channels. [PHYSIO] The formation of new channels in tissues, such as the formation of new blood vessels through a thrombus.

canal of Schlemm [ANAT] An irregular channel at the junction of the sclera and cornea in the eye that drains aqueous humor from the anterior chamber.

canal ray [ATOM PHYS] The name given in early gaseous discharge experiments to the particles passing through a hole or canal in the cathode; the ray comprises positive ions of the gas being used in the discharge.

canal valve [ANAT] The semilunar valve in the right atrium of the heart between the orifice of the inferior vena cava and the right atrioventricular orifice. Also known as eustachian valve.

cananga oil *See* ilang-ilang oil.

canard [AERO ENG] **1.** An aerodynamic vehicle in which horizontal surfaces used for trim and control are forward of the wing or main lifting surface. **2.** The horizontal trim and control surfaces in such an arrangement.

Canary Current [OCEANOGR] The prevailing southward flow of water along the northwestern coast of Africa.

canary-pox virus [VIROL] An avian poxvirus that causes canary pox, a disease closely related to fowl pox.

Canastotan [GEOL] Lower Upper Silurian geologic time.

canavanine [BIOCHEM $C_5H_{12}O_3N_4$ An amino acid found in the jack bean.

can buoy [NAV] Floating cylindrical unlighted buoy with a flat top, constructed of metal; depending on position, it may be painted black with or without an odd number on it, or painted with horizontal stripes.

Canc *See* Cancer.

cancellate [BIOL] Lattice-shaped. Also known as clathrate.

cancellation circuit [ELECTR] A circuit used in providing moving-target indication on a plan position indicator scope; cancels constant-amplitude fixed-target pulses by subtraction of successive pulse trains.

cancellation law [MATH] A rule which allows formal division by common factors in equal products, even in systems which have no division, as integral domains; $ab = ac$ implies that $b = c$.

cancellous [BIOL] Having a reticular or spongy structure.

cancellous bone [HISTOL] A form of bone near the ends of long bones having a cancellous matrix composed of rods, plates, or tubes; spaces are filled with marrow.

cancer [MED] Any malignant neoplasm, including carcinoma and sarcoma.

Cancer [ASTRON] A constellation with right ascension 9 hours, declination 20°N. Abbreviated Canc. Also known as Crab.

cancer eye [VET MED] A malignant epithelioma of the eye of cattle, common in regions of intense sunlight.

cancerphobia [PSYCH] An abnormal fear of acquiring cancer.

cancrinite [MINERAL] $Na_3CaAl_3Si_3O_{12}CO_3(OH)_2$ A feldspathoid tectosilicate occurring in hexagonal crystals in nepheline syenites, usually in compact or disseminated masses.

cancroid [MED] A squamous-cell carcinoma.

candela [OPTICS] A unit of luminous intensity, defined as $\frac{1}{60}$ of the luminous intensity per square centimeter of a blackbody radiator operating at the temperature of freezing platinum. Formerly known as candle. Also known as new candle.

candelilla wax [MATER] A wax obtained from the wax-coated stems of candelilla shrubs, especially *Euphorbia antisyphilitica;* used for varnishes and furniture and shoe polishes.

Candida [MYCOL] A genus of yeastlike, pathogenic imperfect fungi that produce very small mycelia.

Candida albicans [MYCOL] The fungus organism that causes thrush and other types of moniliasis. Also known as *Monilia albicans*.

candidiasis [MED] A fungus infection of the skin, lungs, mucous membranes, and viscera of humans caused by a species of *Candida*, usually *C. albicans*. Also known as moniliasis.
candite *See* ceylonite.
candle *See* candela.
Candlemas crack *See* Candlemas Eve winds.
Candlemas Eve winds [METEOROL] Heavy winds often occurring in Great Britain in February or March (Candlemas is February 2). Also known as Candlemas crack.
candlenut oil *See* lumbang oil.
candlepower [OPTICS] Luminous intensity expressed in candelas. Abbreviated cp.
cane [BOT] **1.** A hollow, usually slender, jointed stem, such as in sugarcane or the bamboo grasses. **2.** A stem growing directly from the base of the plant, as in most Rosaceae, such as blackberry and roses.
cane blight [PL PATH] A fungus disease affecting the canes of several bush fruits, such as currants and raspberries; caused by several species of fungi.
cane molasses [FOOD ENG] The heavy, residual syrup after the crystallization of cane syrup.
canescent [BOT] Having a grayish epidermal covering of short hairs.
cane sugar [ORG CHEM] Sucrose derived from sugarcane.
Canes Venatici [ASTRON] A northern constellation with right ascension 13 hours, declination 40°N, between Ursa Major and Boötes. Abbreviated CVn. Also known as Hunting Dogs.
canfieldite [MINERAL] Ag_8SnS_6 A black mineral of the argyrodite series consisting of silver thiostannate, with a specific gravity of 6.28; found in Germany and Bolivia.
can hoisting system [MIN ENG] A hoisting method used in shallow lead and zinc mines in which cans are loaded below and hoisted to the surface where they are capsized and the load discharged; the operation is controlled at the top of the shaft.
Canidae [VERT ZOO] A family of carnivorous mammals in the superfamily Canoidea, including dogs and their allies.
canine [ANAT] A conical tooth, such as one located between the lateral incisor and first premolar in humans and many other mammals. Also known as cuspid. [VERT ZOO] Pertaining or related to dogs or to the family Canidae.
canine distemper [VET MED] A pantropic virus disease occurring among animals of the family Canidae.
Canis [VERT ZOO] The type genus of the dog family (Canidae), including dogs, wolves, and jackals.
Canis familiaris [VERT ZOO] The scientific name for all breeds of domestic dogs.
Canis Major [ASTRON] A constellation with right ascension 7 hours, declination 20°S. Abbreviated CMa. Also known as Greater Dog.
α Canis Majoris *See* Sirius.
ϵ Canis Majoris *See* Adhara.
Canis Minor [ASTRON] A constellation with right ascension 8 hours, declination 5°N. Abbreviated CMi. Also known as Lesser Dog.
α Canis Minoris *See* Procyon.
canister [ORD] A special short-range, antipersonnel projectile designed to be fired from rifled guns.
canker [PL PATH] An area of necrosis on a woody stem resulting in shrinkage and cracking followed by the formation of callus tissue, ultimately killing the stem. [VET MED] A localized chronic inflammation of the ear in cats, dogs, foxes, ferrets, and others caused by the mite *Otodectes cynotis*.
canker sore [MED] Small ulceration of the mucous membrane of the mouth, sometimes caused by a food allergy.
canker stain [PL PATH] A fungus disease of plane trees caused by *Endoconidiophora fimbriata platani* and characterized by bluish-black or reddish-brown discolorations beneath blackened cankers on the trunk and sometimes the branches.
cankerworm [INV ZOO] Any of several lepidopteran insect larvae in the family Geometridae which cause severe plant damage by feeding on buds and foliage.
Cannabaceae [BOT] A family of dicotyledonous herbs in the order Urticales, including Indian hemp (*Cannabis sativa*) and characterized by erect anthers, two styles or style branches, and the lack of milky juice.
cannabidiol [ORG CHEM] $C_{21}H_{28}(OH)_2$ A constituent of cannabis which, upon isomerization to a tetrahydrocannabinol, has some of the physiologic activity of marijuana.
cannabinol [ORG CHEM] $C_{21}H_{26}O_2$ A physiologically inactive phenol formed by spontaneous dehydrogenation of tetrahydrocannabinol from cannabis.
Cannabis [BOT] A genus of tall annual herbs in the family Cannabaceae having erect stems, leaves with three to seven elongate leaflets, and pistillate flowers in spikes along the stem.
cannabiscetin *See* myricetin.
cannabism [MED] Poisoning resulting from excessive or habitual use of cannabis.
Cannabis sativa [BOT] Indian hemp, the source of a commercial fiber, hashish, and marijuana.
Cannaceae [BOT] A family of monocotyledonous plants in the order Zingiberales characterized by one functional stamen, a single functional pollen sac in the stamen, mucilage canals in the stem, and numerous ovules in each of the one to three locules.
canned motor [MECH ENG] A motor enclosed within a casing along with the driven element (that is, a pump) so that the motor bearings are lubricated by the same liquid that is being pumped.
canned program [COMPUT SCI] A program which has been written to solve a particular problem, is available to users of a computer system, and is usually fixed in form and capable of little or no modification.
canned pump [MECH ENG] A watertight pump that can operate under water.
cannel coal [GEOL] A fine-textured, highly volatile bituminous coal distinguished by a greasy luster and blocky, conchoidal fracture; burns with a steady luminous flame. Also known as cannelite.
cannelite *See* cannel coal.
canneloid [GEOL] **1.** Coal that resembles cannel coal. **2.** Coal intermediate between bituminous and cannel. **3.** Durain laminae in banded coal. **4.** Cannel coal of anthracite or semianthracite rank.
cannel shale [GEOL] A black shale formed by the accumulation of an aquatic ooze rich in bituminous organic matter in association with inorganic materials such as silt and clay.
cannelure [ORD] **1.** A groove in a bullet which contains a lubricant, or into which the cartridge is crimped. **2.** A groove in a cartridge case providing a purchase for the extractor. **3.** A ringlike groove for locking the jacket of an armor-piercing bullet to the core. **4.** A ringlike groove in the rotating band of a gun projectile to lessen the resistance offered to the gun rifling and to prevent fringing grooves.
cannibalize [ENG] To remove parts from one piece of equipment and use them to replace like, defective parts in a similar piece of equipment in order to keep the latter operational.
canning [FOOD ENG] Packing and preserving of food in cans or jars subjected to sterilizing temperatures. [NUCLEO] Placing a jacket around a slug of uranium before inserting the slug in a nuclear reactor.
Cannizzaro reaction [ORG CHEM] The reaction in which aldehydes that do not have a hydrogen attached to the carbon adjacent to the carbonyl group, upon encountering strong alkali, readily form an alcohol and an acid salt.
cannon [ORD] A complete assembly which consists of a tube and a breech mechanism with a firing mechanism or base cap and which is a component of a gun, howitzer, or mortar; may include muzzle appendages; the term is generally limited to calibers greater than 1 inch (2.5 centimeters).
cannonball [ORD] A missile that is spheroidal in shape and fired from a cannon.
cannon cradle [ORD] A portion of a cannon assembly which is designed to support the cannon and allows the cannon to recoil and counter-recoil.
cannon pinion [HOROL] A tube that holds the minute hand at one end and meshes with the minute wheel of a timepiece on the other end.
cannon primer [ORD] Primer used with separate-loading ammunition.
cannula [MED] A small tube that can be inserted into a body cavity, duct, or vessel.
cannular combustion chambers [AERO ENG] The separate combustion chambers in an aircraft gas turbine. Also known as can-type combustors.
Canoidea [VERT ZOO] A superfamily belonging to the mammalian order Carnivora, including all dogs and doglike species such as seals, bears, and weasels.
canonical [SCI TECH] Relating to the simplest or most sig-

CANNACEAE

Flowers of a cultivated *Canna* of the order Zingiberales. These plants have been so extensively hybridized that most of them can no longer be identified with any of the wild species. *(Photograph by Luoma Photos, from National Audubon Society)*

nificant form of a general function, equation, statement, rule, or expression.

canonical coordinates [MATH] Any set of generalized coordinates of a system together with their conjugate momenta.

canonical correlation [STAT] The maximum correlation between linear functions of two sets of random variables when specific restrictions are imposed upon the coefficients of the linear functions of the two sets.

canonical ensemble [STAT MECH] A hypothetical collection of systems of particles used to describe an actual individual system which is in thermal contact with a heat reservoir but is not allowed to exchange particles with its environment.

canonical equations of motion *See* Hamilton's equations of motion.

canonical form [CONT SYS] A specific type of dynamical system representation in which the associated matrices possess specific row-column structures. [ORG CHEM] A resonance structure for a cyclic compound in which the bonds do not intersect. [SCI TECH] A particularly clean and simple representation which usually follows or satisfies a general rule.

canonically conjugate variable [MECH] A generalized coordinate and its conjugate momentum.

canonical momentum *See* conjugate momentum.

canonical time unit [ASTRON] For geocentric orbits, the time required by a hypothetical satellite to move one radian in a circular orbit of the earth's equatorial radius, that is, 13.447052 minutes.

canonical transformation [MATH] Any function which has a standard form, depending on the context. [MECH] A transformation which occurs among the coordinates and momenta describing the state of a classical dynamical system and which leaves the form of Hamilton's equations of motion unchanged. Also known as contact transformation.

Canopus [ASTRON] A star that is 180 light-years from the sun; spectral classification F0Ia. Also known as α Carinae.

canopy [AERO ENG] **1.** The umbrellalike part of a parachute which acts as its main supporting surface. **2.** The overhead, transparent enclosure of an aircraft cockpit.

cant [ORD] The leaning or tilt of an object; especially, the sidewise tilt of a gun.

cantala [BOT] A fiber produced from agave (*Agave cantala*) leaves; used to make twine. Also known as Cebu maguey; maguey; Manila maguey.

cantaloupe [BOT] The fruit (pepo) of *Cucumis malo*, a small, distinctly netted, round to oval muskmelon of the family Cucurbitaceae in the order Violales.

cant body [NAV ARCH] The part of a ship's body where the frames are set at an angle to the keel to form the stern and bow.

Canterbury northwester [METEOROL] A strong northwest foehn descending the New Zealand Alps onto the Canterbury plains of South Island, New Zealand.

cant file [DES ENG] A fine-tapered file with a triangular cross section, used for sharpening saw teeth.

cantheriasis [MED] Infection or disease caused by coleopteran insects or their larvae.

Cantharidae [INV ZOO] The soldier beetles, a family of coleopteran insects in the superfamily Cantharoidea.

cantharides camphor *See* cantharidin.

cantharidin [ORG CHEM] $C_{10}H_{12}O_4$ Colorless crystals that melt at 218°C; slightly soluble in acetone, chloroform, alcohol, and water; used in veterinary medicine. Also known as cantharides camphor.

Cantharoidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.

cant hook [DES ENG] A lever with a hooklike attachment at one end, used in lumbering.

canthus [ANAT] Either of the two angles formed by the junction of the eyelids, designated outer or lateral, and inner or medial.

cantilever [ENG] A beam or member securely fixed at one end and hanging free at the other end.

cantilever arch [ARCH] An arch supported by flat projections on opposing walls.

cantilever bridge [CIV ENG] A fixed bridge consisting of two spans projecting toward each other and joined at their ends by a suspended simple span.

cantilever footing [CIV ENG] A footing used to carry a load from two columns, with one column and one end of the footing placed against a building line or exterior wall.

cantilever retaining wall [CIV ENG] A type of wall formed of three cantilever beams: stem, toe projection, and heel projection.

cantilever spring [MECH ENG] A flat spring supported at one end and holding a load at or near the other end.

cantilever vibration [MECH] Transverse oscillatory motion of a body fixed at one end.

canting [MECH] Displacing the free end of a beam which is fixed at one end by subjecting it to a sideways force which is just short of that required to cause fracture.

canton crepe [TEXT] Thick, slightly ribbed crepe, originally made of silk in Canton, China.

Cantor diagonal process [MATH] A technique of proving statements about infinite sequences, each of whose terms is an infinite sequence by operation on the nth term of the nth sequence for each n; used to prove the uncountability of the real numbers.

Cantor function [MATH] A real-valued nondecreasing continuous function defined on the closed interval [0,1] which maps the Cantor ternary set onto the interval [0,1].

Cantor ternary set [MATH] A perfect, uncountable, totally disconnected subset of the real numbers having Lebesgue measure zero; it consists of all numbers between 0 and 1 (inclusive) with ternary representations containing no ones.

Cantor theorem [MATH] A theorem that there is no one-to-one correspondence between a set and the collection of its subsets.

cant strip [BUILD] **1.** A strip placed along the angle between a wall and a roof so that the roofing will not bend sharply. **2.** A strip placed under the edge of the lowest row of tiles on a roof to give them the same slope as the other tiles.

can-type combustors *See* cannular combustion chambers.

canvas [TEXT] A firm, closely woven fabric of plain weave made principally from hemp, but also from flax, jute, cotton, or a blend of fibers.

canvas duck [TEXT] A lightweight cotton or linen cloth; the term is occasionally used for heavier canvases as well.

canyon [GEOGR] A chasm, gorge, or ravine cut in the surface of the earth by running water; the sides are steep and form cliffs.

canyon bench [GEOL] A steplike level of hard strata in the walls of deep valleys in regions of horizontal strata.

canyon fill [GEOL] Loose, unconsolidated material which fills a canyon to a depth of 50 feet (15 meters) or more during periods between great floods.

canyon wind [METEOROL] Also known as gorge wind. **1.** The mountain wind of a canyon; that is, the nighttime down-canyon flow of air caused by cooling at the canyon walls. **2.** Any wind modified by being forced to flow through a canyon or gorge; its speed may be increased as a jet-effect wind, and its direction is rigidly controlled.

caoutchouc [MATER] Formerly, crude rubber which had been cured over a fire into a solid, dark mass for shipment.

cap [ENG] A detonating or blasting cap. [GEN] In many eukaryotic messenger ribonucleic acids, the structure at the 5′ end consisting of 7′-methyl-guanosine-pppX, where X is the first nucleotide encoded in the deoxyribonucleic acid; it is added posttranscriptionally. [MIN ENG] **1.** A piece of timber placed on top of a prop or post in a mine. **2.** The horizontal section of a set of timber that is used as a support in a mine roadway.

Cap *See* Capricornus.

capacitance [ELEC] The ratio of the charge on one of the conductors of a capacitor (there being an equal and opposite charge on the other conductor) to the potential difference between the conductors. Symbolized C. Formerly known as capacity.

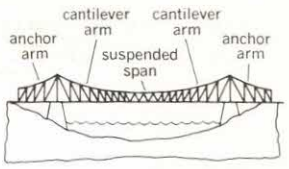
capacitance altimeter [ENG] An absolute altimeter which determines height of an aircraft aboveground by measuring the variations in capacitance between two conductors on the aircraft when the ground is near enough to act as a third conductor.

capacitance box [ELEC] An assembly of capacitors and switches which permits adjustment of the capacitance existing at the terminals in nominally uniform steps, from a minimum value near zero to the maximum which exists when all the capacitors are connected in parallel.

capacitance bridge [ELEC] A bridge for comparing two capacitances, such as a Schering bridge.

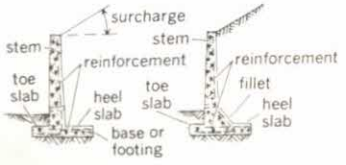
capacitance level indicator [ENG] A level indicator in which the material being monitored serves as the dielectric of a

CANTILEVER BRIDGE



Drawing of a cantilever bridge.

CANTILEVER RETAINING WALL



Cantilever walls, showing the parts.

capacitor formed by a metal tank and an insulated electrode mounted vertically in the tank.

capacitance meter [ENG] An instrument used to measure capacitance values of capacitors or of circuits containing capacitance.

capacitance-operated intrusion detector [ENG] A boundary alarm system in which the approach of an intruder to an antenna wire encircling the protected area a few feet above ground changes the antenna-ground capacitance and sets off the alarm.

capacitance relay [ELECTR] An electronic relay that responds to a small change in capacitance, such as that created by bringing a hand near a pickup wire or plate.

capacitance standard *See* standard capacitor.

capacitive coupling [ELEC] Use of a capacitor to transfer energy from one circuit to another.

capacitive diaphragm [ELECTROMAG] A resonant window used in a waveguide to provide the equivalent of capacitive reactance at the frequency being transmitted.

capacitive-discharge ignition [ELECTR] An automotive ignition system in which energy is stored in a capacitor and discharged across the gap of a spark plug through a step-up pulse transformer and distributor each time a silicon controlled rectifier is triggered.

capacitive-discharge pilot light [ELECTR] An electronic ignition system, operating off an alternating-current power line or battery power supply, that produces a spark for lighting a gas flame.

capacitive divider [ELEC] Two or more capacitors placed in series across a source, making available a portion of the source voltage across each capacitor; the voltage across each capacitor will be inversely proportional to its capacitance.

capacitive feedback [ELECTR] Process of returning part of the energy in the plate (or output) circuit of a vacuum tube (or other device) to the grid (or input) circuit by means of a capacitance common to both circuits.

capacitive load [ELECTROMAG] A load in which the capacitive reactance exceeds the inductive reactance; the load draws a leading current.

capacitive post [ELECTROMAG] Metal post or screw extending across a waveguide at right angles to the E field, to provide capacitive susceptance in parallel with the waveguide for tuning or matching purposes.

capacitive pressure transducer [ENG] A measurement device in which variations in pressure upon a capacitive element proportionately change the element's capacitive rating and thus the strength of the measured electric signal from the device.

capacitive reactance [ELECTROMAG] Reactance due to the capacitance of a capacitor or circuit, equal to the inverse of the product of the capacitance and the angular frequency.

capacitive tuning [ELECTR] Tuning involving use of a variable capacitor.

capacitive window [ELECTROMAG] Conducting diaphragm extending into a waveguide from one or both sidewalls, producing the effect of a capacitive susceptance in parallel with the waveguide.

capacitor [ELEC] A device which consists essentially of two conductors (such as parallel metal plates) insulated from each other by a dielectric and which introduces capacitance into a circuit, stores electrical energy, blocks the flow of direct current, and permits the flow of alternating current to a degree dependent on the capacitor's capacitance and the current frequency. Symbolized C. Also known as condenser; electrical condenser.

capacitor antenna [ELECTROMAG] Antenna consisting of two conductors or systems of conductors, the essential characteristic of which is its capacitance. Also known as condenser antenna.

capacitor bank [ELEC] A number of capacitors connected in series or in parallel.

capacitor box [ELECTR] A box-shaped structure in which a capacitor is submerged in a heat-absorbing medium, usually water. Also known as condenser box.

capacitor color code [ELEC] A method of marking the value on a capacitor by means of dots or bands of colors as specified in the Electronic Industry Association color code.

capacitor hydrophone [ENG ACOUS] A capacitor microphone that responds to waterborne sound waves.

capacitor-input filter [ELECTR] A power-supply filter in which a shunt capacitor is the first element after the rectifier.

capacitor loudspeaker *See* electrostatic loudspeaker.

capacitor microphone [ENG ACOUS] A microphone consisting essentially of a flexible metal diaphragm and a rigid metal plate that together form a two-plate air capacitor; sound waves set the diaphragm in vibration, producing capacitance variations that are converted into audio-frequency signals by a suitable amplifier circuit. Also known as condenser microphone; electrostatic microphone.

capacitor motor [ELEC] **1.** A single-phase induction motor having a main winding connected directly to a source of alternating-current power and an auxiliary winding connected in series with a capacitor to the source of ac power. **2.** *See* capacitor-start motor.

capacitor pickup [ENG ACOUS] A phonograph pickup in which movements of the stylus in a record groove cause variations in the capacitance of the pickup.

capacitor-resistor unit *See* rescap.

capacitor-start motor [ELEC] A capacitor motor in which the capacitor is in the circuit only during the starting period; the capacitor and its auxiliary winding are disconnected automatically by a centrifugal switch or other device when the motor reaches a predetermined speed. Also known as capacitor motor.

capacitor start-run motor *See* permanent-split capacitor motor.

capacity [ANALY CHEM] In chromatography, a measurement used in ion-exchange systems to express the adsorption ability of the ion-exchange materials. [COMPUT SCI] *See* storage capacity. [ELEC] *See* capacitance. [SCI TECH] Volume, especially in reference to merchandise or containers thereof.

capacity cell [ELEC] **1.** Capacitance-type device used to measure the dielectric constants of gases, liquids, or solids. **2.** Capacitance-type device used to monitor certain composition changes in flowing streams.

capacity correction [ENG] The correction applied to a mercury barometer with a nonadjustable cistern in order to compensate for the change in the level of the cistern as the atmospheric pressure changes.

capacity factor *See* plant factor.

capacity of the wind [GEOL] The total weight of airborne particles (soil and rock) of given size, shape, and specific gravity, which can be carried in 1 cubic mile (4.17 cubic kilometers) of wind blowing at a given speed.

cap cloud [METEOROL] An approximately stationary cloud, or standing cloud, on or hovering above an isolated mountain peak; formed by the cooling and condensation of humid air forced up over the peak. Also known as cloud cap.

cap crimper [ENG] A tool resembling a pliers that is used to press the open end of a blasting cap onto the safety fuse before placing the cap in the primer.

cape [GEOGR] A prominent point of land jutting into a body of water. Also known as head; headland; mull; naze; ness; point; promontory.

cape chisel [DES ENG] A chisel that tapers to a flat, narrow cutting end; used to cut flat grooves.

cape doctor [METEOROL] The strong southeast wind which blows on the South African coast.

cape foot [MECH] A unit of length equal to 1.033 feet or to 0.3148584 meter.

Cape Horn Current [OCEANOGR] That part of the west wind drift flowing eastward in the immediate vicinity of Cape Horn, and then curving northeastward to continue as the Falkland Current.

Capella [ASTRON] A star that is 45 light-years from the sun; spectral classification G0IIIp. Also known as α Aurigae.

Capell fan [MIN ENG] A centrifugal type of mine shaft fan.

caper [FOOD ENG] The buds and berries of the caper plant *(Capparis spinosa)* pickled and used as a condiment.

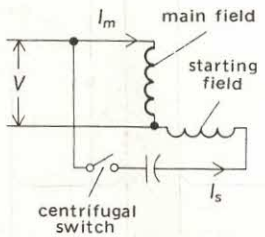
capillarity [FL MECH] The action by which the surface of a liquid where it contacts a solid is elevated or depressed, because of the relative attraction of the molecules of the liquid for each other and for those of the solid. Also known as capillary action.

capillarity correction [ENG] As applied to a mercury barometer, that part of the instrument correction which is required by the shape of the meniscus of the mercury.

capillaroscope [MED] A microscope used for diagnostic examination of the cutaneous capillaries, as in the nail beds and conjunctiva.

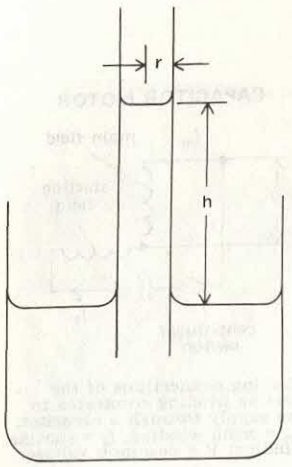
capillary [ANAT] The smallest vessel of both the circulatory

CAPACITOR MOTOR



Winding connections of the starting winding connected to the supply through a capacitor. I_m = main winding; I_s = starting winding; V = common voltage.

CAPILLARY TUBE

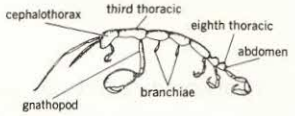


Rise of liquid to a height h in a capillary tube whose radius is r.

CAPITELLIDAE

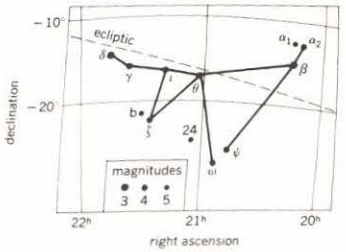
Left lateral view of *Capitomastus*, a genus of Capitellidae.

CAPRELLIDEA



Caprella grandimana, a caprellid.

CAPRICORNUS



Line pattern of constellation Capricornus. Grid lines represent coordinates of the sky. Apparent brightness, or magnitude, of stars is shown by size of dots, which are graded by appropriate numbers as indicated.

and lymphatic systems; the walls are composed of a single cell layer.

capillary action *See* capillarity.

capillary angioma *See* hemangioma.

capillary attraction [FL MECH] The force of adhesion existing between a solid and a liquid in capillarity.

capillary bed [ANAT] The capillaries, collectively, of a given area or organ.

capillary collector [ENG] An instrument for collecting liquid water from the atmosphere; the collecting head is fabricated of a porous material having a pore size of the order of 30 micrometers; the pressure difference across the water-air interface prevents air from entering the capillary system while allowing free flow of water.

capillary condensation [PHYS CHEM] Condensation of an adsorbed vapor within the pores of the adsorbate.

capillary control [PETRO ENG] Discarded theory of reservoir oil flow to a well hole through capillary pores; it attributed flow resistance to gas bubbles within the capillaries.

capillary depression [FL MECH] The depression of the meniscus of a liquid contained in a tube where the liquid does not wet the walls of the container, as in a mercury barometer; the meniscus has a convex shape, resulting in a depression.

capillary drying [ENG] Progressive removal of moisture from a porous solid mass by surface evaporation followed by capillary movement of more moisture to the drying surface from the moist inner region, until the surface and core stabilize at the same moisture concentration.

capillary ejecta *See* Pele's hair.

capillary electrometer [ENG] An electrometer designed to measure a small potential difference between mercury and an electrolytic solution in a capillary tube by measuring the effect of this potential difference on the surface tension between the liquids. Also known as Lippmann electrometer.

capillary equilibrium method [PETRO ENG] Test method to predict oil and gas flow through an oil reservoir core by dethrottling the flow to hold capillary flow in equilibrium between oil and gas within the reservoir.

capillary fringe [HYD] The lower subdivision of the zone of aeration that overlies the zone of saturation and in which the pressure of water in the interstices is lower than atmospheric.

capillary gas chromatography [ANALY CHEM] A highly efficient type of gas chromatography in which the gaseous sample passes through capillary tubes with internal diameters between 0.2 and 0.5 millimeter and lengths up to 100 meters, and adsorption takes place on a medium that is spread on the inner walls of these tubes.

capillary migration [HYD] Movement of water produced by the force of molecular attraction between rock material and the water.

capillary pressure [FL MECH] The difference in pressure across the interface of two immiscible fluid phases. [PHYSIO] Pressure exerted by blood against capillary walls.

capillary pyrites *See* millerite.

capillary ripple *See* capillary wave.

capillary rise [FL MECH] The rise of a liquid in a capillary tube times the radius of the tube.

capillary tube [ENG] A tube sufficiently fine so that capillary attraction of a liquid into the tube is significant.

capillary viscometer [ENG] A long, narrow tube used to measure the laminar flow of fluids.

capillary water [HYD] Soil water held by capillarity as a continuous film around soil particles and in interstices between particles above the phreactic line.

capillary wave [FL MECH] **1.** A wave occurring at the interface between two fluids, such as the interface between air and water on oceans and lakes, in which the principal restoring force is controlled by surface tension. **2.** A water wave of less than 1.7 centimeters. Also known as capillary ripple; ripple.

capillitium [MYCOL] A network of threadlike tubes or filaments in which spores are embedded within sporangia of certain fungi, such as the slime molds.

capital [ARCH] The topmost part of a column.

capital amount factor [IND ENG] Any of 20 common compound interest formulas used to calculate the equivalent uniform annual cost of all cash flows.

capital budgeting [IND ENG] Planning the most effective use of resources to obtain the highest possible level of sustained profits.

capital expenditure [IND ENG] Money spent for long-term additions or improvements and charged to a capital assets account.

capital ship [NAV ARCH] A surface warship classified as major, for example, a battleship or aircraft carrier.

capitate [BIOL] Enlarged and swollen at the tip. [BOT] Forming a head, as certain flowers of the Compositae.

capitellate [BOT] **1.** Having a small knoblike termination. **2.** Grouped to form a capitulum.

Capitellidae [INV ZOO] A family of mud-swallowing annelid worms, sometimes called bloodworms, belonging to the Sedentaria.

capitellum [ANAT] A small head or rounded process of a bone.

Capitonidae [VERT ZOO] The barbets, a family of pantropical birds in the order Piciformes.

capitulum [BIOL] A rounded, knoblike, usually terminal proturberance on a structure. [BOT] One of the rounded cells on the manubrium in the antheridia of lichens belonging to the Caliciales.

cap lamp [MIN ENG] The lamp a miner wears on his safety hat or cap for illumination.

capon [AGR] A castrated male chicken.

Caponidae [INV ZOO] A family of arachnid arthropods in the order Araneida characterized by having tracheae instead of book lungs.

capon unit [BIOL] A unit for the standardization of androgens.

Capparaceae [BOT] A family of dicotyledonous herbs, shrubs, and trees in the order Capparales characterized by parietal placentation; hypogynous, mostly regular flowers; four to many stamens; and simple to trifoliate or palmately compound leaves.

Capparales [BOT] An order of dicotyledonous plants in the subclass Dilleniidae.

capped column [HYD] A form of ice crystal consisting of a hexagonal column with plate or stellar crystals (so-called caps) at its ends and sometimes at intermediate positions; the caps are perpendicular to the column.

capped fuse [ENG] A length of safety fuse with the cap or detonator crimped on before it is taken to the place of use.

capped steel [MET] Partially deoxidized steel cast in an open-top mold, which is capped to solidify the top metal and enforce internal pressure, resulting in a surface condition similar to that of rimming steel.

cappelenite [MINERAL] $(Ba,Ca,Na)(Y,La)_6B_6Si_{13}(O,OH)_{27}$ A greenish-brown hexagonal mineral consisting of a rare yttrium-barium borosilicate occurring in crystals.

cap piece [MIN ENG] A piece of wood fitted over a straight post or timber to provide more bearing surface.

capping [ENG] Preparation of a capped fuse. [GEOL] **1.** Consolidated barren rock overlying a mineral or ore deposit. **2.** *See* gossan. [MIN ENG] The attachment at the end of a winding rope. [PETRO ENG] **1.** The process of sealing or covering a borehole such as an oil or gas well. **2.** The material or device used to seal or cover a borehole.

capraldehyde *See* decyl aldehyde.

caprate [ORG CHEM] Any of the salts of capric acid, containing the group $C_9H_{19}COO—$.

Caprellidae [INV ZOO] The skeleton shrimps, a family of slender, cylindrical amphipod crustaceans in the suborder Caprellidea.

Caprellidea [INV ZOO] A suborder of marine and brackish-water animals of the crustacean order Amphipoda.

capric acid [ORG CHEM] $CH_3(CH_2)_8COOH$ A fatty acid found in oils and animal fats. Also known as *n*-decanoic acid; decatoic acid; *n*-decoic acid; decyclic acid; octylacetic acid.

capric aldehyde *See* decyl aldehyde.

capric anhydride [ORG CHEM] $(CH_3(CH_2)_8CO)_2O$ White crystals that are insoluble in water; used as a chemical intermediate.

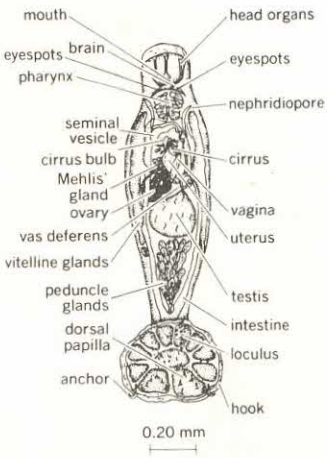
Capricornus [ASTRON] A constellation with right ascension 21 hours, declination 20°S. Abbreviated Cap. Also known as Sea Goat.

Caprifoliaceae [BOT] A family of dicotyledonous, mostly woody plants in the order Dipsacales, including elderberry and honeysuckle; characterized by distinct filaments and anthers, typically five stamens and five corolla lobes, more than one ovule per locule, and well-developed endosperm.

caprilydene *See* octyne.

Caprimulgidae [VERT ZOO] A family of birds in the order Caprimulgiformes, including the nightjars, or goatsuckers.
Caprimulgiformes [VERT ZOO] An order of nocturnal and crepuscular birds, including nightjars, potoos, and frogmouths.
capristor *See* rescap.
caproaldehyde *See* *n*-hexaldehyde.
caproamide [ORG CHEM] $CH_3(CH_2)_4CONH_2$ An amide, melting point 100–101°C; used as a chemical intermediate.
cap rock [GEOL] **1.** An overlying, generally impervious layer or stratum of rock that overlies an oil- or gas-bearing rock. **2.** Barren vein matter, or a pinch in a vein, supposed to overlie ore. **3.** A hard layer of rock, usually sandstone, a short distance above a coal seam. **4.** An impervious body of anhydrite and gypsum in a salt dome.
caproic acid [ORG CHEM] $CH_3(CH_2)_4COOH$ A colorless liquid fatty acid found in oils and animal fats; used in synthesizing pharmaceuticals and flavors. Also known as butylacetic acid; hexanoic acid; *n*-hexoic acid; *n*-hexylic acid; pentylformic acid.
caproic aldehyde *See* *n*-hexaldehyde.
caproic anhydride [ORG CHEM] $[CH_3(CH_2)_4COO]_2$ White crystals that are insoluble in water, melting point −40.6°C, boiling point 241–243°C.
caprolactam [ORG CHEM] $(CH_2)_5NH{\cdot}CO$ White flakes, melting point 68–69°C, made from cyclohexanone; used to make synthetic fiber, particularly nylon-6.
ϵ-caprolactone [ORG CHEM] $CH_2(CH_2)_4NHCO$ White crystals, used to make synthetic fibers, plastics, films, coatings, and plasticizers; its vapors or fine crystals are respiratory irritants.
capryaldehyde *See* octyl aldehyde.
caprylamide [ORG CHEM] $CH_3(CH_2)_6CONH_2$ An amine, melting point 105–110°C; decomposes above 200°C; used as a chemical intermediate.
capryl compounds [ORG CHEM] A misnomer for octyl compounds; that is, the term octyl halide is preferred for caprylic halides, and octanoic acid for caprylic acid.
1-caprylene *See* 1-octene.
caprylic acid [ORG CHEM] $C_8H_{16}O_2$ A liquid fatty acid occurring in butter, coconut oil, and other fats and oils. Also known as hexylacetic acid; *n*-octanoic acid; octylic acid.
caprylic anhydride [ORG CHEM] $[CH_3(CH_2)_6CO]_2O$ A white solid that melts at −1°C; used as a chemical intermediate.
caprylyl acetate *See* *n*-octyl acetate.
capsaicin [ORG CHEM] $C_{18}H_{27}O_3N$ A toxic material extracted from capsicum.
Capsaloidea [INV ZOO] A superfamily of ectoparasitic trematodes in the subclass Monogenea characterized by a sucker-shaped holdfast with anchors and hooks.
capsanthin [BIOCHEM] $C_{40}H_{58}IO_3$ Carmine-red carotenoid pigment occurring in paprika.
cap screw [DES ENG] A screw which passes through a clear hole in the part to be joined, screws into a threaded hole in the other part, and has a head which holds the parts together.
capsicum [BOT] The fruit of a plant of the genus *Capsicum*, especially *C. frutescens*, cultivated in southern India and the tropics; a strong irritant to mucous membranes and eyes.
capsid [INV ZOO] The name applied to all members of the family Miridae. [VIROL] The protein coat of a virus particle.
capsomere [VIROL] An individual protein subunit of a capsid.
capstan [ENG] A shaft which pulls magnetic tape through a machine at constant speed. [NAV ARCH] A rotating vertical spindle-mounted drum on which cable is wound for raising an anchor or other heavy weight.
capstan nut [DES ENG] A nut whose edge has several holes, in one of which a bar can be inserted for turning it.
capstan screw [DES ENG] A screw whose head has several radial holes, in one of which a bar can be inserted for turning it.
capstone [ARCH] A stone placed at the top of a stone arch.
capsular ligament [ANAT] A saclike ligament surrounding the articular cavity of a freely movable joint and attached to the bones.
capsulate [BIOL] Enclosed in a capsule.
capsule [ANAT] A membranous structure enclosing a body part or organ. [BOT] A closed structure bearing seeds or spores; it is dehiscent at maturity. [MICROBIO] A thick, mucous envelope, composed of polypeptide or carbohydrate, surrounding certain microorganisms. [PHARM] A soluble shell in which drugs are enclosed for oral administration.
captan [ORG CHEM] $C_9H_8O_2NSCl_3$ A buff to white solid with a melting point of 175°C; used as a fungicide for diseases of fruits, vegetables, and flowers. Also known as *cis-N* (trichloromethylthio)-4-cyclohexene-1,2-dicarboximide.
captive balloon [AERO ENG] A moored balloon, usually by steel cables.
captive fastener [DES ENG] A screw-type fastener that does not drop out after it has been unscrewed.
captive test [ENG] A hold-down test of a propulsion subsystem, rocket engine, or motor.
Captorhinomorpha [PALEON] An extinct subclass of primitive lizardlike reptiles in the order Cotylosauria.
capture [AERO ENG] The process in which a missile is taken under control by the guidance system. [ASTROPHYS] Of a central force field, as of a planet, to overcome by gravitational force the velocity of a passing body and bring the body under the control of the central force field, in some cases absorbing its mass. [GEOCHEM] In a crystal structure, the substitution of a trace element for a lower-valence common element. [HYD] The natural diversion of the headwaters of one stream into the channel of another stream having greater erosional activity and flowing at a lower level. Also known as piracy; river capture; river piracy; robbery; stream capture; stream piracy; stream robbery. [PHYS] A process in which an atomic or nuclear system acquires an additional particle; for example, the capture of electrons by positive ions, or capture of neutrons by nuclei.
capture area [ENG ACOUS] The effective area of the receiving surface of a hydrophone, or the available power of the acoustic energy divided by its equivalent plane-wave intensity.
capture cross section [NUC PHYS] The cross section that is effective for radiative capture.
capture effect [ELECTR] The effect wherein a strong frequency-modulation signal in an FM receiver completely suppresses a weaker signal on the same or nearly the same frequency.
capture ratio [COMMUN] A measure of the ability of a frequency-modulation tuner to reject the weaker of two stations that are on the same frequency; the lower the ratio in decibels of desired and undesired signals, the better the performance of the tuner.
capturing [ENG] The use of a torquer to restrain the spin axis of a gyro to a specified position relative to the spin reference axis.
capybara [VERT ZOO] *Hydrochoerus capybara*. An aquatic rodent (largest rodent in existence) found in South America and characterized by partly webbed feet, no tail, and coarse hair.
car *See* automobile.
Car *See* Carina.
Carabidae [INV ZOO] The ground beetles, a family of predatory coleopteran insects in the suborder Adephaga.
carabine [METEOROL] In France and Spain, a sudden and violent wind. Also known as brisa carabinera; brise carabinée.
Caracarinae [VERT ZOO] The caracaras, a subfamily of carrion-feeding birds in the order Falconiformes.
caracolite [MINERAL] A rare, colorless mineral occurring as crystalline incrustations, and consisting of a sulfate and chloride of sodium and lead.
Caradocian [GEOL] Lower Upper Ordovician geologic time.
caramel [MATER] A dark-brown mass formed by heating sugar in the presence of ammonium salts.
caranda wax [MATER] A wax similar to carnauba wax; obtained from the tropical palm caranda (*Copernicia australis*).
Carangidae [VERT ZOO] A family of perciform fishes in the suborder Percoidei, including jacks, scads, and pompanos.
carapace [GEOL] The upper normal limb of a fold having an almost horizontal axial plane. [INV ZOO] A dorsolateral, chitonous case covering the cephalothorax of many arthropods. [VERT ZOO] The bony, dorsal part of a turtle shell.
Carapidae [VERT ZOO] The pearlfishes, a family of sinuous, marine shore fishes in the order Gadiformes that live as commensals in the body cavity of holothurians.
carat [LAP] A unit of weight of gemstones, equal to 200 milligrams. Also known as metric carat.
carat count [LAP] The number of near-equal-size diamonds having a total weight of 1 carat.
carate *See* pinta.
Carathéodory outer measure [MATH] A positive, counta-

CAPSALOIDEA



Heterocotyle acetobactis Hargis, from the spotted eagle ray, ventral view.

CAPTORHINIMORPHA

Skull of *Captorhinus* in the subclass Captorhinimorpha. *(From E. H. Colbert, Evolution of the Vertebrates, Wiley, 1965)*

CARABIDAE

A drawing of a representative of the Carabidae. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

bly subadditive set function defined on the class of all subsets of a given set; used for defining measures.

Carathéodory's principle [THERMO] An expression of the second law of thermodynamics which says that in the neighborhood of any equilibrium state of a system, there are states which are not accessible by a reversible or irreversible adiabatic process. Also known as principle of inaccessibility.

caraway [BOT] *Carum carvi*. A white-flowered perennial herb of the family Umbelliferae; the fruit is used as a spice and flavoring agent.

caraway oil [MATER] A pale-yellow to colorless liquid that is slightly soluble in water; distilled from the dried fruit of the caraway plant (*Carum carvi*), the main ingredients being carvone and *d*-limonene; used in flavors, medicines, soaps, and perfumes. Also known as caraway seed oil; carui oil.

caraway seed oil *See* caraway oil.

carbachol [PHARM] $C_6H_{15}ClN_2O_2$ Hygroscopic, hard, prismatic crystals with a melting point of 200–203°C; soluble in water, methanol, and alcohol; used as a cholinergic drug in humans and parasympathomimetic drug in larger animals. Also known as carbamylcholine chloride; carbocholine; choline chloride carbamate.

carbamic acid [BIOCHEM] NH_2COOH An amino acid known for its salts, such as urea and carbamide. Also known as amidocarbonic acid; aminoformic acid.

carbamic acid β-hydroxyphenethyl ester *See* styramate.

carbamide *See* urea.

carbamide peroxide *See* urea peroxide.

carbamidine *See* guanidine.

carbamino [BIOCHEM] A compound formed by the combination of carbon dioxide with a free amino group in an amino acid or a protein.

carbamoyl [ORG CHEM] The radical NH_2CO, formed from carbamic acid.

carbamylcholine chloride *See* carbachol.

carbamylhydrazine hydrochloride *See* semicarbazide hydrochloride.

carbamyl phosphate [BIOCHEM] $NH_2COPO_4H_2$ The ester formed from reaction of phosphoric acid and carbamyl acid.

carbamylurea *See* biuret.

carbanilide [ORG CHEM] $(NHC_6H_5)CO(NHC_6H_5)$ Colorless crystals that are very slightly soluble in water, and dissolve in ether and alcohol; used in organic synthesis. Also known as diphenylurea.

carbanion [CHEM] One of the charged fragments which arise on heterolytic cleavage of a covalent bond involving carbon; the fragment carries an unshared pair of electrons and bears a negative charge.

carbaryl [ORG CHEM] $C_{12}H_{11}NO_2$ A colorless, crystalline compound with a melting point of 142°C; used as an insecticide for crops, forests, lawns, poultry, and pets. Also known as 1-napthylmethylcarbamate.

carbazide *See* carbodihydrazide.

carbazole [ORG CHEM] One of a group of organic heterocyclic compounds containing a dibenzopyrrole system. Also known as 9-azafluorene.

carbazotic acid *See* picric acid.

carbendazim *See* 2-(methoxycarbonylamino)benzimidazole.

carbene [ORG CHEM] A compound of carbon which exhibits two valences to a carbon atom; the two valence electrons are distributed in the same valence; an example is CH_2.

carbenium ion [ORG CHEM] A cation in which the charged atom is carbon; for example, R_2C^+, where R is an organic group.

carbenoid species [ORG CHEM] A species that is not a free carbene but has the characteristics of a carbene when participating in a chemical reaction.

carbide [INORG CHEM] A binary compound of carbon with an element more electropositive than carbon; carbon-hydrogen compounds are excluded. [MATER] A cemented or compacted mixture of powdered carbides of heavy metals forming a hard material used in metal-cutting tools. Also known as cemented carbide.

carbide lamp [MIN ENG] A lamp that is charged with calcium carbide and water to form acetylene, which it burns.

carbide miner [MIN ENG] An automated coal mining machine; the unit is a continuous miner controlled from outside the coal seam.

carbide nuclear fuel [NUCLEO] A nuclear reactor fuel which is mixed with carbon compounds and a metal to give structural strength and oxidation resistance.

carbide tool [DES ENG] A cutting tool made of tungsten, titanium, or tantalum carbides, having high heat and wear resistance.

carbine [ORD] A rifle of short length and light weight.

carbinol [ORG CHEM] **1.** A primary alcohol with general formula RCH_2OH. **2.** The radical CH_2OH of primary alcohols. **3.** An alcohol derived from methanol.

carbinyl *See* methyl.

carbobenzoxychloride *See* benzyl chloroformate.

carbocation [ORG CHEM] A positively charged ion whose charge resides, at least in part, on a carbon atom or group of carbon atoms.

carbocholine *See* carbachol.

carbocyclic compound [ORG CHEM] A compound with a homocyclic ring in which all the ring atoms are carbon, for example, benzene.

carbodicyclohexylimide *See* dicyclohexylcarbodiimide.

carbodihydrazide [ORG CHEM] $CO(NHNH_2)_2$ Colorless crystals that melt at 154°C; very soluble in alcohol and water; used in photographic chemicals. Also known as carbazide.

carbodiimide [ORG CHEM] **1.** HN=C=NH An unstable tautomer of cyanamide. **2.** Any compound with the general formula RN=C=NR which is a formal derivative of carbodiimide.

carbofuran [ORG CHEM] $C_{12}H_{15}NO_3$ A white solid with a melting point of 150–152°C; soluble in water; used as an insecticide, miticide, and nematicide in many crops. Also known as 3,3-dihydro-2,2-dimethyl-7-benzofuranyl methylcarbamate.

carbohumin *See* ulmin.

carbohydrase [BIOCHEM] Any enzyme that catalyzes the hydrolysis of disaccharides and more complex carbohydrates.

carbohydrate [BIOCHEM] Any of the group of organic compounds composed of carbon, hydrogen, and oxygen, including sugars, starches, and celluloses.

carbohydrate gum [ORG CHEM] A polysaccharide which produces a gel of a viscous solution when it is dispersed in water at low concentrations; examples are agar, guar gum, xanthan gum, gum arabic, and sodium carboxymethyl cellulose.

carbohydrate metabolism [BIOCHEM] The sum of the biochemical and physiological processes involved in the breakdown and synthesis of simple sugars, oligosaccharides, and polysaccharides and in the transport of sugar across cell membranes.

carbolfuchsin [MATER] A solution of fuchsin, phenol, alcohol, and water; used as a stain in the identification of bacteria.

carbolic acid *See* phenol.

carbometer [ENG] An instrument for measuring the carbon content of steel by measuring magnetic properties of the steel in a known magnetic field.

carbomycin [MICROBIO] $C_{42}H_{67}O_{16}N$ Colorless, crystalline antibiotic produced by *Streptomyces halstedii;* principally active against gram-positive bacteria.

carbomycin B [MICROBIO] $C_{42}H_{67}O_{15}N$ A colorless, crystalline antibiotic differing from carbomycin only in having one less oxygen atom in its molecule.

carbon [CHEM] A nonmetallic chemical element, symbol C, atomic number 6, atomic weight 12.01115; occurs freely as diamond, graphite, and coal.

carbon-12 [NUC PHYS] A stable isotope of carbon with mass number of 12, forming about 98.9% of natural carbon; used as the basis of the newer scale of atomic masses, having an atomic mass of exactly 12u (relative nuclidic mass unit) by definition.

carbon-13 [NUC PHYS] A heavy isotope of carbon having a mass number of 13.

carbon-14 [NUC PHYS] A naturally occurring radioisotope of carbon having a mass number of 14 and half-life of 5780 years; used in radiocarbon dating and in the elucidation of the metabolic path of carbon in photosynthesis. Also known as radiocarbon.

carbonaceous [SCI TECH] Rélating to or composed of carbon.

carbonaceous meteorite [GEOL] A meteorite yielding relatively large amounts of carbon when it is analyzed.

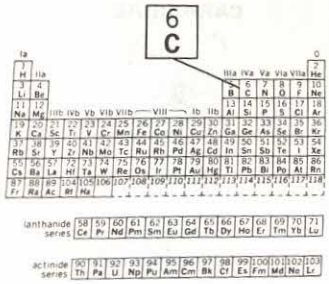
carbonaceous rock [PETR] Rock with carbonaceous material included.

carbonaceous sandstone [PETR] Sandstone rich in carbon.

carbonaceous shale [GEOL] Shale rich in carbon.

CARBON

6
C



Periodic table of the chemical elements showing the position of carbon.

carbonado [MINERAL] A dark-colored, fine-grained diamond aggregate; valuable for toughness and absence of cleavage planes. Also known as black diamond; carbon diamond.

carbon arc [ELEC] An electric arc between two electrodes, at least one of which is made of carbon; used in welding and high-intensity lamps, such as in searchlights and photography lamps.

carbon arc brazing [MET] Brazing base metals by heating with an electric arc between a carbon electrode and the workpiece.

carbon arc cutting [MET] An arc cutting process which generates heat in order to melt a base metal with a carbon electrode to eventually produce a cut.

carbon arc lamp [ELEC] An arc lamp in which an electric current flows between two electrodes of pure carbon, with incandescence at one or both electrodes and some light from the luminescence of the arc.

carbon arc welding [MET] Welding by maintaining an electric arc between a nonconsumable carbon electrode and the work.

carbonate [CHEM] **1.** An ester or salt of carbonic acid. **2.** A compound containing the carbonate (CO_3^{2-}) radical. **3.** Containing carbonates.

carbonate cycle [GEOCHEM] The biogeochemical carbonate pathways, involving the conversion of carbonate to CO_2 and HCO_3, the solution and deposition of carbonate, and the metabolism and regeneration of it in biological systems.

carbonate mineral [MINERAL] A mineral containing considerable amounts of carbonates.

carbonate reservoir [GEOL] An underground oil or gas trap formed in reefs, clastic limestones, chemical limestones, or dolomite.

carbonate rock [PETR] A rock composed principally of carbonates, especially if at least 50% by weight.

carbonate spring [HYD] A type of spring containing dissolved carbon dioxide gas.

carbonation [CHEM] Conversion to a carbonate. [CHEM ENG] The process by which a fluid, especially a beverage, is impregnated with carbon dioxide. [GEOCHEM] A process of chemical weathering whereby minerals that contain soda, lime, potash, or basic oxides are changed to carbonates by the carbonic acid in air or water.

carbonatite [PETR] **1.** Intrusive carbonate rock associated with alkaline igneous intrusive activity. **2.** A sedimentary rock composed of at least 80% calcium or magnesium.

carbon bit [DES ENG] A diamond bit in which the cutting medium is inset carbon.

carbon black [CHEM] **1.** An amorphous form of carbon produced commercially by thermal or oxidative decomposition of hydrocarbons and used principally in rubber goods, pigments, and printer's ink. **2.** *See* gas black.

carbon brush [ELEC] A rod made of carbon that bears against a commutator, collector ring, or slip ring to provide passage for the electric current from a dynamo through an outside circuit or for an external current through a motor.

carbon burning [NUC PHYS] The synthesis of nuclei in stars through reactions involving the fusion of two carbon-12 nuclei at temperatures of about 5×10^8 K.

carbon burning rate [CHEM ENG] The weight of carbon burned per unit time from the catalytic-cracking catalyst in the regenerator.

carbon button *See* button.

carbon cycle [GEOCHEM] The cycle of carbon in the biosphere, in which plants convert carbon dioxide to organic compounds that are consumed by plants and animals, and the carbon is returned to the biosphere in the form of inorganic compounds by processes of respiration and decay. [NUC PHYS] *See* carbon-nitrogen cycle.

carbon-14 dating [NUCLEO] Determining the approximate age of organic material associated with archeological or fossil artifacts by measuring the rate of radiation of the carbon-14 isotope. Also known as radioactive carbon dating; radiocarbon dating.

carbon diamond *See* carbonado.

carbon dioxide [INORG CHEM] CO_2 A colorless, odorless, tasteless gas about 1.5 times as dense as air.

carbon dioxide absorption tube [ANALY CHEM] An absorbent-packed tube used to capture the carbon dioxide formed during the microdetermination of carbon-hydrogen by the Pregl combustion procedure.

carbon dioxide fire extinguisher [CHEM ENG] A type of chemical fire extinguisher in which the extinguishing agent is liquid carbon dioxide, stored under 800–900 pounds per square inch (5.5–6.2 megapascals) at normal room temperature.

carbon dioxide gas laser [PHYS] A powerful, continuously operating laser in the infrared that can emit several hundred watts of power at a wavelength of 10.6 micrometers.

carbon dioxide indicator [MIN ENG] A detector of carbon dioxide in mines based on the gas's absorption by potassium hydroxide.

carbon dioxide process [MET] A casting process in which the molding material is a mixture of sand and 1.5–6% liquid silicate as a binder, and the mixture is packed around the pattern and hardened by blowing carbon dioxide gas through it.

carbon disulfide [ORG CHEM] CS_2 A sulfide, used as a solvent for oils, fats, and rubbers and in paint removers.

carbon electrode [MET] A nonfiller-metal electrode consisting of carbon or a graphite rod; sometimes contains copper powder for increased electrical conductivity; used in carbon arc welding.

carbon equivalent [MET] An empirical relationship of the total carbon (TC), silicon (Si) and phosphorus (P) content of gray iron: $CE = \%TC + 0.3(\%SI + \%P)$.

carbon fiber [MATER] Commercial material made by pyrolyzing any spun, felted, or woven raw material to a char at temperatures from 700 to 1800°C.

carbon film [ANALY CHEM] Carbon deposited by evaporation onto a specimen to protect and prepare it for electron microscopy.

carbon-film hygrometer element [ELEC] An electrical hygrometer element constructed of a plastic strip coated with a film of carbon black dispersed in a hygroscopic binder; variations in atmospheric moisture content vary the volume of the binder and thus change the resistance of the carbon coating.

carbon-film resistor [ELEC] A resistor made by depositing a thin carbon film on a ceramic form.

carbon-hydrogen analyzer [ANALY CHEM] A device used in the quantitative analysis of the carbon and hydrogen content of organic compounds.

carbon hydrophone [ENG ACOUS] A carbon microphone that responds to waterborne sound waves.

carbonic acid [INORG CHEM] H_2CO_3 The acid formed by combination of carbon dioxide and water.

carbonic anhydrase [BIOCHEM] An enzyme which aids carbon dioxide transport and release by catalyzing the synthesis, and the dehydration, of carbonic acid from, and to, carbon dioxide and water.

Carboniferous [GEOL] A division of late Paleozoic rocks and geologic time including the Mississippian and Pennsylvanian periods.

carbonification *See* coalification.

carbon isotope ratio [GEOL] Ratio of carbon-12 to either of the less common isotopes, carbon-13 or carbon-14, or the reciprocal of one of these ratios; if not specified, the ratio refers to $^{12}C/^{13}C$. Also known as carbon ratio.

carbonite *See* natural coke.

carbonitrided steel [MET] Steel which is produced by carbonitriding.

carbonitriding [MET] Surface-hardening of low-carbon steel or other solid ferrous alloy by introducing carbon and nitrogen in a gaseous atmosphere containing carbon monoxide or hydrocarbons and ammonia at 800–875°C. Also known as gas cyaniding; nicarbing.

carbonium ion [ORG CHEM] A carbocation which has a positively charged carbon with a coordination number greater than 3.

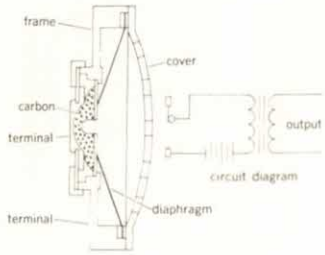
carbonization [CHEM] The conversion of a carbon-containing substance to carbon or a carbon residue as the destructive distillation of coal by heat in the absence of air, yielding a solid residue with a higher percentage of carbon than the original coal; carried on for the production of coke and of fuel gas. [GEOCHEM] **1.** In the coalification process, the accumulation of residual carbon by changes in organic material and their decomposition products. **2.** Deposition of a thin film of carbon by slow decay of organic matter underwater. **3.** A process of converting a carbonaceous material to carbon by removal of other components.

carbon knock [MECH ENG] Premature ignition resulting in knocking or pinging in an internal combustion engine caused

CARBONIFEROUS

Position of the Carboniferous and its relationship to the eras and periods of geologic time.

CARBON MICROPHONE



Sectional view and electrical circuit diagram of a carbon microphone, widely used in telephones.

when the accumulation of carbon produces overheating in the cylinder.

carbon lamp [ELEC] An arc lamp with carbon electrodes.

carbonless copy paper [MATER] A sheet of paper, used to make duplicate copies of written or printed material, whose back is coated with a layer of microcapsules that contain a dye in colorless form in a hydrocarbon solvent; writing or printing pressure breaks the capsules and releases the dye, which reacts with a clay or phenolic resin coating on top of a second paper sheet, located directly below the first, to produce visible color.

carbon microphone [ENG ACOUS] A microphone in which a flexible diaphragm moves in response to sound waves and applies a varying pressure to a container filled with carbon granules, causing the resistance of the microphone to vary correspondingly.

carbon monoxide [INORG CHEM] CO A colorless, odorless gas resulting from the incomplete oxidation of carbon; found, for example, in mines and automobile exhaust; poisonous to animals.

carbon monoxide laser [OPTICS] A molecular gas laser in which the active laser molecule is carbon monoxide, and the strongest wavelengths are 4.9 to 5.7 micrometers. Also known as CO laser.

carbonmonoxyhemoglobin [BIOCHEM] A stable combination of carbon monoxide and hemoglobin formed in the blood when carbon monoxide is inhaled. Also known as carbonylhemoglobin and carboxyhemoglobin.

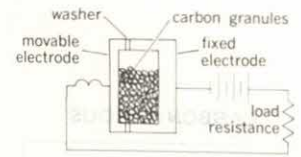
carbon-nitrogen cycle [NUC PHYS] A series of thermonuclear reactions, with release of energy, which presumably occurs in the sun and other stars; the net accomplishment is the synthesis of four hydrogen atoms into a helium atom, the emission of two positrons and much energy, and restoration of a carbon-12 atom with which the cycle began. Also known as carbon cycle; nitrogen cycle.

carbon-nitrogen-phosphorus ratio [OCEANOGR] The relatively constant relationship between the concentrations of carbon (C), nitrogen (N), and phosphorus (P) in plankton, and N and P in sea water, owing to removal of the elements by the organisms in the same proportions in which the elements occur and their return upon decomposition of the dead organisms.

carbon number [ANALY CHEM] The number of carbon atoms in a material under analysis; plotted against chromatographic retention volume for compound identification.

carbon paper [MATER] A paper, coated with dark waxy pigment, used to make duplicate copies while typewriting or handwriting; a sheet of carbon paper is sandwiched between two paper sheets, so that the impression made on the top sheet causes the carbon paper to transfer a pigmented impression onto the bottom sheet.

CARBON TRANSDUCER



Sectional view and electrical circuit diagram of a carbon transducer.

carbon pile [ELEC] A variable resistor consisting of a stack of carbon disks mounted between a fixed metal plate and a movable one that serve as the terminals of the resistor; the resistance value is reduced by applying pressure to the movable plate.

carbon pile pressure transducer [ENG] A measurement device in which variations in pressure upon a conductive carbon core proportionately change the core's electrical resistance, and thus the strength of the measured electric signal from the device.

carbon potential [MET] Determination of the extent to which an environment containing active carbon can affect the carbon content of a steel.

carbon ratio [GEOL] **1.** The ratio of fixed carbon to fixed carbon plus volatile hydrocarbons in a coal. **2.** *See* carbon isotope ratio.

carbon ratio theory [GEOL] The theory that the gravity of oil in any area is inversely proportional to the carbon ratio of the coal.

carbon refractory [MATER] Carbon, generally in the form of graphite, used as a refractory in such equipment as crucibles and stopper nozzles for steel casting.

carbon replication [ANALY CHEM] A faithful carbon-film, mold of a specimen surface (for example, powders, bones, or crystals) which is thin enough to be studied by electron microscopy.

carbon residue [CHEM ENG] The quantity of carbon produced from a lubricating oil heated in a closed container under standard conditions.

carbon residue test [CHEM ENG] A destructive-distillation method for estimation of carbon residues in fuels and lubricating oils. Also known as Conradson carbon test.

carbon resistance thermometer [ENG] A highly sensitive resistance thermometer for measuring temperatures in the range 0.05–20 K; capable of measuring temperature changes of the order 10^{-5} degree.

carbon resistor [ELECTR] A resistor consisting of carbon particles mixed with a binder, molded into a cylindrical shape, and baked; terminal leads are attached to opposite ends. Also known as composition resistor.

carbon restoration [MET] Carburizing of the surface layer of a material to achieve the original level of carbon content which had been depleted during processing.

carbon sequence [ASTRON] Wolf-Rayet stars in which carbon emission bands dominate the spectrum.

carbon star [ASTRON] Any of a class of stars with an apparently high abundance ratio of carbon to hydrogen; a majority of these are low-temperature red giants of the C class.

carbon steel [MET] Steel containing carbon, to about 2%, as the principal alloying element.

carbon suboxide [INORG CHEM] C_3O_2 A colorless lacrimatory gas having an unpleasant odor with a boiling point of $-6.8°C$.

carbon tetrachloride [ORG CHEM] CCl_4 Colorless dense liquid, specific gravity 1.595, slightly soluble in water; used as a dry-cleaning agent. Also known as tetrachloromethane.

carbon tetrafluoride [ORG CHEM] CF_4 A colorless gas with a boiling point of $-126°C$; used as a refrigerant. Also known as tetrafluoromethane.

carbon transducer [ENG] A transducer consisting of carbon granules in contact with a fixed electrode and a movable electrode, so that motion of the movable electrode varies the resistance of the granules.

carbon transfer recording [COMMUN] Type of facsimile recording in which carbon particles are deposited on the record sheet in response to the received signal.

carbon trichloride *See* hexachloroethane.

carbonyl [ORG CHEM] A radical (CO) that is made up of one atom of carbon and one atom of oxygen connected by a double bond; found, for example, in aldehydes and ketones. Also known as carbonyl group.

carbonylation [CHEM] Introduction of a carbonyl radical into a molecule.

1,1′-carbonyl-bis-1-*H*-imidazole *See* *N,N′*-carbonyldiimidazole.

carbonyl bromide [ORG CHEM] $COBr_2$ A poisonous liquid boiling at 187.83°C; may be used by the military as a toxic suffocant. Also known as bromophosgene.

carbonyl chloride *See* phosgene.

carbonyl compound [ORG CHEM] A compound containing the carbonyl radical (CO).

***N,N′*-carbonyldiimidazole** [ORG CHEM] $C_7H_6N_4O$ Crystals with a melting point of 115.5–116°C; hydrolyzed by water very quickly; used in the synthesis of peptides. Also known as 1,1′-carbonyl-bis-1-*H*-imidazole.

carbonyl fluoride [ORG CHEM] COF_2 A colorless gas that is soluble in water; used in organic synthesis.

carbonyl group *See* carbonyl.

carbonylhemoglobin *See* carbonmonoxyhemoglobin.

carbonyl process [MET] **1.** A process in powder metallurgy for the production of iron, nickel, and iron-nickel alloy powders for magnetic applications. **2.** A process used in putting a metallic coating on molybdenum tungsten and other metals.

carbophenothion [ORG CHEM] $C_{11}H_{16}ClO_2PS_3$ An amber liquid used to control pests on fruits, nuts, vegetables, and fiber crops. Also known as *S*-{[(*para*-chlorophenyl)thio]methyl}-*O,O*-diethyl phosphorodithioate.

carborane [ORG CHEM] **1.** Any of a class of compounds containing boron, carbon, and hydrogen. **2.** $B_{10}C_2H_{12}$ A specific member of the class.

carborundum [MATER] A manufactured crystalline material (silicon carbide), prepared by fusing coke and sand in an electric furnace; used as an abrasive in the grinding of low-tensile-strength materials, and as a semiconductor with a maximum operating temperature of 1300°C, to rectify and detect radio waves.

carbosand [MATER] Sand treated with an organic solution and then roasted; used as a spray to disperse oil slicks.

carboxin [ORG CHEM] $C_{12}H_{13}NO_2S$ An off-white solid with a melting point of 91.5–92.5°C; used to treat seeds of barley, oats, wheat, corn, and cotton for fungus diseases. Also

known as DCMO; 5,6-dihydro-2-methyl-1,4-oxathiin-3-carboxanilide.

carboxy group [ORG CHEM] —COOH The functional group of carboxylic acid. Also known as carboxyl group.

carboxyhemoglobin *See* carbonmonoxyhemoglobin.

carboxylase [BIOCHEM] Any enzyme that catalyzes a carboxylation or decarboxylation reaction.

carboxylate anion [ORG CHEM] An anion with the general formula $(RCO_2)^-$, which is formed when the hydrogen attached to the carboxyl group of a carboxylic acid is removed.

carboxylation [ORG CHEM] Addition of a carboxyl group into a molecule.

carboxyl group *See* carboxy group.

carboxylic [CHEM] Having chemical properties resembling those of carboxylic acid.

carboxylic acid [ORG CHEM] Any of a family of organic acids characterized by the presence of one or more carboxyl groups.

carboxyl terminal [BIOCHEM] The end of a polypeptide chain with a free carboxyl group.

carboxymethyl cellulose [ORG CHEM] An acid ether derivative of cellulose used as a sodium salt; a white, odorless, bulky solid used as a stabilizer and emulsifier; negatively charged resin used in ion-exchange chromatography as a cation exchanger. Also known as cellulose gum; CM-cellulose; sodium carboxymethylcellulose; sodium cellulose glycolate.

carboxypeptidase [BIOCHEM] Any enzyme that catalyzes the hydrolysis of a peptide at the end containing the free carboxyl group.

4-carboxy-resorcinol *See* β-resorcylic acid.

carbromal *See* bromodiethylacetylurea.

carbro process [GRAPHICS] A photographic method of making carbon prints in which tanning of pigmented gelatin occurs in a special bleach bath, and the gelatin yields prints made on bromide paper.

carbuncle [MED] A bacterial infection of subcutaneous tissue caused by *Staphylococcus aureus;* multiple sinuses are created by tissue destruction.

carbureted water gas [MATER] Water gas that has been enriched by hydrocarbon gases of high fuel value.

carburetion [CHEM ENG] The process of enriching a gas by adding volatile carbon compounds, such as hydrocarbons, to it, as in the manufacture of carbureted water gas. [MECH ENG] The process of mixing fuel with air in a carburetor.

carburetor [CHEM ENG] An apparatus for vaporizing, cracking, and enriching oils in the manufacture of carbureted water gas. [MECH ENG] A device that makes and controls the proportions and quantity of fuel-air mixture fed to a spark-ignition internal combustion engine.

carburetor icing [MECH ENG] The formation of ice in an engine carburetor as a consequence of expansive cooling and evaporation of gasoline.

carburize [MET] To surface-harden steel by converting the outer layer of low-carbon steel to high-carbon steel by heating the steel above the transformation range in contact with a carbonaceous material.

carbyne [CHEM] Elemental carbon in a triply bonded form.

carcenet [METEOROL] A very cold and violent gorge wind in the eastern Pyrenees (upper Aude valley).

Carcharhinidae [VERT ZOO] A large family of sharks belonging to the charcharinid group of galeoids, including the tiger sharks and blue sharks.

Carchariidae [VERT ZOO] A family of shallow-water predatory sharks belonging to the isurid group of galeoids.

carcharodont [VERT ZOO] Possessing sharp, flat, triangular teeth with serrated margins, like those of the human-eating sharks.

carcinogen [MED] Any agent that incites development of a carcinoma or any other sort of malignancy.

carcinoid [MED] A potentially malignant tumor of the argentaffin cells of the stomach and intestine.

carcinoid syndrome [MED] A complex of symptoms arising from the metastasis of a carcinoid tumor to the liver.

carcinoma [MED] A malignant epithelial tumor.

carcinoma in situ [MED] A malignant tumor in the pre-metastatic stage, when cells are at the site of origin.

carcinomatosis [MED] Metastasis of a primary carcinoma to many sites throughout the body.

carcinotron *See* backward-wave oscillator.

card [COMPUT SCI] An information-carrying medium, common to practically all computers, for the introduction of data and instructions into the computers either directly or indirectly.

cardamom *See* cardamon.

cardamon [BOT] *Elettaria cardamomum.* A perennial herbaceous plant in the family Zingiberaceae; the seed of the plant is used as a spice. Also spelled cardamom.

cardamon oil [MATER] A pale-yellow, combustible essential oil; insoluble in water, soluble in alcohol and ether; distilled from cardamon seeds, the chief known ingredients being terpinene, borneol, dipentene, limonene, and eucalyptol; used in flavoring and medicine.

Cardan joint *See* Hooke's joint.

Cardan motion [MECH ENG] The straight-line path followed by a moving centrode in a four-bar centrode linkage.

Cardan shaft [MECH ENG] A shaft with a universal joint at its end to accommodate a varying shaft angle.

Cardan's suspension [DES ENG] An arrangement of rings in which a heavy body is mounted so that the body is fixed at one point; generally used in a gyroscope.

card bed [COMPUT SCI] The metal plate along which the card travels to the punching and reading stations.

cardboard [MATER] A good quality of chemical pulp or rag pasteboard made by combining two or more webs of paper, either with or without paste, while still wet; used for signs, printed material, and high-quality boxes.

card checking [COMPUT SCI] The verification carried out by the computer to ensure that all the data keypunched on a card has been correctly read into the memory.

card code [COMPUT SCI] The representation of characters on a punched card by means of punching one or more holes per column.

card dialer [COMMUN] A telephone in which a number can be dialed automatically and almost instantly by inserting a coded plastic card for that number in a slot on the dialer.

card-edge connector [ELEC] A connector that mates with printed-wiring leads running to the edge of a printed circuit board on one or both sides. Also known as edgeboard connector.

card face [COMPUT SCI] The printed side of a punched card or, if printing is on both sides, the side of chief importance.

card feed [COMPUT SCI] A device that inserts cards into a machine one at a time.

card field [COMPUT SCI] A specified group of card columns used for a particular category of data.

card fluff [COMPUT SCI] Small bits of paper that may be left attached to the edge of a hole punched in a punch card, which may cause misfeeding or misreading of the card.

card hopper [COMPUT SCI] A device that holds cards and makes them available to a card-feed mechanism. Also known as hopper.

cardia [ANAT] **1.** The orifice where the esophagus enters the stomach. **2.** The large, blind diverticulum of the stomach adjoining the orifice. [INV ZOO] Anterior enlargement of the ventriculus in some insects.

cardiac [ANAT] **1.** Of, pertaining to, or situated near the heart. **2.** Of or pertaining to the cardia of the stomach.

cardiac arrest [MED] Cessation of the heartbeat.

cardiac cirrhosis [MED] Progressive fibrosis of the liver due to prolonged venous blood retention as a result of prolonged and severe heart failure.

cardiac cycle [PHYSIO] The sequence of events in the heart between the start of one contraction and the start of the next.

cardiac edema [MED] Accumulation of fluids throughout the body, as a function of cardiac failure.

cardiac electrophysiology [PHYSIO] The science that is concerned with the mechanism, spread, and interpretation of the electric currents which arise within heart muscle tissue and initiate each heart muscle contraction.

cardiac failure [MED] A complex of symptoms resulting from failure of the heart to pump sufficient quantities of blood. Also known as heart failure.

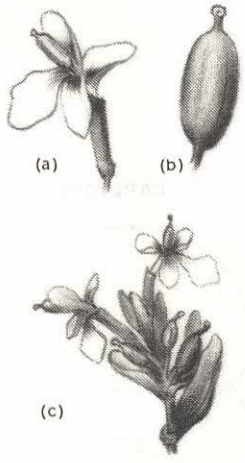
cardiac gland [ANAT] Any of the mucus-secreting, compound tubular structures near the esophagus or in the cardia of the stomach of vertebrates; capable of secreting digestive enzymes.

cardiac input [PHYSIO] The amount of venous blood returned to the heart during a specified period of time.

cardiac loop [EMBRYO] The embryonic heart formed by bending and twisting of the cardiac tube.

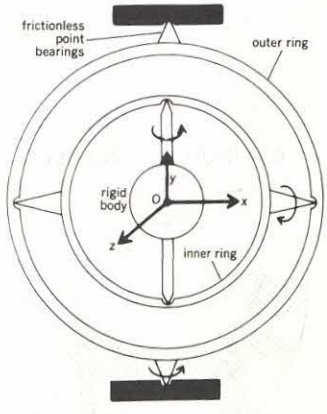
cardiac massage [MED] Rhythmic compression of the

CARDAMON



Cardamon *(Ellettaria cardamomum). (a)* Flower. *(b)* Fruit. *(c)* Branch tip with flowers and fruits.

CARDAN'S SUSPENSION



Cardan's suspension. Point *O* of the rigid body is fixed in space while the body is free to rotate about any axis in space under no external moments.

heart by a physician or other person in the effort to maintain effective circulation following heart failure.

cardiac murmur [MED] Any adventitious sound heard in the region of the heart.

cardiac muscle [HISTOL] The principal tissue of the vertebrate heart; composed of a syncytium of striated muscle fibers.

cardiac output [PHYSIO] The total blood flow from the heart during a specified period of time.

cardiac pacemaker *See* pacemaker.

cardiac plexus [ANAT] A network of visceral nerves situated at the base of the heart; contains both sympathetic and vagal nerve fibers.

cardiac sphincter [ANAT] The muscular ring at the orifice between the esophagus and stomach.

cardiac tamponade [MED] Cardiac compression caused by an accumulation of fluid within the pericardium.

cardiac valve [ANAT] Any of the structures located within the orifices of the heart that maintain unidirectional blood flow.

cardiectomy [MED] Excision of the cardiac end of the stomach.

card image [COMPUT SCI] A one-to-one representation of the contents of a punched card, such as a matrix in which a 1 represents a hole and a 0 represents the absence of a hole.

cardinal heading [NAV] A heading in the direction of any of the cardinal points of the compass.

cardinal number [MATH] The number of members of a set; usually taken as a particular well-ordered set representative of the class of all sets which are in one-to-one correspondence with one another.

cardinal point [GEOD] Any of the four principal directions: north, east, south, or west of a compass. [OPTICS] Any one of six points in an optical system, namely, the two principal points, two nodal points, and two focal points. Also known as Gauss point.

cardinal point effect [ELECTR] The increased intensity of a line or group of returns on the radarscope occurring when the radar beam is perpendicular to the rectangular surface of a line or group of similarly aligned features in the ground pattern.

cardinal system [NAV] In marine operations, a buoyage system in which the buoys are assigned distinctive shape, color, and number in accordance with location relative to the nearest obstruction and pertinent to the cardinal points.

cardinal teeth [INV ZOO] Ridges and grooves on the inner surfaces of both valves of a bivalve mollusk near the anterior end of the hinge.

cardinal vein [EMBRYO] Any of four veins in the vertebrate embryo which run along each side of the vertebral column; the paired veins on each side discharge blood to the heart through the duct of Cuvier.

cardinal winds [METEOROL] Winds from the four cardinal points of the compass, that is, north, east, south, and west winds.

carding [TEXT] Straightening or smoothing of raw fibers in a parallel fashion, with a carding machine.

carding machine [TEXT] A machine for disentangling fibers before they are spun.

Cardiobacterium [MICROBIO] A genus of gram-negative, rod-shaped bacteria of uncertain affiliation; facultative anaerobes that ferment fructose, glucose, mannose, sorbitol, and sucrose; the single species causes endocarditis in humans.

cardioblast [INV ZOO] Any of certain early embryonic cells in insects from which the heart develops.

cardiogenic plate [EMBRYO] An area of splanchnic mesoderm in the early mammalian embryo from which the heart develops.

cardiogenic shock [MED] Shock due to inadequate arterial blood flow following left-ventricular failure or pulmonary embolism.

cardiography [MED] Analysis of heart movements in the cardiac cycle by means of electronic instruments, especially by tracings.

cardioid [MATH] A heart-shaped curve generated by a point of a circle that rolls without slipping on a fixed circle of the same diameter.

cardioid condenser [OPTICS] A substage condenser that cuts off the direct light and allows only the light diffracted or dispersed from the object to enter the microscope; used in dark-field microscopes.

cardioid microphone [ENG ACOUS] A microphone having a heart-shaped, or cardioid, response pattern, so it has nearly uniform response for a range of about 180° in one direction and minimum response in the opposite direction.

cardioid pattern [ENG] Heart-shaped pattern obtained as the response or radiation characteristic of certain directional antennas, or as the response characteristic of certain types of microphones.

cardiolipin [BIOCHEM] A complex phospholipid found in the ether alcohol extract of powdered beef heart; mixed with leutin and cholesterol, it functions as the antigen in the Wassermann complement-fixation test for syphilis. Also known as diphosphatidyl glycerol.

cardiology [MED] The study of the heart.

cardiomyopathy *See* myocardiopathy.

cardiopathy [MED] Any disorder or disease of the heart.

cardiophobia [PSYCH] An abnormal fear of heart disease.

cardiopulmonary bypass [MED] A surgical technique for avoiding circulation of the blood through the heart and lungs by directing the flow from the entrance of the right atrium, conditioning it by mechanical means, and reentering it at the aorta.

cardiopulmonary resuscitation [MED] Simultaneous forced ventilation of the lungs and squeezing of the heart ventricles to sustain the flow of oxygenated blood throughout the system; often applied in cases of cardiac arrest. Abbreviated CPR.

cardiorrhaphy [MED] Suturing of the heart muscle.

cardioscope [MED] **1.** An instrument for the examination or visualization of the interior of the cardiac chambers. **2.** An instrument which, by means of a cathode-ray oscillograph, projects an electrocardiographic record on a luminous screen.

cardiospasm [MED] Failure of the cardiac sphincter to relax; associated with spasm of the cardiac portion of the stomach and dilation of the esophagus.

cardiotachometer [MED] An electronic amplifier that times and records pulse rates of the heart.

cardiotomy [MED] Dissection or incision of the heart or the cardia of the stomach.

cardiotonic drug [PHARM] Any agent, such as digitalis, that increases cardiac muscle tonus.

cardiovascular system [ANAT] Those structures, including the heart and blood vessels, which provide channels for the flow of blood.

carditis [MED] Inflammation of the heart tissues.

card jam [COMPUT SCI] A condition in which one or more punch cards become jammed along the card bed of a machine that is processing them. Also known as card wreck.

card loader [COMPUT SCI] A programming routine which permits a deck of cards to be read into a memory.

card machine [COMPUT SCI] **1.** Any of several small computers which perform particular operations called for by instruction cards, concurrently with the reading of data cards. **2.** Loosely, any type of peripheral equipment which reads or punches cards.

card punch [COMPUT SCI] A computer output device that punches holes in a punch card upon reception of signals from the central processing unit.

card punch buffer [COMPUT SCI] A temporary storage device into which the output of a computer is transmitted before it is entered on a punch card by a card punch, and in which the data remain if for any reason the card punch cannot operate.

card reader [COMPUT SCI] A mechanism that senses information punched on cards, using wire brushes, metal feelers, or a photoelectric system. Also known as punched-card reader.

card reproducer [COMPUT SCI] A machine that makes a duplicate of a punched card.

card row [COMPUT SCI] A row of punching positions parallel to the long edge of a punched card.

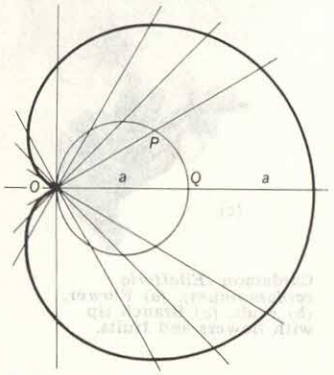
card sorter [COMPUT SCI] A machine used to arrange punched cards into an appropriate sequence for further processing. Also known as punched-card sorter.

card system [COMPUT SCI] A computer system whose only input unit is a card reader and whose only output units are a card punch and a printer.

card-to-card transceiving [COMPUT SCI] A system that makes possible instantaneous and accurate duplication of punched cards over telephone and telegraph networks between locations separated by either just a few miles or thousands of miles.

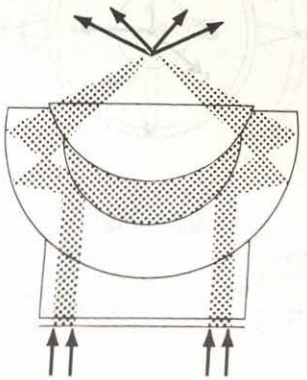
card-to-disk conversion [COMPUT SCI] A straightforward operation which consists in loading the data in a deck of cards onto a disk by means of a utility program.

CARDIOID



Point-construction of a cardioid. The fixed circle is OPQ which has a diameter a. The cardioid is constructed by laying off, along every secant OP passing through the fixed point O, the distance a in both directions from P.

CARDIOID CONDENSER



Cardioid condenser, a dark-field device. Shaded meniscus area is air space; unshaded areas are portions of condenser through which passes the light, indicated by arrows and shaded paths. *(Photographic Service Department, Kodak Research Laboratory)*

card-to-print program [COMPUT SCI] A small computer program that uses punch cards in concert with a printer listing the information on the cards and that does not use either tape or disk storage equipment.

card-to-tape conversion [COMPUT SCI] A straightforward operation which consists in loading the data in a deck of cards onto a magnetic tape by means of a utility program.

car dump [MECH ENG] Any one of several devices for unloading industrial or railroad cars by rotating or tilting the car.

card verifier [COMPUT SCI] An electromechanical device which allows the operator to check that a card has been properly key-punched.

card wreck *See* card jam.

δ-3-carene [ORG CHEM] $C_{10}H_{16}$ A clear, colorless, combustible terpene liquid, stable to about 250°C; used as a solvent and in chemical synthesis. Also known as 3,7,7-trimethylbicyclo-[4.1.0]-hept-3-ene.

caret [GRAPHICS] A printed or written character having the form of an inverted V.

Carettochelyidae [VERT ZOO] A family of reptiles in the order Chelonia containing only one species, the New Guinea plateless turtle (*Carettochelys insculpta*).

car ferry [NAV ARCH] A ferry that is specially designed to carry railroad cars, trucks, or passenger cars.

car float [NAV ARCH] A barge with railroad tracks on its deck, used to carry railroad cars in harbors or inland waterways.

car-following theory [ENG] A mathematical model of the interactions between motor vehicles in terms of relative speed, absolute speed, and separation.

cargo boom [MECH ENG] A long spar extending from the mast of a derrick to support or guide objects lifted or suspended.

cargo liner *See* cargo ship.

cargo mill [IND ENG] A sawmill equipped with docks so the product can be loaded directly onto ships.

cargo ship [NAV ARCH] A power-driven ship employed exclusively in commercial transportation of commodities on the ocean and large inland bodies of water. Also known as cargo liner.

cargo winch [MECH ENG] A motor-driven hoisting machine for cargo having a drum around which a chain or rope winds as the load is lifted.

Cariamidae [VERT ZOO] The long-legged cariamas, a family of birds in the order Gruiformes.

Caribbean Current [OCEANOGR] A water current flowing westward through the Caribbean Sea.

Caribbean Sea [GEOGR] One of the largest and deepest enclosed basins in the world, surrounded by Central and South America and the West Indian island chains.

Caribosireninae [VERT ZOO] A subfamily of trichechiform sirenean mammals in the family Dugongidae.

Caridea [INV ZOO] A large section of decapod crustaceans in the suborder Natantia including many diverse forms of shrimps and prawns.

caries [MED] **1.** Bone decay. **2.** Tooth decay. Also known as dental caries.

carina [BIOL] A ridge or a keel-shaped anatomical structure. [VERT ZOO] *See* keel.

Carina [ASTRON] A constellation, right ascension 9 hours, declination 60°S. Abbreviated Car. Also known as Keel.

α Carinae *See* Canopus.

Carina Nebula [ASTRON] A gaseous nebula near the star η Carinae in the Milky Way.

carinate [BIOL] Having a ridge or keel, as the breastbone of certain birds.

Carinomidae [INV ZOO] A monogeneric family of littoral ribbonlike worms in the order Palaeonemertini.

Carinthian furnace [MET] A zinc distillation furnace with small, vertical retorts. [MIN ENG] A small reverberatory furnace with an inclined hearth, in which lead ore is treated by roasting and reaction, wood being the usual fuel.

Carius method [ANALY CHEM] A procedure used to analyze organic compounds for sulfur, halogens, and phosphorus that involves heating the sample with fuming nitric acid in a sealed tube.

carling [NAV ARCH] A short girder or timber running fore and aft, used to support or stiffen a ship's deck, or to frame an opening in the deck where beams have been cut.

Carlsbad law [CRYSTAL] A feldspar twin law in which the twinning axis is the *c* axis, the operation is rotation of 180°, and the contact surface is parallel to the side pinacoid.

Carlsbad turn [CRYSTAL] A twin crystal in the monoclinic system with the vertical axis as the turning axis.

Carme [ASTRON] A small satellite of Jupiter with a diameter of about 19 miles (31 kilometers), orbiting with retrograde motion at a mean distance of 1.4×10^7 miles (2.3×10^7 kilometers) Also known as Jupiter XI.

carminic acid [ORG CHEM] $C_{22}H_{20}O_{13}$ A glucosidal hydroxyanthrapurin that is derived from cochineal; a red crystalline dye used as a stain for biological materials. Also known as cochinilin.

carminite [MINERAL] $PbFe_2(AsO_4I)_2(OH)_2$ A carmine to tile-red mineral consisting of a basic arsenate of lead and iron.

carnallite [MINERAL] $KMgCl_3 \cdot 6H_2IO$ A milky-white or reddish mineral that crystallizes in the orthorhombic system and occurs in deliquescent masses; it is valuable as an ore of potassium.

carnassial [ANAT] Of or pertaining to molar or premolar teeth specialized for cutting and shearing.

carnauba wax [MATER] The hardest natural wax, having a melting point of 85°C, exuded from the leaves of the carnauba palm (*Carnauba cerifera*); used for insulating purposes and in making candles, shoe polish, high-luster wax, varnishes, phonograph records, and surface coating of automobiles. Also known as Brazil wax.

carnaubic acid [ORG CHEM] $C_{24}H_{48}O_2$ An acid found in carnauba wax and beef kidney.

carnegieite [MINERAL] $NaAlSiO_4$ An artificial mineral similar to feldspar; it is triclinic at low temperatures, isometric at elevated temperatures.

Carnian [GEOL] Lower Upper Triassic geologic time. Also spelled Karnian.

carnitine [BIOCHEM] $C_7H_{15}NO_3$ α-Amino-β-hydroxybutyric acid trimethylbetaine; a constituent of striated muscle and liver, identical with vitamin B_T.

Carnivora [VERT ZOO] A large order of placental mammals, including dogs, bears, and cats, that is primarily adapted for predation as evidenced by dentition and jaw articulation.

carnivorous [BIOL] Eating flesh or, as in plants, subsisting on nutrients obtained from animal protoplasm.

carnivorous plant *See* insectivorous plant.

Carnosauria [PALEON] A group of large, predacious saurischian dinosaurs in the suborder Theropoda having short necks and large heads.

carnosine [BIOCHEM] $C_9H_{14}N_4O_3$ A colorless, crystalline dipeptide occurring in the muscle tissue of vertebrates.

Carnot cycle [THERMO] A hypothetical cycle consisting of four reversible processes in succession: an isothermal expansion and heat addition, an isentropic expansion, an isothermal compression and heat rejection process, and an isentropic compression.

Carnot efficiency [THERMO] The efficiency of a Carnot engine receiving heat at a temperature absolute T_1 and giving it up at a lower temperature absolute T_2; equal to $(T_1 - T_2)/T_1$.

Carnot engine [MECH ENG] An ideal, frictionless engine which operates in a Carnot cycle.

carnotite [MINERAL] $K(UO_2)_2(VO_4)_2 \cdot nH_2O$ A canary-yellow, fine-grained hydrous vanadate of potassium and uranium having monoclinic microcrystals; an ore of radium and uranium.

Carnot number [THERMO] A property of two heat sinks, equal to the Carnot efficiency of an engine operating between them.

Carnot's reagent [CHEM] A solution of sodium bismuth thiosulfate in alcohol used for determining potassium.

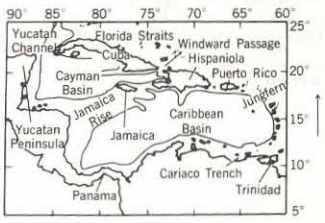
Carnot's theorem [THERMO] **1.** The theorem that all Carnot engines operating between two given temperatures have the same efficiency, and no cyclic heat engine operating between two given temperatures is more efficient than a Carnot engine. **2.** The theorem that any system has two properties, the thermodynamic temperature T and the entropy S, such that the amount of heat exchanged in an infinitesimal reversible process is given by $dQ = TdS$; the thermodynamic temperature is a strictly increasing function of the empirical temperature measured on an arbitrary scale.

Carnoy's solution [MATER] A tissue fixative composed of mercuric salts and acetic acids; used where penetration of hard objects such as seeds is required.

caroba *See* carob wood.

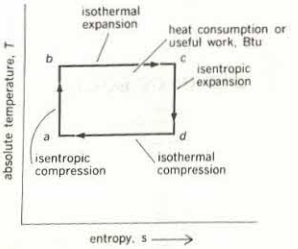
carob wood [MATER] The wood from a large Brazilian tree, *Jacaranda copaia*. Also known as caroba; jacaranda.

CARIBBEAN SEA



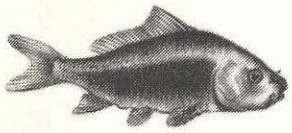
The Caribbean Sea with its basins.

CARNOT CYCLE



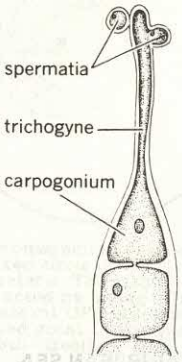
Carnot cycle, comprising the four processes *b–c*, *c–d*, *d–a*, and *a–b*.

CARP



Carp *(Cyprinus carpio)*.

CARPOGONIUM



Filament with terminal carpogonium (containing an egg) and bearing an elongated trichogyne. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

CARRIAGE BOLT

A round-head carriage bolt.

Carolina Bays [GEOGR] Shallow, marshy, often ovate depressions on the coastal plain of the mideastern and southeastern United States of unknown origin.

Carolinian life zone [ECOL] A zone comprising the climate and biotic communities of the oak savannas of eastern North America.

Caro's acid [INORG CHEM] H_2SO_5 A white solid melting at about 45°C, formed during the acid hydrolysis of peroxydisulfates. Also known as peroxymonosulfuric acid.

carotenase [BIOCHEM] An enzyme that effects the hydrolysis of carotenoid compounds, used in bleaching of flour.

carotene [BIOCHEM] $C_{40}H_{56}$ Any of several red, crystalline, carotenoid hydrocarbon pigments occurring widely in nature, convertible in the animal body to vitamin A, and characterized by preferential solubility in petroleum ether. Also known as carotin.

carotenemia [MED] The presence of carotene in the blood; may cause yellowing of the skin.

carotenoid [BIOCHEM] A class of labile, easily oxidizable, yellow, orange, red, or purple pigments that are widely distributed in plants and animals and are preferentially soluble in fats and fat solvents.

carotid artery [ANAT] Either of the two principal arteries on both sides of the neck that supply blood to the head and neck. Also known as common carotid artery.

carotid body [ANAT] Either of two chemoreceptors sensitive to changes in blood chemistry which lie near the bifurcations of the carotid arteries. Also known as glomus caroticum.

carotid ganglion [ANAT] A group of nerve cell bodies associated with each carotid artery.

carotid sinus [ANAT] An enlargement at the bifurcation of each carotid artery that is supplied with sensory nerve endings and plays a role in reflex control of blood pressure.

carotin *See* carotene.

carotol [BIOCHEM] $C_{15}H_{25}OH$ A sesquiterpenoid alcohol in carrots.

carp [VERT ZOO] The common name for a number of freshwater, cypriniform fishes in the family Cyprinidae, characterized by soft fins, pharyngeal teeth, and a suckerlike mouth.

carpel [BOT] The basic specialized leaf of the female reproductive structure in angiosperms; a megasporophyll.

carpenter's level [DES ENG] A bar, usually of aluminum or wood, containing a spirit level.

carpenter stopper [NAV ARCH] A device, generally made from high-carbon steel, that allows a temporary grip on a wire rope up to its breaking strength without injury or slippage.

carpet-bombing [ORD] The laying down of bombs in a creeping pattern to cover the area as with a carpet.

carpholite [MINERAL] $MnAl_2Si_2O_6(OH)_4$ A straw-yellow fibrous mineral consisting of a hydrous aluminum manganese silicate occurring in tufts; specific gravity is 2.93.

carphosiderite [MINERAL] A yellow mineral consisting of a basic hydrous iron sulfate occurring in masses and crusts.

car pincher [MIN ENG] A worker in a mine who uses a pinch bar to position cars under loading chutes.

carpincho [MATER] Processed capybara skin, noted for its elastic properties.

carpogonium [BOT] The basal, egg-bearing portion of the female reproductive organ in some thallophytes, especially red algae.

Carpoidea [PALEON] Former designation for a class of extinct homalozoan echinoderms.

carpoids [PALEON] An assemblage of three classes of enigmatic, rare Paleozoic echinoderms formerly grouped together as the class Carpoidea.

carpology [BOT] The study of the morphology of fruit and seeds.

carpophagous [ZOO] Feeding on fruits.

carpophore [BOT] The portion of a flower receptacle that extends between and attaches to the carpels. [MYCOL] The stalk of a fruiting body in fungi.

carpophyte [BOT] A thallophyte that forms a sporocarp following fertilization.

carposporangium [BOT] In red algae, a sporangium that forms the cystocarp and contains carpospores.

carpospore [BOT] In red algae, a diploid spore produced terminally by a gonimoblast, giving rise to the diploid tetrasporic plant.

carpus [ANAT] **1.** The wrist in humans or the corresponding part in other vertebrates. **2.** The eight bones of the human wrist. [INV ZOO] The fifth segment from the base of a generalized crustacean appendage.

carrageen [BOT] *Chondrus crispus*. A cartilaginous red algae harvested in the Northern Atlantic as a source of carrageenin.

carrageenin [ORG CHEM] A colloid extracted from carrageen and used chiefly as an emulsifying and stabalizing agent in foods, pharmaceuticals, and cosmetics.

Carrara marble [PETR] All marble quarried near Carrara, Italy, having a prevailing white to bluish color, or white with blue veins.

carrene *See* methylene chloride.

car retarder [ENG] A device located along the track to reduce or control the velocity of railroad or mine cars.

carriage [ENG] **1.** A device that moves in a predetermined path in a machine and carries some other part, such as a recorder head. **2.** A mechanism designed to hold a paper in the active portion of a printing or typing device, for example, a typewriter carriage. [ORD] Mobile or fixed support for a cannon; sometimes includes the elevating and traversing mechanisms.

carriage bolt [DES ENG] A round-head type of bolt with a square neck, used with a nut as a through bolt.

carriage return [COMPUT SCI] The operation that causes the next character to be printed at the extreme left margin, and usually advances to the next line at the same time.

carriage stop [MECH ENG] A device added to the outer way of a lathe bed for accurately spacing grooves, turning multiple diameters and lengths, and cutting off pieces of specified thickness.

carriage tape *See* control tape.

Carribel explosive [MATER] A medium-strength explosive used in wet boreholes if immersion does not exceed 2 to 3 hours.

carrier [COMMUN] **1.** The radio wave produced by a transmitter when there is no modulating signal, or any other wave, recurring series of pulses, or direct current capable of being modulated. Also known as carrier wave; signal carrier. **2.** A wave generated locally at a receiver that, when combined with the sidebands of a suppressed-carrier transmission in a suitable detector, produces the modulating wave. **3.** *See* carrier system. [GEN] An individual who is heterozygous for a recessive gene. [MECH ENG] Any machine for transporting materials or people. [MED] A person who harbors and eliminates an infectious agent and so transmits it to others, but who may not show signs of the disease. [NAV ARCH] *See* aircraft carrier. [NUCLEO] A substance that, when associated with a radioactive trace of another substance, will carry the trace with it through a chemical or physical process; an isotope is often used for this purpose. Also known as isotopic carrier. [SOLID STATE] *See* charge carrier.

carrier amplifier [ELECTR] A direct-current amplifier in which the dc input signal is filtered by a low-pass filter, then used to modulate a carrier so it can be amplified conventionally as an alternating-current signal; the amplified dc output is obtained by rectifying and filtering the rectified carrier signal.

carrier amplitude regulation [COMMUN] Change in amplitude of the carrier wave in an amplitude-modulated transmitter when modulation is applied under conditions of symmetrical modulation.

carrier beat [COMMUN] An undesirable heterodyne of facsimile signals, each synchronous with a different stable reference oscillator, causing a pattern in received copy.

carrier channel [COMMUN] The equipment and lines that make up a complete carrier-current circuit between two or more points.

carrier chrominance signal *See* chrominance signal.

carrier-controlled approach system [NAV] An aircraft-carrier radar system providing information by which aircraft approaches may be directed by radio.

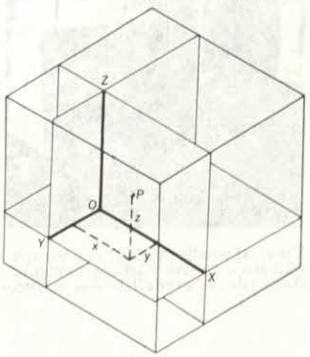
carrier current [COMMUN] A higher-frequency alternating current superimposed on ordinary telephone, telegraph, and power-line frequencies for communication and control purposes.

carrier density [SOLID STATE] The density of electrons and holes in a semiconductor.

carrier frequency [COMMUN] The frequency generated by an unmodulated radio, radar, carrier communication, or other transmitter, or the average frequency of the emitted wave when modulated by a symmetrical signal. Also known as center frequency; resting frequency.

carrier gas [MET] The gas used in thermal spraying which transmits powder from the feeder to the spray gun.
carrier isolating choke coil [ELECTROMAG] Inductor inserted in series with a line on which carrier energy is applied to impede the flow of carrier energy beyond that point.
carrier leak [COMMUN] Carrier remaining after carrier suppression in a suppressed-carrier transmission system.
carrier level [COMMUN] The strength or level of an unmodulated carrier signal at a particular point in a radio system, expressed in decibels in relation to some reference level.
carrier line [ELEC] Any transmission line used for multiple-channel carrier communication.
carrier loading [ELECTROMAG] The addition of lumped inductances to the cable section of a transmission line specifically designed for carrier transmission; it serves to minimize impedance mismatch between cable and open wire and to reduce the cable attenuation.
carrier mobility [SOLID STATE] The average drift velocity of carriers per unit electric field in a homogeneous semiconductor; the mobility of electrons is usually different from that of holes.
carrier noise [COMMUN] Noise produced by undesired variation of a radio-frequency signal in the absence of any intended modulation. Also known as residual modulation.
carrier pipe [ENG] Pipe used to carry or conduct fluids, as contrasted with an exterior protective or casing pipe.
carrier power output rating [COMMUN] Power available at the output terminals of a transmitter when the output terminals are connected to the normal-load circuit or to a circuit equivalent thereto.
carrier repeater [ELECTR] Equipment designed to raise carrier signal levels to such a value that they may traverse a succeeding line section at such amplitude as to preserve an adequate signal-to-noise ratio; while the heart of a repeater is the amplifier, necessary adjuncts are filters, equalizers, level controls, and so on, depending upon the operating methods.
carrier rocket [AERO ENG] A rocket vehicle used to carry something, as the carrier rocket of the first artificial earth satellite.
carrier shift [COMMUN] **1.** Transmission of radio-teletypewriter messages by shifting the carrier frequency in one direction for a marking signal and in the opposite direction for a spacing signal. **2.** Condition resulting from imperfect modulation whereby the positive and negative excursions of the envelope pattern are unequal, thus effecting a change in the power associated with the carrier.
carrier signaling [COMMUN] Method by which busy signals, ringing, or dial signaling relays are operated by the transmission of a carrier-frequency tone.
carrier suppression [COMMUN] **1.** Suppression of the carrier frequency after conventional modulation at the transmitter, with reinsertion of the carrier at the receiving end before demodulation. **2.** Suppression of the carrier when there is no modulation signal to be transmitted; used on ships to reduce interference between transmitters.
carrier swing [COMMUN] The total deviation of a frequency-modulated or phase-modulated wave from the lowest instantaneous frequency to the highest instantaneous frequency.
carrier system [COMMUN] A system permitting a number of simultaneous, independent communications over the same circuit. Also known as carrier.
carrier telegraphy [COMMUN] Telegraphy in which a single-frequency carrier wave is modulated by the transmitting apparatus for transmission over wire lines.
carrier telephony [COMMUN] Telephony in which a single-frequency carrier wave is modulated by a voice-frequency signal for transmission over wire lines.
carrier terminal [ELECTR] Apparatus at one end of a carrier transmission system, whereby the processes of modulation, demodulation, filtering, amplification, and associated functions are effected.
carrier-to-noise ratio [COMMUN] The ratio of the magnitude of the carrier to that of the noise after selection and before any nonlinear process such as amplitude limiting and detection.
carrier transfer filters [ELECTR] Filters arranged as a carrier-frequency crossover or bridge between two transmission circuits.
carrier transmission [COMMUN] Transmission in which the transmitted electric wave is a wave resulting from the modulation of a single-frequency wave by a modulating wave.
carrier wave *See* carrier.
Carrion's disease [MED] A bacterial infection of humans endemic in the Andes caused by *Bartonella bacilliformis*, which attacks red blood cells and blood-forming organs. Also known as bartonellosis.
carron oil [MATER] A mixture comprising equal volumes of linseed oil and lime water which is used for the relief of burns. Also known as lime liniment.
carrot [BOT] *Daucus carota*. A biennial umbellifer of the order Umbellales with a yellow or orange-red edible root.
carrot oil [MATER] A light-yellow oil distilled from the seeds of the carrot (*Daucus carota*), and containing carotene, pinene, palmitic acid, limonene, and butyric or isobutyric acid; used as a flavoring.
Carr-Price unit [BIOL] A unit for the standardization of vitamin A.
carry [MATH] An arithmetic operation that occurs in the course of addition when the sum of the digits in a given position equals or exceeds the base of the number system; a multiple m of the base is subtracted from this sum so that the remainder is less than the base, and the number m is then added to the next-higher-order digit.
carry-complete signal [COMPUT SCI] A signal generated by a digital parallel adder, indicating that all carries from an adding operation have been generated and propagated, and that the addition operation is completed.
carry flag [COMPUT SCI] A flip-flop circuit which indicates overflow in arithmetic operations.
carrying capacity [ECOL] The maximum population size that the environment can support without deterioration.
carry lookahead [COMPUT SCI] A circuit which allows low-order carries to ripple through all the way to the highest-order bit to output a completed sum.
carry-over [CHEM ENG] Unwanted liquid or solid material carried by the overhead effluent from a fractionating column, absorber, or reaction vessel. [HYD] The portion of the stream flow during any month or year derived from precipitation in previous months or years.
carry-save adder [COMPUT SCI] A device for the rapid addition of three operands; consists of a sequence of full adders, in which one of the operands is entered in the carry inputs, and the carry outputs, instead of feeding the carry inputs of the following full adders, form a second output word which is then added to the ordinary output in a two-operand adder to form the final sum.
carry signal [COMPUT SCI] A signal produced in a computer when the sum of two digits in the same column equals or exceeds the base of the number system in use or when the difference between two digits is less than zero.
carry time [COMPUT SCI] The time needed to transfer all carry digits to the next higher column.
car shaker [MECH ENG] A device consisting of a heavy yoke on an open-top car's sides that actively vibrates and rapidly discharges a load, such as coal, gravel, or sand, when an unbalanced pulley attached to the yoke is rotated fast.
carsickness [MED] Motion sickness resulting from accelerator movements of a train or automobile.
car stop [ENG] An appliance used to arrest the movement of a mine or railroad car.
Carter chart [ELECTROMAG] An Argand diagram of the complex reflection coefficient of a waveguide junction on which are drawn lines of constant magnitude and phase of the impedance.
Carterinacea [INV ZOO] A monogeneric superfamily of marine, benthic foraminiferans in the suborder Rotaliina characterized by a test with monocrystal calcite spicules in a granular groundmass.
cartesian axis [MATH] One of a set of mutually perpendicular lines which all pass through a single point, used to define a cartesian coordinate system; the value of one of the coordinates on the axis is equal to the directed distance from the intersection of axes, while the values of the other coordinates vanish.
cartesian coordinates [MATH] The set of numbers which locate a point in space with respect to a collection of mutually perpendicular axes.
cartesian coordinate system [MATH] A coordinate system in n dimensions where n is any integer made by using n number axes which intersect each other at right angles at an origin, enabling any point within that rectangular space to be identified by the distances from the n lines. Also known as rectangular cartesian coordinate system.

CARTESIAN COORDINATE SYSTEM



Cartesian coordinate system showing the coordinates x, y, and z of point P from the origin O.

cartesian diver manostat [ENG] Preset, on-off-control manometer arrangement by which a specified low pressure (high vacuum) is maintained via the rise or submergence of a marginally buoyant float within a liquid mercury reservoir.

cartesian geometry *See* analytic geometry.

cartesian product [MATH] In reference to the product of P and Q, the set $P \times Q$ of all pairs (p,q), where p belongs to P and q belongs to Q.

cartesian surface [MATH] A surface obtained by rotating the curve $n_0(x^2 + y^2)^{1/2} \pm n_1[(x - a)^2 + y^2]^{1/2} = c$ about the x axis.

cartesian tensor [MATH] The aggregate of the functions of position in a tensor field in an n-dimensional cartesian coordinate system.

cartilage [HISTOL] A specialized connective tissue which is bluish, translucent, and hard but yielding.

cartilage bone [HISTOL] Bone formed by ossification of cartilage.

cartilaginous fish [VERT ZOO] The common name for all members of the class Chondrichthyes.

cartogram [MAP] A type of single-factor or topical map that is often diagrammatic to show traffic flow, movement of people or goods, or value by area, where areas of the political subdivisions are distorted so that their size is proportional to their monetary value.

cartographer [GRAPHICS] An individual who makes charts or maps.

cartographic satellite [AERO ENG] An applications satellite that is used to prepare maps of the earth's surface and of the culture on it.

cartography [GRAPHICS] The making of maps and charts for the purpose of visualizing spatial distributions over various areas of the earth.

cartology [GRAPHICS] A method of coal-seam correlation which involves the mapping and drawing of both vertical and horizontal sections.

cartoon [GRAPHICS] **1.** Animated drawings in a motion picture format. **2.** A drawing on paper that is used as a model for a final work.

cartouche [GRAPHICS] A border or scroll that is decorative and executed with a pen or brush.

cartridge [ENG] A cylindrical, waterproof, paper shell filled with high explosive and closed at both ends; used in blasting. [ENG ACOUS] *See* phonograph pickup; tape cartridge. [NUCLEO] *See* jacket. [ORD] **1.** An assemblage of the components required to function a weapon once. **2.** Ammunition for a gun which contains in a unit assembly all components required to function the gun once, and which is loaded into the gun in one operation.

cartridge actuated initiator [AERO ENG] An item designed to provide gas pressure for activating various aircraft components such as canopy removers, thrusters, and catapults.

cartridge belt [ORD] An ammunition belt with loops or pockets for carrying cartridges or clips of cartridges.

cartridge brass [MET] An alloy containing 70% copper and 30% zinc; uses include cartridge cases, automotive radiator cores and tanks, lighting fixtures, eyelets, rivets, springs, screws, and plumbing products.

cartridge case [ORD] An item which is designed to hold an ammunition primer and propellant and to which a projectile may be affixed; its profile and size conform to the chamber of the weapon in which the round is fired.

cartridge clip [ORD] A metallic device used to hold cartridges for ease of loading into a rifle or a revolver. Also known as clip.

cartridge disk [COMPUT SCI] A type of disk storage device consisting of a single disk encased in a compact container which can be inserted in and removed from the disk drive unit; used extensively with minicomputer systems.

cartridge filter [ENG] A filter for the clarification of process liquids containing small amounts of solids; turgid liquid flows between thin metal disks, assembled in a vertical stack, to openings in a central shaft supporting the disks, and solids are trapped between the disks.

cartridge fuse [ELEC] A type of electric fuse in which the fusible element is connected between metal ferrules at either end of an insulating tube.

cartridge lamp [ELEC] A pilot or dial lamp that has a tubular glass envelope with metal-ferrule terminals at each end.

cartridge magazine [ORD] A metallic spring-loaded container of rectangular cross section designed to hold cartridges and to be inserted into the magazine well of a pistol, rifle, or machine gun; it is an integral part of a gun, capable of being removed from the magazine well, reloaded, and reused.

cartridge receiver [ORD] An item integral to a carbine, rifle, or shotgun, designed to take the charge from a cartridge magazine or clip or a single cartridge or shell and hold it until chambered.

cartridge silk *See* powder silk.

cartridge starter [MECH ENG] An explosive device which, when placed in an engine and detonated, moves a piston, thereby starting the engine.

cartridge tape drive [COMPUT SCI] A tape drive which will automatically thread the tape on the takeup reels without human assistance. Formerly known as hypertape drive.

car tunnel kiln [ENG] A long kiln with the fire located near the midpoint; ceramic ware is fired by loading it onto cars which are pushed through the kiln.

Cartwheel [ASTRON] A ring galaxy found in the southern hemisphere.

carui oil *See* caraway oil.

caruncle [ANAT] Any normal or abnormal fleshy outgrowth, such as the comb and wattles of fowl or the mass in the inner canthus of the eye. [BOT] A fleshy outgrowth developed from the seed coat near the hilum in some seeds, such as the castor bean.

carvacrol [ORG CHEM] $(CH_3)_2CHC_6H_3(CH_3)OH$ A colorless liquid, boiling at 237°C; used in perfumes, flavorings, and fungicides. Also known as 2-hydroxy-*para*-cymene; isopropyl-*ortho*-cresol; 2-methyl-5-isopropyl phenol.

Carvallo paradox [OPTICS] The absurdity that since light is composed from infinitely long wave trains of various frequencies, a spectrograph should show the spectrum of a source both before and after it is illuminated.

carved-out payment [PETRO ENG] A proportionate royalty payment based on proceeds from oil or gas production from leased property that has been assigned (carved) out of total payments for the leased property.

carvol *See* carvone.

carvone [ORG CHEM] $C_{10}H_{14}O$ A liquid ketone that boils at 231°C; soluble in water and alcohol; it is optically active and occurs naturally in both dextro and levo forms; used in flavorings and perfumery. Also known as carvol.

caryinite [MINERAL] $(Ca,Pb,Na)_5(Mn,Mg)_4(AsO_4)_5$ A mineral consisting chiefly of a calcium manganese arsenate.

Caryophanaceae [MICROBIO] Formerly a family of large, gram-negative bacteria belonging to the order Caryophanales and having disklike cells arranged in chains.

Caryophanales [MICROBIO] Formerly an order of bacteria in the class Schizomycetes occurring as trichomes which produce short structures that function as reproductive units.

Caryophanon [MICROBIO] A genus of gram-positive, large, rod-shaped or filamentous bacteria of uncertain affiliation.

Caryophyllaceae [BOT] A family of dicotyledonous plants in the order Caryophyllales differing from the other families in lacking betalains.

Caryophyllales [BOT] An order of dicotyledonous plants in the subclass Caryophyllidae characterized by free-central or basal placentation.

caryophyllene [ORG CHEM] $C_{15}H_{24}$ A liquid sesquiterpene that is found in some essential oils, particularly clove oil.

Caryophyllidae [BOT] A relatively small subclass of plants in the class Magnoliopsida characterized by trinucleate pollen, ovules with two integuments, and a multilayered nucellus.

caryophyllin [ORG CHEM] $C_{30}H_{48}O_3$ A ketone, soluble in alcohol, extracted from oil of cloves.

caryophyllus oil *See* oil of cloves.

caryopsis [BOT] A small, dry, indehiscent fruit having a single seed with such a thin, closely adherent pericarp that a single body, a grain, is formed.

Cas *See* Cassiopeia.

casaba melon [BOT] *Cucumis melo*. A winter muskmelon with a yellow rind and sweet flesh belonging to the family Cucurbitaceae of the order Violales.

Casale process [CHEM ENG] A process that employs promoted iron oxide catalyst for synthesis of ammonia from nitrogen and hydrogen.

cascade [ELEC] An electric-power circuit arrangement in which circuit breakers of reduced interrupting ratings are used in the branches, the circuit breakers being assisted in their

CARTRIDGE FILTER

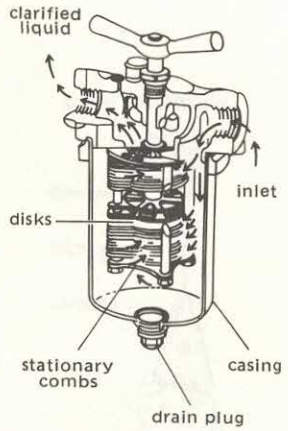


Diagram of a cartridge filter. *(From W. L. McCabe and J. C. Smith, Unit Operations of Chemical Engineering, McGraw-Hill, 1956)*

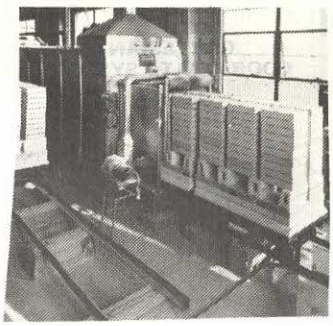
CAR TUNNEL KILN



View of medium-sized car tunnel kiln used to fire vitrified ceramic floor tile. *(Swindell-Dressler, Inc.)*

protection function by other circuit breakers which operate almost instantaneously. Also known as backup arrangement. [ELECTR] *See* avalanche. [ENG] An arrangement of separation devices, such as isotope separators, connected in series so that they multiply the effect of each individual device. [GEOL] A landform structure formed by gravity collapse, consisting of a bed that buckles into a series of folds as it slides down the flanks of an anticline. [HYD] A small waterfall or series of falls descending over rocks.

cascade amplifier [ELECTR] A vacuum-tube amplifier containing two or more stages arranged in the conventional series manner. Also known as multistage amplifier.

cascade-amplifier klystron [ELECTR] A klystron having three resonant cavities to provide increased power amplification and output; the extra resonator, located between the input and output resonators, is excited by the bunched beam emerging from the first resonator gap and produces further bunching of the beam.

cascade compensation [CONT SYS] Compensation in which the compensator is placed in series with the forward transfer function. Also known as series compensation; tandem compensation.

cascade connection [ELECTR] A series connection of amplifier stages, networks, or tuning circuits in which the output of one feeds the input of the next. Also known as tandem connection.

cascade control [CONT SYS] An automatic control system in which various control units are linked in sequence, each control unit regulating the operation of the next control unit in line.

cascade cooler [CHEM ENG] Fluid-cooling device through which the fluid flows in a series of horizontal tubes, one above the other; cooling water from a trough drips over each tube, then to a drain. Also known as serpentine cooler; trickle cooler.

cascaded [ENG] Of a series of elements or devices, arranged so that the output of one feeds directly into the input of another, as a series of dynodes or a series of airfoils.

cascaded carry [COMPUT SCI] A carry process in which the addition of two numerals results in a sum numeral and a carry numeral that are in turn added together, this process being repeated until no new carries are generated.

cascaded feedback canceler [ELECTR] Sophisticated moving-target-indicator canceler which provides clutter and chaff rejection. Also known as velocity shaped canceler.

cascade gamma emission [NUC PHYS] The emission by a nucleus of two or more gamma rays in succession.

cascade hyperon *See* xi hyperon.

cascade image tube [ELECTR] An image tube having a number of sections stacked together, the output image of one section serving as the input for the next section; used for light detection at very low levels.

cascade impactor [ENG] A low-speed impaction device for use in sampling both solid and liquid atmospheric suspensoids; consists of four pairs of jets (each of progressively smaller size) and sampling plates working in series and designed so that each plate collects particles of one size range.

cascade junction [ELECTR] Two *pn* semiconductor junctions in tandem such that the condition of the first governs that of the second.

cascade limiter [ELECTR] A limiter circuit that uses two vacuum tubes in series to give improved limiter operation for both weak and strong signals in a frequency-modulation receiver. Also known as double limiter.

cascade liquefaction [CRYO] A method of liquefying gases in which a gas with a high critical temperature is liquefied by increasing its pressure; evaporation of this liquid cools a second liquid so that it can also be liquefied by compression, and so on.

cascade mixer-settler [CHEM ENG] Series of liquid-holding vessels with stirrers, each connected to an unstirred vessel in which solids or heavy immiscible liquids settle out of suspension; light liquid moves through the mixer-settler units, counterflowing to heavy material, in such a manner that fresh liquid contacts treated heavy material, and spent (used) liquid contacts fresh (untreated) heavy material.

cascade networks [ELEC] Two networks in tandem such that the output of the first feeds the input of the second.

cascade noise [ELECTR] The noise in a communications receiver after an input signal has been subjected to two tandem stages of amplification.

cascade particle *See* xi hyperon; xi-minus particle.

cascade pulverizer [MECH ENG] A form of tumbling pulverizer that uses large lumps to do the pulverizing.

cascade sequence [MET] Combined longitudinal and buildup sequence in which weld beads are deposited in overlapping layers.

cascade shower [PARTIC PHYS] A cosmic-ray shower of electrons, positrons, and gamma rays which grows by pair production and bremsstralung events.

cascade transformer [ELEC] A source of high voltage that is made up of a collection of step-up transformers; secondary windings are in series, and primary windings, except the first, are supplied from a pair of taps on the secondary winding of the preceding transformer.

cascade tray [CHEM ENG] A fractionating apparatus that consists of a series of parallel troughs arranged in stairstep fashion.

cascade unit *See* radiation length.

Cascadian orogeny [GEOL] Post-Tertiary deformation of the crust of the earth in western North America.

cascading [ELEC] An effect in which a failure of an electrical power system causes this system to draw excessive amounts of power from power systems which are interconnected with it, causing them to fail, and these systems cause adjacent systems to fail in a similar manner, and so forth. [MECH ENG] An effect in ball-mill rotating devices when the upper level of crushing bodies breaks clear and falls to the top of the crop load.

cascading glacier [HYD] A glacier broken by numerous crevasses because of passing over a steep irregular bed, giving the appearance of a cascading stream.

cascarilla oil [MATER] An essential oil derived from cascarilla bark (*Croton eluteria*), containing cascarillic acid, $C_{11}H_{20}O_2$; used as a flavoring in foods, medicine, and tobacco.

cascode amplifier [ELECTR] An amplifier consisting of a grounded-cathode input stage that drives a grounded-grid output stage; advantages include high gain and low noise; widely used in television tuners.

case [COMPUT SCI] In computers, a set of data to be used by a particular program. [ENG] An item designed to hold a specific item in a fixed position by virtue of conforming dimensions or attachments; the item which it contains is complete in itself for removal and use outside the container. [GRAPHICS] The cover of a hardbound book. [MET] Outer layer of a ferrous alloy which has been made harder than the core by case hardening. [MIN ENG] A small fissure admitting water into the mine workings. [PETRO ENG] To line a borehole with steel tubing, such as casing or pipe.

caseation necrosis [PATH] Tissue death involving loss of cellular integrity with the consequent conversion to a cheeselike substance; typical in tuberculosis.

case bay [BUILD] A division of a roof or floor, consisting of two principal rafters and the joists between them.

cased glass [MATER] Glass composed of two or more layers of different colors.

case I firing *See* case I pointing.

case II firing *See* case II pointing.

case III firing *See* case III pointing.

case hardening [GEOL] Formation of a mineral coating on the surface of porous rock by evaporation of a mineral-bearing solution. [MET] Process of carburizing low-carbon steel or other ferrous alloy for making the outer layer (case) harder than the core.

casein [ORG CHEM] The protein of milk; a white solid soluble in acids.

casein-formaldehyde [ORG CHEM] A modified natural polymer.

casein glue [MATER] A produce of dried curds of milk, lime, and other chemical ingredients, mixed cold; used for both plywood and assembly work.

casein paint [MATER] A paint with casein substituted for linseed oil.

casein plastic [MATER] A plastic made with casein and used for buttons, beads, knitting needles, and novelties; thin sheets and rods of casein plastic are cured (hardened) in formaldehyde baths.

casemate [ORD] A bombproof structure used as a powder magazine, gun emplacement, or the like.

casement window [BUILD] A window hinged on the side that opens to the outside.

caseous lymphadenitis [VET MED] A chronic bacterial disease of sheep and goats caused by *Corynebacterium*

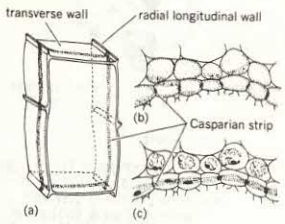
CASCADE IMAGE TUBE

Two-stage electrostatically focused cascade-type image tube. *(U.S. Army Engineer Development Corps)*

CASHEW

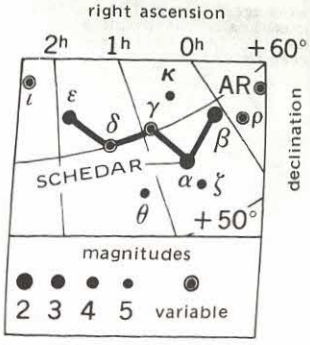
Cashew (*Anacardium occidentale*). Branch with leaves, and fruits with nuts attached.

CASPARIAN STRIP



Details of endodermal structure. *(a)* Diagram of cell showing location of Casparian strip. *(b)* Cells of endodermis and of ordinary parenchyma before treatment with alcohol. *(c)* Cells after treatment. Casparian strip is seen only in sectional views in *b* and *c*. *(From K. Esau, Plant Anatomy, 2d ed., copyright © 1965 by John Wiley & Sons, Inc.; reprinted by permission)*

CASSIOPEIA



Line pattern of the constellation Cassiopeia. The grid lines represent the coordinates of the sky. Magnitudes of the stars are shown by the sizes of the dots.

pseudotuberculosis, characterized by caseation of the lymph glands and sometimes the lungs, liver, spleen, and kidneys.

case I pointing [ORD] Direct pointing, laying, or firing; gun pointing, in which direction and elevation are set with sight or telescope pointed at the target. Also known as case I firing.

case II pointing [ORD] Combined direct and indirect pointing, laying, or firing; gun pointing, in which direction is set with a sight or telescope pointed at the target; the elevation is set with an elevation quadrant, range quadrant, or range disk. Also known as case II firing.

case III pointing [ORD] Indirect pointing, laying, or firing; gun pointing, in which direction is set with an azimuth circle or with a sight or telescope pointed at an aiming point other than the target; the elevation is set with an elevation quadrant, range quadrant, or range disk. Also known as case III firing.

case primer [ORD] Primer intended to be assembled into the cartridge case of case ammunition.

case shot [ORD] A shell loaded with shrapnel.

cashew [BOT] *Anacardium occidentale*. An evergreen tree of the order Sapindales grown for its kidney-shaped edible nuts and resinous oil.

cashew gum [MATER] A gum obtained from the bark of the cashew tree; hard, yellowish-brown substance used for inks, insecticides, pharmaceuticals, varnishes, and bookbinders' gum. Also known as anacardium gum.

cashew nutshell oil [MATER] A toxic, irritating oil obtained from the shell of the cashew nut; contains about 90% anacardic acid; used for varnishes, plasticizers, insecticides, coloring materials, and preservatives.

cashmere [TEXT] A natural textile fiber obtained from the Cashmere goat of the Himalayan region of China and India.

Casimir–du Pré theory [SOLID STATE] A theory of spin-lattice relaxation which treats the lattice and spin systems as distinct thermodynamic systems in thermal contact with one another.

casing [BUILD] A finishing member around the opening of a door or window. [MECH ENG] A fire-resistant covering used to protect part or all of a steam generating unit. [PETRO ENG] A special steel tubing welded or screwed together and lowered into a borehole to prevent entry of loose rock, gas, or liquid into the borehole or to prevent loss of circulation liquid into porous, cavernous, or crevassed ground.

casing cementing [PETRO ENG] Filling of the area between a casing and the borehole with cement in order to prevent fluid migration between permeable zones and to support the casing.

casing centralizer [PETRO ENG] A device secured around the casing during drilling to hold the pipe in a center position, permitting a uniform cement sheath to be constructed around the pipe.

casing cutter [PETRO ENG] Heavy cylindrical apparatus bearing knives, and run on a string of tubing or drill pipe into a well, to perform cutting on the inner walls of a pipe through rotation, thus freeing a pipe section.

casing hanger *See* hanger.

casinghead [PETRO ENG] A fitting at the head of an oil or gas well that allows the pumping operation to take place, as well as the separation of oil and gas.

casinghead gas [MATER] The natural gas that is emitted from the mouth or opening of an oil well.

casinghead gasoline [MATER] Liquid hydrocarbon product removed from casinghead gas by absorption, compression, or refrigeration.

casinghead tank [PETRO ENG] Storage tank for natural gasoline or other liquids with vapor pressures between 4 and 40 pounds per square inch gage (28 and 280 kilopascals, gage); intermediate between a general-purpose tank and a compressed-gas tank.

casing joint [PETRO ENG] Joint or union that connects two lengths of pipe used to form an oil-well casing.

casing log [PETRO ENG] Recorded data of a down-hole inspection of an oil or gas well made to determine some characteristic of the formations penetrated by the drill hole; types of logs include resistivity, induction, radioactivity, geologic, temperature, and acoustic.

casing nail [DES ENG] A nail about half a gage thinner than a common wire nail of the same length.

casing pressure [PETRO ENG] Gas pressure which is built up between the casing and tubing in a well.

casing shoe [ENG] A ring with a cutting edge on the bottom of a well casing.

casing spear [PETRO ENG] An instrument used for recovering casing which has accidentally fallen into the well.

casing tester [PETRO ENG] A closely fitting, rubber-flanged bucket or a similar tool let down in a well to determine the location of a leak in the casing.

Cassinni projection [MAP] A map projection, formerly used for topographic and cadastral mapping, in which scale is perserved along the central meridian and great circle arcs by plotting as rectangular coordinates on a plane the lengths of arcs along a central meridian and along a great circle perpendicular to that meridian.

cask *See* coffin.

cask buoy [NAV] A buoy in the shape of a cask.

casket *See* coffin.

Casparian strip [BOT] A thin band of suberin- or lignin-like deposition in the radial and transverse walls of certain plant cells during the primary development phase of the endodermis.

Cassadagan [GEOL] Middle Upper Devonian geologic time, above Chemungian.

cassava [BOT] *Manihot esculenta*. A shrubby perennial plant grown for its starchy, edible tuberous roots. Also known as manihot; manioc.

Cassegrain antenna [ELECTROMAG] A microwave antenna in which the feed radiator is mounted at or near the surface of the main reflector and aimed at a mirror at the focus; energy from the feed first illuminates the mirror, then spreads outward to illuminate the main reflector.

Cassegrain focus [OPTICS] The principal focus of a Cassegrain telescope, located just behind the primary mirror.

Cassegrain-Newtonian telescope *See* Newtonian-Cassegrain telescope.

Cassegrain telescope [OPTICS] A reflecting telescope in which a small hyperboloidal mirror reflects the convergent beam from the paraboloidal primary mirror through a hole in the primary mirror to an eyepiece in back of the primary mirror.

Cassel green *See* barium manganate.

Casselian *See* Chattian.

cassette [ENG] A light-tight container designed to hold photographic film or plates. [ENG ACOUS] A small, compact container that holds a magnetic tape and can be readily inserted into a matching tape recorder for recording or playback; the tape passes from one hub within the container to the other hub.

cassette-cartridge system [COMPUT SCI] An input system often used in minicomputers; its low cost and ease in mounting often offset its slow access time.

cassette memory [COMPUT SCI] A removable magnetic tape cassette that stores computer programs and data.

cassia oil [MATER] An essential oil extracted from the bark of Chinese cinnamon (*Cinnamomum cassia*), and containing cinnamaldehyde. Also known as Chinese oil of cinnamon.

Cassiar orogeny [GEOL] Orogenic episode in the Canadian Cordillera during late Paleozoic time.

Cassidulinacea [INV ZOO] A superfamily of marine, benthic foraminiferans in the suborder Rotaliina, characterized by a test of granular calcite with monolamellar septa.

Cassiduloida [INV ZOO] An order of exocyclic Euechinoidea possessing five similar ambulacra which form petal-shaped areas (phyllodes) around the mouth.

cassidyite [MINERAL] $Ca_2(Ni,Mg)(PO_4)_2 \cdot 2H_2O$ A mineral found in meteorites.

Cassini's division [ASTRON] The dark ring, 2500 miles (4000 kilometers) wide, that separates ringA from ringB of the planet Saturn.

Cassiopeia [ASTRON] A constellation with right ascension 1 hour, declination 60°N. Abbreviated Cas.

Cassiopeia A [ASTRON] One of the strongest discrete radio sources, located in the constellation Cassiopeia, associated with patches of filamentary nebulosity which are probably remnants of a supernova.

cassiterite [MINERAL] SnO_2 A yellow, black, or brown mineral that crystallizes in the tetragonal system in prisms terminated by dipyramids; the most important ore of tin. Also known as tin stone.

cassowary [VERT ZOO] Any of three species of large, heavy, flightless birds composing the family Casuariidae in the order Casuariiformes.

cast [ENG] **1.** To form a liquid or plastic substance into a fixed shape by letting it cool in the mold. **2.** Any object which is formed by placing a castable substance in a mold or form and allowing it to solidify. Also known as casting. [MED] **1.** A

rigid dressing used to immobilize a part of the body. **2.** *See* strabismus. [NAV] **1.** To turn a ship in its own water. **2.** To turn a ship to a desired direction without gaining either headway or sternway. **3.** To take a sounding with the lead. [OPTICS] A change in a color because of the adding of a different hue. [PALEON] A fossil reproduction of a natural object formed by infiltration of a mold of the object by water-borne minerals. [PHYSIO] A mass of fibrous material or exudate having the form of the body cavity in which it has been molded; classified from its source, such as bronchial, renal, or tracheal.

castable [MATER] A refractory aggregate mixed with a bonding agent such as aluminous hydraulic cement which, with addition of water, will develop structural strength and set in a mold.

Castaing-Slodzian mass analyzer *See* direct-imaging mass analyzer.

castaneous [BIOL] Chestnut-colored.

cast coated paper [MATER] A paper with a high-gloss enamel finish that has been produced by drying coated paper under pressure from a polished cylinder.

caste [INV ZOO] One of the levels of mature social insects in a colony that carry out a specific function; examples are workers and soldiers.

castellanus [METEOROL] A cloud species with at least a fraction of its upper part presenting some vertically developed cumuliform protuberances (some of which are more tall than wide) which give the cloud a crenellated or turreted appearance. Previously known as castellatus.

castellated bit [DES ENG] **1.** A long-tooth, sawtooth bit. **2.** A diamond-set coring bit with a few large diamonds or hard metal cutting points set in the face of each of several upstanding prongs separated from each other by deep waterways. Also known as padded bit.

castellated nut [DES ENG] A type of hexagonal nut with a cylindrical portion above through which slots are cut so that a cotter pin or safety wire can hold it in place.

castellatus *See* castellanus.

caster [ENG] **1.** The inclination of the kingpin or its equivalent in automotive steering, which is positive if the kingpin inclines forward, negative if it inclines backward, and zero if it is vertical as viewed along the axis of the front wheels. **2.** A wheel which is free to swivel about an axis at right angles to the axis of the wheel, used to support trucks, machinery, or furniture.

cast-film extrusion *See* chill-roll extrusion.

Castigliano's principle *See* Castigliano's theorem.

Castigliano's theorem [MECH] The theorem that the component in a given direction of the deflection of the point of application of an external force on an elastic body is equal to the partial derivative of the work of deformation with respect to the component of the force in that direction. Also known as Castigliano's principle.

Castile soap [MATER] A white, odorless, hard soap made from sodium hydroxide and olive oil.

casting *See* cast.

casting alloy [MET] An alloy which cannot be forged or rolled and can be shaped only as a casting.

casting area [ENG] In plastics injection molding, the moldable area of a thermoplastic material for a given thickness and under given conditions of molding.

casting copper [MET] Copper used for making foundry castings; obtained from copper ores, and inferior to electrolytic copper.

casting ladle [MET] A refractory-lined steel ladle used to transport molten metal from the furnace to a mold.

casting-out nines [MATH] A method of checking the correctness of elementary arithmetical operations, based on the fact that an integer yields the same remainder as the sum of its decimal digits, when divided by 9.

casting plaster [MATER] A white plaster used for castings and carvings.

castings [ENG] Any term or symbol designating a low-quality drill diamond. [GEOL] *See* fecal pellets.

casting shrinkage [MET] **1.** Total reduction in volume of a casting due to partial reductions at each stage of solidification. **2.** Reduction in volume at each stage of solidification of a casting.

casting slip [MATER] A slurry of clay and additives mixed in water with deflocculating agents and used for casting in molds.

casting strain [MECH] Any strain that results from the cooling of a casting, causing casting stress.

casting stress [MECH] Any stress that develops in a casting due to geometry and casting shrinkage.

casting wheel [MET] A large turntable with molds mounted on the outer edge; used primarily in the base-metal industries for cast ingots, anodes, and so on.

cast iron [MET] Any carbon-iron alloy cast to shape and containing 1.8–4.5% carbon, that is, in excess of the solubility in austenite at the eutectic temperature. Abbreviated C.I.

cast-iron front [ARCH] A style of architecture characterized by large window areas and cast-iron columns and spandrels.

Castle's intrinsic factor *See* intrinsic factor.

cast loading *See* melt loading.

Castner cell [CHEM ENG] A type of mercury cell used in the commercial production of chlorine and sodium.

Castner process [CHEM ENG] A process used industrially to make high-test sodium cyanide by reacting sodium, glowed charcoal, and dry ammonia gas to form sodamide, which is converted to cyanamide immediately; the cyanamide is converted to cyanide with charcoal.

Castniidae [INV ZOO] The castniids; large diurnal, butterflylike moths composing the single, small family of the lepidopteran superfamily Castnioidea.

Castnioidea [INV ZOO] A superfamily of neotropical and Indo-Australian lepidopteran insects in the suborder Heteroneura.

Castor [ASTRON] A multiple star of spectral classification A0 in the constellation Gemini; the star α Geminorum.

castor bean [BOT] The seed of the castor oil plant (*Ricinus communis*), a coarse, erect annual herb in the spurge family (Euphorbiaceae) of the order Geraniales.

castoreum gland [VERT ZOO] A preputial scent gland in the beaver.

castorite [MINERAL] A transparent variety of petalite occurring in crystals.

castor machine oil [MATER] Petroleum-base lubricating oil thickened with an aluminum-base soap, such as aluminum oleate.

castor oil [MATER] A colorless or greenish nondrying oil extracted from the castor bean; used as a cathartic, in soap, and after processing as a lubricant, and as a leather preservative. Also known as ricinus oil.

castor oil acid *See* ricinoleic acid.

castration [MED] Removing, or inhibiting the function or development of, the ovaries or testes.

castration anxiety [PSYCH] Anxiety due to the fear of loss of the genitals or injury to them.

cast setting *See* mechanical setting.

cast steel [MET] Steel shaped by casting.

cast stone [MATER] Building stone molded from concrete so that it resembles natural stone.

cast structure [MET] The microstructure of a casting.

cast-weld [MET] Joining parts by pouring molten metal over them in a mold.

casual carrier [MED] A person who carries an infectious microorganism but never manifests the disease.

Casuariidae [VERT ZOO] The cassowaries, a family of flightless birds in the order Casuariiformes lacking head and neck feathers and having bony casques on the head.

Casuariiformes [VERT ZOO] An order of large, flightless, ostrichlike birds of Australia and New Guinea.

Casuarinaceae [BOT] The single, monogeneric family of the plant order Casuarinales characterized by reduced flowers and green twigs bearing whorls of scalelike, reduced leaves.

Casuarinales [BOT] A monofamilial order of dicotyledonous plants in the subclass Hamamelidae.

cat [NAV ARCH] **1.** A sturdy tackle used for bringing an anchor up to a ship's cathead. **2.** To hoist an anchor up to the cathead of a ship. [VERT ZOO] The common name for all members of the carnivoran mammalian family Felidae, especially breeds of the domestic species, *Felis domestica*.

CAT *See* clear-air turbulence.

catabiosis [PHYSIO] Degenerative changes accompanying cellular senescence.

catabolism [BIOCHEM] That part of metabolism concerned with the breakdown of large protoplasmic molecules and tissues, often with the liberation of energy.

catabolite [BIOCHEM] Any product of catabolism.

catabolite repression [BIOCHEM] An intracellular regula-

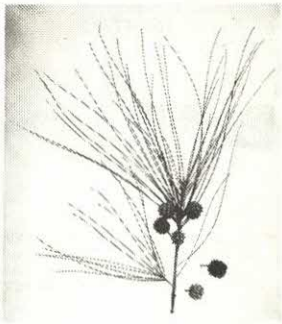
CASTELLATED NUT

A castellated nut, a type of threaded fastener. *(Reynolds Metals Co.)*

CASTOR BEAN

Ricinus communis, the castor bean plant. *(a)* Plant grows 3–40 feet (0.9–12 meters) high. *(b)* Pods of the fruit cluster liberate smooth, distinctively marked seeds.

CASUARINACEAE



Casuarina equisetifolia, typical member of the family Casuarinaceae and order Casuarinales. *(Photograph by W. D. Brush)*

CAT

The Angora cat, noted for its fine, thick fur.

tory mechanism in bacteria whereby glucose, or any other carbon source that is an intermediate in catabolism, prevents formation of inducible enzymes.

catachosis [GEOL] Fracturing or crushing of rock during metamorphism.

cataclasis [GEOL] Deformation of rock by fracture and rotation of aggregates or mineral grains.

cataclasite *See* cataclastic rock.

cataclastic metamorphism [PETR] Local metamorphism restricted to a region of faults and overthrusts involving purely mechanical forces resulting in cataclasis.

cataclastic rock [PETR] Rock containing angular fragments formed by cataclasis. Also known as cataclasite.

cataclastic structure *See* mortar structure.

cataclysmic variable [ASTRON] A star showing a sudden increase in the magnitude of light, followed by a slow fading of light; examples are novae and supernovae. Also known as explosive variable.

cata-condensed polycyclic [ORG CHEM] An aromatic compound in which no more than two rings have a single carbon atom in common.

catadioptric [OPTICS] Involving both reflection and refraction of light.

catadromous [VERT ZOO] Pertaining to fishes which live in fresh water and migrate to spawn in salt water.

catagelophobia [PSYCH] An abnormal fear of ridicule.

Catalan forge [MET] A furnace or forge for making wrought iron from ore, in which the ore loaded at front and charcoal at rear are covered with fine ore and charcoal dust moistened with water.

catalase [BIOCHEM] An enzyme that catalyzes the decomposition of hydrogen peroxide into molecular oxygen and water.

catalectrotonus [PHYSIO] The negative electric potential during the passage of a current on the surface of a nerve or muscle in the region of the cathode.

catalepsy [PSYCH] Suspended animation with loss of voluntary motion associated with hysteria and the schizophrenic reactions in humans, and with organic nervous system disease in animals.

catalog [COMPUT SCI] **1.** All the indexes to data sets or files in a system. **2.** The index to all other indexes; the master index. **3.** To add an entry to an index or to build an entire new index.

cataloged procedure [COMPUT SCI] A group of control cards (job control language statements) that has been placed in a cataloged data set.

catalog number [ASTRON] The designation of a star composed of the name of a particular star catalog and the number of the star as listed there.

catalog-order device [ELECTR] A logic circuit element that is readily obtainable from a manufacturer, and can be combined wih other such elements to provide a wide variety of logic circuits.

catalysis [CHEM] A phenomenon in which a relatively small amount of substance augments the rate of a chemical reaction without itself being consumed.

catalyst [CHEM] Substance that alters the velocity of a chemical reaction and may be recovered essentially unaltered in form and amount at the end of the reaction.

catalyst carrier [CHEM] A neutral material used to support a catalyst, such as activated carbon, diatomaceous earth, or activated alumina.

catalyst selectivity [CHEM] **1.** The relative activity of a catalyst in reference to a particular compound in a mixture. **2.** The relative rate of a single reactant in competing reactions.

catalyst stripping [CHEM ENG] Introduction of steam to remove hydrocarbons retained on the catalyst; the steam is introduced where the spent catalyst leaves the reactor.

catalytic activity [CHEM ENG] The ratio of the space velocity of a catalyst being tested, to the space velocity required for a standard catalyst to give the same conversion as the catalyst under test.

catalytically cracked gasoline [MATER] Gasoline produced in a refinery reactor equipped with catalytic cracking equipment.

catalytic converter [CHEM ENG] A cracker which utilizes catalysts.

catalytic cracking [CHEM ENG] Conversion of high-boiling hydrocarbons into lower-boiling types by a catalyst.

catalytic hydrogenation [CHEM ENG] Hydrogenating by means of catalysts such as nickel or palladium.

catalytic polymerization [CHEM ENG] Polymerization of monomers to form high-molecular-weight molecules in the presence of catalysts.

catalytic reforming [CHEM ENG] Rearranging of hydrocarbon molecules in a gasoline boiling-range feedstock to form hydrocarbons having a higher antiknock quality. Abbreviated CR.

catalytic site *See* active site.

catamaran [NAV ARCH] **1.** A sailing or powered boat having two rather slender hulls joined by a deck or other structure. **2.** A rectangular raft resting on two parallel cylindrical floats.

catamount *See* puma.

cat-and-mouse engine [MECH ENG] A type of rotary engine, typified by the Tschudi engine, which is an analog of the reciprocating piston engine, except that the pistons travel in a circular motion. Also known as scissor engine.

cataphoresis *See* electrophoresis.

catapleiite [MINERAL] $(Na_2,Ca)ZrSi_3O_9 \cdot 2H_2O$ A yellow or yellowish-brown mineral crystallizing in the hexagonal system, consisting of a hydrous silicate of sodium, calcium, and zirconium, and occurring in thin tabular crystals; hardness is 6 on Mohs scale, and specific gravity is 2.8.

cataplexy [MED] **1.** Sudden loss of muscle tone provoked by exaggerated emotion, such as excessive anger or laughter, often associated with a profound desire for sleep. **2.** Prostration by the sudden onset of disease. **3.** Hypnotic sleep.

Catapochrotidae [INV ZOO] A monospecific family of coleopteran insects in the superfamily Cucujoidea.

catapult [AERO ENG] **1.** A power-actuated machine or device for hurling an object at high speed, for example, a device which launches aircraft from a ship deck. **2.** A device, usually explosive, for ejecting a person from an aircraft. [ORD] A mechanical device for hurling grenades or bombs.

cataract [HYD] A waterfall of considerable volume with the vertical fall concentrated in one sheer drop. [MED] An opacity in the crystalline lens or the lens capsule of the eye.

cataracting [MECH ENG] A motion of the crushed bodies in a ball mill in which some, leaving the top of the crop load, fall with impact to the toe of the load.

catarobic [ECOL] Pertaining to a body of water characterized by the slow decomposition of organic matter, and oxygen utilization which is insufficient to prevent the activity of aerobic organisms.

catarrh [MED] An old term for an inflammation of mucous membranes, particularly of the respiratory tract.

catarrhal conjunctivitis [MED] A usually acute inflammation of the conjunctiva with smarting of the eyes, heaviness of the lids, photophobia, and excessive mucous or mucopurulent secretion, caused by a variety of contagious organisms, but sometimes becoming chronic as a sequela of the acute form or because of irritation from polluted atmosphere or allergic factors. Also known as pinkeye.

catarrhal jaundice *See* infectious hepatitis.

catastrophic failure [ENG] **1.** A sudden failure without warning, as opposed to degradation failure. **2.** A failure whose occurrence can prevent the satisfactory performance of an entire assembly or system.

catastrophism [GEOL] The theory that most features in the earth were produced by the occurrence of sudden, short-lived, worldwide events. [PALEON] The theory that the differences between fossils in successive stratigraphic horizons resulted from a general catastrophe followed by creation of the different organisms found in the next-younger beds.

catatonia [PSYCH] A type of schizophrenic reaction in which the individual remains speechless and motionless, assumes fixed postures, and lacks the will and resists attempts to activate speech and movement.

catazone [GEOL] The deepest zone of rock metamorphism where high temperatures and pressures prevail.

cat back [NAV ARCH] A piece of rope sometimes attached to the hook of a cat block to assist in hooking the ring of the anchor. Also known as backrope.

cat block [NAV ARCH] A heavy block with a hook, used in hoisting a ship's anchor up to the cathead.

catch basin [CIV ENG] **1.** A basin at the point where a street gutter empties into a sewer, built to catch matter that would not easily pass through the sewer. **2.** A well or reservoir into which surface water may drain off.

catcher [ELECTR] Electrode in a velocity-modulated vacuum tube on which the spaced electron groups induce a signal; the output of the tube is taken from this element.

catching diode [ELECTR] Diode connected to act as a short circuit when its anode becomes positive; the diode then prevents the voltage of a circuit terminal from rising above the diode cathode voltage.

catching sample [PETRO ENG] During drilling operations, a sample of a cutting obtained from the drilling fluid as it emerges from the well bore or the bailer of a cable tool.

catching up [GRAPHICS] The taking of ink or scumming by the nonimage portions of a press plate.

catchlights [GRAPHICS] Reflections of light sources in a subject's eyes or eyeglasses.

catchment area *See* drainage basin.

catchment glacier *See* snowdrift glacier.

catch pit [MIN ENG] In mineral processing, a sump in a mill to which the floor slopes gently; spillage gravitates or is hosed to this area.

catchwater [CIV ENG] A ditch for catching water on sloping land.

cat cracker [CHEM ENG] A refinery unit where catalytic cracking is done.

catechol [ORG CHEM] One of a group of three isomeric dihydroxy benzenes in which the two hydroxyl groups are ortho to each other. Also known as catechin; pyrocatechol; pyrocatechuic acid.

catecholamine [BIOCHEM] Any one of a group of sympathomimetic amines containing a catechol moiety, including especially epinephrine, norepinephrine (levarterenol), and dopamine.

categorization [COMPUT SCI] Process of separating multiple addressed messages to form individual messages for singular addresses.

category [MATH] A class of objects together with a set of morphisms for each pair of objects and a law of composition for morphisms; sets and functions form an important category, as do groups and homomorphisms.

catena [COMPUT SCI] A series of data items that appears in a chained list. [GEOL] A group of soils derived from uniform or similar parent material which nonetheless show variations in type because of differences in topography or drainage.

catenane [ORG CHEM] A compound whose structure has at least two interlocking rings, similar to links in a chain, where the two links remain free of conventional chemical bonds, yet are still fitted together mechanically.

catenary [MATER] In fiberglass-reinforced plastics, a measure of the sag in an assemblage of a number of strands, which have a minimal amount of twist, at the midpoint of a specified length. [MATH] The curve obtained by suspending a uniform chain by its two ends; the graph of the hyperbolic cosine function.

catenary suspension [ENG] Holding a flexible wire or chain aloft by its end points; the wire or chain takes the shape of a catenary.

catenate [COMPUT SCI] To arrange a collection of items in a chained list or catena.

catenation [CHEM] The property of an element to link to itself to form molecules as with carbon.

catenulate [BIOL] Having a chainlike form.

Catenulida [INV ZOO] An order of threadlike, colorless fresh-water rhabdocoeles with a simple pharynx and a single, median protonephridium.

caterer problem [MATH] A linear programming problem in which it is required to find the optimal policy for a caterer who must choose between buying new napkins and sending them to either a fast or a slow laundry service.

caterpillar [INV ZOO] **1.** The wormlike larval stage of a butterfly or moth. **2.** The larva of certain insects, such as scorpion flies and sawflies. [MECH ENG] A vehicle, such as a tractor or army tank, which runs on two endless belts, one on each side, consisting of flat treads and kept in motion by toothed driving wheels.

caterpillar chain [DES ENG] A short, endless chain on which dogs (grippers) or teeth are arranged to mesh with a conveyor.

caterpillar gate [CIV ENG] A steel gate carried on crawler tracks that is used to control water flow through a spillway.

catfish [VERT ZOO] The common name for a number of fishes which constitute the suborder Siluroidei in the order Cypriniformes, all of which have barbels around the mouth.

catforming [CHEM ENG] A naphtha-reforming process with a catalyst of platinum-silica-alumina which results in very high hydrogen purity.

catgut [MATER] A thin cord made from the submucosa of sheep and other animal intestine; used for sutures and ligatures, for strings of musical instruments, and for tennis racket strings. Also known as gut.

catharsis [PSYCH] Release of tension by releasing deep-seated emotions or reliving a traumatic experience.

cathartic [PHARM] Any drug, such as castor oil, mineral oil, or a laxative, that causes defecation.

Cathartidae [VERT ZOO] The New World vultures, a family of large, diurnal predatory birds in the order Falconiformes that lack a voice and have slightly webbed feet.

cathead [NAV ARCH] A projection on a ship's bow which supports tackle for hoisting an anchor, and to which the anchor is secured.

cathead line *See* catline.

cathedral glass [MATER] Unpolished translucent sheet glass.

cathepsin [BIOCHEM] Any of several proteolytic enzymes occurring in animal tissue that hydrolyze high-molecular-weight proteins to proteoses and peptones.

catheter [MED] A hollow, tubular device for insertion into a cavity, duct, or vessel to permit injection or withdrawal of fluids or to establish patency of the passageway.

catheterization [MED] Insertion or use of a catheter.

cathetometer [ENG] An instrument for measuring small differences in height, for example, between two columns of mercury.

Cathie unit [BIOL] A unit for the standardization of streptokinase.

cathode [ELEC] The positively charged pole of a primary cell or a storage battery. [ELECTR] **1.** The primary source of electrons in an electron tube; in directly heated tubes the filament is the cathode, and in indirectly heated tubes a coated metal cathode surrounds a heater. Designated K. Also known as negative electrode. **2.** The terminal of a semiconductor diode that is negative with respect to the other terminal when the diode is biased in the forward direction. [PHYS CHEM] The electrode at which reduction takes place in an electrochemical cell, that is, a cell through which electrons are being forced.

cathode bias [ELECTR] Bias obtained by placing a resistor in the common cathode return circuit, between cathode and ground; flow of electrode currents through this resistor produces a voltage drop that serves to make the control grid negative with respect to the cathode.

cathode cleaning [MET] Electrolytically removing soil from work connected as the cathode.

cathode copper [MET] Copper deposited at the cathode during electrolytic refining; it is melted and marketed as electrolytic copper.

cathode corrosion [MET] **1.** Corrosion of the cathode of an electrochemical circuit, usually caused by production of alkaline reaction products. **2.** Corrosion of the cathodic member of a galvanic couple.

cathode-coupled amplifier [ELECTR] A cascade amplifier in which the coupling between two stages is provided by a common cathode resistor.

cathode coupling [ELECTR] Use of an input or output element in the cathode circuit for coupling energy to another stage.

cathode dark space [ELECTR] The relatively nonluminous region between the cathode glow and the negative flow in a glow-discharge cold-cathode tube. Also known as Crookes dark space; Hittorf dark space.

cathode disintegration [ELECTR] The destruction of the active area of a cathode by positive-ion bombardment.

cathode drop [ELECTR] The voltage between the arc stream and the cathode of a glow-discharge tube. Also known as cathode fall.

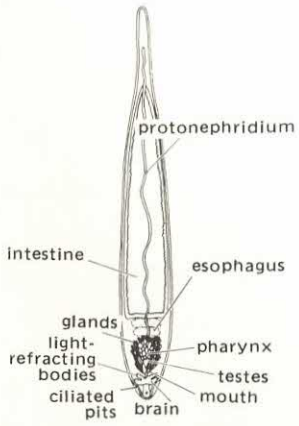
cathode efficiency [CHEM ENG] The proportion of current used for completion of a given process at the cathode.

cathode emission [ELECTR] A process whereby electrons are emitted from the cathode structure.

cathode fall *See* cathode drop.

cathode follower [ELECTR] A vacuum-tube circuit in which the input signal is applied between the control grid and ground,

CATENULIDA

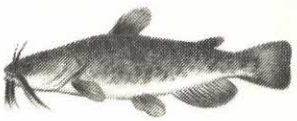


Stenostomum grande, the commonest and most widely distributed of all freshwater rhabdocoeles, in the order Catenulida. *(After Nuttycombe and Waters, 1938)*

CATERPILLAR

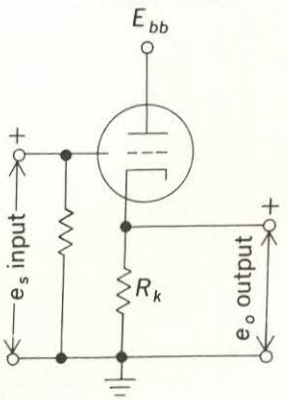
Forest tent caterpillar *(Malacosoma disstria)*.

CATFISH



Brown bullhead *(Ictaturus nebulosus)*, a catfish found in warm mud-bottomed waters across the United States.

CATHODE FOLLOWER



Circuit diagram of a cathode-follower amplifier.

and the load is connected between the cathode and ground. Also known as grounded-anode amplifier; grounded-plate amplifier.

cathode glow [ELECTR] The luminous glow that covers all or part of the cathode in a glow-discharge cold-cathode tube.

cathode interface capacitance [ELECTR] A capacitance which, when connected in parallel with an appropriate resistance, forms an impedance approximately equal to the cathode interface impedance. Also known as layer capacitance.

cathode interface impedance [ELECTR] The impedance between the cathode base and coating in an electron tube, due to a high-resistivity layer or a poor mechanical bond. Also known as layer impedance.

cathode keying [ELECTR] Transmitter keying by means of a key in the cathode lead of the keyed vacuum-tube stage, opening the direct-current circuits for the grid and anode simultaneously.

cathode modulation [ELECTR] Amplitude modulation accomplished by applying the modulating voltage to the cathode circuit of an electron tube in which the carrier is present.

cathode ray [ELECTR] A stream of electrons, such as that emitted by a heated filament in a tube, or that emitted by the cathode of a gas-discharge tube when the cathode is bombarded by positive ions.

cathode-ray oscillograph [ELECTR] A cathode-ray oscilloscope in which a photographic or other permanent record is produced by the electron beam of the cathode-ray tube.

cathode-ray oscilloscope [ELECTR] A test instrument that uses a cathode-ray tube to make visible on a fluorescent screen the instantaneous values and waveforms of electrical quantities that are rapidly varying as a function of time or another quantity. Abbreviated CRO. Also known as oscilloscope; scope.

cathode-ray output [COMPUT SCI] A cathode-ray tube used in a computer to display output information in graphic form or by character representation.

cathode-ray storage tube [ELECTR] A storage tube in which the information is written by means of a cathode-ray beam.

cathode-ray tube [ELECTR] An electron tube in which a beam of electrons can be focused to a small area and varied in position and intensity on a surface. Abbreviated CRT. Originally known as Braun tube; also known as electron-ray tube.

cathode-ray tuning indicator [ELECTR] A small cathode-ray tube having a fluorescent pattern whose size varies with the voltage applied to the grid; used in radio receivers to indicate accuracy of tuning and as a modulation indicator in some tape recorders. Also known as electric eye; electron-ray indicator; magic eye; tuning eye.

cathode-ray voltmeter [ELEC] An instrument consisting of a cathode-ray tube of known sensitivity, whose deflection can be used to measure voltages.

cathode resistor [ELECTR] A resistor used in the cathode circuit of a vacuum tube, having a resistance value such that the voltage drop across it due to tube current provides the correct negative grid bias for the tube.

cathode spot [ELECTR] The small cathode area from which an arc appears to originate in a discharge tube.

cathode sputtering *See* sputtering.

cathodic coating [MET] Material forming a continuous film on a base metal, deposited by mechanical coating or electroplating.

cathodic inhibitor [CHEM ENG] A compound, such as calcium bicarbonate or sodium phosphate, which is deposited on a metal surface in a thin film that operates at the cathodes to provide physical protection over the entire surface against corrosive attack in a conducting medium.

cathodic polarization [PHYS CHEM] Portion of electric cell polarization occurring at the cathode.

cathodic protection [MET] Protecting a metal from electrochemical corrosion by using it as the cathode of a cell with a sacrificial anode. Also known as electrolytic protection.

cathodoluminescence [ELECTR] Luminescence produced when high-velocity electrons bombard a metal in vacuum, thus vaporizing small amounts of the metal in an excited state, which amounts emit radiation characteristic of the metal. Also known as electronoluminescence.

cathodophosphorescence [ELECTR] Phosphorescence produced when high-velocity electrons bombard a metal in a vacuum.

catholyte [CHEM] Electrolyte adjacent to the cathode in an electrolytic cell.

cathomycin [MICROBIO] A trade name for novobiocin.

cation [CHEM] A positively charged atom or group of atoms, or a radical which moves to the negative pole (cathode) during electrolysis.

cation analysis [ANALY CHEM] Qualitative analysis for cations in aqueous solution.

cation exchange [CHEM] A chemical reaction in which hydrated cations of a solid are exchanged, equivalent for equivalent, for cations of like charge in solution.

cation exchange resin [ORG CHEM] A highly polymerized synthetic organic compound consisting of a large, nondiffusible anion and a simple, diffusible cation, which later can be exchanged for a cation in the medium in which the resin is placed.

cationic detergent [CHEM] A member of a group of detergents that have molecules containing a quaternary ammonium salt cation with a group of 12 to 24 carbon atoms attached to the nitrogen atom in the cation; an example is alkyltrimethyl ammonium bromide.

cationic hetero atom [CHEM] A positively charged atom, other than carbon, in an otherwise carbon atomic chain or ring.

cationic polymerization [ORG CHEM] A type of polymerization in which Lewis acids act as catalysts.

cationic reagent [CHEM] A surface-active agent with active positive ions used for ore beneficiation (flotation via flocculation); an example of a cationic reagent is cetyl trimethyl ammonium bromide.

cationtrophy [CHEM] The breaking off of an ion, such as a hydrogen ion or metal ion, from a molecule so that a negative ion remains in equilibrium.

catkin [BOT] An indeterminate type of inflorescence that resembles a scaly spike and sometimes is pendant.

catline [PETRO ENG] In oil well drilling, a heavy line which is used for hoisting. Also known as cathead line.

catoptric light [OPTICS] Light reflected from a mirror, for example, light from a filament, concentrated into a parallel beam by means of a reflector.

catoptrite [MINERAL] An iron black to jet black, monoclinic mineral consisting of a silicoantimonate of aluminum and divalent manganese. Also spelled katoptrite.

Catostomidae [VERT ZOO] The suckers, a family of cypriniform fishes in the suborder Cyprinoidei.

cat scratch disease [MED] A benign systematic illness in humans characterized by malaise, fever, and a granulomatous lymphadenitis; the causative organism has not been identified. Also known as benign lymphoreticulosis.

cat's eye [LAP] Any of several gems cut in convex form, principally from crysoberyl, exhibiting opalescent reflections. Also known as cymophane.

cat's paw [METEOROL] A puff of wind; a light breeze affecting a small area, as one that causes patches of ripples on the surface of water.

CATT *See* controlled avalanche transit-time triode.

Cattell infant intelligence scale [PSYCH] A modification of the revised Stanford-Binet test adapted for children from 2 to 30 months of age.

cattle [AGR] Domesticated bovine animals, including cows, steers, and bulls, raised and bred on a ranch or farm.

CATV *See* cable television.

catwalk [ENG] A narrow, raised platform or pathway used for passage to otherwise inaccessible areas, such as a raised walkway on a ship permitting fore and aft passage when the main deck is awash, a walkway on the roof of a freight car, or a walkway along a vehicular bridge.

catwhisker [ELECTR] A sharply pointed, flexible wire used to make contact with the surface of a semiconductor crystal at a point that provides rectification.

Cauchy boundary conditions [MATH] The conditions imposed on a surface in euclidean space which are to be satisfied by a solution to a partial differential equation.

Cauchy condensation test [MATH] A monotone decreasing series of positive terms Σa_n converges or diverges, as does $\Sigma p^n a_{p^n}$, for any positive integer p.

Cauchy dispersion formula [OPTICS] A semiempirical formula for the index of refraction n of a medium as a function of wavelength λ, according to which $n = A + (B/\lambda^2)$, where A and B are constants.

Cauchy distribution [STAT] A distribution function having the form $M/[\pi M^2 + (x - a)^2]$, where x is the variable and M and a are constants. Also known as Cauchy frequency distribution.

Cauchy formula [MATH] An expression for the value of an analytic function f at a point z in terms of a line integral

$$f(z) = \frac{1}{2\pi i}\int_c \frac{f(\zeta)}{\zeta - z}\,d\zeta$$

where C is a simple closed curve containing z. Also known as Cauchy integral formula.

Cauchy frequency distribution *See* Cauchy distribution.

Cauchy inequality [MATH] The square of the sum of the products of two variables for a range of values is less than or equal to the product of the sums of the squares of these two variables for the same range of values.

Cauchy integral formula *See* Cauchy formula.

Cauchy integral test *See* Cauchy's test for convergence.

Cauchy integral theorem [MATH] The theorem that if γ is a closed path in a region R satisfying certain topological properties, then the integral around γ of any function analytic in R is zero.

Cauchy mean [MATH] The Cauchy mean value theorem for the ratio of two continuous functions.

Cauchy mean value theorem [MATH] If f and g are functions satisfying certain conditions on an interval $[a,b]$, then there is a point x in the interval at which the ratio of derivatives $f'(x)/g'(x)$ equals the ratio of the net change in f, $f(b) - f(a)$, to that of g.

Cauchy number [FL MECH] A dimensionless number used in the study of compressible flow, equal to the density of a fluid times the square of its velocity divided by its bulk modulus. Also known as Hooke number.

Cauchy principal value [MATH] Also known as principal value. **1.** The Cauchy principal value of

$$\int_{-\infty}^{\infty} f(x)dx \text{ is } \lim_{s\to\infty}\int_{-s}^{s} f(x)dx$$

provided the limit exists. **2.** If a function f is bounded on an interval (a,b) except in the neighborhood of a point c, the Cauchy principal value of

$$\int_a^b f(x)dx$$

is

$$\lim_{\delta\to 0}\left[\int_a^{c-\delta} f(x)dx + \int_{c+\delta}^{b} f(x)dx\right]$$

provided the limit exists.

Cauchy problem [MATH] The problem of determining the solution of a system of partial differential equation of order m from the prescribed values of the solution and of its derivatives of order less than m on a given surface.

Cauchy product [MATH] A method of multiplying two absolutely convergent series to obtain a series which converges absolutely to the product of the limits of the original series:

$$\left(\sum_{n=0}^{\infty} a_n\right)\left(\sum_{n=0}^{\infty} b_n\right) = \sum_{n=0}^{\infty} c_n \text{ where } c_n = \sum_{k=0}^{n} a_k b_{n-k}$$

Cauchy radical test [MATH] A test for convergence of series of positive terms: if the nth root of the nth term is less than some number less than unity, the series converges; if it remains equal to or greater than unity, the series diverges.

Cauchy ratio test [MATH] A series of nonnegative terms converges if the limit, as n approaches infinity, of the ratio of the $(n + 1)$st to nth term is smaller than 1, and diverges if it is greater than 1; the test fails if this limit is 1.

Cauchy relations [SOLID STATE] A set of six relations between the compliance constants of a solid which should be satisfied provided the forces between atoms in the solid depend only on the distances between them and act along the lines joining them, and provided that each atom is a center of symmetry in the lattice.

Cauchy residue theorem [MATH] The theorem expressing a line integral around a closed curve of a function which is analytic in a simply connected domain containing the curve, except at a finite number of poles interior to the curve, as a sum of residues of the function at these poles.

Cauchy-Riemann equations [MATH] A pair of partial differential equations that is satisfied by the real and imaginary parts of a complex function $f(z)$ if and only if the function is analytic: $\partial u/\partial x = \partial v/\partial y$ and $\partial u/\partial y = -\partial v/\partial x$, where $f(z) = u + iv$ and $z = x + iy$.

Cauchy-Schwarz inequality [MATH] The square of the inner-product of two vectors does not exceed the product of the squares of their norms. Also known as Buniakowski's inequality; Schwarz' inequality.

Cauchy sequence [MATH] A sequence with the property that the difference between any two terms is arbitrarily small provided they are both sufficiently far out in the sequence; more precisely stated: a sequence $\{a_n\}$ such that for every $\epsilon > 0$ there is an integer N with the property that if n and m are both greater than N, then $|a_n - a_m| < \epsilon$. Also known as fundamental sequence.

Cauchy's test for convergence [MATH] **1.** A series is absolutely convergent if the limit as n approaches infinity of its nth term raised to the $1/n$ power is less than unity. **2.** A series a_n is convergent if there exists a monotonically decreasing function f such that $f(n) = a_n$ for n greater than some fixed number N, and if the integral of $f(x)dx$ from N to ∞ converges. Also known as Cauchy integral test; Maclaurin-Cauchy test.

Cauchy transcendental equation [MATH] An equation whose roots are characteristic values of a certain type of Sturm-Liouville problem: $\tan \sigma\pi = (k + K)/(\sigma^2 - kK)$, where k and K are given, and σ is to be determined.

cauda equina [ANAT] The roots of the sacral and coccygeal nerves, collectively; so called because of their resemblance to a horse's tail.

caudal [ZOO] Toward, belonging to, or pertaining to the tail or posterior end.

caudal artery [VERT ZOO] The extension of the dorsal aorta in the tail of a vertebrate.

caudal vertebra [ANAT] Any of the small bones of the vertebral column that support the tail in vertebrates; in humans, three to five are fused to form the coccyx.

Caudata [VERT ZOO] An equivalent name for Urodela.

caudate [ZOO] **1.** Having a tail or taillike appendage. **2.** Any member of the Caudata.

caudate lobe [ANAT] The tailed lobe of the liver that separates the right extremity of the transverse fissure from the commencement of the fissure for the inferior vena cava.

caudate nucleus [ANAT] An elongated arched gray mass which projects into and forms part of the lateral wall of the lateral ventricle.

caudex [BOT] The main axis of a plant, including stem and roots.

caudicle [BOT] A slender appendage attaching pollen masses to the stigma in orchids.

Cauer form [ELEC] A continued fraction expansion of the impedance used in the network synthesis for a driving point function resulting in a ladder network.

cauldron subsidence [GEOL] **1.** A structure formed by the lowering along a steep ring fracture of a more or less cylindrical block, usually 1 to 10 miles (1.6 to 16 kilometers) in diameter, into a magma chamber. **2.** The process of forming such a structure.

Caulerpaceae [BOT] A family of green algae in the order Siphonales.

caulescent [BOT] Having an aboveground stem.

cauliflorous [BOT] Producing flowers on the older branches or main stem.

cauliflory [BOT] Of flowers, growth on the main stem of limbs of a tree.

cauliflower [BOT] *Brassica oleracea* var. *botrytis*. A biennial crucifer of the order Capparales grown for its edible white head or curd, which is a tight mass of flower stalks.

cauliflower disease [PL PATH] **1.** A disease of the strawberry plant caused by the eelworm and manifested as clustered, puckered, and malformed leaves. **2.** A bacterial disease of the strawberry and some other plants caused by *Corynebacterium fascians*.

cauline [BOT] Belonging to or arising from the stem, particularly if on the upper portion.

caulk Also spelled calk. [ENG] To make a seam or point airtight, watertight, or steamtight by driving in caulking compound, dry pack, lead wool, or other material. [MATER] Material used to caulk seams.

caulking compound [MATER] A heavy paste, such as a syn-

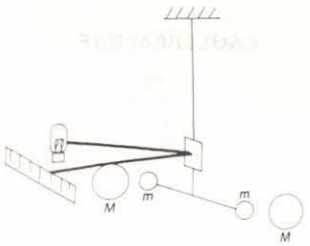
CAULERPACEAE

Caulerpa showing the stolonlike branches, rhizoidal branches, and erect featherlike frond typical of the Caulerpaceae.

CAULOBACTERACEAE

Electron micrograph of *Caulobacter* species in the Caulobacteraceae, showing cells and stalks. *(Courtesy of J. Wachsman)*

CAVENDISH BALANCE



The torsion balance used by H. Cavendish to determine the gravitational constant *G*.

thetic, containing a polysulfide rubber and lead peroxide curing agent, or a natural product such as oakum, used for caulking.

caulking iron [DES ENG] A tool for applying caulking to a seam.

Caulobacter [MICROBIO] A genus of prosthecate bacteria; cells are rod-shaped, fusiform, or vibrioid and stalked, and reproduction is by binary fission of cells.

Caulobacteraceae [MICROBIO] Formerly a family of aquatic, stalked, gram-negative bacteria in the order Pseudomonadales.

caulocarpic [BOT] Having stems that bear flowers and fruit every year.

Caulococcus [MICROBIO] A genus of bacteria of uncertain affiliation; coccoid cells may be connected by threads; reproduces by budding.

caulome [BOT] The stem structure or stem axis of a plant as a whole.

causalgia [MED] A sensation of burning pain, especially of the palms and soles, which may be of psychic or organic origin.

causality [MECH] In classical mechanics, the principle that the specification of the dynamical variables of a system at a given time, and of the external forces acting on the system, completely determines the values of dynamical variables at later times. Also known as determinism. [PHYS] **1.** The principle that an event cannot precede its cause; in a relativistic theory, an event cannot have an effect outside its future light cone. **2.** In relativistic quantum field theory, the principle that the field operators at different space-time points commute (for boson fields; anticommute in the case of fermion fields) if the separation of the points is spacelike. [QUANT MECH] The principle that the specification of the dynamical state of a system at a given time, and of the interaction of the system with its environment, determines the dynamical state of the system at later times, from which a probability distribution for the observation of any dynamical variable may be determined. Also known as determinism. [SCI TECH] The existence of regularities which control natural phenomena.

causal system [CONT SYS] A system whose response to an input does not depend on values of the input at later times. Also known as nonanticipatory system; physical system.

caustic [CHEM] **1.** Burning or corrosive. **2.** A hydroxide of a light metal. [OPTICS] A curve or surface which is tangent to the rays of an initially parallel beam after reflection or refraction in an optical system. [PHYS] A curve or surface which is tangent to adjacent orthogonals to waves that have been reflected or refracted from a curved surface.

caustic alcohol *See* sodium ethylate.

caustic antimony *See* antimony trichloride.

caustic barley *See* sabadilla.

caustic cracking *See* caustic embrittlement.

caustic dip [MET] Immersion of metal into a caustic solution such as sodium hydroxide.

caustic embrittlement [MET] Intercrystalline cracking of steel caused by exposure to caustic solutions above 70°C while under tensile stress; once common in riveted boilers. Also known as caustic cracking.

causticity [CHEM] The property of being caustic.

caustic lime *See* calcium oxide.

caustic potash *See* potassium hydroxide.

caustic soda [INORG CHEM] *See* sodium hydroxide. [MATER] Sodium hydroxide that contains 76–78% sodium oxide; the most important of the commercial caustic materials, used in chemical manufacture, petroleum refining, and pulp and paper manufacture.

caustic wash [CHEM] **1.** Treating a product with a solution of caustic soda to remove impurities. **2.** The solution itself.

caustobiolith [GEOL] Combustible organic rock formed by direct accumulation of plant materials; includes coal peat.

cauterization [MED] Use of a device or chemical agent to coagulate or destroy tissue.

caution area [NAV] An area in which there is a visible hazard to flight or navigation, such as unusual aircraft maneuvers, high density of aircraft, or parachute drops.

cautionary characteristic [NAV] In marine operations, a unique characteristic of light signifying a particular caution, for example, a quick flashing characteristic indicates a sharp turn in a channel.

cautious control [CONT SYS] A control law for a stochastic adaptive control system which hedges and uses lower gain when the estimates are uncertain.

cavaburd [METEOROL] Shetland Islands term for a thick fall of snow. Also spelled kavaburd.

cavaliers [METEOROL] The local term, in the vicinity of Montpelier, France, for the days near the end of March or the beginning of April when the mistral is usually strongest.

cavalry twill *See* tricotine.

cave [ENG] A pit or tunnel under a glass furnace for collecting ashes or raking the fire. [GEOL] A natural, hollow chamber or series of chambers and galleries beneath the earth's surface, or in the side of a mountain or hill, with an opening to the surface. [MIN ENG] **1.** Fragmented rock materials, derived from the sidewalls of a borehole, that obstruct the hole or hinder drilling progress. Also known as cavings. **2.** The partial or complete failure of borehole sidewalls or mine workings. Also known as cave-in. [NUCLEO] A heavily shielded compartment in which highly radioactive material can be handled, generally by remote control. Also known as hot cell.

cave breccia [GEOL] Sharp fragments of limestone debris deposited on the floor of a cave.

cave formation *See* speleothem.

cave-in *See* cave.

Cavellinidae [PALEON] A family of Paleozoic ostracods in the suborder Platycopa.

Cavendish balance [ENG] An instrument for determining the constant of gravitation, in which one measures the displacement of two small spheres of mass m, which are connected by a light rod suspended in the middle by a thin wire, caused by bringing two large spheres of mass M near them.

caveolae [CYTOL] Tiny indentations in the cell surface membrane which trap fluids during micropinocytosis.

cave pearl [GEOL] A small, smooth, rounded concretion of calcite or aragonite, formed by concentric precipitation about a nucleus and usually found in limestone caves.

caver [METEOROL] A gentle breeze in the Hebrides, west of Scotland. Also spelled kaver.

cavern [GEOL] An underground chamber or series of chambers of indefinite extent carved out by rock springs in limestone.

cavernicolous [BIOL] Inhabiting caverns.

cavernous [GEOL] **1.** Having many caverns or cavities. **2.** Producing caverns. **3.** Of or pertaining to a cavern, that is, suggesting vastness.

cavernous sinus [ANAT] Either of a pair of venous sinuses of the dura mater located on the side of the body of the sphenoid bone.

Caviidae [VERT ZOO] A family of large, hystricomorph rodents distinguished by a reduced number of toes and a rudimentary tail.

caving [MIN ENG] A mining procedure, used when the surface is expendable, in which the ore body is undercut and allowed to fall, breaking into small pieces that are recovered by passages (drifts) driven for that purpose; sublevel caving, block caving, and top slicing are examples.

caving ground [MIN ENG] Rock formation that will not stand in the walls of an underground opening without support such as that offered by cementation, casing, or timber.

cavings *See* cave.

CA virus *See* croup-associated virus.

cavitation [CHEM] Emulsification produced by disruption of a liquid into a liquid-gas two-phase system, when the hydrodynamic pressure of the liquid is reduced to the vapor pressure. [ENG] Pitting of a solid surface such as metal or concrete. [FL MECH] Formation of gas- or vapor-filled cavities within liquids by mechanical forces; broadly includes bubble formation when water is brought to a boil and effervescence of carbonated drinks; specifically, the formation of vapor-filled cavities in the interior or on the solid boundaries of vaporized liquids in motion where the pressure is reduced to a critical value without a change in ambient temperature. [PATH] The formation of one or more cavities in an organ or tissue, especially as the result of disease.

cavitation corrosion *See* cavitation erosion.

cavitation damage *See* cavitation erosion.

cavitation erosion [MET] Attack of metal surfaces caused by the collapse of cavitation bubbles on the surface of the liquid and characterized by pitting. Also known as cavitation corrosion; cavitation damage.

cavitation noise [ACOUS] Noise resulting from the formation of vapor- or gas-filled cavities in liquids by mechanical forces, as occurs near a propeller.

cavitation number [FL MECH] The excess of the local static pressure head over the vapor pressure head divided by the velocity head.

cavity [BIOL] A hole or hollow space in an organ, tissue, or other body part. [ELECTROMAG] *See* cavity resonator.

cavity charge *See* shaped charge.

cavity coupling [ELECTROMAG] The extraction of electromagnetic energy from a resonant cavity, either waveguide or coaxial, using loops, probes, or apertures.

cavity filter [ELECTROMAG] A microwave filter that uses quarter-wavelength-coupled cavities inserted in waveguides or coaxial lines to provide band-pass or other response characteristics at frequencies in the gigahertz range.

cavity impedance [ELECTR] The impedance of the cavity of a microwave tube which appears across the gap between the cathode and the anode.

cavity magnetron [ELECTR] A magnetron having a number of resonant cavities forming the anode; used as a microwave oscillator.

cavity oscillator [ELECTR] An ultra-high-frequency oscillator whose frequency is controlled by a cavity resonator.

cavity radiator [THERMO] A heated enclosure with a small opening which allows some radiation to escape or enter; the escaping radiation approximates that of a blackbody.

cavity resonance [ELECTROMAG] The resonant vibration of a cavity. [ENG ACOUS] The natural resonant vibration of a loudspeaker baffle; if in the audio range, it is evident as unpleasant emphasis of sounds at that frequency.

cavity resonator [ELECTROMAG] A space totally enclosed by a metallic conductor and excited in such a way that it becomes a source of electromagnetic oscillations. Also known as cavity; microwave cavity; microwave resonance cavity; resonant cavity; resonant chamber; resonant element; rhumbatron; tuned cavity; waveguide resonator.

cavity tuning [ELECTROMAG] Use of an adjustable cavity resonator as a tuned circuit in an oscillator or amplifier, with tuning usually achieved by moving a metal plunger in or out of the cavity to change the volume, and hence the resonant frequency of the cavity.

cavity-type diode amplifier *See* diode amplifier.

cavity wall [BUILD] A wall constructed in two separate thicknesses with an air space between; provides thermal insulation. Also known as hollow wall.

CAVU [AERO ENG] An operational term commonly used in aviation, which designates a condition wherein the ceiling is more than 10,000 feet (3048 meters) and the visibility is more than 10 miles (16 kilometers). Derived from ceiling and visibility unlimited.

cavy [VERT ZOO] Any of the rodents composing the family Caviidae, which includes the guinea pig, rock cavies, mountain cavies, capybara, salt desert cavy, and mara.

CAW *See* channel address word.

c axis [CRYSTAL] A vertically oriented crystal axis, usually the principal axis; the unique symmetry axis in tetragonal and hexagonal crystals. [GEOL] The reference axis perpendicular to the plane of movement of rock or mineral strata.

cay [GEOL] **1.** A flat coral island. **2.** A flat mound of sand built up on a reef slightly above high tide. **3.** A small, low coastal islet or emergent reef composed largely of sand or coral.

Cayley-Hamilton theorem [MATH] The theorem that a linear transformation or matrix is a root of its own characteristic polynomial. Also known as Hamilton-Cayley theorem.

Cayley-Klein parameters [MATH] A set of four complex numbers used to describe the orientation of a rigid body in space, or equivalently, the rotation which produces that orientation, starting from some reference orientation.

Cayley numbers [MATH] The division algebra consisting of pairs of quaternions; may be identified with an eight-dimensional vector space over the real numbers. Also known as octonions.

cay sandstone [GEOL] Firmly cemented or friable coral sand formed near the base of coral reef cays.

Caytoniales [PALEOBOT] An order of Mesozoic plants.

Cayugan [GEOL] Upper Silurian geologic time.

Cazenovian [GEOL] Lower Middle Devonian geologic time.

C-band waveguide [ELECTROMAG] A rectangular waveguide, with dimensions 3.48 by 1.58 centimeters, which is used to excite only the dominant mode (TE_{01}) for wavelengths in the range 3.7–5.1 centimeters.

C battery [ELEC] The battery that supplies the steady bias voltage required by the control-grid electrodes of electron tubes in battery-operated equipment. Also known as grid battery.

CBC *See* cipher block chaining.

C bias *See* grid bias.

C.B. system *See* central-battery system.

Cc *See* cirrocumulus cloud.

CCD *See* calcite compensation depth.

C chart [IND ENG] A quality-control chart showing number of defects in subgroups of constant size; gives information concerning quality level, its variability, and evidence of assignable causes of variation.

CCIS *See* common channel interoffice signaling.

CCIT 2 code [COMMUN] A printing-telegraph code in which each character is represented by five binary digits. Also known as international telegraph alphabet; International Telegraphic Consultative Committee code 2.

C core [ELECTROMAG] A spirally wound magnetic core that is formed to a desired rectangular shape before being cut into two C-shaped pieces and placed around a transformer or magnetic amplifier coil.

CCR process *See* cyclic catalytic reforming process.

CCTV *See* closed-circuit television.

CCW *See* channel command word.

Cd *See* cadmium.

CD *See* circular dichroism.

C damage [ORD] Damage of a degree or nature that prohibits an aircraft from completing its mission.

CDEC *See* 2-chloroallyl diethyldithiocarbamate.

C display [ELECTR] In radar, a rectangular display in which targets appear as blips with bearing indicated by the horizontal coordinate, and angles of elevation by the vertical coordinate.

CDM *See* code-division multiplex.

CDMA *See* code-division multiple access.

CD-4 sound *See* compatible discrete four-channel sound.

Ce *See* cerium.

Cebidae [VERT ZOO] The New World monkeys, a family of primates in the suborder Anthropoidea including the capuchins and howler monkeys.

Cebochoeridae [PALEON] A family of extinct palaeodont artiodactyls in the superfamily Entelodontoidae.

cebollite [MINERAL] $H_2Ca_4Al_2Si_3O_{16}$ A greenish to white mineral consisting of hydrous calcium aluminum silicate occurring in fibrous aggregates; hardness is 5 on Mohs scale, and specific gravity is 3.

Cebrionidae [INV ZOO] The robust click beetles, a family of cosmopolitan coleopteran insects in the superfamily Elateroidea.

cecidium [PL PATH] Plant gall produced either by insects in ovipositing or by fungi as a consequence of infection.

cecilite [PETR] A basaltic rock having few phenocrysts and consisting of at least 50% leucite with augite, melilite, nepheline, olivine, anorthite, magnetite, and apatite.

Cecropidae [INV ZOO] A family of crustaceans in the suborder Caligoida which are external parasites on fish.

cecum [ANAT] The blind end of a cavity, duct, or tube, especially the sac at the beginning of the large intestine. Also spelled caecum.

cedar [BOT] The common name for a large number of evergreen trees in the order Pinales having fragrant, durable wood.

cedarwood oil [MATER] An essential alcohol-soluble oil obtained from the heartwood of various cedars, the chief components being cedrol and cedrene.

cedricite [MINERAL] A variety of lamproite composed principally of diopside, leucite, and phlogopite and usually containing crystals of serpentine.

ceiba *See* kapok.

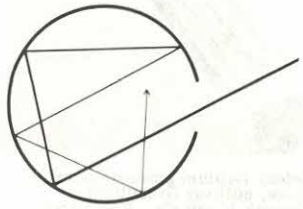
ceiling [BUILD] The covering made of plaster, boards, or other material that constitutes the overhead surface in a room. [METEOROL] In the United States, the height ascribed to the lowest layer of clouds or of obscuring phenomena when it is reported as broken, overcast, or obscuration and not classified as thin or partial.

ceiling and visibility unlimited *See* CAVU.

ceiling balloon [AERO ENG] A small balloon used to determine the height of the cloud base; the height is computed from the ascent velocity of the balloon and the time required for its disappearance into the cloud.

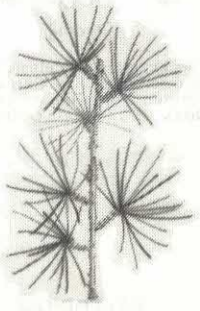
ceiling classification [METEOROL] In aviation weather observations, a description or explanation of the manner in which the height of the ceiling is determined.

CAVITY RADIATOR



A drawing of a cavity radiator showing the almost complete absorption of entering radiation energy because of the multiple reflections it encounters.

CEDAR



Leaf arrangement for the Atlas cedar *(Cedrus atlantica)*.

ceiling light [ENG] A type of cloud-height indicator which uses a searchlight to project vertically a narrow beam of light onto a cloud base. Also known as ceiling projector.

ceiling projector *See* ceiling light.

ceilometer [ENG] An automatic-recording cloud-height indicator.

celadonite [MINERAL] A soft, green variety of mica having high iron content and containing silicates of magnesium and potassium.

Celastraceae [BOT] A family of dicotyledonous plants in the order Celastrales characterized by erect and basal ovules, a flower disk that surrounds the ovary at the base, and opposite or sometimes alternate leaves.

Celastrales [BOT] An order of dicotyledonous plants in the subclass Rosidae marked by simple leaves and regular flowers.

celerity *See* phase velocity.

celery [BOT] *Apium graveolens* var. *dulce*. A biennial umbellifer of the order Umbellales with edible petioles or leaf stalks.

celery seed oil [MATER] A colorless liquid extracted from celery seeds, containing selinene and apiol.

celestial body [ASTRON] Any aggregation of matter in space constituting a unit for astronomical study, as the sun, moon, a planet, comet, star, or nebula. Also known as heavenly body.

celestial coordinates [ASTRON] Any set of coordinates, such as zenithal distance, altitude, celestial latitude, celestial longitude, local hour angle, azimuth and declination, used to define a point on the celestial sphere.

celestial equator [ASTRON] The primary great circle of the celestial sphere in the equatorial system, everywhere 90° from the celestial poles; the intersection of the extended plane of the equator and the celestial sphere. Also known as equinoctial.

celestial equator system of coordinates *See* equatorial system.

celestial fix [NAV] A position established by means of observation on one or more celestial bodies.

celestial geodesy [GEOD] The branch of geodesy which utilizes observations of near celestial bodies and earth satellites to determine the size and shape of the earth.

celestial globe [ASTRON] A small globe representing the celestial sphere, on which the apparent positions of the stars are located. Also known as star globe.

celestial guidance [NAV] The process of directing movements of an aircraft or spacecraft, especially in the selection of a flight path, by reference to celestial bodies.

celestial horizon [ASTRON] That great circle of the celestial sphere which is formed by the intersection of the celestial sphere and a plane through the center of the earth and is perpendicular to the zenith-nadir line. Also known as rational horizon.

celestial-inertial guidance [NAV] The process of directing the movements of an aircraft or spacecraft by an inertial guidance system which receives correction inputs from observations of celestial bodies. Also known as automatic celestial navigation.

celestial latitude [ASTRON] Angular distance north or south of the ecliptic; the arc of a circle of latitude between the ecliptic and a point on the celestial sphere, measured northward or southward from the ecliptic through 90°, and labeled N or S to indicate the direction of measurement. Also known as ecliptic latitude.

celestial line of position [NAV] A line of position determined by observation of a celestial body.

celestial longitude [ASTRON] Angular distance east of the vernal equinox, along the ecliptic; the arc of the ecliptic or the angle at the ecliptic pole between the circle of latitude of the vernal equinox and the circle of latitude of a point on the celestial sphere, measured eastward from the circle of latitude of the vernal equinox, through 360°. Also known as ecliptic longitude.

celestial mechanics [ASTROPHYS] The calculation of motions of celestial bodies under the action of their mutual gravitational attractions. Also known as gravitational astronomy.

celestial meridian [ASTRON] A great circle on the celestial sphere, passing through the two celestial poles and the observer's zenith.

celestial navigation *See* astronavigation.

celestial observation [NAV] Also known as sight. **1.** The measurement of the altitude, and sometimes the azimuth, of a celestial body for a line of position. **2.** The data obtained by such observation.

celestial parallel *See* parallel of declination.

celestial pole [ASTRON] Either of the two points of intersection of the celestial sphere and the extended axis of the earth, labeled N or S to indicate the north celestial pole or the south celestial pole.

celestial sphere [ASTRON] An imaginary sphere of indefinitely large radius, which is described about an assumed center, and upon which positions of celestial bodies are projected along radii passing through the bodies.

celestine *See* celestite.

celestite [MINERAL] $SrSO_4$ A colorless or sky-blue mineral occurring in orthorhombic, tabular crystals and in compact forms; fracture is uneven and luster is vitreous; principal ore of strontium. Also known as celestine.

celiac [ANAT] Of, in, or pertaining to the abdominal cavity.

celiac syndrome [MED] A complex of symptoms produced by intestinal malabsorption of fat and marked by bulky, loose, foul-smelling stools, high in fatty acid content. Also known as idiopathic steatorrhea.

cell [BIOL] The microscopic functional and structural unit of all living organisms, consisting of a nucleus, cytoplasm, and a limiting membrane. [MATH] The homeomorphic image of the unit ball. [MIN ENG] A compartment in a flotation machine. [NUCLEO] One of a set of elementary regions in a heterogeneous reactor, all of which have the same geometrical form and the same neutron characteristics. [PHYS CHEM] A cup, jar, or vessel containing electrolyte solutions and metal electrodes to produce an electric current (conductiometric or potentiometric) or for electrolysis (electrolytic).

cellar *See* push-down storage.

cell complex [MATH] A topological space which is the last term of a finite sequence of spaces, each obtained from the previous by sewing on a cell along its boundary.

cell constancy [BIOL] The condition in which the entire body, or a part thereof, consists of a fixed number of cells that is the same for all adults of the species.

cell constant [PHYS CHEM] The ratio of distance between conductance-titration electrodes to the area of the electrodes, measured from the determined resistance of a solution of known specific conductance.

cell differentiation [CYTOL] The series of events involved in the development of a specialized cell having specific structural, functional, and biochemical properties.

cell division [CYTOL] The process by which living cells multiply; may be mitotic or a amitotic.

cell-free extract [CYTOL] A fluid obtained by breaking open cells; contains most of the soluble molecules of a cell.

cell inclusion [CYTOL] A small, nonliving intracellular particle, usually representing a form of stored food, not immediately vital to life processes.

cell lineage [EMBRYO] The developmental history of individual blastomeres from their first cleavage division to their ultimate differentiation into cells of tissues and organs.

cell membrane [CYTOL] A thin layer of protoplasm, consisting mainly of lipids and proteins, which is present on the surface of all cells. Also known as plasmalemma; plasma membrane.

cell movement [CYTOL] **1.** Intracellular movement of cellular components. **2.** The movement of a cell relative to its environment.

cellobiose [ORG CHEM] $C_{12}H_{22}O_{11}$ A disaccharide which does not occur freely in nature or as a glucoside; a unit of cellulose and lichenin; crystallizes as minute water-soluble crystals from alcohol. Also known as cellose.

celloidin [MATER] A concentrated solution of pyroxylin used principally in microscopy for embedding specimens or for section-cutting.

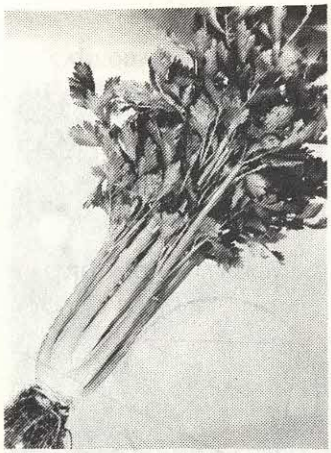
cellophane [MATER] A thin, transparent sheeting of regenerated cellulose; it is moisture-proof, and sometimes dyed, and used chiefly as food wrapping or as bags for dialysis.

cellose *See* cellobiose.

cellosolve [ORG CHEM] $C_2H_5OCH_2CH_2OH$ An important industrial chemical used in varnish removers, in cleaning solutions, and as a solvent for paints, varnishes, and plastics. Also known as 2-ethoxyethanol.

cell pathology [PATH] Abnormalities of the events taking place within cells.

CELERY



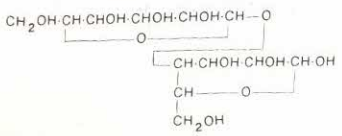
Celery (*Apium graveolens* var. *dulce*, cultivar Greenlight). (*Joseph Harris Co., Rochester, N.Y.*)

CELESTITE

2.5 cm

Bladed crystals of celestite in limestone from Clay Center, Ohio. (*Specimen from Department of Geology, Bryn Mawr College*)

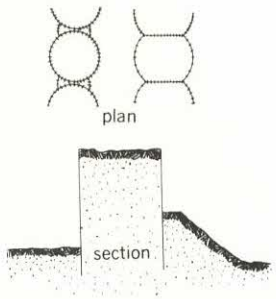
CELLOBIOSE



Structural formula of cellobiose.

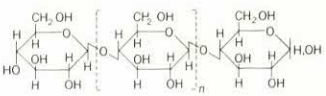
cell permeability [CYTOL] The permitting or activating of the passage of substances into, out of, or through cells.
cell plate [CYTOL] A membrane-bound disk formed during cytokinesis in plant cells which eventually becomes the middle lamella of the wall formed between daughter cells.
cell sap [CYTOL] The liquid content of a plant cell vacuole.
cells of Paneth [HISTOL] Coarsely granular secretory cells found in the crypts of Lieberkühn in the small intestine. Also known as Paneth cells.
cell-surface differentiation [CYTOL] The specialization or modification of the cell surface.
cell-surface ionization [PHYSIO] The presence of a negative charge on the surface of all living cells suspended in aqueous salt solutions at neutral pH.
cell theory [BIOL] **1.** A principle that describes the cell as the fundamental unit of all living organisms. **2.** A principle that describes the properties of an organism as the sum of the properties of its component cells.
cell-type tube [ELECTR] Gas-filled radio-frequency switching tube which operates in an external resonant circuit; a tuning mechanism may be incorporated in either the external resonant circuit or the tube.
cellular [BIOL] Characterized by, consisting of, or pertaining to cells. [PETR] Pertaining to igneous rock having a porous texture, usually with the cavities larger than pore size and smaller than caverns.
cellular affinity [BIOL] The phenomenon of selective adhesiveness observed among the cells of certain sponges, slime molds, and vertebrates.
cellular automation [COMPUT SCI] A theoretical model of a parallel computer which is subject to various restrictions to make practicable the formal investigation of its computing powers.
cellular chain [COMPUT SCI] A chain which is not allowed to cross a cell boundary.
cellular cofferdam [CIV ENG] A cofferdam consisting of interlocking steel-sheet piling driven as a series of interconnecting cells; cells may be of circular type or of straight-wall diaphragm type; space between lines of pilings is filled with sand.
cellular convection [METEOROL] An organized, convective, fluid motion characterized by the presence of distinct convection cells or convective units, usually with upward motion (away from the heat source) in the central portions of the cell, and sinking or downward flow in the cell's outer regions.
cellular glass [MATER] Sheets or blocks of thermal insulating material for walls and roofs made from pulverized glass that is heated with a gas-forming chemical at the flow temperature of glass. Also known as cellulated glass; foamed glass.
cellular horn *See* multicellular horn.
cellular infiltration [MED] **1.** Passage of cells into tissues in the course of inflammation. **2.** Migration of or invasion by cells of neoplasms.
cellular multilist [COMPUT SCI] A type of multilist organization composed of cellular chains.
cellular plastic [MATER] A type of plastic with apparent density decreased substantially by the presence of numerous cells disposed throughout its mass.
cellular rubber *See* rubber sponge.
cellular soil *See* polygonal ground.
cellular splitting [COMPUT SCI] A method of adding records to a file in which the records are grouped into cells and each cell is divided into two when it becomes full.
cellular striation [ENG] Stratum of cells inside a cellular-plastic object that differs noticeably from the cell structure of the remainder of the material.
cellulase [BIOCHEM] Any of a group of extracellular enzymes, produced by various fungi, bacteria, insects, and other lower animals, that hydrolyze cellulose.
cellulated glass *See* cellular glass.
cellulitis [MED] Diffuse inflammation of a connective tissue.
cellulolytic [BIOL] Having the ability to hydrolyze cellulose; applied to certain bacteria and protozoans.
Cellulomonas [MICROBIO] A genus of gram-positive, irregular rods in the coryneform group of bacteria; metabolism is respiratory; most strains produce acid from glucose, and cellulose is attacked by all strains.
cellulose [BIOCHEM] $(C_6H_{10}O_5)_n$ The main polysaccharide in living plants, forming the skeletal structure of the plant cell wall; a polymer of β-D-glucose units linked together, with the elimination of water, to form chains comprising 2000–4000 units.
α-cellulose *See* alpha cellulose.
cellulose acetate [ORG CHEM] An acetic acid ester of cellulose; a tough, flexible, slow-burning, and longlasting thermoplastic material used as the base for magnetic tape and movie film, in acetate rayon, as a plastic film in food packaging, in lacquers, and for molded receiver cabinets.
cellulose acetate butyrate [ORG CHEM] An ester of cellulose formed by the action of a mixture of acetic acid and butyric acid and their anhydrides on purified cellulose; has high impact resistance, clarity, and weatherability; used in making plastic film, lacquer, lenses, and outdoor signs.
cellulose acetate rayon [TEXT] The spun product of the acetic ester of cellulose.
cellulose diacetate [ORG CHEM] The ester formed by esterification of two hydroxyl groups of a cellulose molecule with acetic acid.
cellulose ester [ORG CHEM] Cellulose in which the free hydroxyl groups have been replaced wholly or in part by acidic groups.
cellulose ether [ORG CHEM] The product of the partial or complete etherification of the hydroxyl groups in a cellulose molecule.
cellulose fiber [ORG CHEM] Any fiber based on esters or ethers of cellulose.
cellulose gum *See* carboxymethyl cellulose.
cellulose methyl ether *See* methylcellulose.
cellulose nitrate [ORG CHEM] Any of several esters of nitric acid, produced by treating cotton or some other form of cellulose with a mixture of nitric and sulfuric acids; used as explosive and propellant. Also known as nitrocellulose; nitrocotton.
cellulose propionate [ORG CHEM] An ester of cellulose and propionic acid.
cellulose triacetate [ORG CHEM] A cellulose resin formed by the complete esterification of the cellulose by acetic acid; used as a base in protective coatings.
cellulose xanthate [ORG CHEM] A compound formed by reaction of soda cellulose (prepared by treating cellulose with strong sodium hydroxide solution) with carbon disulfide.
cellulosic [ORG CHEM] Any of the derivatives of cellulose, such as cellulose acetate.
cellulosic resin [ORG CHEM] Any resin based on cellulose compounds such as esters and ethers.
cell wall [CYTOL] A semirigid, permeable structure that is composed of cellulose, lignin, or other substances and that envelops most plant cells.
celo [MECH] A unit of acceleration equal to the acceleration of a body whose velocity changes uniformly by 1 foot per second (0.3048 meter per second) in 1 second.
Celor lens system [OPTICS] An anastigmatic lens system consisting of two air-spaced achromatic doublet lenses, one on each side of the stop. Also known as Gauss lens system; Gauss objective lens.
celsian [MINERAL] $BaAl_2Si_2O_8$ Colorless, monoclinic mineral consisting of barium feldspar.
Celsius degree [THERMO] Unit of temperature interval or difference equal to the kelvin.
Celsius temperature scale [THERMO] Temperature scale in which the temperature Θ_c in degrees Celsius (°C) is related to the temperature T_k in kelvins by the formula $\Theta_c = T_k - 273.15$; the freezing point of water at standard atmospheric pressure is very nearly 0°C and the corresponding boiling point is very nearly 100°C. Formerly known as centigrade temperature scale.
Celyphidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.
cement [GEOL] Any chemically precipitated material, such as carbonates, gypsum, and barite, occurring in the interstices of clastic rocks. [HISTOL] Calcified tissue which fastens the roots of teeth to the alveolus. Also known as cementum. [INV ZOO] Any of the various adhesive secretions, produced by certain invertebrates, that harden on exposure to air or water and are used to bind objects. [MATER] **1.** A dry powder made from silica, alumina, lime, iron oxide, and magnesia which hardens when mixed with water; used as an ingredient in concrete. **2.** An adhesive for the assembling of surfaces which are not in close contact.
cementation [CHEM] The setting of a plastic material. [ENG] **1.** Plugging a cavity or drill hole with cement. Also

CELLULAR COFFERDAM



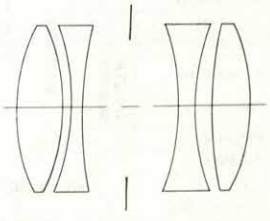
Steel-sheet pile cellular cofferdam.

CELLULOSE



Structure of the cellulose polymer.

CELOR LENS SYSTEM



Celor lens system, an anastigmatic photographic objective.

known as dental work. **2.** Consolidation of loose sediments or sand by injection of a chemical agent or binder. [GEOL] The precipitation of a binding material around minerals or grains in rocks. [MET] **1.** High-temperature impregnation of a metal surface with another material. **2.** Conversion of wrought iron into steel by packing layers of bars in charcoal sealed with clay and heating to 1000°C for 7–10 days.

cementation factor [PETRO ENG] Mathematical expression in oil-reservoir analysis for the degree to which precipitated minerals have bound together the grains (for example, of sand).

cementation sinking [MIN ENG] A technique of shaft sinking through strata containing water by injecting liquid cement or chemicals into the ground.

cement brick [MATER] A type of brick made from a mixture of cement and sand, molded under pressure and cured under steam at 200°F (93°C); used as backing brick and where there is no danger of attack from acid or alkaline conditions.

cement carrier [NAV ARCH] A special ship designed to carry bulk cement; usually fitted with an air-mixing system to allow pumping dry cement powder through pipes to unload or load the ship.

cement copper [MET] A precipitate of copper from copper sulfate solution by the addition of iron.

cemented carbide *See* carbide.

cemented lens *See* compound lens.

cement gland [INV ZOO] A structure in many invertebrates that produces cement.

cement gravel [GEOL] Gravel consolidated by clay, silica, calcite, or other binding material.

cement gun [MECH ENG] **1.** A machine for mixing, wetting, and applying refractory mortars to hot furnace walls. Also known as cement injector. **2.** A mechanical device for the application of cement or mortar to the walls or roofs of mine openings or building walls.

cement injector *See* cement gun.

cementite [MET] Fe_3C A hard, brittle, crystalline compound occurring as lamellae or plates in steel. Also known as iron carbide.

cementitious material [MATER] Any of various building materials which may be mixed with a liquid, such as water, to form a plastic paste, and to which an aggregate may be added; includes cements, limes, and mortar.

cement kiln [ENG] A kiln used to fire cement to less than complete melting.

cement-lined casing [PETRO ENG] Steel-, oil-, or gas-well casing pipe with internal lining of special cement; used to withstand severe corrosive conditions.

cement log [PETRO ENG] Gamma-ray measurement and logging of the height and condition of cement surrounding downhole oil-well casing.

cement mill [MECH ENG] A mill for grinding rock to a powder for cement.

cement mortar [MATER] A mixture of approximately four parts of sand to one part of portland cement with a small amount of lime and enough water to make it plastic.

cement paint [MATER] A mixture based on portland cement, with filler, accelerator, and water repellent added, that is combined with water and applied to masonry, concrete, or brickwork; provides a waterproof coating.

cement paste [MATER] A mixture of cement and water, hardened or unhardened.

cement plaster [MATER] A gypsum plaster used in mortar mixtures for plastering interior surfaces.

cement pump [MECH ENG] A piston device used to move concrete through pipes.

cement rock [PETR] An argillaceous limestone containing lime, silica, and alumina in variable proportions and usually some magnesia; used in the manufacture of natural hydraulic cement.

cement silo [ENG] A silo used to store dry, bulk cement.

cementum *See* cement.

cement valve [MECH ENG] A ball-, flapper-, or clack-type valve placed at the bottom of a string of casing, through which cement is pumped, so that when pumping ceases, the valve closes and prevents return of cement into the casing.

Cen *See* Centaurus.

Cenomanian [GEOL] Lower Upper Cretaceous geologic time.

cenote *See* pothole.

Cenozoic [GEOL] The youngest of the eras, or major subdivisions of geologic time, extending from the end of the Mesozoic Era to the present, or Recent.

CENOZOIC

Chart showing the relationship of the Cenozoic to other eras.

cent [ACOUS] The interval between two sounds whose basic frequency ratio is the twelve-hundredth root of 2; the interval, in cents, between any two frequencies is 1200 times the logarithm to the base 2 of the frequency ratio. [NUCLEO] A unit of nuclear reactivity equal to one-hundredth of a dollar.

cental *See* hundredweight.

centare *See* centiare.

α Centauri [ASTRON] A double star, the brightest in the constellation Centaurus; apart from the sun, it is the nearest bright star to earth, about 4.3 light-years away; spectral classification G2. Also known as Rigil Kent.

β Centauri [ASTRON] A first-magnitude navigational star in the constellation Centaurus; 200 light-years from the sun; spectral classification B0. Also known as Agena; Hadar.

Centaurus [ASTRON] A constellation with right ascension 13 hours, declination 50°S. Abbreviated Cen.

Centaurus A [ASTRON] A strong, discrete radio source in the constellation Centaurus, associated with the peculiar galaxy NGC 5128.

Centaurus X-3 [ASTROPHYS] A source of x-rays that pulses with a period of 4.8 seconds and is eclipsed every 2.1 days; believed to be a binary star, one of whose members is a rotating neutron star. Abbreviated Cen X-3.

center [MATH] **1.** The point which is equidistant from all the points on a circle or sphere. **2.** For an ellipsoid or hyperboloid, the point about which the surface is symmetrical.

centerboard [NAV ARCH] A metal or wooden slab in a casing along the centerline of a sailboat which may be lowered to increase the boat's resistance to lateral motion, and raised when the boat is in shallow water or is beached.

center-coupled loop [ELECTR] Coupling loop in the center of one of the resonant cavities of a multicavity magnetron.

center drill [ENG] A two-fluted tool consisting of a twist drill with a 60° countersink; used to drill countersink center holes in a workpiece to be mounted between centers for turning or grinding.

centered lattice [CRYSTAL] A crystal lattice in which the axes have been chosen according to the rules for the crystal system, and in which there are lattice points at the centers of certain planes as well as at the corners.

center-feed tape [COMPUT SCI] Punched tape in which the centers of the sprocket holes are in line with the centers of the holes carrying the data or message.

center-fire [ORD] Pertaining to a cartridge with primer in the center of the head, or base.

center frequency *See* carrier frequency.

center gage [DES ENG] A gage used to check angles; for example, the angles of cutting tool points or screw threads, or the angular position of cutting tools.

center-gated mold [ENG] A plastics injection mold with the filling orifice interconnected to the nozzle and the center of the cavity area.

centering [CIV ENG] A curved, temporary support for an arch or dome during a casting or laying operations.

centering control [ELECTR] One of the two controls used for positioning the image on the screen of a cathode-ray tube; either the horizontal centering control or the vertical centering control.

centering machine [MECH ENG] A machine for drilling and countersinking work to be turned on a lathe.

center jump [METEOROL] The formation of a second low-pressure center within an already well-developed low-pressure center; the latter diminishes in magnitude as the center of activity shifts or appears to jump to the new center.

centerless grinder [MECH ENG] A cylindrical metal-grinding machine that carries the work on a support or blade between two abrasive wheels.

center line *See* stroke center line.

center of action [METEOROL] A semipermanent high or low atmospheric pressure system at the surface of the earth; fluctuations in the intensity, position, orientation, shape, or size of such a center are associated with widespread weather changes.

center of a distribution [STAT] The expected value of any random variable which has the given distribution.

center of area [MATH] For a plane figure, the center of mass of a thin uniform plate having the same boundaries as the plane figure. Also known as center of figure; centroid.

center of attraction [MECH] A point toward which a force

on a body or particle (such as gravitational or electrostatic force) is always directed; the magnitude of the force depends only on the distance of the body or particle from this point.

center of buoyancy [MECH] The point through which acts the resultant force exerted on a body by a static fluid in which it is submerged or floating; located at the centroid of displaced volume.

center of burst [ORD] A point in the air about which the bursts of several antiaircraft projectiles from rounds fired under like conditions are evenly distributed.

center of curvature [MATH] At a given point on a curve, the center of the osculating circle of the curve at that point.

center of falls *See* pressure-fall center.

center of figure *See* center of area; center of volume.

center of force [MECH] The point toward or from which a central force acts.

center of gravity [MECH] A fixed point in a material body through which the resultant force of gravitational attraction acts.

center of inertia *See* center of mass.

center of inversion [CRYSTAL] A point in a crystal lattice such that the lattice is left invariant by an inversion in the point.

center of lift [AERO ENG] The mean of all the centers of pressure on an airfoil.

center of mass [MECH] That point of a material body or system of bodies which moves as though the system's total mass existed at the point and all external forces were applied at the point. Also known as center of inertia; centroid.

center of mass coordinate system [MECH] A reference frame which moves with the velocity of the center of mass, so that the center of mass is at rest in this system, and the total momentum of the system is zero. Also known as center of momentum coordinate system.

center of momentum coordinate system *See* center of mass coordinate system.

center of oscillation [MECH] Point in a physical pendulum, on the line through the point of suspension and the center of mass, which moves as if all the mass of the pendulum were concentrated there.

center of percussion [MECH] If a rigid body, free to move in a plane, is struck a blow at a point O, and the line of force is perpendicular to the line from O to the center of mass, then the initial motion of the body is a rotation about the center of percussion relative to O; it can be shown to coincide with the center of oscillation relative to O.

center of pressure [AERO ENG] The point in the chord of an airfoil section which is at the intersection of the chord (prolonged if necessary) and the line of action of the combined air forces (resultant air force).

center of pressure coefficient [AERO ENG] The ratio of the distance of a center of pressure from the leading edge of an airfoil to its chord length.

center of rises *See* pressure-rise center.

center of similitude [MATH] A point of intersection of lines that join the ends of parallel radii of coplanar circles.

center of suspension [MECH] The intersection of the axis of rotation of a pendulum with a plane perpendicular to the axis that passes through the center of mass.

center of symmetry [SCI TECH] A point in an object through which any straight line encounters exactly similar points on opposite sides. Also known as symmetry center.

center of thrust *See* thrust axis.

center of twist [MECH] A point on a line parallel to the axis of a beam through which any transverse force must be applied to avoid twisting of the section. Also known as shear center.

center of volume [MATH] For a three-dimensional figure, the center of mass of a homogeneous solid having the same boundaries as the figures. Also known as center of figure; centroid.

center plug [DES ENG] A small diamond-set circular plug, designed to be inserted into the annular opening in a core bit, thus converting it to a noncoring bit.

center punch [DES ENG] A tool similar to a prick punch but having the point ground to an angle of about 90°; used to enlarge prick-punch marks or holes.

center square [DES ENG] A straight edge with a sliding square; used to locate the center of a circle.

center staff [HOROL] The arbor that holds the minute hand and cannon pinion of a timepiece.

center tap [ELEC] A terminal at the electrical midpoint of a resistor, coil, or other device. Abbreviated CT.

center wheel [HOROL] A wheel that drives the wheels leading to the escapement, and that has a pinion post on which the minute hand is mounted.

centesis [MED] Surgical puncture, or perforation as of a tumor or membrane.

centi- [SCI TECH] A prefix representing 10^{-2}, which is 0.01 or one-hundredth. Abbreviated c.

centiare [MECH] Unit of area equal to 1 square meter. Also spelled centare.

centibar [MECH] A unit of pressure equal to 0.01 bar or to 1000 pascals.

centigrade heat unit [THERMO] A unit of heat energy, equal to 0.01 of the quantity of heat needed to raise 1 pound of air-free water from 0 to 100°C at a constant pressure of 1 standard atmosphere; equal to 1900.44 joules. Symbolized CHU; (more correctly) CHU_{mean}.

centigrade temperature scale *See* Celsius temperature scale.

centigram [MECH] Unit of mass equal to 0.01 gram or 10^{-5} kilogram. Abbreviated cg.

centihg *See* centimeter of mercury.

centiliter [MECH] A unit of volume equal to 0.01 liter or to 10^{-5} cubic meter.

centimeter [ELEC] *See* abhenry; statfarad. [MECH] A unit of length equal to 0.01 meter. Abbreviated cm.

centimeter-candle *See* phot.

centimeter-gram-second system [PHYS] An absolute system of metric units in which the centimeter, gram mass, and the second are the basic units. Abbreviated cgs system.

centimeter of mercury [MECH] A unit of pressure equal to the pressure that would support a column of mercury 1 centimeter high, having a density of 13.5951 grams per cubic centimeter, when the acceleration of gravity is equal to its standard value (980.665 centimeters per second per second); it is equal to 1333.22387415 pascals; it differs from the decatorr by less than 1 part in 7,000,000. Abbreviated cmHg. Also known as centihg.

centimetric waves [COMMUN] Microwaves having wavelengths between 1 and 10 centimeters, corresponding to frequencies between 3 and 30 gigahertz.

centimorgan [GEN] A unit of genetic map distance, equal to the distance along a chromosome that gives a recombination frequency of 1%.

centipede [INV ZOO] The common name for an arthropod of the class Chilopoda.

centipoise [FL MECH] A unit of viscosity which is equal to 0.01 poise. Abbreviated cp.

centistoke [FL MECH] A cgs unit of kinematic viscosity in customary use, equal to the kinematic viscosity of a fluid having a dynamic viscosity of 1 centipoise and a density of 1 gram per cubic centimeter. Abbreviated cs.

centner *See* hundredweight.

centrad [MATH] A unit of plane angle equal to 0.01 radian or to about 0.573 degree.

central apparatus [CYTOL] The centrosome or centrosomes together with the surrounding cytoplasm. Also known as cytocentrum.

central-battery system [COMMUN] A telephone or telegraph system which obtains all the energy for signaling (and for speaking, in the case of the telephone) from a single battery of secondary cells located at the main exchange. Abbreviated C.B. system.

central breaker [MIN ENG] A breaker where the coal from several mines in a district is prepared.

central canal [ANAT] The small canal running through the center of the spinal cord from the conus medullaris to the lower part of the fourth ventricle; represents the embryonic neural tube.

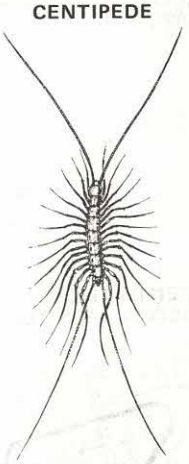
central condensation [ASTRON] The bright, central portion of the coma of a comet, containing one or more nuclei.

central control [AERO ENG] The place, facility, or activity at which the whole action incident to a test launch and flight is coordinated and controlled, from the make-ready at the launch site and on the range, to the end of the rocket flight downrange. [ORD] Fire control of weapons by a central location, not by the individual gunner; especially used in antiaircraft batteries. [SYS ENG] Control exercised over an extensive and complicated system from a single center.

central deafness [MED] Deafness that results from some injury or failure to function in the central nervous system.

central eclipse [ASTRON] An eclipse in which the eclipsing body passes centrally (midpoints in line) over the body eclipsed.

CENTIPEDE



Scutigera coleoptrata (L.), the house centipede; body length about 25 millimeters. *(From R. E. Snodgrass, A Textbook of Arthropod Anatomy, copyright 1952 by Cornell University Press; used by permission)*

Centrales [BOT] An order of diatoms (Bacillariophyceae) in which the form is often circular and the markings on the valves are radial.

central field approximation [PHYS] The approximation that the electrons in an atom or the nucleons in a nucleus move in the potential of a central force which is the same for all the particles.

central force [MECH] A force whose line of action is always directed toward a fixed point; the force may attract or repel.

central gear [MECH ENG] The gear on the central axis of a planetary gear train, about which a pinion rotates. Also known as sun gear.

central heating [CIV ENG] The use of a single steam or hot-water heating plant to serve a group of buildings, facilities, or even a complete community through a system of distribution pipes.

centralized data processing [COMPUT SCI] The processing of all the data concerned with a given activity at one place, usually with fixed equipment within one building.

centralized traffic control [CIV ENG] Control of train movements by signal indications given by a train director at a central control point. Abbreviated CTC.

centralizer [MATH] The subgroup consisting of all elements which commute with a given element of a group.

central-limit theorem [STAT] The theorem that the distribution of sample means taken from a large population approaches a normal (Gaussian) curve.

central meridian [ASTRON] The meridian of a planet that crosses the center of the visible face of the planet at a given instant.

central-meridian transit [ASTRON] The passage of an object on the surface of a planet across the central meridian.

central mix concrete [MATER] A concrete prepared at a concrete mixing plant and transported to the building site.

central nervous system [ANAT] The division of the vertebrate nervous system comprising the brain and spinal cord.

central office [COMMUN] A switching unit, installed in a telephone system serving the general public, having the necessary equipment and operating arrangements for terminating and interconnecting lines and trunks. Also known as telephone central office.

central office line *See* subscriber line.

central paralysis [MED] Paralysis due to a lesion of the brain or spinal cord.

central peak [ASTRON] A mountain located at the center of the floor of a lunar crater.

central placentation [BOT] Having the ovules located in the center of the ovary.

central pocket loop [ANAT] A whorl type of fingerprint pattern having two deltas and at least one ridge that make a complete circuit.

central pressure [METEOROL] At any given instant, the atmospheric pressure at the center of a high or low; the highest pressure in a high, the lowest pressure in a low.

central processing unit [COMPUT SCI] The part of a computer containing the circuits required to interpret and execute the instructions. Abbreviated CPU. Also known as frame; main frame.

central quadric [MATH] A quadric surface that has a point about which the surface is symmetrical; namely, a sphere, ellipsoid, or hyperboloid.

central sulcus [ANAT] A groove situated about the middle of the lateral surface of the cerebral hemisphere, separating the frontal from the parietal lobe.

central terminal [COMPUT SCI] A communication device which queues tellers' requests for processing and which channels answers to the consoles originating the transactions.

central valley *See* rift valley.

central water [OCEANOGR] Upper water mass associated with the central region of oceanic gyre.

Centrarchidae [VERT ZOO] A family of fishes in the order Perciformes, including the fresh-water or black basses and several sunfishes.

centric [ANAT] Having all teeth of both jaws meet normally with perfect distribution of forces in the dental arch.

centrifugal [MECH] Acting or moving in a direction away from the axis of rotation or the center of a circle along which a body is moving.

centrifugal atomizer [MECH ENG] Device that atomizes liquids with a spinning disk; liquid is fed onto the center of the disk, and the whirling motion (3000 to 50,000 revolutions per minute) forces the liquid outward in thin sheets to cause atomization.

centrifugal barrier [MECH] A steep rise, located around the center of force, in the effective potential governing the radial motion of a particle of nonvanishing angular momentum in a central force field, which results from the centrifugal force and prevents the particle from reaching the center of force, or causes its Schrödinger wave function to vanish there in a quantum-mechanical system.

centrifugal brake [MECH ENG] A safety device on a hoist drum that applies the brake if the drum speed is greater than a set limit.

centrifugal casting [ENG] A method for casting metals or forming thermoplastic resins in which the molten material solidifies in and conforms to the shape of the inner surface of a heated, rapidly rotating container.

centrifugal clarification [MECH ENG] The removal of solids from a liquid by centrifugal action which decreases the settling time of the particles from hours to minutes.

centrifugal classification [MECH ENG] A type of centrifugal clarification purposely designed to settle out only the large particles (rather than all particles) in a liquid by reducing the centrifuging time.

centrifugal classifier [MECH ENG] A machine that separates particles into size groups by centrifugal force.

centrifugal clutch [MECH ENG] A clutch operated by centrifugal force from the speed of rotation of a shaft, as when heavy expanding friction shoes act on the internal surface of a rim clutch, or a flyball-type mechanism is used to activate clutching surfaces on cones and disks.

centrifugal collector [MECH ENG] Device used to separate particulate matter of 0.1–1000 micrometers from an airstream; some types are simple cyclones, high-efficiency cyclones, and impellers.

centrifugal compressor [MECH ENG] A machine in which a gas or vapor is compressed by radial acceleration in an impeller with a surrounding casing, and can be arranged multistage for high ratios of compression.

centrifugal discharge elevator [MECH ENG] A high-speed bucket elevator from which free-flowing materials are discharged by centrifugal force at the top of the loop.

centrifugal distortion [PHYS] Tendency of a molecule to stretch slightly as its speed of rotation increases.

centrifugal drainage pattern *See* radial drainage pattern.

centrifugal extractor [CHEM ENG] A device for separating components of a liquid solution, consisting of a series of perforated concentric rings in a cylindrical drum that rotates at 2000–5000 revolutions per minute around a cylindrical shaft; liquids enter and leave through the shaft; they flow radially and concurrently in the rotating drum.

centrifugal fan [MECH ENG] A machine for moving a gas, such as air, by accelerating it radially outward in an impeller to a surrounding casing, generally of scroll shape.

centrifugal filter [ENG] An adaptation of the centrifugal settler; centrifugal action of a spinning container segregates heavy and light materials but heavy materials escape through nozzles as a thick slurry.

centrifugal filtration [MECH ENG] The removal of a liquid from a slurry by introducing the slurry into a rapidly rotating basket, where the solids are retained on a porous screen and the liquid is forced out of the cake by the centrifugal action.

centrifugal force [MECH] **1.** An outward pseudo-force, in a reference frame that is rotating with respect to an inertial reference frame, which is equal and opposite to the centripetal force that must act on a particle stationary in the rotating frame. **2.** The reaction force to a centripetal force.

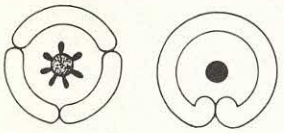
centrifugal governor [MECH ENG] A governor whose flyweights respond to centrifugal force to sense speed.

centrifugal molecular still [CHEM ENG] A device used for molecular distillation; material is fed to the center of a hot, rapidly rotating cone housed in a chamber at a high vacuum; centrifugal force spreads the material rapidly over the hot surface, where the evaporable material goes off as a vapor to the condenser.

centrifugal moment [MECH] The product of the magnitude of centrifugal force acting on a body and the distance to the center of rotation.

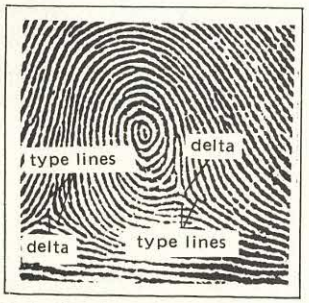
centrifugal pump [MECH ENG] A machine for moving a

CENTRAL PLACENTATION



Free central placentation, ovules shown in black.

CENTRAL POCKET LOOP



Central pocket loop, a type of whorl pattern. *(Federal Bureau of Investigation)*

CENTRIFUGAL MOLECULAR STILL

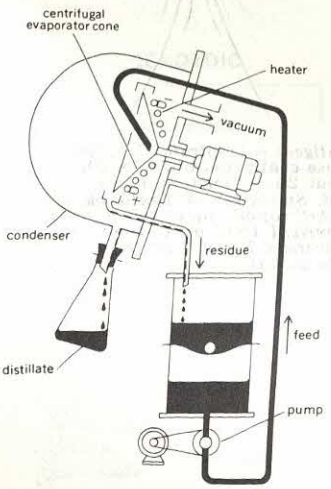


Diagram of the centrifugal molecular still.

liquid, such as water, by accelerating it radially outward in an impeller to a surrounding volute casing.

centrifugal sedimentation [CHEM ENG] Removing solids from liquids by causing particles to settle through the liquid radially toward or away from the center of rotation (depending on the solid-liquid relative densities) by use of a centrifuge.

centrifugal separation [MECH ENG] The separation of two immiscible liquids in a centrifuge within a much shorter period of time than could be accomplished solely by gravity. [NUCLEO] Separation of isotopes by spinning a mixture in gas or vapor form at high speed.

centrifugal settler [CHEM ENG] Spinning container that separates solid particles from liquids; centrifugal force causes suspended solids to move toward or away from the center of rotation, thus concentrating them in one area for removal.

centrifugal stretching [PHYS] Stretching of the bonds of a rotating molecule caused by centrifugal force, resulting in an increase in the molecule's moment of inertia and a modification of its energy levels.

centrifugal switch [MECH ENG] A switch opened or closed by centrifugal force; used on some induction motors to open the starting winding when the motor has almost reached synchronous speed.

centrifugal tachometer [MECH ENG] An instrument which measures the instantaneous angular speed of a shaft by measuring the centrifugal force on a mass rotating with it.

centrifuge [MECH ENG] **1.** A rotating device for separating liquids of different specific gravities or for separating suspended colloidal particles, such as clay particles in an aqueous suspension, according to particle-size fractions by centrifugal force. **2.** A large motor-driven apparatus with a long arm, at the end of which human and animal subjects or equipment can be revolved and rotated at various speeds to simulate the prolonged accelerations encountered in rockets and spacecraft.

centrifuge microscope [OPTICS] An instrument which permits magnification and observation of living cells being centrifuged; image of the material magnified by the objective which rotates near the periphery of the centrifuge head is brought to the axis of rotation where it is observed in a stationary ocular.

centrifuge refining [CHEM ENG] The use of centrifuges for liquids processing, such as separation of solids or immiscible droplets from liquid carriers, or for liquid-liquid solvent extraction.

centrifuge tube [ANALY CHEM] Calibrated, tube-shaped glass container used with laboratory centrifuges for volumetric analysis of separable (solid-liquid or immiscible liquid) samples.

centrilobular emphysema [MED] A disorder marked by pulmonary inflation, primarily affecting the respiratory bronchioles and usually more severe in the upper lobes.

centrimetric wave [COMMUN] Radiation in the super-high-frequency band, having a wavelength between 1 and 10 centimeters.

centriole [CYTOL] A complex cellular organelle forming the center of the centrosome in most cells; usually found near the nucleus in interphase cells and at the spindle poles during mitosis.

centripetal [MECH] Acting or moving in a direction toward the axis of rotation or the center of a circle along which a body is moving.

centripetal acceleration [MECH] The radial component of the acceleration of a particle or object moving around a circle, which can be shown to be directed toward the center of the circle.

centripetal force [MECH] The radial force required to keep a particle or object moving in a circular path, which can be shown to be directed toward the center of the circle.

centrobaric [MECH] **1.** Pertaining to the center of gravity, or to some method of locating it. **2.** Possessing a center of gravity.

centroclinal [GEOL] Referring to geologic strata dipping toward a common center, as in a structural basin.

centrode [MECH] The path traced by the instantaneous center of a plane figure when it undergoes plane motion.

Centrohelida [INV ZOO] An order of protozoans in the subclass Heliozoia lacking a central capsule and having axopodia or filopodia, and siliceous scales and spines.

centroid *See* center of area; center of mass; center of volume.

centroid of asymptotes [CONT SYS] The intersection of asymptotes in a root-locus diagram.

centroids of areas and lines [MATH] Points positioned identically with the centers of gravity of corresponding thin homogeneous plates or thin homogeneous wires; involved in the analysis of certain problems of mechanics such as the phenomenon of bending.

centrolecithal ovum [CYTOL] An egg cell having the yolk centrally located; occurs in arthropods.

Centrolenidae [VERT ZOO] A family of arboreal frogs in the suborder Procoela characterized by green bones.

centromere [CYTOL] A specialized chromomere to which the spindle fibers are attached during mitosis. Also known as kinomere; primary constriction.

Centronellidina [PALEON] A suborder of extinct articulate brachiopods in the order Terebratulida.

centrosome [CYTOL] A spherical hyaline region of the cytoplasm surrounding the centriole in many cells; plays a dynamic part in mitosis as the focus of the spindle pole.

Centrospermae [BOT] An equivalent name for the Caryophyllales.

Centrospermales [BOT] An equivalent name for the Caryophyllales.

centrosphere [CYTOL] The differentiated layer of cytoplasm immediately surrounding the centriole. [GEOL] The central core of the earth. Also known as the barysphere.

centrum [ANAT] The main body of a vertebra. [BOT] The central space in hollow-stemmed plants.

Cen X-3 *See* Centaurus X-3.

Cep *See* Cepheus.

CEPHA *See* ethephon.

cephaeline [ORG CHEM] $C_{14}H_{19}O_2N$ An alkaloid, slightly soluble in water, extracted from the root of ipecac; used as an emetic.

Cephalaspida [PALEON] An equivalent name for the Osteostraci.

Cephalaspidomorphi [VERT ZOO] An equivalent name for Monorhina.

cephalic [ZOO] Of or pertaining to the head or anterior end.

cephalic index [ANTHRO] The ratio of maximum breadth to maximum length of the head multiplied by 100.

cephalic module [ANTHRO] A measure of absolute head size derived by averaging the length, breadth, and auricular height of the head.

cephalic vein [ANAT] A superficial vein located on the lateral side of the arm which drains blood from the radial side of the hand and forearm into the axillary vein.

cephalin [BIOCHEM] Any of several acidic phosphatides whose composition is similar to that of lecithin but having ethanolamine, serine, and inositol instead of choline; found in many living tissues, especially nervous tissue of the brain.

Cephalina [INV ZOO] A suborder of protozoans in the order Eugregarinida that are parasites of certain invertebrates.

cephalization [ZOO] Anterior specialization resulting in the concentration of sensory and neural organs in the head.

Cephalobaenida [INV ZOO] An order of the arthropod class Pentastomida composed of primitive forms with six-legged larvae.

Cephalocarida [INV ZOO] A subclass of Crustacea erected to include the primitive crustacean *Hutchinsoniella macracantha*.

Cephalochordata [VERT ZOO] A subphylum of the Chordata comprising the lancelets, including *Branchiostoma*.

Cephaloidae [INV ZOO] The false longhorn beetles, a small family of coleopteran insects in the superfamily Tenebrionoidea.

cephalomere [INV ZOO] One of the somites that make up the head of an arthropod.

cephalometry [ANTHRO] The science of measuring the head, especially for determining the characteristics of a particular race, sex, or somatotype.

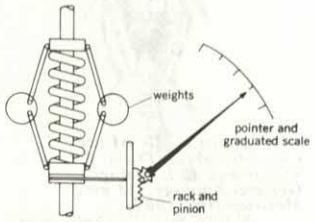
cephalont [INV ZOO] A sporozoan just prior to spore formation.

Cephalopoda [INV ZOO] Exclusively marine animals constituting the most advanced class of the Mollusca, including squids, octopuses, and *Nautilus*.

cephalosporin [MICROBIO] Any of a group of antibiotics produced by strains of the imperfect fungus *Cephalosporium*.

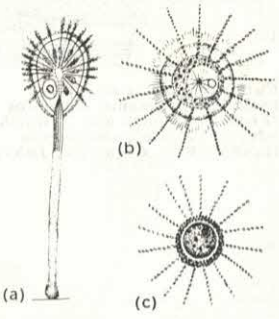
cephalothin [MICROBIO] An antibiotic derived from the fungus *Cephalosporium*, resembling penicillin units in structure and activity, and effective against many gram-positive cocci that are resistant to penicillin.

CENTRIFUGAL TACHOMETER



The centrifugal-force tachometer indicates instantaneous speed. *(From D. M. Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

CENTROHELIDA

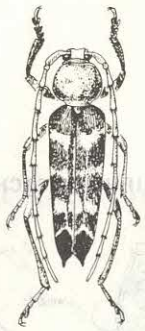


Some Centrohelida species. *(a) Actinolophus pedunculatus*, sessile on Bryozoa *(after Villeneuve)*, *(b) Heterophrys myriopoda (after Penard)*, *(c) Pompholyxophrys punicea (after Penard). (From R. P. Hall, Protozoology, Prentice-Hall, 1953)*

CEPHALOCARIDA

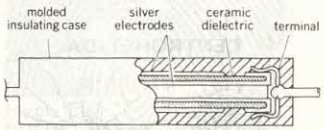
Hutchinsoniella macracantha of the Cephalocarida. *(After Scourfield)*

CERAMBYCIDAE



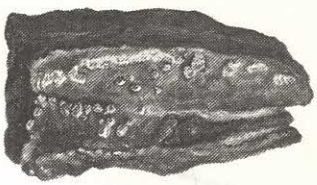
A longhorn beetle of the Cerambycidae. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

CERAMIC CAPACITOR



Cutaway drawing of typical molded-case ceramic capacitor. *(From K. Henney and C. Walsh, eds., Electronic Components Handbook, McGraw-Hill, 1957)*

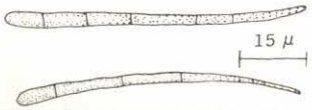
CERARGYRITE



2.5 cm

Cerargyrite crystals from Leadville, Colorado. *(Specimen from Department of Geology, Bryn Mawr College)*

CERCOSPORA



The dark multiseptate spores of *Cercospora*.

cephalothorax [INV ZOO] The body division comprising the united head and thorax of arachnids and higher crustaceans.

Cephalothrididae [INV ZOO] A family of ribbonlike worms in the order Palaeonemertini.

cephalotrichous flagellation [CYTOL] Insertion of flagella in polar tufts.

cepheid [ASTRON] One of a subgroup of periodic variable stars whose brightness does not remain constant with time and whose period of variation is a function of intrinsic mean brightness.

Cepheus [ASTRON] A constellation with right ascension 22 hours, declination 70°N. Abbreviated Cep.

Cephidae [INV ZOO] The stem sawflies, composing the single family of the hymenopteran superfamily Cephoidea.

Cephoidea [INV ZOO] A superfamily of hymenopteran insects in the suborder Symphyta.

cepstrum [ACOUS] The Fourier transform of the logarithm of a speech power spectrum; used to separate vocal tract information from pitch excitation in voiced speech.

cepstrum vocoder [ENG ACOUS] A digital device for reproducing speech in which samples of the cepstrum of speech, together with pitch information, are transmitted to the receiver, and are then converted into an impulse response that is convolved with an impulse train generated from the pitch information.

Ceractinomorpha [INV ZOO] A subclass of sponges belonging to the class Demospongiae.

ceramagnet [ELECTROMAG] A ferrimagnet composed of the hard magnetic material $BaO{\cdot}6Fe_2O_3$.

ceramal *See* cermet.

Cerambycidae [INV ZOO] The longhorn beetles, a family of coleopteran insects in the superfamily Chrysomeloidea.

ceramet *See* cermet.

ceramic [MATER] **1.** A product made by the baking or firing of a nonmetallic mineral, such as tile, cement, plaster refractories, and brick. **2.** Consisting of such a product.

ceramic aggregate [MATER] **1.** Portland cement concrete containing lumps of ceramic material. **2.** Concrete made with porous clay to reduce its weight.

ceramic amplifier [ELECTR] An amplifier that utilizes the piezoelectric properties of semiconductors such as silicon.

ceramic-based microcircuit [ELECTR] A microminiature circuit printed on a ceramic substrate.

ceramic capacitor [ELEC] A capacitor whose dielectric is a ceramic material such as steatite or barium titanate, the composition of which can be varied to give a wide range of temperature coefficients.

ceramic cartridge [ENG ACOUS] A device containing a piezoelectric ceramic element, used in phonograph pickups and microphones.

ceramic coating [MET] A nonmetallic, inorganic coating made of sprayed aluminum oxide or of zirconium oxide, or a cemented coating of an intermetallic compound, such as aluminum disilicide, of essentially crystalline nature, applied as a protective film on metal to protect against temperatures above 1100°C.

ceramic earphones *See* crystal headphones.

ceramic fiber [MATER] A small-dimension filament or thread composed of a ceramic material, usually alumina and silica, used in lightweight units for electrical, thermal, and sound insulation, filtration at high temperatures, packing, and reinforcing other ceramic materials.

ceramic glaze [ENG] A glossy finish on a clay body obtained by spraying with metallic oxides, chemicals, and clays and firing at high temperature.

ceramicite [PETR] A porcelained pyrometamorphic rock composed of basic plagioclase and cordierite with a small amount of hypersthene and a groundmass of glass.

ceramic magnet [ELECTROMAG] A permanent magnet made from pressed and sintered mixtures of ceramic and magnetic powders. Also known as ferromagnetic ceramic.

ceramic microphone [ENG ACOUS] A microphone using a ceramic cartridge.

ceramic mold casting [MET] A precision casting process using a ceramic body fired to high temperature as the mold, and carbon, low-alloy, or stainless steel as the casting.

ceramic pickup [ENG ACOUS] A phonograph pickup using a ceramic cartridge.

ceramic radiant [ENG] A baked-clay component of a gas heating unit which radiates heat when incandescent from the gas flame.

ceramic reactor [NUCLEO] A nuclear reactor in which the fuel and moderator assemblies are made from high-temperature-resistant ceramic materials such as metal oxides, carbides, or nitrides.

ceramic rod flame spraying [MET] A method of flame spraying in which the ceramic rod is fed into a gun that utilizes an oxyfuel gas flame to atomize and airblast the rod material to the substrate.

ceramics [ENG] The art and science of making ceramic products.

ceramic tile [MATER] A burned-clay product composed of a clay body with a decorative surface glaze; used principally for decorative and sanitary effects.

ceramic tool [DES ENG] A cutting tool made from metallic oxides.

ceramic transducer *See* electrostriction transducer.

ceramic tube [ELECTR] An electron tube having a ceramic envelope capable of withstanding operating temperatures over 500°C, as required during reentry of guided missiles.

ceramoplastic [MATER] A high-temperature insulating material made by bonding synthetic mica with glass.

Ceramoporidae [PALEON] A family of extinct, marine bryozoans in the order Cystoporata.

Cerapachyinae [INV ZOO] A subfamily of predacious ants in the family Formicidae, including the army ant.

Ceraphronidae [INV ZOO] A superfamily of hymenopteran insects in the superfamily Proctotrupoidea.

cerargyrite [MINERAL] AgCl A colorless to pearl-gray mineral; crystallizes in the isometric system, but crystals, usually cubic, are rare; a secondary mineral that is an ore of silver. Also known as chlorargyrite; horn silver.

cerata [INV ZOO] Respiratory papillae of the mantle in certain nudibranchs.

cerate [ORG CHEM] A metallic salt or soap made from lard. [PHARM] An unguent made of wax, resin, or spermaceti mixed with oil, lard, and medicinal ingredients; used for external application.

ceratine [INV ZOO] A hornlike material secreted by some anthozoans.

Ceratiomyxaceae [MYCOL] The single family of the fungal order Ceratiomyxales.

Ceratiomyxales [MYCOL] An order of myxomycetous fungi in the subclass Ceratiomyxomycetidae.

Ceratiomyxomycetidae [MYCOL] A subclass of fungi belonging to the Myxomycetes.

ceratite [PALEON] A fossil ammonoid of the genus *Ceratites* distinguished by a type of suture in which the lobes are further divided into subordinate crenulations while the saddles are not divided and are smoothly rounded.

ceratitic [PALEON] Pertaining to a ceratite.

Ceratodontidae [PALEON] A family of Mesozoic lungfishes in the order Dipteriformes.

Ceratomorpha [VERT ZOO] A suborder of the mammalian order Perissodactyla including the tapiroids and the rhinoceratoids.

Ceratophyllaceae [BOT] A family of rootless, free-floating dicotyledons in the order Nymphaeales characterized by unisexual flowers and whorled, cleft leaves with slender segments.

Ceratopsia [PALEON] The horned dinosaurs, a suborder of Upper Cretaceous reptiles in the order Ornithischia.

cercaria [INV ZOO] The larval generation which terminates development of a digenetic trematode in the intermediate host.

Cercopidae [INV ZOO] A family of homopteran insects belonging to the series Auchenorrhyncha.

Cercopithecidae [VERT ZOO] The Old World monkeys, a family of primates in the suborder Anthropoidea.

cercopod [INV ZOO] **1.** Either of two filamentous projections on the posterior end of notostracan crustaceans. **2.** *See* cercus.

Cercospora [MYCOL] A genus of imperfect fungi having dark, elongate, multiseptate spores.

Cercospora leaf spot [PL PATH] Any of several fungus diseases of plants caused by *Cercospora* species and characterized by areas of discoloration on the leaves.

cercus [INV ZOO] Either of a pair of segmented sensory appendages on the last abdominal segment of many insects and certain other anthropods. Also known as cercopod.

cere [VERT ZOO] A soft, swollen mass of tissue at the base of

the upper mandible through which the nostrils open in certain birds, such as parrots and birds of prey.

cereal [BOT] Any member of the grass family (Graminae) which produces edible, starchy grains usable as food by man and his livestock. Also known as grain.

cereal binder [MATER] A binding material derived from flour; used for core mixtures in a casting process.

cerebellar ataxia [MED] Incoordination of muscles due to disease of the cerebellum.

cerebellum [ANAT] The part of the vertebrate brain lying below the cerebrum and above the pons, consisting of three lobes and concerned with muscular coordination and the maintenance of equilibrium.

cerebral cortex [ANAT] The superficial layer of the cerebral hemispheres, composed of gray matter and concerned with coordination of higher nervous activity.

cerebral hemisphere [ANAT] Either of the two lateral halves of the cerebrum.

cerebral localization [ANAT] Designation of a specific region of the brain as the area controlling a specific physiologic function or as the site of a lesion.

cerebral palsy [MED] Any nonprogressive motor disorder in man caused by brain damage incurred during fetal development.

cerebral peduncle [ANAT] One of two large bands of white matter (containing descending axons of upper motor neurons) which emerge from the underside of the cerebral hemispheres and approach each other as they enter the rostral border of the pons.

cerebration [PSYCH] The act or process of using the mind; thinking.

cerebrose *See* galactose.

cerebroside [BIOCHEM] Any of a complex group of glycosides found in nerve tissue, consisting of a hexose, a nitrogenous base, and a fatty acid. Also known as galactolipid.

cerebroside lipoidosis *See* Gaucher's disease.

cerebrospinal axis [ANAT] The axis of the body composed of the brain and spinal cord.

cerebrospinal fluid [PHYSIO] A clear liquid that fills the ventricles of the brain and the spaces between the arachnoid mater and pia mater.

cerebrospinal meningitis [MED] Inflammation of the meninges of the brain and spinal cord.

cerebrotonia [PSYCH] A temperament pattern proposed by W. H. Sheldon as characteristic of an ectomorph, who is an individual with an intellectualized, solitudinous, and inhibited approach to life.

cerebrovascular accident [MED] A symptom complex resulting from cerebral hemorrhage, embolism, or thrombosis of the cerebral vessels, characterized by sudden loss of consciousness.

cerebrum [ANAT] The enlarged anterior or upper part of the vertebrate brain consisting of two lateral hemispheres.

cerelose *See* glucose.

Cerenkov counter [NUCLEO] An apparatus for detecting high-energy charged particles by observation of the Cerenkov radiation produced.

Cerenkov radiation [ELECTROMAG] Light emitted by a high-speed charged particle when the particle passes through a transparent, nonconducting material at a speed greater than the speed of light in the material.

Cerenkov rebatron radiator [ELECTR] Device in which a tightly bunched, velocity-modulated electron beam is passed through a hole in a dielectric; the reaction between the higher velocity of the electrons passing through the hole and the slower velocity of the electromagnetic energy passing through the dielectric results in radiation at some frequency higher than the frequency of modulation of the electron beam.

Ceres [ASTRON] The largest asteroid, with a diameter of about 960 kilometers, mean distance from the sun of 2.766 astronomical units, and C-type surface composition.

ceresin [MATER] **1.** A hydrocarbon wax refined from veins of wax shale known as ozocerite; used in manufacture of candles, shoe polish, electrical insulation, and floor waxes because of its great compatibility with other substances. Also known as ceresine; ozocerite. **2.** A mixture of paraffin wax and beeswax, or a mixture of ozocerite and paraffin.

ceresine *See* ceresin.

ceria *See* ceric oxide.

Ceriantharia [INV ZOO] An order of the Zoantharia distinguished by the elongate form of the anemone-like body.

Ceriantipatharia [INV ZOO] A subclass proposed by some authorities to include the anthozoan orders Antipatharia and Ceriantharia.

ceric oxide [INORG CHEM] CeO_2 A pale-yellow to white powder; soluble in sulfuric acid, insoluble in dilute acid and water; used in ceramics and as a polish for optical glass. Also known as ceria; cerium dioxide; cerium oxide.

ceric sulfate [INORG CHEM] $Ce(SO_4)_2 \cdot 4H_2O$ Yellow needles forming a basic salt with excess water; used in waterproofing, mildew-proofing, and in dyeing and printing textiles.

cerine *See* allanite.

cerinic acid *See* cerotic acid.

cerite [MINERAL] $(Ca,Fe)Ce_3Si_3O_{12} \cdot H_2O$ A brown rare-earth hydrous silicate of cerium and other metals found in gneiss; hardness is 5.5 on Mohs scale, and specific gravity is 4.86.

Cerithiacea [INV ZOO] A superfamily of gastropod mollusks in the order Prosobranchia.

cerium [CHEM] A chemical element, symbol Ce, atomic number 58, atomic weight 140.12; a rare-earth metal, used as a getter in the metal industry, as an opacifier and polisher in the glass industry, in Welsbach gas mantles, in cored carbon arcs, and as a liquid-liquid extraction agent to remove fission products from spent uranium fuel.

cerium-140 [NUC PHYS] An isotope of cerium with atomic mass number of 140, 88.48% of the known amount of the naturally occurring element.

cerium-142 [NUC PHYS] A radioactive isotope of cerium with atomic mass number of 142; emits α-particles and has a half-life of 5×10^{15} years.

cerium-144 [NUC PHYS] A radioactive isotope of the element cerium with atomic mass number of 144; a beta emitter with a half-life of 285 days.

cerium dioxide *See* ceric oxide.

cerium fluoride [INORG CHEM] CeF_3 White hexagonal crystals, melting point 1460°C; used in arc carbons to increase the brilliance of carbon-arc lamps.

cerium oxide *See* ceric oxide.

cerium stearate [ORG CHEM] $Ce(C_{18}H_{35}O_2)_2$ White, waxy, inert powder, melting point 100–110°C; used in waterproofing compounds.

Cermak-Spirek furnace [ENG] An automatic reverberatory furnace of rectangular form divided into two sections by a wall; used for roasting zinc and quicksilver ores.

cermet [MATER] Any of a group of composite materials made by mixing, pressing, and sintering metal with ceramic; examples are silicon-silicon carbide and chromium-alumina carbide. Also known as ceramal; ceramet; metal ceramic.

cermet nuclear fuel [NUCLEO] A nuclear reactor fuel mixed with a heat-resistant ceramic and a metal to give it both refractory and damage-resistant properties.

cermet resistor [ELEC] A metal-glaze resistor, consisting of a mixture of finely powdered precious metals and insulating materials fired onto a ceramic substrate.

cernuous [BOT] Drooping or inclining.

cerography [GRAPHICS] Painting in which wax is used as a binder for the pigments.

cerolite [MINERAL] A mixture of serpentine and stevensite occurring in yellow or greenish waxlike masses.

Cerophytidae [INV ZOO] A small family of coleopteran insects in the superfamily Elateroidea.

cerotic acid [ORG CHEM] $CH_3(CH_2)_{24}COOH$ A fatty acid derived from carnauba wax or beeswax; melts at 87.7°C. Also known as cerinic acid; hexacosanoic acid.

cers [METEOROL] A term for the mistral in Catalonia, Narbonne, and parts of Provence (southern France and northeastern Spain).

certainty equivalence control [CONT SYS] An optimal control law for a stochastic adaptive control system which is obtained by solving the control problem in the case of known parameters and substituting the known parameters with their estimates.

certified color *See* food color.

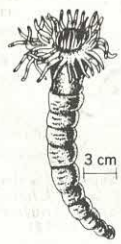
ceruloplasmin [BIOCHEM] The copper-binding serum protein in human blood.

cerumen [PHYSIO] The waxy secretion of the ceruminous glands of the external ear. Also known as earwax.

ceruminous gland [ANAT] A modified sweat gland in the external ear that produces earwax.

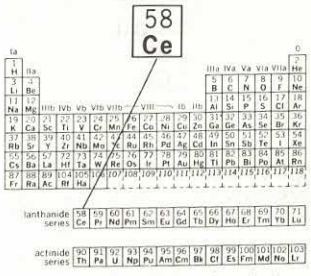
cerussite [MINERAL] $PbCO_3$ A yellow or white member

CERIANTHARIA



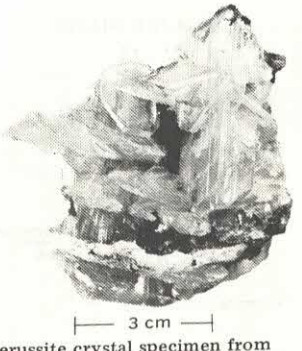
Cerianthus solitarius lives in sandy marine substrata. *(After Y. Delage)*

CERIUM

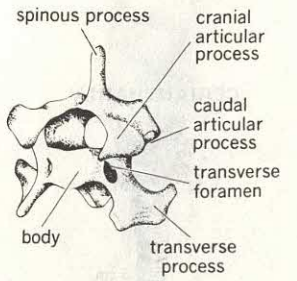


Periodic table of the chemical elements showing the position of cerium.

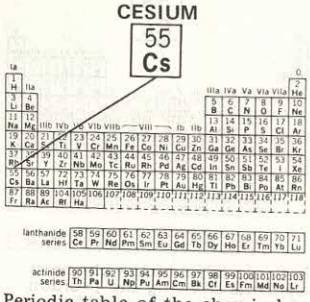
CERUSSITE



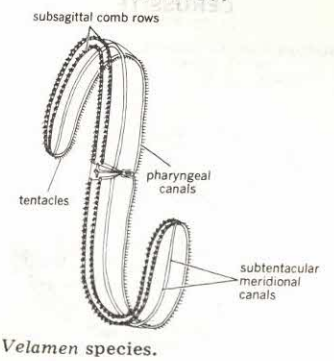
Cerussite crystal specimen from Ems, Nassau. *(American Museum of Natural History Specimen)*



Cervical vertebra of a dog. *(From M. E. Miller, G. C. Christensen, and H. E. Evans, Anatomy of the Dog, Saunders, 1964)*



Periodic table of the chemical elements showing the position of cesium.



Velamen species.

of the aragonite group occurring in orthorhombic crystals; produced by the action of carbon dioxide on lead ore.

cervantite [MINERAL] Sb_2O_4 A white or yellow secondary mineral crystallizing in the orthorhombic system and formed by oxidation of antimony sulfide.

cervical [ANAT] Of or relating to the neck, a necklike part, or the cervix of an organ.

cervical canal [ANAT] Canal of the cervix of the uterus.

cervical flexure [EMBRYO] A ventrally concave flexure of the embryonic brain occurring at the junction of hindbrain and spinal cord.

cervical ganglion [ANAT] Any ganglion of the sympathetic nervous system located in the neck.

cervical plexus [ANAT] A plexus in the neck formed by the anterior branches of the upper four cervical nerves.

cervical sinus [EMBRYO] A triangular depression caudal to the hyoid arch containing the posterior visceral arches and grooves.

cervical vertebra [ANAT] Any of the bones in the neck region of the vertebral column; the transverse process has a characteristic perforation by a transverse foramen.

cervicitis [MED] Inflammation of the cervix uteri.

Cervidae [VERT ZOO] A family of pecoran ruminants in the superfamily Cervoidea, characterized by solid, deciduous antlers; includes deer and elk.

cervix uteri [ANAT] The narrow outer end of the uterus.

Cervoidea [VERT ZOO] A superfamily of tylopod ruminants in infraorder Pecora, including deer, giraffes, and related species.

ceryl alcohol [ORG CHEM] $C_{26}H_{53}OH$ An alcohol derived from Chinese wax, melting at 79°C and insoluble in water.

cesarean section [MED] Delivery of the fetus through an abdominal incision.

cesarolite [MINERAL] $H_2PbMn_3O_8$ A steel-gray mineral consisting of a hydrous lead manganate occurring in spongy masses.

Cesaro summation [MATH] A method of attaching sums to certain divergent sequences and series by taking averages of the first n-terms and passing to the limit.

cesium [CHEM] A chemical element, symbol Cs, atomic number 55, atomic weight 132.905.

cesium-134 [NUC PHYS] An isotope of cesium, atomic mass number of 134; emits negative beta particles and has a half-life of 2.19 years; used in photoelectric cells and in ion propulsion systems under development.

cesium-137 [NUC PHYS] An isotope of cesium with atomic mass number of 137; emits negative beta particles and has a half-life of 30 years; offers promise as an encapsulated radiation source for therapeutic and other purposes. Also known as radiocesium.

cesium-antimonide photocathode [ELECTR] A photocathode obtained by exposing a thin layer of antimony to cesium vapor at elevated temperatures; has a maximum sensitivity in the blue and ultraviolet regions of the spectrum.

cesium-beam atomic clock [NUCLEO] An instrument, used as the primary standard of frequency and time, in which a microwave oscillator, which generates radiation in a microwave cavity, is maintained at a frequency such that a hyperfine transition is induced in cesium atoms in a beam passing through the cavity. Also known as cesium-beam atomic oscillator.

cesium-beam atomic oscillator *See* cesium beam atomic clock.

cesium-beam sputter source [ELECTR] A source of negative ions in which a beam of positive cesium ions, accelerated through a potential difference on 20–30 kilovolts, sputters the cesium-coated inner surface of a hollow cone fabricated from or containing the element whose negative ion is required, and an appreciable fraction of the negative ions leaving the surface are extracted from the rear hole of the sputter cone.

cesium beam tube *See* cesium electron tube.

cesium bromide [INORG CHEM] CsBr A colorless, crystalline powder with a melting point of 636°C; soluble in water; used in medicine, for infrared spectroscopy, and in scintillation counters.

cesium carbonate [INORG CHEM] Cs_2CO_3 A white, hygroscopic, crystalline powder; soluble in water; used in specialty glasses.

cesium chloride [INORG CHEM] CsCl Colorless cuboid crystals, melting point 646°C; used in filaments of radio tubes to increase sensitivity, in photoelectric cells, and for photosensitive deposit on cathodes.

cesium electron tube [ELECTR] An electronic device used as an atomic clock, producing electromagnetic energy that is accurate and stable in frequency. Also known as cesium beam tube.

cesium fluoride [INORG CHEM] CsF Toxic, irritating, deliquescent crystals with a melting point of 682°C; soluble in water and methanol; used in medicine, mineral water, and brewing.

cesium hollow cathode [ELECTR] A cathode in which cesium is heated at the bottom of a cylinder serving as the cathode of an electron tube, to give current densities that can be as high as 800 amperes per square centimeter.

cesium hydroxide [INORG CHEM] CsOH Colorless or yellow, fused crystalline mass with a melting point of 272.3°C; soluble in water; used as electrolyte in alkaline storage batteries at subzero temperatures.

cesium iodide [INORG CHEM] CsI A colorless, deliquescent, crystalline powder with a melting point of 621°C; soluble in water and alcohol; crystals used for infrared spectroscopy.

cesium-ion engine [AERO ENG] An ion engine that uses a stream of cesium ions to produce a thrust for space travel.

cesium magnetometer [ENG] A magnetometer that uses a cesium atomic-beam resonator as a frequency standard in a circuit that detects very small variations in magnetic fields.

cesium perchlorate [INORG CHEM] $CsClO_4$ A crystalline solid with a melting point of 250°C; soluble in water; used in optics and for specialty glasses.

cesium phototube [ELECTR] A phototube having a cesium-coated cathode; maximum sensitivity in the infrared portion of the spectrum.

cesium sulfate [INORG CHEM] Cs_2SO_4 Colorless crystals with a melting point of 1010°C; soluble in water; used for brewing and in mineral waters.

cesium thermionic converter [ELECTR] A thermionic diode in which cesium vapor is stored between the plates to neutralize space charge and to lower the work function of the emitter.

cesium-vapor lamp [ELECTR] A lamp in which light is produced by the passage of current between two electrodes in ionized cesium vapor.

cesium-vapor Penning source [ELECTR] A conventional Penning source modified for negative-ion generation through the introduction or a third, sputter cathode, made from or containing the element of interest, which is the source of negative ions, and through the introduction of cesium vapor into the arc chamber.

cesium-vapor rectifier [ELECTR] A gas tube in which cesium vapor serves as the conducting gas and a condensed monatomic layer of cesium serves as the cathode coating.

cespitose [BOT] **1.** Tufted; growing in tufts, as grass. **2.** Having short stems forming a dense turf.

cesspit *See* cesspool.

cesspool [CIV ENG] An underground tank for raw sewage collection; used where there is no sewage system. Also known as cesspit.

Cestida [INV ZOO] An order of ribbon-shaped ctenophores having a very short tentacular axis and an elongated pharyngeal axis.

Cestoda [INV ZOO] A subclass of tapeworms including most members of the class Cestoidea; all are endoparasites of vertebrates.

Cestodaria [INV ZOO] A small subclass of worms belonging to the class Cestoidea; all are endoparasites of primitive fishes.

Cestoidea [INV ZOO] The tapeworms, endoparasites composing a class of the phylum Platyhelminthes.

Cet *See* Cetus.

Cetacea [VERT ZOO] An order of aquatic mammals, including the whales, dolphins, and porpoises.

cetane *See n*-hexadecane.

cetane index [CHEM ENG] An empirical method for finding the cetane number of a fuel based on API gravity and the mid boiling point.

cetane number [CHEM ENG] The percentage by volume of cetane (cetane number 100) in a blend with α-methylnaphthalene (cetane number 0); indicates the ability of a fuel to ignite quickly after being injected into the cylinder of an engine.

cetane number improver [CHEM] A chemical which has

the effect of increasing a diesel fuel's cetane number; examples are nitrates, nitroalkanes, nitrocarbonates, and peroxides.

cetene *See* 1-hexadecene.

cetin [ORG CHEM] $C_{15}H_{31}COOC_{16}H_{33}$ A white, crystalline, waxy substance with a melting point of 50°C; soluble in alcohol and ether; used as a base for ointments and emulsions and in the manufacture of soaps and candles.

cetol *See* cetyl alcohol.

cetology [VERT ZOO] The study of whales.

Cetomimiformes [VERT ZOO] An order of rare oceanic, deepwater, soft-rayed fishes that are structurally diverse.

Cetomimoidei [VERT ZOO] The whalefishes, a suborder of the Cetomimiformes, including bioluminescent, deep-sea species.

Cetorhinidae [VERT ZOO] The basking sharks, a family of large, galeoid elasmobranchs of the isurid line.

cetrimonium bromide [ORG CHEM] $CH_3(CH_2)_{15}N(CH_3)_3Br$ Crystals with a melting point of 237–243°C; soluble in alcohol, water, and sparingly in acetone; used as a cationic detergent, antiseptic, and precipitant for nucleic acids and mucopolysaccharides. Also known as cetyltrimethylammonium bromide.

Cetus [ASTRON] A constellation with right ascension 2 hours, declination 10°S. Abbreviated Cet. Also known as Whale.

cetyl [ORG CHEM] The radical represented as $C_{16}H_{33}$—.

cetyl alcohol [ORG CHEM] $C_{15}H_{31}OH$ A colorless wax, insoluble in water although a solution in kerosine forms an insoluble film on water. Also known as cetol; ethal; 1-hexadecanol.

cetylene *See* 1-hexadecene.

cetylic acid *See* palmitic acid.

cetyltrimethylammonium bromide *See* cetrimonium bromide.

cetyl vinyl ether [ORG CHEM] $C_{16}H_{33}OCO{:}CH_2$ A colorless liquid with a boiling point of 142°C; may be copolymerized with unsaturated monomers to make internally plasticized resins.

Ceva's theorem [MATH] The theorem that if three concurrent straight lines pass through the vertices A, B, and C of a triangle and intersect the opposite sides, produced if necessary at D, E, and F, then the product $\overline{AF} \cdot \overline{BD} \cdot \overline{CE}$ of the lengths of three alternate segments equals the product $\overline{FB} \cdot \overline{DC} \cdot \overline{EA}$ of the other three.

cevedilla *See* sabadilla.

cevian [MATH] A straight line that passes through a vertex of a triangle or tetrahedron and intersects the opposite side or face.

ceylonite [MINERAL] A dark-green, brown, or black iron-bearing variety of spinel. Also known as candite; pleonaste; zeylanite.

Cf *See* californium.

C factor [MAP] An empirical value in aerial photography which expresses the vertical measuring capability of a given stereoscopic system; the factor is the ratio of the flight height to the smallest contour interval accurately plottable; in planning for aerial photography the C factor is used to determine the flight height required for a specified contour interval, camera, and instrument system. Also known as altitude contour.

C figure *See* C index.

cfm *See* cubic feet per minute.

CFR engine [ENG] Cooperative Fuel Research engine, a standard test engine used to determine the octane number of motor fuels.

cfs *See* cusec.

cg *See* centigram.

cgs system *See* centimeter-gram-second system.

Cha *See* Chamaeleon.

chabazite [MINERAL] $CaAl_2Si_4O_{12} \cdot 6H_2O$ A white to yellow or red member of the zeolite group occurring in glassy rhombohedral crystals; hardness is 4–5 on Mohs scale, and specific gravity is 2.08–2.16.

chad [COMPUT SCI] The piece of material removed when forming a hole or notch in a punched tape or punched card. Also known as chip. [NUCLEO] **1.** A unit of neutron flux equal to 1 neutron per square centimeter per second. **2.** A unit of neutron flux equal to 10^12 neutrons per square centimeter per second.

chadacryst *See* xenocryst.

chadless tape [COMPUT SCI] Paper tape in which the perforations for code characters are made by an incomplete circular cut, with the resulting flap of material folded aside.

chad tape [COMPUT SCI] Paper tape in which perforations for code characters are completely punched out.

Chadwick-Goldhaber effect *See* photodisintegration.

chaeta *See* seta.

Chaetetidae [PALEON] A family of Paleozoic corals of the order Tabulata.

Chaetodontidae [VERT ZOO] The butterflyfishes, a family of perciform fishes in the suborder Percoidei.

Chaetognatha [INV ZOO] A phylum of abundant planktonic arrowworms.

Chaetonotoidea [INV ZOO] An order of the class Gastrotricha characterized by two adhesive tubes connected with the distinctive paired, posterior tail forks.

Chaetophoraceae [BOT] A family of algae in the order Ulotrichales characterized as branched filaments which taper toward the apices, sometimes bearing terminal setae.

Chaetopteridea [INV ZOO] A family of spioniform polychaete annelids belonging to the Sedentaria.

chaff [AGR] Seed coverings and small stem pieces which are separated from grass and grain seeds in threshing or processing. [ORD] Thin, flat pieces of metal foil, plain or backed, designed to act as a countermeasure against enemy radar when released into the atmosphere.

chafing corrosion *See* fretting corrosion.

chafing fatigue [MET] Fatigue induced by corrosion damage between metal surfaces in close contact under pressure.

Chagas' disease [MED] An acute and chronic protozoan disease of humans caused by the hemoflagellate *Trypanosoma* (*Schizotrypanum*) *cruzi*. Also known as South American trypanosomiasis.

chain [CHEM] A structure in which similar atoms are linked by bonds. [CIV ENG] *See* engineer's chain; Gunter's chain. [COMMUN] A network of radio, television, radar, navigation, or other similar stations connected by special telephone lines, coaxial cables, or radio relay links so all can operate as a group for broadcast purposes, communication purposes, or determination of position. [COMPUT SCI] **1.** A series of data or other items linked together in some way. **2.** A sequence of binary digits used to construct a code. [DES ENG] **1.** A flexible series of metal links or rings fitted into one another; used for supporting, restraining, dragging, or lifting objects or transmitting power. **2.** A mesh of rods or plates connected together, used to convey objects or transmit power. [GEOL] A series of interconnected or related natural features, such as lakes, islands, or seamounts, arranged in a longitudinal sequence. [MATH] *See* linearly ordered set.

chain balance [ANALY CHEM] An analytical balance with one end of a fine gold chain suspended from the beam and the other fastened to a device which moves over a graduated vernier scale.

chain belt [DES ENG] Belt of flat links to transmit power.

chain block [MECH ENG] A tackle which uses an endless chain rather than a rope, often operated from an overhead track to lift heavy weights especially in workshops. Also known as chain fall; chain hoist.

chain bond [CIV ENG] A masonry bond formed with a chain or bar.

chain breat machine [MIN ENG] A coal-cutting machine, so constructed that a series of cutting points attached to a circulating chain work their way for a certain distance under a seam.

chain cable [NAV ARCH] The chain to which an anchor is attached. Also known as cable chain.

chain coal cutter [MIN ENG] A cutter which makes a groove in the coal by an endless chain moving around a flat plate called a jib.

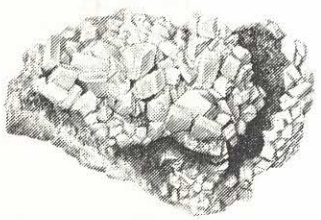
chain code [COMPUT SCI] A binary code consisting of a cyclic sequence of some or all of the possible binary words at a given length such that each word is derived from the previous one by moving the binary digits one position to the left, dropping the leading bit, and inserting a new bit at the end, in such a way that no word recurs before the cycle is complete.

chain command [COMPUT SCI] Any input/output command in a sequence of input/output commands such as WRITE, READ, SENSE.

chain complex [MATH] A sequence $\{C_n\}$, $-\infty < n < \infty$, of Abelian groups together with a sequence of boundary homomorphisms d_n: $C_n \rightarrow C_{n-1}$ such that $d_{n-1} \circ d_n = 0$ for each n.

chain conveyor [MECH ENG] A machine for moving materials that carries the product on one or two endless linked chains

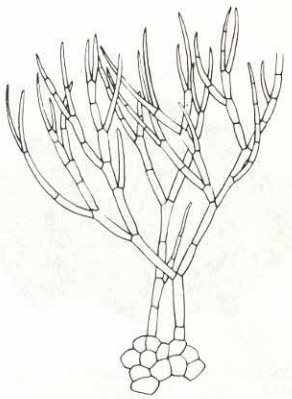
CHABAZITE



2.5 cm

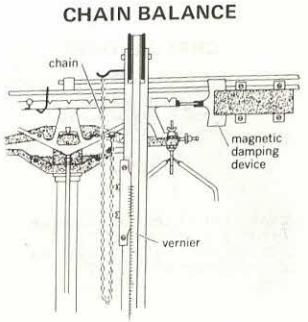
Crystalline specimen of the mineral chabazite found in Two Islands, Nova Scotia. *(Specimen from Department of Geology, Bryn Mawr College)*

CHAETOPHORACEAE



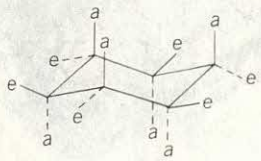
Chaetophora showing portion of erect thallus of branched filaments which arises from a prostrate group of cells.

CHAIN BALANCE



Chain balance with notched beam, magnetic damper, and vernier scale.

CHAIR FORM



The chair form conformation of cyclohexane; *a* represents hydrogens that are staggered and perpendicular to the mean plane of the carbon; *e* represents the hydrogens that are equatorially directed to the center of the mean plane of the carbons.

CHALCANTHITE

2.5 cm

Crystals of chalcanthite associated with quartz. *(Specimen from Department of Geology, Bryn Mawr College)*

CHALCIDIDAE

A member of the Chalcididae. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

with crossbars; allows smaller parts to be added as the work passes.

chain course [CIV ENG] A course of stone held together by iron cramps.

chain data flag [COMPUT SCI] A value of 1 given to a specific bit of a channel command word, commonly used with scatter read or scatter write operations.

chain decay *See* series disintegration.

chain disintegration *See* series disintegration.

chain drive [MECH ENG] A flexible device for power transmission, hoisting, or conveying, consisting of an endless chain whose links mesh with toothed wheels fastened to the driving and driven shafts.

chained block encryption [COMMUN] The use of a block cipher in which the bits of a given output block depend not only on the bits in the corresponding input block and in the key, but also on any or all prior data bits, either inputted to or produced during the enciphering or deciphering process. Also known as block chaining.

chained list [COMPUT SCI] A collection of data items arranged in a sequence so that each item contains an address giving the location of the next item in a computer storage device.

chained records [COMPUT SCI] A file of records arranged according to the chaining method.

chain fall *See* chain block.

chain fission yield [NUC PHYS] The sum of the independent fission yields for all isobars of a particular mass number.

chain-float liquid-level gage [ENG] Float device to measure the level of liquid in a vessel; the float, suspended from a counterweighted chain draped over a toothed sprocket, rises or falls with the liquid level, and the chain movement turns the sprocket to position a calibrated depth-indicator.

chain gear [MECH ENG] A gear that transmits motion from one wheel to another by means of a chain.

chain grate stoker [MECH ENG] A wide, endless chain used to feed, carry, and burn a noncoking coal in a furnace, control the air for combustion, and discharge the ash.

chain hoist *See* chain block.

chain homomorphism [MATH] A sequence of homomorphisms f_n: $C_n \to D_n$ between the groups of two chain complexes such that $f_{n-1}\, d_n = \overline{d}_n f_n$ where d_n and $\overline{d}_n$ are the boundary homomorphisms of $\{C_n\}$ and $\{D_n\}$ respectively.

chaining [COMPUT SCI] A method of storing records which are not necessarily contiguous, in which the records are arranged in a sequence and each record contains means to identify its successor.

chaining search [COMPUT SCI] A method of searching for a data item in a chained list in which an initial key is used to obtain the location of either the item sought or another item in the list, and the search then progresses through the chain until the required item is obtained or the chain is completed.

chain intermittent fillet welding [MET] **1.** The forming of two lines of intermittent fillet welds in a T joint or lap joint so that the increments of welding in one line are approximately opposite those in the other line. **2.** The forming of two lines of equal-length fillet welds concurrently on opposite sides of the perpendicular member of a T joint at intermittent intervals.

chain isomerism [ORG CHEM] A type of molecular isomerism seen in carbon compounds; as the number of carbon atoms in the molecule increases, the linkage between the atoms may be a straight chain or branched chains producing isomers that differ from each other by possessing different carbon skeletons.

chain lightning [GEOPHYS] A rare form of lightning in a long zigzag or apparently broken line.

chain locker [NAV ARCH] A compartment in the lower part of a ship toward the bow for stowing an anchor chain.

chain loom [TEXT] A knitting machine used to make flat-knit fabric.

chain of simplices [MATH] A member of the free Abelian group generated by the simplices of a given dimension of a simplicial complex.

chain pipe [NAV ARCH] A heavy steel pipe through which the anchor chain passes from the windlass to the chain locker.

chain plate [NAV ARCH] One of the metal plates bolted to the side of a ship, to which lines supporting the masts are fastened.

chain printer [COMPUT SCI] A high-speed printer in which the type slugs are carried by the links of a revolving chain.

chain radar beacon [COMMUN] A beacon with a fast recovery time to permit simultaneous interrogation and tracking of the beacon by a number of radars.

chain radar system [ENG] A number of radar stations located at various sites on a missile range to enable complete radar coverage during a missile flight; the stations are linked by data and communication lines for target acquisition, target positioning, or data-recording purposes.

chain reaction [CHEM] A chemical reaction in which many molecules undergo chemical reaction after one molecule becomes activated. [NUCLEO] *See* nuclear chain reaction.

chain riveting [ENG] Riveting consisting of rivets one behind the other in rows along the seam.

chain rule [MATH] A rule for differentiating a composition of functions: $(d/dx)\, f(g(x)) = f'(g(x)) \cdot g'(x)$.

chain saw [MECH ENG] A gasoline-powered saw for felling and bucking timber, operated by one person; has cutting teeth inserted in a sprocket chain that moves rapidly around the edge of an oval-shaped blade.

chain scission [ORG CHEM] The cleavage of polymer chains, as in natural rubber as a result of heating.

chain stopper [NAV ARCH] A short chain with a hook attached to a ship's forecastle, used to secure the anchor chain when the anchor is raised or lowered, thus relieving the windlass from strain, or to quickly release the anchor.

chain tongs [DES ENG] A tool for turning pipe, using a chain to encircle and grasp the pipe.

chain vise [DES ENG] A vise in which the work is encircled and held tightly by a chain.

chainwall [MIN ENG] A coal mining technique in which the mine roof is supported by coal pillars, between which the coal is mined away.

chain weave [TEXT] Compact, heavyweight cloth weave made with plied yarn in both directions; its pattern is two-up and two-down broken twill, with two ends of right hand and two of left hand repeated on four threads each way.

chair form [PHYS CHEM] A particular nonplanar conformation of a cyclic molecule with more than five atoms in the ring; for example, in the chair form of cyclohexane, the hydrogens are staggered and directed perpendicularly to the mean plane of the carbons (axial conformation, *a*) or equatorially to the center of the mean plane (equatorial conformation, *e*).

chairs *See* folding boards.

chalaza [BOT] The region at the base of the nucellus of an ovule; gives rise to the integuments. [CYTOL] One of the paired, spiral, albuminous bands in a bird's egg that attach the yolk to the shell lining membrane at the ends of the egg.

chalazion [MED] A small tumor of the eyelid formed by retention of tarsal gland secretions. Also known as a Meibomian cyst.

chalazogamy [BOT] A process of fertilization in which the pollen tube passes through the chalaza to reach the embryo sac.

chalazoidite *See* mud ball.

chalcanthite [MINERAL] $CuSO_4 \cdot 5H_2O$ A blue to bluish-green mineral which occurs in triclinic crystals or in massive fibrous veins or stalactites. Also known as bluestone; blue vitriol.

chalcedony [MINERAL] A cryptocrystalline variety of quartz; occurs as crusts with a rounded, mammillary, or botryoidal surface and as a major constituent of nodular and bedded cherts; varieties include carnelian and bloodstone.

chalcedonyx [MINERAL] A mineral consisting of onyx with alternating gray and white bands; valued as a semiprecious stone.

Chalcididae [INV ZOO] The chalcids, a family of hymenopteran insects in the superfamily Chalcidoidea.

Chalcidoidea [INV ZOO] A superfamily of hymenopteran insects in the suborder Apocrita, including primarily insect parasites.

chalcoalumite [MINERAL] $CuAl_4(SO_4)(OH)_{12} \cdot 3H_2O$ A turquoise-green to pale-blue mineral consisting of a hydrous basic sulfate of copper and aluminum.

chalcocite [MINERAL] Cu_2S A fine-grained, massive mineral with a metallic luster which tarnishes to dull black on exposure; crystallizes in the orthorhombic system, the crystals being rare and small usually with hexagonal outline as a result of twinning; hardness is 2.5–3 on Mohs scale, and specific gravity is 5.5–5.8. Also known as beta chalcocite; chalcosine; copper glance; redruthite; vitreous copper.

chalcocyanite [MINERAL] $CuSO_4$ A white mineral consisting of copper sulfate. Also known as hydrocyanite.

chalcogen [INORG CHEM] One of the elements that form

group VIa of the periodic table; included are oxygen, sulfur, selenium, tellurium, and polonium.

chalcogenide [INORG CHEM] A binary compound containing a chalcogen and a more electropositive element or radical.

chalcogenide glass [MATER] A type of glass containing large amounts of one of the chalcogens tellurium, selenium, or sulfur; used in glass switches.

chalcography [GRAPHICS] The art of copper engraving.

chalcolite *See* torbernite.

chalcomenite [MINERAL] $CuSeO_3 \cdot 2H_2O$ A blue mineral consisting of copper selenite occurring in crystals.

chalcophanite [MINERAL] $(Zn,Mn,Fe)Mn_2O_5 \cdot nH_2O$ Black mineral with metallic luster consisting of hydrous manganese and zinc oxide.

chalcophile [GEOL] Having an affinity for sulfur and therefore massing in greatest concentration in the sulfide phase of a molten mass.

chalcophyllite [MINERAL] $Cu_{18}Al_2(AsO_4)_3(OH)_{27} \cdot 33H_2O$ A green mineral consisting of basic arsenate and sulfate of copper and aluminum occurring in tabular crystals or foliated masses. Also known as copper mica.

chalcopyrite [MINERAL] $CuFeS_2$ A major ore mineral of copper; crystallizes in the tetragonal crystal system, but crystals are generally small with diphenoidal faces resembling the tetrahedron; usually massive with a metallic luster and brass-yellow color; hardness is 3.5–4 on Mohs scale, and specific gravity is 4.1–4.3. Also known as copper pyrite; yellow pyrite.

chalcopyrrohite [MINERAL] $CuFe_4S_5$ A sulfide mineral occurring in meteorites.

chalcosiderite [MINERAL] $Cu(Fe,Al)_6(PO_4)_4(OH)_8 \cdot 4H_2O$ A green mineral, isomorphous with turquoise, consisting of a hydrous basic phosphate of copper, iron, and aluminum.

chalcosine *See* chalcocite.

chalcostibite [MINERAL] $CuSbS_2$ A lead-gray mineral consisting of antimony copper sulfide.

chalcotrichite [MINERAL] A capillary variety of cuprite occurring in long needlelike crystals. Also known as hair copper; plush copper ore.

chaldron [MECH] **1.** A unit of volume in common use in the United Kingdom, equal to 36 bushels, or 288 gallons, or approximately 1.30927 cubic meters. **2.** A unit of volume, formerly used for measuring solid substances in the United States, equal to 36 bushels, or approximately 1.26861 cubic meters.

chalice cell *See* goblet cell.

chalicosis [MED] A pulmonary affection caused by inhalation of stone dust.

Chalicotheriidae [PALEON] A family of extinct perissodactyl mammals in the superfamily Chalicotherioidea.

Chalicotherioidea [PALEON] A superfamily of extinct, specialized perissodactyls having claws rather than hooves.

chalk [MATER] Artificially prepared pure calcium carbonate; used as the basis for pastels. Also known as whiting. [PETR] A variety of limestone formed from pelagic organisms; it is very fine-grained, porous, and friable; white or very light-colored, it consists almost entirely of calcite.

chalkboard *See* blackboard.

chalking [CHEM] **1.** Treating with chalk. **2.** Forming a powder which is easily rubbed off. [GRAPHICS] In printing, rubbing off pigment when the ink dried improperly because it was absorbed too rapidly into the paper. [MET] Defect of coated metals in which a layer of powder forms between the coating and the base metal.

chalkstone [PATH] A gouty deposit, usually of sodium urate, in the hands or feet.

challenge [COMMUN] To cause an interrogator to transmit a signal which puts a transponder into operation.

challenger *See* interrogator.

challenging signal *See* interrogation.

challiho [METEOROL] Strong southerly winds which blow for about 40 days in spring in some parts of India; sometimes the winds are violent, causing blinding dust storms.

challis [TEXT] A soft fabric with a slight nap, woven in a plain or twill weave; may be cotton, wool, or a synthetic fiber.

chalmersite *See* cubanite.

chalones [BIOCHEM] Substances thought to be molecules of the protein-polypeptide class that are produced as part of the growth-control systems of tissues; known to inhibit cell division by acting on several phases in the mitotic cycle.

chalybite *See* siderite.

Chamaeleon [ASTRON] A constellation, right ascension 11 hours, declination 80°S. Abbreviated Cha. Also spelled Chameleon.

Chamaeleontidae [VERT ZOO] The chameleons, a family of reptiles in the suborder Sauria.

Chamaemyidae [INV ZOO] The aphid flies, a family of myodarian cyclorrhaphous dipteran insects of the subsection Acalypteratae.

chamaephyte [ECOL] Any perennial plant whose winter buds are within 25 centimeters of the soil surface.

chamaerrhine [ANTHRO] Having a short broad nose with a nasal index of 51–57.9 for a skull, and 85–99.9 for a person.

Chamaesiphonales [BOT] An order of blue-green algae of the class Cyanophyceae; reproduce by cell division, colony fragmentation, and endospores.

chamber [CIV ENG] The space in a canal lock between the upper and lower gates. [GRAPHICS] A sleeve or channel of a transparent film jacket. [MIN ENG] **1.** The working place of a miner. **2.** A body of ore with definite boundaries apparently filling a preexisting cavern. [ORD] The part of the gun in which the charge is placed: in a revolver, the hole in the cylinder; in a cannon, the space between the obturator or breechblock and the forcing cone.

chamber acid [INORG CHEM] Sulfuric acid made by the obsolete chamber process.

chamber capacity *See* chamber volume.

chambering [MIN ENG] Increasing the size of a drill hole in a quarry by firing a succession of small charges, until the hole can take a proper explosive charge to bring down the face of the quarry. [ORD] That phase of small-arms operation that deals with the placing of the round into the chamber after the round has been fed into the weapon by the feeding device.

chamber kiln [ENG] A kiln consisting of a series of adjacent chambers in a ring or oval through which the fire moves, taking several days to make a circuit; waste gas from the fire preheats ware in chambers toward which the fire is moving, while combustion air is preheated by ware in chambers already fired.

chamber pressure [AERO ENG] The pressure of gases within the combustion chamber of a rocket engine.

chamber process [CHEM ENG] An obsolete method of manufacturing sulfuric acid in which sulfur dioxide, air, and steam are reacted in a lead chamber with oxides of nitrogen as the catalyst.

chamber volume [AERO ENG] The volume of the rocket combustion chamber, including the convergent portion of the nozzle up to the throat. Also known as chamber capacity.

chambray [TEXT] A cotton fabric similar to gingham; it is plain woven, lightweight, and without a pattern, and has a dyed or unbleached warp and white filling.

chamecephalic [ANTHRO] Having a flattened backward-slanting head with a length-height index of 70 or less.

chamecranial [ANTHRO] Having a flat low skull with a length-height index of less than 70.

chameleon [VERT ZOO] The common name for about 80 species of small-to-medium-sized lizards composing the family Chamaeleontidae.

Chameleon *See* Chamaeleon.

chameprosopic [ANTHRO] Having a broad low face with a facial index of 90 or less.

chamfer [ENG] To bevel a sharp edge on a machined part.

chamfer angle [DES ENG] The angle that a beveled surface makes with one of the original surfaces.

chamfering [MECH ENG] Machining operations to produce a beveled edge. Also known as beveling.

chamfer plane [DES ENG] A plane for chamfering edges of woodwork.

chamois [VERT ZOO] *Rupicapra rupicapra*. A goatlike mammal included in the tribe Rupicaprini of the family Bovidae.

chamosite [MINERAL] A greenish-gray or black mineral consisting of silicate belonging to the chlorite group and having monoclinic crystals; found in many oolitic iron ores.

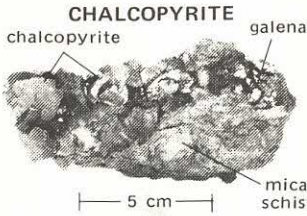
Champlainian [GEOL] Middle Ordovician geologic time.

chance-constrained programming [COMPUT SCI] Type of nonlinear programming wherein the deterministic constraints are replaced by their probabilistic counterparts.

chance process [MIN ENG] A method for separating clean coal from slate and other impurities in a mixture of sand and water.

chancre [MED] **1.** A lesion or ulcer at the site of primary

CHALCOPYRITE

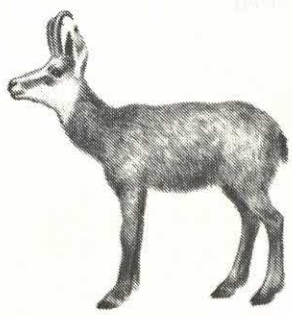


Chalcopyrite with galena and mica schist from Bottino, Tuscany, Italy *(American Museum of Natural History)*

CHAMELEON

Flap-necked chameleon *(Chamaeleo dilepis)*, with opposable toes, a prehensile tail; the neck flap is raised.

CHAMOIS



The chamois *(Rupicapra rupicapra)*, an intermediate between goats and antelopes, found only in Europe.

inoculation by an infecting organism. **2.** The initial lesion of syphilis.

chancroid [MED] A lesion of the genitalia, usually of venereal origin, caused by *Hemophilus ducreyi*. Also known as soft chancre.

Chandler motion *See* polar wandering.

Chandler period [GEOPHYS] The period of the Chandler wobble.

Chandler wobble [GEOPHYS] A movement in the earth's axis of rotation, the period of motion being about 14 months. Also known as Eulerian nutation.

chandui *See* chanduy.

chanduy [METEOROL] A cool, descending wind at Guayaquil, Ecuador, which blows during the dry season (July to November). Also spelled chandui.

change chart [METEOROL] A chart indicating the amount and direction of change of some meteorological element during a specified time interval; for example, a height-change chart or pressure-change chart. Also known as tendency chart.

change dump [COMPUT SCI] A type of dump in which only those locations in a computer memory whose contents have changed since some previous event are copied.

changed memory routine [COMPUT SCI] A selective memory dump routine in which only those words that have been changed in the course of running a program are printed.

change gear [MECH ENG] A gear used to change the speed of a driven shaft while the speed of the driving remains constant.

change of control [COMPUT SCI] **1.** A break in a series of records at which processing of the records may be interrupted and some predetermined action taken. **2.** *See* jump.

change of tide [OCEANOGR] A reversal of the direction of motion (rising or falling) of a tide, or in the set of a tidal current. Also known as turn of the tide.

changeover switch [ELEC] A means of moving a circuit from one set of connections to another.

change record [COMPUT SCI] A record that is used to alter information in a corresponding master record. Also known as amendment record; transaction record.

change tape [COMPUT SCI] A paper tape or magnetic tape carrying information that is to be used to update filed information; the latter is often on a master tape. Also known as transaction tape.

changing bag [ENG] An enclosure of lightproof material used for operations such as loading of film holders in daylight.

Chanidae [VERT ZOO] A monospecific family of teleost fishes in the order Gonorynchiformes which contain the milkfish (*Chanos chanos*), distinguished by the lack of teeth.

channel [CHEM ENG] In percolation filtration, a portion of the clay bed where there is a preponderance of flow. [CIV ENG] A natural or artificial waterway connecting two bodies of water or containing moving water. [COMMUN] **1.** A band of radio frequencies allocated for a particular purpose; a standard broadcasting channel is 10 kilohertz wide, a television channel 6 megahertz wide. **2.** A path for carrier-current signals. [COMPUT SCI] **1.** A path along which digital or other information may flow in a computer. **2.** The section of a storage medium that is accessible to a given reading station in a computer, such as a path parallel to the edge of a magnetic tape or drum or a path in a delay-line memory. **3.** One of the longitudinal rows of intelligence holes punched along the length of paper tape. Also known as level. [ELECTR] **1.** A path for a signal, as an audio amplifier may have several input channels. **2.** The main current path between the source and drain electrodes in a field-effect transistor or other semiconductor device. [ENG] The forming of cavities in a gear lubricant at low temperatures because of congealing. [HYD] The deeper portion of a waterway carrying the main current. [NAV] Navigable portion of a body of water. [NUCLEO] A passage for fuel slugs or heat-transfer fluid in a reactor. [PETRO ENG] In a drilling operation, a cavity appearing behind the casing because of a defect in the cement.

channel address word [COMPUT SCI] A four-byte code containing the protection key and the main storage address of the first channel command word at the start of an input/output operation. Abbreviated CAW.

channel bank [ELECTR] Part of a carrier-multiplex terminal that performs the first step of modulation of the transmitting voice frequencies into a higher-frequency band, and the final step in the demodulation of the received higher-frequency band into the received voice frequencies.

channel black *See* gas black.

channel buoy [NAV] In marine operations, a buoy marking a channel.

channel capacity [COMMUN] The maximum number of bits or other information elements that can be handled in a particular channel per unit time.

channel command [COMPUT SCI] The step, equivalent to a program instruction, required to tell an input/output channel what operation is to be performed, and where the data are or should be located.

channel command word [COMPUT SCI] A code specifying an operation, one or more flags, a count, and a storage location. Abbreviated CCW.

channel control [HYD] A condition whereby the stage of a stream is controlled only by discharge and the general configuration of the stream channel, that is, the contours of its bed, banks, and floodplains.

channel control command [COMPUT SCI] An order to a control unit to perform a nondata input/output operation.

channel design [COMPUT SCI] The type of channel, characterized by the tasks it can perform, available to a computer.

channel designator [COMMUN] Number associated with each channel, tributary, or trunk for reference purposes. Also known as channel sequence number.

channel effect [ELECTR] A leakage current flowing over a surface path between the collector and emitter in some types of transistors.

channel-end condition [COMPUT SCI] A signal indicating that the use of an input/output channel is no longer required.

channeler *See* channeling machine.

channel fill [GEOL] Accumulations of sand and detritus in a stream channel where the transporting capacity of the water is insufficient to remove the material as rapidly as it is delivered.

channel frequency *See* stream frequency.

channel gradient ratio *See* stream gradient ratio.

channeling [ANALY CHEM] In chromatography, furrows or breaks in an ion-exchange bed which permit a solution to run through without having contact with active groups elsewhere in the bed. [COMMUN] A type of multiplex transmission in which the separation between communication channels is accomplished through the use of carriers or subcarriers. [NUCLEO] The transmission of extra particles through a medium in a nuclear reactor due to the presence of voids in the medium. [PHYS] The steering of energetic charged particles by the atomic rows or atomic planes of a crystalline solid.

channeling machine [MECH ENG] An electrically powered machine that operates by a chipping action of three to five chisels while traveling back and forth on a track; used for primary separation from the rock ledge in marble, limestone, and soft sandstone quarries. Also known as channeler.

channeling radiation [PHYS] The radiation emitted by energetic charged particles that pass through a solid.

channel iron [DES ENG] A metal strip or beam with a U-shape.

channelizing [COMMUN] The process of subdividing a wide-band transmission facility so as to handle a number of different circuits requiring comparatively narrow bandwidths.

channel-lag deposit [GEOL] Coarse residual material left as accumulations in the channel in the normal processes of the stream.

channel light [NAV] In marine operations, a light marking a channel.

channel marker [NAV] In marine operations, a marker, such as a light or buoy, indicating a channel.

channel mask [COMPUT SCI] A portion of a program status word indicating which channels may interrupt the task by their completion signals.

channel miles [COMMUN] The summation, in miles, of the electrical path of individual channels between two points; these points may be connected by wire or radio, or a combination of both.

channel morphology *See* river morphology.

channel-mouth bar [GEOL] A bar formed where moving water enters a body of still water, due to decreased velocity.

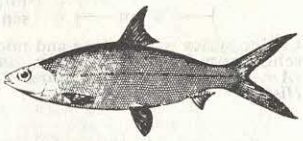
channel net [HYD] Stream channel pattern within a drainage basin.

channel order *See* stream order.

channel pattern [HYD] The configuration of a limited reach of a river channel as seen in plan view from an airplane.

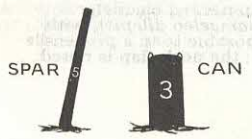
channel process [CHEM ENG] A carbon-black process in

CHANIDAE



The milkfish (*Chanos chanos*), length up to 5 feet (1.5 meters), lives in marine and estuarine waters of the tropical Indo-Pacific. (*After Jordan and Evermann, The Fishes of North and Middle America, U.S. Nat. Mus. Bull., no. 47, pt. 4, 1900*)

CHANNEL BUOY



Black buoy with odd number indicates channel lies to starboard, proceeding from seaward. (*Modified from Motor Boating's chart of United States buoyage system*)

which iron channel beams are used as depositing surfaces for carbon black.

channel program [COMPUT SCI] The set of steps, called channel commands, by means of which an input/output channel is controlled.

channel pulse [COMMUN] Telemetering pulse representing intelligence on a channel by virtue of its time or modulation characteristics.

channel read-backward command [COMPUT SCI] A command to transfer data from tape device to main storage while the tape is moving backward.

channel read command [COMPUT SCI] A command to transfer data from an input/output device to main storage.

channel reliability [COMMUN] The percent of time a channel was available for use in a specific direction during a specified period of time.

channel roughness [GEOL] A measure of the resistivity offered by the material constituting stream channel margins to the flow of water.

channel sample *See* groove sample.

channel sand [GEOL] A sandstone or sand deposited in a stream bed or other channel eroded into the underlying bed.

channel segment *See* stream segment.

channel selector [ELEC] A control used to tune in the desired channel in a radio or television receiver.

channel sense command [COMPUT SCI] A command commonly used to denote an unusual condition existing in an input/output device and requesting more information.

channel sequence number *See* channel designator.

channel shifter [ELECTR] Radiotelephone carrier circuit that shifts one or two voice-frequency channels from normal channels to higher voice-frequency channels to reduce cross talk between channels; the channels are shifted back by a similar circuit at the receiving end.

channel spacing [COMMUN] The difference in frequency between successive radio or television channels.

channel spin [NUC PHYS] The vector sum of the spins of the particles involved in a nuclear reaction, either before or after the reaction takes place.

channel splay *See* floodplain splay.

channel status table [COMPUT SCI] A table that is set up by an executive program to show the status of the various channels that connect the central processing unit with peripheral units, enabling the program to control input/output operations.

channel status word [COMPUT SCI] A storage register containing the status information of the input/output operation which caused an interrupt. Abbreviated CSW.

channel steamer [NAV ARCH] A special type of ship which operates across the English Channel, carrying passengers and cars.

channel synchronizer [ELECTR] An electronic device providing the proper interface between the central processing unit and the peripheral devices.

channel-to-channel adapter [COMPUT SCI] A device which provides two computer systems with interchannel communications.

channel width [GEOL] The distance across a stream or channel as measured from bank to bank near bankful stage.

channel wing [AERO ENG] A wing that is trough-shaped so as to surround partially a propeller to get increased lift at low speeds from the slipstream.

channel write command [COMPUT SCI] A command which transfers data from main storage to an input/output device.

Channidae [VERT ZOO] The snakeheads, a family of freshwater perciform fishes in the suborder Anabantoidei.

chantilly [TEXT] Bobbin lace with fine hexagonal mesh ground; the pattern is outlined in heavy thread with a design that usually contains scrolls and florals.

Chaoboridae [INV ZOO] The phantom midges, a family of dipteran insects in the suborder Orthorrhapha.

chaparral [ECOL] A vegetation formation characterized by woody plants of low stature, impenetrable because of tough, rigid, interlacing branches, which have simple, waxy, evergreen, thick leaves.

chaplet [MET] Metal support used to space and hold the core in position within a sand mold.

Chaplygin-Kármán-Tsien relation [FL MECH] The relation that in the case of isentropic flow of an ideal gas with negligible viscosity and thermal conductivity, the sum of the pressure and a constant times the reciprocal of the density of the fluid is constant along a streamline; a useful, although physically impossible, approximation.

Chapman-Enskog approximations [STAT MECH] Approximations to a solution of the Boltzmann transport equation in the Chapman-Enskog theory.

Chapman-Enskog solution [STAT MECH] The solution of the Boltzmann transport equation according to the Chapman-Enskog theory.

Chapman-Enskog theory [STAT MECH] A method of solving the Boltzmann transport equation by successive approximations, essentially in powers of the mean free path. Also known as Enskog theory.

Chapman equation [GEOPHYS] A theoretical relation describing the distribution of electron density with height in the upper atmosphere. [STAT MECH] The relationship that the viscosity of a gas equals $(0.499)mv/[\sqrt{2}\,\pi\sigma^2(1 + C/T)]$, where m is the mass of a molecule, v its average speed, σ its collision diameter, C the Sutherland constant, and T the absolute temperature (Kelvin scale).

chapmanite [MINERAL] $Fe_2Sb(SiO_4)_2(OH)$ A mineral consisting of a silicate of iron and antimony.

Chapman-Jouguet plane [MECH] A hypothetical, infinite plane, behind the initial shock front, in which it is variously assumed that reaction (and energy release) has effectively been completed, that reaction product gases have reached thermodynamic equilibrium, and that reaction gases, streaming backward out of the detonation, have reached such a condition that a forward-moving sound wave located at this precise plane would remain a fixed distance behind the initial shock.

Chapman region [GEOPHYS] A hypothetical region in the upper atmosphere in which the distribution of electron density with height can be described by Chapman's theoretical equation.

Characeae [BOT] The single family of the order Charales.

Characidae [VERT ZOO] The characins, the single family of the suborder Characoidei.

Characoidei [VERT ZOO] A suborder of the order Cypriniformes including fresh-water fishes with toothed jaws and an adipose fin.

character [COMPUT SCI] **1.** An elementary mark used to represent data, usually in the form of a graphic spatial arrangement of connected or adjacent strokes, such as a letter or a digit. **2.** A small collection of adjacent bits used to represent a piece of data, addressed and handled as a unit, often corresponding to a digit or letter. [GEOPHYS] A distinctive aspect of a seismic event, for example, the waveform.

character adjustment [COMPUT SCI] An address modification affecting a specific number of characters of the address part of the instruction.

character boundary [COMPUT SCI] In character recognition, a real or imaginary rectangle which serves as the delimiter between consecutive characters or successive lines on a source document.

character code [COMMUN] A bit pattern assigned to a particular character in a coded character set.

character data type [COMPUT SCI] A scalar data type which provides an internal representation of printable characters.

character density [COMPUT SCI] The number of characters recorded per unit of length or area. Also known as record density.

character disorder [PSYCH] A pattern of behavior and emotional response that is socially disapproved or unacceptable, with little evidence of anxiety or other symptoms seen in neuroses.

character displacement [ECOL] An outcome of competition in which two species living in the same area have evolved differences in morphology or other characteristics that lessen competition for food resources.

character display terminal [COMPUT SCI] A console that can display only alphanumeric characters, and cannot show arbitrary lines or curves.

character emitter [COMPUT SCI] In character recognition, an electromechanical device which conveys a specimen character in the form of a time pulse or group of pulses.

character fill [COMPUT SCI] To fill one or more locations in a computer storage device by repeated insertion of some particular character, usually blanks or zeros.

character generator [COMPUT SCI] A hard-wired subroutine which will display alphanumeric characters on a screen.

character group [MATH] The set of all continuous homomorphisms of a topological group onto the group of all complex numbers with unit norm.

characteristic [MATH] That part of the logarithm of a number which is the integral (the whole number) to the left of the decimal point in the logarithm.

characteristic chamber length [AERO ENG] The length of a straight, cylindrical tube having the same volume as that of the chamber of a rocket engine if the chamber had no converging section.

characteristic cone [MATH] A conelike region important in the study of initial value problems in partial differential equations.

characteristic curve [GRAPHICS] In photography, a graph that shows how increases in exposure increase the density of the film. [MATH] **1.** One of a pair of conjugate curves in a surface with the property that the directions of the tangents through any point of the curve are the characteristic directions of the surface. **2.** A curve plotted on graph paper to show the relation between two changing values.

characteristic distortion [COMMUN] **1.** Displacement of signal transitions resulting from the persistence of transients caused by preceding transitions. **2.** In teletypewriter transmission-systems, repetitive displacement or disruption peculiar to specific portions of a teletypewriter signal; the two types of characteristic distortions are line and equipment.

characteristic equation [MATH] **1.** Any equation which has a solution, subject to specified boundary conditions, only when a parameter occurring in it has certain values. **2.** Specifically, the equation $A\mathbf{u} = \lambda\mathbf{u}$, which can have a solution only when the parameter λ has certain values, where A can be a square matrix which multiplies the vector $\mathbf{u}$, or a linear differential or integral operator which operates on the function $\mathbf{u}$, or in general, any linear operator operating on the vector $\mathbf{u}$ in a finite or infinite dimensional vector space. Also known as eigenvalue equation. **3.** An equation which sets the characteristic polynomial of a given linear transformation on a finite dimensional vector space, or of its matrix representation, equal to zero. **4.** The number preceding the decimal of a common logarithm. [PHYS] An equation relating a set of variables, such as pressure, volume, and temperature, whose values determine a substance's physical condition. [PL PHYS] An equation whose solutions give the frequencies and modes of those perturbations of a hydromagnetic system which decay or grow exponentially in time, and indicate regions of stability of such a system.

characteristic exhaust velocity [AERO ENG] Of a rocket engine, a descriptive parameter, related to effective exhaust velocity and thrust coefficient. Also known as characteristic velocity.

characteristic form [MATH] A means of classifying partial differential equations.

characteristic frequency [COMMUN] Frequency which can be easily identified and measured in a given emission.

characteristic function [MATH] **1.** The function χ_A defined for any subset A of a set by setting $\chi_A = (x) = 1$ if x is in A and $\chi_A = (x)\,0$ if x is not in A. Also known as indicator function. **2.** *See* eigenfunction. [PHYS] A function, such as the point characteristic function or the principal function, which is the integral of some property of an optical or mechanical system over time or over the path followed by the system, and whose value for a path actually followed by a system is a maximum or a minimum with respect to nearby paths with the same end points. [STAT] A function that uniquely defines a probability distribution; it is equal to $\sqrt{2\pi}$ times the Fourier transform of the frequency function of the distribution.

characteristic impedance [COMMUN] The impedance that, when connected to the output terminals of a transmission line of any length, makes the line appear to be infinitely long, for there are then no standing waves on the line, and the ratio of voltage to current is the same for each point on the line. Also known as surge impedance.

characteristic length [MECH] A convenient reference length (usually constant) of a given configuration, such as overall length of an aircraft, the maximum diameter or radius of a body of revolution, or a chord or span of a lifting surface.

characteristic loss spectroscopy [SPECT] A branch of electron spectroscopy in which a solid surface is bombarded with monochromatic electrons, and backscattered particles which have lost an amount of energy equal to the core-level binding energy are detected. Abbreviated CLS.

characteristic manifold [MATH] A surface used to study the problem of existence of solutions to partial differential equations.

characteristic number *See* eigenvalue.

characteristic overflow [COMPUT SCI] An error condition encountered when the characteristic of a floating point number exceeds the limit imposed by the hardware manufacturer.

characteristic polynomial [MATH] The polynomial whose roots are the eigenvalues of a given linear transformation on a finite dimensional vector space.

characteristic radiation [ATOM PHYS] Radiation originating in an atom following removal of an electron, whose wavelength depends only on the element concerned and the energy levels involved.

characteristic ray [MATH] For a differential equation, an integral curve which generates all the others.

characteristic root *See* eigenvalue.

characteristic temperature *See* Debye temperature.

characteristic underflow [COMPUT SCI] An error condition encountered when the characteristic of a floating point number is smaller than the smallest limit imposed by the hardware manufacturer.

characteristic value *See* eigenvalue.

characteristic vector *See* eigenvector.

characteristic velocity *See* characteristic exhaust velocity.

characteristic x-rays [ATOM PHYS] Electromagnetic radiation emitted as a result of rearrangements of the electrons in the inner shells of atoms; the spectrum consists of lines whose wavelengths depend only on the element concerned and the energy levels involved.

characterization factor [CHEM ENG] A number which expresses the variations in physical properties with change in character of the paraffinic stock; ranges from 12.5 for paraffinic stocks to 10.0 for the highly aromatic stocks. Also known as Watson factor.

character of the bottom [NAV] In marine operations, the type of material of which the bottom is composed; a sounding lead is sometimes armed with tallow or similar substance so that a sample of the bottom is obtained when a sounding is made; the sample is often helpful in determining position. Also known as nature of the bottom.

character-oriented computer [COMPUT SCI] A computer in which the locations of individual characters, rather than words, can be addressed.

character outline [COMPUT SCI] The graphic pattern formed by the stroke edges of a printed or handwritten character in character recognition.

character pitch [GRAPHICS] The number of characters printed in 1 inch (25.4 millimeters) by a printer or typewriter.

character printer *See* serial printer.

character reader [COMPUT SCI] In character recognition, any device capable of locating, identifying, and translating into machine code the handwritten or printed data appearing on a source document.

character recognition [COMPUT SCI] The technology of using a machine to sense and encode into a machine language the characters which are originally written or printed by human beings.

character set [COMMUN] A set of unique representations called characters, for example, the 26 letters of the English alphabet, the Boolean 0 and 1, the set of signals in Morse code, and the 128 characters of the USASCII.

character skew [COMPUT SCI] In character recognition, an improper appearance of a character to be recognized, in which it appears in a tilted condition with respect to a real or imaginary horizontal base line.

character string [COMPUT SCI] A sequence of characters in a computer memory or other storage device. Also known as alphabetic string.

character string constant [COMPUT SCI] An arbitrary combination of letters, digits, and other symbols which, in the processing of nonnumeric data involving character strings, performs a function analogous to that of a numeric constant in the processing of numeric data.

character stroke *See* stroke.

character style [COMPUT SCI] In character recognition, a distinctive construction that is common to all members of a particular character set.

character-writing tube [ELECTR] A cathode-ray tube that

CHARACTER RECOGNITION

Character set approved by the American Standards Association for use in optical character recognition applications.

forms alphanumeric and symbolic characters on its screen for viewing or recording purposes.

Charadrii [VERT ZOO] The shore birds, a suborder of the order Charadriiformes.

Charadriidae [VERT ZOO] The plovers, a family of birds in the superfamily Charadrioidea.

Charadriiformes [VERT ZOO] An order of cosmopolitan birds, most of which live near water.

Charadrioidea [VERT ZOO] A superfamily of the suborder Charadrii, including plovers, sandpipers, and phalaropes.

Charales [BOT] Green algae composing the single order of the class Charophyceae.

charcoal [MATER] Also known as char. **1.** A porous solid product containing 85–98% carbon and produced by heating carbonaceous materials such as cellulose, wood, or peat at 500–600°C in the absence of air. **2.** The residue obtained from the carbonization of a noncoking coal, such as subbituminous coal, lignite, or anthracite. **3.** *See* low-temperature coke.

charcoal rot [PL PATH] A fungus disease of potato, corn, and other plants caused by *Macrophomina phaseoli;* tissues of the root and lower stem are destroyed and blackened.

charcoal test [CHEM ENG] A determination of the natural gasoline content of natural gas by adsorbing the gasoline on activated charcoal and then recovering it by distillation.

Chareae [BOT] A tribe of green algae belonging to the family Characeae.

charge [ELEC] **1.** A basic property of elementary particles of matter; the charge of an object may be a positive or negative number or zero; only integral multiples of the proton charge occur, and the charge of a body is the algebraic sum of the charges of its constituents; the value of the charge may be inferred from the Coulomb force between charged objects. Also known as electric charge. **2.** To convert electrical energy to chemical energy in a secondary battery. **3.** To feed electrical energy to a capacitor or other device that can store it. [ENG] **1.** A unit of an explosive, either by itself or contained in a bomb, projectile, mine, or the like, or used as the propellant for a bullet or projectile. **2.** To load a borehole with an explosive. **3.** The material or part to be heated by induction or dielectric heating. **4.** The measurement or weight of material, either liquid, preformed, or powder, used to load a mold at one time during one cycle in the manufacture of plastics or metal. [MECH ENG] **1.** In refrigeration, the quantity of refrigerant contained in a system. **2.** To introduce the refrigerant into a refrigeration system. [MET] Material introduced into a furnace for melting. [NUCLEO] The fissionable material or fuel placed in a reactor to produce a chain reaction.

charge carrier [SOLID STATE] A mobile conduction electron or mobile hole in a semiconductor. Also known as carrier.

charge conjugation conservation [PARTIC PHYS] The principle that the laws of motion are left unchanged by the charge conjugation operation; it is violated by the weak interactions, but no other violations have as yet been established.

charge conjugation operation [PARTIC PHYS] The operation of changing every particle into its antiparticle.

charge conjugation parity *See* charge parity.

charge conservation *See* conservation of charge.

charge-coupled devices [ELECTR] Semiconductor devices arrayed so that the electric charge at the output of one provides the input stimulus to the next.

charge-coupled image sensor [ELECTR] A device in which charges are introduced when light from a scene is focused on the surface of the device; image points are accessed sequentially to produce a television-type output signal. Also known as solid-state image sensor.

charge-coupled memory [COMPUT SCI] A computer memory that uses a large number of charge-coupled devices for data storage and retrieval.

charge coupling [COMPUT SCI] Transfer of all electric charges within a semiconductor storage element to a similar, nearby element by means of voltage manipulations.

charged-current interaction [PARTIC PHYS] A weak interaction in which the charges of the interacting fermions are changed; easily observed processes such as beta decay are of this type.

charge-delocalized ion [ORG CHEM] A charged species in which the charge is distributed over more than one atom.

charge density [ELEC] The charge per unit area on a surface or per unit volume in space.

charge-density wave [SOLID STATE] The ground state of a metal in which the conduction–electron charge density is sinusoidally modulated in space.

charged particle [PARTIC PHYS] A particle whose charge is not zero; the charge of a particle is added to its designation as a superscript, with particles of charge $+1$ and -1 (in terms of the charge of the proton) denoted by $+$ and $-$ respectively; for example, π^+, Σ^-.

charged species [CHEM] A chemical entity in which the overall total of electrons is unequal to the overall total of protons.

charge establishment [ORD] Process of establishing the correct weight of a propelling charge to produce the prescribed muzzle velocity with the prescribed projectile in a particular weapon; performed at a proving ground.

charge exchange [PHYS] The transfer of electric charge from one particle to another during a collision between the two particles.

charge exchange source [ELECTR] A source of negative ions, generally negative helium ions, in which positive ions generated in a duoplasmatron are directed through a donor canal, usually containing lithium vapor, where they pick up sequentially two electrons to form negative ions.

charge independence [NUC PHYS] The principle that the nuclear (strong) force between a neutron and a proton is identical to the force between two protons or two neutrons in the same orbital and spin state. [PARTIC PHYS] As a generalization of the nuclear physics definition, the principle that the strong interactions of particles are unchanged if a particle is replaced by another particle of the same isotopic spin multiplet.

charge-injection device [ELECTR] A charge-transfer device used as an image sensor in which the image points are accessed by reference to their horizontal and vertical coordinates. Abbreviated CID.

charge-localized ion [ORG CHEM] A charged species in which the charge is centered on a single atom.

charge-mass ratio [ELEC] The ratio of the electric charge of a particle to its mass.

charge multiplet *See* isospin multiplet.

charge neutrality [PL PHYS] The near equality in the density of positive and negative charges throughout a volume, which is characteristic of a plasma. [SOLID STATE] The condition in which electrons and holes are present in equal numbers in a semiconductor.

charge parity [PARTIC PHYS] The eigenvalue of the charge conjugation operation; it exists only for a system which goes into itself under this operation. Also known as charge conjugation parity.

charge quantization [ELEC] The principle that the electric charge of an object must equal an integral multiple of a universal basic charge.

charger *See* battery charger.

charger-eliminator [ELEC] A battery charger with a low-noise, low-impedance output which can either charge a storage battery or supply a dc load directly, without a storage battery in parallel.

charger-reader [NUCLEO] An auxiliary device used to charge and read small, portable ionization chambers.

charge-state process [SOLID STATE] A process involving the motion of preexisting crystal defects in a solid, following a change in the charges of the defects.

charge-storage transistor [ELECTR] A transistor in which the collector-base junction will charge when forward bias is applied with the base at a high level and the collector at a low level.

charge-storage tube [ELECTR] A storage tube in which information is retained on a surface in the form of electric charges.

charge-storage varactor [ELECTR] A varactor that uses semiconductor techniques to achieve power outputs above 50 watts at ultra-high and microwave frequencies.

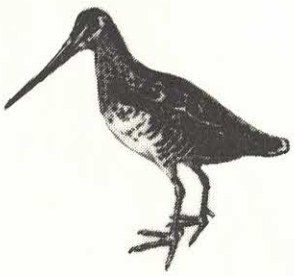
charge transfer [PHYS CHEM] The process in which an ion takes an electron from a neutral atom, with a resultant transfer of charge.

charge-transfer complexes [CHEM] Compounds in which electrons move between molecules.

charge-transfer device [ELECTR] A semiconductor device that depends upon movements of stored charges between predetermined locations, as in charge-coupled and charge-injection devices.

charge-weight ratio [ORD] The ratio of the weight of a charge, especially an explosive charge, to the total weight of the

CHARADRIIFORMES



The common or Wilson's snipe *(Gallinago gallinago)*, a typical wader. It frequents wet woodlands and marshes of North America, France, and the British Isles.

complete bomb or projectile that contains the charge; the term is not used in connection with propellants.

charging current [ELEC] The current that flows into a capacitor when a voltage is first applied.

charging line [PETRO ENG] A pipeline for transporting fresh charging stock of crude oil, gas, oil, and such to a still.

charging pump [CHEM ENG] Pump that provides pressurized fluid flow for the input of another unit, such as to a triplex pump that requires positive pressure.

charging stock [PETRO ENG] A product introduced into a still; may be any product recovered through previous distillation such as gas oil or fuel oil, or any product selected for further distillation or refining.

Charles' law [PHYS] The law that at constant pressure the volume of a fixed mass or quantity of gas varies directly with the absolute temperature; a close approximation. Also known as Gay-Lussac law.

Charles' Wain *See* Big Dipper.

Charlton white *See* lithopone.

charm [PARTIC PHYS] A quantum number which has been proposed to account for an apparent lack of symmetry in the behavior of hadrons relative to that of leptons, to explain why certain reactions of elementary particles do not occur, and to account for the longevity of the J-1 and J-2 particles.

Charmat process [FOOD ENG] A bulk process for making champagne in which the wine undergoes secondary fermentation in a glass-lined vat instead of in a bottle.

charmed particle [PARTIC PHYS] A particle whose total charm is not equal to zero.

charmed quark [PARTIC PHYS] A quark with an electric charge of $+\frac{2}{3}$, baryon number of $\frac{1}{3}$, zero strangeness, and charm of $+1$. Symbolized c.

Charmouthian [GEOL] Middle Lower Jurassic geologic time.

charnockite [PETR] Any of various faintly foliated, nearly massive varieties of quartzofeldspathic rocks containing hypersthene.

charnockite series [GEOL] A series of plutonic rocks compositionally similar to the granitic rock series but characterized by the presence of orthopyroxene.

Charon [ASTRON] The only known satellite of Pluto, with an orbital period of 6.387 days, distance from Pluto of approximately 18,000 kilometers, and diameter of approximately 1500 kilometers.

Charophyceae [BOT] A class of green algae, division Chlorophyta.

Charophyta [BOT] A group of aquatic plants, ranging in size from a few inches to several feet in height, that live entirely submerged in water.

Charpak-Massonet current distribution system [PARTIC PHYS] An electronic data readout method used in spark chambers to locate a single spark, as determined by observing how the spark current divides between the two available paths to the ground.

Charpy test [MET] An impact test to determine the ductility of a metal; a freely swinging pendulum is allowed to strike and break a notched specimen laid loosely on a support; the work done by the pendulum is obtained by comparing the position of the pendulum before release with the position to which it swings after breaking the specimen.

charring ablator [MATER] An ablation material characterized by the formation of a carbonaceous layer at the heated surface which impedes heat flow into the material by its insulating and reradiating characteristics.

chart [MAP] **1.** A map, generally designed for navigation or other particular purposes, in which essential map information is combined with various other data critical to the intended use. **2.** To prepare a chart or to engage in a charting operation. [SCI TECH] A form, such as a graph, table, or diagram, which gives information about some variable quantity.

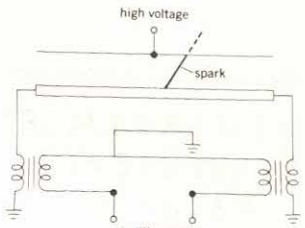
chartaceous [BOT] Resembling paper.

chart catalog [NAV] A list or enumeration of navigational charts, sometimes with index charts indicating the extent of coverage of the various navigational charts.

chart comparison unit [ENG] A device that permits simultaneous viewing of a radar plan position indicator display and a navigation chart so that one appears superimposed on the other. Also known as autoradar plot.

chart convergence [MAP] Convergence of the meridians as shown on a chart.

CHARPAK-MASSONET CURRENT DISTRIBUTION SYSTEM



Circuit diagram of an electronic determination of spark position in a narrow gap by the Charpak-Massonet current distribution system.

chart datum *See* datum plane.

chart desk [ENG] A flat surface on which charts are spread out, usually with storage space for charts and other navigating equipment below the plotting surface.

charted depth [OCEANOGR] The vertical distance from the tidal datum to the bottom.

charted visibility [NAV] The extreme distance, shown in numbers on a chart, at which a navigational light can be seen.

chart house [NAV ARCH] A room, usually adjacent to or on the bridge, where charts and other navigational equipment are stored, and where navigational computations, plots, and so on may be made. Also known as chart room.

chartlet [NAV] A small chart covering a large geographical area; used principally to show errors in locations for loran A and Decca chains; such charts appear at the beginning of each table and show the correction in the geographical position that should be applied.

chartometer [MAP] An instrument used for measurment of distances on charts or maps.

chart projection [MAP] A map projection used for a chart.

chart reading [NAV] Interpretation of the symbols, lines, abbreviations, and terms appearing on charts.

chart recorder [ENG] A recorder in which a dependent variable is plotted against an independent variable by an ink-filled pen moving on plain paper, a heated stylus on heat-sensitive paper, a light beam or electron beam on photosensitive paper, or an electrode on electrosensitive paper. The plot may be linear or curvilinear on a strip chart recorder, or polar on a circular chart recorder.

chartreusin [MICROBIO] $C_{18}H_{18}O_{18}$ Crystalline, greenish-yellow antibiotic produced by a strain of *Streptomyces chartreusis;* active against gram-positive microorganisms, acid-fast bacilli, and phage of *Staphylococcus pyogenes*.

chart room *See* chart house.

chart symbol [NAV] A character, letter, or similar graphical representation used on a chart to indicate some object, characteristic, or such.

chart table [ENG] A flat surface on which charts are spread out, particularly one without storage space below the plotting surface, as in aircraft and VPR (virtual PPI reflectoscope) equipment.

Charybdis *See* Galofaro.

chase [BUILD] A vertical passage for ducts, pipes, or wires in a building. [DES ENG] A series of cuts, each having a path that follows the path of the cut before it; an example is a screw thread. [ENG] **1.** The main body of the mold which contains the molding cavity or cavities. **2.** The enclosure used to shrink-fit parts of a mold cavity in place to prevent spreading or distortion, or to enclose an assembly of two or more parts of a split-cavity block. **3.** To straighten and clean threads on screws or pipes. [GRAPHICS] A rectangular metal frame in which type and plates are locked for letterpress printing. [ORD] The exposed part of a gun (artillery) in front on the trunnion band or cradle.

chase mortise [DES ENG] A mortise with a sloping edge from bottom to surface so that a tenon can be inserted when the outside clearance is small.

chase pilot [AERO ENG] A pilot who flies an escort airplane and advises another pilot who is making a check, training, or research flight in another craft.

chaser [AERO ENG] The vehicle that maneuvers in order to effect a rendezvous with an orbiting object. [ENG] A thread-cutting tool with many teeth.

chase ring [MECH ENG] In hobbing, the ring which restrains the blank from spreading during hob sinking.

chasing tool [DES ENG] A hammer or chisel used to decorate metal surfaces.

chasmogamy [PL ANAT] The production of a hermaphroditic floral type that opens at anthesis and may be visited by an insect vector, providing a means of cross-pollination.

chasmophyte [ECOL] A plant that grows in rock crevices.

chassignite [GEOL] An achondritic stony meteorite composed chiefly of olivine (95%); resembles dunite.

chassis [ENG] **1.** A frame on which the body of an automobile or airplane is mounted. **2.** A frame for mounting the working parts of a radio or other electronic device.

chassis ground [ELEC] A connection to the metal chassis on which the components of a circuit are mounted, to serve as a common return path to the power source.

chassis lubricant [MATER] A lubricating grease of consis-

tency to be applied with a grease gun through fittings on autos and farm and industrial equipment.

chassis punch [DES ENG] A hand tool used to make round or square holes in sheet metal.

chatoyant [MINERAL] Of a mineral or gemstone, having a changeable luster or color marked by a band of light, resembling the eye of a cat in this respect.

chatter [ELEC] Prolonged undesirable opening and closing of electric contacts, as on a relay. Also known as contact chatter. [ENG] An irregular alternating motion of the parts of a relief valve due to the application of pressure where contact is made between the valve disk and the seat. [ENG ACOUS] Vibration of a disk-recorder cutting stylus in a direction other than that in which it is driven.

chattering [CONT SYS] A mode of operation of a relay-type control system in which the relay switches back and forth infinitely fast.

chattermark [GEOL] A scar on the surface of bedrock made by the abrasive action of drift carried at the base of a glacier.

Chattian [GEOL] Upper Oligocene geologic time. Also known as Casselian.

Chauffard-Still disease *See* Still's disease.

chaulmoogra oil [MATER] Any of several fixed oils extracted from seeds of trees in the family Flacourtiaceae; widely used at one time to treat leprosy and other diseases.

Chautauquan [GEOL] Upper Devonian geologic time, below Bradfordian.

chavicol [ORG CHEM] $C_3H_5C_6H_4OH$ A colorless phenol that is liquid at room temperature; boils at 230°C; soluble in alcohol and water; found in many essential oils. Also known as 1-allyl-4-hydroxybenzene; *para*-allyl phenol.

chavicol methyl ether *See* estragole.

Chazyan [GEOL] Middle Ordovician geologic time.

chE *See* cholinesterase.

Cheadle's disease *See* infantile scurvy.

Chebyshev approximation *See* min-max technique.

Chebyshev filter [ELECTR] A filter in which the transmission frequency curve has an equal-ripple shape, with very small peaks and valleys.

Chebyshev polynomials [MATH] A family of orthogonal polynomials which solve Chebyshev's differential equation.

Chebyshev's differential equation [MATH] A special case of Gauss' hypergeometric second-order differential equation: $(1-x^2)f''(x)-xf'(x)+n^2f(x)=0$.

Chebyshev's inequality [STAT] Given a nonnegative random variable $f(x)$, and $k>0$, the probability that $f(x) \geq k$ is less than or equal to the expected value of f divided by k.

check [COMPUT SCI] A test which is necessary to detect a mistake in computer programming or a computer malfunction. [MATER] A lengthwise crack in a board.

check bit [COMPUT SCI] A binary check digit.

check character [COMPUT SCI] A redundant character used to perform a check.

check dam [CIV ENG] A low, fixed structure, constructed of timber, loose rock, masonry, or concrete, to control water flow in an erodable channel or irrigation canal.

check digit [COMPUT SCI] A redundant digit used to perform a check.

checkerboard regenerator [ENG] An open-checkerwork arrangement of firebrick in a high-temperature chamber that absorbs heat during a batch processing cycle, then releases it to preheat fresh combustion air during the down cycle; used, for example, in the steel industry with open-hearth and heat-treating furnaces.

checkers [ENG] Open brickwork in a checkerboard regenerator allowing for the passage of hot, spent gases.

check flight [AERO ENG] **1.** A flight made to check or test the performance of an aircraft, rocket, or spacecraft, or a piece of its equipment, or to obtain measurements or other data on performance. **2.** A familiarization flight in an aircraft, or a flight in which the pilot or the aircrew are tested for proficiency.

check indicator [COMPUT SCI] A console device, usually a light, informing the operator that an error has occurred.

check indicator instruction [COMPUT SCI] A computer instruction which directs that a signal device is turned on to call the operator's attention to the fact that there is some discrepancy in the instruction now in use.

checking [MATER] Fine cracks appearing in a ceramic coating. [MET] Temporarily reducing the volume or temperature of the air blast in a blast furnace.

checking program [COMPUT SCI] A computer program which detects and determines the nature of errors in other programs, particularly those that involve incorrect coding or punching of wrong characters. Also known as checking routine.

checking routine *See* checking program.

check ligament [ANAT] A thickening of the orbital fascia running from the insertion of the lateral rectus muscle to the medial orbital wall (medial check ligament) or from the insertion of the lateral rectus muscle to the lateral orbital wall (lateral check ligament).

checkline [NAV ARCH] A heavy line passed through a chock and fastened to a bitt of a ship that is coming alongside a wharf in order to slow the ship down or to keep it from moving away from the wharf.

check number [COMPUT SCI] A number denoting a specific type of hardware malfunction.

check observation [METEOROL] An aviation weather observation taken primarily for aviation radio broadcast purposes; usually abbreviated to include just those elements of a record observation that have an important affect on aircraft operations.

checkout [ENG] A sequence of actions to test or examine a thing as to its readiness for incorporation into a new phase of use or as to the performance of its intended function.

checkpoint [COMPUT SCI] That place in a routine at which the entire state of the computer (memory, registers, and so on) is written out on auxiliary storage (tape, disk, cards) from which it may be read back into the computer if the program is to be restarted later. [NAV] Geographical location on land or water above which the position of an aircraft in flight may be determined by observation or by electronic means.

check problem *See* check routine.

check rail [BUILD] A rail, thicker than the window, that spans the opening between the top and bottom sash; usually beveled and rabbeted. [CIV ENG] *See* guard rail.

check register [COMPUT SCI] A register in which transferred data are temporarily stored so that they may be compared with a second transfer of the same data, to verify the accuracy of the transfer.

check routine [COMPUT SCI] A routine or problem designed primarily to indicate whether a fault exists in a computer, without giving detailed information on the location of the fault. Also known as check problem; test program; test routine.

check row [COMPUT SCI] A row (or one of two or more rows) on a paper tape which contains the cumulated sum of existing rows, column by column, resulting in either 1 or 0 by column, thus verifying that all rows have been properly read.

check screen *See* oversize control screen.

check sum [COMPUT SCI] A sum of digits or numbers used in a summation check.

check symbol [COMPUT SCI] One or more digits generated by performing an arithmetic check or summation check on a data item which are then attached to the item and copied along with it through various stages of processing, allowing the check to be repeated to verify the accuracy of the copying processes.

check valve [ENG] A device for automatically limiting flow in a piping system to a single direction.

check word [COMPUT SCI] A computer word, containing data from a block of records, that is joined to the block and serves as a check symbol during transfers of the block between different locations.

Chediak-Higashi anomaly [PATH] Deeply staining, coarse, peroxidase-positive granules in the cytoplasm of neutrophils and eosinophils in certain disease states.

cheek [ANAT] The wall of the mouth in man and other mammals. [MET] Portion of a three-part flask between the cope and the drag. [ZOO] The lateral side of the head in submammalian vertebrates and in invertebrates.

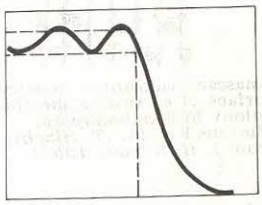
cheek pouch [VERT ZOO] A saclike dilation of the cheeks in certain animals, such as rodents, in which food is held.

cheese [FOOD ENG] A food produced from milk that has been clotted by acid or rennet to form a curd which is cut, shaped, pressed, and salted or brined. [TEXT] Tube of spun yarn to be put on a warp beam for weaving.

cheese antenna [ELECTROMAG] An antenna having a parabolic reflector between two metal plates, dimensioned to permit propagation of more than one mode in the desired direction of polarization.

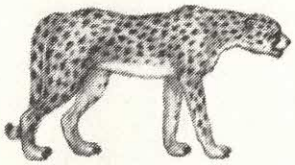
cheesebox still [CHEM ENG] One of the first types of vertical cylindrical stills designed with a vapor dome.

CHEBYSHEV FILTER



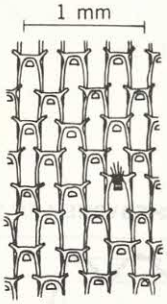
Equal ripple shape characteristic in the transmission band of the Chebyshev filter. Frequency ω_b is lower limit of transition regio from pass band to stop band.

CHEETAH



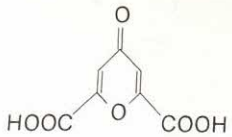
The cheetah *(Acinonyx jubatus)*, which has been trained for hunting, especially in India.

CHEILOSTOMATA



Anascan cheilostome, showing the surface of encrusting sheetlike colony of *Membranipora*, Miocene-Recent. *(T. Hincks, from L. H. Hyman, 1959)*

CHELIDONIC ACID



Structural formula of chelidonic acid.

cheese cement [MATER] A glue made from cheese or milk curd.

cheesecloth [TEXT] A very loosely woven, thin, lightweight cotton fabric; used in unfinished (gray) form for covering tobacco plants and for making tea bags and wiping cloths; the finished form is used for curtains, bedspreads, and such.

cheese head [DES ENG] A raised cylindrical head on a screw or bolt.

cheetah [VERT ZOO] *Acinonyx jubatus*. A doglike carnivoran mammal belonging to the cat family, having nonretractile claws and long legs.

cheiloplasty [MED] Any plastic operation upon the lip.

cheilosis [MED] Cracking at the corners of the mouth and scaling of the lips, usually associated with riboflavin deficiency.

Cheilostomata [INV ZOO] An order of ectoproct bryozoans in the class Gymnolaemata possessing delicate erect or encrusting colonies composed of loosely grouped zooecia.

cheimaphobia [PSYCH] An abnormal fear of cold.

Cheiracanthidae [PALEON] A family of extinct acanthodian fishes in the order Acanthodiformes.

cheiromegaly [MED] Enlargement of one or both hands that is not attributable to disease of the hypophysis. Also spelled chiromegaly.

cheiroplasty [MED] Any plastic operation performed on the hand. Also spelled chiroplasty.

chela [INV ZOO] **1.** A claw or pincer on the limbs of certain crustaceans and arachnids. **2.** A sponge spicule with talonlike terminal processes.

chelate [ORG CHEM] A molecular structure in which a heterocyclic ring can be formed by the unshared electrons of neighboring atoms.

chelate laser [OPTICS] A liquid laser that uses a rare-earth chelate (a metalloorganic compound), with initial excitation taking place within the organic part of the liquid molecule and then transferring to the metallic ions to give lasing action. Also known as rare-earth chelate laser.

chelating agent [ORG CHEM] An organic compound in which atoms form more than one coordinate bonds with metals in solution.

chelating resin [ORG CHEM] Any of the ion-exchange resins with unusually high selectivity for specific cations; for example, phenol-formaldehyde resin with 8-quinolinol replacing part of the phenol, particularly selective for copper, nickel, cobalt, and iron(III).

chelation [ORG CHEM] A chemical process involving formation of a heterocyclic ring compound which contains at least one metal cation or hydrogen ion in the ring.

chelerythrine [ORG CHEM] $C_{21}H_{17}O_4H$ A poisonous, crystalline alkaloid, slightly soluble in alcohol; it is derived from the seeds of the herb celandine (*Chelidonium majus*) and has narcotic properties.

cheletropic reaction [PHYS CHEM] A chemical reaction involving the elimination of a molecule in which two sigma bonds terminating at a single atom are made or broken.

chelicera [INV ZOO] Either appendage of the first pair in arachnids, usually modified for seizing, crushing, or piercing.

Chelicerata [INV ZOO] A subphylum of the phylum Arthropoda; chelicerae are characteristically modified as pincers.

Chelidae [VERT ZOO] The side-necked turtles, a family of reptiles in the suborder Pleurodira.

chelidonic acid [ORG CHEM] $C_7H_4O_6$ A pyran isolated from the perennial herb celandine (*Chelidonium majus*).

chelifore [INV ZOO] Either of the first pair of appendages on the cephalic segment of pycnogonids.

cheliform [INV ZOO] Having a forcepslike organ formed by a movable joint closing against an adjacent segment; referring especially to a crab's claw.

cheliped [INV ZOO] Either of the paired appendages bearing chelae in decapod crustaceans.

chellin *See* khellin.

chelometry [ANALY CHEM] Analytical technique involving the formation of 1:1 soluble chelates when a metal ion is titrated with aminopolycarboxylate and polyamine reagents; a form of complexiometric titration.

Chelonariidae [INV ZOO] A family of coleopteran insects in the superfamily Dryopoidea.

Chelonethida [INV ZOO] An equivalent name for the Pseudoscorpionida.

Chelonia [VERT ZOO] An order of the Reptilia, subclass Anapsida, including the turtles, terrapins, and tortoises.

Cheloniidae [VERT ZOO] A family of reptiles in the order Chelonia including the hawksbill, loggerhead, and green sea turtles.

Cheluridae [INV ZOO] A family of amphipod crustaceans in the suborder Gammaridea.

Chelydridae [VERT ZOO] The snapping turtles, a small family of reptiles in the order Chelonia.

Chemag process [MET] A process for oxide-coating iron and steel by electrolytic means, the object to be coated being the anode in an alkaline solution.

chemical [CHEM] **1.** Related to the science of chemistry. **2.** A substance characterized by definite molecular composition.

chemical affinity *See* affinity.

chemical agent [MATER] A solid, liquid, or gas employed in three principal categories: war gases, smokes, and incendiaries; through its chemical properties produces lethal, injurious, or irritant effects on humans, makes a screening or colored smoke, or acts as a fire starter.

chemical ammunition [ORD] Any ammunition, such as bombs, projectiles, bullets, or flares, containing a chemical agent, such as war gases, smokes, and incendiaries.

chemical bomb [ORD] A bomb with a chemical agent for the main charge.

chemical bond *See* bond.

chemical burn [MED] Tissue destruction caused by caustic agents, irritant gases, or other chemical agents.

chemical-cartridge respirator [MIN ENG] An air purification device worn by miners that removes small quantities of toxic gases or vapors from the inspired air; the cartridge contains chemicals which operate by processes of oxidation, absorption, or chemical reaction.

chemical cellulose *See* alpha cellulose.

chemical compound *See* compound.

chemical conversion coating [MET] A protective or decorative coating formed on the surface of a metal as the result of chemical reaction of the metal with a selected environment.

chemical crystallography [CRYSTAL] The geometric description, and study, of the internal arrangement of atoms in crystals formed from chemical compounds.

chemical dating [ANALY CHEM] The determination of the relative or absolute age of minerals and of ancient objects and materials by measurement of their chemical compositions.

chemical denudation [GEOL] Wasting of the land surface by water transport of soluble materials into the sea.

chemical deposition [CHEM] Precipitation of a metal from a solution of a salt by introducing another metal.

chemical dosimeter [NUCLEO] A dosimeter in which the accumulated radiation-exposure dose is indicated by color changes accompanying chemical reactions induced by the radiation.

chemical element *See* element.

chemical energy [PHYS CHEM] Energy of a chemical compound which, by the law of conservation of energy, must undergo a change equal and opposite to the change of heat energy in a reaction; the rearrangement of the atoms in reacting compounds to produce new compounds causes a change in chemical energy.

chemical engineering [ENG] That branch of engineering serving those industries that chemically convert basic raw materials into a variety of products, and dealing with the design and operation of plants and equipment to perform such work; all products are formed in chemical processes involving chemical reactions carried out under a wide range of conditions and frequently accompanied by changes in physical state or form.

chemical equilibrium [CHEM] A condition in which a chemical reaction is occurring at equal rates in its forward and reverse directions, so that the concentrations of the reacting substances do not change with time.

chemical etching [MET] Formation of characteristic surface features when a polished metal surface is etched by suitable reagents.

chemical exchange process [CHEM] A method of separating isotopes of the lighter elements by the repetition of a process of chemical change which involves exchange of the isotopes.

chemical film dielectric [ELEC] An extremely thin layer of material on one or both electrodes of an electrolytic capacitor, which conducts electricity in only one direction and thereby constitutes the insulating element of the capacitor.

chemical fire extinguisher [CHEM ENG] Any of three types of fire extinguishers (vaporizing liquid, carbon dioxide, and dry

chemical) which expel chemicals in solid, liquid, or gaseous form to blanket or smother a fire.

chemical flux cutting [MET] An oxygen cutting process in which metals are cut by using flux.

chemical focus *See* actinic focus.

chemical formula [CHEM] A notation utilizing chemical symbols and numbers to indicate the chemical composition of a pure substance; examples are CH_4 for methane and HCl for hydrogen chloride.

chemical grenade [ORD] General term for any hand grenade or rifle grenade charged with a chemical agent.

chemical hygrometer *See* absorption hygrometer.

chemical indicator [ANALY CHEM] A substance whose physical appearance is altered at or near the end point of a chemical titration.

chemical inhibitor [CHEM] A substance capable of stopping or retarding a chemical reaction.

chemical-ion pump [CHEM ENG] A vacuum pump whose pumping action is based on evaporation of a metal whose vapor then reacts with the chemically active molecules in the gas to be evacuated.

chemical kinetics [PHYS CHEM] That branch of physical chemistry concerned with the mechanisms and rates of chemical reactions. Also known as reaction kinetics.

chemical laser *See* chemically pumped laser.

chemically foamed plastic [MATER] A foamed plastic having its cellular structure produced by gases generated from chemical reaction of the components.

chemically pumped laser [OPTICS] A laser in which pumping is achieved by using a chemical action rather than electrical energy to produce the required pulses of light. Also known as chemical laser.

chemically pure [CHEM] Without impurities detectable by analysis. Abbreviated cp.

chemical machining [MET] Making of metal parts to specified dimensions by removing surface metal with chemicals (acids or alkalies). Also known as chemical milling.

chemical metallurgy [MET] The science and technology of extracting metals from ores and refining them. Also known as process metallurgy.

chemical microscopy [ANALY CHEM] Application of the microscope to the solution of chemical problems.

chemical milling *See* chemical machining.

chemical operations *See* chemical warfare.

chemical pathology [PATH] The study of disease by using chemical methods.

chemical polarity [PHYS CHEM] Tendency of a molecule, or compound, to be attracted or repelled by electrical charges because of an asymmetrical arrangement of atoms around the nucleus.

chemical polishing [MET] Smoothing and brightening the surface of a metal by treatment with a chemical agent.

chemical porcelain [MATER] High-purity, nonporous grade of porcelain used to make laboratory analysis utensils, such as crucibles, retorts, and spatulas.

chemical potential [PHYS CHEM] In a thermodynamic system of several constituents, the rate of change of the Gibbs function of the system with respect to the change in the number of moles of a particular constituent.

chemical precipitates [GEOL] A sediment formed from precipitated materials as distinguished from detrital particles that have been transported and deposited.

chemical pressurization [AERO ENG] The pressurization of propellant tanks in a rocket by means of high-pressure gases developed by the combustion of a fuel and oxidizer or by the decomposition of a substance.

chemical pulp [MATER] Wood pulp made by separating the fibers of wood chips by the action of alkalies or acids.

chemical pulping [CHEM ENG] Separation of wood fiber for paper pulp by chemical treatment of wood chips to dissolve the lignin that cements the fibers together.

chemical pump [PETRO ENG] Skid-mounted pumping unit used to feed chemicals into the power oil (used to operate bottom-hole pumps in oil wells) to reduce corrosion in the system and to assist in water removal when the power oil and well-produced oil reach the ground-level wash tank.

chemical reaction [CHEM] A change in which a substance (or substances) is changed into one or more new substances; there is only a minute change, Δm, in the mass of the system, given by $\Delta E = \Delta m c^2$, where ΔE is the energy emitted or absorbed and c is the speed of light.

chemical reactivity [CHEM] The tendency of two or more chemicals to react to form one or more products differing from the reactants.

chemical reactor [CHEM ENG] Vessel, tube, pipe, or other container within which a chemical reaction is made to take place; may be batch or continuous, open or packed, and can use thermal, catalytic, or irradiation actuation.

chemical remanent magnetization [GEOPHYS] Permanent magnetization of rocks acquired when a magnetic material, such as hematite, is grown at low temperature through the oxidation of some other iron mineral, such as magnetite or goethite; the growing mineral becomes magnetized in the direction of any field which is present. Abbreviated CRM.

chemical reservoir [GEOL] An underground oil or gas trap formed in limestones or dolomites deposited in quiescent geologic environments.

chemical resistance [MATER] Ability of solid materials to resist damage by chemical reactivity or solvent action.

chemical sense [PHYSIO] A process of the nervous system for reception of and response to chemical stimulation by excitation of specialized receptors.

chemical shift [PHYS CHEM] Shift in a nuclear magnetic-resonance spectrum resulting from diamagnetic shielding of the nuclei by the surrounding electrons.

chemical shim [NUCLEO] A chemical, usually boric acid, that is placed in the coolant system of a nuclear reactor to serve as a neutron absorber and that compensates for fuel burnup during normal operation.

chemical shutdown [NUCLEO] Addition of a dissolved poison to the coolant of a nuclear reactor to achieve shutdown.

chemical similitude [CHEM ENG] A procedure used to ensure satisfactory operation of a full-scale chemical process by comparison with pilot plant data.

chemical spray [ORD] Aerial release, or device for aerial release, of liquid war gas for casualty effect, or of liquid smoke for aerial smoke screens.

chemical sterilization [ENG] The use of bactericidal chemicals to sterilize solutions, air, or solid surfaces.

chemical stoneware [MATER] Clay pottery material that resists acids and alkalies; used for ball mills, pipes, laboratory sinks and utensils, and so on.

chemical symbol [CHEM] A notation for one of the chemical elements, consisting of letters; for example Ne, O, C, and Na represent neon, oxygen, carbon, and sodium.

chemical synthesis [CHEM] The formation of one chemical compound from another.

chemical tanker [NAV ARCH] Ship designed with tanks of stainless steel, or of other materials, capable of containing chemicals.

chemical thermodynamics [PHYS CHEM] The application of thermodynamic principles to problems of chemical interest.

chemical thermometer [ENG] A filled-system temperature-measurement device in which gas or liquid enclosed within the device responds to heat by a volume change (rising or falling of mercury column) or by a pressure change (opening or closing of spiral coil).

chemical tracer [NUCLEO] A tracer having chemical properties similar to those of the substance with which it is mixed.

chemical warfare [ORD] Originally, the employment of poison gases as antipersonnel agents; later expanded to include flame and incendiary warfare, smoke for screening or signaling purposes, and microorganisms (bacteria and their toxins, rickettsia, viruses) for the production of casualties or destruction of crops. Also known as chemical operations.

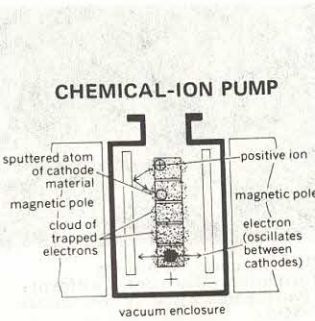
chemical weathering [GEOCHEM] A weathering process whereby rocks and minerals are transformed into new, fairly stable chemical combinations by such chemical reactions as hydrolysis, oxidation, ion exchange, and solution. Also known as decay; decomposition.

chemiclearance [CHEM] The use of chemical analysis to establish the safe use of a substance.

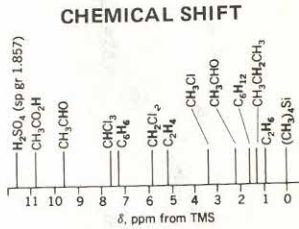
chemiluminescence [PHYS CHEM] Emission of light as a result of a chemical reaction without an apparent change in temperature.

chemimechanical pulp [MATER] Plant material treated by the sulfite, soda, or sulfate process for papermaking.

chemiosmosis [CHEM] A chemical reaction occurring

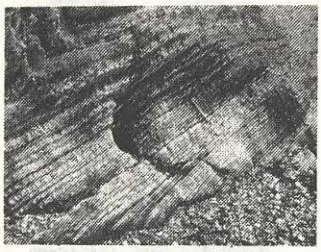


The principal features of an ion pump.



Chemical shifts for representativ compounds. Decreasing values of δ correspond to increasing magnetic field in a constant-frequency spectrometer. The scale calibration is obtained from the resonance signal of a small amount of tetramethylsilar (TMS) placed in the sample tub to provide a zero reference poi

CHERT

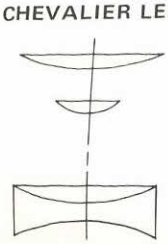


Bedded chert, Monterey formation (Miocene), California. *(Photograph by M. N. Bramlette, USGS)*

CHESTNUT

Twig, leaf, and bud of American chestnut *(Castanea dentata)*.

CHEVALIER LENS



Chevalier magnifying lens.

through an intervening semipermeable membrane. Also known as chemosmosis.

chemisorption [PHYS CHEM] A chemical adsorption process in which weak chemical bonds are formed between gas or liquid molecules and a solid surface.

chemist [CHEM] A scientist specializing in chemistry.

chemistry [SCI TECH] The scientific study of the properties, composition, and structure of matter, the changes in structure and composition of matter, and accompanying energy changes.

chemoautotroph [MICROBIO] Any of a number of autotrophic bacteria and protozoans which do not carry out photosynthesis.

chemocline [HYD] The transition in a meromictic lake between the mixolimnion layer (at the top) and the monimolimnion layer (at the bottom).

chemodectoma [MED] A benign tumor of the carotid body.

chemodifferentiation [EMBRYO] The process of cellular differentiation at the molecular level by which embryonic cells become specialized as tissues and organs.

chemoheterotroph [BIOL] An organism that derives energy and carbon from the oxidation of preformed organic compounds.

chemonite [MATER] A wood preservative consisting of a water solution of small percentages of copper hydroxide, arsenic trioxide, ammonia, and acetic acid.

chemoorganotroph [BIOL] An organism that requires an organic source of carbon and metabolic energy.

chemoprevention [MED] Prevention of illness through pharmaceutical means; for example, use of drugs to arrest or reverse development of premalignant neoplasia.

chemoprophylaxis [MED] Use of drugs to prevent the development of infectious diseases.

chemoreception [PHYSIO] Reception of a chemical stimulus by an organism.

chemoreceptor [PHYSIO] Any sense organ that responds to chemical stimuli.

chemosmosis *See* chemiosmosis.

chemosphere [METEOROL] The vaguely defined region of the upper atmosphere in which photochemical reactions take place; generally considered to include the stratosphere (or the top thereof) and the mesosphere, and sometimes the lower part of the thermosphere.

chemostat [MICROBIO] An apparatus, and a principle, for the continuous culture of bacterial populations in a steady state.

chemosynthesis [BIOCHEM] The synthesis of organic compounds from carbon dioxide by microorganisms using energy derived from chemical reactions.

chemotaxis [BIOL] The orientation movement of a motile organism with reference to a chemical agent.

chemotaxonomy [BOT] The classification of plants based on natural products.

chemotherapeutic [PHARM] Any agent used for chemotherapy.

chemotherapeutic index [PHARM] The relationship between toxicity of a compound for the body and the toxicity for parasites.

chemotherapy [MED] Administering chemical substances for treatment of disease, especially cancer and diseases caused by parasites.

chemotropism [BIOL] Orientation response of a sessile organism with reference to chemical stimuli.

Chemungian [GEOL] Middle Upper Devonian geologic time, below Cassodagan.

chemurgy [CHEM ENG] A branch of chemistry concerned with the profitable utilization of organic raw materials, especially agricultural products, for nonfood purposes such as for paints and varnishes.

chenevixite [MINERAL] $Cu_2Fe_2(AsO_4)_2(OH)_4 \cdot H_2O$ A dark-green to greenish-yellow mineral consisting of a hydrous copper iron arsenate occurring in masses.

chenic acid *See* chenodeoxycholic acid.

chenier [GEOL] A continuous ridge of beach material built upon swampy deposits; often supports trees, such as pines or evergreen oaks.

chenille [TEXT] **1.** A wool, cotton, silk, rayon, or synthetic yarn with pile protrudng all around. **2.** A fabric woven from chenille yarn. **3.** A fabric with a pile made by weaving a cloth with warp threads around soft filling threads and then cutting.

chenodeoxycholic acid [BIOCHEM] $C_{24}H_{40}O_4$ A constituent of bile; needlelike crystals with a melting point of 119°C; soluble in alcohol, methanol, and acetic acid; used on an experimental basis to prevent and dissolve gallstones. Also known as anthropodesoxycholic acid; chenic acid; gallodesoxycholic acid.

Chenopodiaceae [BOT] A family of dicotyledonous plants in the order Caryophyllales having reduced, mostly greenish flowers.

chenopodium oil [MATER] An alcohol-soluble, colorless to yellow oil, derived from the herb *Chenopodium ambrosioides;* chief constituents are *para*-cymeme, *l*-limonene, and ascaridole; used in medicine. Also known as American wormseed oil; goosefoot oil.

chergui [METEOROL] An eastern or southeastern desert wind in Morocco (North Africa), especially in the north; it is persistent, very dry and dusty, hot in summer, cold in winter.

Chermidae [INV ZOO] A small family of minute homopteran insects in the superfamily Aphidoidea.

Cherminae [INV ZOO] A subfamily of homopteran insects in the family Chermidae; all forms have a beak and an open digestive tract.

Chernozem [GEOL] One of the major groups of zonal soils, developed typically in temperate to cool, subhumid climate; the Chernozem soils in modern classification include Borolls, Ustolls, Udolls, and Xerolls. Also spelled Tchernozem.

cherophobia [PSYCH] An abnormal fear of happiness.

cherry [BOT] **1.** Any trees or shrub of the genus *Prunus* in the order Rosales. **2.** The simple, fleshy, edible drupe or stone fruit of the plant.

Cherry-Burrell process [FOOD ENG] A butter manufacturing process in which high fat cream is pasteurized, cooled, and collected in vats, where color and salt are added and the fat content reduced to 80%; it is pumped continuously through a chiller-agitator and a texturator, from which it emerges as butter in a continuous ribbon.

cherry leaf spot [PL PATH] A fungus disease of the cherry caused by *Coccomyces hiemalis;* spotting and chlorosis of the leaves occurs, with consequent retardation of tree and fruit development.

cherry picker [AERO ENG] A crane used to remove the aerospace capsule containing astronauts from the top of the rocket in the event of a malfunction. [MECH ENG] Any of several small traveling cranes, especially one used to hoist a passenger on the end of a boom. [MIN ENG] A small hoist used to facilitate car changing near the loader in a mine tunnel.

chersophyte [ECOL] A plant that grows in dry waste lands.

chert [PETR] A hard, dense, micro- or cryptocrystalline rock composed of chalcedony and microcrystalline quartz. Also known as hornstone; phthanite.

chertification [GEOL] A process of replacement by silica in limestone in the form of fine-grained quartz or chalcedony.

chessylite *See* azurite.

chest breadth [ANTHRO] The measurement across the chest at nipple level.

chest circumference [ANTHRO] The horizontal circumference taken just above the nipples during a period of quiet breathing.

chest depth [ANTHRO] A measurement of the chest taken front to back from the sternum to the spinal groove.

Chesterian [GEOL] Upper Mississippian geologic time.

chestnut [BOT] The common name for several species of large, deciduous trees of the genus *Castanea* in the order Fagales, which bear sweet, edible nuts.

chestnut blight [PL PATH] A fungus disease of the chestnut caused by *Endothia parasitica,* which attacks the bark and cambium, causing cankers that girdle the stem and kill the plant. Also known as chestnut canker.

chestnut canker *See* chestnut blight.

chestnut coal [GEOL] Anthracite coal small enough to pass through a round mesh of 1⅝ inches (4.13 centimeters) but too large to pass through a round mesh of 1 1/16 inches (3.02 centimeters).

Chestnut soil [GEOL] One of the major groups of zonal soils, developed typically in temperate to cool, subhumid to semiarid climate; the Chestnut soils in modern classification include Ustolls, Borolls, and Xerolls.

Chevalier lens [OPTICS] A type of magnifying lens composed of an achromatic negative lens combined with a distant collecting front lens; a magnifying power up to 10X with an object distance up to 3 inches (7.62 centimeters) can be obtained.

cheviot [TEXT] **1.** A twill fabric similar to serge but having a slightly rough, napped surface; originally made of wool from sheep of the Cheviot Hills between England and Scotland. **2.** Striped or checked cotton shirting made of coarse yarns, woven to resemble woolen cheviot.

chevkinite [MINERAL] $(Fe,Ca)(Ce,La)_2(Si,Ti)_2O_8$ A mineral consisting of silicotitanate of iron, calcium, and rare-earth elements.

chevron [VERT ZOO] The bone forming the hemal arch of a caudal vertebra.

chevron fold [GEOL] An accordionlike fold with limbs of equal length.

chevrotain [VERT ZOO] The common name for four species of mammals constituting the family Tragulidae in the order Artiodactyla. Also known as mouse deer.

Cheyne-Stokes respiration [MED] Breathing characterized by periods of hyperpnea alternating with periods of apnea; rhythmic waxing and waning of respiration; occurs most commonly in older patients with heart failure and cerebrovascular disease.

Chézy formula [FL MECH] For the velocity V of open-channel flow which is steady and uniform, $V = \sqrt{8g/f} \cdot \sqrt{mS}$, where f is the Darcy-Weisbach friction coefficient, m the hydraulic radius, S the energy dissipation per unit length, and g the acceleration of gravity.

chiasma [ANAT] A cross-shaped point of intersection of two parts, especially of the optic nerves. [CYTOL] The point of junction and fusion between paired chromatids or chromosomes, first seen during diplotene of meiosis.

Chiasmodontidae [VERT ZOO] A family of deep-sea fishes in the order Perciformes.

chiastolite [MINERAL] A variety of andalusite whose crystals have a cross-shaped appearance in cross section due to the arrangement of carbonaceous impurities. Also known as macle.

chibli *See* ghibli.

Chicago boom [MECH ENG] A hoisting device that is supported on the structure being erected.

Chicago caisson [CIV ENG] A cofferdam about 4 feet (1.2 meters) in diameter lined with planks and sunk in medium-stiff clays to hard ground for pier foundations. Also known as open-well caisson.

chichili *See* chili.

chicken [VERT ZOO] *Galus galus*. The common domestic fowl belonging to the order Galliformes.

chickenpox [MED] A mild, highly infectious viral disease of humans caused by a herpesvirus and characterized by vesicular rash. Also known as varicella.

chick unit [BIOL] A unit for the standardization of pantothenic acid.

chicle [MATER] A gummy exudate obtained from the bark of *Achras zapota*, an evergreen tree belonging to the sapodilla family (Sapotaceae); used as the principal ingredient of chewing gum.

chicory [BOT] *Cichorium intybus*. A perennial herb of the order Campanulales grown for its edible green leaves.

Chideruan [GEOL] Uppermost Permian geologic time.

chief cell [HISTOL] **1.** A parenchymal, secretory cell of the parathyroid gland. **2.** A cell in the lumen of the gastric fundic glands.

chiffon [TEXT] A very thin transparent fabric in plain weave.

chigger [INV ZOO] The common name for bloodsucking larval mites of the Trombiculidae which parasitize vertebrates.

chilarium [INV ZOO] One of a pair of processes between the bases of the fourth pair of walking legs in the king crab.

childhood aphasia [PSYCH] Loss or impairment of the use of language in a child.

Child-Langmuir equation *See* Child's law.

Child-Langmuir-Schottky equation *See* Child's law.

childrenite [MINERAL] $(Fe,Mn)AlPO_4(OH)_2 \cdot H_2O$ A pale-yellowish to dark-brown orthorhombic mineral consisting of a hydrous basic iron aluminum phosphate occurring as translucent crystals; it is isomorphous with eosphorite; hardness is 4.5–5 on Mohs scale, and specific gravity is 3.18–3.24.

Child's law [ELECTR] A law stating that the current in a thermionic diode varies directly with the three-halves power of anode voltage and inversely with the square of the distance between the electrodes, provided the operating conditions are such that the current is limited only by the space charge. Also known as Child-Langmuir equation; Child-Langmuir-Schottky equation; Langmuir-Child equation.

Chile mill [MECH ENG] A crushing mill having vertical rollers running in a circular enclosure with a stone or iron base or die. Also known as edge runner.

Chile niter *See* Chile saltpeter.

Chile saltpeter [MINERAL] Also known as Chile niter. **1.** Soda niter found in large quantities in caliche in arid regions of northern Chile. **2.** Deposits of sodium nitrate.

chili [METEOROL] A warm, dry, descending wind in Tunisia, resembling the sirocco; in southern Algeria it is called chichili.

chill [MET] **1.** A metal plate inserted in the surface of a sand mold or placed in the mold cavity to rapidly cool and solidify the casting, producing a hard surface. **2.** White or mottled iron occurring on the surface of a rapidly cooled gray iron casting.

chill-block melt spinning [MET] A rapid quenching process in which a jet of molten metal is directed onto a cold moving surface, such as a spinning disk, where the jet is shaped and solidified; quench rates are 1000 to 1,000,000 K/s.

chilled contact [PETR] The finer-grained portion of an igneous rock found near its contact with older rock.

chilled iron [MET] Cast iron made in iron- or steel-faced molds so the surface of the casting cools rapidly, retaining most of the carbon and becoming white and hard.

chilled roll [MET] A roll consisting of an outer hard layer of white (chilled) iron with a middle transitional layer of mottled iron and a core of full gray iron.

chilled shot [MET] Lead shots containing 3–6% antimony.

chiller [CHEM ENG] Oil-refining apparatus in which the temperature of paraffin distillates is lowered preparatory to filtering out the solid wax components.

chilling [MET] Rapidly removing the heat from a casting.

chill roll [ENG] A cored roll used in chill-roll extrusion of plastics.

chill-roll extrusion [ENG] Method of extruding plastic film in which the film is cooled while being drawn around two or more highly polished chill rolls, inside of which there is cooling water. Also known as cast-film extrusion.

chill wind factor [METEOROL] An arbitrary index, developed by the Canadian Army, to correlate the performance of equipment and personnel in an Arctic winter; it is equal to the sum of the wind speed in miles per hour and the negative of the Fahrenheit temperature; the term is not to be confused with wind chill.

Chilobolbinidae [PALEON] A family of extinct ostracods in the superfamily Hollinacea showing dimorphism of the velar structure.

Chilopoda [INV ZOO] The centipedes, a class of the Myriapoda that is exclusively carnivorous and predatory.

Chimaeridae [VERT ZOO] A family of the order Chimaeriformes.

Chimaeriformes [VERT ZOO] The single order of the chondrichthyan subclass Holocephali comprising the ratfishes, marine bottom-feeders of the Atlantic and Pacific oceans.

chimera [BIOL] An organism or a part made up of tissues or cells exhibiting chimerism.

chimerism [BIOL] The admixture of cell populations from more than one zygote.

chi meson [PARTIC PHYS] A meson resonance of mass 958 MeV/c^2, designated χ_0, which has 0 isospin and charge, negative parity, positive G parity, and spin probably equal to 0. Also known as eta-prime meson (η'). Also denoted η'_A (958).

chimney [BUILD] A vertical, hollow structure of masonry, steel, or concrete, built to convey gaseous products of combustion from a building. [ELECTR] A pipelike enclosure that is placed over a heat sink to improve natural upward convection of heat and thereby increase the dissipating ability of the sink. [GEOL] *See* pipe; spouting horn.

chimney bar [BUILD] A wrought-iron or steel lintel which is supported by the sidewalls and carries the masonry above the fireplace opening. Also known as turning bar.

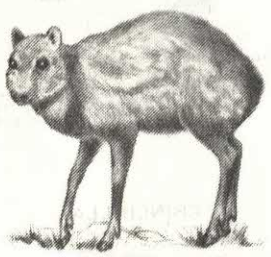
chimney cloud [METEOROL] A cumulus cloud in the tropics that has much greater vertical than horizontal extent.

chimney core [MECH ENG] The inner section of a double-walled chimney which is separated from the outer section by an air space.

chimney effect [FL MECH] The tendency of air or gas in a vertical passage to rise when it is heated because its density is lower than that of the surrounding air or gas.

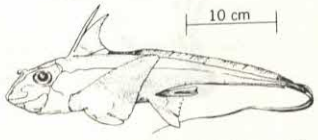
chimney rock [GEOL] **1.** A chimney-shaped remnant of a

CHEVROTAIN



Indian chevrotain, distinguished by white spots on coat.

CHIMAERIFORMES



Modern chimaeriform of genus *Chimaera*. (*From H. B. Bigelow and W. C. Schroeder, Fishes of the Western North Atlantic, pt. 2, Sears Foundation for Marine Research, Yale University, 1953*)

CHIMPANZEE

The chimpanzee, with a highly developed brain, and an anatomical resemblance to man.

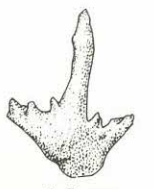
CHINCHILLA

The chinchilla, valued for its fur, with more hair per square inch than any other animal.

CHIPMUNK

The eastern chipmunk *(Tamias striatus)* with characteristic longitudinal black and yellow stripes on its back.

CHIROGNATHIDAE



Chirognathus, an example of the conodont Chirognathidae —minute, toothlike microfossils.

rock cliff whose sides have been cut into and carried away by waves and the gravel beach. **2.** A rock column rising above its surroundings. [MATER] A porous phosphate rock used principally in chimney construction.

chimopelagic [ECOL] Pertaining to, belonging to, or being marine organisms living at great depths throughout most of the year; during the winter they move to the surface.

chimpanzee [VERT ZOO] Either of two species of Primates of the genus *Pan* indigenous to central-west Africa.

chin [ANAT] The lower part of the face, at or near the symphysis of the lower jaw.

china clay [MATER] A high-grade white kaolin composed principally of the mineral kaolinite, and often occurring as a lenticular-shaped body; used in the manufacture of ceramics, paper, rubber, catalysts, and ink.

China grass *See* ramie.

chinaldine *See* quinaldine.

China oil *See* Peru balsam.

China wood oil *See* tung oil.

chin breadth [ANTHRO] Contact measurement of the maximum width of the chin, taken between the points of intersection of the mandible and the menton.

chinchilla [VERT ZOO] The common name for two species of rodents in the genus *Chinchilla* belonging to the family Chinchillidae.

chinchilla cloth [TEXT] A wool or other fabric that has a long nap or is tufted or nubbed.

Chinchillidae [VERT ZOO] A family of rodents comprising the chinchillas and viscachas.

chine [FOOD ENG] A part of an animal carcass backbone, with parts adjoining it, cut for cooking. [NAV ARCH] **1.** A part of a ship's waterway rising above the deck and hollowed out on the inboard edge to make a path for water. **2.** That point where the sides and bottom meet on a flat- or V-bottomed boat. **3.** A longitudinal member that lies along the bilge where the sides and bottom of the boat meet.

Chinese bean oil *See* soybean oil.

Chinese binary *See* column binary.

Chinese ink *See* india ink.

Chinese oil *See* Peru balsam.

Chinese oil of cinnamon *See* cassia oil.

Chinese vermilion *See* mercuric sulfide.

Chinese wax [MATER] A white or yellowish crystalline wax formed on certain trees by the secretions of a scale insect, especially *Ceroplastes ceriferus*.

Chinese white [CHEM] A term used in the paint industry for zinc oxide and kaolin used as a white pigment. Also known as zinc white.

chinic acid *See* quinic acid.

chinidine *See* quinidine.

chin-neck projection [ANTHRO] Measurement from the tip of the thyroid cartilage to the midpoint of the menton.

chino [TEXT] A twilled cotton fabric made of combed two-ply yarn.

chinoidine *See* quinoidine.

chinone *See* quinone.

chinook [METEOROL] The foehn on the eastern side of the Rocky Mountains.

chinook arch [METEOROL] A foehn cloud formation appearing as a bank of clouds over the Rocky Mountains, generally a flat layer of altostratus, heralding the approach of a chinook.

chin projection [ANTHRO] Measurement from the gonion to the most forward point on the vertical midline of the menton.

chintz [TEXT] A glazed cotton fabric often printed with figures, birds, and florals.

chiolite [MINERAL] $Na_5Al_3F_{14}$ A snow white mineral resembling cryolite. Also known as arksutite.

Chionididae [VERT ZOO] The white sheathbills, a family of birds in the order Charadriiformes.

chionophile [ECOL] Having a preference for snow.

chionophobia [PSYCH] An abnormal fear of snow.

chip [COMPUT SCI] *See* chad. [ELECTR] **1.** The shaped and processed semiconductor die that is mounted on a substrate to form a transistor, diode, or other semiconductor device. **2.** An integrated microcircuit performing a significant number of functions and constituting a subsystem.

chip blower [MED] A dental instrument used to blow drilling debris from a tooth cavity that is being prepared for filling.

chipboard [MATER] A low-density paper board made from mixed waste paper and used where strength and quality are needed.

chip breaker [DES ENG] An irregularity or channel cut into the face of a lathe tool behind the cutting edge to cause removed stock to break into small chips or curls.

chip cap [DES ENG] A plate or cap on the upper part of the cutting iron of a carpenter's plane designed to give the tool rigidity and also to break up the wood shavings.

chip capacitor [ELECTR] A single-layer or multilayer monolithic capacitor constructed in chip form, with metallized terminations to facilitate direct bonding on hybrid integrated circuits.

chip circuit *See* large-scale integrated circuit.

chip log [ENG] A line, marked at intervals (commonly 50 feet or 15 meters), that is paid out over the stern of a moving ship and is pulled out by a drag (the chip), to determine the ship's speed.

chipmunk [VERT ZOO] The common name for 18 species of rodents belonging to the tribe Marmotini in the family Sciuridae.

chipper [ENG] A tool such as a chipping hammer used for chipping.

chipping [MET] Removing seams, surface defects, or other excess fragments from semifinished metal products by using a manual or pneumatic chisel or a continuous machine.

chipping hammer [ENG] A hand or pneumatic hammer with chisel-shaped or pointed faces used to remove rust and scale from metal surfaces.

chip resistor [ELECTR] A thick-film resistor constructed in chip form, with metallized terminations to facilitate direct bonding on hybrid integrated circuits.

chip sampling [MIN ENG] Taking small pieces of ore or coal from the width of an ore face exposure; may be done at random or along a line.

chirality [CHEM] The handedness of an asymmetric molecule. [PARTIC PHYS] The characteristic of particles of spin $\frac{1}{2}\hbar$ that are allowed to have only one spin state with respect to an axis of quantization parallel to the particle's momentum; if the particle's spin is always parallel to its momentum, it has positive chirality; antiparallel, negative chirality. [PHYS] The characteristic of an object that cannot be superimposed upon its mirror image.

chiral molecules [CHEM] Molecules which are not superposable with their mirror images.

chiral symmetry group [PARTIC PHYS] A group of symmetry transformations that act differently on the left- and right-handed parts of fermion fields.

chiral twinning *See* optical twinning.

Chiridotidae [INV ZOO] A family of holothurians in the order Apodida having six-spoked, wheel-shaped spicules.

Chirodidae [PALEON] A family of extinct chondrostean fishes in the suborder Platysomoidei.

Chirognathidae [PALEON] A family of conodonts in the suborder Neurodontiformes.

chiromegaly *See* cheiromegaly.

Chiron [ASTRON] An object circling the sun in an eccentric orbit which takes it from inside the orbit of Saturn out to near the orbit of Uranus, and which has a period of 50.7 years.

chiroplasty *See* cheiroplasty.

chiropodist [MED] One who treats minor ailments of the feet. Also known as podiatrist.

chiropractic [MED] A system of therapeutics based upon the theory that disease is caused by abnormal function of the nervous system; attempts to restore normal function are made through manipulation and treatment of the structures of the body, especially those of the spinal column.

chiropractor [MED] One who practices the chiropractic arts.

Chiroptera [VERT ZOO] The bats, an order of mammals having the front limbs modified as wings.

chiropterophilous [BIOL] Pollinated by bats.

chiropterygium [VERT ZOO] A typical vertebrate limb, thought to have evolved from a finlike appendage.

Chirotheuthidae [INV ZOO] A family of mollusks comprising several deep-sea species of squids.

chirp [COMMUN] **1.** An undersirable variation in the frequency of a continuous-wave carrier when it is keyed. **2.** The sound heard in a code receiver when the transmitted carrier frequency is increased linearly for the duration of a pulse code.

chirp radar [ENG] Radar in which a swept-frequency signal

is transmitted, received from a target, then compressed in time to give a narrow pulse called the chirp signal.

chisel [AGR] A strong, heavy tool with curved points used for tilling; drawn by a tractor, it stirs the soil at an appreciable depth without turning it. [DES ENG] A tool for working the surface of various materials, consisting of a metal bar with a sharp edge at one end and often driven by a mallet.

Chisel *See* Caelum.

chisel bit *See* chopping bit.

chisel bond [ENG] A thermocompression bond in which a contact wire is attached to a contact pad on a semiconductor chip by applying pressure with a chisel-shaped tool.

chisel-edge angle [DES ENG] The angle included between the chisel edge and the cutting edge, as seen from the end of the drill.

chisel-tooth saw [DES ENG] A circular saw with chisel-shaped cutting edges.

chi-square distribution [STAT] The distribution of the sample variances indicated by

$$S^2 = \sum_{i=1}^{n} (x_i - \bar{x})^2/(n-1),$$

where $x_1, x_2, \ldots x_n$ are observations of a random sample n drawn from a normal population.

chi-square test [STAT] A generalization, and an extension, of a test for significant differences between a binomial population and a multinomial population, wherein each observation may fall into one of several classes and furnishes a comparison among several samples instead of just two.

chitin [BIOCHEM] A white or colorless amorphous polysaccharide that forms a base for the hard outer integuments of crustaceans, insects, and other invertebrates.

chitinase [BIOCHEM] An externally secreted digestive enzyme produced by certain microorganisms and invertebrates that hydrolyzes chitin.

chitinivorous bacterium [MICROBIO] Any bacterium that secretes chitinase and can digest chitin; organisms extract chitin from lobster exoskeletons, causing an infection called soft-shell disease.

Chitinozoa [PALEON] An extinct group of unicellular microfossils of the kingdom Protista.

chiton [INV ZOO] The common name for over 600 extant species of mollusks which are members of the class Polyplacophora.

Chitral fever *See* phlebotomus fever.

chiviatite [MINERAL] $Pb_2Bi_6S_{11}$ A lead-gray mineral consisting of a lead bismuth sulfide occurring in foliated masses.

Chladni's figures [MECH] Figures produced by sprinkling sand or similar material on a horizontal plate and then vibrating the plate while holding it rigid at its center or along its periphery; indicate the nodal lines of vibration.

chlamydeous [BOT] **1.** Pertaining to the floral envelope. **2.** Having a perianth.

Chlamydia [MICROBIO] The single genus of the family Chylamydiaceae.

Chlamydiaceae [MICROBIO] The single family of the order Chlamydiales; characterized by a developmental cycle from a small elementary body to a larger initial body which divides, with daughter cells becoming elementary bodies.

Chlamydiales [MICROBIO] An order of coccoid rickettsias; gram-negative, obligate, intracellular parasites of vertebrates.

Chlamydobacteriaceae [MICROBIO] Formerly a family of gram-negative bacteria in the order Chlamydobacteriales possessing trichomes in which false branching may occur.

Chlamydobacteriales [MICROBIO] Formerly an order comprising colorless, gram-negative, algae-like bacteria of the class Schizomycetes.

Chlamydomonadidae [INV ZOO] A family of colorless, flagellated protozoans in the order Volvocida considered to be close relatives of protozoans that possess chloroplasts.

Chlamydoselachidae [VERT ZOO] The frilled sharks, a family of rare deep-water forms having a combination of hybodont and modern shark characteristics.

chlamydospore [MYCOL] A thick-walled, unicellar resting spore developed from vegetative hyphae in almost all parasitic fungi.

Chlamydozoaceae [MICROBIO] A family of small, gram-negative, coccoid bacteria in the order Rickettsiales; members are obligate intracytoplasmic parasites, or saprophytes.

chloanthite [MINERAL] $NiAs_{2-3}$ A white or gray mineral with metallic luster forming crystals in the isometric system; it is isomorphous with nickel-skutterudite.

chloasma [MED] Patchy tan, brown, and black hyperpigmentation, especially on the brow and cheek; of unknown cause, but may be due to the action of sunshine upon perfume or to endocrinopathy.

chloflurecol methyl ester [ORG CHEM] $C_{15}H_{11}ClO_3$ A white, crystalline compound with a melting point of 152°C; slight solubility in water; used as a growth regulator for grass and weeds. Also known as methyl-2-chloro-9-hydroxyfluorene-9-carboxylate.

Chloracea [MICROBIO] The green sulfur bacteria, a family of photosynthetic bacteria in the suborder Rhodobacteriineae.

chloracetone *See* chloroacetone.

chloracetophenone *See* chloroacetophenone.

chloracne [MED] An acnelike eruption caused by chlorinated hydrocarbons.

chloragogen [INV ZOO] Of or pertaining to certain specialized cells forming the outer layer of the alimentary tract in earthworms and other annelids.

chloral [ORG CHEM] CCl_3CHO A colorless, oily liquid soluble in water; used industrially to prepare DDT; a hypnotic. Also known as trichloroacetic aldehyde; trichloroethanal.

chloralase [ORG CHEM] $C_8H_{11}Cl_3O_6$ Colorless, water-soluble crystals, melting at 185°C; made by heating chloral with dextrose; used as a hypnotic.

chloral hydrate [ORG CHEM] $CCl_3CH(OH)_2$ Colorless, deliquescent needles with slightly bitter caustic taste, soluble in water; a hypnotic. Also known as crystalline chloral; hydrated chloral.

chloralkane [ORG CHEM] Chlorinated aliphatic hydrocarbon of the methane series (C_nH_{2n+2}).

chloralosane *See* chloralose.

chloralose [ORG CHEM] $C_8H_{11}O_6Cl_3$ A crystalline compound with a melting point of 178°C; used as a repellent for birds. Also known as glucochloralose.

α-chloralose [ORG CHEM] $C_8H_{11}O_6Cl_3$ Needlelike crystals with a melting point of 87°C; soluble in glacial acetic acid and ether; used on seed grains as a bird repellent and as a hypnotic for animals. Also known as anhydroglucochloral; chloralosane; glucochloral; α-D-glucochloralose.

chloraluminite [MINERAL] $AlCl_3 \cdot 6H_2O$ A mineral consisting of hydrous aluminum chloride.

chloramben *See* 3-amino-2,5-dichlorobenzoic acid.

chloramine T [ORG CHEM] $CH_3C_6H_4SO_2NClNa \cdot 3H_2O$ A white, crystalline powder that decomposes slowly in air, freeing chlorine; used as an antiseptic, a germicide, and an oxidizing agent and chlorinating agent.

chloramphenicol [MICROBIO] $C_{11}H_{12}O_2N_2Cl_2$ A colorless, crystalline, broad-spectrum antibiotic produced by *Streptomyces venezuelae;* industrial production is by chemical synthesis. Also known as chloromycetin.

Chlorangiaceae [BOT] A primitive family of colonial green algae belonging to the Tetrasporales in which the cells are directly attached to each other.

chloranil [ORG CHEM] $C_6Cl_4O_2$ Yellow leaflets melting at 290°C; soluble in organic solvents; made from phenol by treatment with potassium chloride and hydrochloric acid; used as an agricultural fungicide and as an oxidizing agent in the manufacture of dyes. Also known as tetrachloroquinone.

chloranilic acid [ORG CHEM] $C_6H_2Cl_2O_4$ A relatively strong dibasic acid whose crystals are red and melt between 283–284°C; used in spectrophotometry.

chloranthy [BOT] A reverting of normally colored floral leaves or bracts to green foliage leaves.

chlorapatite [MINERAL] $Ca_5(PO_4)_3Cl$ An apatite mineral containing chlorine.

chlorargyrite *See* cerargyrite.

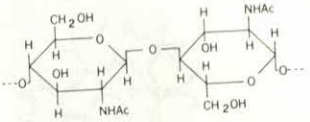
chlorastrolite [MINERAL] A mottled, green variety of pumpellyite occurring as grains or small nodules of a stellate structure in basic igneous rock in the Lake Superior region; used as a semiprecious stone.

chlorate [INORG CHEM] ClO_3^- **1.** A negative ion derived from chloric acid. **2.** A salt of chloric acid.

chlorate candle [MATER] A mixture of solid chemical compounds which, when ignited, liberates free oxygen.

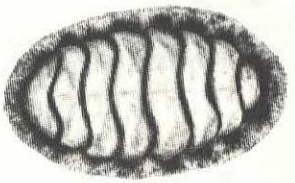
chlorate explosive [MATER] A type of explosive with a potassium chlorate base; a substitute for blackpowder in which potassium chlorate is used in place of potassium nitrate. Also known as chlorate powder.

CHITIN



β-*N*-acetyl-D-glucosamine unit of chitin.

CHITON

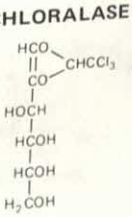


Mossy chiton with characteristic shell of eight plates and surrounding girdle bearing spicules on upper surface.

CHLAMYDOSPORE

A chlamydospore, an asexual spore type produced by Ascomycetes and Basidiomycetes.

CHLORALASE



Structural formula.

chlorate powder *See* chlorate explosive.

chlorbenside [ORG CHEM] $C_{13}H_{10}SCl_2$ White crystals with a melting point of 72°C; used as a miticide for spider mites on fruit trees and ornamentals. Also known as *para*-chlorobenzyl-*para*-chlorophenyl sulfide.

chlorbromuron [ORG CHEM] $C_9H_{10}ONBrCl$ A white solid with a melting point of 94–96°C; used as a pre- and postemergence herbicide for annual grass and for broadleaf weeds on crops, soybeans, and Irish potatoes. Also known as 3-(4-bromo-3-chlorophenyl)-1-methoxy-1-methylurea.

chlorcyclizine hydrochloride [PHARM] $ClC_6H_4CH(C_6H_5)C_4H_8N_2CH_3 \cdot HCl$ A white, crystalline solid with a melting point of 222–227°C; soluble in water, chloroform, and alcohol; used as an antihistamine.

chlordan *See* chlordane.

chlordane [ORG CHEM] $C_{10}IH_6Cl_8$ A volatile liquid insecticide; a chlorinated hexahydromethanoindene. Also spelled chlordan.

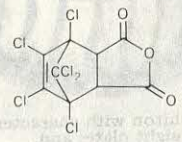
chlordiazepoxide hydrochloride [PHARM] $C_{16}H_{14}ON_3Cl$ A white crystalline conpound, soluble in water; the hydrochloride salt is used as a tranquilizer.

chlordimeform [ORG CHEM] $C_{10}H_{13}ClN_2$ A tan-colored solid, melting point 35°C; used as a miticide and insecticide for fruits, vegetables, and cotton. Also known as *N'*-(4-chloro-*ortho*-tolyl)-*N*,*N*-dimethylformamidine.

chlorenchyma [BOT] Chlorophyll-containing tissue in parts of higher plants, as in leaves.

chlorendic acid [ORG CHEM] $C_9H_4Cl_6O_4$ White, fine crystals used in fire-resistant polyester resins and as an intermediate for dyes, fungicides, and insecticides.

CHLORENDIC ANHYDRIDE



Structural formula.

chlorendic anhydride [ORG CHEM] $C_9H_2Cl_6O_3$ White, fine crystals used in fire-resistant polyester resins, in hardening epoxy resins, and as a chemical intermediate.

Chlorex process [CHEM ENG] A method of extracting lubricating-oil stocks; the solvent is Chlorex, a trademark for β,β-dichlorodiethyl ether.

chlorfenethol [ORG CHEM] $C_{14}H_{12}Cl_2O$ A colorless, crystalline compound with a melting point of 69.5–70°C; insoluble in water; used for control of mites in ornamentals and shrub trees. Also known as 1,1-bis(4-chlorophenyl)ethanol.

chlorfenpropmethyl [ORG CHEM] $C_{10}H_{10}OCl_2$ A colorless to brown liquid used as a postemergence herbicide of wild oats, cereals, fodder beets, sugarbeets, and peas. Also known as 2-chloro-3-(4-chlorophenyl)-methylpropionate.

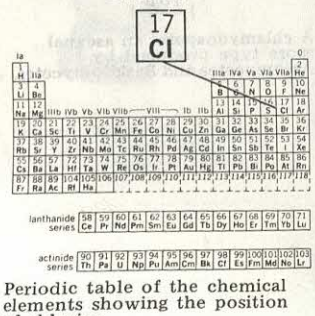
chlorfensulfide [ORG CHEM] $C_{12}H_6Cl_4N_2S$ A yellow, crystalline compound with a melting point of 123.5–124°C; used as a miticide for citrus. Also known as 4-chlorophenyl-2,4,5-trichlorophenylazosulfide.

chlorfenvinphos [ORG CHEM] $C_{12}H_{14}Cl_3O_4P$ An amber liquid with a boiling point of 168–170°C; used as an insecticide for ticks, flies, lice, and mites on cattle. Also known as 2-chloro-1-(2,4-dichlorophenyl)-vinyl diethylphosphate.

chlorhydrin *See* chlorohydrin.

chloric acid [INORG CHEM] $HClO_3$ A compound that exists only in solution and as chlorate salts; breaks down at 40°C.

CHLORINE



Periodic table of the chemical elements showing the position of chlorine.

chloride [CHEM] **1.** A compound which is derived from hydrochloric acid and contains the chlorine atom in the −1 oxidation state. **2.** In general, any binary compound containing chloride.

chloride benzilate *See* lachesne.

chloride of lime *See* bleaching powder.

chloride paper [MATER] A paper made with an emulsion of silver chloride; usually used in photography as contact paper or very-slow-speed enlarging paper.

chloride shift [PHYSIO] The reversible exchange of chloride and bicarbonate ions between erythrocytes and plasma to effect transport of carbon dioxide and maintain ionic equilibrium during respiration.

chloridization [CHEM] *See* chlorination. [MET] Treatment of mineral ores with hydrochloric acid or chlorine to form the chloride of the main metal present.

chlorimide *See* dichloramine.

chlorinated acetone *See* chloroacetone.

chlorinated lime *See* bleaching powder.

chlorinated paraffin [ORG CHEM] One of a group of chlorine derivatives of paraffin compounds.

chlorinated rubber [MATER] A nonrubbery, incombustible rubber derivative produced by the action of chlorine on rubber in solution; used in corrosion-resistant paints and varnishes, and in inks and adhesives.

chlorinated wool [TEXT] Wool treated with chlorine chemicals to minimize shrinkage and enhance dye penetration.

chlorination [CHEM] **1.** Introduction of chlorine into a compound. Also known as chloridization. **2.** Water sterilization by chlorine gas. [TEXT] A process in which wool is treated with a solution of hypochlorite and an acid or similar mixture to reduce the tendency of the fiber to shrink by matting.

chlorinator [CHEM ENG] The apparatus used in chlorinating.

chlorine [CHEM] A chemical element, symbol Cl, atomic number 17, atomic weight 35.453; used in manufacture of solvents, insecticides, and many non-chlorine-containing compounds, and to bleach paper and pulp.

chlorine-36 [NUCLEO] A radioactive isotope of chlorine with atomic mass number of 36; a beta emitter with a half-life of 3×10^5 years.

chlorine dioxide [INORG CHEM] ClO_2 A green gas used to bleach cellulose and to treat water.

chlorine log *See* chlorinolog.

chlorine war gas [ORD] Chlorine gas packaged to be released against enemy troops; greenish yellow, toxic, and gaseous at normal temperatures and pressures.

chlorine water [CHEM] A clear, yellowish liquid used as a deodorizer, antiseptic, and disinfectant.

chlorinity [OCEANOGR] A measure of the chloride and other halogen content, by mass, of sea water.

chlorinolog [PETRO ENG] A record of the presence and concentration of chlorine in oil reservoirs, prepared as a method of locating salt-water strata. Also known as chlorine log.

chlorite [INORG CHEM] A salt of chlorous acid. [MINERAL] Any of a group of greenish, platyhydrous monoclinic silicates of aluminum, ferrous iron, and magnesium which are closely associated with and resemble the micas.

chlorite schist [PETR] A metamorphic rock whose composition is dominated by members of the chlorite group.

chlorite-sericite schist [PETR] A low-grade, fine-grained variety of mica schist without biotite.

chloritization [CHEM] The introduction of, production of, replacement by, or conversion into chlorite.

chloritoid [MINERAL] $FeAl_4Si_2O_{10}(OH)_4$ A micaceous mineral related to the brittle mica group; has both monoclinic and triclinic modifications, a gray to green color, and weakly pleochroic crystals.

chloritoid schist [PETR] A variety of mica schist whose composition is dominated by chloritoid.

chlormanganokalite [MINERAL] K_4MnCl_6 A wine yellow to lemon or canary yellow, hexagonal mineral consisting of potassium and manganese chloride; occurs as rhombohedrons.

chlormephos [ORG CHEM] $C_5H_{12}O_2S_2ClP$ A liquid used as an insecticide for soil. Also known as *S*-chloromethyl-*O*,*O*-diethyl phosphorodithioate.

chloro- [ORG CHEM] A prefix describing an organic compound which contains chlorine atoms substituted for hydrogen.

chloroacetic acid [ORG CHEM] $ClCH_2COOH$ White or colorless, deliquescent crystals that are soluble in water, ether, chloroform, benzene, and alcohol; used as an herbicide and in the manufacture of dyes and other organic molecules. Also known as chloroethanoic acid; monochloroacetic acid.

chloroacetic acid *tert*-butyl ester *See tert*-butyl chloroacetate.

chloroacetic anhydride [ORG CHEM] $C_4H_4Cl_2O_3$ Crystals with a melting point of 46°C; soluble in chloroform and ether; used in the preparation of cellulose chloracetates and in the N-acetylation of amino acids in alkaline solution. Also known as *sym*-dichloroacetic anhydride; monochloroacetic acid anhydride.

chloroacetone [ORG CHEM] CH_3COCH_2Cl Pungent, colorless liquid used as military tear gas and in organic synthesis. Also known as chloracetone; chlorinated acetone; monochloroacetone.

chloroacetonitrile [ORG CHEM] $ClCH_2CN$ A colorless liquid with a pungent odor; soluble in hydrocarbons and alcohols; used as a fumigant. Also known as chloroethane nitrile; chloromethyl cyanide.

chloroacetophenone [ORG CHEM] $C_6H_5COCH_2Cl$ Rhombic crystals melting at 59°C; an intermediate in organic synthesis. Also known as chloracetophenone; phenacyl chloride.

chloroacrolein [ORG CHEM] $H_2C{:}ClCHO$ A colorless liquid with a boiling point of 29–31°C; used as a tear gas.

2-chloroallyl diethyldithiocarbamate *See* sulfallate.

chloroazotic acid *See* aqua regia.

Chlorobacteriaceae [MICROBIO] The equivalent name for Chlorobiaceae.

chlorobenzal *See* benzal chloride.

chlorobenzaldehyde [ORG CHEM] C_6H_4CHOCl A colorless to yellowish liquid (ortho form) or powder (para form) with a boiling range of 209–215°C; soluble in alcohol, ether, and acetone; used in dye manufacture.

chlorobenzene [ORG CHEM] C_6H_5Cl A colorless, mobile, volatile liquid with an almondlike odor; used to produce phenol, DDT, and aniline. Also known as chlorobenzol; monochlorobenzene; phenyl chloride.

chlorobenzilate [ORG CHEM] $C_{16}H_{14}Cl_2O_3$ A yellow-brown, viscous liquid with a melting point of 35–37°C; used as a miticide in agriculture and horticulture. Also known as ethyl 4,4′-dichlorobenzilate.

***para*-chlorobenzoic acid** [ORG CHEM] ClC_6H_4COOH A white powder with a melting point of 238°C; soluble in methanol, absolute alcohol, and ether; used in the manufacture of dyes, fungicides, and pharamaceuticals.

5-chlorobenzoxazolidone *See* chlorzoxazone.

5-chlorobenzoxazolin-2-one *See* chlorzoxazone.

chlorobenzoyl chloride [ORG CHEM] ClC_6H_4COCl A colorless liquid with a boiling range of 227–239°C; soluble in alcohol, acetone, and water; used in dye and pharmaceuticals manufacture.

chlorobenzyl chloride [ORG CHEM] $ClC_6H_4CH_2Cl$ A colorless liquid with a boiling range of 216–222°C; soluble in acetone, alcohol, and ether; used in the manufacture of organic chemicals.

***para*-chlorobenzyl-*para*-chlorophenyl sulfide** *See* chlorbenside.

***S*-(4-chlorobenzyl)-*N*,*N*-diethylthiocarbamate** *See* benthiocarb.

Chlorobiaceae [MICROBIO] A family of bacteria in the suborder Chlorobiineae; cells are nonmotile and contain bacteriochlorophylls *c*, *d*, or *e* in chlorobium vesicles attached to the cytoplasmic membrane.

Chlorobiineae [MICROBIO] The green sulfur bacteria, a suborder of the order Rhodospirillales; contains the families Chlorobiaceae and Chloroflexaceae.

2-chloro-4,6-bis(ethylamino)-*s*-triazine *See* simazine.

2-chloro-4,6-bis(isopropylamino)-*s*-triazine *See* propazine.

Chlorobium [MICROBIO] A genus of bacteria in the family Chlorobiaceae; cells are ovoid, rod- or vibrio-shaped, and nonmotile, do not have gas vacuoles, contain bacteriochlorophyll *c* or *d*, and are free-living.

chlorobium chlorophyll [BIOCHEM] $C_{51}H_{67}O_4N_4Mg$ Either of two spectral forms of chlorophyll occurring as esters of farnesol in certain (*Chlorobium*) photosynthetic bacteria. Also known as bacterioviridin.

chlorobromide paper [GRAPHICS] A paper with an emulsion composed of silver bromide and silver chloride; used in photography for fast-speed contact paper, and medium-speed enlarging paper.

chlorobutadiene *See* chloroprene.

2-chloro-1,3-butadiene *See* chloroprene.

chlorobutanol [ORG CHEM] $Cl_3CC(CH_3)_2OH$ Colorless to white crystals with a melting point of 78°C; soluble in alcohol, glycerol, ether, and chloroform; used as a plasticizer and a preservative for biological solutions. Also known as acetone chloroform; trichloro-*tert*-butyl alcohol.

4-chloro-2-butynyl-*meta*-chlorocarbanilate *See* barban.

chlorocalcite [MINERAL] $KCaCl_3$ A white mineral consisting of a chloride of potassium and calcium. Also known as hydrophilite.

chlorocarbon [ORG CHEM] A compound of chlorine and carbon only, such as carbon tetrachloride, CCl_4.

2-chloro-3-(4-chlorophenyl)-methylpropionate *See* chlorfenpropmethyl.

chlorochromic anhydride *See* chromyl chloride.

Chlorococcales [BOT] A large, highly diverse order of unicellular or colonial, mostly fresh-water green algae in the class Chlorophyceae.

Chlorodendrineae [BOT] A suborder of colonial green algae in the order Volvocales comprising some genera with individuals capable of detachment and motility.

***O*-[2-chloro-1-(2,5-dichlorophenyl)-vinyl]-*O*,*O*-diethyl phosphorothioate** [ORG CHEM] $C_{12}H_{14}O_3PSCl_2$ A brown liquid with a boiling point of 145°C at 0.005 mmHg (0.667 newtons per square meter); used as an insecticide for lawn and turf pests.

2-chloro-1-(2,4-dichlorophenyl)-vinyl diethylphosphate *See* chlorfenvinphos.

2-chloro-2′,6′-diethyl-*N*-(butoxymethyl)-acetanilide *See* butachlor.

2-chloro-2-diethylcarbamoyl-1-methylvinyl dimethylphosphate *See* phosphamidon.

1,1,1-chlorodifluoroethane [ORG CHEM] CH_3CClF_2 A colorless gas with a boiling point of −130.8°C; used as a refrigerant, solvent, and aerosol propellant. Also known as 1,1,1-difluorochloroethane; difluoromonochloroethane.

chlorodifluoromethane [ORG CHEM] $CHClF_2$ A colorless gas with a boiling point of −40.8°C and freezing point of −160°C; used as an aerosol propellant and refrigerant. Also known as difluoromonochloromethane; monochlorodifluoromethane.

10-chloro-5,10-dihydrophenarsazine *See* phenarsazine chloride.

3-chloro-1,2-dihydroxypropane *See* 3-chloro-1,2-propanediol.

1-chloro-2,4-dinitrobenzene [ORG CHEM] $C_6H_3ClN_2O_4$ Yellow crystals with a melting point of 52–54°C; soluble in hot alcohol, ether, and benzene; used as a reagent in the determination of pyridine compounds such as nicotinic acid, and nicotinamide. Also known as 4-chloro-1,3-dinitrobenzene; 6-chloro-1,3-dinitrobenzene; 2,4-dinitro-1-chlorobenzene.

4-chloro-1,3-dinitrobenzene *See* 1-chloro-2,4-dinitrobenzene.

6-chloro-1,3-dinitrobenzene *See* 1-chloro-2,4-dinitrobenzene.

1-chloro-2,3-epoxypropane *See* epichlorohydrin.

chloroethane *See* ethyl chloride.

chloroethane nitrile *See* chloroacetonitrile.

chloroethanoic acid *See* chloroacetic acid.

chloroethene *See* vinyl chloride.

3-chloro-*N*-ethoxy-2,6-dimethoxybenzimidic acid anhydride with benzoic acid *See* benzomate.

chloroethyl alcohol *See* ethylene chlorohydrin.

2-chloro-4-ethylamino-6-isopropylamino-*s*-triazine [ORG CHEM] $C_8H_{14}N_5Cl$ White crystals with a melting point of 173–175°C; solubility in water is 33 parts per million at 20°C; used as an herbicide for weed control in corn, sorghum, and other crops. Also known as atrazine.

2-(4-chloro-6-ethylamino-*s*-triazin-2-yl-amino)-2-methyl propionitrile *See* cyanazine.

chloroethylene *See* vinyl chloride.

2-chloro-*N*-(2-ethyl-6-methylphenyl)-*N*-(2-methoxy-1-methyl) acetamide [ORG CHEM] $C_{15}H_{22}O_2N$ A white liquid that boils at 100°C; used as an herbicide on corn and soybeans.

2-(chloroethyl)phosphonic acid *See* ethephon.

chlorofenac [ORG CHEM] $C_8H_5Cl_3O_2$ A colorless solid with a melting point of 159–160°C; slightly soluble in water; used as a preemergence herbicide for noncrop areas. Also known as 2,3,6-trichlorophenylacetic acid.

Chloroflexaceae [MICROBIO] A family of phototrophic bacteria in the suborder Chlorobiineae; cells possess chlorobium vesicles and bacteriochlorophyll *a* and *c*, are filamentous, and show gliding motility; capable of anaerobic, phototrophic growth or aerobic chemotrophic growth.

Chloroflexies [MICROBIO] The single genus of the family Chloroflexaceae.

chloroform [ORG CHEM] $CHCl_3$ A colorless, sweet-smelling, nonflammable liquid; used at one time as an anesthetic. Also known as trichloromethane.

chloroformic acid benzyl ester *See* benzyl chloroformate.

chloroformyl chloride *See* phosgene.

chlorogenic acid [BIOCHEM] $C_{16}H_{18}O_9$ An important factor in plant metabolism; isolated from green coffee beans; the hemihydrate crystallizes in needlelike crystals from water. Also known as 3-caffeoylquinic acid; 3-(3,4-dihydroxycinnamoyl)quinic acid.

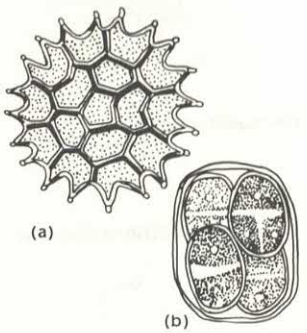
chloroguanide *See* chloroguanide hydrochloride.

chloroguanide hydrochloride [PHARM] $C_{11}H_{16}N_5Cl$ Very effective suppressive drug in low doses, against the three kinds of malaria. Also known as chloroguanide.

chlorohydrin [ORG CHEM] Any of the compounds derived from a group of glycols or polyhydroxy alcohols by chlorine substitution for part of the hydroxyl groups. Also spelled chlorhydrin.

α-chlorohydrin *See* 3-chloro-1,2-propanediol.

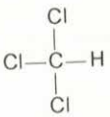
CHLOROCOCCALES



(a) (b)

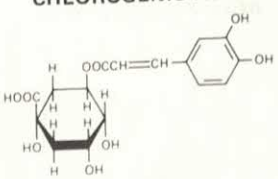
Representative colonial forms of chlorococcales. *(a) Pediastrum boryanum. (b) Oöcystis borgei. (From G.M. Smith, Fresh-water Algae of the United States, 2d ed., McGraw-Hill, 1950)*

CHLOROFORM



Structural formula of chloroform.

CHLOROGENIC ACID



Structural formula.

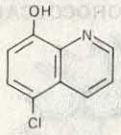
chlorohydrocarbon [ORG CHEM] A carbon- and hydrogen-containing compound with chlorine substituted for some hydrogen in the molecule.

chlorohydroquinone [ORG CHEM] $ClC_6H_3(OH)_2$ White to light tan crystals with a melting point of 100°C; soluble in water and alcohol; used as a photgraphic developer and bactericide and for dyestuffs.

5-chloro-2-hydroxybenzoxazole *See* chlorzoxazone.

2-chloro-5-hydroxy-1,3-dimethylbenzene *See* 4-chloro-3,5-xylenol.

5-CHLORO-8-HYDROXY-QUINOLINE



Structural formula.

5-chloro-8-hydroxyquinoline [ORG CHEM] C_9H_6ClNO Crystals with a melting point of 130°C; used as a fungicide and bactericide. Also known as 5-chloro-8-oxychinolin; 5-chloro-8-quinolinol.

2-chloro-5-hydroxy-*meta*-xylene *See* 4-chloro-3,5-xylenol.

2-chloro-*N*-isopropylacetanilide *See* propachlor.

6-chloro-4-isopropyl-1-methyl-3-phenol *See* chlorothymol.

chloroma [MED] A focal tumorous proliferation of granulocytes, with or without the blood findings of granulocytic leukemia; the sectioned surfaces of the mass are green.

chloromagnesite [MINERAL] $MgCl_2$ A mineral consisting of anhydrous magnesium chloride, found on the volcano Vesuvius.

chloromethane [ORG CHEM] CH_3Cl A colorless, noncorrosive, liquefiable gas which condenses to a colorless liquid; used as a refrigerant, and as a catalyst carrier in manufacture of butyl rubber. Also known as methyl chloride.

chloromethapyrilene citrate *See* chlorothen citrate.

2-chloro-4-(methylamino)-6-(ethylamino)-*s*-triazine *See* triistazine.

4-chloro-5-(methylamino)-2-(α,α,α,-trifluoro-*meta*-tolyl)-3-(2*H*)-pyridazine *See* norflurazon.

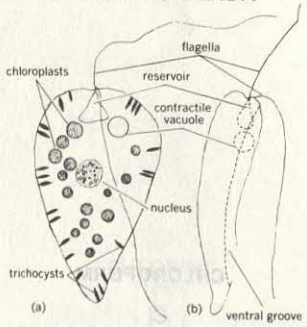
chloromethyl cyanide *See* chloroacetonitrile.

***S*-chloromethyl-*O,O*-diethyl phosphorodithioate** *See* chlormephos.

***N'*-(3-chloro-4-methylphenyl)-*N*-dimethylurea** *See* chlorotoluron.

2-chloro-*N*-(1-methyl-2-propynyl)acetanilide *See* prynachlor.

CHLOROMONADIDA



Gonyostomum semen.
(a) Dorsal view. *(b)* Side view.

Chloromonadida [INV ZOO] An order of flattened, grass-green or colorless, flagellated protozoans of the class Phytamastigophorea.

Chloromonadina [INV ZOO] The equivalent name for Chloromonadida.

Chloromonadophyceae [BOT] A group of algae considered by some to be a class of the division Chrysophyta.

Chloromonadophyta [BOT] A division of algae in the plant kingdom considered by some to be a class, Chloromonadophyceae.

chloromycetin *See* chloramphenicol.

1-chloronaphthalene [ORG CHEM] $C_{10}H_7Cl$ An oily liquid used as an immersion medium in the microscopic determination of refractive index of crystals and as a solvent for oils, fats, and DDT.

chloroneb [ORG CHEM] $C_8H_8O_2Cl_2$ A white solid with a melting point of 133–135°C; used as a fungicide for cotton, soybean seeds, and bean seeds. Also known as 1,4-dichloro-2-5-dimethoxybenzene.

chloronitrous acid *See* aqua regia.

4-chloro-2-oxo-3-benzothiazolin-acetic acid [ORG CHEM] $C_8H_6O_3NSCl$ White crystals with a melting point of 193°C; used as a preemergence herbicide for cereals and clovers.

5-chloro-8-oxychinolin *See* 5-chloro-8-hydroxyquinoline.

chloropal *See* nontronite.

***para*-chlorophenol** [PHARM] C_6H_5ClO Crystals with a typical phenol odor and a melting point of 43.2–43.7°C; soluble in alcohol, ether, glycerol, and chloroform; used as a topical antiseptic.

chlorophenol red [ORG CHEM] $C_{19}H_{12}.ICl_2O_5S$ A dye that is used as an acid-base indicator; yellow in acid solution, red in basic solution. Also spelled chlorphenol red.

***para*-chlorophenoxyacetic acid** [ORG CHEM] $C_8H_7O_3Cl$ A solid with a melting point of 157–158°C; used as a growth regulator for tomatoes and peaches.

3-[*para*-(*para*-chlorophenoxy)phenyl]-1,1-dimethylurea *See* chloroxuron.

chlorophenoxypropionic acid [ORG CHEM] $C_9H_9O_3Cl$ A growth regulator used as a fruit thinner for plums and prunes. Also known as 2-(3-chlorophenoxy)-propionic acid.

2-(3-chlorophenoxy)-propionic acid *See* chlorophenoxypropionic acid.

***para*-chlorophenylbenzenesulfonate** *See* fenson.

3-(*para*-chlorophenyl)-1,1-dimethylurea [ORG CHEM] $C_9H_{11}ClN_2O$ A white, crystalline compound with a melting point of 174–175°C; limited solubility in water; used as an herbicide for grasses and broadleaf weeds in noncropland areas. Also known as monuron.

4-(2-chlorophenylhydrazono)-3-methyl-5-isoxazolone *See* drazoxolon.

3-(4-chlorophenyl)-1-methoxyl-1-methylurea [ORG CHEM] $C_9H_{11}N_2O_2Cl$ A colorless solid with a melting point of 75–78°C; solubility in water is 735 parts per million; used as a pre- and postemergence herbicide for crops and ornamental plants. Also known as monolinuron.

***ortho*-chlorophenyl-methylcarbamate** [ORG CHEM] $C_8H_8ClNO_2$ A white, crystalline compound with a melting point of 90–91°C; used as an insecticide for rice. Abbreviated CPMC.

***para*-chlorophenyl-*N*-methylcarbamate** [ORG CHEM] $C_8H_8ClNO_2$ A white, crystalline compound with a melting point of 116°C; used as an herbicide in combination with other herbicides.

***S*-{[(*para*-chlorophenyl)thio]methyl}-*O,O*-diethyl phosphorodithioate** *See* carbophenothion.

4-chlorophenyl-2,4,5-trichlorophenylazosulfide *See* chlorfensulfide.

***S-para*-chlorophenyl-2,4,5-trichlorophenyl sulfone** *See* tetradifon.

***S*-(2-chloro-1-phthalimidoethyl)-*O,O*-diethyl phosphorodithioate** *See* dialifor.

chlorophoenicite [MINERAL] $(Mn,An)_5(AsO_4)(OH)_7$ Gray-green monoclinic mineral consisting of a basic arsenate of manganese and zinc occurring in crystals.

Chlorophyceae [BOT] A class of microscopic or macroscopic green algae, division Chlorophyta, composed of fresh- or salt-water, unicellular or multicellular, colonial, filamentous or sheetlike forms.

chlorophyll [BIOCHEM] The generic name for any of several oil-soluble green tetrapyrrole plant pigments which function as photoreceptors of light energy for photosynthesis.

chlorophyll a [BIOCHEM] $C_{55}H_{72}O_5N_4Mg$ A magnesium chelate of dihydroporphyrin that is esterified with phytol and has a cyclopentanone ring; occurs in all higher plants and algae.

chlorophyllase [BIOCHEM] An enzyme that splits or hydrolyzes chlorophyll.

chlorophyll b [BIOCHEM] $C_{55}H_{70}O_6N_4Mg$ An ester similar to cholorphyll *a* but with a —CHO substituted for a $—CH_3$; occurs in small amounts in all green plants and algae.

Chlorophyta [BOT] The green algae, a highly diversified plant division characterized by chloroplasts, having chlorophyll *a* and *b* as the predominating pigments.

chloropicrin [INORG CHEM] CCl_3NO_2 A colorless liquid with a sweet odor whose vapor is very irritating to the lungs and causes vomiting, coughing, and crying; used as a soil fumigant. Also known as nitrochloroform; trichloronitromethane.

Chloropidae [INV ZOO] The chloropid flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

chloroplast [BOT] A type of cell plastid occurring in the green parts of plants, containing chlorophyll pigments, and functioning in photosynthesis and protein synthesis.

chloroplatinate [INORG CHEM] **1.** A double salt of platinic chloride and another chloride. **2.** A salt of chloroplatinic acid. Also known as platinochloride.

chloroplatinic acid [INORG CHEM] H_2PtCl_6 An acid obtained as red-brown deliquescent crystals; used in chemical analysis. Also known as platinic chloride.

chloroprene [ORG CHEM] C_4H_5Cl A colorless liquid which polymerizes to chloroprene resin. Also known as chlorobutadiene; 2-chloro-1,3-butadiene.

chloroprene resin [ORG CHEM] A polymer of chloroprene used to form materials resembling natural rubber.

chloropropane [ORG CHEM] Propane molecules with chlorine substituted in various amounts for the hydrogen atoms.

3-chloro-1,2-propanediol [ORG CHEM] $ClCH_2CH(OH)CH_2OH$ A sweetish-tasting liquid that has a tendency to turn a straw color; soluble in ether, alcohol, and water; used to manufacture dye intermediates and to lower the freezing point of

dynamite. Also known as 3-chloro-1,2-dihydroxypropane; α-chlorohydrin; glycerol α-monochlorohydrin; α-monochlorohydrin.

3-chloropropanonitrile *See* β-chloroproprionitrile.

chloropropene [CHEM] Propene molecules with chlorine substituted for some hydrogen atoms.

3-chloro-1-propene *See* allyl chloride.

β-chloropropionitrile [ORG CHEM] $ClCH_2CH_2CN$ A liquid with an acrid odor; miscible with various organic solvents such as ethanol, ether, and acetone; used in polymer synthesis and in the synthesis of pharmaceuticals. Also known as 3-chloropropanonitrile.

chloropropylene oxide *See* epichlorohydrin.

3-chloro-1-propyne *See* propargyl bromide.

Chloropseudomonas [MICROBIO] An invalid genus of bacteria; originally described as a member of the family Chlorobiaceae, with motile rod-shaped cells, without gas vacuoles, containing bacteriochlorophyll *c*, and capable of photoheterotrophic growth; cultures now known to be symbiotic of one of a number of typical Chlorobiaceae and a chemoorganotrophic bacterium capable of reducing elemental sulfur to sulfide.

chloropsia [MED] A defect of vision in which all objects appear green.

6-chloropurine [PHARM] $C_5H_3ClN_4$ A compound crystallizing as blunt needles from water; crystals decompose at 175–177°C; soluble in dimethylformamide and ether; used as an antineoplastic drug.

5-chloro-8-quinolinol *See* 5-chloro-8-hydroxyquinoline.

chlorosis [MED] A form of macrocytic anemia in young females characterized by marked reduction in hemoglobin and a greenish skin color. [PL PATH] A disease condition of green plants seen as yellowing of green parts of the plant.

chlorosity [OCEANOGR] The chlorine and bromide content of one liter of sea water; equals the chlorinity of the sample times its density at 20°C.

***N*-chlorosuccinimide** [ORG CHEM] $C_4H_4ClNO_2$ Orthorhombic crystals with the smell of chlorine; melting point is 150–151°C; soluble in water, benzene, and alcohol; used as a chlorinating agent.

chlorosulfonic acid [INORG CHEM] $ClSO_2OH$ A fuming liquid that decomposes in water to sulfuric acid and hydrochloric acid; used in pharmaceuticals, pesticides, and dyes, and as a chemical intermediate. Also known as chlorosulfuric acid; sulfuric chlorohydrin.

chlorosulfuric acid *See* chlorosulfonic acid; sulfuryl chloride.

chlorothalonil [ORG CHEM] $C_8Cl_4N_2$ Colorless crystals with a melting point of 250–251°C; used as a fungicide for crops, turf, and ornamental flowers. Also known as 2,4,5,6-tetrachloroisophthalonitrile.

chlorothen citrate [PHARM] $C_{14}H_{18}ClN_3S \cdot C_6H_8O_7$ A white, crystalline powder with a melting range of 112–116°C; used in medicine. Also known as chloromethapyrilene citrate.

chlorothionite [MINERAL] $K_2Cu(SO_4)Cl_2$ Bright-blue secondary mineral consisting of potassium copper sulfate chloride, found on the volcano Vesuvius.

chlorothymol [ORG CHEM] $CH_3C_6H_2(OH)(C_3H_7)Cl$ White crystals melting at 59–61°C; soluble in benzene alcohol, insoluble in water; used as a bactericide. Also known as 6-chloro-4-isopropyl-1-methyl-3-phenol.

chlorotic streak [PL PATH] A systemic virus disease of sugarcane characterized by yellow or white streaks on the foliage.

***ortho*-chlorotoluene** [ORG CHEM] $CH_3C_6H_4Cl$ A liquid with a boiling point of 158.97°C; soluble in alcohol, chloroform, benzene, and ether; used in organic synthesis, as a solvent, and as an intermediate in dyestuff manufacture.

chlorotoluron [ORG CHEM] $C_{10}H_{11}ClN_2O$ A colorless, crystalline compound with a melting point of 147–148°C; used as a preemergence herbicide on cereals. Also known as *N'*-(3-chloro-4-methylphenyl)-*N*-dimethylurea.

***N'*-(4-chloro-*ortho*-tolyl)-*N,N*-dimethylformamidine** *See* chlordimeform.

4-(4-chloro-*ortho*-tolyl)oxy butyric acid [ORG CHEM] $C_{10}H_{13}ClO_3$ A white, crystalline compound with a melting point of 99–100°C; used as a postemergence herbicide for peas.

2-[(4-chloro-*ortho*-tolyl)oxy]propionic acid *See* mecoprop.

2-chloro-1-(2,4,5-trichlorophenyl)vinyl dimethylohosphate *See* tetrachlorvinphos.

chlorotrifluoroethylene polymer [ORG CHEM] A colorless, noninflammable, heat-resistant resin, soluble in most organic solvents, and with a high impact strength; can be made into transparent filling and thin sheets; used for chemical piping, fittings, and insulation for wire and cables, and in electronic components. Also known as fluorothene; polytrifluorochloroethylene resin.

chlorotrifluoromethane [ORG CHEM] $CClF_3$ A colorless gas having a boiling point of −81.4°C and a freezing point of −181°C; used as a dielectric and aerospace clinical, refrigerant, and aerosol propellant, and for metals hardening and pharmaceuticals manufacture. Also known as monochlorotrifluoromethane; trifluorochloromethane.

chloroxine [ORG CHEM] $C_9H_5Cl_2NO$ Crystals with a melting point of 179–180°C; soluble in benzene and in sodium and potassium hydroxides; used as an analytical reagent. Also known as 5,7-dichloro-8-hydroxyquinoline.

chloroxiphite [MINERAL] $Pb_3CuCl_2(OH)_2O_2$ A dull-olive or pistachio-green mineral consisting of a basic chloride of lead and copper, found in the Mendip Hills of England.

chloroxuron [ORG CHEM] $C_{15}H_{15}ClO_2N_2$ A tan solid with a melting point of 151–152°C; used as a pre- and postemergence herbicide for annual broadleaf weeds in common crops. Also known as 3-[*para*-(*para*-chlorophenoxy)phenyl[-1,1-dimethylurea.

chloroxylenol *See* 4-chloro-3,5-xylenol.

4-chloro-3,5-xylenol [ORG CHEM] $ClC_6H_2(CH_3)_2OH$ Crystals with a melting point of 115.5°C; soluble in water, 95% alcohol, benzene, terpenes, ether, and alkali hydroxides; used as an antiseptic and germicide and to stop mildew; used in humans as a topical and urinary antiseptic and as a topical antiseptic in animals. Also known as 2-chloro-5-hydroxy-1,3-dimethylbenzene; 2-chloro-5-hydroxy-*meta*-xylene; chloroxylenol; 2-chloro-*meta*-xylenol; parachlorometaxylenol.

chlorphenol red *See* chlorophenol red.

chlorpromazine [PHARM] $C_{17}H_{19}ClN_2S$ A gray-white, crystalline compound used as a sedative and in preventing or relieving nausea and vomiting.

chlorpropamide [PHARM] $C_3H_7NHCONHSO_2C_6H_4Cl$ A crystalline compound with a melting point of 127–129°C; soluble in alcohol; used in the treatment of diabetes.

chlorpropham [ORG CHEM] $C_{10}H_{12}NO_2Cl$ A tan solid with a melting point of 38–39°C; used as a preemergence herbicide for fruit and vegetable crops. Also known as isopropyl-*meta*-chlorocarbanilate.

chlorpyrifos [ORG CHEM] $C_9H_{11}Cl_3NO_3PS$ A white, granular, crystalline compound with a melting point of 41–43°C; used as an insecticide in the home and on turf and ornamental flowers. Also known as *O,O*-diethyl-*O*-(3,5,6-trichloro-2-pyridyl)phosphorothioate.

chlortetracycline [MICROBIO] $C_{22}H_{23}O_8N_2Cl$ Yellow, crystalline, broad-spectrum antibiotic produced by a strain of *Streptomyces aureofaciens*.

chlorthiamid [ORG CHEM] $C_7H_5Cl_2NS$ An off-white, crystalline compound with a melting point of 151–152°C; used as a herbicide for selective weed control in industrial sites. Also known as 2,6-dichlorothiobenzamide.

chlorzoxazone [PHARM] $C_7H_4ClNO_2$ Crystals with a melting point of 191–191.5°C; soluble in aqueous solutions of alkali hydroxides and in ammonia; used as a skeletal muscle relaxant. Also known as 5-chlorobenzoxazolidone; 5-chlorobenzoxazolin-2-one; 5-chloro-2-hydroxybenzoxazole; 2-hydroxy-5-chlorobenzoxazole.

choana [ANAT] A funnel-shaped opening, especially the posterior nares. [INV ZOO] A protoplasmic collar surrounding the basal ends of the flagella in certain flagellates and in the choanocytes of sponges.

choanate fish [PALEON] Any of the lobefins composing the subclass Crossopterygii.

Choanichthyes [VERT ZOO] An equivalent name for the Sarcopterygii.

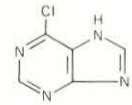
choanocyte [INV ZOO] Any of the choanate, flagellate cells lining the cavities of a sponge. Also known as collar cell.

Choanoflagellida [INV ZOO] An order of single-celled or colonial, colorless flagellates in the class Zoomastigophorea; distinguished by a thin protoplasmic collar at the anterior end.

choanosome [INV ZOO] The inner layer of a sponge; composed of choanocytes.

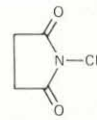
chock [MIN ENG] A square pillar for supporting the roof in a mine, constructed of prop timber laid up in alternate cross

6-CHLOROPURINE



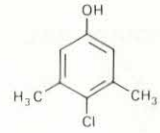
Structural formula.

N-CHLOROSUCCINIMIDE



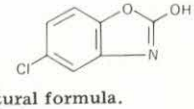
Structural formula.

4-CHLORO-3,5-XYLENOL



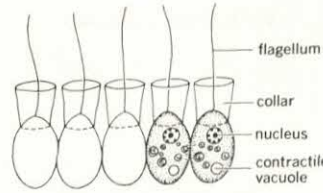
Structural formula.

CHLORZOXAZONE



Structural formula.

CHOANOFLAGELLIDA



A linear colony of the choanoflagellate *Desmarella moniliformis*. *(After McCracken)*

layers, in log-cabin style, the center being filled with waste. [NAV ARCH] **1.** An open or closed metal fitting through which ropes, wires, or cables are passed. **2.** A block or wedge for supporting a boat that is being repaired.

chockablock [NAV ARCH] Also known as block and block. **1.** Brought close together, especially in reference to two blocks of tackle. **2.** Hoisted all the way up.

chocolate gale *See* chocolatero.

chocolate liquor [FOOD ENG] In chocolate manufacture, the liquid coming from the dried cocoa nibs during the grinding process.

chocolatero [METEOROL] A moderate norther in the Gulf region of Mexico. Also known as chocolate gale.

chocolate spot [PL PATH] A fungus disease of legumes caused by species of *Botrytis* and characterized by brown spots on leaves and stems, with withering of shoots.

chocolate tree *See* cacao.

Choeropotamidae [PALEON] A family of extinct palaeodont artiodactyls in the superfamily Entelodontoidae.

choke [ELEC] An inductance used in a circuit to present a high impedance to frequencies above a specified frequency range without appreciably limiting the flow of direct current. Also known as choke coil. [ELECTROMAG] A groove or other discontinuity in a waveguide surface so shaped and dimensioned as to impede the passage of guided waves within a limited frequency range. [MECH ENG] **1.** To increase the fuel feed to an internal combustion engine through the action of a choke valve. **2.** *See* choke valve. [ORD] A narrowing toward the muzzle in the bore of gun, hence the choked bore; often applied to shotguns. [PETRO ENG] A removable nipple inserted in a flow line to control oil or gas flow.

choke coil *See* choke.

choke coupling [ELECTROMAG] Coupling between two parts of a waveguide system that are not in direct mechanical contact with each other.

choke crushing [MIN ENG] A recrushing of fine ore.

chokedamp *See* blackdamp

choked disk *See* papilledema.

choked flow [FL MECH] Flow in a duct or passage such that the flow upstream of a certain critical section cannot be increased by a reduction of downstream pressure.

choked neck [DES ENG] Container neck which has a narrowed or constricted opening.

choke filter *See* choke input filter.

choke flange [ELECTROMAG] A waveguide flange having in its mating surface a slot (choke) so shaped and dimensioned as to restrict leakage of microwave energy within a limited frequency range.

choke input filter [ELEC] A power-supply filter in which the first filter element is a series choke. Also known as choke filter.

choke joint [ELECTROMAG] A connection between two waveguides that uses two mating choke flanges to provide effective electrical continuity without metallic continuity at the inner walls of the waveguide.

choke piston [ELECTROMAG] A piston in which there is no metallic contact with the walls of the waveguide at the edges of the reflecting surface; the short circuit for high-frequency currents is achieved by a choke system. Also known as noncontacting piston; noncontacting plunger.

choke ring [ORD] Metal ring used in the reaction chambers of certain recoilless weapons to control gas escape; the same function is carried out by throat rings, throat blocks, and restricting plugs in other types of recoilless weapons.

choke valve [MECH ENG] A valve which supplies the higher suction necessary to give the excess fuel feed required for starting a cold internal combustion engine. Also known as choke.

choking [FL MECH] The condition prevailing in compressible fluid flow when the upper limit of mass flow is reached, or when the speed of sound is reached in a duct.

choking gas [ORD] Casualty gas which causes irritation and inflammation of the bronchial tubes and lungs; for example, phosgene.

choking Mach number [FL MECH] The Mach number at some reference point in a duct or passage (for example, at the inlet) at which the flow in the passage becomes choked.

cholagogic [PHYSIO] Inducing the flow of bile.

cholaic acid *See* taurocholic acid.

cholane [BIOCHEM] $C_{24}H_{42}$ A tetracyclic hydrocarbon which may be considered as the parent substance of sterols, hormones, bile acids, and digitalis aglycons.

cholangiogram [MED] The x-ray film produced by means of cholangiography.

cholangiography [MED] Roentgenography of the bile ducts.

cholangiolitis [MED] Inflammation of the bile capillaries.

cholangioma [MED] Adenocarcinoma of the bile ducts.

cholangitis [MED] Inflammation of the bile ducts.

cholate [BIOCHEM] Any salt of cholic acid.

cholecalciferol [PHARM] $C_{27}H_{44}O$ Colorless crystals with a melting range of 84–88°C; soluble in alcohol, chloroform, and fatty oils; derived from the vitamin D_3 of tuna liver oil and used as an antirachitic vitamin. Also known as vitamin D_3.

cholecystectomy [MED] Surgical removal of the gallbladder and cystic duct.

cholecystitis [MED] Inflammation of the gallbladder.

cholecystography [MED] Radiography of the gallbladder following injection or ingestion of a radiopaque substance excreted in bile. Also known as Graham-Cole test.

cholecystokinin [BIOCHEM] A hormone produced by the mucosa of the upper intestine which stimulates contraction of the gallbladder.

cholecystostomy [MED] The establishment of an opening into the gallbladder, usually for external drainage of its contents.

choledochoduodenal junction [ANAT] The point where the common bile duct enters the duodenum.

choledocholithiasis [MED] The presence of calculi in the common bile duct.

choledochostomy [MED] The draining of the common bile duct through the abdominal wall.

choleglobin [BIOCHEM] Combined native protein (globin) and open-ring iron-porphyrin, which is bile pigment hemoglobin; a precursor of biliverdin.

cholelithiasis [MED] The production of or the condition associated with gallstones in the gallbladder or bile ducts.

cholera [MED] **1.** An acute, infectious bacterial disease of humans caused by *Vibrio comma;* characterized by diarrhea, delirium, stupor, and coma. **2.** Any condition characterized by profuse vomiting and diarrhea.

cholera morbus [MED] An acute, severe gastroenteritis.

cholera vibrio [MICROBIO] *Vibrio comma,* the bacterium that causes cholera.

cholerophobia [PSYCH] Abnormal fear of cholera.

cholesteatoma [MED] An epidermal inclusion cyst of the middle ear, or mastoid bone, sometimes in the external ear canal, brain, or spinal cord. Also known as pearly tumor.

cholesteric material [PHYS CHEM] A liquid crystal material in which the elongated molecules are parallel to each other within the plane of a layer, but the direction of orientation is twisted slightly from layer to layer to form a helix through the layers.

cholesterol [BIOCHEM] $C_{27}H_{46}O$ A sterol produced by all vertebrate cells, particularly in the liver, skin, and intestine, and found most abundantly in nerve tissue.

cholic acid [BIOCHEM] $C_{24}H_{40}O_5$ An unconjugated, crystalline bile acid.

choline [BIOCHEM] $C_5H_{15}O_2N$ A basic hygroscopic substance constituting a vitamin of the B complex; used by most animals as a precursor of acetylcholine and a source of methyl groups.

choline chloride carbamate *See* carbachol.

cholinergic [PHYSIO] Liberating, activated by, or resembling the physiologic action of acetylcholine.

cholinergic nerve [PHYSIO] Any nerve, such as autonomic preganglionic nerves and somatic motor nerves, that releases a cholinergic substance at its terminal points.

cholinesterase [BIOCHEM] An enzyme found in blood and in various other tissues that catalyzes hydrolysis of choline esters, including acetylcholine. Abbreviated chE.

choline succinate dichloride dihydrate *See* succinylcholine chloride.

choluria [MED] The presence of bile in the urine.

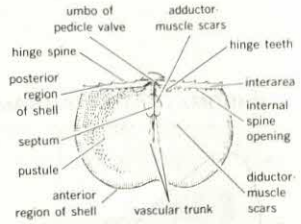
cholytaurine *See* taurocholic acid.

Chondrichthyes [VERT ZOO] A class of vertebrates comprising the cartilaginous, jawed fishes characterized by the absence of true bone.

chondrification [PHYSIO] Formation of or conversion into cartilage.

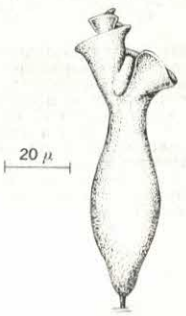
chondrin [BIOCHEM] A horny gelatinous protein substance obtainable from the collagen component of cartilage.
chondriome [CYTOL] Referring collectively to the chondriosomes (mitochondria) of a cell as a functional unit.
chondriosome [CYTOL] Any of a class of self-perpetuating lipoprotein complexes in the form of grains, rods, or threads in the cytoplasm of most cells; thought to function in cellular metabolism and secretion.
chondrite [GEOL] A stony meteorite containing chondrules.
chondroblast [HISTOL] A cell that produces cartilage.
Chondrobrachii [VERT ZOO] The equivalent name for Ateleopoidei.
chondroclast [HISTOL] A cell that absorbs cartilage.
chondrocranium [ANAT] The part of the adult cranium derived from the cartilaginous cranium. [EMBRYO] The cartilaginous, embryonic cranium of vertebrates.
chondrocyte [HISTOL] A cartilage cell.
chondrodendrin *See* bebeerine.
chondrodite [MINERAL] $Mg_5(SiO_4)_2(F,OH)_2$ A monoclinic mineral of the humite group; has a resinous luster, is yellow-red in color, and occurs in contact-metamorphosed dolomites.
chondrodysplasia *See* enchondromatosis.
chondrodystrophy fetalis *See* achondroplasia.
chondrogenesis [EMBRYO] The development of cartilage.
chondroitin [BIOCHEM] A nitrogenous polysaccharide occurring in cartilage in the form of condroitinsulfuric acid.
chondrology [ANAT] The anatomical study of cartilage.
chondroma [MED] A benign tumor of bone, cartilage, or other tissue which simulates the structure of cartilage in its growth.
chondromalacia [MED] Softening of a cartilage.
chondromucoid [BIOCHEM] A mucoid found in cartilage; a glycoprotein in which chondroitinsulfuric acid is the prosthetic group.
Chondromyces [MICROBIO] A genus of bacteria in the family Polyangiaceae; sporangia are stalked, and vegetative cells are short rods or spheres.
chondrophone [INV ZOO] In bivalve mollusks, a structure or cavity supporting the internal hinge cartilage.
Chondrophora [INV ZOO] A suborder of polymorphic, colonial, free-floating coelenterates of the class Hydrozoa.
chondroprotein [BIOCHEM] A protein (glycoprotein) occurring normally in cartilage.
chondrosarcoma [MED] A malignant tumor of cartilage.
chondroskeleton [ANAT] **1.** The parts of the bony skeleton which are formed from cartilage. **2.** Cartilaginous parts of a skeleton. [VERT ZOO] A cartilaginous skeleton, as in Chondrostei.
Chondrostei [PALEON] The most archaic infraclass of the subclass Actinopterygii, or rayfin fishes.
Chondrosteidae [PALEON] A family of extinct actinopterygian fishes in the order Acipenseriformes.
chondrule [GEOL] A spherically shaped body consisting chiefly of pyroxene or olivine minerals embedded in the matrix of certain stony meteorites.
Chonetidina [PALEON] A suborder of extinct articulate brachiopods in the order Strophomenida.
Chonotrichida [INV ZOO] A small order of vase-shaped ciliates in the subclass Holotrichia; commonly found as ectocommensals on marine crustaceans.
chopper [ENG] Any knife, axe, or mechanical device for chopping or cutting an object into segments. [PHYS] A device for interrupting an electric current, beam of light, or beam of infrared radiation at regular intervals, to permit amplification of the associated electrical quantity or signal by an alternating-current amplifier; also used to interrupt a continuous stream of neutrons to measure velocity.
chopper amplifier [ELECTR] A carrier amplifier in which the direct-current input is filtered by a low-pass filter, then converted into a square-wave alternating-current signal by either one or two choppers.
chopper-stabilized amplifier [ELECTR] A direct-current amplifier in which a direct-coupled amplifier is in parallel with a chopper amplifier.
chopper transistor [ELECTR] A bipolar or field-effect transistor operated as a repetitive "on/off" switch to produce square-wave modulation of an input signal.
chopping [ELECTR] The removal, by electronic means, of one or both extremities of a wave at a predetermined level. [PHYS] The act of interrupting an electric current, beam of light, beam of infrared radiation, or stream of neutrons at regular intervals.
chopping bit [MECH ENG] A steel bit with a chisel-shaped cutting edge, attached to a string of drill rods to break up, by impact, boulders, hardpan, and a lost core in a drill hole. Also known as chisel bit.
choppy sea [OCEANOGR] In popular usage, short, rough, irregular wave motion on a sea surface.
chop-type feeder [MECH ENG] Device for semicontinuous feed of solid materials to a process unit, with intermittent opening and closing of a hopper gate (bottom closure) by a control arm actuated by an eccentric cam.
chord [ACOUS] A combination of two or more tones. [AERO ENG] **1.** A straight line intersecting or touching an airfoil profile at two points. **2.** Specifically, that part of such a line between two points of intersection. [CIV ENG] The top or bottom, generally horizontal member of a truss. [MATH] A line segment which intersects a curve or surface only at the endpoints of the segment.
chordal thickness [DES ENG] The tangential thickness of a tooth on a circular gear, as measured along a chord of the pitch circle.
chordamesoderm [EMBRYO] The portion of the mesoderm in the chordate embryo from which the notochord and related structures arise, and which induces formation of ectodermal neural structures.
Chordata [ZOO] The highest phylum in the animal kingdom, characterized by a notochord, nerve cord, and gill slits; includes the urochordates, lancelets, and vertebrates.
chord length [AERO ENG] The length of the chord of an airfoil section between the extremities of the section.
Chordodidae [INV ZOO] A family of worms in the order Gordioidea distinguished by a rough cuticle containing thickenings called areoles.
chordoma [MED] A rarely malignant tumor derived from persistent remnants of the notochord.
chordotomy [MED] Surgical division of a spinal nerve tract to relieve severe intractable pain.
chorea [MED] A nervous disorder seen as part of a syndrome following an organic dysfunction or an infection and characterized by irregular, involuntary movements of the body, especially of the face and extremities.
choreiform syndrome [MED] A complex of symptoms representing a form or component of minimal brain dysfunction in children, manifested by twitching movements of the face, trunk, and extremities.
chorioadenoma [MED] A tumor intermediate in malignancy between a hydatidiform mole and choriocarcinoma.
chorioallantois [EMBRYO] A vascular fetal membrane that is formed by the close association or fusion of the chorion and allantois.
choriocarcinoma [MED] A highly malignant tumor derived from chorionic tissue; found most commonly in the uterus and testis. Also known as chorioepithelioma.
chorioepithelioma *See* choriocarcinoma.
chorion [EMBRYO] The outermost of the extraembryonic membranes of amniotes, enclosing the embryo and all of its other membranes.
chorionic adenoma [MED] A benign tumor of the placenta.
chorionic gonadotropin *See* human chorionic gonadotropin.
chorionitis *See* scleroderma.
chorioretinal [ANAT] Pertaining to the choroid and retina of the eye.
chorioretinitis [MED] Inflammation of the choroid and retina of the eye.
choripetalous *See* polypetalous.
chorisepalous *See* polysepalous.
chorisis [BOT] Separation of a leaf or floral part into two or more parts during development.
chorismite [PETR] A mixed rock whose fabric is macropolyschematic and which consists of petrologically dissimilar materials of varied origins.
Choristida [INV ZOO] An order of sponges in the class Demospongiae in which at least some of the megascleres are tetraxons.
Choristodera [PALEON] A suborder of extinct reptiles of the order Eosuchia composed of a single genus, *Champsosaurus*.
C horizon [GEOL] The portion of the parent material in soils which has been penetrated with roots.

CHONETIDINA



Neochonetes showing features of the pedicle valve.

CHONOTRICHIDA



Spirochona, an example of a chonotrichid.

CHOPPER AMPLIFIER

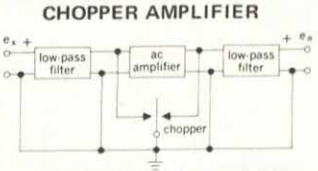


Diagram of chopper amplifier.

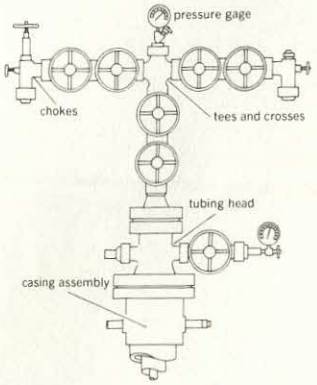
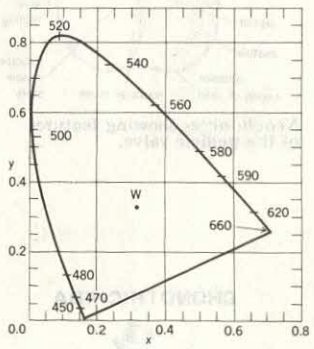
CHRISTMAS TREE



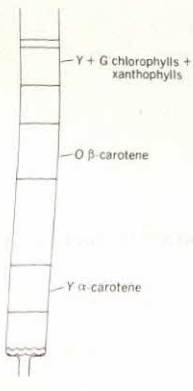
Typical layout of a Christmas tree.

CHROMATICITY DIAGRAM



International Committee on Illumination chromaticity diagram. The wavelengths of the visible spectrum in units of 10^{-9} meter are indicated along the curve. W represents a white composed of equal amounts of the three primaries. *(Adapted from A. C. Hardy, ed., Handbook of Colorimetry, copyright 1936 by The MIT Press)*

CHROMATOGRAPHIC ADSORPTION



Separation of carotenes by adsorption on activated magnesium oxide. The solvent consists of petroleum ether plus 2% acetone. *G* signifies green; O, orange; *Y*, yellow.

chorography [MAP] All of the methods used to map a region or district.

choroid [ANAT] The highly vascular layer of the vertebrate eye, lying between the sclera and the retina.

choroiditis [MED] Inflammation of the choroid.

choroid plexus [ANAT] Any of the highly vascular, folded processes that project into the third, fourth, and lateral ventricles of the brain.

chorology [ECOL] The study of how organisms are distributed geographically.

chosen position *See* assumed position.

chrematophobia [PSYCH] An abnormal fear of money.

Christensen unit [BIOL] A unit for the standardization of streptokinase and plasmin.

Christiansen effect [ANALY CHEM] Monochromatic transparency effect when finely powdered substances, such as glass or quartz, are immersed in a liquid having the same refractive index.

Christiansen filter [OPTICS] A type of color filter, a solid-in-liquid suspension, which scatters all incident energy except that of a narrow frequency range out of the direct beam. Also known as band-pass filter.

Christmas disease [MED] A hereditary, sex-linked, hemophilia-like disease involving failure of the clotting mechanism due to a deficiency of Christmas factor.

Christmas factor [BIOCHEM] A soluble protein blood factor involved in blood coagulation. Also known as factor IX; plasma thromboplastin component (PTC).

Christmas tree [PETRO ENG] An assembly of valves, tees, crosses, and other fittings at the wellhead, used to control oil or gas production and to give access to the well tubing.

Christoffel symbols [MATH] Symbols which represent particular functions of the coefficients and their first-order derivatives of a quadratic form.

christophite *See* marmatite.

chroma [OPTICS] **1.** The dimension of the Munsell system of color that corresponds most closely to saturation, which is the degree of vividness of a hue. Also known as Munsell chroma. **2.** *See* color saturation.

chroma band-pass amplifier *See* burst amplifier.

chroma control [ELECTR] The control that adjusts the amplitude of the carrier chrominance signal fed to the chrominance demodulators in a color television receiver, so as to change the saturation or vividness of the hues in the color picture. Also known as color control; color-saturation control.

chromadizing [MET] Treating the surface of aluminum or aluminum alloys with chromic acid to improve paint adhesion.

Chromadoria [INV ZOO] A subclass of nematode worms in the class Adenophorea.

Chromadorida [INV ZOO] An order of principally aquatic nematode worms in the subclass Chromadoria.

Chromadoridae [INV ZOO] A family of soil and fresh-water, free-living nematodes in the superfamily Chromadoroidea; generally associated with algal substances.

Chromadoroidea [INV ZOO] A superfamily of small to moderate-sized, free-living nematodes with spiral, transversely ellipsoidal amphids and a striated cuticle.

chromaffin [BIOL] Staining with chromium salts.

chromaffin body *See* paraganglion.

chromaffin cell [HISTOL] Any cell of the suprarenal organs in lower vertebrates, of the adrenal medulla in mammals, of the paraganglia, or of the carotid bodies that stains with chromium salts.

chromaffin system [PHYSIO] The endocrine organs and tissues of the body that secrete epinephrine; characterized by an affinity for chromium salts.

chroma oscillator [ELECTR] A crystal oscillator used in color television receivers to generate a 3.579545-megahertz signal for comparison with the incoming 3.579545-megahertz chrominance subcarrier signal being transmitted. Also known as chrominance-subcarrier oscillator; color oscillator; color-subcarrier oscillator.

chromascope [OPTICS] An instrument used to determine the optical effects of color.

chromate [INORG CHEM] CrO_4^{2-} **1.** An ion derived from the unstable acid H_2CrO_4. **2.** A salt or ester of chromic acid. [MINERAL] A mineral characterized by the cation CrO_4^{2-}.

chromate treatment [MET] Treatment of metal with a solution of a hexavalent chromium compound to produce a protective coating of metal chromate.

Chromatiaceae [MICROBIO] A family of bacteria in the suborder Rhodospirillineae; motile cells have polar flagella, photosynthetic membranes are continuous with the cytoplasmic membrane, all except one species are anaerobic, and bacteriochlorophyll *a* or *b* is present.

chromatic [OPTICS] Relating to color.

chromatic aberration [ELECTR] An electron-gun defect causing enlargement and blurring of the spot on the screen of a cathode-ray tube, because electrons leave the cathode with different initial velocities and are deflected differently by the electron lenses and deflection coils. [OPTICS] An optical lens defect causing color fringes, because the lens material brings different colors of light to focus at different points. Also known as color aberration.

chromatic diagram *See* chromaticity diagram.

chromaticity [OPTICS] The color quality of light that can be defined by its chromaticity coordinates; depends only on hue and saturation of a color, and not on its luminance (brightness).

chromaticity coordinates [OPTICS] The fractional amounts of the *x*, *y*, and *z* primary colors, specified by the International Committee on Illumination, in a color sample; more precisely, $x = X/(X + Y + Z)$, $y = Y/(X + Y + Z)$, $z = Z/(X + Y + Z)$, where X, Y, and Z are the integrals over wavelength λ of the product of the amount of light emerging from the sample per unit wavelength, and the tristimulus values, $\bar{x}(\lambda)$, $\bar{y}(\lambda)$, and $\bar{z}(\lambda)$ respectively.

chromaticity diagram [OPTICS] A triangular graph for specifying colors, whose ordinate is the *y* chromaticity coordinate and whose abscissa is the *x* chromaticity coordinate; the apexes of the triangle represent primary colors. Also known as chromatic diagram.

chromatic mineral [MINERAL] A mineral with color.

chromatic number [MATH] For a specified surface, the smallest number *n* such that for any decomposition of the surface into regions the regions can be colored with *n* colors in such a way that no two adjacent regions have the same color.

chromatic parallax [OPTICS] A type of optical parallax that arises from the dependence of the position of the focal plane on the wavelength of light.

chromatic resolving power [OPTICS] The difference between two equally strong spectral lines that can barely be separated by a spectroscopic instrument, divided into the average wavelength of these two lines; for prisms and gratings Rayleigh's criteria are used, and the term is defined as the width of the emergent beam times the angular dispersion.

chromatics [OPTICS] **1.** The branch of optics concerned with the properties of colors. **2.** The part of colorimetry concerned with hue and saturation.

chromatic sensitivity [OPTICS] The smallest change in wavelength of light that produces a change in hue which is just large enough to be detected by human vision.

chromatic vision [PHYSIO] Vision pertaining to the color sense, that is, the perception and evaluation of the colors of the spectrum.

chromatid [CYTOL] **1.** One of the pair of strands formed by longitudinal splitting of a chromosome which are joined by a single centromere in somatic cells during mitosis. **2.** One of a tetrad of strands formed by longitudinal splitting of paired chromosomes during diplotene of meiosis.

chromatin [BIOCHEM] The deoxyribonucleoprotein complex forming the major portion of the nuclear material and of the chromosomes.

chromating [MET] Performing a chromate treatment.

Chromatium [MICROBIO] A genus of bacteria in the family Chromatiaceae; cells are ovoid to rod-shaped, are motile, do not have gas vacuoles, and contain bacteriochlorophyll *a* on vesicular photosynthetic membranes.

chromatogram [ANALY CHEM] The pattern formed by zones of separated pigments and of colorless substance in chromatographic procedures.

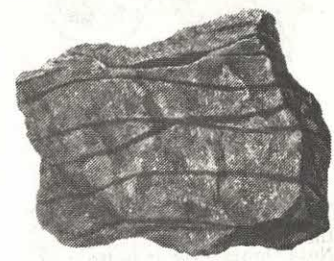
chromatograph [ANALY CHEM] To employ chromatography to separate substances.

chromatographic adsorption [ANALY CHEM] Preferential adsorption of chemical compounds (gases or liquids) in an ascending molecular-weight sequence onto a solid adsorbent material, such as activated carbon, alumina, or silica gel; used for analysis and separation of chemical mixtures.

chromatography [ANALY CHEM] A method of separating and analyzing mixtures of chemical substances by chromatographic adsorption.

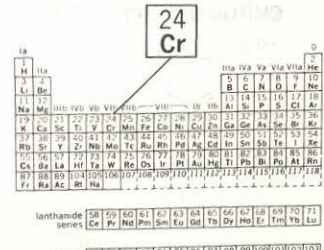
chromatophobia [PSYCH] An abnormal fear of colors.
chromatophore [HISTOL] A type of pigment cell found in the integument and certain deeper tissues of lower animals that contains color granules capable of being dispersed and concentrated.
chromatophorotrophin [BIOCHEM] Any crustacean neurohormone which controls the movement of pigment granules within chromatophores.
chromatoplasm [BOT] The peripheral protoplasm in blue-green algae containing chlorophyll, accessory pigments, and stored materials.
chromatopsia [MED] A disorder of visual sensation in which color impressions are disturbed or arise subjectively, with objects appearing as unnaturally colored or colorless objects as colored; may be caused by a disturbance of the optic centers, psychic disturbance, or drugs.
chromatoscope [OPTICS] An instrument in which light beams are used to mix color stimuli.
chromatosis [MED] A pathologic process or pigmentary disease in which there is a deposit of coloring matter in a normally unpigmented site, or an excessive deposit in a normally pigmented area.
chromatron [ELECTR] A single-gun color picture tube having color phosphors deposited on the screen in strips instead of dots. Also known as Lawrence tube.
chrome alum [INORG CHEM] $KCr(SO_4)_2 \cdot 12H_2O$ An alum obtained as purple crystals and used as a mordant, in tanning, and in photography in the fixing bath. Also known as potassium chromium sulfate.
chrome brick *See* chrome refractory.
chrome diopside [MINERAL] A bright green variety of diopside containing a small amount of Cr_2O_3.
chrome dye [CHEM] One of a class of acid dyes used on wool with a chromium compound as mordant.
chrome green *See* chromic oxide.
chrome iron ore *See* chromite.
chrome leather [MATER] A leather tanned with chromium salts and used in making shoe uppers.
chrome plating [MET] A thin plate of chromium deposited by electrolysis on a corrodible metal, giving a bright, metallic surface which is highly resistant to tarnish; used to coat automobile trimming, bathroom fixtures, and many household and other articles. Also known as chromium coating; chromium plating.
chrome red [CHEM] **1.** A pigment containing basic lead chromate. **2.** Any of several mordant acid dyes.
chrome refractory [MATER] A ceramic material made from chrome ore and used to line steel furnaces. Also known as chrome brick.
chrome spinel *See* picotite.
chrome steel *See* chromium steel.
chrome tanning [CHEM ENG] Tanning treatment of animal skin with chromium salts.
chrome-vanadium steel *See* chromium-vanadium steel.
chrome yellow [CHEM] **1.** A yellow pigment composed of normal lead chromate, $PbCrO_4$, or other lead compounds. **2.** Any of several mordant acid dyes.
chromic acid [INORG CHEM] H_2CrO_4 The hydrate of CrO_3; exists only as salts or in solution.
chromic chloride [INORG CHEM] $CrCl_3$ Crystals that are pinkish violet shimmering plates, almost insoluble in water, but easily soluble in presence of minute traces of chromous chloride; used in calico printing, as a mordant for cotton and silk.
chromic fluoride [INORG CHEM] $CrF_3 \cdot 4H_2O$ Crystals that are green, soluble in water; used in dyeing cottons.
chromic hydroxide [INORG CHEM] $Cr(OH)_3 \cdot 2H_2O$ Gray-green, gelatinous precipitate formed when a base is added to a chromic salt; the precipitate dries to a bluish, amorphous powder; prepared as an intermediate in the manufacture of other soluble chromium salts.
chromic nitrate [INORG CHEM] $Cr(NO_3)_3 \cdot 9H_2O$ Purple, rhombic crystals that are soluble in water; used as a mordant in textile dyeing.
chromic oxide [INORG CHEM] Cr_2O_3 A dark green, amorphous powder, forming hexagonal crystals on heating that are insoluble in water or acids; used as a pigment to color glass and ceramic ware and as a catalyst. Also known as chrome green.
chrominance [OPTICS] The difference between any color and a specified reference color of equal brightness; in color television, this reference color is white having coordinates $x = 0.310$ and $y = 0.316$ on the chromaticity diagram.
chrominance carrier *See* chrominance subcarrier.
chrominance-carrier reference [COMMUN] A continuous signal having the same frequency as the chrominance subcarrier in a color television system and having fixed phase with respect to the color burst; this signal is the reference with which the phase of a chrominance signal is compared for the purpose of modulation or demodulation. Also known as chrominance-subcarrier reference; color-carrier reference; color-subcarrier reference.
chrominance channel [COMMUN] Any path that is intended to carry the chrominance signal in a color television system.
chrominance demodulator [ELECTR] A demodulator used in a color television receiver for deriving the I and Q components of the chrominance signal from the chrominance signal and the chrominance-subcarrier frequency. Also known as chrominance-subcarrier demodulator.
chrominance frequency [COMMUN] The frequency of the chrominance subcarrier, equal to 3.579545 megahertz.
chrominance gain control [ELECTR] Variable resistors in red, green, and blue matrix channels that individually adjust primary signal levels in color television.
chrominance modulator [ELECTR] A modulator used in a color television transmitter to generate the chrominance signal from the video-frequency chrominance components and the chrominance subcarrier. Also known as chrominance-subcarrier modulator.
chrominance primary [COMMUN] The nonphysical color represented by either the I or Q chrominance signal component in a color television system.
chrominance signal [COMMUN] One of the two components, called the I signal and Q signal, that add together to produce the total chrominance signal in a color television system. Also known as carrier chrominance signal.
chrominance subcarrier [COMMUN] The 3.579545-megahertz carrier whose modulation sidebands are added to the monochrome signal to convey color information in a color television receiver. Also known as chrominance carrier; color carrier; color subcarrier; subcarrier.
chrominance-subcarrier demodulator *See* chrominance demodulator.
chrominance-subcarrier modulator *See* chrominance modulator.
chrominance-subcarrier oscillator *See* chroma oscillator.
chrominance-subcarrier reference *See* chrominance-carrier reference.
chrominance video signal [ELECTR] Voltage output from the red, green, or blue section of a color television camera or receiver matrix.
chromite [MINERAL] $FeCr_2O_4$ A mineral of the spinel group; crystals and pure form are rare, and it usually is massive; the only important ore mineral of chromium. Also known as chrome iron ore.
chromium [CHEM] A metallic chemical element, symbol Cr, atomic number 24, atomic weight 51.996. [MET] A blue-white, hard, brittle metal used in chrome plating, in chromizing, and in many alloys.
chromium-51 [NUC PHYS] A radioactive isotope with atomic mass 51 made by neutron bombardment of chromium; radiates gamma rays.
chromium carbide [INORG CHEM] Cr_3C_2 Orthorhombic crystals with a melting point of 1890°C; resistant to oxidation, acids, and alkalies; used for hot-extrusion dies, in spray-coating materials, and as a component for pumps and valves.
chromium chloride [INORG CHEM] A group of compounds of chromium and chloride; chromium may be in the +2, +3, or +6 oxidation state.
chromium coating *See* chrome plating.
chromium dioxide [INORG CHEM] Cr_2O_2 Black, acicular crystals; a semiconducting material with strong magnetic properties used in recording tapes.
chromium dioxide tape [ELECTR] A magnetic recording tape developed primarily to improve quality and brilliance of reproduction when used in cassettes operated at 1⅞ inches per second (4.76 centimeters per second); requires special recorders that provide high bias.
chromium-gold metallizing [ELECTR] A metal film used on a silicon or silicon oxide surface in semiconductor devices because it is not susceptible to purple plague deterioration; a

CHROMITE



Chromite veins in a peridotite sample found in Selukwe, Rhodesia. *(Specimen from Department of Geology, Bryn Mawr College)*

CHROMIUM



Periodic table of the chemical elements showing the position of chromium.

layer of chromium is applied first for adherence to silicon, then a layer of chromium-gold mixture, and finally a layer of gold to which bonding contacts can be applied.

chromium-iron alloy [MET] Any of several acid- and corrosion-resistant alloys containing chromium and iron.

chromium molybdenum steel [MET] Cast steel containing up to 1% carbon, 0.7–1.1% chromium, and 0.2–0.4% molybdenum; characterized by high strength and ductility.

chromium-nickel alloy [MET] Any of several alloys containing chromium and nickel in various proportions together with small amounts of other metals.

chromium oxide [INORG CHEM] A compound of chromium and oxygen; chromium may be in the +2, +3, or +6 oxidation state.

chromium oxychloride *See* chromyl chloride.

chromium plating *See* chrome plating.

chromium stearate [ORG CHEM] $Cr(C_{18}H_{35}O_2)_3$ A dark-green powder, melting at 95–100°C; used in greases, ceramics, and plastics.

chromium steel [MET] Hard, wear-resistant steel containing chromium as the predominating alloying element. Also known as chrome steel.

chromium-vanadium steel [MET] Any of several strong, hard alloy steels containing 0.15–0.25% vanadium, 0.50–1% chromium, and 0.45–0.55% carbon. Also known as chrome-vanadium steel.

chromizing [MET] Surface-alloying of metals in which an alloy is formed by diffusion of chromium into the base metal.

Chormobacterium [MICROBIO] A genus of gram-negative, aerobic or facultatively anaerobic, motile, rod-shaped bacteria of uncertain affiliation; they produce violet colonies and violacein, a violet pigment with antibiotic properties.

chromoblastomycosis [MED] A granulomatous skin disease caused by any of several fungi, usually *Hormodendrum pedrosoi,* and characterized by warty nodules which may ulcerate. Also known as chromomycosis.

chromocenter [CYTOL] An irregular, densely staining mass of heterochromatin in the chromosomes, with six armlike extensions of euchromatin, in the salivary glands of *Drosophila.*

chromocratic *See* melanocratic.

chromocyte [HISTOL] A pigmented cell.

chromodynamics [PARTIC PHYS] A theory of the interaction between quarks carrying color in which the quarks exchange gluons in a manner analogous to the exchange of photons between charged particles in electrodynamics.

chromogen [BIOCHEM] A pigment precursor. [MICROBIO] A microorganism capable of producing color under suitable conditions.

chromogenesis [BIOCHEM] Production of colored substances as a result of metabolic activity; characteristic of certain bacteria and fungi.

chromolipid *See* lipochrome.

chromolithography [GRAPHICS] Lithographic printing with several colors, requiring a stone for each color.

chromomere [CYTOL] Any of the linearly arranged chromatin granules in leptotene and pachytene chromosomes and in polytene nuclei.

chromometer *See* colorimeter.

chromomycin [MICROBIO] Any of five components of an antibiotic complex produced by a strain of *Streptomyces griseus;* components are designated A_1 to A_5, of which A_3 ($C_{51}H_{72}O_{32}$) is biologically active.

chromomycosis *See* chromoblastomycosis.

chromonema [CYTOL] The coiled core of a chromatid; it is thought to contain the genes.

chromophile [BIOL] Staining readily.

chromophobe [BIOL] Not readily absorbing a stain.

chromophore [CHEM] An arrangement of atoms that gives rise to color in many organic substances.

chromophyll [BIOCHEM] Any plant pigment.

chromoplasm [BOT] The pigmented, peripheral protoplasm of blue-green algae cells; contains chlorophyll, carotenoids, and phycobilins.

chromoplast [CYTOL] Any colored cell plastid, excluding chloroplasts.

chromoprotein [BIOCHEM] Any protein, such as hemoglobin, with a metal-containing pigment.

chromoradiometer [ENG] A radiation meter that uses a substance whose color changes with x-ray dosage.

chromoscope [OPTICS] An instrument for analyzing color values and intensities.

chromosomal hybrid sterility [GEN] Sterility caused by inability of homologous chromosomes to pair during meiosis due to a chromosome aberration.

chromosome [CYTOL] Any of the complex, threadlike structures seen in animal and plant nuclei during karyokinesis which carry the linearly arranged genetic units.

chromosome aberration [GEN] Modification of the normal chromosome complement due to deletion, duplication, or rearrangement of genetic material.

chromosome complement [GEN] The species-specific, normal diploid set of chromosomes in somatic cells.

chromosome map *See* genetic map.

chromosome puff [CYTOL] Chromatic material accumulating at a restricted site on a chromosome; thought to reflect functional activity of the gene at that site during differentiation.

chromosome walking [GEN] Sequential isolation of overlapping molecular clones in order to span large intervals on the chromosome.

chromosphere [ASTRON] A transparent, tenuous layer of gas that rests on the photosphere in the atmosphere of the sun.

chromotropic acid [ORG CHEM] $C_{10}H_8O_8S_2$ White, needlelike crystals that are soluble in water; used as an analytical reagent and azo dye intermediate. Also known as 1,8-dihyroxynaphthalene-3,6-disulfonic acid.

chromyl chloride [INORG CHEM] CrO_2Cl_2 A dark-red, toxic, fuming liquid that boils at 116°C; reacts with water to form chromic acid; used to make dyes and chromium complexes. Also known as chlorochromic anhydride; chromium oxychloride.

chron [GEOL] The time unit equivalent to the stratigraphic unit, subseries, and geologic name of a division of geologic time.

chronaxie [PHYSIO] The time interval required to excite a tissue by an electric current of twice the galvanic threshold.

chronic [MED] Long-continued; of long duration.

chronic alcoholism [MED] Excessive consumption of alcohol over a prolonged period of time.

chronic appendicitis [MED] Inflammation of the vermiform appendix characterized by recurring attacks of right-sided abdominal pain over an extended period of time.

chronic carrier [MED] A person who harbors and transmits an infectious agent for an indefinite period.

chronic catarrhal enteritis [MED] Inflammation of the intestinal tract associated with vascular congestion, mucosal edema, and increased outpouring of mucus in the intestinal lumen.

chronic glomerulonephritis [MED] Diffuse inflammation of the glomeruli over a prolonged period of time; characterized by progressive fibrosis and associated with hypertension and uremia.

chronic granulomatosis [MED] A disorder of the phagocytes in which they ingest bacteria normally but fail to kill them; disease is usually fatal due to overwhelming bacterial infection.

chronic hyperplastic perihepatitis *See* polyserositis.

chronic infectious arthritis *See* rheumatoid arthritis.

chronic leukemia [MED] A leukemia in which the life expectancy is prolonged; leukemias are classified as to acute or chronic, and according to the predominant cell type; the life expectancy is highly variable depending on the latter.

chronic myeloid leukemia [MED] A form of leukemia in which immature granulocytes are predominant and the life expectancy is 1–20 years or more.

chronic rhinitis [MED] Inflammation of the nasal mucous membrane due to repeated attacks of acute rhinitis; associated with membrane hypertrophy and later atrophy.

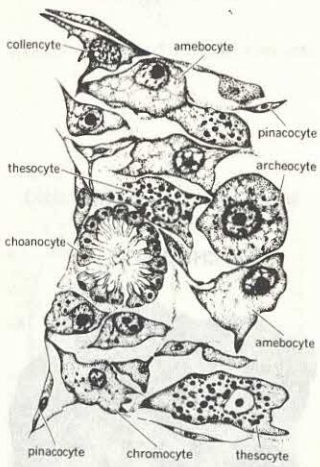
chronistor [ELECTR] A subminiature elapsed-time indicator that uses electroplating principles to totalize operating time of equipment up to several thousand hours.

chronoamperometry [ANALY CHEM] Electroanalysis by measuring at a working electrode the rate of change of current versus time during a titration; the potential is controlled.

chronocline [PALEON] A cline shown by successive morphological changes in the members of a related group, such as a species, in successive fossiliferous strata.

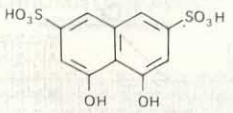
chronocyclegraph [IND ENG] A device used in micromotion studies to record a complete work cycle by taking still pictures with long exposures, the motion paths being traced by

CHROMOCYTE



Cell types found in a fresh-water sponge as seen in a cross section through the interior of the sponge. Note chromocyte at bottom of tissue. *(After Meewis, 1936)*

CHROMOTROPIC ACID



Structural formula.

small electric lamps fastened to the worker's hands or fingers; time is obtained by interrupting the light circuits by applying a controlled frequency which produces dots on the film.

chronograph [ENG] An instrument used to register the time of an event or graphically record time intervals such as the duration of an event.

chronolith *See* time-stratigraphic unit.

chronolithologic unit *See* time-stratigraphic unit.

chronology [SCI TECH] The arrangement of data in order of time of appearance.

chronometer [HOROL] **1.** Any extremely accurate watch. **2.** A large, strongly built timepiece that beats half seconds and is especially designed for precise timekeeping on ships at sea.

chronometer time [HOROL] The hour of the day as indicated by a chronometer, generally set approximately to Greenwich mean time; unless the chronometer has a 24-hour dial, chronometer time is usually expressed on a 12-hour cycle and labeled A.M. or P.M.

chronometric data [ENG] Data in which the desired quantity is the time of occurrence of an event or the time interval between two or more events.

chronometric encoder [ELECTR] An encoder that uses an electronic counter to time or count electrical events and deliver in digital form a number equivalent to the input magnitude.

chronometric radiosonde [ENG] A radiosonde whose carrier wave is switched on and off in such a manner that the interval of time between the transmission of signals is a function of the magnitude of the meteorological elements being measured.

chronometric tachometer [ENG] A tachometer which repeatedly counts the revolutions during a fixed interval of time and presents the average speed during the last timed interval.

chronometry [HOROL] **1.** The science of measuring time. **2.** The measurement of time by a chronometer.

chronopher [ELECTR] Instrument for emitting standard time signal impulses from a standard clock or timing device.

chronopotentiometry [ANALY CHEM] Electroanalysis based on the measurement at a working electrode of the rate of change in potential versus time; the current is controlled.

chronoscope [HOROL] An electronic instrument used for measuring extremely short intervals of time, such as the time of passage of a rifle bullet between two points.

chronostratic unit *See* time-stratigraphic unit.

chronostratigraphic unit *See* time-stratigraphic unit.

chronothermometer [ENG] A thermometer consisting of a clock mechanism whose speed is a function of temperature; automatically calculates the mean temperature.

chronotron [ELECTR] A device that measures millimicrosecond time intervals between pulses on a transmission line to determine the time between the events which initiated the pulses.

Chroococcales [BOT] An order of blue-green algae (Cyanophyceae) that reproduce by cell division and colony fragmentation only.

Chryomyidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

chrysazin *See* 1,8-dihyroxyanthraquinone.

chrysene [ORG CHEM] $C_{18}H_{12}$ An organic, polynuclear hydrocarbon which when pure gives a bluish fluorescence; a component of short afterglow or luminescent paint.

Chrysididae [INV ZOO] The cuckoo wasps, a family of hymenopteran insects in the superfamily Bethyloidea having brilliant metallic blue and green bodies.

chrysoberyl [MINERAL] $BeAl_2O_4$ A pale green, yellow, or brown mineral that crystallizes in the orthorhombic system and is found most commonly in pegmatite dikes; used as a gem. Also known as chrysopal; gold beryl.

chrysocarpous [BOT] Bearing yellow fruits.

Chrysochloridae [PALEON] The golden moles, a family of extinct lipotyphlan mammals in the order Insectivora.

chrysocolla [MINERAL] $CuSiO_3 \cdot 2H_2O$ A silicate mineral ordinarily occurring in impure cryptocrystalline crusts and masses with conchoidal fracture; a minor ore of copper; luster is vitreous, and color is normally emerald green to greenish-blue.

chrysoidine [ORG CHEM] $C_6H_5NNC_6H_3(NH_2)_2 \cdot HCl$ Large, black crystals or a red-brown powder that melts at 117°C; soluble in water and alcohol; used as an orange dye for silk and cotton. Also known as *meta*-diaminoazobenzene hydrochloride.

chrysolite [MINERAL] **1.** A gem characterized by light-yellowish-green hues, especially the gem varieties of olivine, but also including beryl, topaz, and spinel. **2.** A variety of olivine having a magnesium to magnesium-iron ratio of 0.90–0.70.

Chrysomelidae [INV ZOO] The leaf beetles, a family of coleopteran insects in the superfamily Chrysomeloidea.

Chrysomeloidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.

Chrysomonadida [INV ZOO] An order of yellow to brown, flagellated colonial protozoans of the class Phytamastigophorea.

Chrysomonadina [INV ZOO] The equivalent name for the Chrysomonadida.

chrysopal *See* chrysoberyl.

Chrysopetalidae [INV ZOO] A small family of scale-bearing polychaete worms belonging to the Errantia.

chrysophanic acid [ORG CHEM] $C_{15}H_{10}O_4$ Yellow leaves that melt at 196°C; soluble in ether, chloroform, and hot alcohol; extracted from senna leaves and rhubarb root; used in medicine as a mild laxative.

Chrysophyceae [BOT] Golden-brown algae making up a class of fresh- and salt-water unicellular forms in the division Chrysophyta.

Chrysophyta [BOT] The golden-brown algae, a division of plants with a predominance of carotene and xanthophyll pigments in addition to chlorophyll.

chrysoprase [MINERAL] An apple-green variety of chalcedony that contains nickel; used as a gem. Also known as green chalcedony.

chrysotherapy [MED] The use of gold compounds in the treatment of disease.

chrysotile [MINERAL] $Mg_3Si_2O_5(OH)_4$ A fibrous form of serpentine that constitutes one type of asbestos.

Chthamalidae [INV ZOO] A small family of barnacles in the suborder Thoracica.

CHU *See* centigrade heat unit.

CHU_{mean} *See* centigrade heat unit.

chubasco [METEOROL] A severe thunderstorm with vivid lightning and violent squalls coming from the land on the west coast of Nicaragua and Costa Rica in Central America.

Chubb [GEOL] A meteorite crater in Ungava, Quebec, Canada.

chuck [DES ENG] A device for holding a component of an instrument rigid, usually by means of adjustable jaws or set screws, such as the workpiece in a metalworking or woodworking machine, or the stylus or needle of a phonograph pickup. [MET] A small bar between flask bars to secure the sand in the upper box (cope) of a flask.

chucking [MECH ENG] The grasping of an outsize workpiece in a chuck or jawed device in a lathe.

chucking lug [MET] A projection forged or cast onto a piece of metal that functions as a location marker when the work is being machined.

chucking machine [MECH ENG] A lathe or grinder in which the outsize workpiece is grasped in a chuck or jawed device.

chuffing *See* chugging.

Chugaev reaction [ORG CHEM] The thermal decomposition of methyl esters of xanthates to yield olefins without rearrangement.

chugging [AERO ENG] Also known as bumping; chuffing. **1.** A form of combustion instability in a rocket engine, characterized by a pulsing operation at a fairly low frequency, sometimes defined as occurring between particular frequency limits. **2.** The noise that is made in this kind of combustion. [NUCLEO] An instability in a water-moderated reactor in which the formation of steam bubbles in the core and their subsequent collapse cause oscillations in the reactivity.

churada [METEOROL] A severe rain squall in the Mariana Islands (western Pacific Ocean) during the northeast monsoon; these squalls occur from November to April or May, but especially from January through March.

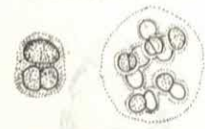
churchite *See* weinschenkite.

Church-Rosser theorem [MATH] If for a lambda expression there is a terminating reduction sequence yielding a reduced form B, then the leftmost reduction sequence will yield a reduced form that is equivalent to B up to renaming.

Church's thesis [MATH] The claim that a function is computable in the intuitive sense if and only if it is computable by a Turing machine. Also known as Turing's thesis.

churn drill [MECH ENG] Portable drilling equipment, with drilling performed by a heavy string of tools tipped with a blunt-edge chisel bit suspended from a flexible cable, to which a

CHROOCOCCALES



Examples of *Chroococcus*. *(From E. N. Transeau, H. C. Sampson, and L. H. Tiffany, Textbook of Botany, rev. ed., Harper and Row, 1953)*

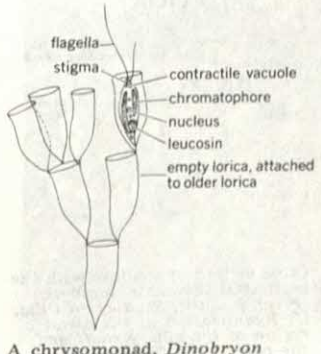
CHRYSOBERYL

Chrysoberyl crystals in pegmatite, Greenwood, Maine. *(Specimen from Department of Geology, Bryn Mawr College)*

CHRYSOMELIDAE

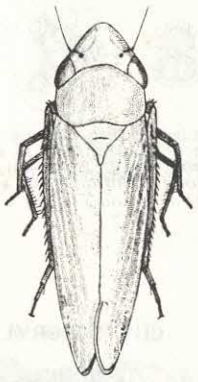
A leaf beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

CHRYSOMONADIDA



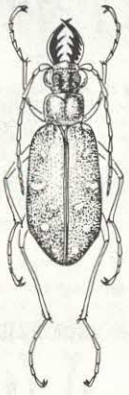
A chrysomonad, *Dinobryon sertularia*; cells measure 30–40 micrometers.

CICADELLIDAE



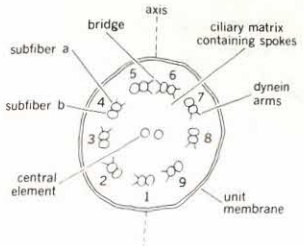
A cicadellid, dorsal view.

CICINDELIDAE



A tiger beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

CILIA



Cross section of a cilium with the peripheral filaments numbered. *(From P. Satir, Studies on Cilia, II: Examination of the distal region of the ciliary shaft and the role of the filaments in motility, J. Cell Biol, 26:805–834, 1965)*

reciprocating motion is imparted by its suspension from an oscillating beam or sheave, causing the bit to be raised and dropped. Also known as American system drill; cable-system drill.

churn hole *See* pothole.

churning [FOOD ENG] A mechanical mixing process used to separate the fat phase from a fat-water system; universally used in the manufacture of butter.

churn shot drill [MECH ENG] A boring rig with both churn and shot drillings.

chute [ENG] A conduit for conveying free-flowing materials at high velocity to lower levels. [HYD] A short channel across a narrow land area which bypasses a bend in a river; formed by the river's breaking through the land.

chute blades [COMPUT SCI] Thin metal bands which form channels to the various pockets of a sorter.

chute conveyor *See* jigging conveyor.

chute spillway [CIV ENG] A spillway in which the water flow passes over a crest into a sloping, lined, open channel; used for earth and rock-fill dams.

chute system [MIN ENG] A method of mining by which ore is broken from the surface downward into chutes and is removed through passageways below. Also known as glory hole system; milling system.

Chworinov rule [MET] The postulation that total freezing time for a casting is a function of the ratio of volume to surface area.

chyle [PHYSIO] Lymph containing emulsified fat, present in the lacteals of the intestine during digestion of ingested fats.

chylomicron [BIOCHEM] One of the extremely small lipid droplets, consisting chiefly of triglycerides, found in blood after ingestion of fat.

chylophyllous [BOT] Having succulent or fleshy leaves.

chylothorax [MED] An accumulation of chyle in the pleural cavity.

chyluria [MED] The presence of chyle or lymph in the urine, usually caused by a fistulous communication between the urinary and lymphatic tracts or by lymphatic obstruction.

chyme [PHYSIO] The semifluid, partially digested food mass that is expelled into the duodenum by the stomach.

chymosin *See* rennin.

chymotrypsin [BIOCHEM] A proteinase in the pancreatic juice that clots milk and hydrolyzes casein and gelatin.

chymotrypsinogen [BIOCHEM] An inactive proteolytic enzyme of pancreatic juice; converted to the active form, chymotrypsin, by trypsin.

Chytridiales [MYCOL] An order of mainly aquatic fungi of the class Phycomycetes having a saclike to rhizoidal thallus and zoospores with a single posterior flagellum.

Chytridiomycetes [MYCOL] A class of true fungi.

Ci *See* cirrus cloud; curie.

CI *See* color index; cropping index; temperature humidity index.

C.I. *See* cast iron.

cibarium [INV ZOO] In insects, the space anterior to the mouth cavity in which food is chewed.

cibophobia [PSYCH] An abnormal aversion to food.

Cicadellidae [INV ZOO] Large family of homopteran insects belonging to the series Auchenorrhyncha; includes leaf hoppers.

Cicadidae [INV ZOO] A family of large homopteran insects belonging to the series Auchenorrhyncha; includes the cicadas.

cicatrix [BIOL] A scarlike mark, usually caused by previous attachment of a part or organ. [MED] The connective-tissue scar formed at the site of a healing wound.

Cichlidae [VERT ZOO] The cichlids, a family of perciform fishes in the suborder Percoidei.

Cicindelidae [INV ZOO] The tiger beetles, a family of coleopteran insects in the suborder Adephaga.

Ciconiidae [VERT ZOO] The tree storks, a family of wading birds in the order Ciconiiformes.

Ciconiiformes [VERT ZOO] An order of predominantly long-legged, long-necked birds, including herons, storks, ibises, spoonbills, and their relatives.

CID *See* charge-injection device.

Cidaroida [INV ZOO] An order of echinoderms in the subclass Perischoechinoidea in which the ambulacra comprise two columns of simple plates.

CID disease *See* combined immunological deficiency disease.

Ciereszko unit [BIOL] A unit for the standardization of thyroid extracts.

Cifax [COMMUN] Enciphered facsimile communication in which the output of a keyed pulse generator is mixed with the output of the facsimile converter.

cigarette burning [CHEM] In rocket propellants, black powder, gasless delay elements, and pyrotechnic candles, the type of burning induced in a solid grain by permitting burning on one end only, so that the burning progresses in the direction of the longitudinal axis.

ciguatoxin [BIOCHEM] A toxin produced by the benthic dinoflagellate *Gambierdiscus toxicus*.

Ciidae [INV ZOO] The minute, tree-fungus beetles, a family of coleopteran insects in the superfamily Cucujoidea.

cilia [ANAT] Eyelashes. [CYTOL] Relatively short, centriole-based, hairlike processes on certain anatomical cells and motile organisms.

ciliary body [ANAT] A ring of tissue lying just anterior to the retinal margin of the eye.

ciliary movement [BIOL] A type of cellular locomotion accomplished by the rhythmical beat of cilia.

ciliary muscle [ANAT] The smooth muscle of the ciliary body.

ciliary process [ANAT] Circularly arranged choroid folds continuous with the iris in front.

Ciliatea [INV ZOO] The single class of the protozoan subphylum Ciliophora.

ciliated epithelium [HISTOL] Epithelium composed of cells bearing cilia on their free surfaces.

ciliolate [BIOL] Ciliated to a very minute degree.

Ciliophora [INV ZOO] The ciliated protozoans, a homogeneous subphylum of the Protozoa distinguished principally by a mouth, ciliation, and infraciliature.

CIM *See* computer input from microfilm.

Cimbicidae [INV ZOO] The cimbicid sawflies, a family of hymenopteran insects in the superfamily Tenthredinoidea.

Cimex [INV ZOO] The type genus of Cimicidae, including bedbugs and related forms.

Cimex lectularius [INV ZOO] The common bedbug of temperate and subtropical regions.

Cimicidae [INV ZOO] The bat, bed, and bird bugs, a family of flattened, wingless, parasitic hemipteran insects in the superfamily Cimicimorpha.

Cimicimorpha [INV ZOO] A superfamily, or group according to some authorities, of hemipteran insects in the subdivision Geocorisae.

Cimicoidea [INV ZOO] A superfamily of the Cimicimorpha in some systems of classification.

ciminite [PETR] An extrusive rock consisting essentially of olivine with sanidine and pyroxene and basic plagioclase.

cimolite [MINERAL] $2Al_2O_3 \cdot 9SiO_3 \cdot 6H_2O$ A white, grayish, or reddish mineral consisting of hydrous aluminum silicate occurring in soft, claylike masses.

cinching [COMPUT SCI] Creases produced in magnetic tape when the supply reel is wound at low tension and suddenly stopped during playback. [GRAPHICS] The tightening of successive loops of film on a roll.

cincholepidine *See* lepidine.

cinchona [BOT] The dried, alkaloid-containing bark of trees of the genus *Cinchona*.

cinchonamine [ORG CHEM] $C_{19}H_{24}N_2O$ A yellow, crystalline, water-insoluble alkaloid that melts at 184°C; derived from the bark of *Remijia purdieana*, a member of the madder family of shrubs.

cinchonine [ORG CHEM] $C_{19}H_{22}N_2O$ A colorless, crystalline alkaloid that melts at about 245°C; extracted from cinchona bark, it is used as a substitute for quinine and as a spot reagent for bismuth.

Cincinnatian [GEOL] Upper Ordovician geologic time.

Cinclidae [VERT ZOO] The dippers, a family of insect-eating songbirds in the order Passeriformes.

cinclides [INV ZOO] Pores in the body wall of some sea anemones for the release of water and stinging cells.

cinclis [INV ZOO] Singular of cinclides.

cinder [GEOL] Fine-grained pyroclastic material ranging in diameter from 4 to 32 millimeters. [MATER] Slag from a metal furnace. [MET] Scale cast off in forging metal.

cinder block [MATER] A hollow block made of cinder concrete. [MET] A block which closes the front of a blast furnace, containing the cinder notch.

cinder coal *See* natural coke.

cinder concrete [MATER] A concrete containing cinders as the aggregate.

cinder cone [GEOL] A conical elevation formed by the accumulation of volcanic debris around a vent.

cinder notch [MET] An opening in a blast furnace that allows molten slag to flow out.

cinder pig [MET] Pig iron produced from a mixture of slag in the furnace and crude metal or ore.

cinders [MATER] Incombustible residue from a burning process; in particular, small pieces of clinker from the burning of soft coal.

C index [GEOPHYS] A subjectively obtained daily index of geomagnetic activity, in which each day's record is evaluated on the basis of 0 for quiet, 1 for moderately disturbed, and 2 for very disturbed. Also known as C figure; magnetic character figure.

C indicator *See* C scope.

cinefluorography [GRAPHICS] The motion picture recording of fluoroscopic images.

cinema *See* motion picture.

cinematography [GRAPHICS] Motion picture photography.

cinemicrography [GRAPHICS] The photography of objects formed by a microscope, using a motion picture camera.

cineol *See* eucalyptol.

cineplasty *See* kineplasty.

cinereous [BIOL] **1.** Ashen in color. **2.** Having the inert and powdery quality of ashes.

cinetheodolite [ENG] A surveying theodolite in which 35-millimeter motion picture cameras with lenses of 60- to 240-inch (1.5 to 6.1 meter) focal length are substituted for the surveyor's eye and telescope; used for precise time-correlated observation of distant airplanes, missiles, and artificial satellites.

Cingulata [VERT ZOO] A group of xenarthran mammals in the order Edentata, including the armadillos.

cingulate [BIOL] Having a girdle of bands or markings.

cingulum [ANAT] **1.** The ridge around the base of the crown of a tooth. **2.** The tract of association nerve fibers in the brain, connecting the callosal and the hippocampal convolutions. [BOT] The part of a plant between stem and root. [INV ZOO] **1.** Any girdlelike structure. **2.** A band of color or a raised line on certain bivalve shells. **3.** The outer zone of cilia on discs of certain rotifers. **4.** The clitellum in annelids.

cinnabar [MINERAL] HgS A vermilion-red mineral that crystallizes in the hexagonal system, although crystals are rare, and commonly occurs in fine, granular, massive form; the only important ore of mercury. Also known as cinnabarite; vermilion.

cinnabarite *See* cinnabar.

cinnamaldehyde *See* cinnamic aldehyde.

cinnamate [ORG CHEM] A salt of cinnamic acid, containing the radical $C_9H_7O_2^-$.

cinnamein *See* benzyl cinnamate.

cinnamic acid [ORG CHEM] $C_6H_5CHCHCOOH$ Colorless, monoclinic acid; forms scales, slightly soluble in water; found in natural balsams. Also known as benzalacetic acid; β-phenylacrylic acid; styrylformic acid.

cinnamic alcohol [ORG CHEM] $C_6H_5CH{:}CHCH_2OH$ White needles that congeal upon heating and are soluble in alcohol; used in perfumery. Also known as cinnamyl alcohol; phenylallylic alcohol; 3-phenyl-2-propen-1-ol; styryl carbinol.

cinnamic aldehyde [ORG CHEM] $C_6H_5CH{:}CHCHO$ A yellow oil with a cinnamon odor, sweet taste, and a boiling point of 248°C; used in flavors and perfumes. Also known as cinnamaldehyde; cinnamyl aldehyde; 3-phenylpropenal.

cinnamon [BOT] *Cinnamomum zeylanicum*. An evergreen shrub of the laurel family (Lauraceae) in the order Magnoliales; a spice is made from the bark.

cinnamoyl chloride [ORG CHEM] $C_6H_5CHCHCOCl$ Yellow crystals that melt at 35°C, and decompose in water; used as a chemical intermediate. Also known as phenylacrylyl chloride.

cinnamyl alcohol *See* cinnamic alcohol.

cinnamyl aldehyde *See* cinnamic aldehyde.

cinnamyl methyl ketone *See* benzylideneacetone.

cipher [COMMUN] A transposition or substitution code for transmitting secret messages.

cipher block chaining [COMMUN] A technique for block chaining in which each block of ciphertext is produced by adding, through the EXCLUSIVE OR operation, the previous block of ciphertext to the current block of plaintext. Abbreviated CBC.

cipher feedback [COMMUN] An implementation of ciphertext autokey cipher in which the leftmost n bits of the data encryption standard (DES) output are added by the EXCLUSIVE OR operation to N bits of plaintext to produce N bits of ciphertext (where N is the number of bits enciphered at one time), and these N bits of ciphertext are fed back into the algorithm by first shifting the current DES input N bits to the left, and then appending the N bits of ciphertext to the right-hand side of the shifted input to produce a new DES input used for the next iteration of the algorithm.

cipher machine [COMMUN] Mechanical or electrical apparatus for enciphering and deciphering.

ciphertext [COMMUN] A message which has been transformed by a cipher so that it can be read only by those privy to the secrets of the cipher.

ciphertext autokey cipher [COMMUN] A stream cipher in which the cryptographic bit stream generated at a given time is determined by the ciphertext generated at earlier times.

ciphony [COMMUN] A technique by which security is accomplished by converting speech into a series of on-off pulses and mixing these with the pulses supplied by a key generator; to recover the original speech, the identical key must be subtracted and the resultant on-off pulses reconverted into the original speech pattern; unauthorized listeners are unable to reconstruct the plain text unless they have an identical key generator and the daily key setting.

ciphony equipment [ELECTR] Any equipment attached to a radio transmitter, radio receiver, or telephone for scrambling or unscrambling voice messages.

Cipolletti weir [CIV ENG] Trapezoidal weir in which the sides of the notch slope are one horizontal to four vertical; used to measure water flow in open channels, especially streams and rivers.

CIPW classification [PETR] A designation for the Norm system of classifying igneous rocks; from the initial letters of the names of those who devised it: Cross, Iddings, Pirsson, and Washington.

Cir *See* Circinus.

circadian rhythm [PHYSIO] A rhythmic process within an organism occurring independently of external synchronizing signals.

circinate [BIOL] Having the form of a flat coil with the apex at the center.

circinate vernation [BOT] Uncoiling of new leaves from the base toward the apex, as in ferns.

Circinus [ASTRON] A constellation, right ascension 15 hours, declination 60°S. Abbreviated Cir. Also known as Compasses.

circle [MATH] **1.** The set of all points in the plane at a given distance from a fixed point. **2.** A unit of angular measure, equal to one complete revolution, that is, to 2π radians or 360°. Also known as turn.

circle diagram [ELEC] A diagram which gives a graphical solution of equations for a transmission line, giving the input impedance of the line as a function of load impedance and electrical length of the line.

circle-dot mode [ELECTR] Mode of cathode-ray storage of binary digits in which one kind of digit is represented by a small circle of excitation of the screen, and the other kind by a similar circle with a concentric dot.

circle haul [MIN ENG] A haulage system in strip mining; empty units enter the mine over one lateral and leave, loaded, over the lateral nearest the tipple.

circle of confusion [OPTICS] The blurred circular image of a point object which is formed by a camera lens, even with the best focusing. Also known as circle of least confusion.

circle of convergence [MATH] The region in which a power series possesses a limit.

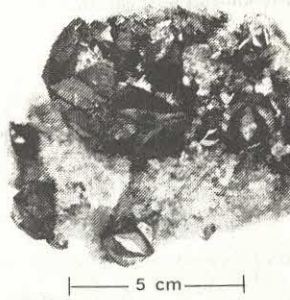
circle of curvature [MATH] The circle tangent to a curve on the concave side and having the same curvature at the point of tangency as does the curve.

circle of declination *See* hour circle.

circle of equal altitude [GEOD] A circle on the surface of the earth, on every point of which the altitude of a given celestial body is the same at a given instant; the pole of this circle is the geographical position of the body, and the great-circle distance from this pole to the circle is the zenith distance of the body.

circle of equal declination *See* parallel of declination.

CINNABAR



Cinnabar on quartz crystals, Hunan Province, China. *(American Museum of Natural History)*

CINNAMON

Cinnamomum zeylanicum. (USD

circle of equal probability [AERO ENG] A measure of the accuracy with which a rocket or missile can be guided; the radius of the circle at a specific distance in which 50% of the reliable shots land. Also known as circle of probable error; circular error probable.

circle of inertia *See* inertial circle.

circle of latitude [ASTRON] A great circle of the celestial sphere passing through the ecliptic poles, and hence perpendicular to the plane of the ecliptic. Also known as parallel of latitude. [GEOD] A meridian of the terrestrial sphere along which latitude is measured.

circle of least confusion *See* circle of confusion.

circle of longitude [ASTRON] A circle of the celestial sphere, parallel to the ecliptic. [GEOD] *See* parallel.

circle of perpetual apparition [ASTRON] That circle of the celestial sphere, centered on the polar axis and having a polar distance from the elevated pole approximately equal to the latitude of the observer, within which celestial bodies do not set.

circle of perpetual occultation [ASTRON] That circle of the celestial sphere, centered on the polar axis and having a polar distance from the depressed pole approximately equal to the latitude of the observer, within which celestial bodies do not rise.

circle of position [NAV] A circular line of position, used most frequently with reference to the circle of equal altitude surrounding the geographical position of a celestial body, but also used to refer to the lines of position produced by the DME (distance measuring equipment) system.

circle of probable error *See* circle of equal probability.

circle of right ascension *See* hour circle.

circle of uncertainty [NAV] A circle having as its center a position and as its radius the probable error of the position; the percent of the probable error must be specified error; it is a circle within which a craft is considered to be located.

circle of Willis [ANAT] A ring of arteries at the base of the cerebrum.

circle shear [MECH ENG] A shearing machine that cuts circular disks from a metal sheet rolling between the cutting wheels.

circle sheet [NAV] A chart with curves enabling a graphical solution of a three-point problem rather than using a three-arm protractor.

circling approach area [NAV] The area in which aircraft circle to land under visual conditions after completing an instrument approach.

circuit [ELEC] *See* electric circuit. [ELECTROMAG] A complete wire, radio, or carrier communications channel. [MATH] *See* cycle.

circuit analyzer *See* volt-ohm-milliammeter.

circuit breaker [ELEC] An electromagnetic device that opens a circuit automatically when the current exceeds a predetermined value.

circuit capacity [COMMUN] Number of communications channels which can be handled by a given circuit at the same time.

circuit conditioning [ELECTR] Test, analysis, engineering, and installation actions to upgrade a communications circuit to meet an operational requirement; includes the reduction of noise, the equalization of phase and level stability and frequency response, and the correction of impedance discontinuities, but does not include normal maintenance and repair activities.

circuit design [ELEC] The art of specifying the components and interconnections of an electrical network.

circuit diagram [ELEC] A drawing, using standardized symbols, of the arrangement and interconnections of the conductors and components of an electrical or electronic device or installation. Also known as schematic circuit diagram; wiring diagram.

circuit efficiency [ELECTR] Of an electron tube, the power delivered to a load at the output terminals of the output circuit at a desired frequency divided by the power delivered by the electron stream to the output circuit at that frequency.

circuit element *See* component.

circuit interrupter [ELEC] A device in a circuit breaker to remove energy from an arc in order to extinguish it.

circuit loading [ELEC] Power drawn from a circuit by an electric measuring instrument, which may alter appreciably the quantity being measured.

circuit noise [COMMUN] In telephone practice, the noise which is brought to the receiver electrically from a telephone system, excluding noise picked up acoustically by telephone transmitters.

circuit noise level [COMMUN] Ratio of the circuit noise at that point to some arbitrary amount of circuit noise chosen as a reference; usually expressed in decibels above reference noise, signifying the reading of a circuit noise meter, or in adjusted decibels, signifying circuit noise meter reading adjusted to represent interfering effect under specified conditions.

circuit protection [ELECTR] Provision for automatically preventing excess or dangerous temperatures in a conductor and limiting the amount of energy liberated when an electrical failure occurs.

circuit reliability [COMMUN] The percent of time a circuit was available to the user during a specified period of time.

circuitron [ELECTR] Combination of active and passive components mounted in a single envelope like that used for tubes, to serve as one or more complete operating stages.

circuitry [ELEC] The complete combination of circuits used in an electrical or electronic system or piece of equipment.

circuit shift *See* cyclic shift.

circuit switching [COMMUN] The method of providing communication service through a switching facility, either from local users or from other switching facilities.

circuit testing [ELEC] The testing of electric circuits to determine and locate an open circuit, or a short circuit or leakage.

circuit theory [ELEC] The mathematical analysis of conditions and relationships in an electric circuit. Also known as electric circuit theory.

circuit determinant [MATH] A determinant in which the elements of each row are the same as those of the previous row moved one place to the right, with the last element put first.

circulant matrix [MATH] A matrix in which the elements of each row are those of the previous row moved one place to the right.

circular accelerator *See* circular particle accelerator.

circular antenna [ELECTROMAG] A folded dipole that is bent into a circle, so the transmission line and the abutting folded ends are at opposite ends of a diameter.

circular arc *See* arc.

circular birefringence [OPTICS] The phenomenon in which an optically active substance transmits right circularly polarized light with a different velocity from left circularly polarized light.

circular buffering [COMPUT SCI] A technique for receiving data in an input-output control system which uses a single buffer that appears to be organized in a circle, with data wrapping around it.

circular burner [ENG] A fuel burner having a round opening.

circular channel [ENG] Continuous-length opening with circular cross section through which liquid or gas can be made to flow.

circular-chart recorder [ENG] Graphic pen-and-ink recorder where measured values are drawn onto a rotating circular chart by the backward and forward movement of a pivoted pen actuated by the input signal (such as temperature, pressure, flow, or force) from an instrument transmitter.

circular chromatography *See* radial chromatography.

circular coal *See* eye coal.

circular coil [ELECTROMAG] In eddy-current nondestructive tests, a type of test coil which surrounds an object.

circular current [ELEC] An electric current moving in a circular path.

circular cutter [MECH ENG] A rotating blade with a square or knife edge used to slit or shear metal.

circular cylinder [MATH] A solid bounded by two parallel planes and a cylindrical surface whose intersections with planes perpendicular to the straight lines forming the surface are circles.

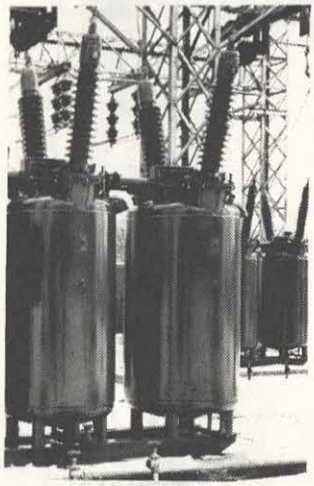
circular deoxyribonucleic acid [BIOCHEM] A single- or double-stranded ring of deoxyribonucleic acid found in certain bacteriophages and in human wart virus. Also known as ring deoxyribonucleic acid.

circular dichroism [OPTICS] A change from planar to elliptic polarization when an initially plane-polarized light wave traverses an optically active medium. Abbreviated CD.

circular electric wave [ELECTROMAG] A transverse electric wave for which the lines of electric force form concentric circles.

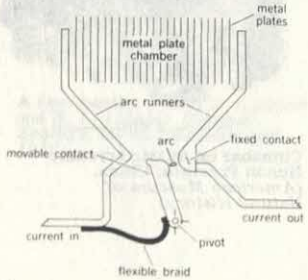
circular error [ORD] **1.** A bombing error measured by the

CIRCUIT BREAKER



Bulk oil circuit breaker for 138-kilovolt application.

CIRCUIT INTERRUPTER



Cross section of interrupter for a typical medium-voltage circuit breaker.

CIRCULAR DEOXYRIBONUCLEIC ACID

Electron micrograph of circular deoxyribonucleic acid extracted from the human wart virus. *(Courtesy of E. A. C. Follett)*

radial distance of a point of bomb impact, or mean point of impact, from the center of the target, excluding gross errors. **2.** With an airburst atomic bomb, the bombing error measured from the point on the ground immediately below the bomb burst to the desired ground zero.

circular error average [ORD] The bombing error in a given bombing attack, expressed as the average radial distance of the bomb impacts, or mean points of impact, from the center of the target.

circular error probable *See* circle of equal probability.

circular flow method [FL MECH] A method to determine viscosities of Newtonian fluids by measuring the torque from viscous drag of sample material between a closely spaced rotating plate–stationary cone assembly.

circular form tool [DES ENG] A round or disk-shaped tool with the cutting edge on the periphery.

circular functions *See* trigonometric functions.

circular horn [ELECTROMAG] A circular-waveguide section that flares outward into the shape of a horn, to serve as a feed for a microwave reflector or lens.

circular inch [MECH] The area of a circle 1 inch (25.4 millimeters) in diameter.

circular magnetic wave [ELECTROMAG] A transverse magnetic wave for which the lines of magnetic force form concentric circles.

circular mil [MECH] A unit equal to the area of a circle whose diameter is 1 mil (0.001 inch); used chiefly in specifying cross-sectional areas of round conductors. Abbreviated cir mil.

circular motion [MECH] **1.** Motion of a particle in a circular path. **2.** Motion of a rigid body in which all its particles move in circles about a common axis, fixed with respect to the body, with a common angular velocity.

circular nomograph [MATH] A chart with concentric circular scales for three variables, laid out so that any straight line passes through values of the variables satisfying a given equation.

circular orbit [ASTRON] An orbit comprising a complete constant-altitude revolution around the earth.

circular paper chromatography [ANALY CHEM] A paper chromatographic technique in which migration from a spot in the sheet takes place in 360° so that zones separate as a series of concentric rings.

circular particle accelerator [NUCLEO] A particle accelerator which utilizes a magnetic field to bend charged-particle orbits and confine the extent of particle motion. Also known as circular accelerator.

circular pitch [DES ENG] The linear measure in inches along the pitch circle of a gear between corresponding points of adjacent teeth.

circular plane [DES ENG] A plane that can be adjusted for convex or concave surfaces.

circular polarization [PHYS] Attribute of a transverse wave (either of electromagnetic radiation, or in an elastic medium) whose electric or displacement vector is of constant amplitude and, at a fixed point in space, rotates in a plane perpendicular to the propagation direction with constant angular velocity.

circular polarized loop vee [ELECTROMAG] Airborne communications antenna with an omnidirectional radiation pattern to provide optimum near-horizon communications coverage.

circular saw [MECH ENG] Any of several power tools for cutting wood or metal, having a thin steel disk with a toothed edge that rotates on a spindle.

circular scanning [ENG] Radar scanning in which the direction of maximum radiation describes a right circular cone.

circular screen [GRAPHICS] A circular halftone screen designed to permit adjustments for correct angles for halftone color photography without disturbing the copy.

circular segment [MATH] Portion of circle cut off from the main body of the circle by a straight line (chord) through the circle.

circular shaft [MIN ENG] A shaft excavated in a round shape.

circular shift *See* cyclic shift.

circular slide rule [MATH] A slide rule in a circular form whose advantages over a straight slide rule are its precision, because it is equivalent to a straight slide rule many times longer than the circular slide rule's diameter, and ease of multiplication, because the scale is continuous.

circular sweep generation [ELECTR] The use of electronic circuits to provide voltage or current which causes an electron beam in a device such as a cathode-ray tube to move in a circular deflection path at constant speed.

circular velocity [MECH] At any specific distance from the primary, the orbital velocity required to maintain a constant-radius orbit.

circular vortex [METEOROL] An atmospheric flow in parallel planes in which streamlines and other isopleths are concentric circles about a common axis; an atmospheric model of easterly and westerly winds is a circular vortex about the earth's polar axis.

circular wait *See* mutual deadlock.

circular waveguide [ELECTROMAG] A waveguide whose cross-sectional area is circular.

circulated gas-oil ratio [PETRO ENG] The volume (cubic feet) of gas introduced into a well during gas-lift operations in comparison with the volume (barrel) of oil that is lifted.

circulating current [ASTRON] A current that circulated in an abnormal direction in the atmosphere of the southern hemisphere of Jupiter between 1919 and 1934; its presence was indicated by the behavior of dark spots in the region.

circulating fluid [ENG] A fluid pumped into a borehole through the drill stem, the flow of which cools the bit and transports the cuttings out of the borehole.

circulating memory [ELECTR] A digital computer device that uses a delay line to store information in the form of a pattern of pulses in a train; the output pulses are detected electrically, amplified, reshaped, and reinserted in the delay line at the beginning. Also known as delay-line memory; delay-line storage; circulating storage.

circulating pump [CHEM ENG] Pump used to circulate process liquid out of and back into a process system, as in the circulation of distillation column bottoms through an external heater, or the circulation of storage tank bottoms to mix tank contents.

circulating reactor [NUCLEO] A nuclear reactor in which the fissionable material circulates through the core in fluid form or as small particles suspended in a fluid.

circulating register [COMPUT SCI] A shift register in which data move out of one end and reenter the other end, as in a closed loop.

circulating scrap [MET] At steelworks and founderies, scrap arising during the manufacture of finished iron and steel or of castings.

circulating storage *See* circulating memory.

circulating system [CHEM ENG] Fluid system in which the process fluid is taken from and pumped back into the system, as in the circulation of distillation column bottoms through an external heater.

circulation [FL MECH] The flow or motion of fluid in or through a given area or volume. [MATH] For the circulation of a vector field around a closed path, the line integral of the field vector around the path. [METEOROL] For an air mass, in the line integral of the tangential component of the velocity field about a closed curve. [OCEANOGR] A water current flow occurring within a large area, usually in a closed circular pattern. [PHYSIO] The movement of blood through defined channels and tissue spaces; movement is through a closed circuit in vertebrates and certain invertebrates.

circulation area [BUILD] The area required for human traffic in a building, including permanent corridors, stairways, elevators, escalators, and lobbies.

circulation flux [METEOROL] Flux due to mean atmospheric motion as opposed to eddy flux; the dominant flux in low latitudes.

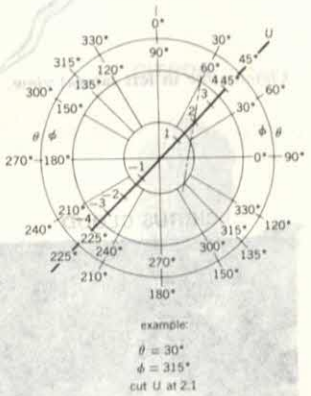
circulation index [METEOROL] A measure of the magnitude of one of several aspects of large-scale atmospheric circulation patterns; indices most frequently measured represent the strength of the zonal (east-west) or meridional (north-south) components of the wind, at the surface or at upper levels, usually averaged spatially and often averaged in time.

circulation map *See* traffic-circulation map.

circulation pattern [METEOROL] The general geometric configuration of atmospheric circulation usually applied, in synoptic meteorology, to the large-scale features of synoptic charts and mean charts.

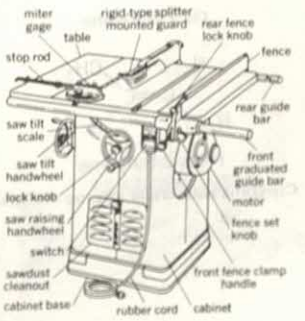
circulator [ELECTROMAG] A waveguide component having a number of terminals so arranged that energy entering one terminal is transmitted to the next adjacent terminal in a particular direction. Also known as microwave circulator.

CIRCULAR NOMOGRAPH



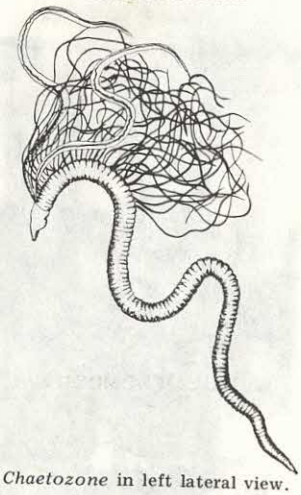
Circular nomograph which results from a trigonometric equation expressed in the form of a determinant.

CIRCULAR SAW



Bench circular saw with tilting arbor is used for parting or slotting and can make cuts as long as working space permits. *(Delta)*

CIRRATULIDAE

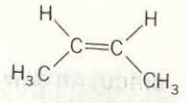


Chaetozone in left lateral view.

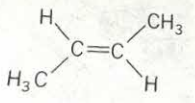
CIRRUS CLOUD

Cirrus, with trails of slowly falling ice crystals at a high level. *(F. Ellerman, U.S. Weather Bureau)*

CIS-TRANS ISOMERISM



cis-2-Butylene



trans-2-Butylene

Cis-trans isomerism among olefins.

circulatory system [ANAT] The vessels and organs composing the lymphatic and cardiovascular systems.

circulin [MICROBIO] Any of a group of peptide antibiotics produced by *Bacillus circulans* which are related to polymixin and are active against both gram-negative and gram-positive bacteria.

circulus [BIOL] Any of various ringlike structures, such as the vascular circle of Willis or the concentric ridges on fish scales.

circumboreal distribution [ECOL] The distribution of a Northern Hemisphere organism whose habitat includes North American, European, and Asian stations.

circumcenter [MATH] For a triangle or a regular polygon, the center of the circle that is circumscribed about the triangle or polygon.

circumcision [MED] Surgical excision of the foreskin.

circumduction [ANAT] Movement of the distal end of a body part in the form of an arc; performed at ball-and-socket and saddle joints.

circumference [MATH] **1.** The length of a circle. **2.** For a sphere, the length of any great circle on the sphere.

circumferentor [ENG] A horizontal compass used in surveying that has arms diametrically placed with vertical slit sights in them.

circumflex artery [ANAT] Any artery that follows a curving or winding course.

circumhorizontal arc [OPTICS] A halo phenomenon consisting of a colored arc, red on its upper margin; it extends for about 90° parallel to the horizon and lies about 46° below the sun.

circumlunar [ASTRON] Around the moon; generally applied to trajectories.

circummeridian altitude *See* exmeridian altitude.

circum-Pacific province *See* Pacific suite.

circumpharyngeal connective [INV ZOO] One of a pair of nerve strands passing around the esophagus in annelids and anthropods, connecting the brain and subesophageal ganglia.

circumpolar [ASTRON] Revolving about the elevated pole without setting. [GEOGR] Located around one of the polar regions of earth.

circumpolar star [ASTRON] A star with its polar distance approximately equal to or less than the latitude of the observer.

circumpolar westerlies *See* westerlies.

circumpolar whirl *See* polar vortex.

circumradius [MATH] The radius of a circle that is circumscribed about a polygon.

circumscissile [BOT] Dehiscing along the line of a circumference, as exhibited by a pyxidium.

circumscribed [MATH] **1.** A closed curve (or surface) is circumscribed about a polygon (or polyhedron) if every vertex of the polygon (or polyhedron) is incident upon the curve (or surface) and the polygon (or polyhedron) is contained in the curve (or surface). **2.** A polygon (or polyhedron) is circumscribed about a closed curve (or surface) if every side of the polygon (or face of the polyhedron) is tangent to the curve (or surface) and the curve (or surface) is contained within the polygon (or polyhedron).

circumvallate papilla *See* vallate papilla.

circumzenithal arc [OPTICS] A brilliant rainbow-colored arc of about a quarter of a circle with its center at the zenith and about 46° above the sun, produced by refraction and dispersion of the sun's light striking the top of prismatic ice crystals in the atmosphere, and usually lasting only a few minutes.

ciré [TEXT] Any fabric treated with wax, heat, and pressure to produce a glossy appearance.

cir mil *See* circular mil.

Cirolanidae [INV ZOO] A family of isopod crustaceans in the suborder Flabellifera composed of actively swimming predators and scavengers with biting mouthparts.

cirque [GEOL] A steep elliptic to elongated enclave high on mountains in calcareous districts, usually forming the blunt end of a valley.

cirque lake [HYD] A small body of water occupying a cirque.

Cirratulidae [INV ZOO] A family of fringe worms belonging to the Sedentaria which are important detritus feeders in coastal waters.

cirrhosis [MED] A progressive, inflammatory disease of the liver characterized by a real or apparent increase in the proportion of hepatic connective tissue.

cirriform [METEOROL] Descriptive of clouds composed of small particles, mostly ice crystals, which are fairly widely dispersed, usually resulting in relative transparency and whiteness and often producing halo phenomena not observed with other cloud forms. [ZOO] Having the form of a cirrus; generally applied to a prolonged, slender process.

Cirripedia [INV ZOO] A subclass of the Crustacea, including the barnacles and goose barnacles; individuals are free-swimming in the larval stages but permanently fixed in the adult stage.

cirrocumulus cloud [METEOROL] A principal cloud type, appearing as a thin, white path of cloud without shadows, composed of very small elements in the form of grains, ripples, and so on. Abbreviated Cc.

Cirromorpha [INV ZOO] A suborder of cephalopod mollusks in the order Octopoda.

cirrostratus cloud [METEOROL] A principal cloud type, appearing as a whitish veil, usually fibrous but sometimes smooth, which may totally cover the sky and often produces halo phenomena, either partial or complete. Abbreviated Cs.

cirrus [INV ZOO] **1.** The conical locomotor structure composed of fused cilia in hypotrich protozoans. **2.** Any of the jointed thoracic appendages of barnacles. **3.** Any hairlike tuft on insect appendages. **4.** The male copulatory organ in some mollusks and trematodes. [VERT ZOO] Any of the tactile barbels of certain fishes. [ZOO] A tendrillike animal appendage.

cirrus cloud [METEOROL] A principal cloud type composed of detached cirriform elements in the form of white, delicate filaments, of white (or mostly white) patches, or narrow bands. Abbreviated Ci.

cirrus sac [INV ZOO] A pouch or channel containing the copulatory organ (cirrus) in certain invertebrates.

cis [ORG CHEM] A descriptive term indicating a form of isomerism in which atoms are located on the same side of an asymmetric molecule.

cisele [TEXT] A velvet fabric on which the pattern is formed by contrast between cut and uncut pile loops.

cislunar [ASTRON] Of or pertaining to phenomena, projects, or activity in the space between the earth and moon, or between the earth and the moon's orbit.

cissoid [MATH] A plane curve consisting of all points which lie on a variable line passing through a fixed point on a circle, and whose distance from the fixed point is equal to the distance from the line's intersection with the circle to its intersection with the tangent to the circle at the point diametrically opposite the fixed point; in cartesian coordinates the equation is $y^2(2a - x) = x^3$.

cistern [ANAT] A closed, fluid-filled sac or vesicle, such as the subarachnoid spaces or the vesicles comprising the dictyosomes of a Golgi apparatus. [CIV ENG] A tank for storing water or other liquid. [GEOL] A hollow that holds water.

cistern barometer [ENG] A pressure-measuring device in which pressure is read by the liquid rise in a vertical, closed-top tube as a result of system pressure on a liquid reservoir (cistern) into which the bottom, open end of the tube is immersed.

cis-trans isomerism [ORG CHEM] A type of geometrical isomerism found in alkenic systems in which it is possible for each of the doubly bonded carbons to carry two different atoms or groups; two similar atoms or groups may be on the same side (cis) or on opposite sides (trans) of a plane bisecting the alkenic carbons and perpendicular to the plane of the alkenic system.

cistron [MOL BIO] The genetic unit (deoxyribonucleic acid fragment) that codes for a particular polypeptide; mutants do not complement each other within a cistron.

Citheroniinae [INV ZOO] Subfamily of lepidopteran insects in the family Saturniidae, including the regal moth and the imperial moth.

citiolone *See N*-acetylhomocysteinethiolactone.

citizens' band [COMMUN] A frequency band allocated for citizens' radio service (460–470 or 26.965–27.405 megahertz). Also known as citizens' waveband.

citizens' radio service [COMMUN] A radio communication service intended for private or personal radio communication, including radio signaling and control of objects by radio.

citizens' waveband *See* citizens' band.

citraconic acid [ORG CHEM] $C_5H_6O_4$ A dicarboxylic acid; hygroscopic crystals that melt at 91°C; derived from citric acid by heating. Also known as methyl maleic acid.

citral [ORG CHEM] $C_{10}H_{16}O$ A pale-yellow liquid that in commerce is a mixture of two isomeric forms, alpha and beta;

insoluble in water, soluble in glycerin or benzyl benzoate; used in perfumery and as an intermediate to form other compounds. Also known as 3,7-dimethyl-2,6-octadienal; geranial; geranialdehyde.

citramalase [BIOCHEM] An enzyme that is involved in the fermentation of glutamate by *Clostridium tetanomorphum;* catalyzes the breakdown of citramalic acid to acetate and pyruvate.

citrate [BIOCHEM] A salt or ester of citric acid.

citrate test [MICROBIO] A differential cultural test to identify genera within the bacterial family Enterobacteriaceae that are able to utilize sodium citrate as a sole source of carbon.

citric acid [BIOCHEM] $C_6H_8O_7 \cdot H_2O$ A colorless crystalline or white powdery organic, tricarboxylic acid occurring in plants, especially citrus fruits, and used as a flavoring agent, as an antioxidant in foods, and as a sequestering agent; the commercially produced form melts at 153°C.

citric acid cycle *See* Krebs cycle.

citriculture [BOT] The cultivation of citrus fruits.

citrine [MINERAL] An important variety of crystalline quartz, yellow to brown in color and transparent. Also known as Bohemian topaz; false topaz; quartz topaz; topaz quartz; yellow quartz.

Citrobacter [MICROBIO] A genus of bacteria in the family Enterobacteriaceae; motile rods that utilize citrate as the only carbon source.

citron [BOT] *Citrus medica*. A shrubby, evergreen citrus tree in the order Sapindales cultivated for its edible, large, lemonlike fruit.

citronella [BOT] *Cymbopogon nardus*. A tropical grass; the source of citronella oil.

citronella oil [MATER] A yellowish oil distilled from the leaves of either of two grasses, *Cymbopogon nardus* or *C. winterianus;* used as an insect repellent. Also known as Java citronella oil.

citronellal hydrate *See* hydroxycitronellal.

citronellol [ORG CHEM] $C_{10}H_{19}OH$ A liquid derived from citronella oil; soluble in alcohol; used in perfumery. Also known as 3,7-dimethyl-6(or 7)-octen-1-ol.

citrulline [BIOCHEM] $C_6H_{13}O_3N_3$ An amino acid formed in the synthesis of arginine from ornithine.

citrus anthracnose [PL PATH] A fungus disease of citrus plants caused by *Colletotrichum gloeosporioides* and characterized by tip blight, stains on the leaves, and spots, stains, or rot on the fruit.

citrus blast [PL PATH] A bacterial disease of citrus trees caused by *Pseudomonas syringae* and marked by drying and browning of foliage and twigs and black pitting of the fruit.

citrus canker [PL PATH] A bacterial disease of citrus plants caused by *Xanthomonas citri* and producing lesions on twigs, foliage, and fruit.

citrus flavanoid compound *See* bioflavanoid.

citrus fruit [BOT] Any of the edible fruits having a pulpy endocarp and a firm exocarp that are produced by plants of the genus *Citrus* and related genera.

citrus scab [PL PATH] A fungus disease of citrus plants caused by *Sphaceloma rosarum*, producing scablike lesions on all plant parts.

city plan [MAP] A large-scale, comprehensive map of a city delineating streets, important buildings, and other urban elements; relief is shown when important. Also known as town plan.

civet [PHYSIO] A fatty substance secreted by the civet gland; used as a fixative in perfumes. [VERT ZOO] Any of 18 species of catlike, nocturnal carnivores assigned to the family Viverridae, having a long head, pointed muzzle, and short limbs with nonretractile claws.

civet cat *See* cacomistle.

civet gland [VERT ZOO] A large anal scent gland in civet cats that secretes civet.

civetone [BIOCHEM] $C_{17}H_{30}O$ 9-Cycloheptadecen-1-one, a macrocyclic ketone component of civet used in perfumes because of its pleasant odor and lasting quality; believed to function as a sex attractant among civet cats.

civil airway [NAV] An airway designated for air commerce.

civil day [ASTRON] A mean solar day beginning at midnight instead of at noon; may be based on either apparent solar time or mean solar time.

civil engineering [ENG] The planning, design, construction, and maintenance of fixed structures and ground facilities for industry, transportation, use and control of water, or occupancy.

civil time [ASTRON] Solar time in a day (civil day) that begins at midnight; may be either apparent solar time or mean solar time.

civil twilight [ASTRON] The interval of incomplete darkness between sunrise (or sunset) and the time when the center of the sun's disk is 6° below the horizon.

civil year *See* calendar year.

Cl *See* chlorine.

cladding [ENG] Process of covering one material with another and bonding them together under high pressure and temperature. Also known as bonding. [NUCLEO] An outer jacket, usually metallic, for a nuclear fuel element; prevents corrosion of fuel and release of fission products into the coolant.

cladism [SYST] A theory of taxonomy by which organisms are grouped and ranked on the basis of the most recent phylogenetic branching point.

Cladistia [VERT ZOO] The equivalent name for Polypteriformes.

clad metal [MET] A metal overlaid on one or both sides with a different metal.

Cladocera [INV ZOO] An order of small, fresh-water branchiopod crustaceans, commonly known as water fleas, characterized by a transparent bivalve shell.

Cladocopa [INV ZOO] A suborder of the order Myodocopida including marine animals having a carapace that lacks a permanent aperture when the two valves are closed.

Cladocopina [INV ZOO] The equivalent name for Cladocopa.

cladode *See* cladophyll.

cladodont [PALEON] Pertaining to sharks of the most primitive evolutionary level.

cladogenesis [EVOL] Evolution associated with altered habit and habitat, usually in isolated species populations.

cladogenic adaptation *See* divergent adaptation.

cladogram [EVOL] A dendritic diagram which shows the evolution and descent of a group of organisms.

Cladoniaceae [BOT] A family of lichens in the order Lecanorales, including the reindeer mosses and cup lichens, in which the main thallus is hollow.

Cladophorales [BOT] An order of coarse, wiry, filamentous, branched and unbranched algae in the class Chlorophyceae.

cladophyll [BOT] A branch arising from the axil of a true leaf and resembling a foliage leaf. Also known as cladode.

cladoptosis [BOT] The annual abscission of twigs or branches instead of leaves.

Cladoselachii [PALEON] An order of extinct elasmobranch fishes including the oldest and most primitive of sharks.

cladus [BOT] A branch of a ramose spicule.

Claibornian [GEOL] Middle Eocene geologic time.

claim *See* mining claim.

Clairaut's formula [GEOD] An approximate formula for gravity at the earth's surface, assuming that the earth is an ellipsoid; states that the gravity is equal to $g_e\,[1 + (5/2\,m' - f)\sin^2\theta]$, where θ is the latitude, g_e is the gravity at the equator, m' is the ratio of centrifugal acceleration to gravity at the equatorial surface, and f is the earth's flattening, equal to $(a - b)/a$, where a is the semimajor axis and b is the semiminor axis.

clairite *See* enargite.

clairvoyance [PSYCH] A form of extrasensory perception in which there is a receiver and an extant event of which he has knowledge that has not been conveyed to him through his sensory channels.

Claisen condensation [ORG CHEM] **1.** Condensation, in the presence of sodium ethoxide, of esters or of esters and ketones to form β-dicarbonyl compounds. **2.** Condensation of arylaldehydes and acylphenones with esters or ketones in the presence of sodium ethoxide to yield unsaturated esters. Also known as Claisen reaction.

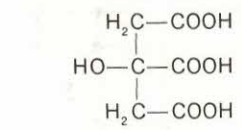
Claisen flask [CHEM] A glass flask with a U-shaped neck, used for distillation.

Claisen reaction *See* Claisen condensation.

Claisen-Schmidt condensation [ORG CHEM] A reaction employed for preparation of unsaturated aldehydes and ketones by condensation of aromatic aldehydes with aliphatic aldehydes or ketones in the presence of sodium hydroxide.

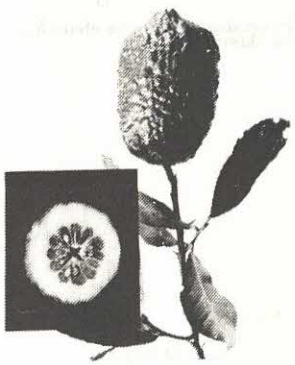
clam [INV ZOO] The common name for a number of species of bivalve mollusks, many of which are important as food.

CITRIC ACID



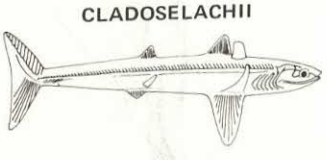
Structural formula of citric acid.

CITRON



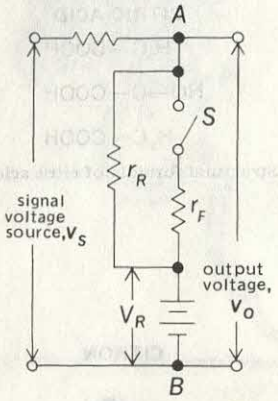
Commercial citron *(Citrus medica)*, foliage and fruit. Inset shows cross section of fruit. *(From J. Horace McFarland Co.)*

CLADOSELACHII



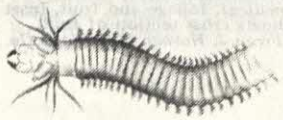
Cladoselache, a Late Devonian sharklike fish. The original specimens range from about 1½ to 4 feet (0.48–1.2 meters) in length. *(After Harris and Dean)*

CLAMPING CIRCUIT



Circuit diagram of the elements of a clamping circuit.

CLAM WORM



Anterior end of a clam worm showing chitinous jaws, head appendages, and parapodia on each segment.

CLASPER

The clasper of the dogfish (*Squalus*).

Clambidae [INV ZOO] The minute beetles, a family of coleopteran insects in the superfamily Dascilloidea.
clammy [BIOL] Moist and sticky, as the skin or a stem.
clamp [DES ENG] A tool for binding or pressing two or more parts together, by holding them firmly in their relative positions. [ELECTR] *See* clamping circuit.
clamper *See* direct-current restorer.
clamping [ELECTR] The introduction of a reference level that has some desired relation to a pulsed waveform, as at the negative or positive peaks. Also known as direct-current reinsertion; direct-current restoration.
clamping circuit [ELECTR] A circuit that reestablishes the direct-current level of a waveform; used in the dc restorer stage of a television receiver to restore the dc component to the video signal after its loss in capacitance-coupled alternating-current amplifiers, to reestablish the average light value of the reproduced image. Also known as clamp.
clamping coupling [MECH ENG] A coupling with a split cylindrical element which clamps the shaft ends together by direct compression, through bolts or rings, and by the wedge action of conical sections; not considered a permanent part of the shaft.
clamping diode [ELECTR] A diode used to clamp a voltage at some point in a circuit.
clamping plate [ENG] A plate on a mold which attaches the mold to a machine.
clamping pressure [ENG] In injection and transfer-molding of plastics, the pressure applied to keep the mold closed in opposition to the fluid pressure of the molding material.
clamp-on [COMMUN] A method of holding a call for a line that is in use and of signaling when it becomes free.
clamp-on ammeter *See* snap-on ammeter.
clamp screw [DES ENG] A screw that holds a part by forcing it against another part.
clamp screw sextant [ENG] A marine sextant having a clamp screw for controlling the position of the tangent screw.
clamshell bucket [MECH ENG] A two-sided bucket used in a type of excavator to dig in a vertical direction; the bucket is dropped while its leaves are open and digs as they close. Also known as clamshell grab.
clamshell grab *See* clamshell bucket.
clamshell snapper [MECH ENG] A marine sediment sampler consisting of snapper jaws and a footlike projection which, upon striking the bottom, causes a spring mechanism to close the jaws, thus trapping a sediment sample.
clam worm [INV ZOO] The common name for a number of species of dorsoventrally flattened annelid worms composing the large family Nereidae in the class Polychaeta; all have a distinct head, with numerous appendages.
clan [ECOL] A very small community, perhaps a few square yards in area, in climax formation, and dominated by one species. [PETR] A category of igneous rocks defined in terms of similarities in mineralogical or chemical composition.
clapboard [MATER] A board, thicker at one edge than the other, used to cover exterior walls.
Clapeyron-Clausius equation *See* Clausius-Clapeyron equation.
Clapeyron equation *See* Clausius-Clapeyron equation.
Clapeyron's theorem [MECH] The theorem that the strain energy of a deformed body is equal to one-half the sum over three perpendicular directions of the displacement component times the corresponding force component, including deforming loads and body forces, but not the six constraining forces required to hold the body in equilibrium.
clapper [ELEC] A hinged or pivoted relay armature.
clapper box [MECH ENG] A hinged device that permits a reciprocating cutting tool (as in a planer or shaper) to clear the work on the return stroke.
Clapp oscillator [ELECTR] A series-tuned Colpitts oscillator, having low drift.
clarain [GEOL] A coal lithotype appearing as stratifications parallel to the bedding plane and usually having a silky luster and scattered or diffuse reflection. Also known as clarite.
Clarendonian [GEOL] Lower Pliocene or upper Miocene geologic time.
clarified oil [MATER] The heavy oil which is taken from the bottom of a fractionator in a catalytic cracking process and from which residual catalyst has been removed.
clarifier [COMMUN] A fine-tuning control on some single-band citizen band transceivers; adjusted for maximum naturalness of the received voice signals. [ENG] A device for filtering a liquid.
clarifying agents [FOOD ENG] Tannin, gelatin, albumin, methylcellulose, pectinases, and proteinases used to remove turbidity from fruit juices, vinegar, wine, beer, and soft drinks.
clarifying centrifuge [MECH ENG] A device that clears liquid of foreign matter by centrifugation.
clarifying filter [ENG] Any filter, such as a sand filter or a cartridge filter, used to purify liquids with a low solid-liquid ratio; in some instances color may be removed as well.
Clariidae [VERT ZOO] A family of Asian and African catfishes in the suborder Siluroidei.
clarinite [MINERAL] A heterogeneous, generally translucent material making up the major micropetrological ingredient of clarain.
clarite *See* clarain.
clarity [CHEM ENG] Measure of the amount of opaque suspended solids in a liquid, determined by visual or optical methods.
Clark cell [ELEC] An early form of standard cell, having 1.433 volts at 15°C, now largely replaced by the Weston standard cell as a voltage standard.
Clark degree *See* English degree.
clarke [GEOCHEM] A unit of the average abundance of an element in the earth's crust, expressed as a percentage. Also known as crustal abundance.
Clarkecarididae [PALEON] A family of extinct crustaceans in the order Anaspidacea.
Clarke ellipsoid of 1866 [GEOD] The reference ellipsoid adopted by the U.S. Coast and Geodetic Survey of 1880 for charting North America.
clarkeite [MINERAL] $(Na,Ca,Pb)_2U_2(O,OH)_7$ A dark reddish-brown or dark brown mineral consisting of a hydrous or hydrated uranium oxide.
Clarke's soap solution [MATER] Reagent used in standard APHA (American Pharmaceutical Association) method to estimate hardness in water; consists of powdered castile soap in 80% ethyl alcohol solution.
Clark process [CHEM ENG] Softening of water by adding alkaline solutions of calcium hydroxide so that the acid carbonates are converted to normal carbonates.
clarodurain [GEOL] A transitional lithotype of coal composed of vitrinite and other macerals, principally micrinite and exinite.
clarofusain [GEOL] A transitional lithotype of coal composed of fusinite and vitrinite and other macerals.
clarovitrain [GEOL] A transitional lithotype of coal rock composed primarily of the maceral vitrinite, with lesser amounts of other macerals.
clasp [DES ENG] A releasable catch which holds two or more objects together.
clasper [VERT ZOO] A modified pelvic fin of male elasmobranchs and holocephalians used for the transmission of sperm.
clasp lock [DES ENG] A spring lock with a self-locking feature.
clasp nut [DES ENG] A split nut that clasps a screw when closed around it.
class [SYST] A taxonomic category ranking above the order and below the phylum or division.
class A amplifier [ELECTR] **1.** An amplifier in which the grid bias and alternating grid voltages are such that anode current in a specific tube flows at all times. **2.** A transistor amplifier in which each transistor is in its active region for the entire signal cycle.
class AB amplifier [ELECTR] **1.** An amplifier in which the grid bias and alternating grid voltages are such that anode current in a specific tube flows for appreciably more than half but less than the entire electric cycle. **2.** A transistor amplifier whose operation is class A for small signals and class B for large signals.
class A modulator [ELECTR] A class A amplifier used to supply the necessary signal power to modulate a carrier.
class A push-pull sound track [ENG ACOUS] Two single photographic sound tracks side by side, the transmission of one being 180° out of phase with the transmission of the other; both positive and negative halves of the sound wave are linearly recorded on each of the two tracks.
class B amplifier [ELECTR] **1.** An amplifier in which the grid bias is approximately equal to the cutoff value, so that

anode current is approximately zero when no exciting grid voltage is applied, and flows for approximately half of each cycle when an alternating grid voltage is applied. **2.** A transistor amplifier in which each transistor is in its active region for approximately half the signal cycle.

class B auxiliary power [ELEC] Standby power plant to cover extended outages (days) of primary power.

class B modulator [ELECTR] A class B amplifier used to supply the necessary signal power to modulate a carrier; usually connected in push-pull.

class B push-pull sound track [ENG ACOUS] Two photographic sound tracks side by side, one of which carries the positive half of the signal only, and the other the negative half; during the inoperative half-cycle, each track transmits little or no light.

class C amplifier [ELECTR] **1.** An amplifier in which the bias on the control element is appreciably greater than the cutoff valve, so that the output current in each device is zero when no alternating control signal is applied, and flows for appreciably less than half of each cycle when an alternating control signal is applied. **2.** A transistor amplifier in which each transistor is in its active region for significantly less than half the signal cycle.

class C auxiliary power [ELEC] Quick start (10–60 seconds) power unit to cover short-term outages (hours) of primary power.

class D auxiliary power [ELEC] Uninterruptible (no-break) power unit using stored energy to provide continuous power within specified voltage and frequency tolerances.

classical approximation [QUANT MECH] The approximation that Planck's constant may be considered infinitely small; the laws of quantum mechanics must then reduce to those of classical mechanics.

classical conductivity theory [STAT MECH] A theory which treats the system of electrons in a metal as a gas and uses the Boltzmann transport equation to calculate conductivity.

classical electron radius [ELECTROMAG] The quantity expressed as $e^2/m_e c^2$, where e is the electron's charge in electrostatic units, m_e its mass, and c the speed of light; equal to approximately 2.82×10^{-13} centimeter.

classical field theory [PHYS] The study of distributions of energy, matter, and other physical quantities under circumstances where their discrete nature is unimportant, and they may be regarded as (in general, complex) continuous functions of position. Also known as c-number theory; continuum mechanics; continuum physics.

classical mechanics [MECH] Mechanics based on Newton's laws of motion.

classical wave equation *See* wave equation.

classic epidemic typhus [MED] An epidemic disease caused by *Rickettsia prowazeki* var. *prowazekii*, and characterized by violent headache, a rash, neurological symptoms, and high fever. Also known as epidemic typhus.

classification [ENG] **1.** Sorting out or categorizing of particles or objects by established criteria, such as size, function, or color. **2.** Stratification of a mixture of various-sized particles (that is, sand and gravel), with the larger particles migrating to the bottom. [IND ENG] *See* grading. [ORD] Placing of military documents in special groups for safeguarding defense information. [SYST] A systematic arrangement of plants and animals into categories based on a definite plan, considering evolutionary, physiologic, cytogenetic, and other relationships.

classification societies [NAV ARCH] Private organizations which issue rules for the construction, equipment, and maintenance of merchant ships.

classification track [CIV ENG] A railroad track used to separate cars from a train according to destination.

classification yard [CIV ENG] A railroad yard for separating trains according to car destination.

classifier [MECH ENG] Any apparatus for separating mixtures of materials into their constituents according to size and density.

classify [SCI TECH] To sort into groups that have common properties.

class interval [STAT] One of several convenient intervals into which the values of the variate of a frequency distribution may be grouped.

class mark [STAT] The mid-value of a class interval, or the integral value nearest the midpoint of the interval.

classons [PARTIC PHYS] Massless bosons which are quanta of the two classical fields, gravitational and electromagnetic.

class switch [IMMUNOL] A switch of B-lymphocyte expression from one antibody class to another.

clast [GEOL] An individual grain, fragment, or constituent of detrital sediment or sedimentary rock produced by physical breakdown of a larger mass.

clastation *See* weathering.

clastic [GEOL] Rock or sediment composed of clasts which have been transported from their place of origin, as sandstone and shale.

clastic dike [GEOL] A tabular-shaped sedimentary dike composed of clastic material and transecting the bedding of a sedimentary formation; represents invasion by extraneous material along a crack of the containing formation.

clastic pipe [GEOL] A cylindrical body of clastic material having an irregular columnar or pillarlike shape, standing approximately vertically through enclosing formations (usually limestone), and measuring a few centimeters to 50 meters in diameter and 1 to 60 meters in height.

clastic ratio [GEOL] The ratio of the percentage of clastic rocks to that of nonclastic rocks in a geologic section. Also known as detrital ratio.

clastic reservoir [GEOL] An underground oil or gas trap formed in clastic limestone.

clastic sediment [GEOL] Deposits of clastic materials transported by mechanical agents. Also known as mechanical sediment.

clastic wedge [GEOL] The sediments of the exogeosyncline, derived from the tectonic landmasses of the adjoining orthogeosyncline.

clathrate [BIOL] *See* cancellate. [CHEM] A well-defined addition compound formed by inclusion of molecules in cavities formed by crystal lattices or present in large molecules; examples include hydroxyquinone, urea, and cyclodextrin. [PETR] Pertaining to a condition, chiefly in leucite rock, in which clear leucite crystals are surrounded by tangential leucite crystals to give the rock an appearance of a net or a section of sponge.

Clathrinida [INV ZOO] A monofamilial order of sponges in the subclass Calcinea having an asconoid structure and lacking a true dermal membrane or cortex.

Clathrinidae [INV ZOO] The single family of the order Clathrinida.

Clathrochloris [MICROBIO] A genus of bacteria in the family Chlorobiaceae; cells are spherical to ovoid and arranged in chains united in trellis-like aggregates, are nonmotile, contain gas vacuoles, and are free-living.

Clauberg unit [BIOL] A unit for the standardization of progesterone.

Claude process [CHEM ENG] A process of ammonia synthesis which uses high operating pressures and a train of converters. [CRYO] A method of liquefying air or other gases in stages, in which the gas is cooled by doing work in an expansion engine and then undergoing the Joule-Thomson effect as it passes through an expansion valve.

claudetite [MINERAL] As_2O_3 A mineral containing arsenic that is dimorphous with arsenolite; crystallizes in the monoclinic system.

clause [COMPUT SCI] A part of a statement in the COBOL language which may describe the structure of an elementary item, give initial values to items in independent and group work areas, or redefine data previously defined by another clause.

clausius [THERMO] A unit of entropy equal to the increase in entropy associated with the absorption of 1000 international table calories of heat at a temperature of 1 K, or to 4186.8 joules per kelvin.

Clausius-Clapeyron equation [THERMO] An equation governing phase transitions of a substance, $dp/dT = \Delta H/(T\Delta V)$, in which p is the pressure, T is the temperature at which the phase transition occurs, ΔH is the change in heat content (enthalpy), and ΔV is the change in volume during the transition. Also known as Clapeyron-Clausius equation; Clapeyron equation.

Clausius-Dickel column *See* thermogravitational column.

Clausius equation [THERMO] An equation of state in reference to gases which applies a correction to the van der Waals equation: $\{P + (n^2a/[T(V + c)^2])\}(V - nb) = nRT$, where P is the pressure, T the temperature, V the volume of the gas, n the number of moles in the gas, R the gas constant, a depends only on temperature, b is a constant, and c is a function of a and b.

Clausius inequality [THERMO] The principle that for any

system executing a cyclical process, the integral over the cycle of the infinitesimal amount of heat transferred to the system divided by its temperature is equal to or less than zero. Also known as Clausius theorem; inequality of Clausius.

Clausius law [THERMO] The law that an ideal gas's specific heat at constant volume does not depend on the temperature.

Clausius-Mossotti equation [ELEC] An expression for the polarizability γ of an individual molecule in a medium which has the relative dielectric constant ϵ and has N molecules per unit volume: $\gamma = (3/4\pi N)[(\epsilon - 1)/(\epsilon + 2)]$ (Gaussian units).

Clausius-Mossotti-Lorentz-Lorenz equation [ELECTROMAG] The equation that results from replacing the real relative dielectric constant in the Clausius-Mossotti equation, or the real index of refraction in the Lorentz-Lorenz equation, with its complex counterpart.

Clausius number [THERMO] A dimensionless number used in the study of heat conduction in forced fluid flow, equal to $V^3 L \rho / k\Delta T$, where V is the fluid velocity, ρ is its density, L is a characteristic dimension, k is the thermal conductivity, and ΔT is the temperature difference.

Clausius range [STAT MECH] The condition in which the mean free path of molecules in a gas is much smaller than the dimensions of the container.

Clausius' statement [THERMO] A formulation of the second law of thermodynamics, stating it is not possible that, at the end of a cycle of changes, heat has been transferred from a colder to a hotter body without producing some other effect.

Clausius theorem *See* Clausius inequality.

Clausius virial theorem [STAT MECH] The theorem that in a system of particles whose positions and velocities are bounded, the total kinetic energy of the system averaged over a long period of time equals the virial of the system. Also known as virial theorem.

Claus method [CHEM ENG] Industrial method of obtaining sulfur by a partial oxidation of gaseous hydrogen sulfide in the air to give water and sulfur.

clausthalite [MINERAL] PbSe A mineral consisting of lead selenide and resembling galena; specific gravity is 7.6–8.8.

claustrophobia [PSYCH] An abnormal fear of confined spaces.

claustrum [ANAT] A thin layer of gray matter in each cerebral hemisphere between the lenticular nucleus and the island of Reil.

clava [BIOL] A club-shaped structure, as the tip on the antennae of certain insects or the fruiting body of certain fungi.

clavacin *See* patulin.

clavate [BIOL] Club-shaped. Also known as claviform.

clavatin *See* patulin.

Clavatoraceae [PALEOBOT] A group of middle Mesozoic algae belonging to the Charophyta.

Clavaxinellida [INV ZOO] An order of sponges in the class Demospongiae; members have monaxonid megascleres arranged in radial or plumose tracts.

clavicle [ANAT] A bone in the pectoral girdle of vertebrates with articulation occurring at the sternum and scapula.

claviculate [ANAT] Having a clavicle.

claviform *See* clavate.

claviformin *See* patulin.

clavus [INV ZOO] Any of several rounded or fingerlike processes, such as the club of an insect antenna or the pointed anal portion of the hemelytron in hemipteran insects.

claw [ANAT] A sharp, slender, curved nail on the toe of an animal, such as a bird. [DES ENG] A fork for removing nails or spikes. [INV ZOO] A sharp-curved process on the tip of the limb of an insect.

claw clutch [MECH ENG] A clutch consisting of claws that interlock when pushed together.

claw coupling [MECH ENG] A loose coupling having projections or claws cast on each face which engage in corresponding notches in the opposite faces; used in situations in which shafts require instant connection.

claw hammer [DES ENG] A woodworking hammer with a flat working surface and a claw to pull nails.

clay [GEOL] **1.** A natural, earthy, fine-grained material which develops plasticity when mixed with a limited amount of water; composed primarily of silica, alumina, and water, often with iron, alkalies, and alkaline earths. **2.** The fraction of an earthy material containing the smallest particles, that is, finer than 3 micrometers. [MATER] A special grade of absorbent clay used as a filtering medium in refineries for removing solids or colorizing matter from lubricating oils.

clay atmometer [ENG] An atmometer consisting of a porous porcelain container connected to a calibrated reservoir filled with distilled water; evaporation is determined by the depletion of water.

Clay Belt [GEOL] A lowland area bordering on the western and southern portions of Hudson and James bays in Canada, composed of clays and silts recently deposited in large glacial lakes during the withdrawal of the continental glaciers.

clay bit [ENG] **1.** A bit designed for use on a clay barrel. **2.** *See* mud auger.

clay brick [MATER] Brick made from diverse types of clays and used for normal constructional purposes.

Clayden effect *See* dark lightning.

clay digger [MECH ENG] A power-driven, hand-held spade for digging hard soil or soft rock.

clay gall [GEOL] A dry, curled clay shaving derived from dried, cracked mud and embedded and flattened in a sand stratum.

clay ironstone [PETR] **1.** A clayey rock containing large quantities of iron oxide, usually limonite. **2.** A clayey-looking stone occurring among carboniferous and other rocks; contains 20–30% iron.

clay loam [GEOL] Soil containing 27–40% clay, 20–45% sand, and the remaining portion silt.

clay marl [GEOL] A chalky clay, whitish with a smooth texture.

clay mineral [MINERAL] One of a group of finely crystalline, hydrous silicates with a two- or three-layer crystal structure; the major components of clay materials; the most common minerals belong to the kaolinite, montmorillonite, attapulgite, and illite groups.

claypan [GEOL] A stratum of compact, stiff, relatively impervious noncemented clay; can be worked into a soft, plastic mass if immersed in water.

clay plug [GEOL] Sediment, with a great deal of organic muck, deposited in a cutoff river meander.

clay press [ENG] A press used to remove excess water from a pottery-clay slurry.

clay refining [CHEM ENG] A treating process for vaporized gasoline or other light petroleum product; the material is passed through a bed of granular clay, and certain olefins are polymerized to gums and absorbed by the clay.

clay regeneration [CHEM ENG] Cleaning coarse-grained absorbent clays for reuse in percolation processes by deoiling them with naphtha, steaming out excess naphtha, and roasting in a stream of air to remove carbonaceous matter.

clay shale [GEOL] **1.** Shale composed wholly or chiefly of clayey material which becomes clay again on weathering. **2.** Consolidated sediment composed of up to 10% sand and having a silt to clay ratio of less than 1:2.

clay slip [MATER] A slurry of clay and water used in glazing pottery.

clay soil [GEOL] A fine-grained inorganic soil which forms hard lumps when dry and becomes sticky when wet.

claystone [GEOL] Indurated clay, consisting predominantly of fine material of which a major proportion is clay mineral.

clay vein [GEOL] A body of clay which is similar to an ore vein in form and fills a crevice in a coal seam. Also known as dirt slip.

clay wash [MATER] A light oil such as naphtha or kerosine used to clean fuller's earth after it has been used in a filter.

clay worsted [TEXT] Worsted made in a weave of three-up and three-down right-handed twill.

clean bomb [ORD] A nuclear bomb that produces relatively little radioactive fallout.

cleanout auger *See* cleanout jet auger.

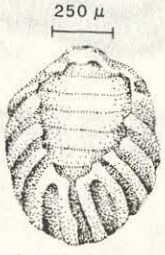
cleanout jet auger [ENG] An auger equipped with water-jet orifices designed to clean out collected material inside a driven pipe or casing before taking soil samples from strata below the bottom of the casing. Also known as cleanout auger.

clean room [ENG] A room in which elaborate precautions are employed to reduce dust particles and other contaminants in the air, as required for assembly of delicate equipment.

cleanser [MATER] Any material used to remove dirt, soil, and impurities from surfaces of all kinds.

clean ship [NAV ARCH] A tanker used to carry refined light-petroleum products instead of crude oil or heavy fuel oils.

CLAVATORACEAE



A calcified part of the unfertilized oogonia of a Clavatoraceae fossil.

clean track [ENG ACOUS] A sound track having no leakage from other tracks.

cleanup [AERO ENG] Improving the external shape and smoothness of an aircraft to reduce its drag. [ELECTR] Gradual disappearance of gases from an electron tube during operation, due to absorption by getter material or the tube structure. [ENG] The time required for a leak-testing system to reduce its signal output to 37% of the signal transmitted at the instant when tracer gases enter the system. [MIN ENG] **1.** The collecting of all the valuable product of a given period of operation in a stamp mill or in a hydraulic or placer mine. **2.** The valuable material resulting from a cleanup.

clean weapon [ORD] A nuclear warhead in which the amount of residual radioactivity is comparable to that of a normal weapon which has the same energy yield.

clear [COMPUT SCI] **1.** To restore a storage device, memory device, or binary stage to a prescribed state, usually that denoting zero. Also known as reset. **2.** A function key on calculators, to delete an entire problem or just the last keyboard entry. [METEOROL] **1.** After United States weather observing practice, the state of the sky when it is cloudless or when the sky cover is less than 0.1 (to the nearest tenth). **2.** To change from a stormy or cloudy weather condition to one of no precipitation and decreased cloudiness. [NAV] In marine navigation, to leave or pass safely, as to clear port or clear a shoal. [ORD] **1.** To give a person a security clearance. **2.** To operate a gun so as to unload it or make certain no ammunition remains; to free a gun of stoppages.

clear-air turbulence [METEOROL] A meteorological phenomenon occurring in the upper troposphere and lower stratosphere, in which high-speed aircraft are subject to violent updrafts and downdrafts. Abbreviated CAT.

clearance [ENG] Unobstructed space required for occasional removal of parts of equipment. [MECH ENG] **1.** In a piston-and-cylinder mechanism, the space at the end of the cylinder when the piston is at dead-center position toward the end of the cylinder. **2.** The ratio of the volume of this space to the piston displacement during a stroke. [MIN ENG] The space between the top or side of a car and the roof or wall. [NAV] **1.** The clear space between a vessel and an object such as a navigation light, hazard to navigation, or another vessel. **2.** A specific message from air-traffic control to a pilot of an aircraft allowing him to proceed in accordance with the flight plan which the pilot had filed, or with some modification of the original plan. **3.** In the instrument landing system, the difference in the depth of modulation which is required to produce a full-scale deflection of the course deviation indicator needle in any flight sector outside the on-course sectors. [ORD] Elevation of a gun at such an angle that a projectile will not strike an obstacle between the muzzle and the target. [PETRO ENG] The annular space between down-hole drill-string equipment, such as bits, core barrels, and casing, and the walls of the borehole with the down-hole equipment centered in the hole.

clearance angle [MECH ENG] The angle between a plane containing the end surface of a cutting tool and a plane passing through the cutting edge in the direction of cutting motion.

clearance sector [NAV] In instrument-landing-system localizers, that section which extends from the front to the back course of sectors and within which the deviation indicator provides the required off-course indications.

clearance test [PATH] The use of a substance such as urea or creatinine, or an injected foreign substance such as inulin to measure renal excretory activity; the ratio of the amount of these excreted substances in two 1-hour periods contrasted with the level of these substances in the blood is calculated in terms of the amount of blood cleared of these substances in a given unit time.

clearance volume [MECH ENG] The volume remaining between piston and cylinder when the piston is at top dead center.

clear area [COMPUT SCI] In optical character recognition, any area designated to be kept free of printing or any other extraneous markings.

clear band [COMPUT SCI] In character recognition, a continuous horizontal strip of blank paper which must be obtained between consecutive code lines on a source document.

clear-cell carcinoma *See* renal-cell carcinoma.

clear channel [COMMUN] A standard broadcast channel in which the dominant station or stations render service over wide areas; stations are cleared of objectionable interference within their primary service areas and over all or a substantial portion of their secondary.

clear-cutting [FOR] Felling and removing all trees in a forest area.

clear-face worsted [TEXT] Closely woven worsted fabric made of twisted yarns and with the nap removed so that the weave is visible.

clear gasoline [MATER] Gasoline which is free from antiknock additives.

clear ice [HYD] Generally, a layer or mass of ice which is relatively transparent because of its homogeneous structure and small number and size of air pockets.

clearing-out drop [COMMUN] Drop signal associated with a cord or trunk circuit, which is operated by ringing current to attract the attention of the operator.

clear text [COMMUN] Text or language which conveys an intelligible meaning in the language in which it is written with no hidden meaning.

clear-voice override [COMMUN] The ability of a speech scrambler to receive a clear message even when the scrambler is set for scrambler operation.

cleat [CIV ENG] A strip of wood, metal, or other material fastened across something to serve as a batten or to provide strength or support. [DES ENG] A fitting having two horizontally projecting horns around which a rope may be made fast. [GEOL] Vertical breakage planes found in coal. Also spelled cleet.

cleat spar *See* ankerite.

cleavage [CRYSTAL] Splitting, or the tendency to split, along planes determined by crystal structure and always parallel to a possible face. [EMBRYO] The subdivision of activated eggs into blastomeres. [GEOL] Splitting, or the tendency to split, along parallel, closely positioned planes in rock.

cleavage banding [GEOL] A compositional banding, usually formed from incompetent material such as argillaceous rocks, that is parallel to the cleavage rather than the bedding.

cleavage crystal [CRYSTAL] A crystal fragment bounded by cleavage faces giving it a regular form.

cleavage fracture [CRYSTAL] **1.** Manner of breaking a crystalline substance along the cleavage plane. **2.** The appearance of such a broken surface.

cleavage nucleus [EMBRYO] The nucleus of a zygote formed by fusion of male and female pronuclei.

cleavage plane [CRYSTAL] Plane along which a crystalline substance may be split.

cleavelandite [MINERAL] A white, lamellar variety of albite that is almost pure $NaAlSi_3O_8$ and has a tabular habit, with individuals often showing mosaic developments and tending to occur in fan-shaped aggregates.

Clebsch-Gordan coefficient *See* vector coupling coefficient.

cleet *See* cleat.

cleft grafting [BOT] A top-grafting method in which the scion is inserted into a cleft cut into the top of the stock.

cleft lip *See* harelip.

cleft palate [MED] A birth defect resulting from incomplete closure of the palate during embryogenesis.

cleft weld [MET] A weld in which a V-shaped projection on one piece is joined to a V-shaped groove in the other.

cleidocranial dysostosis [MED] A congenital defect in which there is deficient formation of bone in the skull and clavicle.

cleistocarp *See* cleistothecium.

cleistocarpous [BOT] Of mosses, having the capsule opening irregularly without an operculum. [MYCOL] Forming or having cleistothecia.

cleistogamy [BOT] The production of small closed flowers that are self-pollinating and contain numerous seeds. [PL ANAT] The production of a hermaphroditic floral type that remains closed and self-pollinates in the bud.

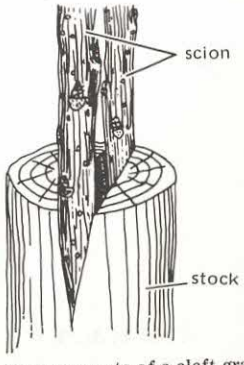
cleistothecium [MYCOL] A closed sporebearing structure in Ascomycetes; asci and spores are freed of the fruiting body by decay or desiccation. Also known as cleistocarp.

cleithrophobia [PSYCH] An abnormal fear of being locked in.

cleithrum [VERT ZOO] A bone external and adjacent to the clavicle in certain fishes, stegocephalians, and primitive reptiles.

clerestory [ARCH] The upward extension of enclosed space achieved by bringing a windowed wall up to interrupt the slope of the roof.

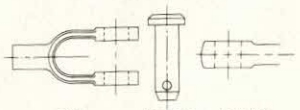
CLEFT GRAFTING



The components of a cleft graft. *(From H. J. Fuller and Z. B. Carothers, The Plant World, 4th ed., Holt, Rinehart, and Winston, 1963)*

Cleridae [INV ZOO] The checkered beetles, a family of coleopteran insects in the superfamily Cleroidea.
Cleroidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.
Cleveland open-cup tester [ANALY CHEM] A laboratory apparatus used to determine flash point and fire point of petroleum products.
clevis [DES ENG] A U-shaped metal fitting with holes in the open ends to receive a bolt or pin; used for attaching or suspending parts. [MIN ENG] A spring hook or snap hook which, in coal mining, is used to attach the bucket to the hoisting rope. Also known as clivvy.
clevis pin [DES ENG] A fastener with a head at one end, used to join the ends of a clevis.
cliachite [MINERAL] A group of brownish, colloidal aluminum hydroxides that constitutes most bauxite.
click [COMMUN] A short-duration electric disturbance, such as that sometimes produced by a code-sending key or a switch. [ENG ACOUS] A perforation in a sound track which produces a clicking sound when passed over the projector sound head.
click track [ENG ACOUS] A sound track containing a series of clicks, which may be spaced regularly (uniform click track) or irregularly (variable click track).
cliff [GEOGR] A high, steep, perpendicular or overhanging face of a rock; a precipice.
cliff of displacement *See* fault scarp.
Cliftonian [GEOL] Middle Middle Silurian geologic time.
climacophobia [PSYCH] An abnormal fear of staircases.
climacteric *See* menopause.
climagram *See* climatic diagram.
climagraph *See* climatic diagram.
climate [CLIMATOL] The long-term manifestations of weather.
climate control [CLIMATOL] Schemes for artificially altering or controlling the climate of a region. [ENG] *See* air conditioning.
climatic change [CLIMATOL] The long-term fluctuation in rainfall, temperature, and other aspects of the earth's climate.
climatic classification [CLIMATOL] The division of the earth's climates into a system of contiguous regions, each one of which is defined by relative homogeneity of the climate elements.
climatic climax [ECOL] A climax community viewed, by some authorities, as controlled by climate.
climatic controls [CLIMATOL] The relatively permanent factors which govern the general nature of the climate of a portion of the earth, including solar radiation, distribution of land and water masses, elevation and large-scale topography, and ocean currents.
climatic cycle [CLIMATOL] A long-period oscillation of climate which recurs with some regularity, but which is not strictly periodic. Also known as climatic oscillation.
climatic diagram [CLIMATOL] A graphic presentation of climatic data; generally limited to a plot of the simultaneous variations of two climatic elements, usually through an annual cycle. Also known as climagram; climagraph; climatograph; climogram; climograph.
climatic divide [CLIMATOL] A boundary between regions having different types of climate.
climatic factor [CLIMATOL] Climatic control, but regarded as including more local influences; thus city smoke and the extent of the builtup metropolitan area are climatic factors, but not climatic controls.
climatic forecast [CLIMATOL] A forecast of the future climate of a region; that is, a forecast of general weather conditions to be expected over a period of years.
climatic optimum [CLIMATOL] The period in history (about 5000–2500 B.C.) during which temperatures were warmer than at present in nearly all parts of the world.
climatic oscillation *See* climatic cycle.
climatic prediction [CLIMATOL] The estimation of the chances that specified climatic conditions will occur in a certain time interval.
climatic province [CLIMATOL] A region of the earth's surface characterized by an essentially homogeneous climate.
climatic snow line [METEOROL] The altitude above which a flat surface (fully exposed to sun, wind, and precipitation) would experience a net accumulation of snow over an extended period of time; below this altitude, ablation would predominate.

CLEVIS



A clevis (yoke), with clevis pin and rod end.

climatic zone [CLIMATOL] A belt of the earth's surface within which the climate is generally homogeneous in some respect; an elemental region of a simple climatic classification.
Climatiidae [PALEON] A family of archaic tooth-bearing fishes in the suborder Climatioidei.
Climatiiformes [PALEON] An order of extinct fishes in the class Acanthodii having two dorsal fins and large plates on the head and ventral shoulder.
Climatioidei [PALEON] A suborder of extinct fishes in the order Climatiiformes.
climatochronology [GEOL] The absolute age dating of recent geologic events by using the oxygen isotope ratios in ice, shells, and so on.
climatograph *See* climatic diagram.
climatography [CLIMATOL] A quantitative description of climate, particularly with reference to the tables and charts which show the characteristic values of climatic elements at a station or over an area.
climatological forecast [METEOROL] A weather forecast based upon the climate of a region instead of upon the dynamic implications of current weather, with consideration given to such synoptic weather features as cyclones and anticyclones, fronts, and the jet stream.
climatological station elevation [CLIMATOL] The elevation above mean sea level chosen as the reference datum level for all climatological records of atmospheric pressure in a given locality.
climatological station pressure [CLIMATOL] The atmospheric pressure computed for the level of the climatological station elevation, used to give all climatic records a common reference; it may or may not be the same as station pressure.
climatological substation [CLIMATOL] A weather-observing station operated (by an unpaid volunteer) for the purpose of recording climatological observations.
climatology [METEOROL] That branch of meteorology concerned with the mean physical state of the atmosphere together with its statistical variations in both space and time as reflected in the weather behavior over a period of many years.
climatopathology [MED] The study of disease in relation to the effects of the natural environment.
climatophysiology [PHYSIO] The study of the interaction of the natural environment with physiologic factors.
climatotherapy [MED] Placing a person in a suitable climate to treat a certain disease.
climax [ECOL] A mature, relatively stable community in an area, which community will undergo no further change under the prevailing climate; represents the culmination of ecological succession.
climax plant formation [ECOL] A mature, stable plant population in a climax community.
climb [AERO ENG] The gain in altitude of an aircraft.
climb cutting [MET] A milling technique in which the teeth of a cutting tool advance into the work in the same direction as the feed. Also known as climb milling; down cutting; down milling.
climbing bog [ECOL] An elevated boggy area on a swamp margin, usually occurring where there is a short summer and considerable rainfall.
climbing crane [MECH ENG] A crane used on top of a high-rise construction that ascends with the building as work progresses.
climbing dune [GEOL] A dune that develops on the windward side of mountains or hills.
climbing irons [DES ENG] Spikes attached to a steel framework worn on shoes to climb wooden utility poles and trees.
climbing stem [BOT] A long, slender stem that climbs up a support or along the tops of other plants by using spines, adventitious roots, or tendrils for attachment.
climb milling *See* climb cutting.
climogram *See* climatic diagram.
climograph *See* climatic diagram.
cline [BIOL] A graded series of morphological or physiological characters exhibited by a natural group (as a species) of related organisms, generally along a line of environmental or geographic transition.
clinical chemisty [PATH] The science involving chemical analysis of body tissues to diagnose disease.
clinical genetics [GEN] The study of biological inheritance by direct observation of the living patient.
clinical pathology [PATH] A medical specialty encompass-

ing the diagnostic study of disease by means of laboratory tests of material from the living patient.

clinical pharmacology [PHARM] The study and evaluation of the effects of drugs in humans.

clinical thermometer [ENG] A thermometer used to accurately determine the temperature of the human body; the most common type is a mercury-in-glass thermometer, in which the mercury expands from a bulb into a capillary tube past a constriction that prevents the mercury from receding back into the bulb, so that the thermometer registers the maximum temperature attained.

clinker [GEOL] Burnt or vitrified stony material, as ejected by a volcano or formed in a furnace. [MATER] An overburned brick.

clinker building [DES ENG] A method of building ships and boilers in which the edge of the wooden planks or steel plates used for the outside covering overlap the edge of the plank or plate next to it; clinched nails fasten the planks together, and rivets fasten the steel plates.

clinoamphibole [MINERAL] A group of amphiboles which crystallize in the monoclinic system.

clinoaxis [CRYSTAL] The inclined lateral axis that makes an oblique angle with the vertical axis in the monoclinic system. Also known as clinodiagonal.

clinochlore [MINERAL] $(Mg,Fe,Al)_3(Si,Al)_2O_5(OH)_4$ Green mineral of the chlorite group, occurring in monoclinic crystals, in folia or scales, or massive.

clinoclase [MINERAL] $Cu_3(AsO_4)(OH)_3$ A dark-green mineral consisting of basic copper arsenate occurring in translucent prismatic crystals or massive. Also known as clinoclasite.

clinoclasite *See* clinoclase.

clinodiagonal *See* clinoaxis.

clinoenstatite [MINERAL] $Mg_2(Si_2O_6)$ A monoclinic pyroxene consisting principally of magnesium silicate; occurs frequently in stony meteorites, but is rare in terrestrial environments.

clinoferrosilite [MINERAL] $Fe_2(Si_2O_6)$ A monoclinic pyroxene consisting of iron silicate.

clinoform [GEOL] A subaqueous landform, such as the continental slope of the ocean or the foreset bed of a delta.

clinograph [ENG] A type of directional surveying instrument that records photographically the direction and magnitude of deviations from the vertical of a borehole, well, or shaft; the information is obtained by the instrument in one trip into and out of the well.

clinographic projection [GRAPHICS] A method of representing objects, especially crystals, in which each point P of the object to be represented is projected onto the foot of a perpendicular from P to a plane which is located so that no place surface of the object is represented by a line.

clinohedral class [CRYSTAL] A rare class of crystals in the monoclinic system having a plane of symmetry but no axis of symmetry. Also known as domatic class.

clinohedrite [MINERAL] $CaZnSiO_3(OH)_2$ A colorless, white, or purplish monoclinic mineral consisting of a calcium zinc silicate occurring in crystals; hardness is 5.5 on Mohs scale, and specific gravity is 3.33.

clinohumite [MINERAL] $Mg_9(SiO_4)_4(F,OH_2)$ A monoclinic mineral of the humite group.

clinometer [ENG] **1.** A hand-held surveying device for measuring vertical angles; consists of a sighting tube surmounted by a graduated vertical arc with an attached level bubble; used in meteorology to measure cloud height at night, in conjunction with a ceiling light, and in ordnance for boresighting. **2.** A device for measuring the amount of roll aboard ship.

clinopinacoid [CRYSTAL] A form of monoclinic crystal whose faces are parallel to the inclined and vertical axes.

clinopyroxene [MINERAL] The general term for any of those pyroxenes that crystallize in the monoclinic system; on occasion, these pyroxenes have large amounts of calcium with or without aluminum and the alkalies. Also known as monopyroxene clinoaugite.

clinozoisite [MINERAL] $Ca_2Al_3(SiO_4)_3(OH)$ A grayish-white, pink, or green monoclinic mineral of the epidote group.

clint [GEOL] A hard or flinty rock, such as a projecting rock or ledge.

Clintonian [GEOL] Lower Middle Silurian geologic time.

clintonite [MINERAL] $Ca(Mg,Al)_3(Al,Si)O_{10}(OH)_2$ A reddish-brown, copper-red, or yellowish monoclinic mineral of the brittle mica group occurring in crystals or foliated masses. Also known as seybertite; xanthophyllite.

Clionidae [INV ZOO] The boring sponges, a family of marine sponges in the class Demospongiae.

clip [DES ENG] A device that fastens by gripping, clasping, or hooking one part to another. [ORD] *See* cartridge clip.

clip and shave [MET] Dual forging operation in which one cutter removes the flash and then another cutter shaves and sizes the piece.

clip bond [CIV ENG] A bond in which the inner edge of face brick is cut off so that bricks laid diagonal to a wall can be joined to those laid parallel to it.

clip-dot fabric [TEXT] A fabric decorated with small woven spots of extra warp or filling yarn—the floating threads between the spots being clipped or sheared in finishing. Also known as clip-spot fabric.

clipper *See* limiter.

clipper diode [ELECTR] A bidirectional breakdown diode that clips signal voltage peaks of either polarity when they exceed a predetermined amplitude.

clipper-limiter [ELECTR] A device whose output is a function of the instantaneous input amplitude for a range of values lying between two predetermined limits but is approximately constant, at another level, for input values above the range.

clipping [COMMUN] The perceptible mutilation of signals or speech syllables during transmission. [ELECTR] *See* limiting.

clipping circuit *See* limiter.

clipping edge [MET] Area of a forging where flash is removed.

clipping level [ELECTR] The level at which a clipping circuit is adjusted; for example, the magnitude of the clipped wave shape.

clip-spot fabric *See* clip-dot fabric.

clisere [ECOL] The succession of ecological communities, especially climax formations, as a consequence of intense climatic changes.

clitellum [INV ZOO] The thickened, glandular, saddlelike portion of the body wall of some annelid worms.

clitoris [ANAT] The homolog of the penis in females, located in the anterior portion of the vulva.

clivvy *See* clevis.

clo [ENG] The amount of insulation which will maintain normal skin temperature of the human body when heat production is 50 kilogram-calories per meter squared per hour, air temperature is 70°F (21°C), and the air is still.

cloaca [INV ZOO] The chamber which functions as a respiratory, excretory, and reproductive duct in certain invertebrates. [VERT ZOO] The chamber which receives the discharges of the intestine, urinary tract, and reproductive canals in monotremes, amphibians, birds, reptiles, and many fish.

cloacal bladder [VERT ZOO] A diverticulum of the cloacal wall in monotremes, amphibians, and some fish, into which urine is forced from the cloaca.

cloacal gland [VERT ZOO] Any of the sweat glands in the cloaca of lower vertebrates, as snakes or amphibians.

clock [ELECTR] A source of accurately timed pulses, used for synchronization in a digital computer or as a time base in a transmission system. [HOROL] A device for indicating the passage of time, usually containing a means for producing a regularly recurring action.

Clock *See* Horologium.

clock control system [CONT SYS] A system in which a timing device is used to generate the control function. Also known as time-controlled system.

clock drive [ENG] The mechanism that causes an equatorial telescope to revolve about its polar axis so that it keeps the same star in its field of view.

clocked flip-flop [ELECTR] A flip-flop circuit that is set and reset at specific times by adding clock pulses to the input so that the circuit is triggered only if both trigger and clock pulses are present simultaneously.

clocked logic [ELECTR] A logic circuit in which the switching action is conrolled by repetitive pulses from a clock.

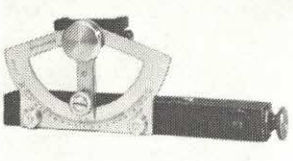
clock frequency [ELECTR] The master frequency of the periodic pulses that schedule the operation of a digital computer.

clock method [ORD] Method of calling artillery shots by reference to the figures on an imaginary clock dial assumed to have the target at its center; thus a shot directly above the target is at 12 o'clock.

CLINOGRAPH

Vertical section through a clinograph. *(Sperry-Sun Well Surveying Co.)*

CLINOMETER



A typical clinometer. *(Keuffel and Esser Co.)*

clock motor *See* timing motor.

clock oscillator [ELECTR] An oscillator that controls an electronic clock.

clock paradox [RELAT] The apparent contradiction between the principle of relativity, which asserts the equivalence of different observers, and the prediction, also part of the theory of relativity, that the clock of an observer who passes back and forth will be slower than the clock of an observer at rest. Also known as twin paradox.

clock pulses [COMPUT SCI] Electronic pulses which are emitted periodically, usually by a crystal device, to synchronize the operation of circuits in a computer. Also known as clock signals.

clock rate [ELECTR] The rate at which bits or words are transferred from one internal element of a computer to another. [HOROL] The amount of time which a clock gains or loses during a fixed period of time, usually a day.

clock signals *See* clock pulses.

clock star [ASTRON] Any star that is used to measure time; always a bright star, whose right ascension is well known.

clock time *See* internal cycle time.

clock track [COMPUT SCI] A track on a magnetic recording medium that generates clock pulses for the synchronization of read and write operations.

clock valve [ENG] A hinged valve that permits flow in one direction only.

clock watch [HOROL] A watch that strikes the hours.

clockwork [HOROL] A timing mechanism.

clod [AGR] A compact mass of soil, ranging from about 0.5 to 25 centimeters in size, which is produced by plowing and digging of excessively wet or dry soil.

clog snow [HYD] A skiing term for wet, sticky, new snow.

cloister vault [ARCH] A vault resembling a pyramid with outward-curving sides.

cloithoid *See* Cornu's spiral.

clone [BIOL] All individuals, considered collectively, produced asexually or by parthenogenesis from a single individual.

clonorchiasis [MED] A parasitic infection of humans and other fish-eating mammals which is caused by the trematode *Opisthorchis* (*Clonorchis*) *sinensis*, which is usually found in the bile ducts.

Clonothrix [MICROBIO] A genus of sheathed bacteria; cells are attached and encrusted with iron and manganese oxides, and filaments are tapered.

clonus [PHYSIO] Irregular, alternating muscular contractions and relaxations.

close [METEOROL] Colloquially, descriptive of oppressively still, warm, moist air, frequently applied to indoor conditions.

close-control radar [ENG] Ground radar used with radio to position an aircraft over a target that is normally difficult to locate or is invisible to the pilot.

close-coupled pump [MECH ENG] Pump with built-in electric motor (sometimes a steam turbine), with the motor drive and pump impeller on the same shaft.

close coupling [ELEC] **1.** The coupling obtained when the primary and secondary windings of a radio-frequency or intermediate-frequency transformer are close together. **2.** A degree of coupling that is greater than critical coupling. Also known as tight coupling.

closed aerodrome [NAV] An aerodrome at which ceiling and visibility are below prescribed minimum for ordinary landings and takeoffs.

closed-belt conveyor [MECH ENG] Solids-conveying device with zipperlike teeth that mesh to form a closed tube wrapped snugly around the conveyed material; used with fragile materials.

closed-cell foam [MATER] A cellular plastic in which there is a predominance of noninterconnecting cells.

closed circuit [COMMUN] Program source that is not broadcast for general consumption but is fed to remote monitoring units by wire. [ELEC] A complete path for current.

closed-circuit communications system [COMMUN] A communications systems which is entirely self-contained, and does not exchange intelligence with other facilities and systems.

closed-circuit grinder [MIN ENG] A grinder connected to a size classifier (cyclone or screen) to return oversized particles to the grinding operation in closed-circuit pulverizing.

closed-circuit pulverizing [MIN ENG] A process used in ore dressing in which the material discharged from the pulverizer is passed through an external classifier where the finished product is removed and oversized particles are returned to the pulverizer.

closed-circuit signaling [COMMUN] Signaling in which current flows in the idle condition, and a signal is initiated by increasing or decreasing the current.

closed-circuit telegraph system [COMMUN] Telegraph system in which, when no station is transmitting, the circuit is closed and current flows through the circuit.

closed-circuit television [COMMUN] Any application of television that does not involve broadcasting for public viewing; the programs can be seen only on specified receivers connected to the television camera by circuits, which include microwave relays and coaxial cables. Abbreviated CCTV.

closed cycle [THERMO] A thermodynamic cycle in which the thermodynamic fluid does not enter or leave the system, but is used over and over again.

closed-cycle fuel cell [ELEC] A fuel cell in which the reactants are regenerated by an auxiliary process, such as electrolysis.

closed-cycle reactor [NUCLEO] A nuclear reactor in which the primary coolant flows to a heat exchanger and then recirculates through the core in a completely closed circuit.

closed-cycle turbine [MECH ENG] A gas turbine in which essentially all the working medium is continuously recycled, and heat is transferred through the walls of a closed heater to the cycle.

closed die [MET] A forming or forging die in which the flow of metal is restricted to the cavity of the die set.

closed drainage [HYD] Drainage in which the surface flow of water collects in sinks or lakes having no surface outlet. Also known as blind drainage.

closed ecological system [AERO ENG] A system used in spacecraft that provides for the maintenance of life in an isolated living chamber through complete reutilization of the material available, in particular, by means of a cycle wherein exhaled carbon dioxide, urine, and other waste matter are converted chemically or by photosynthesis into oxygen, water, and food. [ECOL] A community into which a new species cannot enter due to crowding and competition.

closed file [COMPUT SCI] A file that cannot be accessed for reading or writing.

closed fireroom system [MECH ENG] A fireroom system in which combustion air is supplied via forced draft resulting from positive air pressure in the fireroom.

closed fold [GEOL] A fold whose limbs have been compressed until they are parallel, and whose structure contour lines form a closed loop. Also known as tight fold.

closed frame [MIN ENG] A mine support frame that is completely closed; especially in inclined shafts, it is used to protect all sides from rock pressure.

closed graph theorem [MATH] If T is a linear transformation on Banach space X to Banach space Y whose domain $D(T)$ is closed and whose graph, that is, the set of pairs (x,Tx) for x in $D(T)$, is closed in $X \times Y$, then T is bounded (and hence continuous).

closed high [METEOROL] A high that may be completely encircled by an isobar or contour line.

closed intervals [MATH] A closed interval of real numbers, denoted by $[a,b]$, consists of all numbers equal to or greater than $a$and equal to or less than b.

closed lake [HYD] A lake that does not have a surface effluent and that loses water by evaporation or by seepage.

closed linear manifold [MATH] A topologically closed vector subspace of a topological vector space.

closed loop [COMPUT SCI] A loop whose execution continues indefinitely in the absence of any external intervention. [CONT SYS] A family of automatic control units linked together with a process to form an endless chain; the effects of control action are constantly measured so that if the controlled quantity departs from the norm, the control units act to bring it back.

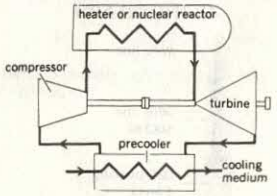
closed-loop control system *See* feedback control system.

closed-loop telemetry system [ENG] **1.** A telemetry system which is also used as the display portion of a remote-control system. **2.** A system used to check out test vehicle or telemetry performance without radiation of radio-frequency energy.

closed-loop voltage gain [ELECTR] The voltage gain of an amplifier with feedback.

closed low [METEOROL] A low that may be completely encircled by an isobar or contour line, that is, an isobar or contour

CLOSED-CYCLE TURBINE



A closed-cycle gas turbine with precooler, series flow, single-shaft power plant.

line of any value, not necessarily restricted to those arbitrarily chosen for the analysis of the chart.

closed magnetic circuit [ELECTROMAG] A complete circulating path for magnetic flux around a core of ferromagnetic material.

closed nozzle [MECH ENG] A fuel nozzle having a built-in valve interposed between the fuel supply and combustion chamber.

closed operator [MATH] A linear transformation f whose domain A is contained in a normed vector space X satisfying the condition that if $\lim x_n = x$ for a sequence x_n in A, and $\lim f(x_n) = y$, then x is in A and $f(x) = y$.

closed orthonormal set *See* complete orthonormal set.

closed pair [MECH] A pair of bodies that are subject to constraints which prevent any relative motion between them.

closed pass [MET] A metal-rolling operation in which the top roll has a collar that fits a groove on the bottom roll, allowing a flash-free shape to be formed in the rolled metal.

closed reduction [MED] Reduction of fractures or dislocations by manipulation without surgical intervention.

closed respiratory gas system [ENG] A self-contained system within a sealed cabin, capsule, or spacecraft that will provide adequate oxygen for breathing, maintain adequate cabin pressure, and absorb the exhaled carbon dioxide and water vapor.

closed rotative gas lift [PETRO ENG] Oil-well control system in which high-pressure compressor gas is injected into a well to force oil fluids from the reservoir, with spent lift gas recompressed for reinjection.

closed sea [OCEANOGR] **1.** That part of the ocean enclosed by headlands, within narrow straits, or within other landforms. **2.** That part of the ocean within the territorial jurisdiction of a country.

closed set [MATH] A set of points which contains all its cluster points. Also known as topologically closed set.

closed shell [PHYS] An atomic or nuclear shell containing the maximum number of electrons or nucleons allowed by the Pauli exclusion principle.

closed shop [COMPUT SCI] A data-processing center so organized that only professional programmers and operators have access to the center to meet the needs of users. [IND ENG] An establishment permitting only union members to be employed.

closed steam [ENG] Steam that flows through a heating coil or annulus so that there is no direct contact between the steam and the material being heated.

closed subroutine [COMPUT SCI] A subroutine that can be stored outside the main routine and can be connected to it by linkages at one or more locations.

closed system [THERMO] A system which is isolated so that it cannot exchange matter or energy with its surroundings and can therefore attain a state of thermodynamic equilibrium.

closed universe [ASTRON] A cosmological model in which the volume of the universe is final and in which the expansion of the universe will slow to a halt billions of years in the future, and the universe will then contract, becoming progressively denser, until it ends in a fireball similar to the big bang.

closefile [COMPUT SCI] A procedure call in time sharing which enables an ALGOL program to close a file no longer required.

close-grained [MATER] Consisting of fine, closely spaced particles, crystals, or other elements.

close-joints cleavage *See* slip cleavage.

close-packed crystal [CRYSTAL] A crystal structure in which the lattice points are centers of spheres of equal radius arranged so that the volume of the interstices between the spheres is minimal.

close routine [COMPUT SCI] A computer program that changes the state of a file from open to closed.

close sand *See* tight sand.

closest approach [ASTRON] **1.** The event that occurs when two planets or other celestial bodies are nearest to each other as they orbit about the sun or other primary. **2.** The place or time of such an event.

close-talking microphone [ENG ACOUS] A microphone designed for use close to the mouth, so noise from more distant points is suppressed. Also known as noise-canceling microphone.

close-tolerance forging [MET] Forging in which draft angles are on the order of 1–3°, tolerances are less than half of those for commercial designs, and there is little or no allowance for finish.

close work [MIN ENG] Driving a tunnel or drifting between two coal seams.

closing line [MECH] The vector required to complete a polygon consisting of a set of vectors whose sum is zero (such as the forces acting on a body in equilibrium).

closing plug [ORD] A plug used to close openings of various components of a round of ammunition, that is, primer or nose of an unfused projectile.

closing pressure [MECH ENG] The amount of static inlet pressure in a safety relief valve when the valve disk has a zero lift above the seat.

closing rate [AERO ENG] The speed at which two aircraft or missiles come closer together.

Clostridium [MICROBIO] A genus of bacteria in the family Bacillaceae; usually motile rods which form large spores that distend the cell; anaerobic and do not reduce sulfate.

Clostridium botulinum [MICROBIO] A species of human pathogenic bacteria that produce an exotoxin, botulinin, which causes botulism.

Clostridium chauvoei [MICROBIO] A species of pathogenic bacteria that produce an exotoxin causing black leg in cattle.

Clostridium perfringens [MICROBIO] A gas-producing species of bacteria that produce several toxins and are the principal cause of gas gangrene in humans. Also known as *Clostridium welchii*.

Clostridium tetani [MICROBIO] A species of pathogenic soil bacteria which cause tetanus in humans.

Clostridium welchii *See* Clostridium perfringens.

closure [GEOL] The vertical distance between the highest and lowest point on an anticline which is enclosed by contour lines. [MATH] The union of a set and its cluster points; the smallest closed set containing the set.

clot [PHYSIO] A semisolid coagulum of blood or lymph.

cloth [TEXT] **1.** A sheet of fibers assembled by weaving, knitting, felting, or some other similar process. **2.** A nonfibrous material of similar properties.

cloth beam [TEXT] One of five essential parts of a loom, upon which the newly constructed fabric is wound.

cloth count *See* thread count.

clothing monitor [NUCLEO] An instrument designed for monitoring radioactive contamination on clothing.

clothoid *See* Cornu's spiral.

cloth print [GRAPHICS] A photo reproduction image on a woven fiber base.

cloth wheel [DES ENG] A polishing wheel made of sections of cloth glued or sewn together.

clot retraction time [PATH] The length of time required for the appearance or completion of the contraction or shrinkage of a blood clot, resulting in the extrusion of serum.

clotting time [PHYSIO] The length of time required for shed blood to coagulate under standard conditions. Also known as coagulation time.

cloud [METEOROL] Suspensions of minute water droplets or of ice crystals produced by the condensation of water vapor. [NUC PHYS] The nucleons that are in the nucleus of an atom but not in closed shells. [SCI TECH] Any suspension of particulate matter, such as dust or smoke, dense enough to be seen.

cloud absorption [GEOPHYS] The absorption of electromagnetic radiation by the waterdrops and water vapor within a cloud.

cloudage *See* cloud cover.

cloud attenuation [ELECTROMAG] The attenuation of microwave radiation by clouds (for the centimeter-wavelength band, clouds produce Rayleigh scattering); due largely to scattering, rather than absorption, for both ice and water clouds.

cloud band [METEOROL] A broad band of clouds, about 10 to 100 or more miles (16 to 161 kilometers) wide, and varying in length from a few tens of miles to hundreds of miles.

cloud bank [METEOROL] A fairly well-defined mass of cloud observed at a distance; covers an appreciable portion of the horizon sky, but does not extend overhead.

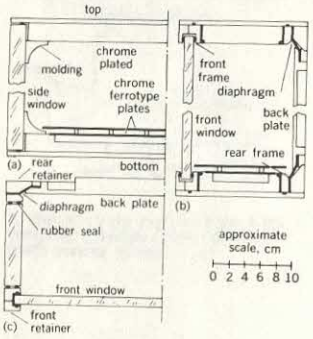
cloud banner *See* banner cloud.

cloud bar [METEOROL] **1.** A heavy bank of clouds that appears on the horizon with the approach of an intense tropical cyclone (hurricane or typhoon); it is the outer edge of the central cloud mass of the storm. **2.** Any long, narrow, unbroken line of cloud, such as a crest cloud or an element of billow cloud.

CLOUD

Cumulonimbus clouds photographed over the upland adjoining the upper Colorado River Valley. Note the rain showers which appear under some of the clouds. *(Lt. B. H. Wyatt, U.S.N., U.S. Weather Bureau)*

CLOUD CHAMBER



Cloud chamber designed for use in a magnetic field. *(a)* Vertical section parallel to front. *(b)* Vertical section parallel to side. *(c)* Horizontal section. The back plate moves to produce the expansion. The mechanism for compressing the chamber and producing the expansion is not shown.

CLOVE

Closed flower buds (cloves) and open buds on a branch of the evergreen tree *Eugenia caryophyllata*.

cloud base [METEOROL] For a given cloud or cloud layer, that lowest level in the atmosphere at which the air contains a perceptible quantity of cloud particles.

cloudburst [METEOROL] In popular terminology, any sudden and heavy fall of rain, usually of the shower type, and with a fall rate equal to or greater than 100 millimeters (3.94 inches) per hour. Also known as rain gush; rain gust.

cloudburst hardness test [MET] A procedure in which a shower of steel balls, dropped from a predetermined height, dulls the surface of a hardened part in proportion to its softness and thus reveals defective areas.

cloudburst treatment [MET] Cold-working the surface of a metal by impingement of an avalanche of metal shot; a form of shot-peening.

cloud cap *See* cap cloud.

cloud chamber [NUCLEO] A particle detector in which the path of a charged particle is made visible by the formation of liquid droplets along the trail of ions left by the particle as it passes through the gas of the chamber. Also known as expansion chamber; fog chamber.

cloud classification [METEOROL] **1.** A scheme of distinguishing and grouping clouds according to their appearance and, where possible, to their process of formation. **2.** A scheme of classifying clouds according to their altitudes: high, middle, or low clouds. **3.** A scheme of classifying clouds according to their particulate composition: water clouds, ice-crystal clouds, or mixed clouds.

cloud column [NUCLEO] The column of smoke extending upward from the point of burst of an atomic weapon.

cloud cover [METEOROL] That portion of the sky cover which is attributed to clouds, usually measured in tenths of sky covered. Also known as cloudage; cloudiness.

cloud crest *See* crest cloud.

cloud deck [METEOROL] The upper surface of a cloud.

cloud-detection radar [ENG] A type of weather radar designed specifically for the detection of clouds (rather than precipitation).

cloud discharge [GEOPHYS] A lightning discharge occurring between a positive charge center and a negative charge center, both of which lie in the same cloud. Also known as cloud flash; intracloud discharge.

cloud droplet [METEOROL] A particle of liquid water from a few micrometers to tens of micrometers in diameter, formed by condensation of atmospheric water vapor and suspended in the atmosphere with other drops to form a cloud.

cloud-drop sampler [ENG] An instrument for collecting cloud particles, consisting of a sampling plate or cylinder and a shutter, which is so arranged that the sampling surface is exposed to the cloud for a predetermined length of time; the sampling surface is covered with a material which either captures the cloud particles or leaves an impression characteristic of the impinging elements.

cloud echo [METEOROL] The radar target signal returned from clouds alone, as detected by cloud detection radars or other very-short-wavelength equipment.

cloud flash *See* cloud discharge.

cloud forest *See* temperate rainforest.

cloud formation [METEOROL] **1.** The process by which various types of clouds are formed, generally involving adiabatic cooling of ascending moist air. **2.** A particular arrangement of clouds in the sky, or a striking development of a particular cloud.

cloud height [METEOROL] The absolute altitude of the base of a cloud.

cloud height indicator [ENG] General term for an instrument which measures the height of cloud bases.

cloudiness *See* cloud cover.

cloud layer [METEOROL] An array of clouds, not necessarily all of the same type, whose bases are at approximately the same level; may be either continuous or composed of detached elements.

cloud level [METEOROL] **1.** A layer in the atmosphere in which are found certain cloud genera; three levels are usually defined: high, middle, and low. **2.** At a particular time, the layer in the atmosphere bounded by the limits of the bases and tops of an existing cloud form.

cloud mirror *See* mirror nephoscope.

cloud modification [METEOROL] Any process by which the natural course of development of a cloud is altered by artificial means.

cloud particle [METEOROL] A particle of water, either a drop of liquid water or an ice crystal, comprising a cloud.

cloud-phase chart [METEOROL] A chart designed to indicate and distinguish supercooled water clouds from ice-crystal clouds.

cloud physics [METEOROL] The study of the physical and dynamical processes governing the structure and development of clouds and the release from them of snow, rain, and hail.

cloud point [CHEM ENG] The temperature at which paraffin wax or other solid substance begins to separate from a solution of petroleum oil; a cloudy appearance is seen in the oil at this point.

cloud pulse [ELECTR] The output resulting from space charge effects produced by turning the electron beam on or off in a charge-storage tube.

cloud seeding [METEOROL] Any technique carried out with the intent of adding to a cloud certain particles that will alter its natural development.

cloud shield [METEOROL] The principal cloud structure of a typical wave cyclone, that is, the cloud forms found on the cold-air side of the frontal system.

cloud street [METEOROL] A line of cumuliform clouds frequently one cumulus element wide, but ranging upward in width so that it is sometimes difficult to differentiate between streets and bands.

cloud symbol [METEOROL] One of a set of specified ideograms that represent the various cloud types of greatest significance or those most commonly observed, and entered on a weather map as part of a station model.

cloud system [METEOROL] An array of clouds and precipitation associated with a cyclonic-scale feature of atmospheric circulation, and displaying typical patterns and continuity. Also known as nephsystem.

cloud test [CHEM ENG] An ASTM method for determining the cloud point of petroleum oil.

cloud-to-cloud discharge [GEOPHYS] A lightning discharge occurring between a positive charge center of one cloud and a negative charge center of a second cloud. Also known as intercloud discharge.

cloud-to-ground discharge [GEOPHYS] A lightning discharge occurring between a charge center (usually negative) in the cloud and a center of opposite charge at the ground. Also known as ground discharge.

cloud top [METEOROL] The highest level in the atmosphere at which the air contains a perceptible quantity of cloud particles for a given cloud or cloud layer.

cloud track [NUCLEO] The string of minute water droplets that forms along the path of an ionizing particle in the supersaturated vapor of a cloud chamber.

cloudy [METEOROL] The character of a day's weather when the average cloudiness, as determined from frequent observations, is more than 0.7 for the 24-hour period.

cloudy crystal-ball model [NUC PHYS] An optical analogy used in explaining scattering of nucleons by nuclei, in which the nucleus is thought of as a sphere of nuclear matter which partially refracts and partially absorbs the incident nucleon (de Broglie) wave. Also known as optical model.

cloudy swelling [PATH] A retrogressive change in the cytoplasm of parenchymatous cells, whereby the cell enlarges and its outline becomes irregular, with resultant swelling of the organ.

clough [GEOGR] A cleft in a hill; a ravine or narrow valley.

clout nail [DES ENG] A nail with a large, thin, flat head used in building.

clove [BOT] **1.** The unopened flower bud of a small, conical, symmetrical evergreen tree, *Eugenia caryophyllata*, of the myrtle family (Myrtaceae); the dried buds are used as a pungent, strongly aromatic spice. **2.** A small bulb developed within a larger bulb, as in garlic.

clove oil *See* oil of cloves.

clover [BOT] **1.** A common name designating the true clovers, sweet clovers, and other members of the Leguminosa. **2.** A herb of the genus *Trifolium*.

cloverleaf [CIV ENG] A highway intersection resembling a clover leaf and designed to allow movement and interchange of traffic without direct crossings and left turns.

cloverleaf antenna [ELECTROMAG] Antenna having radiating units shaped like a four-leaf clover.

CLS *See* characteristic loss spectroscopy.

clubfoot [MED] Congenital malpositioning of a foot such

that the forefoot is inverted and rotated with a shortened Achilles tendon.

club fungi [MYCOL] The common name for members of the class Basidiomycetes.

club moss [BOT] The common name for members of the class Lycopodiatae.

clubroot [PL PATH] A disease principally of crucifers, such as cabbage, caused by the slime mold *Plasmodiophora brassicae* in which roots become enlarged and deformed, leading to plant death.

clupanodonic acid *See* docosatrienynoic acid.

Clupeidae [VERT ZOO] The herrings, a family of fishes in the suborder Clupoidea composing the most primitive group of higher bony fishes.

Clupeiformes [VERT ZOO] An order of teleost fishes in the subclass Actinopterygii, generally having a silvery, compressed body.

clupeine [BIOCHEM] A protamine found in salmon sperm, mainly composed of arginine (74.1%) and small percentages of threonine, serine, proline, alanine, valine, and isoleucine.

Clupoidea [VERT ZOO] A suborder of fishes in the order Clupeiformes comprising the herrings and anchovies.

cluse [GEOL] A narrow gorge, trench, or water gap with steep sides that cuts transversely through an otherwise continuous ridge.

clusec [MECH ENG] A unit of power used to measure the power of evacuation of a vacuum pump, equal to the power associated with a leak rate of 1 centiliter per second at a pressure of 1 millitorr, or to approximately 1.33322×10^{-6} watt.

Clusiidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalyptratae.

Clusius column [NUCLEO] A device for separating isotopes by thermal diffusion, consisting of a long vertical tube with an electrically heated wire along its axis that produces a temperature gradient, causing the lighter isotope to concentrate around the wire and the heavier isotope to concentrate near the walls.

cluster [ASTRON] A number of stars moving in the same direction with nearly the same speed. [COMPUT SCI] In a clustered file, one of the classes into which records with similar sets of content identifiers are grouped. [ENG] **1.** A pyrotechnic signal consisting of a group of stars or fireballs. **2.** A grouping of rocket motors fastened together. [ORD] A collection of small bombs held together by an adapter for dropping.

cluster analysis [STAT] A general approach to multivariate problems whose aim is to determine whether the individuals fall into groups or clusters.

cluster bean *See* guar.

cluster cepheids *See* RR Lyrae stars.

clustered file [COMPUT SCI] A collection of records organized so that items which exhibit similar sets of content identifiers are automatically grouped into common classes.

cluster expansion [STAT MECH] A virial expansion in which the virial coefficients (of inverse powers of the volume of the gas in question) are obtained from integrals, over positions of a small number of molecules, of functions involving intermolecular potentials.

clustering algorithm [COMPUT SCI] A computer program that attempts to detect and locate the presence of groups of vectors, in a high-dimensional multivariate space, that share some property of similarity.

clusterite *See* botryoid.

cluster mill [MET] A rolling mill in which small-diameter rolls are supported by larger rolls.

cluster point [MATH] A cluster point of a set in a topological space is a point p whose neighborhoods all contain at least one point of the set other than p. Also known as accumulation point; limit point.

cluster variables *See* RR Lyrae stars.

clutch [MECH ENG] A machine element for the connection and disconnection of shafts in equipment drives, especially while running. [VERT ZOO] A nest of eggs or a brood of chicks.

clutch point [COMPUT SCI] The moment in time at which the clutch is engaged in a peripheral device such as a card punch.

clutter [ELECTROMAG] Unwanted echoes on a radar screen, such as those caused by the ground, sea, rain, stationary objects, chaff, enemy jamming transmissions, and grass. Also known as background return; radar clutter.

clutter gating [ELECTR] A technique which provides switching between moving-target-indicator and normal videos; this results in normal video being displayed in regions with no clutter and moving-target-indicator video being switched in only for the clutter areas.

Clypeasteroida [INV ZOO] An order of exocyclic Euechinoidea having a monobasal apical system in which all the genital plates fuse together.

clypeus [INV ZOO] An anterior medial plate on the head of an insect, commonly bearing the labrum on its anterior margin. [MYCOL] A disk of black tissue about the mouth of the perithecia in certain ascomycetes.

clysis [MED] **1.** Administration of an enema. **2.** Subcutaneous or intravenous administration of fluids.

Clythiidae [INV ZOO] The flat-footed flies, a family of cyclorrhaphous dipteran insects in the series Aschiza characterized by a flattened distal end on the hind tarsus.

cm *See* centimeter.

Cm *See* curium.

CMa *See* Canis Major.

CM-cellulose *See* carboxymethyl cellulose.

cmHg *See* centimeter of mercury.

CMi *See* Canis Minor.

CMI *See* computer-managed instruction.

CMOS device [ELECTR] A device formed by the combination of a PMOS (p-type-channel metal oxide semiconductor device) with an NMOS (n-type-channel metal oxide semiconductor device). Derived from complementary metal oxide semiconductor device.

CM Tauri [ASTRON] A supernova observed by the Chinese and Japanese in 1054; remnants are still seen as spectacular nebulae.

C network [ELECTR] Network composed of three impedance branches in series, the free ends being connected to one pair of terminals, and the junction points being connected to another pair of terminals.

C neutron [NUCLEO] A neutron of such energy, up to about 0.3 electron-volt, that it is strongly absorbable in cadmium.

Cnidaria [INV ZOO] The equivalent name for Coelenterata.

cnidoblast [INV ZOO] A cell that produces nematocysts. Also known as nettle cell; stinging cell.

cnidocil [INV ZOO] The trigger on a cnidoblast that activates discharge of the nematocyst when touched.

cnidophore [INV ZOO] A modified structure bearing nematocysts in certain coelenterates.

Cnidospora [INV ZOO] A subphylum of spore-producing protozoans that are parasites in cells and tissues of invertebrates, fishes, a few amphibians, and turtles.

c-number theory *See* classical field theory.

Co *See* cobalt.

Co^{60} *See* cobalt-60.

CoA *See* coenzyme A.

coacervate [CHEM] An aggregate of colloidal droplets bound together by the force of electrostatic attraction.

coacervation [CHEM] The separation, by addition of a third component, of an aqueous solution of a macromolecule colloid (polymer) into two liquid phases, one of which is colloid-rich (the coacervate) and the other an aqueous solution of the coacervating agent (the equilibrium liquid).

coach screw [DES ENG] A large, square-headed, wooden screw used to join heavy timbers. Also known as lag bolt; lag screw.

coagulability test [PATH] Any of several clinical tests of the ability of blood to coagulate, such as clot retraction time and quantification, prothrombin time, partial thromboplastin time, and platelet enumeration.

coagulant [CHEM] An agent that causes coagulation.

coagulase [BIOCHEM] Any enzyme that causes coagulation of blood plasma.

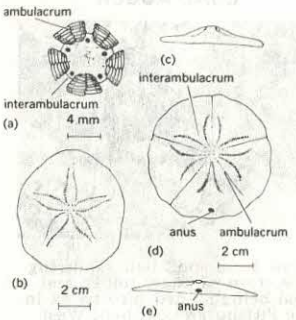
coagulation [CHEM] A separation or precipitation from a dispersed state of suspensoid particles resulting from their growth; may result from prolonged heating, addition of an electrolyte, or from a condensation reaction between solute and solvent; an example is the setting of a gel. [METEOROL] *See* agglomeration.

coagulation time *See* clotting time.

Coahuilan [GEOL] A North American provincial series in Lower Cretaceous geologic time, above the Upper Jurassic and below the Comanchean.

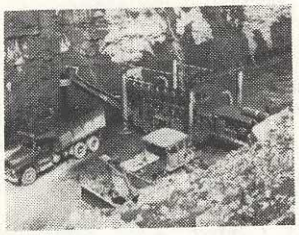
coal [GEOL] The natural, rocklike, brown to black derivative of forest-type plant material, usually accumulated in peat beds

CLYPEASTEROIDA



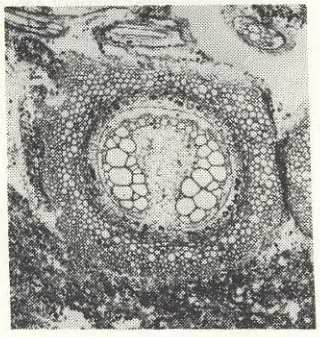
Typical clypeasteroids. *Laganum*, *(a)* monobasal apical system, *(b)* aboral aspect, and *(c)* posterior aspect. *Arachnoides*, *(d)* aboral aspect, and *(e)* posterior aspect.

COAL AUGER



View from spoil bank showing operation of auger miner and coal being loaded into truck in the Pittsburgh coal bed, West Virginia. *(U.S. Bureau of Mines)*

COAL BALL



Photomicrograph of the peel made from a coal ball containing the branch of a fern.

and progressively compressed and indurated until it is finally altered into graphite or graphite-like material.

coal auger [MIN ENG] A type of continuous miner which consists of a screw drill of large diameter and which cuts, transports, and loads the coal.

coal ball [GEOL] A subspherical mass containing mineral matter embedded with plant material, found in coal seams and overlying beds of the late Paleozoic.

coal bank [MIN ENG] A seam of coal that is exposed.

coal barrier [MIN ENG] A protective pillar composed of coal.

coal bed [GEOL] A seam or stratum of coal parallel to the rock stratification. Also known as coal rake; coal seam.

coal blasting [MIN ENG] Breaking coal with explosives.

coalbreaker *See* breaker.

coal breccia [GEOL] Angular fragments of coal within a coal bed.

coal chemicals [MATER] Chemicals obtained as by-products in the primary processing of coal to metallurgical coke; the main source of aromatic compounds used as intermediates in the synthesis of dyes, drugs, antiseptics, and solvents.

coal clay *See* underclay.

coal cutter [MIN ENG] A power-operated machine which cuts out a thin strip of coal from the bottom of the seam; it draws itself by rope haulage along the coal face.

coal digger *See* faceman.

coal drill [MIN ENG] Usually, an electric drill of a compact, light design; however, also a light pneumatic drill.

coal dust [MIN ENG] A finely divided coal, sometimes defined as coal that will pass through 100-mesh screens (100 wires to the inch or 40 wires to the centimeter).

coalesce [SCI TECH] To come together to form a whole.

coalesced copper [MET] A mass, oxygen-free copper made by compacting and sintering cathode copper at high pressure and temperature.

coalescence [MET] The bonding of welded materials into one body. [METEOROL] In cloud physics, merging of two or more water drops into a single larger drop. [PHYS] The uniting by growth in one body, as particles, gas, or a liquid.

coalescence efficiency [METEOROL] The fraction of all collisions which occur between waterdrops of a specified size and which result in actual merging of two drops into a single larger drop.

coalescence process [METEOROL] The growth of raindrops by the collision and coalescence of cloud drops or small precipitation particles.

coalescent [CHEM] Chemical additive used in immiscible liquid-liquid mixtures to cause small droplets of the suspended liquid to unite, preparatory to removal from the carrier liquid.

coalescent pack [CHEM ENG] High-surface-area packing to consolidate liquid droplets for gravity separation from a second phase (for example, gas or immiscible liquid); packing must be wettable by the droplet phase; Berl saddles, Raschig rings, knitted wire mesh, excelsior, and similar materials are used.

coalescer [CHEM ENG] Mechanical process vessel with wettable, high-surface area packing on which liquid droplets consolidate for gravity separation from a second phase (for example, gas or immiscible liquid).

coal face [MIN ENG] The mining face from which coal is extracted.

coalfield [MIN ENG] A region containing coal deposits.

coal gas [MATER] **1.** Flammable gas derived from coal either naturally in place, or by induced methods of industrial plants and underground gasification. **2.** Specifically, fuel gas obtained from carbonization of coal.

coal gasification [CHEM ENG] The conversion of coal, char, or coke to a gaseous product by reaction with air, oxygen, steam, carbon dioxide, or mixtures of these.

coal getter *See* faceman.

coal hydrogenation *See* Bergius process.

coalification [GEOL] Formation of coal from plant material by the processes of diagenesis and metamorphism. Also known as bituminization; carbonification; incarbonization; incoalation.

coal-in-oil suspension [MATER] A fluid mixture of pulverized coal dispersed in either fuel oil or coal tar oil, used as a fuel chiefly in large installations. Also known as colloidal fuel.

coal liquefaction [CHEM ENG] The process of preparing a liquid mixture of hydrocarbons by destructive distillation of coal.

Coal Measures [GEOL] The sequence of rocks typically containing coal of the Upper Carboniferous.

coal mining [MIN ENG] The technical and mechanical job of removing coal from the earth and preparing it for market.

coal oil [MATER] **1.** Condensed liquid from coal distillation. **2.** An archaic term for kerosine made from petroleum.

coal paleobotany [PALEOBOT] A branch of the paleobotanical sciences concerned with the origin, composition, mode of occurrence, and significance of fossil plant materials that occur in or are associated with coal seams.

coal pebbles [GEOL] Rounded masses of coal occurring in sedimentary rock.

coal petrology [GEOL] The science that deals with the origin, history, occurrence, structure, chemical composition, and classification of coal.

coal planer [MIN ENG] A type of continuous coal mining machine for longwall mining; consists of a heavy steel plow with cutting knives, with power equipment to drag it back and forth across a coal face.

coal plough [MIN ENG] A device with steel blades which shears off coal and pushes it onto the face conveyor.

coal rake *See* coal bed.

Coalsack [ASTRON] An area in one of the brighter regions of the Southern Milky Way which to the naked eye appears entirely devoid of stars and hence dark with respect to the surrounding Milky Way region.

coal seam *See* coal bed.

coal-sensing probe [MIN ENG] A nucleonic instrument to measure the thickness of coal left in the seam floor by means of a gamma-ray backscattering unit.

coal sizes [MIN ENG] The sizes by which anthracite coal is marketed.

coal split *See* split.

coal tar [MATER] A tar obtained from carbonization of coal, usually in coke ovens or retorts, containing several hundred organic chemicals.

coal tar dye [ORG CHEM] Dye made from a coal tar hydrocarbon or a derivative such as benzene, toluene, xylene, naphthalene, or aniline.

coal tar enamel [MATER] Coal tar used as a paintlike coating for petroleum-product pipelines; provides protection from both water and cathodic corrosion.

coal tar light oil *See* light oil.

coal tar pitch [MATER] Dark-brown to black amorphous residue from the redistillation of coal tar; melts at 150°F (66°C); used as a thermoplastic.

co-altitude *See* zenith distance.

coaming [NAV ARCH] A rim placed on a roof or around a hatch, deck, or bulkhead opening to stop water from entering.

Coanda effect [FL MECH] The tendency of a gas or liquid coming out of a jet to travel close to the wall contour even if the wall's direction of curvature is away from the jet's axis; a factor in the operation of a fluidic element.

coarctation [MED] **1.** A compression of the wall of a vessel, narrowing the lumen and reducing the volume (or flow). **2.** A stricture or occlusion resulting from an outside force deforming a vessel.

coarse *See* low-grade.

coarse aggregate [MATER] Crushed stone or gravel used in concrete; will not, when dry, pass through a sieve with ¼-inch-diameter (6 millimeter) holes.

coarse fragment [GEOL] A rock or mineral fragment in the soil with an equivalent diameter greater than 2 millimeters.

coarse-grained [MATER] Having a coarse texture. [PETR] *See* phaneritic.

coarse roll [MIN ENG] A large roll for the preliminary crushing of large pieces of ore, rock, or coal.

coarse setting [ORD] Preliminary adjustment of a sight in laying a gun, made first on the main scale; then the fine setting is made on the associated scale of smaller graduations.

coarse sighting [ORD] Adjustment of the sight of a gun so that a part of the front sight is seen through the notch in the rear sight.

coast [ENG] A memory feature on a radar which, when activated, causes the range and angle systems to continue to move in the same direction and at the same speed as that required to track an original target. [GEOGR] The general region of indefinite width that extends from the sea inland to the first major change in terrain features.

coastal berm *See* berm.

coastal current [OCEANOGR] An offshore current flowing generally parallel to the shoreline with a relatively uniform velocity.

coastal dune [GEOL] A mobile mound of windblown material found along many sea and lake shores.

coastal engineering [CIV ENG] A branch of civil engineering pertaining to the study of the action of the seas on shorelines and to the design of structures to protect against this action.

coastal ice *See* fast ice.

coastal landform [GEOGR] The characteristic features and patterns of land in a coastal zone subject to marine and subaerial processes of erosion and deposition.

coastal plain [GEOGR] Broad, low-level plain between a mountain range and a seashore.

coastal refraction [ELECTROMAG] An apparent change in the direction of travel of a radio wave when it crosses a shoreline obliquely. Also known as land effect.

coastal sediment [GEOL] The mineral and organic deposits of deltas, lagoons, and bays, barrier islands and beaches, and the surf zone.

coast chart [NAV] A nautical chart for use in inshore, coastwise navigation when a course carries a vessel inside outlying reefs and shoals, for use in entering or leaving bays and harbors of considerable size, or for use in navigating larger inland waterways.

coaster [NAV ARCH] A small merchant ship, about 200 feet (61 meters) long, which operates near coasts, in rivers and estuaries, and on short ocean passages.

coast guard [ORD] A naval force which guards a coast and ensures the order, safety, and effective operation of traffic on the coastal waters.

coast guard cutter [NAV ARCH] A small, armed boat in a coast guard.

Coast Guard lines [NAV] Lines established by the U.S. Coast Guard for separating areas of the sea where the inland rules of the road apply, from those areas where the international rules apply.

Coast Guard station [NAV] In American usage, any building on the coast used to house personnel and equipment for saving life at sea. Also known as life-saving station.

coast ice *See* fast ice.

coasting [NAV] Proceeding approximately parallel to a coastline and near enough to be in pilot waters most of the time.

coasting flight [AERO ENG] The flight of a rocket between burnout or thrust cutoff of one stage and ignition of another, or between burnout and summit altitude or maximum horizontal range.

coastline [GEOGR] **1.** The line that forms the boundary between the shore and the coast. **2.** The line that forms the boundary between the water and the land.

coastlining [MAP] The process of obtaining data from which the coastline can be drawn on a chart.

coast pilot [NAV] A book serving as an adjunct to nautical charts, containing important information which cannot be shown conveniently on the charts, and not readily available elsewhere; prepared by the U.S. Coast and Geodetic Survey for coastal waters of continental United States, Hawaii, the Virgin Islands, and Puerto Rico; and by the U.S. Naval Oceanographic Office for foreign waters. Also known as sailing directions.

coast piloting [NAV] The directing of the movements of a vessel near a coast by means of terrestrial reference points.

coast shelf *See* submerged coastal plain.

coastwise navigation [NAV] Navigation in the vicinity of a coast, in contrast to offshore navigation at a distance from a coast.

coated abrasive [MATER] An abrasive product having the abrasive particles attached to a backing material with glue or a synthetic resin.

coated cathode [ELECTR] A cathode that has been coated with compounds to increase electron emission.

coated electrode [MET] A wire covered with metal oxides and silicates and used as a filler-metal electrode in arc welding. Also known as covered electrode.

coated fabric [TEXT] A fabric that has been coated, covered, or impregnated with substances such as lacquer, varnish, rubber, or polymers.

coated filament [ELECTR] A vacuum-tube filament coated with metal oxides to provide increased electron emission.

coated lens [OPTICS] A lens whose surfaces have been coated with a thin, transparent film having an index of refraction that minimizes light loss by reflection.

coated paper [MATER] Paper with a surface coating of clay and other materials to produce a smooth, shiny surface; especially useful for fine, detailed, blur-free reproductions in color or black and white. Also known as enamel paper.

coat hanger die [ENG] A plastics-sheet slot die shaped like a coat hanger on the inside.

coati [VERT ZOO] The common name for three species of carnivorous mammals assigned to the raccoon family (Procyonidae) characterized by their elongated snout, body, and tail.

coating [MATER] **1.** Any material that will form a continuous film over a surface. **2.** The film formed by the material.

coating density ratio [MET] In thermal spraying, the ratio of actual density to theoretical density of the coating material used.

coax *See* coaxial cable.

coaxial [MECH] Sharing the same axes. [MECH ENG] Mounted on independent concentric shafts.

coaxial antenna [ELECTROMAG] An antenna consisting of a quarter-wave extension of the inner conductor of a coaxial line and a radiating sleeve that is in effect formed by folding back the outer conductor of the coaxial line for a length of approximately a quarter wavelength.

coaxial attenuator [ELECTROMAG] An attenuator that has a coaxial construction and terminations suitable for use with coaxial cable.

coaxial bolometer [ELECTR] A bolometer in which the desired square-law detection characteristic is provided by a fine Wollaston wire element that has been thoroughly cleaned before being axially located and soldered in position in its cylinder.

coaxial cable [ELECTROMAG] A transmission line in which one conductor is centered inside and insulated from an outer metal tube that serves as the second conductor. Also known as coax; coaxial line; coaxial transmission line; concentric cable; concentric line; concentric transmission line.

coaxial capacitor *See* cylindrical capacitor.

coaxial cavity [ELECTROMAG] A cylindrical resonating cavity having a central conductor in contact with its pistons or other reflecting devices.

coaxial cavity magnetron [ELECTR] A magnetron which achieves mode separation, high efficiency, stability, and ease of mechanical tuning by coupling a coaxial high Q cavity to a normal set of quarter-wavelength vane cavities.

coaxial circles [MATH] Family of circles such that any pair have the same radical axis.

coaxial connector [ELECTROMAG] An electric connector between a coaxial cable and an equipment circuit, so constructed as to maintain the conductor configuration, through the separable connection, and the characteristic impedance of the coaxial cable.

coaxial cylinder magnetron [ELECTR] A magnetron in which the cathode and anode consist of coaxial cylinders.

coaxial cylinders [MATH] Two cylinders whose cylindrical surfaces consist of the lines that pass through concentric circles in a given plane and are perpendicular to this plane.

coaxial diode [ELECTR] A diode having the same outer diameter and terminations as a coaxial cable, or otherwise designed to be inserted in a coaxial cable.

coaxial filter [ELECTROMAG] A section of coaxial line having reentrant elements that provide the inductance and capacitance of a filter section.

coaxial hybrid [ELECTROMAG] A hybrid junction of coaxial transmission lines.

coaxial isolator [ELECTROMAG] An isolator used in a coaxial cable to provide a higher loss for energy flow in one direction than in the opposite direction; all types use a permanent magnetic field in combination with ferrite and dielectric materials.

coaxial line *See* coaxial cable.

coaxial line resonator [ELECTROMAG] A resonator consisting of a length of coaxial line short-circuited at one or both ends.

coaxially fed linear array [ELECTROMAG] A beacon antenna having a uniform azimuth pattern.

coaxial machine gun [ORD] A machine gun mounted integrally with the primary gun of a tank.

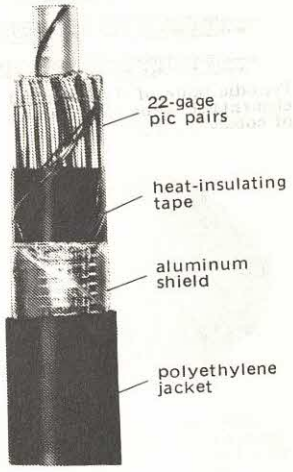
coaxial relay [ELECTROMAG] A relay designed for opening or closing a coaxial cable circuit without introducing a mismatch that would cause wave reflections.

coaxial speaker [ENG ACOUS] A loudspeaker system comprising two, or less commonly three, speaker units mounted on

COATI

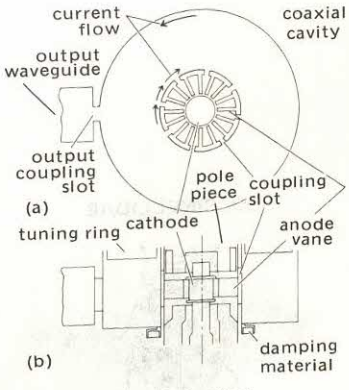
Common coati *(Nasua nasua)* with a long snout and striped bushy tail, which is held erect.

COAXIAL CABLE



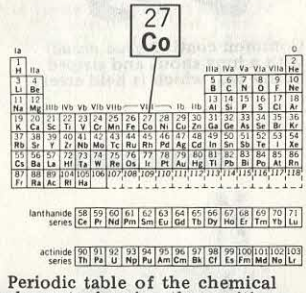
Cutaway view of coaxial transmission line.

COAXIAL CAVITY MAGNETRON



Coaxial cavity magnetron. *(a)* End view. *(b)* Cross-sectional view. *(After J. W. Gewartowski and H. A. Watson, Principles of Electron Tubes, Van Nostrand, 1965)*

COBALT



Periodic table of the chemical elements showing the position of cobalt.

substantially the same axis in an integrated mechanical assembly, with an acoustic-radiation-controlling structure.

coaxial stub [ELECTROMAG] A length of nondissipative cylindrical waveguide or coaxial cable branched from the side of a waveguide to produce some desired change in its characteristics.

coaxial switch [ELEC] A switch that changes connections between coaxial cables going to antennas, transmitters, receivers, or other high-frequency devices without introducing impedance mismatch.

coaxial transistor [ELECTR] A point-contact transistor in which the emitter and collector are point electrodes making pressure contact at the centers of opposite sides of a thin disk of semiconductor material serving as base.

coaxial transmission line *See* coaxial cable.

coaxing [MET] Improving fatigue strength of a metal by increasing the stress range, beginning just below the fatigue limit.

cob [MIN ENG] To chip away waste material from an ore, using hand hammers.

cobalamin *See* vitamin B_{12}.

cobalt [CHEM] A metallic element, symbol Co, atomic number 27, atomic weight 58.93; used chiefly in alloys.

cobalt-60 [NUC PHYS] A radioisotope of cobalt, symbol ^{60}Co, having a mass number of 60; emits gamma rays and has many medical and industrial uses; the most commonly used isotope for encapsulated radiation sources.

cobalt-beam therapy [MED] Therapy involving the use of gamma radiation from a cobalt-60 source mounted in a cobalt bomb. Also known as cobalt therapy.

cobalt bloom *See* erythrite.

cobalt blue [CHEM] A green-blue pigment formed of alumina and cobalt oxide. Also known as cobalt ultramarine; king's blue.

cobalt bomb [NUCLEO] A quantity of cobalt-60 mounted in a housing with walls having up to 8 inches (20 centimeters) of lead for protection, and with means for removing a lead plug to release a beam of gamma rays for use in cobalt-beam therapy. [ORD] A theoretical atomic or hydrogen bomb encased in cobalt, which cobalt would be transformed into deadly radioactive dust upon detonation.

cobalt bromide *See* cobaltous bromide.

cobalt chloride *See* cobaltous chloride.

cobalt glance *See* cobaltite.

cobaltic fluoride *See* cobalt trifluoride.

cobaltite [MINERAL] CoAsS A silver-white mineral with a metallic luster that crystallizes in the isometric system, resembling crystals of pyrite; one of the chief ores of cobalt. Also known as cobalt glance; gray cobalt; white cobalt.

cobalt-molybdate desulfurization [CHEM ENG] A process for desulfurization of petroleum by using cobalt molybdate as a catalyst.

cobalt nitrate *See* cobaltous nitrate.

cobaltocalcite [MINERAL] A red, cobalt-bearing variety of calcite.

cobalt ocher *See* asbolite; erythrite.

cobaltomenite [MINERAL] $CoSeO_3 \cdot 2H_2O$ A mineral consisting of a hydrous cobalt selenium oxide.

cobaltous acetate [ORG CHEM] $Co(C_2H_3O_2)_2 \cdot 4H_2O$ Reddish-violet, deliquescent crystals; soluble in water, alcohol, and acids; used in paint and varnish driers, for anodizing, and as a feed additive mineral supplement. Also known as cobalt acetate.

cobaltous bromide [INORG CHEM] $CoBr_2 \cdot 6H_2O$ Red-violet crystals with a melting point of 47–48°C; soluble in water, alcohol, and ether; used in hygrometers. Also known as cobalt bromide.

cobaltous chloride [INORG CHEM] $CoCl_2$ or $CoCl_2 \cdot 6H_2O$ A compound whose anhydrous form consists of blue crystals and sublimes when heated, and whose hydrated form consists of red crystals and melts at 86.8°C; both forms are used as an absorbent for ammonia in dyes and as a catalyst. Also known as cobalt chloride.

cobaltous fluorosilicate [INORG CHEM] $CoSiF_6 \cdot H_2O$ A water-soluble, orange-red powder, used in toothpastes.

cobaltous nitrate [INORG CHEM] $Co(NO_3)_2 \cdot 6H_2O$ A red crystalline compound with a melting point of 56°C; soluble in organic solvents; used in sympathetic inks, as an additive to soils and animal feeds, and for vitamin preparations and hair dyes. Also known as cobalt nitrate.

cobalt oxide [INORG CHEM] CoO A grayish brown powder that decomposes at 1935°C, insoluble in water; used as a colorant in ceramics and in manufacture of glass.

cobalt potassium nitrite [INORG CHEM] $K_3Co(NO_2)_6$ A yellow powder which decomposes at the melting point of 200°C; used in medicine and as a yellow pigment. Also known as cobalt yellow; Fischer's salt; potassium cobaltinitrite.

cobalt pyrites *See* linnaeite.

cobalt sulfate [INORG CHEM] Any compound of either divalent or trivalent cobalt and the sulfate group; anhydrous cobaltous sulfate, $CoSO_4$, contains divalent cobalt, has a melting point of 96.8°C, is soluble in methanol, and is utilized to prepare pigments and cobalt salts; cobaltic sulfate, $Co_2(SO_4)_3 \cdot 18H_2O$, contains trivalent cobalt, is soluble in sulfuric acid, and functions as an oxidizing agent.

cobalt therapy *See* cobalt-beam therapy.

cobalt trifluoride [INORG CHEM] CoF_3 A brownish powder that reacts with water to form a precipitate of cobaltic hydroxide; used as a fluorinating agent. Also known as cobaltic fluoride.

cobalt ultramarine *See* cobalt blue.

cobalt yellow *See* cobalt potassium nitrite.

cobber [MIN ENG] **1.** A device used to reject waste materials from ore concentrates. **2.** A person who breaks fibers from asbestos rocks or chips low-grade material from ore.

cobble beach *See* shingle beach.

cobble [GEOL] A rock fragment larger than a pebble and smaller than a boulder, having a diameter in the range of 64–256 millimeters (2.5–10.1 inches), somewhat rounded or otherwise modified by abrasion in the course of transport.

Cobb's disease [PL PATH] A bacterial disease of sugarcane caused by *Xanthomonas vascularum* and characterized by a slime in the vascular bundles, dwarfing, streaking of leaves, and decay. Also known as sugarcane gummosis.

cobinotron [ELECTROMAG] The combination of a corbino disk and a coil arranged to produce a magnetic field perpendicular to the disk.

Cobitidae [VERT ZOO] The loaches, a family of small fishes, many eel-shaped, in the suborder Cyprinoidei, characterized by barbels around the mouth.

Coblentzian [GEOL] Upper Lower Devonian geologic time.

COBOL [COMPUT SCI] A business data-processing language that can be given to a computer as a series of English statements describing a complete business operation. Derived from common business-oriented language.

coboundary [MATH] An image under the coboundary operator.

coboundary operator [MATH] If $\{C^n\}$ is a sequence of Abelian groups, coboundary operators are homomorphisms $\{\delta^n\}$ such that δ^n: $C^n \rightarrow C^{n+1}$ and $\delta^{n+1} \circ \delta^n = 0$.

cobra [VERT ZOO] Any of several species of venomous snakes in the reptilian family Elaphidae characterized by a hoodlike expansion of skin on the anterior neck that is supported by a series of ribs.

coca [BOT] *Erythroxylon coca*. A shrub in the family Erythroxylaceae; its leaves are the source of cocaine.

cocaine [PHARM] $C_{17}H_{21}O_4N$ An alkaloid obtained from coca leaves that is used for local anesthesia and as a tonic in digestive and nervous disorders. Also known as erythroxylon; methylbenzoylecgonine.

cocarboxylase *See* thiamine pyrophosphate.

cocarcinogen [MED] A noncarcinogenic agent which augments the carcinogenic process.

Coccidia [INV ZOO] A subclass of protozoans in the class Telosporea; typically intracellular parasites of epithelial tissue in vertebrates and invertebrates.

coccidioidomycosis [MED] An infectious fungus disease of humans and animals of either a pulmonary or a cutaneous nature; caused by *Coccidioides immitis*. Also known as San Joaquin Valley fever.

coccidiosis [MED] The state of or the conditions associated with being infected by coccidia.

Coccinellidae [INV ZOO] The ladybird beetles, a family of coleopteran insects in the superfamily Cucujoidea.

coccobacillus [MICROBIO] A short, thick, oval bacillus, midway between the coccus and the bacillus in appearance.

coccoid [MICROBIO] A spherical bacterial cell.

Coccoidea [INV ZOO] A superfamily of homopteran insects belonging to the Sternorrhyncha; includes scale insects and mealy bugs.

COCCINELLIDAE

A ladybird beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

coccolith [BOT] One of the small, interlocking calcite plates covering members of the Coccolithophorida.

coccolith ooze [GEOL] A fine-grained pelagic sediment containing undissolved sand- or silt-sized particles of coccoliths mixed with amorphous clay-sized material.

Coccolithophora [INV ZOO] An order of phytoflagellates in the protozoan class Phytamastigophorea.

Coccolithophorida [BOT] A group of unicellular, biflagellate, golden-brown algae characterized by a covering of coccoliths.

Coccomyxaceae [BOT] A family of algae belonging to the Tetrasporales composed of elongate cells which reproduce only by vegetative means.

coccosphere [PALEOBOT] The fossilized remains of a member of Coccolithophorida.

Coccosteomorphi [PALEON] An aberrant lineage of the joint-necked fishes.

cocculin *See* picrotoxin.

coccus [MICROBIO] A form of eubacteria which are more or less spherical in shape.

coccygeal body [ANAT] A small mass of vascular tissue near the tip of the coccyx.

coccygectomy [MED] Surgical excision of the coccyx.

coccyx [ANAT] The fused vestige of caudal vertebrae forming the last bone of the vertebral column in man and certain other primates.

cochain complex [MATH] A sequence of Abelian groups C^n, $-\infty < n < \infty$, together with coboundary homomorphisms δ^n: $C^n \rightarrow C^{n+1}$ such that $\delta^{n+1} \cdot \delta^n = 0$.

cochannel interference [COMMUN] Interference caused on one communication channel by a transmitter operating in the same channel.

cochineal [CHEM] A red dye made of the dried bodies of the female cochineal insect (*Coccus cacti*), found in Central America and Mexico; used as a biological stain and indicator.

cochineal solution [ANALY CHEM] An indicator in acid-base titration.

cochinilin *See* carminic acid.

cochlea [ANAT] The snail-shaped canal of the mammalian inner ear; it is divided into three channels and contains the essential organs of hearing.

cochlear duct *See* scala media.

Cochleariidae [VERT ZOO] A family of birds in the order Ciconiiformes composed of a single species, the boatbill.

cochlear nerve [ANAT] A sensory branch of the auditory nerve which receives impulses from the organ of Corti.

cochlear nucleus [ANAT] One of the two nuclear masses in which the fibers of the cochlear nerve terminate; located ventrad and dorsad to the inferior cerebellar peduncle.

cochleate [BIOL] Spiral; shaped like a snail shell.

Cochliodontidae [PALEON] A family of extinct chondrichthian fishes in the order Bradyodonti.

cocinerite [MINERAL] Cu_4AgS A silver gray mineral consisting of copper and silver sulfide; occurs in massive form.

cock [ENG] Any mechanism which starts, stops, or regulates the flow of liquid, such as a valve, faucet, or tap. [VERT ZOO] The adult male of the domestic fowl and of gallinaceous birds.

Cockcroft-Walton accelerator [NUCLEO] An electrostatic particle accelerator utilizing as a source of high voltage a transformer and an array of rectifiers and condensers, giving voltage multiplication.

cockeyed bob [METEOROL] A thunder squall occurring during the summer, on the northwest coast of Australia.

cocking lever [ORD] A lever for drawing back or sometimes lowering the striker of an automatic firearm.

cockle [INV ZOO] The common name for a number of species of marine mollusks in the class Bivalvia characterized by a shell having convex radial ribs.

cockle finish [MATER] An irregular surface usually produced on rag bond and ledger paper, obtained by coating the paper with sizing and drying it in loop or festoon fashion in heated air.

cockpit [AERO ENG] A space in an aircraft or spacecraft where the pilot sits. [NAV ARCH] A sunken area on the deck of a small vessel, near the stern, from which the craft is steered.

cockpit karst *See* cone karst.

cockroach *See* roach.

cocoa butter [MATER] A brown fat obtained from cacao seeds; melts at 30–35°C; used in the manufacture of chocolate, cosmetics, and pharmaceuticals. Also known as cacao butter; oleum theobromatis; theobroma oil.

cocoa nibs [FOOD ENG] In chocolate manufacture, the cleaned broken pieces of the cotyledon of the cacao seed which remain after the roasting, crushing, and winnowing processes.

cocodyl oxide [ORG CHEM] $(CH_3)_2AsOAs(CH_3)_2$ A liquid that has an obnoxious odor; slightly soluble in water, soluble in alcohol and ether; boils at 150°C. Also known as alkarsine; bisdimethyl arsenic oxide; dicacodyl oxide.

coconsciousness [PSYCH] A dissociated mental state coexisting with a person's consciousness, but without his awareness, though it is psychodynamically active and may account for various normal and abnormal mental phenomena.

coconut [BOT] *Cocos nucifera*. A large palm in the order Arecales grown for its fiber and fruit, a large, ovoid, edible drupe with a fibrous exocarp and a hard, bony endocarp containing fleshy meat (endosperm).

coconut bud rot [PL PATH] A fungus disease of the coconut palm caused by *Phytophthora palmivora* and characterized by destruction of the terminal bud and adjacent leaves.

coconut oil [MATER] A nearly colorless or yellow oil from fresh coconut (*Cocos nucifera*) or from copra (dried coconut); used in foods, in making soap, and as a raw material in fatty-acid production.

cocoon [INV ZOO] **1.** A protective case formed by the larvae of many insects, in which they pass the pupa stage. **2.** Any of the various protective egg cases formed by invertebrates.

cocurrent line [OCEANOGR] A line through places having the same tidal current hour.

cod [VERT ZOO] The common name for fishes of the subfamily Gadidae, especially the Atlantic cod (*Gadus morrhua*).

codan [ELECTR] A device that silences a receiver except when a modulated carrier signal is being received.

codan lamp [COMMUN] Visual indication that a usable transmitted signal has been received by a particular radio receiver.

CODAR *See* correlation, detection, and ranging.

Coddington lens [OPTICS] A magnifier consisting of a glass sphere with a deep groove cut around a great circle to serve as a stop.

Coddington shape factor *See* shape factor.

code [COMMUN] A system of symbols and rules for expressing information, such as the Morse code, EIA color code, and the binary and other machine languages used in digital computers.

code beacon [NAV] A beacon that flashes a characteristic signal by which it may be recognized.

code book [COMMUN] A book containing a large number of plaintext words, phrases, and sentences and their codetext equivalents.

codecarboxylase [BIOCHEM] The prosthetic component of the enzyme carboxylase which catalyzes decarboxylation of D-amino acids. Also known as pyridoxal phosphate.

code-check [COMPUT SCI] To remove mistakes from a coded routine or program.

code checking time [COMPUT SCI] Time spent checking out a problem on the computer, making sure that the problem is set up correctly and that the code is correct.

codeclination [NAV] In celestial navigation, 90° minus the declination; when the declination and latitude are of the same name, codeclination is the same as polar distance measured from the elevated pole.

code converter [COMPUT SCI] A converter that changes coded information to a different code system.

coded character set [COMPUT SCI] A set of characters together with the code assigned to each character for computer use.

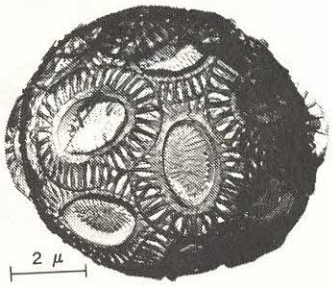
coded decimal *See* decimal-coded digit.

coded interrogator [COMMUN] An interrogator whose output signal forms the code required to trigger a specific radio or radar beacon.

code-division multiple access [COMMUN] A multiple-access technique used in satellite communication systems, in which neither the satellite frequency nor the time domain is divided among the earth stations; each earth station has common usage of the full satellite bandwidth and time by transmitting with its own unique pseudo-noise-coded waveform; correlation-detection techniques are used at each receiver to recover the original information. Abbreviated CDMA.

code-division multiplex [COMMUN] Multiplex in which

COCCOSPHERE

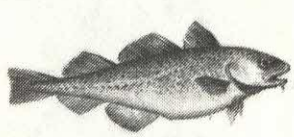


Scanning electron micrograph of coccosphere. *(A. McIntyre, Lamont-Doherty Geological Observatory of Columbia University)*

COCKLE

The shell of the rock cockle *(Protothaca laciniata)*, covered with radiating ribs crossed with concentric ribs.

COD



Gadus morrhua, a codfish of the northern seas.

two or more communication links occupy the entire transmission channel simultaneously, with code signal structures designed so a given receiver responds only to its own signals and treats the other signals as noise. Abbreviated CDM.

coded passive reflector antenna [ELECTROMAG] An object intended to reflect Hertzian waves and having variable reflecting properties according to a predetermined code for the purpose of producing an indication on a radar receiver.

coded program [COMPUT SCI] A program expressed in the required code for a computer.

coded stop [COMPUT SCI] A stop instruction built into a computer routine.

code element [COMMUN] One of the separate elements or events constituting a coded message, such as the presence or absence of a pulse, dot, dash, or space.

code error [COMPUT SCI] A surplus or lack of a bit or bits in a machine instruction.

code group [COMMUN] A combination of letters or numerals or both, assigned to represent one or more words of plain text in a coded message.

code holes [COMPUT SCI] The informational holes in perforated tape, as opposed to the feed holes or other holes.

codehydrogenase I *See* diphosphopyridine nucleotide.

codehydrogenase II *See* triphosphopyridine nucleotide.

codeine [PHARM] $C_{18}H_{21}NO_3$ An alkaloid prepared from morphine; used as mild analgesic and cough suppressant.

code line [COMPUT SCI] In character recognition, the area reserved for the inscription of the printed or handwritten characters to be recognized.

code position [COMPUT SCI] A location in a data-recording medium at which data may be entered, such as the intersection of a column and a row on a punch card, at which a hole may be punched.

code practice oscillator [ELECTR] An oscillator used with a key and either headphones or a loudspeaker to practice sending and receiving Morse code.

coder [COMMUN] A device that generates a code by generating pulses having varying lengths or spacings, as required for radio beacons and interrogators. Also known as moder; pulse coder; pulse-duration coder. [COMPUT SCI] A person who translates a sequence of computer instructions into codes acceptable to the machine.

code ringing [COMMUN] In telephone switching, party-line ringing wherein the number or duration of rings indicates which station is being called.

code-sending radiosonde [ENG] A radiosonde which transmits the indications of the meteorological sensing elements in the form of a code consisting of combinations of dots and dashes. Also known as code-type radiosonde; contracted code sonde.

code signal [COMMUN] A sequence of discrete conditions or events corresponding to a coded message.

codetext [COMMUN] A message which has been transformed by a code into a form which can be read only by those privy to the secrets of the code.

code translation [COMMUN] Conversion of a directory code or number into a predetermined code for controlling the selection of an outgoing trunk or line.

code-type radiosonde *See* code-sending radiosonde.

Codiaceae [BOT] A family of green algae in the order Siphonales having macroscopic thalli composed of aggregates of tubes.

codimer [ORG CHEM] **1.** A copolymer formed from the polymerization of two dissimilar olefin molecules. **2.** The product of polymerization of isobutylene with one of the two normal butylenes.

coding [COMPUT SCI] **1.** The process of converting a program design into an accurate, detailed representation of that program in some suitable language. **2.** A list, in computer code, of the successive operations required to carry out a given routine or solve a given problem.

coding delay [NAV] An arbitrary time delay in the transmission of pulse signals; in the loran system it is inserted between transmission of the master and slave signals to prevent zero or small readings, and thus to aid in distinguishing between master and slave station signals.

coding disk [COMMUN] Disk with small projections for operating contacts to give a certain predetermined code to a transmission.

coding line *See* instruction word.

coding sheet [COMPUT SCI] A sheet of paper printed with a form on which one can conveniently write a coded program.

codistor [ELECTR] A multijunction semiconductor device which provides noise rejection and voltage regulation functions.

cod-liver oil [MATER] A yellow oil, high in vitamin D, extracted from the liver of the Atlantic cod (*Gadus morrhua*); soluble in alcohol. Also known as banks oil; oleum morrhuae.

codon [COMMUN] A basic unit in a coded message, corresponding to a single character. [GEN] The basic unit of the genetic code, comprising three-nucleotide sequences of messenger ribonucleic acid, each of which is translated into one amino acid in protein synthesis.

coefficient [MATH] A factor in a product.

coefficient A [NAV] A component of magnetic compass deviation of constant value with compass heading, resulting from mistakes in calculations, compass and pelorus misalignment, and unsymmetrical arrangements of horizontal soft iron.

coefficient B [NAV] A component of magnetic compass deviation, varying with the sine function of the compass heading, resulting from the fore-and-aft component of the craft's permanent magnetic field and induced magnetism in unsymmetrical vertical iron forward or aft of the compass.

coefficient C [NAV] A component of magnetic compass deviation, varying with the cosine function of the compass heading, resulting from the athwartship component of the craft's permanent magnetic field and induced magnetism in unsymmetrical vertical iron port or starboard of the compass.

coefficient D [NAV] A component of magnetic compass deviation, varying with the sine function of twice the compass heading, resulting from induced magnetism in all symmetrical arrangements of the craft's horizontal soft iron.

coefficient E [NAV] A component of magnetic compass deviation, varying with the cosine function of twice the compass heading, resulting from induced magnetism in all unsymmetrical arrangements of the craft's horizontal soft iron.

coefficient J [NAV] A change in magnetic compass deviation, varying with the cosine function of the compass heading for a given value of J, where J is the change of deviation for a heel of 1° on compass heading 000°.

coefficient of absorption *See* absorption coefficient.

coefficient of compressibility [MECH] The decrease in volume per unit volume of a substance resulting from a unit increase in pressure; it is the reciprocal of the bulk modulus.

coefficient of condensation [STAT MECH] The ratio of the number of molecules condensed on the surface of a solid or liquid in equilibrium with its vapor phase to the total number of vapor molecules striking the surface.

coefficient of contingency [STAT] A measure of the strength of dependence between two statistical variables, based on a contingency table.

coefficient of contraction [FL MECH] The ratio of the minimum cross-sectional area of a jet of liquid discharging from an orifice to the area of the orifice. Also known as contraction coefficient.

coefficient of coupling *See* coupling constant.

coefficient of cubical expansion [THERMO] The increment in volume of a unit volume of solid, liquid, or gas for a rise of temperature of 1° at constant pressure. Also known as coefficient of expansion; coefficient of thermal expansion; expansion coefficient; expansivity.

coefficient of discharge *See* discharge coefficient.

coefficient of eddy diffusion *See* eddy diffusivity.

coefficient of elasticity *See* modulus of elasticity.

coefficient of expansion *See* coefficient of cubical expansion.

coefficient of friction [MECH] The ratio of the frictional force between two bodies in contact, parallel to the surface of contact, to the force, normal to the surface of contact, with which the bodies press against each other. Also known as friction coefficient.

coefficient of friction of rest *See* coefficient of static friction.

coefficient of kinematic viscosity *See* kinematic viscosity.

coefficient of kinetic friction [MECH] The ratio of the frictional force, parallel to the surface of contact, that opposes the motion of a body which is sliding or rolling over another, to the force, normal to the surface of contact, with which the bodies press against each other.

coefficient of linear expansion [THERMO] The increment of length of a solid in a unit of length for a rise in temperature of 1° at constant pressure.

coefficient of performance [THERMO] In a refrigeration

CODIACEAE

A portion of a dichotomously branched thallus of *Codium*.

cycle, the ratio of the heat energy extracted by the heat engine at the low temperature to the work supplied to operate the cycle; when used as a heating device, it is the ratio of the heat delivered in the high-temperature coils to the work supplied.

coefficient of permeability *See* permeability coefficient.

coefficient of reflection *See* reflection coefficient.

coefficient of resistance [FL MECH] The ratio of the loss of head of fluid, issuing from an orifice or passing over a weir, to the remaining head.

coefficient of restitution [MECH] The constant e, which is the ratio of the relative velocity of two elastic spheres after direct impact to that before impact; e can vary from 0 to 1, with 1 equivalent to an elastic collision and 0 equivalent to a perfectly elastic collision.

coefficient of rigidity *See* modulus of elasticity in shear.

coefficient of rolling friction [MECH] The ratio of the frictional force, parallel to the surface of contact, opposing the motion of a body rolling over another, to the force, normal to the surface of contact, with which the bodies press against each other.

coefficient of sliding friction [MECH] The ratio of the frictional force, parallel to the surface of contact, opposing the motion of a body sliding over another, to the force, normal to the surface of contact, with which the bodies press against each other.

coefficient of static friction [MECH] The ratio of the maximum possible frictional force, parallel to the surface of contact, which acts to prevent two bodies in contact, and at rest with respect to each other, from sliding or rolling over each other, to the force, normal to the surface of contact, with which the bodies press against each other. Also known as coefficient of friction of rest.

coefficient of strain [MATH] Multiplier used in transformations to elongate or compress configurations in a direction parallel to an axis. [MECH] For a substance undergoing a one-dimensional strain, the ratio of the distance along the strain axis between two points in the body, to the distance between the same points when the body is undeformed.

coefficient of thermal expansion *See* coefficient of cubical expansion.

coefficient of variation [STAT] The ratio of the standard deviation of a distribution to its arithmetic mean.

coefficient of velocity *See* velocity coefficient.

coefficient of viscosity *See* absolute viscosity.

coefficients of form [NAV ARCH] Parameters depending on the form of a ship, such as the block coefficient, midship section coefficient, mean length coefficient, water plane coefficient, and displacement coefficient.

coelacanth [VERT ZOO] Any member of the Coelacanthiformes, an order of lobefin fishes represented by a single living genus, *Latimeria*.

Coelacanthidae [PALEON] A family of extinct lobefin fishes in the order Coelacanthiformes.

Coelacanthiformes [VERT ZOO] An order of lobefin fishes in the subclass Crossopterygii which were common fresh-water animals of the Carboniferous and Permian; one genus, *Latimeria*, exists today.

Coelacanthini [VERT ZOO] The equivalent name for Coelacanthiformes.

Coelenterata [INV ZOO] A phylum of the Radiata whose members typically bear tentacles and possess intrinsic nematocysts.

coelenteron [INV ZOO] The internal cavity of coelenterates.

coeloblastula [EMBRYO] A simple, hollow blastula with a single-layered wall.

Coelolepida [PALEON] An order of extinct jawless vertebrates (Agnatha) distinguished by skin set with minute, close-fitting scales of dentine, similar to placoid scales of sharks.

coelom [ZOO] The mesodermally lined body cavity of most animals higher on the evolutionary scale than flatworms and nonsegmented roundworms.

Coelomata [ZOO] The equivalent name for Eucoelomata.

coelomocyte [INV ZOO] A corpuscle, including amebocytes and eleocytes, in the coelom of certain animals, especially annelids.

coelomoduct [INV ZOO] Either of a pair of ciliated excretory and reproductive channels passing from the coelom to the exterior in certain invertebrates, including annelids and mollusks.

Coelomomycetaceae [MYCOL] A family of entomophilic fungi in the order Blastocladiales which parasitize primarily mosquito larvae.

coelomostome [INV ZOO] The opening of a coelomoduct into the coelom.

Coelomycetes [MYCOL] A group set up by some authorities to include the Sphaerioidaceae and the Melanconiales.

Coelopidae [INV ZOO] The seaweed flies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae whose larvae breed on decomposing seaweed.

coeloplanula [INV ZOO] A hollow planula having a wall of two layers of cells.

coelostat [ENG] A device consisting of a clockwork-driven mirror that enables a fixed telescope to continuously keep the same region of the sky in its field of view.

Coelurosauria [PALEON] A group of small, lightly built saurischian dinosaurs in the suborder Theropoda having long necks and narrow, pointed skulls.

Coenagrionidae [INV ZOO] A family of zygopteran insects in the order Odonata.

coenenchyme [INV ZOO] The mesagloea surrounding and uniting the polyps in compound anthozoans. Also known as coenosarc.

Coenobitidae [INV ZOO] A family of terrestrial decapod crustaceans belonging to the Anomura.

coenobium [INV ZOO] A colony of protozoans having a constant size, shape, and cell number, but with undifferentiated cells.

coenocyte [BIOL] A multinucleate mass of protoplasm formed by repeated nucleus divisions without cell fission.

Coenomyidae [INV ZOO] A family of orthorrhaphous dipteran insects in the series Brachycera.

Coenopteridales [PALEOBOT] A heterogeneous group of fernlike fossil plants belonging to the Polypodiophyta.

coenosarc [INV ZOO] **1.** The living axial part of a hydroid colony. **2.** *See* coenenchyme.

coenosteum [INV ZOO] The calcareous skeleton of a compound coral or bryozoan colony.

Coenothecalia [INV ZOO] An order of the class Alcyonaria that forms colonies; lacks spicules but has a skeleton composed of fibrocrystalline argonite.

coenotype [BIOL] An organism having the characteristic structure of the group to which it belongs.

coenurosis [VET MED] An infestation by a coenurus, the metacestode of *Taenia* species; most common in sheep, rabbits, and other herbivores.

coenzyme [BIOCHEM] The nonprotein portion of an enzyme; a prosthetic group which functions as an acceptor of electrons or functional groups.

coenzyme A [BIOCHEM] $C_{21}H_{36}O_{16}N_7P_3S$ A coenzyme in all living cells; required by certain condensing enzymes to act in acetyl or other acyl-group transfer and in fatty-acid metabolism. Abbreviated CoA.

coenzyme I *See* diphosphopyridine nucleotide.

coenzyme II *See* triphosphopyridine nucleotide.

coercimeter [ENG] An instrument that measures the magnetic intensity of a natural magnet or electromagnet.

coercive force [ELECTROMAG] The magnetic field H which must be applied to a magnetic material in a symmetrical, cyclicly magnetized fashion, to make the magnetic induction B vanish. Also known as magnetic coercive force.

coercivity [ELECTROMAG] The coercive force of a magnetic material in a hysteresis loop whose maximum induction approximates the saturation induction.

coeruleolactite [MINERAL] $(Ca,Cu)Al_6(PO_4)_4(OH)_8 \cdot 4\text{–}5H_2O$ A milky-white to sky-blue mineral consisting of an aluminum phosphate.

coesite [MINERAL] A high-pressure polymorph of SiO_2 formed in nature only under unique physical conditions, requiring pressures of more than 20 kilobars (2×10^9 newtons per square meter); usually found in meteor impact craters.

coetaneous [SCI TECH] Contemporary.

coevolution [EVOL] An evolutionary pattern based on the interaction among major groups or organisms with an obvious ecological relationship; for example, plant and plant-eater, flower and pollinator.

coextrusion [ENG] Extrusion-forming of plastic or metal products in which two or more compatible feed materials are used in physical admixture through the same extrusion die.

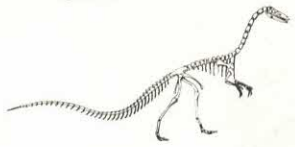
cofactor *See* minor.

coffee [BOT] Any of various shrubs or small trees of the

COELACANTH

Living coelacanth, *Latimeria chalumnae*; 5 feet (1.5 meters). *(After P. P. Grassé, ed., Traité de Zoologie, tome 13, fasc. 3, 1958)*

COELUROSAURIA



Skeleton of *Coelophysis* (about 8 feet, or 2.5 meters long), a Late Triassic theropod from New Mexico. *(After E. H. Colbert, Evolution of the Vertebrates, 2d ed., copyright © 1969 by John Wiley & Sons, Inc.; reprinted by permission)*

COFFEE

Branch of *Coffea arabica*.

genus *Coffea* (family Rubiaceae) cultivated for the seeds (coffee beans) of its fruit; most coffee beans are obtained from the Arabian species, *C. arabica*.

cofferdam [CIV ENG] A temporary damlike structure constructed around an excavation to exclude water.

coffered ceiling [BUILD] An ornamental ceiling constructed of panels that are sunken or recessed.

coffin [NUCLEO] A box of heavy shielding material, usually lead, used for transporting radioactive objects and having walls thick enough to attenuate radiation from the contents to an allowable level. Also known as cask; casket.

coffin corner [AERO ENG] The range of Mach numbers between the buffeting Mach number and the stalling Mach number within which an aircraft must be operated.

coffinite [MINERAL] $USiO_4$ A black silicate important as a uranium ore; found in sandstone deposits and hydrothermal veins in New Mexico, Utah, and Wyoming.

cofinal [MATH] A subset C of a directed set D is cofinal if for each element of D there is a larger element in C.

cog [DES ENG] A tooth on the edge of a wheel.

cog belt [MECH ENG] A flexible device used for timing and for slip-free power transmission.

cogeneration [MECH ENG] The simultaneous on-site generation of electric energy and process steam or heat from the same plant.

cogging [ELECTROMAG] Variations in torque and speed of an electric motor due to variations in magnetic flux as rotor poles move past stator poles.

cogging mill *See* blooming mill.

cognac [FOOD ENG] Brandy distilled from grapes grown in the Charente and Charente-Maritime departments of France.

cognac oil *See* ethyl enanthate.

cognate [GEOL] Pertaining to contemporaneous fractures in a system with regard to time of origin and deformational type.

cognate ejecta [GEOL] Essential or accessory pyroclasts derived from the magmatic materials of a current volcanic eruption.

cognate inclusion *See* autolith.

cognition [PSYCH] The conscious faculty or process of knowing, of becoming or being aware of thoughts or perceptions, including understanding and reasoning.

COGO [COMPUT SCI] A higher-level computer language oriented toward civil engineering, enabling one to write a program in a technical vocabulary familiar to engineers and feed it to the computer; several versions have been implemented. Derived from coordinated geometry.

cogon [BOT] *Imperate cylindrica*. A grass found in rainforests. Also known as alang-alang.

cog railway [CIV ENG] A steep railway that employs a cograil that meshes with a cogwheel on the locomotive to ensure traction.

cogwheel [DES ENG] A wheel with teeth around its edge.

cogwheel ore *See* bournonite.

cohenite [MINERAL] $(Fe,Ni,Co)_3C$ A tin-white, isometric mineral found in meteorites.

cohered video [ELECTR] The video detector output signal in a coherent moving-target indicator radar system.

coherence [PHYS] **1.** The existence of a correlation between the phases of two or more waves, so that interference effects may be produced between them. **2.** Property of moving in unison, such as is characteristic of the particles in a synchrotron.

coherence distance *See* coherence length.

coherence length [PHYS] For a beam of particles, the typical length of a wave packet along the beam; the more monochromatic the beam, the greater its coherence length. [SOLID STATE] A measure of the distance through which the effect of any local disturbance is spread out in a superconducting material. Also known as coherence distance.

coherence time [PHYS] The average time required for the relative phase of two waves, or the phase of a single wave, to fluctuate appreciably.

coherent carrier system [NAV] Transponder system in which the interrogating carrier is retransmitted at a definite multiple frequency for comparison.

coherent detector [ELECTR] A detector used in moving-target indicator radar to give an output-signal amplitude that depends on the phase of the echo signal instead of on its strength, as required for a display that shows only moving targets.

coherent echo [ELECTR] A radar echo whose phase and amplitude at a given range remain relatively constant.

coherent interrupted waves [COMMUN] Interrupted continuous waves occurring in wave trains in which the phase of the waves is maintained through successive wave trains.

coherent light [OPTICS] Radiant electromagnetic energy of the same, or almost the same, wavelength, and with definite phase relationships between different points in the field.

coherent light communications [COMMUN] Communications using the optical band as a transmission medium by modulating a laser in amplitude or pulse frequency.

coherent moving-target indicator [ENG] A radar system in which the Doppler frequency of the target echo is compared to a local reference frequency generated by a coherent oscillator.

coherent noise [ENG] Noise that affects all tracks across a magnetic tape equally and simultaneously.

coherent oscillator [ELECTR] An oscillator used in moving-target indicator radar to serve as a reference by which changes in the radio-frequency phase of successively received pulses may be recognized. Abbreviated coho.

coherent precipitate [PHYS CHEM] A precipitate that is a continuation of the lattice structure of the solvent and has no phase or grain boundary.

coherent-pulse radar [ELECTR] A radar in which the radio-frequency oscillations of recurrent pulses bear a constant phase relation to those of a continuous oscillation.

coherent pulses [ELECTR] Characterizing pulses in which the phase of the radio-frequency waves is maintained through successive pulses.

coherent radiation [PHYS] Radiation in which there are definite phase relationships between different points in a cross section of the beam.

coherent reference [ELECTR] A reference signal, usually of stable frequency, to which other signals are phase-locked to establish coherence throughout a system.

coherent scattering [PHYS] Scattering in which there is a definite phase relationship between incoming and scattered particles or photons.

coherent signal [ELECTR] In a pulsed radar system, a signal having a constant phase; it is mixed with the echo signal, whose phase depends upon the range of the target, in order to detect the phase shift and measure the target's range.

coherent source [PHYS] A source in which there is a constant phase difference between waves emitted from different parts of the source.

coherent system [NAV] A navigation system in which the signal output is obtained by demodulating the received signal after mixing with a local signal having a fixed phase relation to that of the transmitted signal, to permit use of the information carrier by the phase of the received signal.

coherent transponder [ELECTR] A transponder in which a fixed relation between frequency and phase of input and output signals is maintained.

coherent units [PHYS] A system of units, such as the International System, in which the units of derived quantities are formed as products or quotients of units of the base quantities according to the algebraic relations linking these quantities.

coherent video [ELECTR] The video signal produced in a moving-target indicator system by combining a radar echo signal with the output of a continuous-wave oscillator; after delay, this signal is detected, amplified, and subtracted from the next pulse train to give a signal representing only moving targets.

coherer [ELEC] A cell containing a granular conductor between two electrodes; the cell becomes highly conducting when it is subjected to an electric field, and conduction can then be stopped only by jarring the granules.

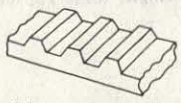
cohesion [BOT] The union of similar plant parts or organs, as of the petals to form a corolla. [PHYS] The tendency of parts of a body of like composition to hold together, as a result of intermolecular attractive forces. [SCI TECH] The state or process of sticking together.

cohesional work [PHYS] The work per unit area required to separate a column of liquid into two parts.

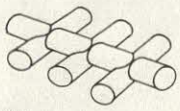
cohesionless [GEOL] Referring to a soil having low shear strength when dry, and low cohesion when wet. Also known as frictional; noncohesive.

cohesive energy [SOLID STATE] The difference between the energy per atom of a system of free atoms at rest far apart from each other, and the energy of the solid.

COG BELT



(a)

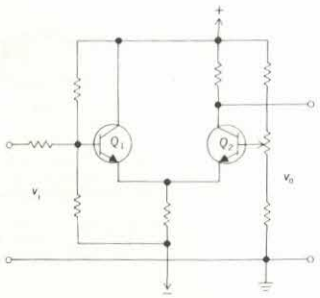


(b)

Cog belts for various uses. *(a)* Flat belt for timing or high-speed power transmission. *(b)* Projections integrally molded with self-lubricating plastic belt for engaging gears from either side and twisting to mesh with misaligned gears.

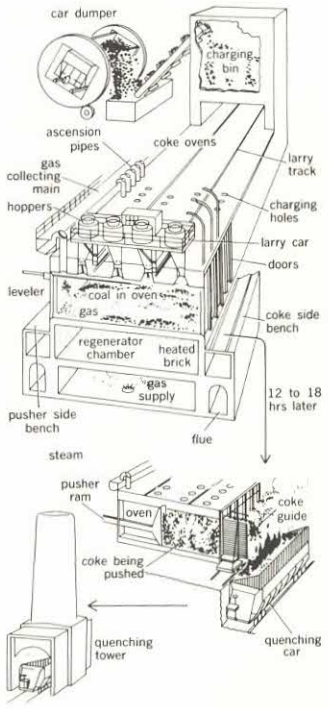
cohesiveness [GEOL] Property of unconsolidated fine-grained sediments by which the particles stick together by surface forces.
cohesive soil [GEOL] A sticky soil, such as clay or silt; its shear strength equals about half its unconfined compressive strength.
cohesive strength [MECH] **1.** Strength corresponding to cohesive forces between atoms. **2.** Hypothetically, the stress causing tensile fracture without plastic deformation.
cohesive terminus [MOL BIO] Either of the ends of single-stranded deoxyribonucleic acid that are complementary in the nucleotide sequences and can join, by base pairing, to form circular molecules.
coho *See* coherent oscillator.
cohomology theory [MATH] A theory which uses algebraic groups to study the geometric properties of topological spaces; closely related to homology theory.
coil [ELECTROMAG] A number of turns of wire used to introduce inductance into an electric circuit, to produce magnetic flux, or to react mechanically to a changing magnetic flux; in high-frequency circuits a coil may be only a fraction of a turn. Also known as electric coil; inductance; inductance coil; inductor. [SCI TECH] An arrangement of flexible material into a spiral or helix.
coil antenna [ELECTROMAG] An antenna that consists of one or more complete turns of wire.
coil breaks [MET] Creases across a metal strip transverse to the direction of coiling and representing areas of reduced thickness.
coiled tubular gland [ANAT] A structure having a duct interposed between the surface opening and the coiled glandular portion; an example is a sweat gland.
coil form [ELECTROMAG] The tubing or spool of insulating material on which a coil is wound.
coil loading [COMMUN] Loading in which inductors, commonly called loading coils, are inserted in a line at intervals.
coil method [GRAPHICS] One of the methods used in terracotta sculpture; the clay is rolled into cylindrical strips about the size of an ordinary pencil and wound up to create the desired shape.
coil neutralization *See* inductive neutralization.
coil serving *See* serving.
coil spring [DES ENG] A helical or spiral spring, such as one of the helical springs used over the front wheels in an automotive suspension.
coil weld [MET] A butt weld joining the ends of two metal sheets; forms a continuous strip for coiling.
coil winder [ENG] A manual or motor-driven mechanism for winding coils individually or in groups.
coincidence [GEN] A numerical value equal to the number of double crossovers observed, divided by the number expected.
coincidence amplifier [ELECTR] An electronic circuit that amplifies only that portion of a signal present when an enabling or controlling signal is simultaneously applied.
coincidence boundary [CRYSTAL] A grain boundary separating crystal lattices which are rotated with respect to each other by an angle with a special value, resulting in a periodic grain boundary structure and an extension of a sublattice of the original lattice across the boundary.
coincidence circuit [ELECTR] A circuit that produces a specified output pulse only when a specified number or combination of two or more input terminals receives pulses within an assigned time interval. Also known as coincidence counter; coincidence gate.
coincidence correction *See* dead-time correction.
coincidence counter *See* coincidence circuit.
coincidence counting [NUCLEO] A method of distinguishing particular types of events from background events and of measuring the velocities or directions of particles, by registering the occurrence of counts in two or more particle detectors within a given time interval by means of coincidence circuits.
coincidence gate *See* coincidence circuit.
coincidence magnet [NUCLEO] An electromagnet used in one type of scram mechanism for a nuclear reactor; has three electrically independent coils and releases when any two coils are deenergized.
coincidence rangefinder [OPTICS] An optical rangefinder in which one-eyed viewing through a single eyepiece provides the basis for manipulation of the rangefinder adjustment to cause two images of the target or parts of each, viewed over different paths, to match or coincide.
coincident-current selection [ELECTR] The selection of a particular magnetic cell, for reading or writing in computer storage, by simultaneously applying two or more currents.
coin gold [MET] Gold of the legal fineness for coins.
coining [MET] **1.** A process of forming metals by squeezing between two dies so as to impress well-defined imprints on both surfaces of the work; usually performed cold. **2.** Final pressing of a sintered compact in powder metallurgy.
coin silver [MET] An alloy of 90% silver, 10% copper; has been used for coining American currency.
coion [ANALY CHEM] Any of the small ions entering a solid ion exchanger and having the same charge as that of the fixed ions.
coir [MATER] A coarse, brown fiber obtained from the husk of the coconut.
coitophobia [PSYCH] An abnormal fear of coitus.
coitus [ZOO] The act of copulation. Also known as intercourse.
coke [MATER] A coherent, cellular, solid residue remaining from the dry (destructive) distillation of a coking coal or of pitch, petroleum, petroleum residues, or other carbonaceous materials; contains carbon as its principal constituent, together with mineral matter and volatile matter.
coke breeze [MECH ENG] Undersized coke screenings passing through a screen opening of approximately ⅝ inch (16 millimeters).
coke coal *See* natural coke.
coke drum [CHEM ENG] A vessel in which coke is produced.
cokeite [GEOL] Naturally occurring coke formed by the action of magma on coal or by natural combustion of coal.
coke knocker [MECH ENG] A mechanical device used to break loose coke within a drum or tower.
coke number [CHEM ENG] A number used to report the results of the Ramsbottom carbon residue test.
coke oven [CHEM ENG] A retort in which coal is converted to coke by carbonization.
coke-oven gas [MATER] A gas produced during carbonization of coal to form coke.
coke-oven regenerator [CHEM ENG] Arrangement of refractory blocks in the flue system of a coke oven to recover waste heat from hot, exiting combustion gases; the blocks, in turn, release heat to warm, incoming fuel gas.
coker [CHEM ENG] The processing unit in which coking occurs.
coking [CHEM ENG] **1.** Destructive distillation of coal to make coke **2.** A process for thermally converting the heavy residual bottoms of crude oil entirely to lower-boiling petroleum products and by-product petroleum coke.
coking coal [GEOL] A very soft bituminous coal suitable for coking.
coking still [CHEM ENG] A still in which coking is done; usually, it is a batch still.
col [GEOL] A high, sharp-edged pass occurring in a mountain ridge, usually produced by the headward erosion of opposing cirques. [METEOROL] The point of intersection of a trough and a ridge in the pressure pattern of a weather map; it is the point of relatively lowest pressure between two highs and the point of relatively highest pressure between two lows. Also known as neutral point; saddle point.
Col *See* Columba.
cola [BOT] *Cola acuminata*. A tree of the sterculia family (Sterculiaceae) cultivated for cola nuts, the seeds of the fruit; extract of cola nuts is used in the manufacture of soft drinks.
CO laser *See* carbon monoxide laser.
colatitude [GEOD] Ninety degrees minus the latitude.
Colburn analogy [FL MECH] Dimensionless Reynolds equation for fluid-flow resistance modified to be analogous to the Colburn *j* factor heat-transfer equation.
Colburn j factor equation [THERMO] Dimensionless heat-transfer equation to calculate the natural convection movement of heat from vertical surfaces or horizontal cylinders to fluids (gases or liquids) flowing past these surfaces.
Colburn method [CHEM ENG] Graphical method, and equations to calculate the theoretical number of plates (trays) needed to separate light and heavy liquids in a distillation column.
colchicine [ORG CHEM] $C_{22}H_{25}O_6N$ An alkaloid extracted from the stem of the autumn crocus; used experimentally to

COINCIDENCE AMPLIFIER



Simple coincidence amplifier.

COKE



Steps in the production of coke from coal. After the coal has been in the oven for 12–18 hours, the doors are removed, and a ram mounted on the same machine that operates the leveling bar shoves the coke into a quenching car for cooling. *(American Iron and Steel Institute)*

COLA

Branch of *Cola acuminata*.

inhibit spindle formation and delay centromere division, and medicinally in the treatment of gout.

colcothar [INORG CHEM] Red ferric oxide made by heating ferrous sulfate in the air; used as a pigment and as an abrasive in polishing glass.

cold [ELEC] Pertaining to electrical circuits that are disconnected from voltage supplies and at ground potential; opposed to hot, pertaining to carrying an electrical charge.

cold agglutination phenomenon [IMMUNOL] Clumping of human blood group O erythrocytes at 0–4°C, but not at body temperature; occurs in primary atypical pneumonia, trypanasomiasis, and other unidentifiable states.

cold agglutinin [IMMUNOL] A nonspecific panagglutinin found in many normal human serums which produce maximum clumping of erythrocytes at 4° and none at 37°C.

cold-air drop *See* cold pool.

cold-air machine [MECH ENG] A refrigeration system in which air serves as the refrigerant in a cycle of adiabatic compression, cooling to ambient temperature, and adiabatic expansion to refrigeration temperature; the air is customarily reused in a closed superatmospheric pressure system. Also known as dense-air system.

cold-air outbreak *See* polar outbreak.

cold anticyclone *See* cold high.

cold area [SCI TECH] Laboratory area that is continuously held at a specified degree of coldness to facilitate the conduct of physical and chemical tests.

cold bending [MET] The bending of metal rods, especially concrete-reinforcing rods, without heat.

cold-blooded [PHYSIO] Having body temperature approximating that of the environment and not internally regulated.

cold cathode [ELECTR] A cathode whose operation does not depend on its temperature being above the ambient temperature.

cold-cathode counter tube [ELECTR] A counter tube having one anode and three sets of 10 cathodes; two sets of cathodes serve as guides that direct the flow discharge to each of the 10 output cathodes in correct sequence in response to driving pulses.

cold-cathode discharge *See* glow discharge.

cold-cathode ionization gage *See* Philips ionization gage.

cold-cathode rectifier [ELECTR] A cold-cathode gas tube in which the electrodes differ greatly in size so electron flow is much greater in one direction than in the other. Also known as gas-filled rectifier.

cold-cathode tube [ELECTR] An electron tube containing a cold cathode, such as a cold-cathode rectifier, mercury-pool rectifier, neon tube, phototube, or voltage regulator.

cold-chamber die casting [ENG] A die-casting process in which molten metal is ladled either manually or mechanically into a relatively cold cylinder from which it is forced into the die cavity.

cold chisel [DES ENG] A chisel specifically designed to cut or chip cold metal; made of specially tempered tool steel machined into various cutting edges. Also known as cold cutter.

cold color [GRAPHICS] In printing, a color that has bluish tones.

cold-core cyclone *See* cold low.

cold-core high *See* cold high.

cold-core low *See* cold low.

cold cure [CHEM ENG] Vulcanization of rubber at nonelevated temperatures with a solution of a sulfur compound.

cold cutter *See* cold chisel.

cold differential test pressure [ENG] The inlet pressure of a pressure-relief valve at which the valve is set to open during testing.

cold dome [METEOROL] A cold air mass, considered as a three-dimensional entity.

cold drawing [MET] Drawing a tube or wire through a series of successively smaller dies, without the application of heat, to reduce its diameter. [TEXT] Drawing a textile, as nylon, when cold.

cold drop *See* cold pool.

cold emission *See* field emission.

cold extrusion [MET] Shaping cold metal by striking a slug in a closed cavity with a punch so that the metal is forced up around the punch. Also known as cold forging; cold pressing; extrusion pressing; impact extrusion.

cold-finished steel [MET] Steel bars which have been cold-drawn, cold-rolled, centerless-ground, or turned smooth.

cold flow [MECH] Creep in polymer plastics.

cold-flow test [AERO ENG] A test of a liquid rocket without firing it to check or verify the integrity of a propulsion subsystem, and to provide for the conditioning and flow of propellants (including tank pressurization, propellant loading, and propellant feeding).

cold forging *See* cold extrusion.

cold forming [MET] Any forging operation performed cold, such as cold extrusion, cold drawing, or coining, which enables close dimensional accuracy to be achieved.

cold front [METEOROL] Any nonoccluded front, or portion thereof, that moves so that the colder air replaces the warmer air; the leading edge of a relatively cold air mass.

cold-front-like sea breeze [METEOROL] Sea breeze that forms over the ocean, moves slowly toward the land, and then moves inland quite suddenly. Also known as sea breeze of the second kind.

cold-front thunderstorm [METEOROL] A thunderstorm attending a cold front.

cold galvanizing [MET] Painting iron with a suspension of zinc particles in an organic solvent, so that a zinc coating remains following evaporation of the solvent.

cold heading [MET] The cold working of metal in order to increase part or all of the cross-sectional area of the stock.

cold hemagglutination [IMMUNOL] A phenomenon caused by the presence of cold agglutinin.

cold high [METEOROL] At a given level in the atmosphere, any high that is generally characterized by colder air near its center than around its periphery. Also known as cold anticyclone; cold-core high.

cold injury [MED] Physical trauma following exposure to very low temperatures.

cold inspection [MET] The inspection of a forging at room temperature by visible or nondestructive means to detect surface conditions or defects at room temperature.

cold joint [ENG] A soldered connection which was inadequately heated, with the result that the wire is held in place by rosin flux, not solder.

cold junction [ELECTR] The reference junction of thermocouple wires leading to the measuring instrument; normally at room temperature.

cold lap *See* cold shut.

cold light [PHYS] **1.** Light emitted in luminescence. **2.** Visible light which is accompanied by little or no infrared radiation, and therefore has little heating effect.

cold lime-soda process [CHEM ENG] A water-softening process in which water is treated with hydrated lime (sometimes in combination with soda ash), which reacts with dissolved calcium and magnesium compounds to form precipitates that can be removed as sludge.

cold low [METEOROL] At a given level in the atmosphere, any low that is generally characterized by colder air near its center than around its periphery. Also known as cold-core cyclone; cold-core low.

cold molding [ENG] Shaping of an unheated compound in a mold under pressure, followed by heating the article to cure it.

cold neutron [SOLID STATE] A very-low-energy neutron in a reactor, used for research into solid-state physics because it has a wavelength of the order of crystal lattice spacings and can therefore be diffracted by crystals.

cold nosing *See* wildcat drilling.

cold plate [MECH ENG] An aluminum or other plate containing internal tubing through which a liquid coolant is forced, to absorb heat transferred to the plate by transistors and other components mounted on it. Also known as liquid-cooled dissipator.

cold pole [CLIMATOL] The location which has the lowest mean annual temperature in its hemisphere.

cold pool [METEOROL] A region of relatively cold air surrounded by warmer air; the term is usually applied to cold air of appreciable vertical extent that has been isolated in lower latitudes as part of the formation of a cutoff low. Also known as cold-air drop; cold drop.

cold pressing *See* cold extrusion.

cold rolling [MET] Rolling metal at room temperature to reduce thickness or harden the surface; results in a smooth finish and improved resistance to fatigue.

cold rubber [MATER] Butadiene-styrene type of synthetic rubber produced by polymerization at about 40°F (4°C), instead of the conventional 120°F (49°C); has improved strength and abrasion resistance.

cold saw [MECH ENG] **1.** Any saw for cutting cold metal, as opposed to a hot saw. **2.** A disk made of soft steel or iron which rotates at a speed such that a point on its edge has a tangential velocity of about 15,000 feet per minute (75 meters per second), and which grinds metal by friction.

cold-sensitive mutation [GEN] An alteration that causes a gene to be inactive at low temperature.

cold settling [CHEM ENG] A process that removes wax from high-viscosity stocks.

cold-short [MET] Pertaining to lack of ductility in some metals at temperatures below the recrystallization temperature.

cold shot [MET] Intensely hard, globular portions of the surface of an ingot or casting formed by premature solidification upon first contact with the cold sand during pouring.

cold shut [MET] **1.** A surface defect of a metal casting in the form of a discontinuity where two streams failed to unite. Also known as cold lap. **2.** Freezing of the top surface of an ingot before the mold is full.

cold slug [ENG] The first material to enter an injection mold in plastics manufacturing.

cold slug well [ENG] The area in a plastic injection mold which receives the cold slug from the sprue opening.

cold soldering [MET] Soldering of parts without heat.

cold-spot hygrometer *See* dew-point hygrometer.

cold storage [ENG] The storage of perishables at low temperatures produced by refrigeration, usually above freezing, to increase storage life.

cold-storage locker plant [ENG] A plant with many rental steel lockers, each with a capacity of about 6 cubic feet (0.17 cubic meter) and generally for food storage by an individual family, placed in refrigerated rooms, at about 0°F (−18°C).

cold stress [MECH] Forces tending to deform steel, cement, and other materials, resulting from low temperatures.

cold stretch [ENG] A pulling operation on extruded plastic filaments in which little or no heat is used; improves tensile properties.

cold test [CHEM ENG] A test to determine the temperature at which clouding or coagulation is first visible in a sample of oil, as the temperature of the sample is reduced.

cold tongue [METEOROL] In synoptic meteorology, a pronounced equatorward extension or protrusion of cold air.

cold torpor [PHYSIO] Condition of reduced body temperature in poikilotherms.

cold trap [MECH ENG] A tube whose walls are cooled with liquid nitrogen or some other liquid to condense vapors passing through it; used with diffusion pumps and to keep vapors from entering a McLeod gage.

cold treatment [MET] Subzero cooling, to a temperature of −100°F (−73°C).

cold trimming [MET] The removal of excess metal from a forging at room temperature by means of a trimming press.

cold-type composition [GRAPHICS] Any typesetting method which produces copy suitable for offset lithography; copy may be obtained from a typewriter or photocomposition equipment.

cold wall [OCEANOGR] The line or surface along which two water masses of significantly different temperature are in contact.

cold-water sphere [OCEANOGR] Those portions of the ocean water having a temperature below 8°C. Also known as oceanic stratosphere.

cold wave [METEOROL] A rapid fall in temperature within 24 hours to a level requiring substantially increased protection to agriculture, industry, commerce, and social activities.

cold welding [MET] Welding in which a molecular bond is obtained by a cold flow of metal under extremely high pressures, without heat; widely used for sealing transistors and quartz crystal holders.

cold working [MET] Plastic deformation of a metal below the annealing temperature to cause permanent strain hardening.

Colebrook equation [FL MECH] An empirical equation for the flow of liquids in ducts, relating the friction factor to the Reynolds number and the relative roughness of the duct.

colectomy [MED] Excision of all or a portion of the colon.

colemanite [MINERAL] $Ca_2B_6O_{11}\cdot 5H_2O$ A colorless or white hydrated borate mineral that crystallizes in the monoclinic system and occurs in massive crystals or as nodules in clay.

Coleochaetaceae [BOT] A family of green algae in the suborder Ulotrichineae; all occur as attached, disklike, or parenchymatous thalli.

Coleodontidae [PALEON] A family of conodonts in the suborder Neurodontiformes.

Coleoidea [INV ZOO] A subclass of cephalopod mollusks including all cephalopods except *Nautilus*, according to certain systems of classification.

Coleophoridae [INV ZOO] The case bearers, moths with narrow wings composing a family of lepidopteran insects in the suborder Heteroneura; named for the silk-and-leaf shell carried by larvae.

coleopter [AERO ENG] An aircraft having an annular (barrel-shaped) wing, the engine and body being mounted within the circle of the wing.

Coleoptera [INV ZOO] The beetles, holometabolous insects making up the largest order of the animal kingdom; general features of the Insecta are found in this group.

coleoptile [BOT] The first leaf of a monocotyledon seedling.

coleorhiza [BOT] The sheath surrounding the radicle in monocotyledons.

Coleorrhyncha [INV ZOO] A monofamilial group of homopteran insects in which the beak is formed at the anteroventral extremity of the face and the propleura form a shield for the base of the beak.

Coleosporaceae [MYCOL] A family of parasitic fungi in the order Uredinales.

colic [MED] **1.** Acute paroxysmal abdominal pain usually caused by smooth muscle spasm, obstruction, or twisting. **2.** In early infancy, paroxysms of pain, crying, and irritability caused by swallowing air, overfeeding, intestinal allergy, and emotional factors.

colic artery [ANAT] Any of the three arteries that supply the colon.

colicin [MICROBIO] A highly specific protein, released by some enteric bacilli, which kills other enteric bacilli.

colidar *See* ladar.

coliform bacteria [MICROBIO] Colon bacilli, or forms which resemble or are related to them.

Coliidae [VERT ZOO] The colies or mousebirds, composing the single family of the avian order Coliiformes.

Coliiformes [VERT ZOO] A monofamilial order of birds distinguished by long tails, short legs, and long toes, all four of which are directed forward.

coliphage [VIROL] Any bacteriophage able to infect *Escherichia coli*.

colistin [MICROBIO] $C_{45}H_{85}O_{10}N_{13}$ A basic polypeptide antibiotic produced by *Bacillus colistinus;* consists of an A and B component, active against a broad spectrum of gram-positive microorganisms and some gram-negative microorganisms.

colitis [MED] Inflammation of the large bowel, or colon.

colk *See* pothole.

colla [METEOROL] In the Philippines, a fresh or strong (less than 39–46 miles per hour, or 63–74 kilometers per hour) south to southwest wind, accompanied by heavy rain and severe squall. Also known as colla tempestade.

collada [METEOROL] A strong wind (35–50 miles per hour, or 56–80 kilometers per hour) in the Gulf of California, blowing from the north or northwest in the upper part, and from the northeast in the lower part of the gulf.

collage [GRAPHICS] A composition consisting of paper, cloth, wood, photographs, and so on, pasted together to form a texture or pattern.

collagen [BIOCHEM] A fibrous protein found in all multicellular animals, especially in connective tissue.

collagenase [BIOCHEM] Any proteinase that decomposes collagen and gelatin.

collagen disease [MED] Any of various clinical syndromes characterized by widespread alterations of connective tissue, including inflammation and fibrinoid degeneration.

collagraph [GRAPHICS] A print made from a plate produced by the collage method.

collapsar *See* black hole.

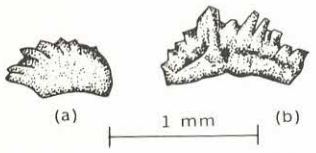
collapse [ENG] Contraction of plastic container walls during cooling; produces permanent indentation.

collapse breccia [GEOL] Angular rock fragments derived from the collapse of rock overlying a hollow space.

collapse caldera [GEOL] A caldera formed primarily as a result of collapse due to withdrawal of magmatic support.

collapse properties [MECH] Strength and dimensional attributes of piping, tubing, or process vessels, related to the

COLEODONTIDAE



Representatives of Coleodontidae. *(a) Coleodus*, a typical denticulate blade. *(b) Erismodus. (After illustration in R. R. Shrock and W. H. Twenhofel, Principles of Invertebrate Paleontology, McGraw-Hill, 2d ed., 1953)*

ability to resist collapse from exterior pressure or internal vacuum.

collapse sink [GEOL] A sinkhole resulting from local collapse of a cavern that has been enlarged by solution and erosion.

collapse structure [GEOL] A structure resulting from rock slides under the influence of gravity. Also known as gravity-collapse structure.

collapsing pressure [MECH] The external pressure which causes a thin-walled body or structure to collapse.

collar [DES ENG] A ring placed around an object to restrict its motion, hold it in place, or cover an opening. [MIN ENG] The mouth of a mine shaft. [NAV ARCH] **1.** An opening in the end or bight of a rope or cable supporting a mast that goes over the masthead. **2.** A ring or loop of metal, rope, or other material, used to secure a heart or deadeye. **3.** A fitting over a structural part passing through a bulkhead or deck.

collar beam [BUILD] A tie beam in a roof truss connecting the rafters well above the wall plate.

collar bearing [MECH ENG] A bearing that resists the axial force of a collar on a rotating shaft.

collar cell *See* choanocyte.

collard [BOT] *Brassica oleracea* var. *acephala*. A biennial crucifer of the order Capparales grown for its rosette of edible leaves.

collared hole [ENG] A started hole drilled sufficiently deep to confine the drill bit and prevent slippage of the bit from normal position.

collar locator log [PETRO ENG] Down-hole nuclear-log measurement to locate drill-hole casing collars, usually for precise location of perforating points.

collar vortex *See* vortex ring.

collate [COMPUT SCI] To combine two or more similarly ordered sets of values into one set that may or may not have the same order as the original sets. [GRAPHICS] To assemble in proper sequence all the sheets, signatures, or insertions for a printed piece.

colla tempestade *See* colla.

collateral bud [BOT] An accessory bud produced beside an axillary bud.

collateral series [NUC PHYS] A radioactive decay series, initiated by transmutation, that eventually joins into one of the four radioactive decay series encountered in natural radioactivity.

collating sequence [COMPUT SCI] The ordering of a set of items such that sets in that assigned order can be collated.

collating unit [COMPUT SCI] An electromechanical device capable of performing singly or simultaneously the merging, sequence-checking, selection, and matching of punched cards. Also known as collator.

collator *See* collating unit.

collecting tubule [ANAT] One of the ducts conveying urine from the renal tubules (nephrons) to the minor calyces of the renal pelvis.

collection trap [ANALY CHEM] Cooled device to collect gas-chromatographic eluent, holding it for subsequent compound-identification analysis.

collective [METEOROL] In aviation weather observations, a group of observations transmitted in prescribed order by stations on the same long-line teletypewriter circuit. Also known as sequence.

collective bargaining [IND ENG] The negotiation for mutual agreement in the settlement of a labor contract between an employer or his representatives and a labor union or its representatives.

collective fire [ORD] Combined fire of various small arms concentrated on a given target or area.

collective motion [NUC PHYS] Motion of nucleons in a nucleus correlated so that their overall space pattern is essentially constant or undergoes changes which are slow compared to the motions of individual nucleons.

collective transition [NUC PHYS] A nuclear transition from one state of collective motion to another.

collector [ELECTR] **1.** A semiconductive region through which a primary flow of charge carriers leaves the base of a transistor; the electrode or terminal connected to this region is also called the collector. **2.** An electrode that collects electrons or ions which have completed their functions within an electron tube; a collector receives electrons after they have done useful work, whereas an anode receives electrons whose useful work is to be done outside the tube. Also known as electron collector. [ENG] A class of instruments employed to determine the electric potential at a point in the atmosphere, and ultimately the atmospheric electric field; all collectors consist of some device for rapidly bringing a conductor to the same potential as the air immediately surrounding it, plus some form of electrometer for measuring the difference in potential between the equilibrated collector and the earth itself; collectors differ widely in their speed of response to atmospheric potential changes.

collector capacitance [ELECTR] The depletion-layer capacitance associated with the collector junction of a transistor.

collector cutoff [ELECTR] The reverse saturation current of the collector-base junction.

collector junction [ELECTR] A semiconductor junction located between the base and collector electrodes of a transistor.

collector modulation [ELECTR] Amplitude modulation in which the modulator varies the collector voltage of a transistor.

collector plate [ELEC] One of several metal inserts that are sometimes embedded in the lining of an electrolyte cell to make the resistance between the cell lining and the current leads as small as possible.

collector resistance [ELECTR] The back resistance of the collector-base diode of a transistor.

collector ring *See* slip ring.

collector voltage [ELECTR] The direct-current voltage, obtained from a power supply, that is applied between the base and collector of a transistor.

Collembola [INV ZOO] The springtails, an order of primitive insects in the subclass Apterygota having six abdominal segments.

collenchyma [BOT] A primary, or early-differentiated, subepidermal supporting tissue in leaf petioles and vein ribs formed before vascular differentiation.

collenchyme [INV ZOO] A loose mesenchyme that fills the space between ectoderm and endoderm in the body wall of many lower invertebrates, such as sponges.

collenia [PALEOBOT] A convex, slightly arched, or turbinate stromatolite produced by late Precambrian blue-green algae of the genus *Collenia*.

Colles' fracture [MED] A fracture of the radius about 1 inch (2.5 centimeters) above the wrist with dorsal displacement of the distal fragment.

collet [DES ENG] A split, coned sleeve to hold small, circular tools or work in the nose of a lathe or other type of machine. [ENG] **1.** The glass neck remaining on a bottle after it is taken off the glass-blowing iron. **2.** Pieces of glass, ordinarily discarded, that are added to a batch of glass. Also spelled cullet. [HOROL] A small, friction-tight collar on a balance staff which holds the inner end of a balance spring. [LAP] The small, horizontal face at the bottom of a brilliant-cut gemstone.

Colletidae [INV ZOO] The colletid bees, a family of hymenopteran insects in the superfamily Apoidea.

colliculus [ANAT] **1.** Any of the four prominences of the corpora quadrigemina. **2.** The elevation of the optic nerve where it enters the retina. **3.** The anterolateral, apical elevation of the arytenoid cartilages.

2,4,6-collidine [ORG CHEM] $(CH_3)_3C_5H_2N$ A liquid boiling at 170.4°C; slightly soluble in water, soluble in alcohol; used as a chemical intermediate. Also known as 2,4,6-trimethylpyridine.

colliding-beam source [ELECTR] A device for generating beams of polarized negative hydrogen or deuterium ions, in which polarized negative hydrogen or deuterium atoms are converted to negative ions through charge exchange during collisions with cesium atoms.

colliery [MIN ENG] A whole coal mining plant; generally the term is used in connection with anthracite mining but sometimes to designate the mine, shops, and preparation plant of a bituminous operation.

colligative properties [PHYS CHEM] Properties dependent on the number of molecules but not their nature.

collimate [PHYS] To render parallel to a certain line or direction; paths of electrons in a flooding beam, or paths of various rays of a scanning beam are collimated to cause them to become more nearly parallel as they approach the storage assembly of a storage tube.

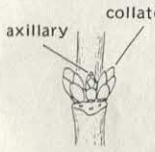
collimating lens [OPTICS] A lens on a collimator used to focus light from a source near one of its focal points into a parallel beam.

collimating sight [ORD] Sight equipped with a collimator,

COLLARD

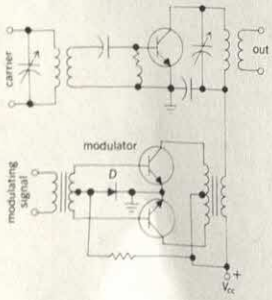
Collard (*Brassica oleracea* var. *acephala*).

COLLATERAL BUD



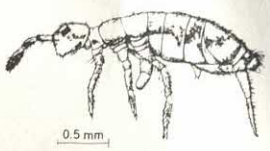
Collateral bud in a red maple.

COLLECTOR MODULATION



Circuit diagram of a collector-modulated transistor.

COLLEMBOLA



A collembolan, *Entomobrya cubensis*. (*From J. W. Folsom, Proc. U.S. Nat. Mus., 72(6), plate 6, 1927*)

set parallel with the axis of the bore of the gun in horizontal direction, but adjustable in elevation, so that it can be kept focused on an aiming point while the gun is raised or lowered.

collimation error [ASTRON] The amount by which the angle between the optical axis of a transit telescope and its east-west mechanical axis deviates from 90°. [ENG] **1.** Angular error in magnitude and direction between two nominally parallel lines of sight. **2.** Specifically, the angle by which the line of sight of a radar differs from what it should be.

collimation tower [ENG] Tower on which a visual and a radio target are mounted to check the electrical axis of an antenna.

collimator [OPTICS] An instrument which produces parallel rays of light. [PHYS] A device for confining the elements of a beam within an assigned solid angle.

collinear array *See* linear array.

collinear heterodyning [ELECTR] An optical processing system in which the correlation function is developed from an ultrasonic light modulator; the output signal is derived from a reference beam in such a way that the two beams are collinear until they enter the detection aperture; variations in optical path length then modulate the phase of both signal and reference beams simultaneously, and phase differences cancel out in the heterodyning process.

collinear vectors [MATH] Two vectors, one of which is a non-zero scalar multiple of the other.

collineation [MATH] A mapping which transforms points into points, lines into lines, and planes into planes. Also known as collineatory transformation.

collineatory transformation *See* collineation.

collinite [GEOL] The maceral, of collain consistency, of jellified plant material precipitated from solution and hardened; a variety of euvitrinite.

Collins helium liquefier [CRYO] A machine which uses the Joule-Thomson effect and work done by helium gas in expansion against a movable piston to liquefy helium.

collinsite [MINERAL] $Ca_2(Mg,Fe)(PO_4)_2$ A phosphate mineral occurring in concentric layers in phosphoric nodules; found in meteorites.

Collins miner [MIN ENG] A type of remote-controlled continuous miner for thin-seam extraction.

Collip unit [BIOL] A unit for the standardization of parathyroid extract.

collision [PHYS] An interaction resulting from the close approach of two or more bodies, particles, or systems of particles, and confined to a relatively short time interval during which the motion of at least one of the particles or systems changes abruptly.

collision-avoidance radar [ENG] Radar equipment utilized in a collision-avoidance system.

collision-avoidance system [ENG] Electronic devices and equipment used by a pilot to perform the functions of conflict detection and avoidance.

collision bearing [NAV] A constant bearing maintained while the distance between two craft is decreasing.

collision blasting [ENG] The blasting out of different sections of rocks against each other.

collision broadening *See* collision line-broadening.

collision bulkhead [NAV ARCH] A watertight partition in a ship, perpendicular to the fore and aft centerline of the ship, usually near the bow, for keeping out water in the event of a collision.

collision course [NAV] A course which if followed will bring two craft together.

collision-course homing [ORD] Homing in which an offset antenna is used on the missile in conjunction with built-in computers that anticipate the motion of the target and direct the missile ahead of the present position of the target on a converging course that gives a collision in minimum missile travel time.

collision cross section *See* cross section.

collision efficiency [METEOROL] The fraction of all waterdrops which, initially moving on a collision course with respect to other drops, actually collide (make surface contact) with the other drops.

collision excitation [ATOM PHYS] The excitation of a gas by collisions of moving charged particles.

collision frequency [PHYS] The average number of collisions undergone by a particle traveling through a material, such as an electron traveling through a gas, in a unit time.

collision ionization [ATOM PHYS] The ionization of atoms or molecules of a gas or vapor by collision with other particles.

collisionless Boltzmann equation *See* Vlasov equation.

collision line-broadening [SPECT] Spreading of a spectral line due to interruption of the radiation process when the radiator collides with another particle. Also known as collision broadening.

collision matrix *See* scattering matrix.

collision of the first kind [PHYS] An inelastic collision in which some of the kinetic energy of translational motion is converted to internal energy of the colliding systems. Also known as endoergic collision.

collision of the second kind [PHYS] An inelastic collision in which some of the internal energy of the colliding systems is converted to kinetic energy of translation. Also known as exoergic collision.

collision parameter [AERO ENG] In orbit computation, the distance between a center of attraction of a central force field and the extension of the velocity vector of a moving object at a great distance from the center.

collision-radiative recombination [ATOM PHYS] The capture of an electron by an ion in a gas, accompanied by the emission of one or more photons.

collision theory [PHYS CHEM] Theory of chemical reaction proposing that the rate of product formation is equal to the number of reactant-molecule collisions multiplied by a factor that corrects for low-energy-level collisions. [QUANT MECH] Theory to describe collisions of simple or complex particles, the derivation of collision cross sections from postulated interactions and the study of properties of collision amplitudes which follow from invariance principles such as conservation of probability and time-reversal invariance.

colloblast [INV ZOO] An adhesive cell on the tentacles of ctenophores.

collodion [ORG CHEM] Cellulose nitrate deposited from a solution of 60% ether and 40% alcohol, used for making fibers and film and in membranes for dialysis.

collodion cotton *See* pyroxylin.

collodion replication [ANALY CHEM] Production of a faithful collodion-film mold of a specimen surface (for example, powders, bones, microorganisms, crystals) which is sufficiently thin to be studied by electron microscopy. [GRAPHICS] A process of image formation utilizing a negative that is a glass plate coated with a collodion containing iodides.

colloform [GEOL] Pertaining to the rounded, globular texture of mineral formed by colloidal precipitation.

colloid [CHEM] The phase of a colloidal system made up of particles having dimensions of 10–10,000 angstroms (1–1000 nanometers) and which is dispersed in a different phase.

colloidal dispersion *See* colloidal system.

colloidal fuel *See* coal-in-oil suspension.

colloidal graphite [MATER] Extremely fine flakes of graphite suspended in water, petroleum oil, castor oil, glycerin, or other liquids; used to provide conductive shields on the inside or outside surfaces of electron tubes.

colloidal instability [METEOROL] A property attributed to clouds, by which the particles of the cloud tend to aggregate into masses large enough to precipitate.

colloidal osmotic pressure *See* oncotic pressure.

colloidal silver [MATER] Finely divided particles of silver, sometimes used on terminals of electronic components to give a larger surface area for connections.

colloidal suspension *See* colloidal system.

colloidal system [CHEM] An intimate mixture of two substances, one of which, called the dispersed phase (or colloid), is uniformly distributed in a finely divided state through the second substance, called the dispersion medium (or dispersing medium); the dispersion medium or dispersed phase may be a gas, liquid, or solid. Also known as colloidal dispersion; colloidal suspension.

colloid chemistry [PHYS CHEM] The scientific study of matter whose size is approximately 10 to 10,000 angstroms (1 to 1000 nanometers), and which exists as a suspension in a continuous medium, especially a liquid, solid, or gaseous substance.

colloider [CIV ENG] A device that removes colloids from sewage.

colloid goiter [MED] A soft, diffuse enlargement of the thyroid gland in which colloid fills the acinar spaces.

colloid mill [MECH ENG] A grinding mill for the making of

very fine dispersions of liquids or solids by breaking down particles in an emulsion or paste.

collophane [MINERAL] A massive, cryptocrystalline, carbonate-containing variety of apatite and a principal source of phosphates for fertilizers. Also known as collophanite.

collophanite *See* collophane.

Collothecacea [INV ZOO] A monofamilial suborder of mostly sessile rotifers in the order Monogonata; many species are encased in gelatinous tubes.

Collothecidae [INV ZOO] The single family of the Collothecacea.

collotype *See* photogelatin process.

colluvium [GEOL] Loose, incoherent deposits at the foot of a slope or cliff, brought there principally by gravity.

Collyritidae [PALEON] A family of extinct, small, ovoid, exocyclic Euechinoidea with fascioles or a plastron.

Colmol miner [MIN ENG] A continuous miner, in which the coal is completely augered by two banks of cutting arms fitted with picks; the arms rotate in opposite directions to assist in gathering up the cuttings for the central conveyor.

coloboma [MED] A congenital, pathologic, or operative fissure, especially of the eye or eyelid.

colog *See* cologarithm.

cologarithm [MATH] The cologarithm of a number is the logarithm of the reciprocal of that number. Abbreviated colog.

colon [ANAT] The portion of the human intestine extending from the cecum to the rectum; it is divided into four sections: ascending, transverse, descending, and sigmoid. Also known as large intestine.

colon bacillus *See* Escherichia coli.

colonization [ECOL] The establishment of an immigrant species in a peripherally unsuitable ecological area; occasional gene exchange with the parental population occurs, but generally the colony evolves in relative isolation and in time may form a distinct unit.

colonnade [ARCH] A series of columns placed at regular intervals.

colony [BIOL] A localized population of individuals of the same species which are living either attached or separately. [MICROBIO] A cluster of microorganisms growing on the surface of or within a solid medium; usually cultured from a single cell.

colony count [MICROBIO] The number of colonies of bacteria growing on the surface of a solid medium.

color [OPTICS] A general term that refers to the wavelength composition of light, with particular reference to its visual appearance. [PARTIC PHYS] A hypothetical quantum number carried by quarks, so that each type of quark comes in three varieties which are identical in all measurable qualities but which differ in this additional property; this quantity determines the coupling of quarks to the gluon field.

color aberration *See* chromatic aberration.

Coloradoan [GEOL] Middle Upper Cretaceous geologic time.

coloradoite [MINERAL] HgTe A grayish-black, isometric telluride mineral with a metallic luster; specific gravity is 8.6.

Colorado low [METEOROL] A low which makes its first appearance as a definite center in the vicinity of Colorado on the eastern slopes of the Rocky Mountains; analogous to the Alberta low.

Colorado tick fever [MED] A nonexanthematous acute viral disease of humans occurring in the western United States and transmitted by a bite of the tick *Dermacentor andersoni*; characterized by a short course, intermittent fever, leukopenia, and occasionally meningoencephalitis. Also known as mountain tick fever.

color balance [ELECTR] Adjustment of the circuits feeding the three electron guns of a television color picture tube to compensate for differences in light-emitting efficiencies of the three color phosphors on the screen of the tube.

color-bar code [IND ENG] A code that uses one or more different colors of bars in combination with black bars and white spaces, to increase the density of binary coding of data printed on merchandise tags or directly on products for inventory control and other purposes.

color-bar generator [ELECTR] A signal generator that delivers to the input of a color television receiver the signal needed to produce a color-bar test pattern on one or more channels.

color-bar test pattern [COMMUN] A test pattern of different colors of vertical bars, used to check the performance of a color television receiver.

color-blind [GRAPHICS] Of a photographic emulsion, sensitive only to blue, violet, and ultraviolet light.

color blindness [MED] Inability to perceive one or more colors.

color burst [ELECTR] The portion of the composite color television signal consisting of a few cycles of a sine wave of chrominance subcarrier frequency. Also known as burst; reference burst.

color carrier *See* chrominance subcarrier.

color-carrier reference *See* chrominance-carrier reference.

color center [SOLID STATE] A point lattice defect which produces optical absorption bands in an otherwise transparent crystal.

color circle [OPTICS] An arrangement of hues about the circumference of a circle in the order in which they appear in the electromagnetic spectrum, with pairs of complementary colors at opposite ends of diameters.

color code [ELEC] A system of colors used to indicate the electrical value of a component or to identify terminals and leads. [ENG] **1.** Any system of colors used for purposes of identification, such as to identify dangerous areas of a factory. **2.** A system of colors used to identify the type of material carried by a pipe; for example, dangerous materials, protective materials, extra valuable materials.

color coder *See* matrix.

color comparator [ANALY CHEM] A photoelectric instrument that compares an unknown color with that of a standard color sample for matching purposes. Also known as photoelectric color comparator.

color control *See* chroma control.

color correction [GRAPHICS] Any method used to improve color rendition; for example, masking, dot etching, reetching, and scanning. [OPTICS] The construction of an optical system so that the image positions of an object are the same for two or more wavelengths, and chromatic aberration is thus minimized.

color decoder *See* matrix.

color-difference signal [ELECTR] A signal that is added to the monochrome signal in a color television receiver to obtain a signal representative of one of the three tristimulus values needed by the color picture tube.

color disk [OPTICS] A rotating circular disk having three filter sections to produce the individual red, green, and blue pictures in a field-sequential color television system.

colored smoke [MATER] Gaseous products of a distinctive color which forms a colored cloud and may be used for signals or target markers.

color encoder *See* matrix.

color equation [ASTRON] A measure of the color sensitivity and response of a method of observation; photographic, visual, or photoelectric techniques may be employed.

color facsimile [COMMUN] A facsimile system for transmission of color photographs, in which three separate facsimile transmissions are made from the original color print, using color-separation filters in the optical system of the facsimile transmitter.

colorfast [TEXT] Referring to a fabric that does not fade during normal wear.

color film [GRAPHICS] A sensitized film used for three-color photography; consists of three emulsions coated one above another and sensitive respectively to blue, green, and red light.

color filter [OPTICS] An optical element that partially absorbs incident light, consisting of a pane of glass or other partially transparent material, or of films separated by narrow layers; the absorption may be either selective or nonselective with respect to wavelength. Also known as light filter.

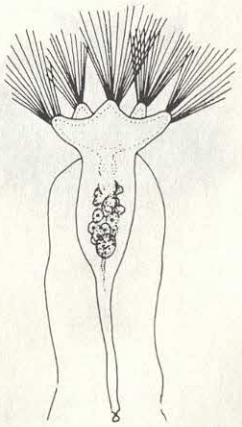
color fringing [ELECTR] Spurious chromaticity at boundaries of objects in a television picture.

colorimeter [ANALY CHEM] A device for measuring concentration of a known constituent in solution by comparison with colors of a few solutions of known concentration of that constituent. Also known as chromometer. [OPTICS] An instrument that measures color by determining the intensities of the three primary colors that will give that color.

colorimetric photometer [OPTICS] A photometer that can measure light intensities in several spectral regions, using color filters placed in the path of the light.

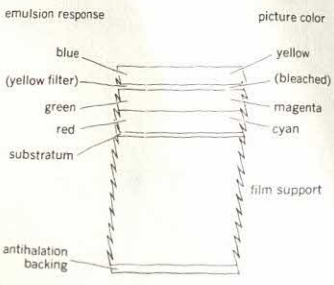
colorimetry [OPTICS] Any technique by which an unknown

COLLOTHECIDAE



Collotheca species.

COLOR FILM



Cross section of Kodachrome film showing the various emulsion layers with (left) the emulsion response and (right) the developed color of each layer.

color is evaluated in terms of standard colors; the technique may be visual, photoelectric, or indirect by means of spectrophotometry; used in chemistry and physics.

color index Abbreviated CI. [ASTRON] Of a star, the numerical difference between the apparent photographic magnitude and the apparent photovisual magnitude. [PATH] The amount of hemoglobin per erythrocyte relative to normal, equal to the percent normal hemoglobin concentration divided by percent normal erythrocyte count.

coloring agent [FOOD ENG] Any substance of natural origin, such as tumeric, annatto, caramel, carmine, and carotine, or a synthetic certified food color added to food to compensate for color changes during processing or to give an appetizing color.

color killer circuit [ELECTR] The circuit in a color television receiver that biases chrominance amplifier tubes to cutoff during reception of monochrome programs. Also known as killer stage.

color kinescope *See* color picture tube.

color lake *See* lake.

color media [OPTICS] Any colored, transparent material that is placed in front of a lighting unit to color the light transmitted.

color oscillator *See* chroma oscillator.

color phase [COMMUN] The difference in phase between components (I or Q) of a chrominance signal and the chrominance-carrier reference in a color television receiver.

color-phase alternation [COMMUN] The periodic changing of the color phase of one or more components of the chrominance subcarrier between two sets of assigned values after every field in a color television system. Abbreviated cpa.

color-phase detector [ELECTR] The color television receiver circuit that compares the frequency and phase of the incoming burst signal with those of the locally generated 3.579545-megahertz chroma oscillator and delivers a correction voltage to a reactance tube to ensure that the color portions of the picture will be in exact register with the black-and-white portions on the screen.

color photography [GRAPHICS] A film process that uses color film to produce three-color positive pictures.

color picture signal [COMMUN] The electric signal that represents complete color picture information, excluding all synchronizing signals.

color picture tube [ELECTR] A cathode-ray tube having three different colors of phosphors, so that when these are appropriately scanned and excited in a color television receiver, a color picture is obtained. Also known as color kinescope; color television picture tube; tricolor picture tube.

color printing [GRAPHICS] The art and craft of embellishing designs, pictures, and typographic pages with color for a more pleasing effect than obtained in black and white; in addition, pictures more closely represent the original object or painting.

color purity [ELECTR] Absence of undesired colors in the spot produced on the screen by each beam of a television color picture tube.

color saturation [OPTICS] The degree to which a color is mixed with white; high saturation means little white, low saturation means much white. Also known as chroma; saturation.

color-saturation control *See* chroma control.

color-sensitive [GRAPHICS] Referring to a photographic emulsion which is not color-blind.

color separation [GRAPHICS] The process of preparing a separate drawing, engraving, or negative for each color required in the reproduction of a colored picture.

color signal [COMMUN] Any signal that controls the chromaticity values of a color television picture, such as the color picture signal and the chrominance signal.

color solid [OPTICS] A three-dimensional diagram which represents the relationship of three attributes of surface color: hue, saturation, and brightness.

color stability [CHEM] Resistance of materials to change in color that can be caused by light or aging, as of petroleum or whiskey.

color standard [ANALY CHEM] Liquid solution of known chemical composition and concentration, hence of known and standardized color, used for optical analysis of samples of unknown strength.

color subcarrier *See* chrominance subcarrier.

color-subcarrier oscillator *See* chroma oscillator.

color-subcarrier reference *See* chrominance-carrier reference.

color television [COMMUN] A television system that reproduces an image approximately in its original colors.

color television picture tube *See* color picture tube.

color temperature [STAT MECH] Of a solid surface, that temperature of a blackbody from which the radiant energy has essentially the same spectral distribution as that from the surface.

color tempering [MET] Reheating of hardened steel and observing color changes to determine quenching temperature and to obtain the desired hardness.

color test [ANALY CHEM] The quantitative analysis of a substance by comparing the intensity of the color produced in a sample by a reagent with a standard color produced similarly in a solution of known strength.

color throw [ANALY CHEM] In an ion-exchange process, discoloration of the liquid passing through the bed.

color-translating microscope [OPTICS] A type of compound microscope that employs three different wavelengths of light to reveal details produced by ultraviolet or other nonvisible radiation.

color transmission [COMMUN] In television, the transmission of a signal wave which represents both the brightness values and the chromaticity values in the picture.

color vision [PHYSIO] The ability to discriminate light on the basis of wavelength composition.

Colossendeidae [INV ZOO] A family of deep-water marine arthropods in the subphylum Pycnogonida, having long palpi and lacking chelifores, except in polymerous forms.

colostomy [MED] Surgical formation of an artificial anus by joining the colon to an opening in the anterior abdominal wall.

colostrum [PHYSIO] The first milk secreted by the mammary gland during the first days following parturition.

colotomy [MED] Incision of the colon; may be abdominal, lateral, lumbar, or iliac, according to the region of entrance.

Colpitts oscillator [ELECTR] An oscillator in which a parallel-tuned tank circuit has two voltage-dividing capacitors in series, with their common connection going to the cathode in the electron-tube version and the emitter circuit in the transistor version.

colposcope [MED] An instrument for the visual examination of the vagina and cervix; a vaginal speculum.

colpotomy [MED] Incision of the vagina.

Colubridae [VERT ZOO] A family of cosmopolitan snakes in the order Squamata.

Columba [ASTRON] A constellation, right ascension 6 hours, declination 35°S. Abbreviated Col. Also known as Dove.

Columbia unit [BIOL] A unit for the standardization of bacitracin.

Columbidae [VERT ZOO] A family of birds in the order Columbiformes composed of the pigeons and doves.

Columbiformes [VERT ZOO] An order of birds distinguished by a short, pointed bill, imperforate nostrils, and short legs.

columbite [MINERAL] $(Fe,Mn)(Cb,Ta)_2O_6$ An iron-black mineral with a submetallic luster that crystallizes in the orthorhombic system; the chief ore mineral of niobium (columbium); hardness is 6 on Mohs scale, and specific gravity is 5.4–6.5. Also known as dianite; greenlandite; niobite.

columbium *See* niobium.

columella [ANAT] *See* stapes. [BIOL] Any part shaped like a column. [BOT] A sterile axial body within the capsules of certain mosses, liverworts, and many fungi.

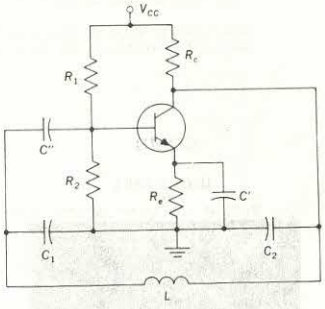
column [CHEM ENG] *See* tower. [COMPUT SCI] A vertical arrangement of characters or other expressions, usually referring to a specific print position on a printer or a vertical area on a card. [ENG] A vertical shaft designed to bear axial loads in compression. [MATH] *See* place. [NUCLEO] A hollow cylinder of water and spray thrown up from an underwater burst of an atomic weapon, through which hot, high-pressure gases are vented to the atmosphere; a somewhat similar column of dirt is formed in an underground explosion. Also known as plume.

columnar epithelium [HISTOL] Epithelium distinguished by elongated, columnar, or prismatic cells.

columnar jointing [GEOL] Parallel, prismatic columns that are formed as a result of contraction during cooling in basaltic flow and other extrusive and intrusive rocks. Also known as columnar structure; prismatic jointing; prismatic structure.

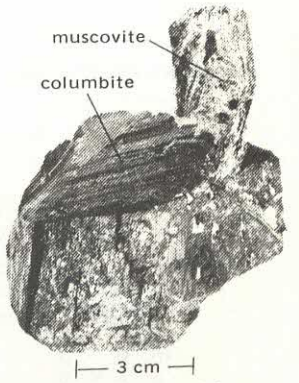
columnar resistance [GEOPHYS] The electrical resistance

COLPITTS OSCILLATOR



A transistor Colpitts oscillator.

COLUMBITE



Columbite associated with muscovite from Minas Gerais, Brazil. *(American Museum of Natural History)*

of a column of air 1 centimeter square, extending from the earth's surface to some specified altitude.

columnar section [GEOL] A vertical strip or scale drawing of the strip taken from a given area or locality showing the sequence of the rock units and their stratigraphic relationship, and indicating the thickness, lithology, age, classification, and fossil content of the rock units. Also known as section.

columnar stem [BOT] An unbranched, cylindrical stem bearing a set of large leaves at its summit, as in palms, or no leaves, as in cacti.

columnar structure [GEOL] *See* columnar jointing. [MINERAL] Mineral structure consisting of parallel columns of slender prismatic crystals. [PETR] A primary sedimentary structure consisting of columns arranged perpendicular to the bedding.

column binary [COMPUT SCI] The binary representation of data on punched cards in which adjacent positions in a column correspond to adjacent bits of data. Also known as Chinese binary.

column binary card [COMPUT SCI] A punched card containing data in column binary representation.

column bleed [ANALY CHEM] The loss of carrier liquid during gas chromatography due to evaporation into the gas under analysis.

column chromatography [ANALY CHEM] Chromatographic technique of two general types: packed columns usually contain either a granular adsorbent or a granular support material coated with a thin layer of high-boiling solvent (partitioning liquid); open-tubular columns contain a thin film of partitioning liquid on the column walls and have an opening so that gas can pass through the center of the column.

column crane [MECH ENG] A jib crane whose boom pivots about a post attached to a building column.

column development chromatography [ANALY CHEM] Columnar apparatus for separating or concentrating one or more components from a physical mixture by use of adsorbent packing; as the specimen percolates along the length of the adsorbent, its various components are preferentially held at different rates, effecting a separation.

column drill [MECH ENG] A tunnel rock drill supported by a vertical steel column.

column formation *See* trail formation.

column indicator [COMPUT SCI] The visible column on the program card which shows to the punch card operator the next column to be encountered.

column operations [MATH] A set of rules for manipulating the columns of a matrix so that the image of the corresponding linear transformation remains unchanged.

column order [COMPUT SCI] The storage of a matrix $a(m,n)$ as $a(1,1), a(2,1), \ldots, a(m,1), a(1,2), \ldots$.

column pipe [MIN ENG] The large cast-iron (or wooden) pipe through which the water is conveyed from the mine pumps to the surface.

column printer [COMPUT SCI] A small line printer used with some calculators to provide hard-copy printout of input and output data; typically consists of 20 columns of numerals and a limited number of alphabetic or other identifying characters.

column rank [MATH] The number of linearly independent columns of a matrix; the dimension of the image of the corresponding linear transformation.

column space [MATH] The vector space spanned by the columns of a matrix.

column splice [CIV ENG] A connection between two lengths of a compression member (column); an erection device rather than a stress-carrying element.

column split [COMPUT SCI] A device on a punched card machine that senses a column in two parts, used to treat certain punch positions in the column differently from others or to treat the column as two separate characters.

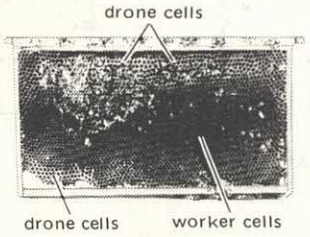
column vector [MATH] A matrix consisting of only one column.

colure [ASTRON] A great circle of the celestial sphere through the celestial poles and either the equinoxes or solstices, called respectively the equinoctial colure or the solstitial colure.

colusite [MINERAL] $Cu_3(As,Sn,V,Fe,Te)S_4$ A bronze-colored mineral consisting of a sulfide of copper and arsenic with vanadium, iron, and telluride substituting for arsenic; usually occurs in massive form.

Colydiidae [INV ZOO] The cylindrical bark beetles, a large family of coleopteran insects in the superfamily Cucujoidea.

COMB



Drone and worker bee cells in comb. *(Walter T. Kelley Co., Clarkson, Ky.)*

colza oil *See* rape oil.

Com *See* Coma Berenices.

COM *See* computer output on microfilm.

coma [ASTRON] The gaseous envelope that surrounds the nucleus of a comet. Also known as head. [ELECTR] A cathode-ray tube image defect that makes the spot on the screen appear comet-shaped when away from the center of the screen. [MED] Unconsciousness from which the patient cannot be aroused. [OPTICS] A manifestation of errors in an optical system, so that a point has an asymmetrical image (that is, appears as a pear-shaped spot).

Coma Berenices [ASTRON] A constellation, right ascension 13 hours, declination 20°N. Abbreviated Com. Also known as Berenice's Hair.

Coma cluster [ASTRON] A specific group of several thousand galaxies.

comagmatic province *See* petrographic province.

coma lobe [ELECTROMAG] Side lobe that occurs in the radiation pattern of a microwave antenna when the reflector alone is tilted back and forth to sweep the beam through space because the feed is no longer always at the center of the reflector; used to eliminate the need for a rotary joint in the feed waveguide.

Comanchean [GEOL] A North American provincial series in Lower and Upper Cretaceous geologic time, above Coahuilan and below Gulfian.

Comasteridae [INV ZOO] A family of radially symmetrical Crinozoa in the order Comatulida.

comatose [MED] In a condition of coma; resembling coma.

Comatulida [INV ZOO] The feather stars, an order of free-living echinoderms in the subclass Articulata.

comb [INV ZOO] **1.** A system of hexagonal cells constructed of beeswax by a colony of bees. **2.** A comblike swimming plate in ctenophores. [VERT ZOO] A crest of naked tissue on the head of many male fowl.

comb antenna [ELECTROMAG] A broad-band antenna for vertically polarized signals, in which half of a fishbone antenna is erected vertically and fed against ground by a coaxial line.

combat analysis [ORD] A theoretical analysis conducted to determine the probable effectiveness of an existing or projected weapons system under combat conditions.

combatant ship [NAV ARCH] A ship whose main function is combat with an ememy.

combat chart [MAP] A chart overprinted with a system of grid lines as an aid in fire control.

combat development [ORD] The research, development, and testing of new doctrine and organization, and their integration with new materiel into the army services to obtain the greatest combat effectiveness.

combat development field experiment [ORD] A field trial usually under controlled conditions designed to collect data on operations, organizations, or materiel for use in preparing new or modified operational or organizational concepts or qualitative materiel requirements.

combat development study project [ORD] A study directed toward a determination of operational concepts and techniques, new organizations, or qualitative materiel requirements for the army in the field, or a study which contributes to such determination.

combat development test project [ORD] A troop test directed at the determination of the feasibility and desirability of operational or organizational concepts, the suitability of materiel, or a combination of these tasks.

combat information center [COMMUN] A shipboard location at which tactical information from radar, sonar, and other equipment is received, displayed for rapid analysis, and evaluated.

combat loading [ORD] The division of military cargo into categories for loading aboard ships.

combat serviceable item [ORD] An item of equipment which is complete, ready to perform immediately at its rated capacity, and will remain serviceable under severe operating conditions for a reasonable length of time.

combat tire [ORD] Pneumatic tire of heavy construction which is designed to operate without air pressure for a limited distance in an emergency.

combat vehicle [ORD] A land or amphibious vehicle, with or without armor or armament, designed for specific functions in combat or battle.

combat zone [ORD] A region in a theater of operations where fighting takes place, or where space is designated for the

operations of friendly combat forces, extending from the front line to a line or boundary designated by the theater commander.

combed cotton [TEXT] Cotton yarn that has been cleaned with wire brushes and roller cards after carding to remove short fibers and other impurities.

comber [OCEANOGR] A deep-water wave of long, curling character with a high, breaking crest pushed forward by a strong wind.

combescure transformation [MATH] A one-to-one continuous mapping of one space curve onto another space curve so that tangents to corresponding points are parallel.

comb filter [ELECTR] A wave filter whose frequency spectrum consists of a number of equispaced elements resembling the teeth of a comb.

comb growth unit [BIOL] A unit for the standardization of male sex hormones.

combination [MATH] A selection of one or more of the elements of a given set without regard to order.

combinational circuit [ELECTR] A switching circuit whose outputs are determined only by the concurrent inputs.

combination buoy [NAV] A buoy in which a light and a sound signal are combined such as a lighted bell buoy, lighted gong buoy, lighted whistle buoy, or lighted horn buoy.

combination cable [ELEC] A cable having conductors grouped in both quads and pairs.

combination chuck [DES ENG] A chuck used in a lathe whose jaws either move independently or simultaneously.

combination coefficient [GEOPHYS] A measure of the specific rate of disappearance of small ions in the atmosphere due to either union with neutral Aitken nuclei to form new large ions, or union with large ions of opposite sign to form neutral Aitken nuclei.

combination collar [DES ENG] A collar that has left-hand threads at one end and right-hand threads at the other.

combination cycle *See* mixed cycle.

combination die [MET] A die having more than one cavity for different castings.

combination distributing frame [ELEC] Frame which combines the functions of a main distributing frame and an intermediate distributing frame.

combination-drive reservoir [PETRO ENG] A type of reservoir in which hydrocarbons are swept (displaced) toward the drill hole by injection of water followed by liquefied-petroleum-gas or gas injection.

combination fuse [ORD] A fuse combining two different types of fuse mechanisms, especially one combining impact and time mechanisms.

combination lock [ENG] A lock that can be opened only when its dial has been set to the proper combination of symbols, in the proper sequence.

combination mill [MET] A rolling mill arranged with continuous rolls for roughing and a guide or looping mill for shaping.

combination plate [GRAPHICS] A photoengraved plate on which halftone and line work have been combined.

combination pliers [DES ENG] Pliers that can be used either for holding objects or for cutting and bending wire.

combination principle *See* Ritz's combination principle.

combination saw [MECH ENG] A saw made in various tooth arrangement combinations suitable for ripping and crosscut mitering.

combination square [DES ENG] A square head and steel rule that when used together have both a 45 and 90° face to allow the testing of the accuracy of two surfaces intended to have these angles.

combination tone [ACOUS] A subjective tone produced by simultaneously sounding two pure tones whose frequencies differ by a large amount.

combination trap [GEOL] Underground reservoir structure closure, deformation, or fault where reservoir rock covers only part of the structure.

combination unit [CHEM ENG] A processing unit that combines more than one process, such as straight-run distillation together with selective cracking.

combination vibration [SPECT] A vibration of a polyatomic molecule involving the simultaneous excitation of two or more normal vibrations.

combination wrench [DES ENG] A wrench that is an open-end wrench at one end and a socket wrench at the other.

combinatorial analysis [MATH] **1.** The determination of the number of possible outcomes in ideal games of chance by using formulas for computing numbers of combinations and permutations. **2.** The study of large finite problems.

combinatorial theory [MATH] The branch of mathematics which studies the arrangements of elements into sets.

combinatorial topology [MATH] The study of polyhedrons, simplicial complexes, and generalizations of these. Also known as piecewise-linear topology.

combinatorics [MATH] Combinatorial topology which studies geometric forms by breaking them into simple geometric figures.

combined carbon [CHEM] Carbon that is chemically combined within a compound, as contrasted with free or uncombined elemental carbon.

combined cyanide [ORG CHEM] The cyanide portion of a complex ion composed of cyanide and a metal.

combined flexure [MECH] The flexure of a beam under a combination of transverse and longitudinal loads.

combined footing [CIV ENG] A footing, either rectangular or trapezoidal, that supports two columns.

combined head *See* read/write head.

combined immunological deficiency disease [MED] A severe and usually fatal disease in which the individual lacks not only the T (thymus-derived) cells, which are responsible for graft rejection and for defense against viruses, but also the B (bone-marrow-derived) cells, which are responsible for production of globulins and antibodies. Also known as CID disease.

combined moisture [MIN ENG] Moisture in coal that cannot be removed by ordinary drying.

combined sewers [CIV ENG] A drainage system that receives both surface runoff and sewage.

combined stresses [MECH] Bending or twisting stresses in a structural member combined with direct tension or compression.

combine-harvester [AGR] A machine for harvesting legumes and grasses; cuts off the plant tops, then beats and cleans the grain while the machine continues to move across the field.

combiner circuit [ELECTR] The circuit that combines the luminance and chrominance signals with the synchronizing signals in a color television camera chain.

combing [BUILD] In roofing, the topmost row of shingles which project above the ridge line. [ENG] **1.** Using a comb or stiff bristle brush to create a pattern by pulling through freshly aplied paint. **2.** Scraping or smoothing a soft stone surface. [TEXT] Elimination of short, curly fibers by means of a machine process.

combing machine [TEXT] A machine that combs fibers, separating the longer ones from the shorter.

combining glass [OPTICS] A glass screen designed to reflect display imagery to the viewer, usually at selected wavelengths of light, while being sufficiently transmissive for the viewer to see the scene beyond.

combining-volumes principle [CHEM] The principle that when gases take part in chemical reactions the volumes of the reacting gases and those of the products (if gaseous) are in the ratio of small whole numbers, provided that all measurements are made at the same temperature and pressure. Also known as Gay-Lussac law.

combining weight [CHEM] The weight of an element that chemically combines with 8 grams of oxygen or its equivalent.

comb nephoscope [ENG] A direct-vision nephoscope constructed with a comb (a crosspiece containing equispaced vertical rods) attached to the end of a column 8–10 feet (2.4–3 meters) long and supported on a mounting that is free to rotate about its vertical axis; in use, the comb is turned so that the cloud appears to move parallel to the tips of the vertical rods.

combustible gas [MATER] A gas that burns, including the fuel gases, hydrogen, hydrocarbon, carbon monoxide, or a mixture of these.

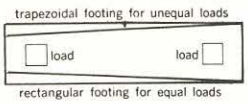
combustible loss [ENG] Thermal loss resulting from incomplete combustion of fuel.

combustible shale *See* tasmanite.

combustion [CHEM] The burning of gas, liquid, or solid, in which the fuel is oxidized, evolving heat and often light.

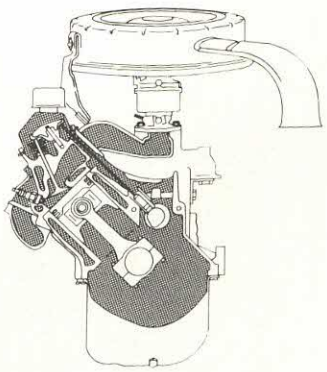
combustion chamber [AERO ENG] That part of the rocket engine in which the combustion of propellants takes place at high pressure. Also known as firing chamber. [ENG] Any chamber in which a fuel such as oil, coal, or kerosine is burned to provide heat. [MECH ENG] The space at the head end of

COMBINED FOOTING



Rectangular and trapezoidal shapes of combined footing.

COMBUSTION CHAMBER



Combustion chamber as found in a spark-ignition engine. *(From L. C. Lichty, Internal-Combustion Engines, 6th ed., McGraw-Hill, 1951)*

an internal combustion engine cylinder where most of the combustion takes place.

combustion chamber volume [MECH ENG] The volume of the combustion chamber when the piston is at top dead center.

combustion deposit [ENG] A layer of ash on the heat-exchange surfaces of a combustion chamber, resulting from the burning of a fuel.

combustion efficiency [CHEM] The ratio of heat actually developed in a combustion process to the heat that would be released if the combustion were perfect.

combustion engine [MECH ENG] An engine that operates by the energy of combustion of a fuel.

combustion engineering [MECH ENG] The design of combustion furnaces for a given performance and thermal efficiency, involving study of the heat liberated in the combustion process, the amount of heat absorbed by heat elements, and heat-transfer rates.

combustion furnace [ANALY CHEM] A heating device used in the analysis of organic compounds for elements. [ENG] A furnace whose source of heat is the energy released in the oxidation of fossil fuel.

combustion instability [AERO ENG] Unsteadiness or abnormality in the combustion of fuel, as may occur in a rocket engine.

combustion knock *See* engine knock.

combustion nucleus [METEOROL] A condensation nucleus formed as a result of industrial or natural combustion processes.

combustion rate [CHEM] The rate of burning of any substance.

combustion shock [ENG] Shock resulting from abnormal burning of fuel in an internal combustion engine, caused by preignition or fuel-air detonation; or in a diesel engine, the uncontrolled burning of fuel accumulated in the combustion chamber.

combustion train [ANALY CHEM] The arrangement of apparatus for elementary organic analysis.

combustion tube [ANALY CHEM] A glass, silica, or porcelain tube, resistant to high temperatures, that is a component of a combustion train.

combustion turbine *See* gas turbine.

combustion wave [CHEM] **1.** A zone of burning propagated through a combustible medium. **2.** The zoned, reacting, gaseous material formed when an explosive mixture is ignited.

combustor [MECH ENG] The combustion chamber together with burners, igniters, and injection devices in a gas turbine or jet engine.

come-along [DES ENG] **1.** A device for gripping and effectively shortening a length of cable, wire rope, or chain by means of two jaws which close when one pulls on a ring. **2.** *See* puller.

comedo [MED] A collection of sebaceous material and keratin retained in the hair follicle and excretory duct of the sebaceous gland, whose surface is covered with a black dot caused by oxidation of sebum at the follicular orifice. Also known as blackhead.

comedocarcinoma [MED] A type of adenocarcinoma of the breast in which the ducts are filled with cells which, when expressed from the cut surface, resemble comedos.

comendite [GEOL] A white, sodic rhyolite containing alkalic amphibole or pyroxene.

comes [ASTRON] The smaller star in a binary system. Also known as companion.

Comesomatidae [INV ZOO] A family of free-living nematodes in the superfamily Chromadoroidea found as deposit feeders on soft bottom sediments.

comet [ASTRON] A nebulous celestial body having a fuzzy head surrounding a bright nucleus, one of two major types of bodies moving in closed orbits about the sun; in comparison with the planets, the comets are characterized by their more eccentric orbits and greater range of inclination to the ecliptic.

comet family [ASTRON] Those short-period comets whose aphelia correspond closely to Jupiter's orbit.

comet group [ASTRON] A division of comets on the basis of their period; the short-period group (periods of less than 200 years) contains orbits that show a strong preference for the plan of the solar system; the planes of long-period comets are randomly distributed.

comfort chart [ENG] A diagram showing curves of relative humidity and effective temperature superimposed upon rectangular coordinates of wet-bulb temperature and dry-bulb temperature.

comfort control [ENG] Control of temperature, humidity, flow, and composition of air by using heating and air-conditioning systems, ventilators, or other systems to increase the comfort of people in an enclosure.

comfort curve [ENG] A line drawn on a graph of air temperature versus some function of humidity (usually wet-bulb temperature or relative humidity) to show the varying conditions under which the average sedentary person feels the same degree of comfort; a curve of constant comfort.

comfort index *See* temperature humidity index.

comfort standard *See* comfort zone.

comfort zone [ENG] The ranges of indoor temperature, humidity, and air movement, under which most persons enjoy mental and physical well-being. Also known as comfort standard.

COMIT [COMPUT SCI] A user-oriented, general-purpose, symbol-manipulation programming language for computers.

Comleyan [GEOL] Lower Cambrian geologic time.

comlognet [COMMUN] A long-line data-transmission network for rapid processing and distribution of logistic information at a computer-equipped automatic switching center.

comma [ACOUS] The difference between the larger and smaller whole tones in the just scale, corresponding to a frequency ratio of 81/80.

command [COMPUT SCI] A signal that initiates a predetermined type of computer operation that is defined by an instruction. [CONT SYS] An independent signal in a feedback control system, from which the dependent signals are controlled in a predetermined manner.

command code *See* operation code.

command control *See* command guidance.

command control program [COMPUT SCI] The interface between a time-sharing computer and its users by means of which they can create, edit, save, delete, and execute their programs.

command destruct [CONT SYS] A command control system that destroys a flightborne test rocket or a guided missile, actuated by the safety officer whenever the vehicle's performance indicates a safety hazard.

command guidance [ENG] A type of electronic guidance of guided missiles or other guided aircraft wherein signals or pulses sent out by an operator cause the guided object to fly a directed path. Also known as command control.

command interpreter [COMPUT SCI] A program that processes commands and other input and output from an active terminal in a time-sharing system.

command language [COMPUT SCI] The language of an operating system, through which the users of a data-processing system describe the requirements of their tasks to that system. Also known as job control language.

command mode [COMPUT SCI] The status of a terminal in a time-sharing environment enabling the programmer to use the command control program.

command module [AERO ENG] The spacecraft module that carries the crew, the main communication and telemetry equipment, and the reentry capsule during cruising flight.

command net [ORD] The several points that may exercise control over airborne guided missiles.

command pulses [ELECTR] The electrical representations of bit values of 1 or 0 which control input/output devices.

command set [COMMUN] A radio set used to receive or give commands, as between one aircraft and another or between an aircraft and the ground.

Commelinaceae [BOT] A family of monocotyledonous plants in the order Commelinales characterized by differentiation of the leaves into a closed sheath and a well-defined, commonly somewhat succulent blade.

Commelinales [BOT] An order of monocotyledonous plants in the subclass Commelinidae marked by having differentiated sepals and petals but lacking nectaries and nectar.

Commelinidae [BOT] A subclass of flowering plants in the class Liliopsida.

commensal [ECOL] An organism living in a state of commensalism.

commensalism [ECOL] An interspecific, symbiotic relationship in which two different species are associated, wherein one is benefited and the other neither benefited nor harmed.

commensurable motions [ASTRON] Mean motions of the planets, or of the satellites of a planet, which satisfy simple arithmetic relationships.

comment [COMPUT SCI] An expression identifying or explaining one or more steps in a routine, which has no effect on execution of the routine.
comment code [COMPUT SCI] One or more characters identifying a comment.
commercial diesel cycle *See* mixed cycle.
commercial harbor [CIV ENG] A harbor in which docks are provided with cargo-handling facilities.
commercial lecithin *See* lecithin.
commercial mine [MIN ENG] A coal mine operated to supply purchasers in general, as contrasted with a captive mine.
commercial ore [MIN ENG] Mineralized material profitable at prevailing metal prices.
commercial-type vehicle [ORD] A motor vehicle designed to meet civilian requirements and used by the armed services, without major modification, for routine purposes in connection with the transportation of supplies, personnel, and equipment.
comminution [MECH ENG] Breaking up or grinding into small fragments. Also known as pulverization.
comminutor [MECH ENG] A machine that breaks up solids.
commissioned [NAV] Pertaining to an aid to navigation which, after it has been constructed, tested, and placed in operation, is declared suitable for use by vessels or crafts.
commission ore [MIN ENG] Uranium-bearing ore of 0.10% U_3O_8 or higher, for which the U.S. Atomic Energy Commission has an established price.
commissure [BIOL] A joint, seam, or closure line where two structures unite.
commissurotomy [MED] The surgical destruction of a commissure, usually the anterior commissure, particularly in the treatment of certain psychiatric disorders.
committed [ORD] Pertaining to the condition of a fuse when the arming process has reached the point from which arming will continue to completion in spite of the absence of any arming forces.
common area [COMPUT SCI] An area of storage which two or more routines share.
common-base connection *See* grounded-base connection.
common-base feedback oscillator [ELECTR] A bipolar transistor amplifier with a common-base connection and a positive feedback network between the collector (output) and the emitter (input).
common battery [COMMUN] System of current supply where all direct current energy for a unit of a telephone system is supplied by one source in a central office or exchange.
common bile duct [ANAT] The duct formed by the union of the hepatic and cystic ducts.
common bond *See* American bond.
common branch [ELEC] A branch of an electrical network which is common to two or more meshes. Also known as mutual branch.
common brick [MATER] Brick made from natural clay.
common business-oriented language *See* COBOL.
common carotid artery *See* carotid artery.
common carrier [IND ENG] A company recognized by an appropriate regulatory agency as having a vested interest in furnishing communications services or in transporting commodities or people.
common-channel interoffice signaling [COMMUN] A method of signaling in a telecommunications switching system in which a network of separate data communication paths is used for transmitting all signaling information between offices. Abbreviated CCIS.
common cold [MED] A viral disease of humans most frequently caused by the rhinovirus and accompanied by inflammation of the mucous membranes of the nose, throat, and eyes.
common-collector connection *See* grounded-collector connection.
common control unit [COMPUT SCI] Control unit that is shared by more than one machine.
common declaration statement [COMPUT SCI] A nonexecutable statement in FORTRAN which allows specified arrays or variables to be stored in an area available to other programs.
common denominator [MATH] Any common multiple of the denominators of a collection of fractions.
common-drain amplifier [ELECTR] An amplifier using a field-effect transistor so that the input signal is injected between gate and drain, while the output is taken between the source and drain. Also known as source-follower amplifier.
common-emitter connection *See* grounded-emitter connection.
common establishment *See* high-water full and change.
common feldspar *See* orthoclase.
common fraction [MATH] A fraction whose numerator and denominator are both integers.
common-gate amplifier [ELECTR] An amplifier using a field-effect transistor in which the gate is common to both the input circuit and the output circuit.
common hepatic duct *See* hepatic duct.
common iliac artery *See* iliac artery.
common impedance coupling [ELECTROMAG] The interaction of two circuits by means of an inductance or capacitance in a branch which is common to both circuits.
common-ion effect [CHEM] The lowering of the degree of ionization of a compound when another ionizable compound is added to a solution; the compound added has a common ion with the other compound.
common item [ORD] Piece of equipment or materiel of supply, used or procured by more than one technical service.
common joist [BUILD] An ordinary floor beam to which floor boards are attached.
common labor [IND ENG] Unskilled workers.
common language [COMPUT SCI] A machine-readable language that is common to a group of computers and associated equipment.
common language family [COMPUT SCI] Various types of business machines, capable of being operated automatically and interchangeably by the same piece of punched paper tape, are said to be of a common language family.
common logarithm [MATH] The exponent in the representation of a number as a power of 10. Also known as Briggs' logarithm.
common mica *See* muscovite.
common mode [ELECTR] Having signals that are identical in amplitude and phase at both inputs, as in a differential operational amplifier.
common-mode error [ELECTR] The error voltage that exists at the output terminals of an operational amplifier due to the common-mode voltage at the input.
common-mode gain [ELECTR] The ratio of the output voltage of a differential amplifier to the common-mode input voltage.
common-mode input capacitance [ELECTR] The equivalent capacitance of both inverting and noninverting inputs of an operational amplifier with respect to ground.
common-mode input impedance [ELECTR] The open-loop input impedance of both inverting and noninverting inputs of an operational amplifier with respect to ground.
common-mode input resistance [ELECTR] The equivalent resistance of both inverting and noninverting inputs of an operational amplifier with respect to ground or reference.
common-mode rejection [ELECTR] The ability of an amplifier to cancel a common-mode signal while responding to an out-of-phase signal. Also known as in-phase rejection.
common-mode signal [ELECTR] A signal applied equally to both ungrounded inputs of a balanced amplifier stage or other differential device. Also known as in-phase signal.
common-mode voltage [ELECTR] A voltage that appears in common at both input terminals of a device with respect to the output reference (usually ground).
common multiple [MATH] A quantity (polynomial number) divisible by all quantities in a given set.
common projectile [ORD] A penetrating type of projectile containing a bursting charge of high explosive, intended to explode after passing through the lighter protective armor of a tank or naval vessel.
common pyrite *See* pyrite.
common rafter [BUILD] A rafter which extends from the plate of the roof to the ridge board at right angles to both members, and to which roofing is attached.
common return [ELECTR] A return conductor that serves two or more circuits.
common salt *See* halite; sodium chloride.
common-source amplifier [ELECTR] An amplifier stage using a field-effect transistor in which the input signal is applied between gate and source and the output signal is taken between drain and source.
common storage [COMPUT SCI] A section of memory in

certain computers reserved for temporary storage of program outputs to be used as input for other programs.

common-user channel [COMMUN] Any of the communications channels which are available to all authorized agencies for transmission of command, administrative, and logistic traffic.

common user circuit [ELEC] A circuit designated to furnish a communications service to a number of users.

common wall [BUILD] A wall that is shared by two dwelling units.

common year [ASTRON] A calendar year of 365 days.

communicable disease [MED] An infectious disease that can be transmitted from one individual to another either directly by contact or indirectly by fomites and vectors.

communicating hydrocephaly [MED] A form of hydrocephaly in which there is normal communication between the ventricles and the subarachnoid space of the brain.

communication [COMMUN] The transmission of intelligence between two or more points over wires or by radio; the terms telecommunication and communication are often used interchangeably, but telecommunication is usually the preferred term when long distances are involved.

communication band [COMMUN] The band of frequencies effectively occupied by a radio transmitter for the type of transmission and the speed of signaling used.

communication bus [COMMUN] A device that transfers control, timing, and data signals between switching processor subsystems; designed to provide physical and electrical isolation, to provide for simple addition of units on an in-service basis, and to provide pluggable connection for efficient factory testing, installation, and maintenance.

communication cable [COMMUN] A uniform conductive circuit used in the telephone industry to connect customers to their local switching centers and to interconnect local and long-distance switching centers.

communication channel [COMMUN] The wire or radio channel that serves to convey intelligence between two or more terminals.

communication countermeasure [COMMUN] Any electronic countermeasure against communications, such as jamming.

communication disorder [MED] Any interference with an individual's ability to comprehend or express ideas, experiences, knowledge, and feelings.

communication engineering [COMMUN] The design, construction, and operation of all types of equipment used for radio, wire, or other types of communication.

communication link *See* data link.

communication protocol [COMPUT SCI] The exchange of a special sequence of control characters between a computer and a remote terminal in order to establish synchronous communication. Also known as protocol.

communication receiver [ELECTR] A receiver designed especially for reception of voice or code messages transmitted by radio communication systems.

communications [ENG] The science and technology by which information is collected from an originating source, transformed into electric currents or fields, transmitted over electrical networks or space to another point, and reconverted into a form suitable for interpretation by a receiver.

communications intelligence [COMMUN] Technical and intelligence information derived from foreign communications by other than the intended recipients.

communications language [COMMUN] A language structure complete with conventions, syntax, and character set, used primarily for conveying knowledge of processes between two participants.

communications network [COMMUN] Organization of stations capable of intercommunications but not necessarily on the same channel.

communication speed [COMMUN] The rate at which information is transmitted over a communications channel, adjusted for redundancies.

communications relay station [COMMUN] Facility for rapidly passing message traffic from one tributary to another by automatic, semiautomatic, or manual means, or by electrically connecting circuits (circuit switching) between two tributaries for direct transmission.

communications satellite [AERO ENG] An orbiting, artificial earth satellite that relays radio, television, and other signals between ground terminal stations thousands of miles apart. Also known as radio relay satellite; relay satellite.

Communications Satellite Corporation [COMMUN] A common carrier created under the provisions of the Communications Satellite Act of 1962, to provide communications satellite service. Abbreviated COMSAT.

communications traffic [COMMUN] All transmitted and received messages.

communication system [COMMUN] A telephone, telegraph, teletypewriter, picture, data transmission, or other system in which electrical impulses originated at one place are faithfully reproduced at a distant point.

communications zone indicator [ELECTR] Device to indicate whether or not long-distance high-frequency broadcasts are successfully reaching their destinations.

communication theory [COMMUN] The mathematical theory of the communication of information from one point to another.

community [ECOL] Aggregation of organisms characterized by a distinctive combination of two or more ecologically related species; an example is a deciduous forest. Also known as ecological community.

community antenna television *See* cable television.

community classification [ECOL] Arrangement of communities into classes with respect to their complexity and extent, their stage of ecological succession, or their primary production.

community dial office [COMMUN] Small dial office with no employees located in the building serving an exchange area.

commutated antenna direction finder [NAV] A direction finder utilizing a number of antenna elements and a switching device which connects the elements sequentially to the receiver. Abbreviated CADF.

commutating capacitor [ELECTR] A capacitor used in gas-tube rectifier circuits to prevent the anode from going highly negative immediately after extinction.

commutating pole [ELECTROMAG] One of several small poles between the main poles of a direct-current generator or motor, which serves to neutralize the flux distortion in the neutral plane caused by armature reaction. Also known as compole; interpole.

commutating reactance [ELECTR] An inductive reactance placed in the cathode lead of a three-phase mercury-arc rectifier to ensure that tube current holds over during transfer of conduction from one anode to the next.

commutating reactor [ELEC] A reactor found primarily in silicon controlled rectifier (SCR) converters where it is connected in series with a commutation capacitor to form a highly efficient resonant circuit used to cause a current oscillation which turns off (commutates) the conducting SCR.

commutating zone [ELECTROMAG] The part of the armature of an electric machine that contains the windings which are short-circuited by the brush on the commutator at a particular instant.

commutation [COMMUN] The sampling of various quantities in a repetitive manner for transmission over a single channel in telemetering. [ELECTR] The transfer of current from one channel to another in a gas tube. [ELECTROMAG] The process of current reversal in the armature windings of a direct-current rotating machine to provide direct current at the brushes.

commutation rules [QUANT MECH] The specification of the commutators of operators corresponding to the dynamical variables of a system, which are equal to $i\hbar$ times the Poisson brackets of the classical variables to which the operators correspond.

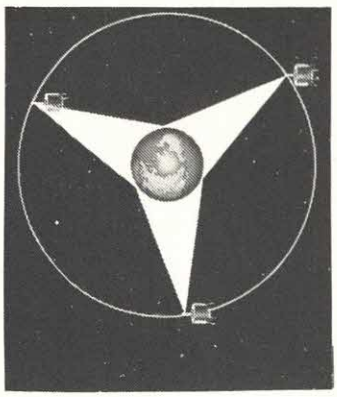
commutative group *See* Abelian group.

commutative law [MATH] A rule which requires that the result of a binary operation be independent of order; that is, $ab = ba$.

commutative ring [MATH] A ring in which the multiplication obeys the commutative law.

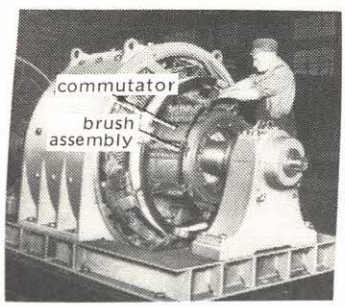
commutator [ELECTROMAG] That part of a direct-current motor or generator which serves the dual function, in combination with brushes, of providing an electrical connection between the rotating armature winding and the stationary terminals, and of permitting reversal of the current in the armature windings. [MATH] The commutator of a and b is the element c of a group such that $bac = ab$. [QUANT MECH] The commutator of a and b is $[a,b] = ab - ba$.

COMMUNICATIONS SATELLITE



Three satellites in synchronous equatorial orbits to provide nearly worldwide coverage. Each satellite is about 22,300 miles (35,900 kilometers) above the surface of the earth.

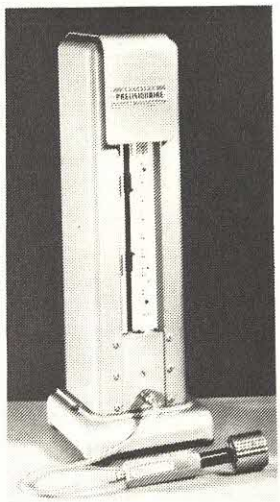
COMMUTATOR



Direct-current generator showing the typical commutator and brush assembly. *(Allis-Chalmers)*

commutator-controlled welding [MET] Spot or projection welding in which several electrodes in contact with the work simultaneously are operated under the control of an electrical commutating device. Also known as ultraspeed welding.
commutator head [ELEC] The butt end of a commutator.
commutator motor [ELEC] An electric motor having a commutator.
commutator pulse [COMPUT SCI] One of a series of pulses indicating the beginning or end of a signal representing a single binary digit in a computer word. Also known as position pulse (P pulse).
commutator switch [ELEC] A switch, usually rotary and mechanically driven, that performs a set of switching operations in repeated sequential order, such as is required for telemetering many quantities. Also known as sampling switch; scanning switch.
comose [BOT] Having a tuft of soft hairs.
comonomer [CHEM] One of the compounds used to produce a specific polymeric product.
compact [MET] A briquette made by the compression of metal powder, with or without the addition of nonmetallic constituents.
compacting garbage collection [COMPUT SCI] The physical rearrangement of data cells so that those cells whose contents are no longer useful (garbage) are compressed into a contiguous array.
compaction [COMPUT SCI] A technique for reducing the space required for data storage without losing any information content. [ENG] Increasing the dry density of a granular material, particularly soil, by means such as impact or by rolling the surface layers. [GEOL] Process by which soil and sediment mass loses pore space in response to the increasing weight of overlying material.
compact-open topology [MATH] A topology on the space of all continuous functions from one topological space into another; a subbase for this topology is given by the sets $W(K,U) = \{f : f(K) \subset U\}$, where K is compact and U is open.
compact operator [MATH] A linear transformation from one normed vector space to another, with the property that the image of every bounded set has a compact closure.
compactor [MECH ENG] Machine designed to consolidate earth and paving materials by kneading, weight, vibration, or impact, to sustain loads greater than those sustained in an uncompacted state.
compact set [MATH] A set in a topological space with the property that every open cover has a finite subset which is also a cover. Also known as bicompact set.
compact space [MATH] A topological space which is a compact set.
companding [ELECTR] A process in which compression is followed by expansion; often used for noise reduction in equipment, in which case compression is applied before noise exposure and expansion after exposure.
compandor [ELECTR] A system for improving the signal-to-noise ratio by compressing the volume range of the signal at a transmitter or recorder by means of a compressor and restoring the normal range at the receiving or reproducing apparatus with an expander.
companion *See* comes.
companion body [AERO ENG] A nose cone, last-stage rocket, or other body that orbits along with an earth satellite or follows a space probe.
companion cell [BOT] A specialized parenchyma cell occurring in close developmental and physiologic association with a sieve-tube member.
companion flange [DES ENG] A pipe flange that can be bolted to a similar flange on another pipe.
companionway [NAV ARCH] A stairway that runs from one deck of a ship to another.
compar [MATER] Generic term for a family of compounded, modified, and plasticized polyvinyl alcohol resins; used for making full- and solvent-resistant tubing and hose, and printing rolls.
comparative embryology [EMBRYO] A branch of embryology that deals with the similarities and differences in the development of animals or plants of different orders.
comparative experiments [STAT] Experiments conducted to determine statistically whether one procedure is better than another.
comparative pathology [MED] Investigation and comparison of disease in various animals, including man, to arrive at resemblances and differences which may clarify disease as a phenomenon of nature.
comparative rabal [ENG] A rabal observation (that is, a radiosonde balloon tracked by theodolite) taken simultaneously with the usual rawin observation (tracking by radar or radio direction-finder), to provide a rough check on the alignment and operating accuracy of the electronic tracking equipment.
comparator [COMPUT SCI] A device that compares two transcriptions of the same information to verify the accuracy of transcription, storage, arithmetical operation, or some other process in a computer, and delivers an output signal of some form to indicate whether or not the two sources are equal or in agreement. [CONT SYS] A device which detects the value of the quantity to be controlled by a feedback control system and compares it continuously with the desired value of that quantity. [ENG] A device used to inspect a gaged part for deviation from a specified dimension, by mechanical, electrical, pneumatic, or optical means.
comparator circuit [ELECTR] An electronic circuit that produces an output voltage or current whenever two input levels simultaneously satisfy predetermined amplitude requirements; may be linear (continuous) or digital (discrete).
comparator-densitometer [ANALY CHEM] Device that projects a labeled spectrum onto a screen adjacent to an enlarged image of the spectrum to be analyzed, allowing visual comparison.
comparator probe [COMPUT SCI] A component of a hardware monitor that is used to sense the number of bits that appear in parallel, as in an address register.
comparing brushes [COMPUT SCI] Sets of metallic brushes which verify that all the cards in a gang-punching operation have been properly punched.
comparing control change *See* control change.
comparing unit [ELECTR] An electromechanical device which compares two groups of timed pulses and signals to establish either identity or nonidentity.
comparing watch [HOROL] A hack watch, particularly one having an error determined by comparison with a chronometer.
comparison [COMPUT SCI] A computer operation in which two numbers are compared as to identity, relative magnitude, or sign.
comparison bridge [ELECTR] A bridge circuit in which any change in the output voltage with respect to a reference voltage creates a corresponding error signal, which, by means of negative feedback, is used to correct the output voltage and thereby restore bridge balance.
comparison indicators [COMPUT SCI] Registers, one of which is activated during the comparison of two quantities to indicate whether the first quantity is lower than, equal to, or greater than the second quantity.
comparison lamp [OPTICS] An incandescent lamp whose luminous intensity is constant (although not necessarily known), and which is compared against other lamps in a photometer.
comparison microscope [OPTICS] **1.** An arrangement of two microscopes connected by a special receiving ocular so that the field of one microscope is seen at one side of a dividing line and the field of the other microscope at the opposite side. **2.** A projection type of microscope in which the image is compared with a template or known pattern.
comparison spectrum [SPECT] A line spectrum whose wavelengths are accurately known, and which is matched with another spectrum to determine the wavelengths of the latter.
comparison star [ASTRON] A star of known brightness used as a standard for comparison in determining the magnitude of a nearby celestial object.
compartment [MIN ENG] A section of a mine shaft separated by framed timbers and planking.
compartment mill [MECH ENG] A multisection pulverizing device divided by perforated partitions, with preliminary grinding at one end in a short ball-mill operation, and finish grinding at the discharge end in a longer tube-mill operation.
compass [ENG] An instrument for indicating a horizontal reference direction relative to the earth. [GRAPHICS] An instrument used for describing arcs or circles with pencil or pen; has two legs hinged together at the top.
compass adjustment [NAV] The process of neutralizing the magnetic effect a craft exerts on a magnetic compass: permanent magnets and soft iron correctors are arranged about

COMPARATOR



Pneumatic comparator in a plug gage for inspection of an inside diameter. *(Sheffield Corp.)*

the binnacle so that their effects are nearly equal and opposite to the magnetic material in the craft, thus reducing the deviations and eliminating the sectors of sluggishness and unsteadiness.

compass amplitude [NAV] In marine navigation, amplitude relative to compass east or west.

compass azimuth [NAV] Azimuth relative to compass north.

compass bearing [NAV] Direction relative to north as indicated by a compass.

compass bowl [ENG] That part of a compass in which the compass card is mounted.

compass calibration *See* swinging ship.

compass card [DES ENG] The part of a compass on which the direction graduations are placed, it is usually in the form of a thin disk or annulus graduated in degrees, clockwise from 0° at the reference direction to 360°, and sometimes also in compass points.

compass card axis [DES ENG] The line joining 0° and 180° on a compass card.

compass compensation [NAV] **1.** The process of neutralizing the effects degaussing currents exert on a marine magnetic compass. **2.** The process of neutralizing the magnetic effect an aircraft exerts on a magnetic compass.

compass correction card [NAV] A card posted in a holder near the magnetic compass, on which there is recorded the difference between the readings of the compass and the correct geomagnetic directions; these errors (deviations) are given for at least the four cardinal points; sometimes the card lists the compass bearings to be flown when it is desired to fly corresponding magnetic headings.

compass corrector [NAV] A magnet or piece of iron placed close to a ship's or aircraft's compass to neutralize the effect of the ship's or aircraft's magnetic field. Also known as Flinder's bar.

compass course [NAV] Course relative to compass north.

compass declinometer [ENG] An instrument used for magnetic distribution surveys; employs a thin compass needle 6 inches (15 centimeters) long, supported on a sapphire bearing and steel pivot of high quality; peep sights serve for aligning the compass box on an azimuth mark.

compass deviation [NAV] The difference between the readings of a compass which is without mechanical defects and is held motionless in space, and the same instrument when it is installed in the same geographic position but is mounted on a ship or aircraft; deviation is a systematic error which is compensated by placing iron bars in places about the compass; residual deviation errors are calibrated and noted on a card so it can be used by the pilot or navigator.

compass direction [NAV] Horizontal direction expressed as angular distance from compass north.

compass error [NAV] The angle by which a compass direction differs from the true geographical direction; assuming that there is no lubber line error, it is the algebraic sum of the declination, variation, and motion errors.

Compasses *See* Circinus.

compass heading [NAV] Heading relative to compass north.

compass locator [NAV] A low-power, low-frequency, nondirectional radio beacon installed near an airfield to facilitate instrument approaches.

compass meridian [NAV] A line through the north-south points of a magnetic compass, in which the compass card axis lies.

compass motion error [NAV] Errors in compass reading when the craft or vessel is under way; these errors are caused by northerly turning, speed acceleration and deceleration, the liquid in the compass swirling on turns, and vibration caused by engines; these are all random errors, and compensation is not attained in the simple compass.

compass north [NAV] The direction of north as indicated by a magnetic compass; the reference direction for measurement of compass directions.

compass points [GEOD] The 32 divisions of a compass at intervals of 11¼°, with each division further divided into quarter points. Also known as points of the compass.

compass prime vertical [NAV] The vertical circle through the compass east and west points of the horizon.

compass repeater [NAV] That part of a remote-indicating compass system which repeats at a distance the indications of the master compass. Also known as repeater compass.

compass roof [BUILD] A roof in which each truss is in the form of an arch.

compass rose [NAV] A graduated circle, usually marked in degrees, indicating directions north, south, east, and west, and inscribed on a chart; used for the calibration of compasses on crafts.

compass saw [DES ENG] A handsaw which has a handle with several attachable thin, tapering blades of varying widths, making it suitable for a variety of work, such as cutting circles and curves.

compass track [NAV] The direction of the track relative to compass north.

compass transmitter [NAV] That part of a remote-indicating compass system which sends the direction indications to the repeaters.

compass variation error [NAV] The angular difference between the geographic and magnetic meridians at any place as read on the magnetic compass; variation errors vary in time and place, but they are systematic and can readily be canceled out merely by referring to government-published variation charts; the importance of this error may be judged by this example: the variation in northern California is 20° east while in northern New York it is 10° west, thus a pilot attempting to fly between the two places who failed to correct would be off by 30°. Also known as declination error.

compatibility [COMPUT SCI] The ability of one device to accept data handled by another device without conversion of the data or modification of the code. [IMMUNOL] Ability of two bloods or other tissues to unite and function together. [ORD] In ammunition, the ability of a given material to exist unchanged under certain conditions of temperature and moisture when in the presence of some other specific material. [PHARM] The capacity of two or more ingredients in a medicine to mix without chemical change or loss of therapeutic effectiveness. [SYS ENG] The ability of a new system to serve users of an old system.

compatible color television system [COMMUN] A color television system that permits the substantially normal monochrome reception of the transmitted color picture signal on a typical unaltered monochrome receiver.

compatible discrete four-channel sound [ENG ACOUS] A sound system in which a separate channel is maintained from each of the four sets of microphones at the recording studio or other input location to the four sets of loudspeakers that serve as the output of the system. Abbreviated CD-4 sound.

compatible monolithic integrated circuit [ELECTR] Device in which passive components are deposited by thin-film techniques on top of a basic silicon-substrate circuit containing the active components and some passive parts.

compatible single-sideband system [COMMUN] A single-sideband system that can be received by an ordinary amplitude-modulation radio receiver without distortion.

compensated amplifier [ELECTR] A broad-band amplifier in which the frequency range is extended by choice of circuit constants.

compensated ionization chamber [NUCLEO] An arrangement of two ionization chambers in parallel, with potentials reversed, used as a radiation null indicator.

compensated-loop direction finder [ELECTR] A direction finder employing a loop antenna and a second antenna system to compensate for polarization error.

compensated pendulum [DES ENG] A pendulum made of two materials with different coefficients of expansion so that the distance between the point of suspension and center of oscillation remains nearly constant when the temperature changes.

compensated semiconductor [ELECTR] Semiconductor in which one type of impurity or imperfection (for example, donor) partially cancels the electrical effects on the other type of impurity or imperfection (for example, acceptor).

compensated volume control *See* loudness control.

compensated winding *See* pole-face winding.

compensating capacitor *See* balancing capacitor.

compensating eyepiece [OPTICS] A type of Huygens eyepiece in which the eye lens is achromatized to compensate for the color errors of the objective.

compensating network [CONT SYS] A network used in a low-energy-level method for suppression of excessive oscillations in a control system.

compensating plate [OPTICS] The first of two plates in a Brace compensator, which covers the entire field of view.

compensation [CONT SYS] Introduction of additional equipment into a control system in order to reshape its root locus so as to improve system performance. Also known as stabilization. [ELECTR] The modification of the amplitude-frequency response of an amplifier to broaden the bandwidth or to make the response more nearly uniform over the existing bandwidth. Also known as frequency compensation. [PSYCH] Counterbalancing a weakness or failure in one area by stressing or substituting a strength or success in another area.

compensation balance [HOROL] A balance that compensates for changes caused by temperature variations.

compensation depth [OCEANOGR] The depth at which the light intensity is just sufficient to bring about a balance between the oxygen produced and that consumed by algae.

compensation pendulum [HOROL] A clock pendulum which has compensating mechanisms that are designed to maintain constant pendulum length in spite of temperature changes.

compensation point [BOT] The light intensity at which the amount of carbon dioxide released in respiration equals the amount used in photosynthesis, and the amount of oxygen released in photosynthesis equals the amount used in respiration.

compensation signals [ENG] In telemetry, signals recorded on a tape, along with the data and in the same track as the data, used during the playback of data to correct electrically the effects of tape-speed errors.

compensator [CONT SYS] A device introduced into a feedback control system to improve performance and achieve stability. Also known as filter. [ELECTR] A component that offsets an error or other undesired effect. [OPTICS] A device, usually consisting of two quartz wedges, for determining the phase difference between the two components of elliptically polarized light.

compensatory emphysema [MED] Simple, nonobstructive overdistension of lung segments or an entire lung in intrathoracic adaptation to collapse, destruction, or removal of portions of the lung or the opposite lung.

compensatory hypertrophy [MED] An increase in the size of an organ following injury or removal of the opposite paired organ or of part of the same organ.

competence [EMBRYO] The ability of a reacting system to respond to the inductive stimulus during early developmental stages. [GEOL] The ability of the wind to transport solid particles either by rolling, suspension, or saltation (intermittent rolling and suspension); usually expressed in terms of the weight of a single particle. [HYD] The ability of a stream, flowing at a given velocity, to move the largest particles.

competent beds [GEOL] Beds or strata capable of withstanding the pressures of folding without flowing or changing in original thickness.

competing equilibria condition [CHEM] The competition for a reactant in a complex chemical system in which several reactions are taking place at the same time.

competition [ECOL] The inter- or intraspecific interaction resulting when several individuals share an environmental necessity.

competitive enzyme inhibition [BIOCHEM] Prevention of an enzymatic process resulting from the reversible interaction of an inhibitor with a free enzyme.

competitive exclusion [ECOL] The result of a competition in which one species is forced out of part of the available habitat by a more efficient species.

competitive exclusion principle *See* Gause's principle.

competitive inhibition [BIOCHEM] Enzyme inhibition in which the inhibitor competes with the natural substrate for the active site of the enzyme; may be overcome by increasing substrate concentration.

compilation [MAP] The selecting, extracting, and assembling of map detail from various sources (such as existing maps, aerial photographs, and surveys), followed by the production of a new or improved map based on this data.

compile [COMPUT SCI] To prepare a machine-language program automatically from a program written in a higher programming language, usually generating more than one machine instruction for each symbolic statement.

compiler [COMPUT SCI] A program to translate a higher programming language into machine language. Also known as compiling routine.

compiler-level language [COMPUT SCI] A higher-level language normally supplied by the computer manufacturer.

compiler system [COMPUT SCI] The set consisting of a higher-level language, such as FORTRAN, and its compiler which translates the program written in that language into machine-readable instructions.

compiling routine *See* compiler.

compital [BOT] **1.** Of the vein of a leaf, intersecting at a wide angle. **2.** Of a fern, bearing sori at the intersection of two veins.

complement [IMMUNOL] A heat-sensitive, complex system in fresh human and other sera which, in combination with antibodies, is important in the host defense mechanism against invading microorganisms. [MATH] **1.** The complement of a number A is another number B such that the sum $A + B$ will produce a specified result. **2.** *See* radix complement. **3.** For a subset of a set, the collection of all members of the set which are not in the given subset.

complemental air [PHYSIO] The amount of air that can still be inhaled after a normal inspiration.

complementarity [QUANT MECH] The principle that nature has complementary aspects, particle and wave; the two aspects are related by $p = h/\lambda$ and $E = h\nu$, where p and E are the momentum and energy of the particle, λ and ν are the wavelength and frequency of the wave, and h is Planck's constant.

complementary [ELECTR] Having *pnp* and *npn* or *p*- and *n*-channel semiconductor elements on or within the same integrated-circuit substrate or working together in the same functional amplifier state.

complementary angle [MATH] One of a pair of angles whose sum is 90°.

complementary colors [OPTICS] Two colors which lie on opposite sides of the white point in the chromaticity diagram so that an additive mixture of the two, in appropriate proportions, can be made to yield an achromatic mixture.

complementary deoxyribonucleic acid [GEN] Deoxyribonucleic acid that is complementary to messenger ribonucleic acid.

complementary function [MATH] Any solution of the equation obtained from a given linear differential equation by replacing the inhomogeneous term with zero.

complementary genes [GEN] Nonallelic genes that complement one another's expression in a trait.

complementary logic switch [ELECTR] A complementary transistor pair which has a common input and interconnections such that one transistor is on when the other is off, and vice versa.

complementary metal oxide semiconductor device *See* CMOS device.

complementary minor *See* minor.

complementary rocks [GEOL] Rocks which are differentiated from the same magma, and whose average composition is the same as the parent magma.

complementary symmetry [ELECTR] A circuit using both *pnp* and *npn* transistors in a symmetrical arrangement that permits push-pull operation without an input transformer or other form of phase inverter.

complementary transistors [ELECTR] Two transistors of opposite conductivity (*pnp* and *npn*) in the same functional unit.

complementary wave [ELECTROMAG] Wave brought into existence at the ends of a coaxial cable, or two-conductor transmission lines, or any discontinuity along the line.

complementary wavelength [OPTICS] The wavelength of light that, when combined with a sample color in suitable proportions, matches a reference standard light.

complementation [GEN] The action of complementary genes. [MATH] The act of replacing a set by its complement.

complementation law [STAT] The law that the probability of an event E is 1 minus the probability of the event not E.

complemented lattice [MATH] A lattice with distinguished elements a and b, and with the property that corresponding to each point x of the lattice, there is a y such that the greatest lower bound of x and y is a, and the least upper bound of x and y is b.

complement fixation [IMMUNOL] The binding of complement to an antigen-antibody complex so that the complement is unavailable for subsequent reaction.

complement-fixation test [IMMUNOL] A diagnostic test to determine the presence of antigen or antibody in the blood by adding complement to the test system; used especially in diagnosing syphilis.

complement number system [COMPUT SCI] System of number handling in which the complement of the actual number

is operated upon; used in some computers to facilitate arithmetic operations.

complete blood count [PATH] Differential and absolute determinations of the numbers of each type of blood cell in a sample and, by extrapolation, in the general circulation.

complete carry [COMPUT SCI] In parallel addition, an arrangement in which the carries that result from the addition of carry digits are allowed to propagate from place to place.

complete combustion [CHEM] Combustion in which the entire quantity of oxidizable constituents of a fuel is reacted.

complete degeneracy [QUANT MECH] The condition in which all the states of interest have the same energy.

complete-expansion diesel cycle *See* Brayton cycle.

complete flower [BOT] A flower having all four floral parts, that is, having sepals, petals, stamens, and carpels.

complete fusion [MET] Fusion which has occurred over all surfaces of the base metal exposed for welding.

complete induction *See* mathematical induction.

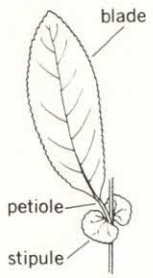
complete integral [MATH] **1.** A solution of an nth order ordinary differential equation which depends on n arbitrary constants as well as the independent variable. Also known as complete primitive. **2.** A solution of a first-order partial differential equation with n independent variables which depends upon n arbitrary parameters as well as the independent variables.

complete joint penetration [MET] The fusion of weld metal to base metal throughout the entire thickness of the base metal, that is, the deposited weld metal occupies the entire groove.

complete lattice [MATH] A partially ordered set in which every subset has both a supremum and an infimum.

complete leaf [BOT] A dicotyledon leaf consisting of three parts: blade, petiole, and a pair of stipules.

COMPLETE LEAF



Drawing of a complete leaf.

complete lubrication [ENG] Lubrication taking place when rubbing surfaces are separated by a fluid film, and frictional losses are due solely to the internal fluid friction in the film. Also known as viscous lubrication.

completely inelastic collision *See* perfectly inelastic collision.

completely normal space [MATH] A topological space with the property that any pair of sets with disjoint closures can be separated by open sets.

completely regular space [MATH] A topological space X where for every point x and neighborhood U of x there is a continuous function from X to $[0,1]$ with $f(x) = 1$ and $f(y) = 0$, if y is not in U. Also known as Tychonoff space.

complete metric space [MATH] A metric space in which every Cauchy sequence converges to a point of the space. Also known as complete space.

complete normed linear space *See* Banach space.

complete operation [COMPUT SCI] An operation which includes obtaining all operands from storage, performing the operation, returning resulting operands to storage, and obtaining the next instruction.

complete order *See* linear order.

complete orthonormal set [MATH] A set of mutually orthogonal unit vectors in a (possibly infinite dimensional) vector space which is contained in no larger such set, that is no nonzero vector is perpendicular to all the vectors in the set. Also known as closed orthonormal set.

complete primitive *See* complete integral.

complete round [ORD] All components of ammunition that are needed to fire a given gun or firearm once.

complete routine [COMPUT SCI] A routine, generally supplied by a computer manufacturer, which does not have to be modified by the user before being applied.

complete space *See* complete metric space.

completion of a metric space [MATH] A complete metric space obtained from another metric space by formally adding limits to Cauchy sequences.

complex [GEOL] An assemblage of rocks that has been folded together, intricately mixed, involved, or otherwise complicated. [MATH] A space which is represented as a union of simplices which intersect only on their faces. [MED] *See* syndrome. [MINERAL] Composed of many ingredients. [PSYCH] A group of associated ideas with strong emotional tones, which have been transferred from the conscious mind into the unconscious and which influence the personality.

complexation *See* complexing.

complex chemical reaction [CHEM] A chemical system in which a number of chemical reactions take place simultaneously, including reversible reactions, consecutive reactions, and concurrent or side reactions.

complex climatology [CLIMATOL] Analysis of the climate of a single space, or comparison of the climates of two or more places, by the relative frequencies of various weather types or groups of such types; a type is defined by the simultaneous occurrence within specified narrow limits of each of several weather elements.

complex compound [CHEM] Any of a group of chemical compounds in which a part of the molecular bonding is of the coordinate type.

complex conjugate [MATH] One of a pair of complex numbers with identical real parts and with imaginary parts differing only in sign. Also known as conjugate.

complex data type [COMPUT SCI] A scalar data type which contains two real fields representing the real and imaginary components of a complex number.

complex declaration statement [COMPUT SCI] A nonexecutable statement in FORTRAN used to specify that the type of identifier appearing in the program is of the form $a + bi$, where i is the square root of -1.

complex degree of coherence [PHYS] A measure of the coherence between two waves, equal to the cross-correlation function between the normalized amplitude of one wave and the complex conjugate of the normalized amplitude of the other.

complex dune [GEOL] A dune of varying forms, often very large, and produced by variable, shifting winds and the merging of various dune types.

complex fold [GEOL] A fold whose axial line is also folded.

complex fraction [MATH] A fraction whose numerator or denominator is a fraction.

complex frequency [ENG] A complex number used to characterize exponential and damped sinusoidal motion in the same way that an ordinary frequency characterizes simple harmonic motion; designated by the constant s corresponding to a motion whose amplitude is given by Ae^{st}, where A is a constant and t is time.

complex impedance *See* electrical impedance; impedance.

complexing [CHEM] Formation of a complex compound. Also known as complexation.

complexing agent [CHEM] A substance capable of forming a complex compound with another material in solution.

complex ion [CHEM] A complex, electrically charged group of atoms or radical, for example, $Cu(NH_3)_2^{++}$.

complex low [METEOROL] An area of low atmospheric pressure within which more than one low-pressure center is found.

complex notation [PHYS] The representation of a physical quantity by a complex number whose real component equals the instantaneous value of the physical quantity, a sinusoidally varying quantity thus being represented by a point rotating in a circle centered at the origin of the complex plane with uniform speed.

complex number [MATH] Any number of the form $a + bi$, where a and b are real numbers, and $i^2 = -1$.

complexometric titration [ANALY CHEM] A technique of volumetric analysis in which the formation of a colored complex is used to indicate the end point of a titration. Also known as chelatometry.

complex permeability [ELECTROMAG] A property, designated by μ^*, of a magnetic material, equal to $\mu_0(L/L_0)$, where L is the complex inductance of an inductance coil in which the magnetic material forms the core when the coil is connected to a sinusoidal voltage source, and L_0 is the vacuum inductance of the coil.

complex permittivity [ELEC] A property of a dielectric, equal to $\epsilon_0(C/C_0)$, where C is the complex capacitance of a capacitor in which the dielectric is the insulating material when the capacitor is connected to a sinusoidal voltage source, and C_0 is the vacuum capacitance of the capacitor.

complex potential [FL MECH] An analytic function in ideal aerodynamics whose real part is the velocity potential and whose imaginary part is the stream function. [NUC PHYS] A generalization of the potential in the Schrödinger equation describing the scattering of a nucleon by a nucleus in the cloudy crystal-ball model.

complex reflector [ENG] A structure or group of structures having many radar-reflecting surfaces facing in different directions.

complex relative attenuation [ELECTR] The ratio of the

peak output voltage, in complex notation, of an electric filter to the output voltage at the frequency being considered.

complex salt [INORG CHEM] A class of salts in which there are no detectable quantities of each of the metal ions existing in solution; an example is $K_3Fe(CN)_6$, which in solution has K^+ but no Fe^{3+} because Fe is strongly bound in the complex ion, $Fe(CN)_6^{3-}$.

complex sphere *See* Riemann sphere.

complex target [ENG] A radar target composed of a number of reflecting surfaces that, in the aggregate, are smaller in all dimensions than the resolution capabilities of the radar.

complex tombolo [GEOL] A system resulting when several islands and the mainland are interconnected by a complex series of tombolos. Also known as tombolo cluster; tombolo series.

complex tone [ACOUS] A sound wave produced by the combination of simple sinusoidal components of different frequencies.

complex unit [MATH] Any complex number, $x + iy$, whose absolute value, $\sqrt{x^2 + y^2}$, equals 1.

complex variable [MATH] A variable which assumes complex numbers for values.

complex velocity [FL MECH] In ideal aerodynamic flow, the derivative of the complex potential with respect to $z = x + iy$, where x and y are the chosen coordinates.

complex wave [PHYS] A waveform which varies from instant to instant, but can be resolved into a number of sine-wave components, each of a different frequency and probably of a different amplitude.

compliance [MECH] The displacement of a linear mechanical system under a unit force.

compliance constant [MECH] Any one of the coefficients of the relations in the generalized Hooke's law used to express strain components as linear functions of the stress components. Also known as elastic constant.

complicate [INV ZOO] Folded lengthwise several times, as applied to insect wings.

compo board *See* composition board.

compole *See* commutating pole.

component [CHEM] **1.** A part of a mixture. **2.** The smallest number of chemical substances which are able to form all the constituents of a system in whatever proportion they may be present. [ELEC] Any electric device, such as a coil, resistor, capacitor, generator, line, or electron tube, having distinct electrical characteristics and having terminals at which it may be connected to other components to form a circuit. Also known as circuit element; element. [MATH] In a graph system, a connected subgraph which is not a subgraph of any other connected subgraph. [SCI TECH] Aconstituent part of a system; examples are a vector term which when added to others gives a vector sum, an ingredient of a chemical system, or the mineral portion of a rock.

component distillation [CHEM ENG] A distillation process in which a fraction that cannot normally be separated by distillation is removed by forming an azeotropic mixture.

component name *See* metavariable.

component substances law [CHEM] The law that each substance, singly or in mixture, composing a material exhibits specific properties that are independent of the other substances in that material.

component symbol [ELEC] A graphical design used to represent a component in a circuit diagram.

composing rule *See* composing stick.

composing stick [GRAPHICS] A tool designed for holding type which is being assembled and justified.

Compositae [BOT] The single family of the order Asterales; perhaps the largest family of flowering plants, it contains about 19,000 species.

composite [ENG ACOUS] A re-recording consisting of at least two elements. [MATER] A structural material composed of combinations of metal alloys or plastics, usually with the addition of strengthening agents.

composite balance [ELEC] An electric balance made by modifying the Kelvin balance to measure amperage, voltage, or wattage.

composite beam [CIV ENG] Beam action of two materials joined to act as a unit, especially that developed by a concrete slab resting on a steel beam and joined by shear connectors.

composite cable [ELEC] Cable in which conductors of different gages or types are combined under one sheath.

composite circuit [ELECTR] A circuit used simultaneously for voice communication and telegraphy, with frequency-discriminating networks serving to separate the two types of signals.

composite color signal [COMMUN] The color television picture signal plus all blanking and synchronizing signals. Also known as composite picture signal.

composite color sync [COMMUN] The signal comprising all the synchronization signals necessary for proper operation of a color television receiver.

composite column [CIV ENG] A concrete column having a structural-steel or cast-iron core with a maximum core area of 20%.

composite compact [MET] A powder compact composed of more than one layer of different components with each layer retaining its identity.

composite cone [GEOL] A large volcanic cone constructed of lava and pyroclastic material in alternating layers.

composite defense [ORD] In antiaircraft artillery, a defense that employs two or more types of fire units which are integrated into a single defense.

composite dialing [COMMUN] Method of dialing between distant offices over one leg of a composite set.

composite dike [GEOL] A dike consisting of several intrusions differing in chemical and mineralogical composition.

composite electrode [MET] A filler-metal electrode composed of more than one metal.

composite explosive [MATER] A mixture of substances which consume and give off oxygen, together with one or several simple explosives; dynamite is an example.

composite filter [ELECTR] A filter constructed by linking filters of different kinds in series.

composite flash [GEOPHYS] A lightning discharge which is made up of a series of distinct lightning strokes with all strokes following the same or nearly the same channel, and with successive strokes occurring at intervals of about 0.05 second. Also known as multiple discharge.

composite fold [GEOL] A fold having smaller folds on its limbs.

composite fuel [MATER] A broad class of solid chemical fuels composed of a fuel and oxidizer and used as propellants in rockets; an example of a fuel is phenol formaldehyde, and an oxidizer is ammonium perchlorate. Also known as composite propellant.

composite gneiss [PETR] A banded rock formed by intimate penetration of magma into country rocks.

composite grain [GEOL] A sedimentary clast formed of two or more original particles.

composite I-beam bridge [CIV ENG] A beam bridge in which the concrete roadway is mechanically bonded to the I beams by means of shear connectors.

composite joint [MET] A joint connected by welding in conjunction with one or more mechanical means.

composite macromechanics [ENG] The study of composite material behavior wherein the material is presumed homogeneous and the effects of the constituent materials are detected only as averaged apparent properties of the composite.

composite map [MIN ENG] A map in which several levels of a mine are shown on a single sheet.

composite micromechanics [ENG] The study of composite material behavior wherein the constituent materials are studied on a microscopic scale with specific properties being assigned to each constituent; the interaction of the constituent materials is used to determine the properties of the composite.

composite nerve [PHYSIO] A nerve containing both sensory and motor fibers.

composite number [MATH] Any positive integer which is not prime. Also known as composite quantity.

composite photograph [GRAPHICS] An assembly of separate photographs, made by the several lenses of a multiple-lens camera in simultaneous exposure, into the equivalent of a photograph made with a wide-angle lens.

composite picture signal *See* composite color signal.

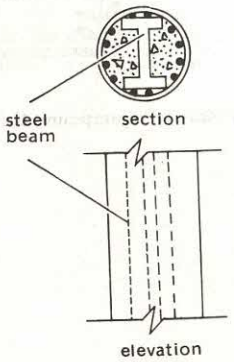
composite pile [CIV ENG] A pile in which the upper and lower portions consist of different types of piles.

composite plate [MET] A layer of electrodeposited material consisting of at least two different constituents.

composite profile [MAP] A profile comprising the highest points of a series of profiles that are drawn along several regularly spaced and parallel map lines.

composite propellant *See* composite fuel.

COMPOSITE COLUMN

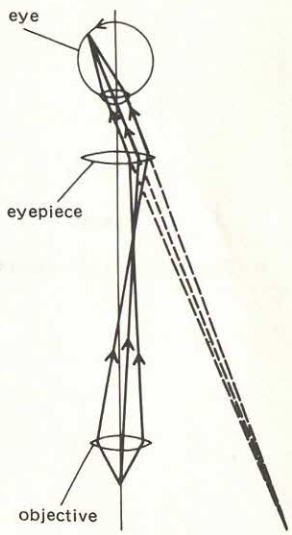


Cross section and elevation of a composite column.

COMPOUND LEAF

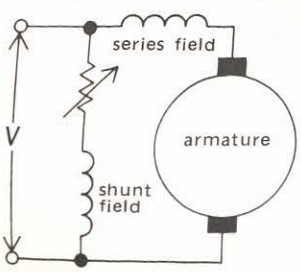
Odd-pinnately compound leaf.

COMPOUND MICROSCOPE



Compound microscope diagram. *(From F. A. Jenkins and H. E. White, Fundamentals of Optics, 3d ed., McGraw-Hill, 1957)*

COMPOUND MOTOR



Connection of a compound motor.

composite pulse [ELECTR] A pulse composed of a series of overlapping pulses received from the same source over several paths in a pulse navigation system.

composite quantity *See* composite number.

composite sailing [NAV] In marine operations, a modification of great-circle sailing, used when limiting the highest latitude.

composite sampler [ENG] A hydrometer cylinder equipped with sample cocks at regular intervals along its vertical height; used to take representative (vertical composite) samples of oil from storage tanks.

composite sequence [GEOL] An ideal sequence of cyclic sediments containing all the lithological types in their proper order.

composite set [ELECTR] Assembly of apparatus designed to provide one end of a composite circuit.

composite sill [GEOL] A sill consisting of several intrusions differing in chemical and mineralogical compositions.

composite steel [MET] Bar steel machined along the entire length which is cast around an insert of tool steel welded to the backing of mild steel; used for shear blades and die parts.

composite topography [GEOL] A topography whose features have developed in two or more erosion cycles.

composite track [NAV] A modified great-circle track consisting of an initial great-circle track from the point of departure with its vertex on a limiting parallel of latitude; a parallel-sailing track from this vertex along the limiting parallel to the vertex of a final great-circle track passing through the destination.

composite unconformity [GEOL] An unconformity that has resulted from more than one episode of nondeposition and possible erosion.

composite vein [GEOL] A large fracture zone composed of parallel ore-filled fissures and converging diagonals, whose walls and intervening country rock have been replaced to a certain degree.

composite volcano *See* stratovolcano.

composite wave filter [ELECTR] A combination of two or more low-pass, high-pass, band-pass, or band-elimination filters.

composition [CHEM] The elements or compounds making up a material or produced from it by analysis. [GRAPHICS] The act of composing or combining type for printing, either by hand or by machine. [SCI TECH] The elements or compounds making up a material or produced from it by analysis.

compositional maturity [GEOL] Concept of a type of maturity in sedimentary rocks in which a sediment approaches the compositional end product to which formative processes drive it.

composition board [MATER] A sheet product composed of vegetable fibers mechanically or chemically formed into a pulp which is rolled and pressed. Also known as compo board.

composition diagram [CHEM ENG] Graphical plots to show the solvent-solute concentration relationships during various stages of extraction operations (leaching, or solid-liquid extraction; and liquid-liquid extraction).

composition face *See* composition surface.

composition metal [MET] A cast copper alloy having a composition of more than 80% copper, with tin, zinc, and lead.

composition of forces [MECH] The determination of a force whose effect is the same as that of two or more given forces acting simultaneously; all forces are considered acting at the same point.

composition of vectors *See* addition of vectors.

composition of velocities law [MECH] A law relating the velocities of an object in two references frames which are moving relative to each other with a specified velocity.

composition plane [CRYSTAL] A planar composition surface in a crystal uniting two individuals of a contact twin.

composition resistor *See* carbon resistor.

composition series [MATH] A normal series $G_1, G_2, \ldots$, of a group, where each G_i is a proper normal subgroup of G_{i-1} and no further normal subgroups both contain G_i and are contained in G_{i-1}.

composition surface [CRYSTAL] The surface uniting individuals of a crystal twin; may or may not be planar. Also known as composition face.

compost [MATER] A mixture of decaying organic matter used to fertilize and condition the soil.

compound [CHEM] A substance whose molecules consist of unlike atoms and whose constituents cannot be separated by physical means. Also known as chemical compound.

compound acinous gland [ANAT] A structure with spherical secreting units connected to many ducts that empty into a common duct.

compound alluvial fan [GEOL] Structure formed by the lateral growth and merger of fans made by neighboring streams.

compound angle [ENG] The angle formed by two mitered angles.

compound compact [MET] A powder compact made from a mixture of metals, with each particle retaining its original composition.

compound cryosar [ELECTR] A cryosar consisting of two normal cryosars with different electrical characteristics in series.

compound curve [MATH] A curve made up of two arcs of differing radii whose centers are on the same side, connected by a common tangent; used to lay out railroad curves because curvature goes from nothing to a maximum gradually, and vice versa.

compound die [MET] A die designed to perform more than one operation on the work with each stroke of the press.

compound elastic scattering [NUC PHYS] Scattering in which the final state is the same as the initial state, but there is an intermediate state with the colliding systems amalgamating to form a compound system.

compound engine [MECH ENG] A multicylinder-type displacement engine, using steam, air, or hot gas, where expansion proceeds successively (sequentially).

compound eye [INV ZOO] An eye typical of crustaceans, insects, centipedes, and horseshoe crabs, constructed of many functionally independent photoreceptor units (ommatidia) separated by pigment cells.

compound fault [GEOL] A zone or series of essentially parallel faults, closely spaced.

compound generator [ELEC] A direct-current generator which has both a series field winding and a shunt field winding, both on the main poles with the shunt field winding on the outside.

compound gland [ANAT] A secretory structure with many ducts.

compounding [MECH ENG] The series placing of cylinders in an engine (such as steam) for greater ratios of expansion and consequent improved engine economy.

compound leaf [BOT] A type of leaf with the blade divided into two or more separate parts called leaflets.

compound lens [OPTICS] **1.** A combination of two or more lenses in which the second surface of one lens has the same radius as the first surface of the following lens, and the two lenses are cemented together. Also known as cemented lens. **2.** Any optical system consisting of more than one element, even when they are not in contact.

compound lever [MECH ENG] A train of levers in which motion or force is transmitted from the arm of one lever to that of the next.

compound microscope [OPTICS] A microscope which utilizes two lenses or lens systems; one lens forms an enlarged image of the object, and the second magnifies the image formed by the first.

compound modulation *See* multiple modulation.

compound motor [ELEC] A direct-current motor with two separate field windings, one connected in parallel with the armature circuit, the other connected in series with the armature circuit.

compound nucleus [NUC PHYS] An intermediate state in a nuclear reaction in which the incident particle combines with the target nucleus and its energy is shared among all the nucleons of the system.

compound number [MATH] A quantity which is expressed as the sum of two or more quantities in terms of different units, for example, 3 feet 10 inches, or 2 pounds 5 ounces.

compound rest [MECH ENG] A principal component of a lathe consisting of a base and an upper part dovetailed together; the base is graduated in degrees and can be swiveled to any angle; the upper part includes the tool post and tool holder.

compound ripple marks [GEOL] Complex ripple marks of great diversity which originate by simultaneous interference of wave oscillation with current action.

compound screw [DES ENG] A screw having different or opposite pitches on opposite ends of the shank.

compound shaft [MIN ENG] A shaft in which the upper stage is often a vertical shaft, while the lower stage, or stages, may be inclined and driven into the deposit.
compound sugar *See* oligosaccharide.
compound tubular-acinous gland [ANAT] A structure in which the secreting units are simple tubes with acinous side chambers and all are connected to a common duct.
compound tubular gland [ANAT] A structure having branched ducts between the surface opening and the secreting portion.
compound twins [CRYSTAL] Individuals of one mineral group united in accordance with two or more different twin laws.
compound valley glacier [HYD] A glacier composed of several ice streams emanating from different tributary valleys.
compound volcano [GEOL] **1.** A volcano consisting of a complex of two or more cones. **2.** A volcano with an associated volcanic dome.
compound wave [FL MECH] A plane wave of finite amplitude in which neither the sum of the velocity potential and the component of velocity in the direction of wave motion, nor the difference of these two quantities, is constant.
compound winding [ELEC] A winding that is a combination of series and shunt winding.
compregnate [ENG] Compression of materials into a dense, hard substance with the aid of heat.
compressadensity function [MECH] A function used in the acoustic levitation technique to determine either the density or the adiabatic compressibility of a submicroliter droplet suspended in another liquid, if the other property is known.
compressed air [MECH] Air whose density is increased by subjecting it to a pressure greater than atmospheric pressure.
compressed-air blasting [MIN ENG] A method for breaking down coal by compressed-air power.
compressed-air diving [ENG] Any form of diving in which air is supplied under high pressure to prevent lung collapse.
compressed-air illness *See* caisson disease.
compressed-air loudspeaker [ENG ACOUS] A loudspeaker having an electrically actuated valve that modulates a stream of compressed air.
compressed-air power [MECH ENG] The power delivered by the pressure of compressed air as it expands, utilized in tools such as drills, in hoists, grinders, riveters, diggers, pile drivers, motors, locomotives, and mine ventilating systems.
compressibility [MECH] The property of a substance capable of being reduced in volume by application of pressure; quantitively, the reciprocal of the bulk modulus.
compressibility burble [FL MECH] A region of disturbed flow, produced by and rearward of a shock wave.
compressibility correction [FL MECH] The correction of the calibrated airspeed caused by compressibility error.
compressibility error [FL MECH] The error in the readings of a differential-pressure-type airspeed indicator due to compression of the air on the forward part of the pitot tube component moving at high speeds.
compressibility factor [THERMO] The product of the pressure and the volume of a gas, divided by the product of the temperature of the gas and the gas constant; this factor may be inserted in the ideal gas law to take into account the departure of true gases from ideal gas behavior. Also known as deviation factor; gas-deviation factor; supercompressibility factor.
compressible flow [FL MECH] Flow in which the fluid density varies.
compressible-flow principle [FL MECH] The principle that when flow velocity is large, it is necessary to consider that the fluid is compressible rather than to assume that it has a constant density.
compressible fluid flow [CHEM ENG] Gas flow when the pressure drop due to the flow of a gas through a system is large enough, compared with the inlet pressure, to cause a 10% or greater decrease in gas density.
compression [COMPUT SCI] *See* data compression. [ELECTR] **1.** Reduction of the effective gain of a device at one level of signal with respect to the gain at a lower level of signal, so that weak signal components will not be lost in background and strong signals will not overload the system. **2.** *See* compression ratio. [GEOD] *See* flattening. [GEOL] A system of forces which tend to decrease the volume or shorten rocks. [MECH] Reduction in the volume of a substance due to pressure; for example in building, the type of stress which causes shortening of the fibers of a wooden member. [MECH ENG] *See* compression ratio.
compressional wave [PHYS] A disturbance traveling in an elastic medium; characterized by changes in volume and by particle motion parallel with the direction of wave movement. Also known as dilatational wave; irrotational wave; pressure wave; P wave.
compression cable *See* pressure cable.
compression coupling [MECH ENG] **1.** A means of connecting two perfectly aligned shafts in which a slotted tapered sleeve is placed over the junction and two flanges are drawn over the sleeve so that they automatically center the shafts and provide sufficient contact pressure to transmit medium loads. **2.** A type of tubing fitting.
compression cup [ENG] A cup from which lubricant is forced to a bearing by compression.
compression failure [ENG] Buckling or collapse caused by compression, as of a steel or concrete column or of wood fibers.
compression ignition [MECH ENG] Ignition produced by compression of the air in a cylinder of an internal combustion engine before fuel is admitted.
compression-ignition engine *See* diesel engine.
compression machine *See* compressor.
compression member [ENG] A beam or other structural member which is subject to compressive stress.
compression modulus *See* bulk modulus of elasticity.
compression mold [ENG] A mold for plastics which is open when the material is introduced and which shapes the material by heat and by the pressure of closing.
compression plant [PETRO ENG] Gas-compression facility used to produce a high-pressure gas stream for injection into reservoir formations to increase oil yield; when the injected gas is that recovered from the well during oil production, the facility is called a gas-cycling plant.
compression pressure [MECH ENG] That pressure developed in a reciprocating piston engine at the end of the compression stroke without combustion of fuel.
compression process [CHEM ENG] The recovery of natural gasoline from gas containing a high proportion of hydrocarbons.
compression ratio [ELECTR] The ratio of the gain of a device at a low power level to the gain at some higher level, usually expressed in decibels. Also known as compression. [MECH ENG] The ratio in internal combustion engines between the volume displaced by the piston plus the clearance space, to the volume of the clearance space. Also known as compression. [MET] Ratio of the volume of loose metal powder to the volume of the compact made from it.
compression refrigeration [MECH ENG] The cooling of a gaseous refrigerant by first compressing it to liquid form (with resultant heat buildup), cooling the liquid by heat exchange, then releasing pressure to allow the liquid to vaporize (with resultant absorption of latent heat of vaporization and a refrigerative effect).
compression release [MECH ENG] Release of compressed gas resulting from incomplete closure of intake or exhaust valves.
compression spring [ENG] A spring, usually a coil spring, which resists a force tending to compress it.
compression strength [MECH] Property of a material to resist rupture under compression.
compression stroke [MECH ENG] The phase of a positive displacement engine or compressor in which the motion of the piston compresses the fluid trapped in the cylinder.
compression syndrome *See* crush syndrome.
compression test [ENG] A test to determine compression strength, usually applied to materials of high compression but low tensile strength, in which the specimen is subjected to increasing compressive forces until failure occurs.
compression wave [FL MECH] A wave in a fluid in which a compression is propagated.
compression wood [BOT] Dense wood found at the base of some tree trunks and on the undersides of branches.
compressive intercept receiver [ELECTR] An electromagnetic surveillance receiver that instantaneously analyzes and sorts all signals within a broad radio-frequency spectrum by using pulse compression techniques which perform a complete analysis up to 10,000 times faster than a superheterodyne receiver or spectrum analyzer.

COMPOUND TUBULAR-ACINOUS GLAND

One of the distal secreting units of a compound tubular-acinous gland.

compressive strength [MECH] The maximum compressive stress a material can withstand without failure.

compressive stress [MECH] A stress which causes an elastic body to shorten in the direction of the applied force.

compressor [ELECTR] The part of a compandor that is used to compress the intensity range of signals at the transmitting or recording end of a circuit. [MECH ENG] A machine used for increasing the pressure of a gas or vapor. Also known as compression machine.

compressor blade [MECH ENG] The vane components of a centrifugal or axial-flow, air or gas compressor.

compressor station [MECH ENG] A permanent facility which increases the pressure on gas to move it in transmission lines or into storage.

compressor valve [MECH ENG] A valve in a compressor, usually automatic, which operates by pressure difference (less than 5 pounds per square inch or 35 kilopascals) on the two sides of a movable, single-loaded member and which has no mechanical linkage with the moving parts of the compressor mechanism.

compromise joint [CIV ENG] **1.** A joint bar used for joining rails of different height or section. **2.** A rail that has different joint drillings from that of the same section.

compromise network [ELEC] **1.** Network employed in conjunction with a hybrid coil to balance a subscriber's loop; adjusted for an average loop length or an average subscriber's set, or both, to secure compromise (not precision) isolation between the two directional paths of the hybrid. **2.** Hybrid balancing network which is designed to balance the average of the impedances that may be connected to the switchboard side of a hybrid arrangement of a repeater.

compromise rail [CIV ENG] A short rail having different sections at the ends to correspond with the rail ends to be joined, thus providing a transition between rails of different sections.

compromising emanations [COMMUN] Unintentional data-related or intelligence-bearing signals which, if intercepted and analyzed by any technique, could disclose the classified information transmitted, received, handled, or otherwise processed by equipments.

Compton absorption [QUANT MECH] The absorption of an x-ray or gamma-ray photon in Compton scattering, accompanied by the emission of another photon of lower energy.

Compton cross section [QUANT MECH] The differential cross section for the elastic scattering of photons by electrons.

Compton-Debye effect *See* Compton effect.

Compton effect [QUANT MECH] The increase in wavelength of electromagnetic radiation in the x-ray and gamma-ray region on being scattered by material objects; the scattering is due to the interaction of the photons with electrons that are effectively free. Also known as Compton-Debye effect.

Compton electron *See* Compton recoil electron.

Compton-Getting effect [ASTROPHYS] The sidereal diurnal variation of the intensity of cosmic rays which would be expected from the rotation of the galaxy if cosmic radiation originated in extragalactic regions and was isotropic in intergalactic space, and if this radiation was unaffected at entry to and passage through the galaxy.

Compton incoherent scattering [NUC PHYS] Scattering of gamma rays by individual nucleons in a nucleus or electrons in an atom when the energy of the gamma rays is large enough so that binding effects may be neglected.

Compton meter [NUCLEO] An ionization chamber having a balance chamber with a uranium source that is adjusted until it balances out normal cosmic radiation; variations in cosmic radiation are then shown on an electrometer.

Compton process *See* Compton scattering.

Compton recoil electron [QUANT MECH] An electron set in motion by its interaction with a photon in Compton scattering. Also known as Compton electron.

Compton recoil particle [QUANT MECH] Any particle that has acquired its momentum in a scattering process similar to Compton scattering.

Compton rule [PHYS CHEM] An empirical law stating that the heat of fusion of an element times its atomic weight divided by its melting point in degrees Kelvin equals approximately 2.

Compton scattering [QUANT MECH] The elastic scattering of photons by electrons. Also known as Compton process; gamma-ray scattering.

Compton shift [QUANT MECH] The change in wavelength of scattered radiation due to the Compton effect.

Compton wavelength [QUANT MECH] A convenient unit of length that is characteristic of an elementary particle, equal to Planck's constant divided by the product of the particle's mass and the speed of light.

compulsion [PSYCH] An irresistible, impulsive act performed by an individual against his conscious will and usually arising from an obsession.

compulsive reaction [PSYCH] Behavior disorder in which a person is uncomfortable with conditions of ambiguity and uncertainty.

compulsory reporting points [NAV] In air operations, geographical points for which an aircraft must report; these points are designated by regulations and can be approved or deleted only by rule-making action.

computation [MATH] **1.** The act or process of calculating. **2.** The result so obtained.

computational chemistry [CHEM] The use of calculations to predict molecular structure, properties, and reactions.

computed altitude [NAV] **1.** In celestial navigation, tabulated altitude interpolated for increments of latitude, declination, or hour angle; if no interpolation is required, the tabulated altitude and computed altitude are identical. **2.** Altitude determined by computation, table, mechanical computer, or graphics, particularly such an altitude of the center of a celestial body measured as an arc on a vertical circle of the celestial sphere from the celestial horizon. Also known as calculated altitude.

computed azimuth [NAV] In celestial navigation, an azimuth determined by computation, table, mechanical device, or graphics for a given place and time.

computed azimuth angle [NAV] Azimuth angle determined by computation, table, mechanical device, or graphics for a given place and time.

computed go to [COMPUT SCI] A control procedure in FORTRAN which allows the transfer of control to the ith label of a set of n labels used as statement numbers in the program.

compute mode [COMPUT SCI] The operation of an analog computer in which input signals are used by the computing units to calculate a solution, in contrast to hold mode and reset mode.

computer [COMPUT SCI] A device that receives, processes, and presents data; the two types are analog and digital. Also known as computing machine.

computer-aided design [COMPUT SCI] The generation of computer automated designs for display on cathode-ray tubes. Abbreviated CAD.

computer-aided management of instruction *See* computer-managed instruction.

computer-aided manufacturing [COMPUT SCI] The use of computers to communicate work instructions to automatic machinery for the handling and processing needed to produce a workpiece. Abbreviated CAM.

computer analyst [COMPUT SCI] A person who defines a problem, determines exactly what is required in the solution, and defines the outlines of the machine solution; generally, an expert in automatic data processing applications.

computer animation [COMPUT SCI] The use of a computer to present, either continuously or in rapid succession, pictures on a cathode-ray tube or other device, graphically representing a time developing system at successive times.

computer architecture [COMPUT SCI] The art and science of assembling logical elements to form a computing device.

computer-assisted instruction [COMPUT SCI] The use of computers to present drills, practice exercises, and tutorial sequences to the student, and sometimes to engage the student in a dialog about the substance of the instruction. Abbreviated CAI.

computer center *See* electronic data-processing center.

computer code [COMPUT SCI] The code representing the operations built into the hardware of a particular computer.

computer control [COMPUT SCI] *See* control. [CONT SYS] Process control in which the process variables are fed into a computer and the output of the computer is used to control the process.

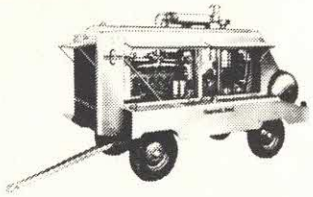
computer control counter [COMPUT SCI] Counter which stores the next required address; any counter which furnishes information to the control unit.

computer-controlled system [CONT SYS] A feedback control system in which a computer operates on both the input signal and the feedback signal to effect control.

computer control register *See* program register.

computer efficiency [COMPUT SCI] **1.** The ratio of actual

COMPRESSOR



Mobile air compressor unit which is driven by engine in the forward compartment. *(Ingersoll-Rand)*

operating time to scheduled operating time of a computer. **2.** In time-sharing, the ratio of user time to the sum of user time plus system time.

computer entry punch [COMPUT SCI] Combination card-reader and key punch that enters data directly onto a computer's memory drum.

computer graphics [COMPUT SCI] The process of pictorial communication between humanand computers, in which the computer input and output have the form of charts, drawings, or appropriate pictorial representation; such devices as cathode-ray tubes, mechanical plotting boards, curve tracers, coordinate digitizers, and light pens are employed.

computer input from microfilm [COMPUT SCI] The technique of reading images on microfilm and transforming them into a form which is understandable to a computer. Abbreviated CIM.

computerized composition [GRAPHICS] Type composition in which line-end hyphenation and other typographic work has been done by a computer working from unjustified tape.

computerized tomography [MED] The process of producing a picture showing human body organs in cross section by first electronically detecting the variation in x-ray transmission through the body section at different angles, and then using this information in a digital computer to reconstruct the x-ray absorption of the tissues at an array of points representing the cross section.

computer-limited [COMPUT SCI] Pertaining to a situation in which the time required for computation exceeds the time required to read inputs and write outputs.

computer-managed instruction [COMPUT SCI] The use of computer assistance in testing, diagnosing, prescribing, grading, and record keeping. Abbreviated CMI. Also known as computer-aided management of instruction.

computer memory *See* memory.

computer network [COMPUT SCI] A system of two or more computers interconnected by communication channels.

computer operation [COMPUT SCI] The electronic action required in a computer to give a desired computation.

computer output on microfilm [COMPUT SCI] The generation of microfilm which displays information developed by a computer. Abbreviated COM.

computer-output typesetting [GRAPHICS] Production of graphic arts quality printout of computer information on photographic paper or film.

computer performance evaluation [COMPUT SCI] The measurement and evaluation of the performance of a computer system, aimed at ensuring that a minimum amount of effort, expense, and waste is incurred in the production of data-processing services, and encompassing such tools as canned programs, source program optimizers, software monitors, hardware monitors, simulation, and bench-mark problems. Abbreviated CPE.

computer programming *See* programming.

computer science [COMPUT SCI] The branch of knowledge concerned with information processes, the structures and procedures that represent these processes, and their implementation in information-processing systems.

computer security [COMPUT SCI] Measures taken to protect computers and their contents from unauthorized use.

computer storage device *See* storage device.

computer system [COMPUT SCI] **1.** A set of related but unconnected components (hardware) of a computer or data-processing system. **2.** A set of hardware parts that are related and connected, and thus form a computer.

computer theory [COMPUT SCI] A discipline covering the study of circuitry, logic, microprogramming, compilers, programming languages, file structures, and system architectures.

computer utility [COMPUT SCI] A computer that provides service on a time-sharing basis, generally over telephone lines, to subscribers who have appropriate terminals.

computer word *See* word.

computing gunsight [ORD] A sight which includes an electrical or mechanical means for computing the proper angle between the line of sight to the target and the line of departure for the projectile.

computing machine *See* computer.

computing power [COMPUT SCI] The number of operations that a computer can carry out in 1 second.

computing unit [COMPUT SCI] The section of a computer that carries out arithmetic, logical, and decision-making operations.

COMSAT *See* Communications Satellite Corporation.

Comstock refraction formula [ASTROPHYS] A formula for the apparent angular displacement of an object outside the earth's atmosphere due to refraction, in terms of the barometric pressure, the temperature of the atmosphere, and the observed zenith distance.

conarium *See* pineal body.

concatenate [COMPUT SCI] To unite in a sequence, link together, or link to a chain.

concatenation [COMPUT SCI] **1.** An operation in which a number of conceptually related components are linked together to form a larger, organizationally similar entity. **2.** In string processing, the synthesis of longer character strings from shorter ones. [ELEC] A method of speed control of induction motors in which the rotors of two wound-rotor motors are mechanically coupled together and the stator of the second motor is supplied with power from the rotor slip rings of the first motor.

Concato's disease *See* polyserositis.

concave [SCI TECH] Having a curved form which bulges inward resembling the interior of a sphere or cylinder or a section of these bodies.

concave bit [DES ENG] A type of tungsten carbide drill bit having a concave cutting edge; used for percussive boring.

concave fillet weld [MET] A fillet weld having a concave surface.

concave function [MATH] A function $f(x)$ is said to be concave over the interval a,b if for any three points x_1, x_2, x_3 such that $a<x_1<x_2<x_3<b$, $f(x_2) \geq L(x_2)$, where $L(x)$ is the equation of the straight line passing through the points $[x_1, f(x_1)]$ and $[x_3, f(x_3)]$.

concave grating [SPECT] A reflection grating which both collimates and focuses the light falling upon it, made by spacing straight grooves equally along the chord of a concave spherical or paraboloid mirror surface. Also known as Rowland grating.

concave polygon [MATH] A polygon at least one of whose angles is greater than 180°.

concave spherical mirror [OPTICS] A round mirror having a concavely curved surface, in the form of a portion of a sphere.

concentrate [CHEM] To increase the amount of a dissolved substance by evaporation. [MIN ENG] **1.** To separate ore or metal from its containing rock or earth. **2.** The clean product recovered in froth flotation or other methods of mineral separation.

concentrated load [MECH] A force that is negligible because of a small contact area; a beam supported on a girder represents a concentrated load on the girder.

concentrating table [MIN ENG] A device consisting of a riffled deck to which a reciprocating motion in a horizontal direction is imparted; the material to be separated is fed in a stream of water, the heavy particles collect between the riffles and are conveyed in the direction of the reciprocating motion, while the lighter particles are borne by the water over the riffles to be discharged laterally from the table.

concentration [CHEM] In solutions, the mass, volume, or number of moles of solute present in proportion to the amount of solvent or total solution. [HYD] The ratio of the area of the sea covered by ice to the total area of sea surface. [MIN ENG] Separation and accumulation of economic minerals from gangue.

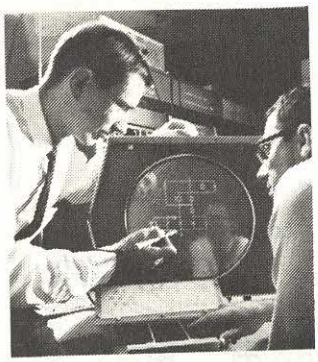
concentration cell [PHYS CHEM] **1.** Electrochemical cell for potentiometric measurement of ionic concentrations where the electrode potential electromotive force produced is determined as the difference in emf between a known cell (concentration) and the unknown cell. **2.** An electrolytic cell in which the electromotive force is due to a difference in electrolyte concentrations at the anode and the cathode.

concentration-dilution test [PATH] A renal function test to measure the ability of the kidney to concentrate and dilute urine under stress; specific gravity for urine from a normal kidney fluctuates from 1.030 on a restricted fluid intake to 1.003 on a high water intake.

concentration gradient [CHEM] The graded difference in the concentration of a solute throughout the solvent phase.

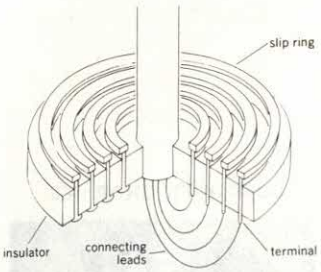
concentration polarization [PHYS CHEM] That part of the polarization of an electrolytic cell resulting from changes in the electrolyte concentration due to the passage of current through the solution.

COMPUTER GRAPHICS



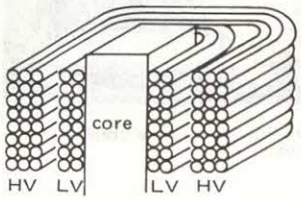
On-line interactive graphics console.

CONCENTRIC SLIP RING



Concentric slip-ring assembly configuration.

CONCENTRIC WINDINGS

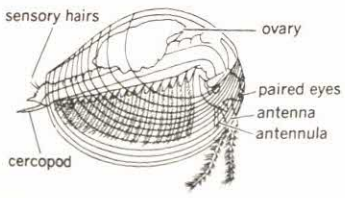


Section through the core and concentric winding of a transformer. LV = low-voltage winding; HV = high-voltage winding.

CONCH

Shell of hawk-wing conch.

CONCHOSTRACA



Limnadia lenticularis female, lateral aspect.

concentration potential [CHEM] Tendency for a univalent electrolyte to concentrate in a specific region of a solution.

concentration scale [CHEM] Any of several numerical systems defining the quantitative relation of the components of a mixture; for solutions, concentration is expressed as the mass, volume, or number of moles of solute present in proportion to the amount of solvent or total solution.

concentration time [HYD] The time required for water to travel from the most remote portion of a river basin to the basin outlet; it varies with the quantity of flow and channel conditions.

concentrator [ELECTR] Buffer switch (analog or digital) which to reduces the number of trunks required. [ENG] **1.** An apparatus used to concentrate materials. **2.** A plant where materials are concentrated.

concentric [SCI TECH] Pertaining to the relationship between two different-sized circular, cylindrical, or spherical shapes when the smaller one is exactly centered within the larger one.

concentric bundle [BOT] A vascular bundle in which xylem surrounds phloem, or phloem surrounds xylem.

concentric cable *See* coaxial cable.

concentric circles [MATH] A family of coplanar circles with the same center.

concentric faults [GEOL] Faults that are arranged concentrically.

concentric fold [GEOL] A fold in which the original thickness of the strata is unchanged during deformation. Also known as parallel fold.

concentric fractures [GEOL] A system of fractures concentrically arranged about a center.

concentric groove *See* locked groove.

concentric lens [OPTICS] A lens whose two spherical surfaces have the same center.

concentric line *See* coaxial cable.

concentric locating [DES ENG] The process of making the axis of a tooling device coincide with the axis of the workpiece.

concentric orifice plate [DES ENG] A fluid-meter orifice plate whose edges have a circular shape and whose center coincides with the center of the pipe.

concentric ring structures [ASTRON] A formation on the moon's surface consisting of two craters, one inside the other, with approximately the same center.

concentric slip ring [ELEC] A large slip-ring assembly consisting of concentrically arranged insulators and conducting materials.

concentric transmission line *See* coaxial cable.

concentric tube column [CHEM ENG] A carefully insulated distillation apparatus which is capable of very high separating power, and in which the outer vapor-rising annulus of the column is concentric around an inner, bottom-discharging reflux return.

concentric weathering *See* spheroidal weathering.

concentric windings [ELEC] Transformer windings in which the low-voltage winding is in the form of a cylinder next to the core, and the high-voltage winding, also cylindrical, surrounds the low-voltage winding.

conceptacle [BOT] A cavity which is shaped like a flask with a pore opening to the outside, contains reproductive structures, and is bound in a thallus such as in the brown algae.

concept coordination [COMPUT SCI] The basic principles of various punched-card, aspect, and mechanized information retrieval systems in which independently assigned concepts are used to characterize the subject content of documents, and the latter are identified during searching by means of either such assigned concepts or their combination.

conception [BIOL] Fertilization of an ovum by the sperm resulting in the formation of a viable zygote. [PSYCH] The mental process of forming ideas, especially abstract ideas.

conceptual modeling [COMPUT SCI] Writing a program by means of which a given result will be obtained, although the result is incapable of proof. Also known as heuristic programming.

concerted reaction [ORG CHEM] A reaction in which there is a simultaneous occurrence of bond making and bond breaking.

concertina wire [ORD] A barbed wire coiled for easier handling and emplacement; when uncoiled, it forms an entanglement for the enemy infantry.

concession lease [MIN ENG] A lease form that conveys specified national or state permission to a lessee to explore for or produce minerals (such as oil, gas, or uranium) from specified properties.

conch [INV ZOO] The common name for several species of large, colorful gastropod mollusks of the family Strombidae; the shell is used to make cameos and porcelain.

conchiolin [BIOCHEM] A nitrogenous substance that is the organic basis of many molluscan shells.

conchoid [MATH] A plane curve consisting of the locus of both ends of a line segment of constant length on a line which rotates about a fixed point, while the midpoint of the segment remains on a fixed line which does not contain the fixed point.

conchoidal [GEOL] Having a smoothly curved surface; used especially to describe the fracture surface of a mineral or rock.

Conchorhagae [INV ZOO] A suborder of benthonic wormlike animals in the class Kinorhyncha.

Conchostraca [INV ZOO] An order of mussellike crustaceans of moderate size belonging to the subclass Branchiopoda.

concordance [GEN] Similarity in appearance of members of a twin pair with respect to one or more specific traits.

concordant body [GEOL] An intrusive igneous body whose contacts are parallel to the bedding of the country rock. Also known as concordant injection; concordant pluton.

concordant coastline [GEOL] A coastline parallel to the land structures which form the margin of an ocean basin.

concordant injection *See* concordant body.

concordant pluton *See* concordant body.

concrescence [BIOL] Convergence and fusion of parts originally separate, as the lips of the blastopore in embryogenesis.

concrete [MATER] A mixture of aggregate, water, and a binder, usually portland cement; hardens to stonelike condition when dry.

concrete beam [CIV ENG] A structural member of reinforced concrete, placed horizontally over openings to carry loads.

concrete block [MATER] A solid or hollow block of precast concrete.

concrete bridge [CIV ENG] A bridge constructed of prestressed or reinforced concrete.

concrete bucket [ENG] A container with movable gates at the bottom that is attached to power cranes or cables to transport concrete.

concrete buggy [ENG] A cart which carries up to 6 cubic feet (0.17 cubic meter) of concrete from the mixer or hopper to the forms. Also known as buggy; concrete cart.

concrete caisson sinking [CIV ENG] A shaft-sinking method similar to caisson sinking except that reinforced concrete rings are used and an airtight working chamber is not adopted.

concrete cart *See* concrete buggy.

concrete chute [ENG] A long metal trough with rounded bottom and open ends used for conveying concrete to a lower elevation.

concrete column [CIV ENG] A vertical structural member made of reinforced or unreinforced concrete.

concrete dam [CIV ENG] A dam built of concrete.

concrete finish [MATER] The texture or smoothness on the surface of hardened concrete.

concrete form oil [MATER] Nonviscous, neutral mineral oil used on wooden or metal forms to allow easy removal from set concrete.

concrete hardener [MATER] An admixture such as calcium chloride, sodium chloride, or sodium hydroxide that hastens or decreases the hydration rate of cementing material; the concrete takes less time to set and has earlier higher strength.

concrete masonry [MATER] Building units composed of block, brick, or tile laid by masons.

concrete mixer [MECH ENG] A machine with a rotating drum in which the components of concrete are mixed.

concrete pile [CIV ENG] A reinforced pile made of concrete, either precast and driven into the ground, or cast in place in a hole bored into the ground.

concrete pipe [CIV ENG] A porous pipe made of concrete and used principally for subsoil drainage; diameters over 15 inches (38 centimeters) are usually reinforced.

concrete pump [MECH ENG] A device which drives concrete to the placing position through a pipeline of 6-inch (15-centimeter) diameter or more, using a special type of reciprocating pump.

concrete retarder [MATER] A material added to concrete that decreases the hydration rate of cement, thereby increasing

the setting time and decreasing the strengthening rate during the early age.

concrete slab [CIV ENG] A flat, reinforced-concrete structural member, relatively sizable in length and width, but shallow in depth; used for floors, roofs, and bridge decks.

concrete steel [MET] Steel used in reinforced concrete, which should comply with standard specifications for prestressed concrete.

concrete thinking [PSYCH] Mental processes characterized by literalness and the tendency to be bound to the most immediate and obvious sense impressions, as well as by a lack of generalization and abstraction.

concrete vibrator [MECH ENG] Vibrating device used to achieve proper consolidation of concrete; the three types are internal, surface, and form vibrators.

concretion [GEOL] A hard, compact mass of mineral matter in the pores of sedimentary or fragmental volcanic rock; represents a concentration of a minor constituent of the enclosing rock or of cementing material.

concretionary [GEOL] Tending to grow together, forming concretions. [PATH] A compact mass of inorganic material formed in a body cavity or in tissue.

concretioning [GEOL] The process of forming concretions.

concurrency [COMPUT SCI] Referring to two or more tasks of a computer system which are in progress simultaneously.

concurrent conversion [COMPUT SCI] The transfer of data from one medium to another, such as card to tape, under computer control while programs are being run on the same computer.

concurrent heating [MET] Application of supplemental heat in metal cutting or welding.

concurrent infection [MED] Two or more forms of an infection existing simultaneously.

concurrent input/output [COMPUT SCI] The simultaneous reading from and writing on different media by a computer.

concurrent line [MAP] A line on a map or chart passing through places having the same current hour.

concurrent operations control [COMPUT SCI] The supervisory capability required by a computer to handle more than one program at a time.

concurrent processing [COMPUT SCI] The capability of a computer to process more than one program at the time.

concurrent real-time processing [COMPUT SCI] The capability of a computer to process simultaneously several programs, each of which requires responses within a time span related to its particular time frame.

concussion [MED] A state of shock following traumatic injury, especially cerebral trauma, in which there is temporary functional impairment without physical evidence of damage to impaired tissues.

concussion fracture [GEOL] Radiating system of fractures in a shock-metamorphosed rock.

concussion fuse [ORD] A bomb fuse designed to function in the air in response to the concussion produced by the explosion of a preceding bomb.

concussion table [MIN ENG] An inclined table, agitated by a series of shocks and operating like a buddle. Also known as percussion table.

condensable vapors [CHEM] Gases or vapors which when subjected to appropriately altered conditions of temperature or pressure become liquids.

condensate [MATER] **1.** The liquid product from a condenser. Also known as condensate liquid. **2.** A light hydrocarbon mixture formed as a liquid product in a gas-recycling plant through expansion and cooling of the gas.

condensate field [GEOL] A petroleum field developed in predominantly gas-bearing reservoir rocks, but within which condensation of gas to oil commonly occurs with decreases in field pressure.

condensate flash [CHEM ENG] Partial evaporation (flash) of hot condensed liquid by a stepwise reduction in system pressure, the hot vapor supplying heat to a cooler evaporator step (stage).

condensate liquid *See* condensate.

condensate strainer [MECH ENG] A screen used to remove solid particles from the condensate prior to its being pumped back to the boiler.

condensate well [MECH ENG] A chamber into which condensed vapor falls for convenient accumulation prior to removal. [PETRO ENG] Well that produces a natural gas highly saturated with condensable hydrocarbons heavier than methane and ethane.

condensation [ACOUS] A measure of the increase in the instantaneous density at a given point owing to a sound wave, namely $(\rho - \rho_0)/\rho_0$, where ρ is the density and ρ_0 is the constant mean density at the point. [CHEM] Transformation from a gas to a liquid. [CRYO] *See* Bose-Einstein condensation. [ELEC] An increase of electric charge on a capacitor conductor. [MECH] An increase in density. [METEOROL] The process by which water vapor becomes a liquid such as dew, fog, or cloud or a solid like snow; condensation in the atmosphere is brought about by either of two processes: cooling of air to its dew point, or addition of enough water vapor to bring the mixture to the point of saturation (that is, the relative humidity is raised to 100%). [OPTICS] Focusing or collimation of light.

condensation cloud [METEOROL] A mist or fog of minute water droplets that temporarily surrounds the fireball following an atomic detonation in a comparatively humid atmosphere.

condensation nucleus [METEOROL] A particle, either liquid or solid, upon which condensation of water vapor begins in the atmosphere.

condensation polymer [ORG CHEM] A high-molecular-weight compound formed by condensation polymerization.

condensation polymerization [ORG CHEM] The formation of high-molecular-weight polymers from monomers by chemical reactions of the condensation type.

condensation pressure [METEOROL] The pressure at which a parcel of moist air expanded dry adiabatically reaches saturation. Also called adiabatic condensation pressure; adiabatic saturation pressure.

condensation reaction [CHEM] One of a class of chemical reactions involving a combination between molecules or between parts of the same molecule.

condensation resin [ORG CHEM] A resin formed by polycondensation.

condensation shock wave [FL MECH] A sheet of discontinuity associated with a sudden condensation and fog formation in a field of flow; it occurs, for example, on a wing where a rapid drop in pressure causes the temperature to drop considerably below the dew point.

condensation temperature [ANALY CHEM] In boiling-point determination, the temperature established on the bulb of a thermometer on which a thin moving film of liquid coexists with vapor from which the liquid has condensed, the vapor phase being replenished at the moment of measurement from a boiling-liquid phase. [METEOROL] The temperature at which a parcel of moist air expanded dry adiabatically reaches saturation. Also known as adiabatic condensation temperature; adiabatic saturation temperature.

condensation trail [METEOROL] A visible trail of condensed water vapor or ice particles left behind an aircraft, an airfoil, or such, in motion through the air. Also known as contrail; vapor trail.

condensed instruction deck [COMPUT SCI] The card output from an assembly program in which several instructions per card are punched in machine language; input to the assembly program may consist of one instruction per card, so the output is condensed.

condensed system [PHYS CHEM] A chemical system in which the vapor pressure is negligible or in which the pressure maintained on the system is greater than the vapor pressure of any portion.

condensed type [GRAPHICS] A typeface which is narrow or slender.

condenser [ELEC] *See* capacitor. [MECH ENG] A heat-transfer device that reduces a thermodynamic fluid from its vapor phase to its liquid phase, suchas in a vapor-compression refrigeration plant or in a condensing steam power plant. [OPTICS] A system of lenses or mirrors in an optical projection system, which gathers as much of the light from the source as possible and directs it through the projection lens.

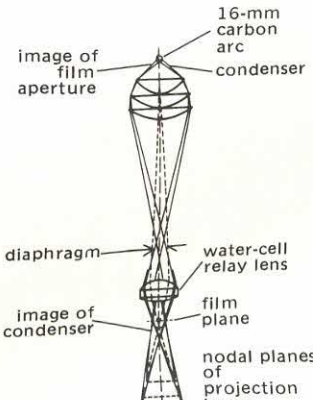
condenser antenna *See* capacitor antenna.

condenser box *See* capacitor box.

condenser bushing [ELEC] An insulation made up of alternate layers of insulating material and metal foil placed between the conductor and outer casing in terminals of transformers and other high-voltage equipment such as switchgears.

condenser-discharge anemometer [ENG] A contact ane-

CONDENSER



A relay condenser system having a water cell incorporated in second stage.

mometer connected to an electrical circuit which is so arranged that the average wind speed is indicated.

condenser microphone *See* capacitor microphone.

condenser transducer *See* electrostatic transducer.

condenser tubes [MECH ENG] Metal tubes used in a heat-transfer device, with condenser vapor as the heat source and flowing liquid such as water as the receiver.

condensing engine [MECH ENG] A steam engine in which the steam exhausts from the cylinder to a vacuum space, where the steam is liquefied.

condensing flow [FL MECH] The flow and simultaneous condensation (partial or complete) of vapor through a cooled pipe or other closed conduit or container.

condensing gas drive [PETRO ENG] Reservoir-oil displacement by gas where hydrocarbon components of the injected gas condense in the oil that it is displacing.

condensing routine [COMPUT SCI] A routine that converts a program format having one instruction per card to a program format having several instructions per card.

condition [MATH] The product of the norm of a matrix and of its inverse.

conditional [COMPUT SCI] Subject to the result of a comparison made during computation in a computer, or subject to human intervention.

conditional assembly [COMPUT SCI] A feature of some assemblers which suppresses certain sections of code if stated program conditions are not met at assembly time.

conditional branch *See* conditional jump.

conditional breakpoint [COMPUT SCI] A conditional jump that, if a specified switch is set, will cause a computer to stop; the routine may then be continued as coded or a jump may be forced.

conditional convergence [MATH] The property of a series that is convergent but not absolutely convergent.

conditional distribution [STAT] If W and Z are random variables with discrete values $w_1,w_2,\ldots,$ and $z_1,z_2,\ldots,$ the conditional distribution of W given $Z = z$ is the distribution which assigns to w_i, $i = 1,2,\ldots,$ the conditional probability of $W = w_i$ given $Z = z$.

conditional expectation [MATH] If X is a random variable on a probability space (Ω,F,P), the conditional expectation of X with respect to a given sub σ-field F' of F is an F'-measurable random variable whose expected value over any set in F' is equal to the expected value of X over this set. [STAT] The expected value of a conditional distribution.

conditional expression [COMPUT SCI] A COBOL language expression which is either true or false, depending upon the status of the variables within the expression.

conditional frequency [STAT] If r and s are possible outcomes of an experiment which is performed n times, the conditional frequency of s given that r has occurred is the ratio of the number of times both r and s have occurred to the number of times r has occurred.

conditional instability [METEOROL] The state of a column of air in the atmosphere when its lapse rate of temperature is less than the dry adiabatic lapse rate but greater than the saturation adiabatic lapse rate.

conditional jump [COMPUT SCI] A computer instruction that will cause the proper one of two or more addresses to be used in obtaining the next instruction, depending on some property of a numerical expression that may be the result of some previous instruction. Also known as conditional branch; conditional transfer; decision instruction; discrimination.

conditional lethal mutant [GEN] A mutant gene that has lethal expression only under particular growth conditions, such as a specific temperature range.

conditionally compact set [MATH] A set whose closure is compact. Also known as relatively compact set.

conditionally periodic motion [MECH] Motion of a system in which each of the coordinates undergoes simple periodic motion, but the associated frequencies are not all rational fractions of each other so that the complete motion is not simply periodic.

conditionally stable circuit [ELECTR] A circuit which is stable for certain values of input signal and gain, and unstable for other values.

conditional probability [STAT] The probability that a second event will be B if the first event is A, expressed as $P(B/A)$.

conditional replenishment [COMMUN] A form of differential pulse-code modulation in which the only information transmitted consists of addresses specifying the locations of picture samples in the moving area, and information by which the intensities of moving area picture samples can be reconstructed at the receiver.

conditional transfer *See* conditional jump.

condition code [COMPUT SCI] Portion of a program status word indicating the outcome of the most recently executed arithmetic or boolean operation.

conditioned reflex [PSYCH] Response of an organism to a stimulus which was inadequate to elicit the response until paired for one or more times with an adequate stimulus.

conditioned stop instruction [COMPUT SCI] A computer instruction which causes the execution of a program to stop if some given condition exists, such as the specific setting of a switch on a computer console.

condition entries [COMPUT SCI] The upper-right-hand portion of a decision table, indicating, for each of the conditions, whether the condition satisfies various criteria listed in the condition stub, or the values of various parameters listed in the condition stub.

conditioning [ELECTR] Equipment modifications or adjustments necessary to match transmission levels and impedances or to provide equalization between facilities. [SCI TECH] Subjecting a material or organism to a stipulated treatment or stimulus so that it will respond in a uniform and desired manner to subsequent testing or processing.

condition portion [COMPUT SCI] The upper portion of a decision table, comprising the condition stub and condition entires.

condition stub [COMPUT SCI] The upper-left-hand portion of a decision table, consisting of a single column listing various criteria or parameters which are used to specify the conditions.

Condon-Shortley-Wigner phase convention [QUANT MECH] Convention relating the phases of states having the same eigenvalue of $J^2 = J_x^2 + J_y^2 + J_z^2$, and different eigenvalues of J_z, where $\mathbf{J}$ is the total angular momentum, according to which the matrix elements of $\mathbf{J}_+ = J_x + iJ_y$ and $\mathbf{J}_- = J_x - iJ_y$ between such states are real.

condor [NAV] A continuous-wave navigation system, similar to benito, that automatically measures bearing and distance from a single ground station; the distance is determined by phase comparison and the bearing by automatic direction finding. [VERT ZOO] *Vultur gryphus*. A large American vulture having a bare head and neck, dull black plumage, and a white neck ruff.

Condor [ORD] A U.S. Navy air-to-surface missile that uses optoelectronic guidance, developed for use beyond the range of antiaircraft guns which protect heavily defended ground targets; range is about 50 miles (80 kilometers).

conductance [ELEC] The real part of the admittance of a circuit; when the impedance contains no reactance, as in a direct-current circuit, it is the reciprocal of resistance, and is thus a measure of the ability of the circuit to conduct electricity. Also known as electrical conductance. Designated G. [FL MECH] For a component of a vacuum system, the amount of a gas that flows through divided by the pressure difference across the component. [THERMO] *See* thermal conductance.

conductance-variation method [ELEC] A technique for measuring low admittances; measurements in a parallel-resonance circuit with the terminals open-circuited, with the unknown admittance connected, and then with the unknown admittance replaced by a known conductance standard are made; from them the unknown can be calculated.

conducted interference [COMMUN] Interfering signals arriving on power lines.

conductimetry [CHEM] The scientific study of conductance measurements of solutions; to avoid electrolytic complications, conductance measurements are usually taken with alternating current.

conducting polymer [MATER] A plastic having high conductivity, approaching that of metals.

conduction [ELEC] The passage of electric charge, which can occur by a variety of processes, such as the passage of electrons or ionized atoms. Also known as electrical conduction. [PHYS] Transmission of energy by a medium which does not involve movement of the medium itself.

conduction aphasia [PSYCH] A subtype of fluent aphasia which features selectively impaired repetition with relatively fluent speech production and good comprehension; often asso-

ciated with damage in the white matter underlying the parietal operculum.

conduction band [SOLID STATE] An energy band in which electrons can move freely in a solid, producing net transport of charge.

conduction current [SOLID STATE] A current due to a flow of conduction electrons through a body.

conduction deafness [MED] Deafness involving an impairment of the mechanism that conducts sound to the sense organ.

conduction electron [SOLID STATE] An electron in the conduction band of a solid, where it is free to move under the influence of an electric field. Also known as outer-shell electron; valence electron.

conduction field [ELECTROMAG] Energy surrounding a conductor when an electric current is passed through the conductor, which, because of the difference in phase between the electrical field and magnetic field set up in the conductor, cannot be detached from the conductor.

conduction pump [ENG] A pump in which liquid metal or some other conductive liquid is moved through a pipe by sending a current across the liquid and applying a magnetic field at right angles to current flow.

conductive coating [MATER] A coating used to reduce surface resistance and thus prevent the accumulation of static electric charges.

conductive coupling [ELEC] Electric connection of two electric circuits by their sharing the same resistor.

conductive elastomer [MATER] A rubberlike silicone material in which suspended metal particles conduct electricity.

conductive equilibrium *See* isothermal equilibrium.

conductive gasket [ELEC] A flexible metallic gasket used to reduce radio-frequency leakage at joints in shielding.

conductive paste [MED] **1.** A substance applied to the skin to lower its electrical resistance in an area to which electrodes will be applied. **2.** A gel applied to the skin to lower its acoustical impedance and to accommodate an ultrasonic probe; enables ultrasonic energy to penetrate to underlying tissues without severe attenuation at the skin interface.

conductive silver paste [MATER] Silver powder in a suitable vehicle for applying to ceramic or other insulating materials by silk-screening or other methods, then fixing or firing at appropriate temperatures to provide a hard conductive surface or joint.

conductivity [ELEC] The ratio of the electric current density to the electric field in a material. Also known as electrical conductivity; specific conductance.

conductivity bridge [ELEC] A modified Kelvin bridge for measuring very low resistances.

conductivity cell [ELEC] A glass vessel with two electrodes at a definite distance apart and filled with a solution whose conductivity is to be measured.

conductivity current *See* air-earth conduction current.

conductivity modulation [ELECTR] Of a semiconductor, the variation of the conductivity of a semiconductor through variation of the charge carrier density.

conductivity modulation transistor [ELECTR] Transistor in which the active properties are derived from minority carrier modulation of the bulk resistivity of the semiconductor.

conductivity tensor [ELEC] A tensor which, when multiplied by the electric field vector according to the rules of matrix multiplication, gives the current density vector.

conductivity theory [STAT MECH] Theory which treats the system of electrons in a metal as a gas and uses the Boltzmann transport equation to calculate conductivity.

conductometer [ENG] An instrument designed to measure thermal conductivity; in particular, one that compares the rates at which different rods transmit heat.

conductometric titration [ANALY CHEM] A titration in which electrical conductance of a solution is measured during the course of the titration.

conductor [ELEC] A wire, cable, or other body or medium that is suitable for carrying electric current.

conductor pipe [BUILD] A metal pipe through which water is drained from the roof. [PETRO ENG] A short string of large-diameter casing serving primarily to keep the top of a well bore open and to convey upflowing drilling fluid from the well bore to the slush pit.

conductor skin effect *See* skin effect.

conduit [ELEC] Solid or flexible metal or other tubing through which insulated electric wires are run. [ENG] Any channel or pipe for conducting the flow of water or other fluid. [GEOL] A water-filled underground passage that is always under hydrostatic pressure.

conduplicate [BOT] Folded lengthwise and in half with the upper faces together, applied to leaves and petals in the bud.

Condylarthra [PALEON] A mammalian order of extinct, primitive, hoofed herbivores with five-toed plantigrade to semidigitigrade feet.

condyle [ANAT] A rounded bone prominence that functions in articulation. [BOT] The antheridium of certain stoneworts. [INV ZOO] A rounded, articular process on arthropod appendages.

condyloid articulation [ANAT] A joint, such as the wrist, formed by an ovoid surface that fits into an elliptical cavity, permitting all movement except rotation.

condyloma acuminata [MED] A venereal disease characterized by wartlike growths on the genital organs; thought to be of viral origin.

cone [BOT] The ovulate or staminate strobilus of a gymnosperm. [ENG ACOUS] The cone-shaped paper or fiber diaphragm of a loudspeaker. [GEOL] A mountain, hill, or other landform having relatively steep slopes and a pointed top. [HISTOL] A photoceptor of the vertebrate retina that responds differentially to light across the visible spectrum, providing both color vision and visual acuity in bright light. [MATH] A solid bounded by a region enclosed in a closed curve on a plane and a surface formed by the segments joining each point of the closed curve to a point which is not in the plane. [MET] The part of an oxygen gas flame adjacent to the orifice of the tip. [TEXT] A bobbin on which yarn is wound for weaving.

cone antenna *See* conical antenna.

cone bearing [MECH ENG] A cone-shaped journal bearing running in a correspondingly tapered sleeve.

cone-bottom tank [ENG] Liquids-storage tank with downward-pointing conical bottom to facilitate drainage of bottom, as of water or sludge.

cone brake [MECH ENG] A type of friction brake whose rubbing parts are cone-shaped.

cone classifier [MECH ENG] Inverted-cone device for the separation of heavy particulates (such as sand, ore, or other mineral matter) from a liquid stream; feed enters the top of the cone, heavy particles settle to the bottom where they can be withdrawn, and liquid overflows the top edge, carrying the smaller particles or those of lower gravity over the rim; used in the mining and chemical industries.

cone clutch [MECH ENG] A clutch which uses the wedging action of mating conical surfaces to transmit friction torque.

cone crusher [MECH ENG] A machine that reduces the size of materials such as rock by crushing in the tapered space between a truncated revolving cone and an outer chamber.

cone delta *See* alluvial cone.

cone dike *See* cone sheet.

conehead rivet [DES ENG] A rivet with a head shaped like a truncated cone.

cone-in-cone structure [GEOL] The structure of a concretion characterized by the development of a succession of cones one within another.

cone karst [GEOL] A type of karst, typical of tropical regions, characterized by a pattern of steep, convex sides and slightly concave floors. Also known as cockpit karst; Kegel karst.

cone key [DES ENG] A taper saddle key placed on a shaft to adapt it to a pulley with a too-large hole.

cone loudspeaker [ENG ACOUS] A loudspeaker employing a magnetic driving unit that is mechanically coupled to a paper or fiber cone. Also known as cone speaker.

Conelrad [COMMUN] A system for providing official civil defense information and instructions by radio in an emergency without providing radio homing guidance for the enemy. Derived from control of electromagnetic radiation.

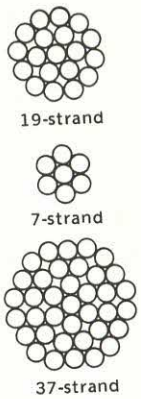
cone mandrel [DES ENG] A mandrel in which the diameter can be changed by moving conical sleeves.

Conemaughian [GEOL] Upper Middle Pennsylvanian geologic time.

cone nozzle [DES ENG] A cone-shaped nozzle that disperses fluid in an atomized mist.

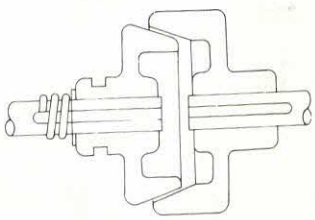
cone of ambiguity [NAV] The conical volume of airspace above the beacon in which bearing information is unreliable in VOR and Tacan.

CONDUCTOR



End views of stranded round electric conductors.

CONE CLUTCH



Cone-type friction clutch.

cone of dejection *See* alluvial cone.
cone of depression [HYD] The depression in the water table around a well defining the area of influence of the well. Also known as cone of influence.
cone of detritus *See* alluvial cone.
cone of dispersion [ORD] The pattern in space formed by phenomena from point sources, such as shots on a target from the same gun, that spread out in conical form.
cone of escape [GEOPHYS] A hypothetical cone in the exosphere, directed vertically upward, through which an atom or molecule would theoretically be able to pass to outer space without a collision.
cone of influence *See* cone of depression.
cone of nulls [ELECTROMAG] In antenna practice, a conical surface formed by directions of negligible radiation.
cone of revolution [MATH] The surface obtained by rotating a line around another line which it intersects, using the intersection point as a pivot.
cone of silence [NAV] A cone-shaped region, directly over the antenna of a radio-beacon transmitter, in which no signal is detected.
cone-of-silence marker [NAV] A marker beacon, usually a Z (for zone) marker beacon, located at a radio-range station; operates at 75 megahertz and produces a light signal accompanied by a 3000-hertz tone.
cone of visibility [AERO ENG] Generally, the right conical space which has its apex at some ground target and within which an aircraft must be located if the pilot is to be able to discern the target while flying at a specified altitude.
cone pulley *See* step pulley.
cone rock bit [MECH ENG] A rotary drill with two hardened knurled cones which cut the rock as they roll. Also known as roller bit.
cone-roof tank [ENG] Liquids-storage tank with flattened conical roof to allow a vapor reservoir at the top for filling operations.
cone settler [MIN ENG] A conical vessel fed centrally with fine ore pulp, in which the apex discharge carries the larger-sized particles, and the peripheral top overflow carries the finer fraction of the solids.
cone sheet [GEOL] An accurate dike forming part of a concentric set that dips inward toward the center of the arc. Also known as cone dike.
cone speaker *See* cone loudspeaker.
cone valve [CIV ENG] A divergent valve whose cone-shaped head in a fixed cylinder spreads water around the wide, downstream end of the cone in spillways of dams or hydroelectric facilities. Also known as Howell-Bunger valve.
Conewangoan [GEOL] Upper Upper Devonian geologic time.
confectioner's coating [FOOD ENG] A chocolate substitute for coating candy or filling biscuits that is made with a fat other than cocoa butter.
conference communications [COMMUN] Communications facilities whereby direct speech conversation may be conducted between three or more locations simultaneously.
confidence [STAT] The degree of assurance that a specified failure rate is not exceeded.
confidence coefficient [STAT] The probability associated with a confidence interval; that is, the probability that the interval contains a given parameter or characteristic. Also known as confidence level.
confidence interval [STAT] An interval which has a specified probability of containing a given parameter or characteristic.
confidence level [IND ENG] The probability in acceptance sampling that the quality of accepted lots manufactured will be better than the rejectable quality level (RQL); 90% level indicates that accepted lots will be better than the RQL 90 times in 100. [STAT] *See* confidence coefficient.
confidence limit [STAT] One of the end points of a confidence interval.
configuration [AERO ENG] A particular type of specific aircraft, rocket, or such, which differs from others of the same model by the arrangement of its components or by the addition or omission of auxiliary equipment; for example, long-range configuration or cargo configuration. [CHEM] The three-dimensional spatial arrangement of atoms in a stable or isolable molecule. [ELEC] A group of components interconnected to perform a desired circuit function. [MATH] An arrangement of geometric objects. [MECH] The positions of all the particles in a system. [SYS ENG] A group of machines interconnected and programmed to operate as a system.
configurational free energy [STAT MECH] The free energy of a solid lattice associated with the interaction between neighboring atoms, and with external electric and magnetic fields.
configuration interaction [PHYS CHEM] Interaction between two different possible arrangements of the electrons in an atom (or molecule); the resulting electron distribution, energy levels, and transitions differ from what would occur in the absence of the interaction.
confined aquifer *See* artesian aquifer.
confined charge [ORD] An explosive charge loaded in a resistant container, as opposed to a bare charge.
confined explosion [ORD] Explosion occurring in a closed chamber, where the volume is constant.
confined flow [ENG] The flow of any fluid (liquid or gas) through a continuous container (process vessel) or conduit (piping or tubing).
confinement [ENG] Physical restriction, or degree of such restriction, to passage of detonation wave or reaction zone, for example, that of a resistant container which holds an explosive charge.
confinement of plasma [PL PHYS] Restriction of a hot plasma to a given volume as long as possible, by such means as magnetic mirrors and pinch effect.
confining bed [GEOL] An impermeable bed adjacent to an aquifer.
confining liquid [CHEM ENG] A liquid seal (most often mercury or sodium sulfate brine) that is displaced during the no-loss transfer of a gas sample from one container to another.
confining pressure [GEOL] An equal, all-sided pressure, such as lithostatic pressure produced by overlying rocks in the crust of the earth.
conflict alert [NAV] A computer program, in use in enroute traffic control centers, which is designed to detect potential encounters between aircraft that are being tracked automatically by air-traffic control radars; in the event of a conflict, a symbol representing the encountering aircraft is flashed on the controller's display. Abbreviated CA.
confluence [HYD] **1.** A stream formed from the flowing together of two or more streams. **2.** The place where such streams join.
confluent hypergeometric function [MATH] A solution to differential equation $z(d^2w/dz^2) + (\rho - z)(dw/dz) - \alpha w = 0$.
confocal coordinates [MATH] Coordinates of a point in the plane with norm greater than 1 in terms of the system of ellipses and hyperbolas whose foci are at $(1,0)$ and $(-1,0)$.
confocal resonator [ELECTROMAG] A wavemeter for millimeter wavelengths, consisting of two spherical mirrors facing each other; changing the spacing between the mirrors affects propagation of electromagnetic energy between them, permitting direct measurement of free-space wavelength.
conformable [GEOL] **1.** Pertaining to the contact of an intrusive body when it is aligned with the internal structures of the intrusion. **2.** Referring to strata in which layers are formed above one another in an unbroken, parallel order.
conformable optical mask [ELECTR] An optical mask made on a flexible glass substrate so that it can be pulled down under vacuum into intimate contact with the substrate for accurate circuit fabrication.
conformal array [ELECTR] A circular, cylindrical, hemispherical, or other shaped array of electronically switched antennas; provides the special radiation patterns required for Tacan, IFF, and other air navigation, radar, and missile control applications.
conformal chart [MAP] A chart on a conformal map projection.
conformality [MAP] The retention of angular relationships at each point on a map projection.
conformal mapping [MATH] An angle-preserving analytic function of a complex variable.
conformal map projection [MAP] A map projection on which the shape of any small area of the surface mapped is preserved unchanged. Also known as orthomorphic map projection.
conformal reflection chart [ELECTROMAG] An Argand diagram for plotting the complex reflection coefficient of a waveguide junction and its image, the two being related by a conformal transformation.

conformation [ORG CHEM] In a molecule, a specific orientation of the atoms that varies from other possible orientations by rotation or rotations about single bonds; generally in mobile equilibrium with other conformations of the same structure. Also known as conformational isomer; conformer.

conformational analysis [PHYS CHEM] The determination of the arrangement in space of the constituent atoms of a molecule that may rotate about a single bond.

conformational isomer *See* conformation.

conformer *See* conformation.

confused sea [OCEANOGR] A highly disturbed water surface without a single, well-defined direction of wave travel.

confusion jamming [ELECTR] An electronic countermeasure technique in which the signal from an enemy tracking radar is amplified and retransmitted with distortion to create a false echo that affects accuracy of target range, azimuth, and velocity data.

confusion matrix [COMPUT SCI] In pattern recognition, a matrix used to represent errors in assigning classes to observed patterns in which the ijth element represents the number of samples from class i which were classified as class j.

confusion reflector [ORD] An electromagnetic-wave reflector dropped from aircraft to create false signals on enemy radarscopes, consisting of strips of aluminum foil or metallized paper, such as chaff or window, cut to lengths that are multiples or submultiples of enemy radar frequencies. Also known as radar confusion reflector.

conge [FOOD ENG] A machine in which the ingredients for sweet chocolate are worked to a smooth and viscosity-stable paste.

congelifraction [GEOL] The splitting or disintegration of rocks as the result of the freezing of the water contained. Also known as frost bursting; frost riving; frost shattering; frost splitting; frost weathering; frost wedging; gelifraction; gelivation.

congeliturbate [GEOL] Soil or unconsolidated earth which has been moved or disturbed by frost action.

congeliturbation [GEOL] The churning and stirring of soil as a result of repeated cycles of freezing and thawing; includes frost heaving and surface subsidence during thaws. Also known as cryoturbation; frost churning; frost stirring; geliturbation.

congener [CHEM] A chemical substance that is related to another substance, such as a derivative of a compound or an element belonging to the same family as another element in the periodic table.

congeneric [SYST] Referring to the species of a given genus.

congenital [MED] Dating from or existing before birth.

congenital agammaglobulinemia [MED] A congenital deficiency (in serum) of immunoglobulins, characterized clinically by increased susceptibility to bacterial infections; may be a sex-linked recessive tract, affecting male infants, or sporadic, affecting both sexes.

congenital anomaly [MED] A structural or functional abnormality of the human body that develops before birth. Also known as birth defect.

congenital disease [MED] Any disorder or disease state that is present at birth.

congenital pathology [MED] The study of diseases and defects existing at birth.

congestin [BIOCHEM] A toxin produced by certain sea anemones.

congestion [MED] An abnormal accumulation of fluid, usually blood, but occasionally bile or mucus, within the vessels of an organ or part.

congestive heart failure [MED] A state in which circulatory congestion exists as a result of heart failure.

conging process [FOOD ENG] In making sweet chocolate, working a ground mixture of chocolate liquor, sugar, and cocoa butter with additional cocoa butter in conges.

conglomerate [GEOL] Cemented, rounded fragments of water-worn rock or pebbles, bound by a siliceous or argillaceous substance.

conglomeratic mudstone *See* paraglomerate.

conglutination [IMMUNOL] The completion of an agglutinating system, or the enhancement of an incomplete one, by the addition of certain substances. [MED] Abnormal union of two contiguous surfaces or bodies.

conglutination phenomenon [IMMUNOL] Clumping of cells or particles, such as red cells or bacteria, when treated with conglutinin in the presence of antibody and nonhemolytic complement.

conglutinin [IMMUNOL] A heat-stable substance in bovine and other serums that aids or causes agglomeration or lysis of certain sensitized cells or particles.

congo red [ORG CHEM] $C_{32}H_{22}N_6Na_2O_6S_2$ An azo dye, sodium diphenyldiazo-bis-α-naphthylamine sulfonate, used as a biological stain and as an acid-base indicator; it is red in alkaline solution and blue in acid solution.

congo red test [PATH] Diagnostic test for amyloidosis, in which congo red is injected intravenously; 30% disappears within 1 hour in normal individuals, but in amyloidosis 40–100% disappears.

congruence [MATH] **1.** The property of geometric figures that can be made to coincide by a rigid transformation. **2.** The property of two integers having the same remainder on division by another integer.

congruential generator [COMPUT SCI] A method of generating a sequence of random numbers $x_0, x_1, x_2, \ldots$, in which each member is generated from the previous one by the formula $x_{i+1} \equiv ax_i + b$ modulus m, where a, b, and m are constants.

congruent matrices [MATH] Two matrices A and B related by the transformation $B = SAT$, where S and T are nonsingular matrices and T is the transpose of S.

congruent melting [GEOL] Melting of a solid substance to a liquid identical in composition.

congruent melting point [THERMO] A point on a temperature composition plot of a nonstoichiometric compound at which the one solid phase and one liquid phase are adjacent.

congruent numbers [MATH] Two numbers having the same remainder when divided by a given quantity called the modulus.

congruent transformation [MET] An isothermal or isobaric phase change in an alloy where the integrity of both phases is maintained throughout the process.

Coniacian [GEOL] Lower Senonian geologic time.

conic [MATH] A curve which may be represented as the intersection of a cone with a plane; the four types of conics are circle, ellipse, parabola, and hyperbola. Also known as conic section.

conical [SCI TECH] Having the shape of or pertaining to a cone.

conical antenna [ELECTROMAG] A wide-band antenna in which the driven element is conical in shape. Also known as cone antenna.

conical ball mill [MECH ENG] A cone-shaped tumbling pulverizer in which the steel balls are classified, with the larger balls at the feed end where larger lumps are crushed, and the smaller balls at the discharge end where the material is finer.

conical beam [ELECTR] The radar beam produced by conical scanning methods.

conical bearing [MECH ENG] An antifriction bearing employing tapered rollers.

conical buoy [NAV] A buoy whose part above water is in the shape of a cone.

conical helimagnet [SOLID STATE] A helimagnet in which the directions of atomic magnetic moments all make the same angle (greater than 0° and less than 90°) with a specified axis of the crystal, moments of atoms in successive basal planes are separated by equal azimuthal angles, and all moments have the same magnitude.

conical horn [ACOUS] A horn having a circular cross section and straight sides.

conical-horn antenna [ELECTROMAG] A horn antenna having a circular cross section and straight sides.

conical pendulum [MECH] A weight suspended from a cord or light rod and made to rotate in a horizontal circle about a vertical axis with a constant angular velocity.

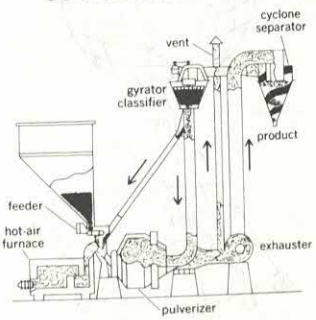
conical refiner [MECH ENG] In paper manufacture, a cone-shaped continuous refiner having two sets of bars mounted on the rotating plug and fixed shell for beating unmodified cellulose fibers.

conical refraction [OPTICS] Phenomenon in which a ray incident on the surface of a biaxial crystal at a certain direction splits into a family of rays which lie along a cone.

conical roll *See* batten roll.

conical scanning [ELECTR] Scanning in radar in which the direction of maximum radiation generates a cone, the vertex angle of which is of the order of the beam width; may be either

CONICAL BALL MILL



Conical ball mill pulverizer in closed circuit with classifier. *(Hardinge Co., Inc.)*

rotating or nutating, according to whether the direction of polarization rotates or remains unchanged.

conical surface [MATH] A surface formed by the lines which pass through each of the points of a closed plane curve and a fixed point which is not in the plane of the curve.

conical vault [ARCH] A vault whose inner surface is conical.

conic chart [MAP] A chart on a conic projection.

conic chart with two standard parallels [MAP] A chart on the conic projection with two standard parallels. Also known as secant conic chart.

conichalcite [MINERAL] $CaCu(AsO_4)(OH)$ A grass green to yellowish-green or emerald green, orthorhombic mineral consisting of a basic arsenate of calcium and copper.

Coniconchia [PALEON] A class name proposed for certain extinct organisms thought to have been mollusks; distinguished by a calcareous univalve shell that is open at one end and by lack of a siphon.

conic projection [MAP] A map deformation pattern resulting from the transfer of the map to a tangent or intersecting cone.

conic projection with two standard parallels [MAP] A conic map projection in which the surface of a sphere or spheroid, such as the earth, is conceived as developed on a cone which intersects the sphere or spheroid along two standard parallels, the cone being spread out to form a plane; for example, the Lambert conformal projection. Also known as secant conic projection.

conic section *See* conic.

Conidae [INV ZOO] A family of marine gastropod mollusks in the order Neogastropoda containing the poisonous cone shells.

conidiophore [MYCOL] A specialized aerial hypha that produces conidia in certain ascomycetes and imperfect fungi.

conidiospore *See* conidium.

conidium [MYCOL] Unicellular, asexual reproductive spore produced externally upon a conidiophore. Also known as conidiospore.

conifer [BOT] The common name for plants of the order Pinales.

Coniferales [BOT] The equivalent name for Pinales.

Coniferophyta [BOT] The equivalent name for Pinicae.

coniferous forest [ECOL] An area of wooded land predominated by conifers.

coniine [PHARM] $C_5H_{10}NC_3H_7$ A colorless, oily liquid with a mousy odor and a boiling point of 166°C; soluble in alcohol, ether, and oils; used as a sedative. Also known as propylpiperidine.

coniine hydrobromide [PHARM] $C_8H_{18}BrN$ Prismatic crystals melting at 211°C; soluble in chloroform, water, and alcohol; used as an antispasmodic drug.

coniscope *See* koniscope.

conjoint tendon [ANAT] The common tendon of the transverse and internal oblique muscles of the abdomen.

Conjugales [BOT] An order of fresh-water green algae in the class Chlorophyceae distinguished by the lack of flagellated cells, and conjugation being the method of sexual reproduction.

conjugase [BIOCHEM] Any of a group of enzymes which catalyze the breakdown of pteroylglutamic acid.

conjugate [GEOL] **1.** Pertaining to fractures in which both sets of veins or joints show the same strike but opposite dip. **2.** Pertaining to any two sets of veins or joints lying perpendicular. [MATH] *See* complex conjugate.

conjugate acid-base pair [CHEM] An acid and a base related by the ability of the acid to generate the base by loss of a proton.

conjugate binomial surds *See* conjugate radicals.

conjugate branches [ELEC] Any two branches of an electrical network such that a change in the electromotive force in either branch does not result in a change in current in the other. Also known as conjugate conductors.

conjugate bridge [ELECTR] A bridge in which the detector circuit and the supply circuits are interchanged, as compared with a normal bridge of the given type.

conjugate conductors *See* conjugate branches.

conjugate convex functions [MATH] Two functions $f(x)$ and $g(y)$ are conjugate convex functions if the derivative of $f(x)$ is 0 for $x = 0$ and constantly increasing for $x > 0$, and the derivative of $g(y)$ is the inverse of the derivative of $f(x)$.

conjugate curve *See* Bertrand curve.

conjugated diene [ORG CHEM] An acyclic hydrocarbon with a molecular structure containing two carbon-carbon double bonds separated by a single bond.

conjugate diameters [MATH] **1.** For a conic section, any pair of straight lines either of which bisects all the chords that are parallel to the other. **2.** For an ellipsoid or hyperboloid, any three lines passing through the point of symmetry of the surface such that the plane containing the conjugate diameters (first definition) of one of the lines also contains the other two lines.

conjugate division [MYCOL] Division of dikaryotic cells in certain fungi in which the two haploid nuclei divide independently, each daughter cell receiving one product of each nuclear division.

conjugated polyene [ORG CHEM] An acyclic hydrocarbon with a molecular structure containing alternating carbon-carbon double and single bonds.

conjugated protein [BIOCHEM] A protein combined with a nonprotein group, other than a salt or a simple protein.

conjugate fiber *See* bicomponent fiber.

conjugate foci *See* conjugate points.

conjugate hyperbolas [MATH] Two hyperbolas having the same asymptotes with semiaxes interchanged.

conjugate impedances [ELEC] Impedances having resistance components that are equal, and reactance components that are equal in magnitude but opposite in sign.

conjugate joint system [GEOL] Two joint sets with a symmetrical pattern arranged about another structural feature or an inferred stress axis.

conjugate lines [MATH] **1.** For a conic section, two lines each of which passes through the intersection of the tangents to the conic at its points of intersection with the other line. **2.** For a quadric surface, two lines each of which intersects the polar line of the other.

conjugate momentum [MECH] If $q_j (j = 1,2, \ldots)$ are generalized coordinates of a classical dynamical system, and L is its Lagrangian, the momentum conjugate to q_j is $p_j = \partial L/\partial q_j$. Also known as canonical momentum; generalized momentum.

conjugate particles [PARTIC PHYS] A particle and its antiparticle.

conjugate planes [MATH] For a quadric surface, two planes each of which contains the pole of the other.

conjugate points [MATH] For a conic section, two points either of which lies on the line that passes through the points of contact of the two tangents drawn to the conic from the other. [OPTICS] Any pair of points such that all rays from one are imaged on the other within the limits of validity of Gaussian optics. Also known as conjugate foci.

conjugate radicals [MATH] Binomial surds that are of the type $a\sqrt{b} + c\sqrt{d}$ and $a\sqrt{b} - c\sqrt{d}$, where a, b, c, d are rational but $\sqrt{b}$ and $\sqrt{d}$ are not both rational. Also known as conjugate binomial surds.

conjugate roots [MATH] Conjugate complex numbers which are roots of a given equation.

conjugate space [MATH] The set of all continuous linear functionals defined on a normed linear space.

conjugate triangles [MATH] Two triangles in which the poles of the sides of each with respect to a given curve are the vertices of the other.

conjugation [BOT] Sexual reproduction by fusion of two protoplasts in certain thallophytes to form a zygote. [INV ZOO] Sexual reproduction by temporary union of cells with exchange of nuclear material between two individuals, principally ciliate protozoans. [MICROBIO] A process involving contact between two bacterial cells during which genetic material is passed from one cell to the other.

conjunction [ASTRON] **1.** The situation in which two celestial bodies have either the same celestial longitude or the same sidereal hour angle. **2.** The time at which this conjunction takes place. [MATH] The connection of two statements by the word "and."

conjunctiva [ANAT] The mucous membrane covering the eyeball and lining the eyelids.

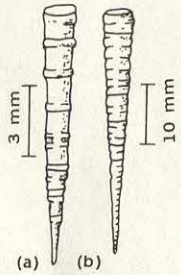
conjunctive search [COMPUT SCI] A search to identify items having all of a certain set of characteristics.

conjunctive transformation [MATH] The transformation $B = SAT$, where S is the Hermitian conjugate of T, and matrices A and B are equivalent.

conjunctivitis [MED] Inflammation of the conjunctiva.

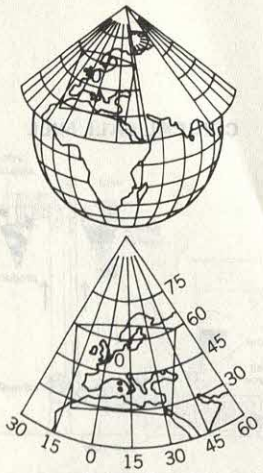
conn [NAV] To direct or conduct the steering of a vessel; to give orders to the helmsman on steering the ship.

CONICONCHIA



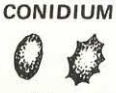
Early Paleozoic *Tentaculites*. *(a) T. gyracanthus* (Eaton), Upper Silurian. *(b) T. scalariforms* Hall, Middle Devonian. *(Adapted from R. C. Moore, C. G. Lalicker, and A. G. Fischer, Invertebrate Fossils, McGraw-Hill, 1952)*

CONIC PROJECTION



Conic projection based on origin 45°N 10°E. *(From American Oxford Atlas, Oxford University Press, 1951)*

CONIDIUM



Two conidia.

connarite [MINERAL] A green mineral consisting of hydrous nickel silicate occurring as small crystals or grains.

connate [GEOL] Referring to materials involved in sedimentary processes that are contemporaneous with surrounding materials. [SCI TECH] Born, originated, or produced in a united or fused condition.

connate leaf [BOT] A leaf shaped as though the bases of two opposite leaves had fused around the stem.

connate water [HYD] Water entrapped in the interstices of igneous rocks when the rocks were formed; usually highly mineralized.

connected graph [MATH] A graph in which each pair of points is connected by a path.

connected load [ELEC] The sum of the continuous power ratings of all load-consuming apparatus connected to an electric power distribution system or any part thereof.

connected set [MATH] A set in a topological space which is not the union of two nonempty sets A and B for which both the intersection of the closure of A with B and the intersection of the closure of B with A are empty; intuitively, a set with only one piece.

connected surface [MATH] A surface between any two points of which there is a continuous path that does not cross the surface's boundary.

connect function [COMPUT SCI] A signal sent over a data line to a selected peripheral device to connect it with the central processing unit.

connecting bar *See* tombolo.

connecting circuit [ELECTR] A functional switching circuit which directly couples other functional circuit units to each other to exchange information as dictated by the momentary needs of the switching system.

connecting rod [MECH ENG] Any straight link that transmits motion or power from one linkage to another within a mechanism, especially linear to rotary motion, as in a reciprocating engine or compressor.

connection box [COMPUT SCI] A mechanical device for altering electrical connections between various terminals, used to control the operations of a punched-card machine; its function is similar to that of a plug board.

connective tissue [HISTOL] A primary tissue, distinguished by an abundance of fibrillar and nonfibrillar extracellular components.

connectivity number [MATH] **1.** The number of points plus 1 which can be removed from a curve without separating the curve into more than one piece. **2.** The number of closed cuts or cuts joining points of previous cuts (or joining points on the boundary) plus 1 which can be made on a surface without separating the surface. Also known as Betti number.

connector [ELECTR] A switch, or relay group system, which finds the telephone line being called as a result of digits being dialed; it also causes interrupted ringing voltage to be placed on the called line or of returning a busy tone to the calling party if the line is busy. [ENG] **1.** A detachable device for connecting electrical conductors. **2.** A metal part for joining timbers.

connect time [COMPUT SCI] The time that a user at a terminal is signed on to a computer.

connellite [MINERAL] $Cu_{19}(SO_4)Cl_4(OH)_{32}\cdot 3H_2O$ A deep-blue striated copper mineral; crystals are in the hexagonal system. Also known as footeite.

conning tower [NAV ARCH] **1.** The raised observation post of a submarine, which is in addition usually used as an entrance or exit. **2.** The armored pilothouse of a warship.

connivent [BIOL] Converging so as to meet, but not fused into a single part.

Conoclypidae [PALEON] A family of Cretaceous and Eocene exocyclic Euechinoidea in the order Holectypoida having developed aboral petals, internal partitions, and a high test.

Conocyeminae [PALEON] A subfamily of Mesozoan parasites in the family Dicyemidae.

conode *See* tie line.

conodont [PALEON] A minute, toothlike microfossil, composed of translucent amber-brown, fibrous or lamellar calcium phosphate; taxonomic identity is controversial.

Conodontiformes [PALEON] A suborder of conodonts from the Ordovician to the Triassic having a lamellar internal structure.

Conodontophoridia [PALEON] The ordinal name for the conodonts.

conoid [SCI TECH] Shaped somewhat like a cone, but not quite conical.

Conopidae [INV ZOO] The wasp flies, a family of dipteran insects in the suborder Cyclorrhapha.

conoplain *See* pediment.

conoscope [OPTICS] An instrument, essentially a wide-angle microscope, used for study and observation of interference figures and related phenomena of specially cut crystal plates, especially for measuring the axial angle. Also known as hodoscope.

Conrad discontinuity [GEOPHYS] A relatively abrupt discontinuity in the velocity of elastic waves in the earth, increasing from 6.1 to 6.4–6.7 kilometers per second; occurs at various depths and marks contact of granitic and basaltic layers.

Conrad-Limpach method [CHEM ENG] Synthesis of 2-methyl-4-quinolone from aniline and acetoacetic ester.

Conrad machine [MIN ENG] Mechanized pit digger used in checking of alluvial boring; sections of tubing, 5 feet (152 centimeters) long and 2 feet (61 centimeters) in inside diameter, are worked into the ground while spoil is removed by means of a bucket or grab.

Conradson carbon test *See* carbon residue test.

consanguineous [GEOL] Of a natural group of sediments or sedimentary rocks, having common or related origin.

consanguineous ring structures [ASTRON] A formation on the moon's surface consisting of two or more craters that are similar in form and very close to each other.

consanguinity [GEN] Blood relationship arising from common parentage. [PETR] The genetic relationship between igneous rocks in a single petrographic province which are presumably derived from a common parent magma.

conscience [PSYCH] The moral, self-critical part of oneself wherein have developed, and reside, standards of behavior and performance and value judgments.

consciousness [PSYCH] State of being aware of one's own existence, of one's mental states, and of the impressions made upon one's senses.

consensus [SCI TECH] A method of checking or confirming the correctness of an observation or report, based on agreement between different observers.

consensus sequence [GEN] An average nucleotide sequence; each nucleotide is the most frequent at its position in the sequence.

consequence finding program [COMPUT SCI] A computer program that attempts to deduce mathematical consequences from a set of axioms and to select those consequences that will be significant.

consequent [GEOL] Of, pertaining to, or characterizing movements of the earth resulting from the external transfer of material in the process of gradation.

consequent poles [ELECTROMAG] Pairs of magnetic poles in a magnetized body that are in excess of the usual single pair.

consequent stream [GEOL] A stream whose course is determined by the slope of the land. Also known as superposed stream.

consequent valley [GEOL] **1.** A valley whose direction depends on corrugation. **2.** A valley formed by the widening of a trench cut by a consequent stream.

conservation [ECOL] Those measures concerned with the preservation, restoration, beneficiation, maximization, reutilization, substitution, allocation, and integration of natural resources.

conservation gasoline [MATER] Gasoline that is made from charging stocks consisting of vapors collected from distillation and cracking stills, from storage tanks, and from other points where condensation gasoline vapors may be escaping.

conservation law [PHYS] A law which states that some physical quantity associated with an isolated system is constant.

conservation of charge [ELEC] A law which states that the total charge of an isolated system is constant; no violation of this law has been discovered. Also known as charge conservation.

conservation of energy [PHYS] The principle that energy cannot be created or destroyed, although it can be changed from one form to another; no violation of this principle has been found. Also known as energy conservation.

conservation of mass [PHYS] The notion that mass can neither be created nor destroyed; it is violated by many microscopic phenomena.

conservation of matter [PHYS] The notion that matter can

CONNATE LEAF

Shape of a connate leaf.

CONNECTING CIRCUIT

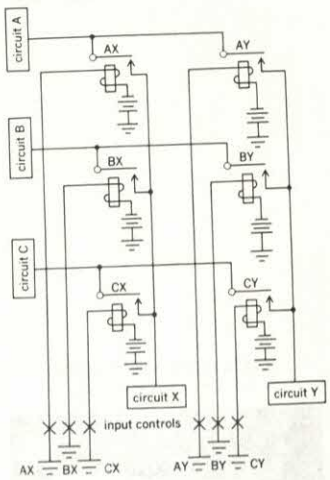


Diagram of a connecting circuit.

be neither created nor destroyed; it is violated by microscopic phenomena.

conservation of momentum [MECH] The principle that, when a system of masses is subject only to internal forces that masses of the system exert on one another, the total vector momentum of the system is constant; no violation of this principle has been found. Also known as momentum conservation.

conservation of orbital symmetry *See* Woodward-Hoffmann rule.

conservation of parity [QUANT MECH] The law that, if the wave function describing the initial state of a system has even (odd) parity, the wave function describing the final state has even (odd) parity; it is violated by the weak interactions. Also known as parity conservation.

conservation of probability [QUANT MECH] The requirement that the sum of the probabilities of finding a system in each of its possible states is constant.

conservation of vorticity [FL MECH] **1.** The principle that the vertical component of the absolute vorticity of each particle in an inviscid, autobarotropic fluid flowing horizontally remains constant. **2.** The hypothesis that the vorticity of fluid particles remains constant during the turbulent mixing of the fluid.

conservative concentrations [OCEANOGR] Concentrations such as heat content or salinity occurring in bodies of water that are altered locally, except at the boundaries, by processes of diffusion and advection only.

conservative force field [MECH] A field of force in which the work done on a particle in moving it from one point to another depends only on the particle's initial and final positions.

conservative property [THERMO] A property of a system whose value remains constant during a series of events.

conserved vector current [PARTIC PHYS] The hypothesis that the weak hadronic vector current is identical to the conserved isotopic-spin current. Abbreviated CVC.

consistency [MATER] The degree of solidity or fluidity of a material such as grease, pulp, or slurry.

consistency condition [MATH] The requirement that a mathematical theory be free from contradiction.

consistency routine [COMPUT SCI] A debugging routine which is used to determine whether the program being checked gives consistent results at specified check points; for example, consistent between runs or with values calculated by other means.

consistent estimate [STAT] A method of estimation which has the property that the estimate is practically certain to fall very close to a parameter being estimated, provided there are sufficient observations.

consociation [ECOL] A climax community of plants which is dominated by a single species.

Consol [NAV] A radio navigation aid that provides a number of characteristic signal zones which rotate in a time sequence; a bearing may be determined by observation of the instant at which transition occurs from one zone to the following zone. Also known as Sonne.

Consolan [NAV] A long-range directional navigation system that transmits a slowly rotating keyed radio field pattern; an American version of the German Sonne and British Consol, using two radiators instead of three to minimize night-effect errors.

Consol chart [NAV] A chart showing the lines of position of the Consol navigation system.

console [COMPUT SCI] The section of a computer that is used to control the machine manually, correct errors, manually revise the contents of storage, and provide communication in other ways between the operator or service engineer and the central processing unit. [ENG] **1.** A main control desk for electronic equipment, as at a radar station, radio or television station, or airport control tower. Also known as control desk. **2.** A large cabinet for a radio or television receiver, standing on the floor rather than on a table. **3.** A grouping of controls, indicators, and similar items contained in a specially designed model cabinet for floor mounting; constitutes an operator's permanent working position.

console display [COMPUT SCI] The visible representation of information, whether in words, numbers, or drawings, on a console screen connected to a computer.

console file adapter [COMPUT SCI] A special input/output device which allows the operator to load reloadable control storage from the system console.

console receiver [ELECTR] A television or radio receiver in a console.

console switch [COMPUT SCI] A switch on a computer console whose setting can be sensed by a computer, so that an instruction in the program can direct the computer to use this setting to determine which of various alternative courses of action should be followed.

console typewriter [COMPUT SCI] A typewriter by means of which the computer operator can monitor system and program operations.

consolidated ice [OCEANOGR] Ice which has been compacted into a solid mass by wind and ocean currents and covers an area of the ocean.

consolidation [GEOL] **1.** Processes by which loose, soft, or liquid earth become coherent and firm. **2.** Adjustment of a saturated soil in response to increased load; involves squeezing of water from the pores and a decrease in void ratio.

consolidation test [MIN ENG] A test in which the specimen is confined laterally in a ring and is compressed between porous plates which are saturated with water.

Consol station [NAV] A short-base-line directional-antenna system consisting of three low-frequency/medium-frequency vertical antennas in a line on the ground, evenly spaced at a distance of about three times the length of the transmitted continuous wave; coverage is about 240° over long distances, in the form of 22 lobes; the lobes are areas where the signals corresponding to the Morse E and T are heard; these patterns rotate in space and the line of position is determined by counting the numbers of E's and T's that are heard.

consolute [CHEM] Of or pertaining to liquids that are perfectly miscible in all proportions under certain conditions.

consolute temperature [THERMO] The upper temperature of immiscibility for a two-component liquid system. Also known as upper consolute temperature; upper critical solution temperature.

consonance [ACOUS] The interval between two tones whose frequencies are in a ratio approximately equal to the quotient of two whole numbers, each equal to or less than 6, or to such a quotient multiplied or divided by some power of 2.

consortism *See* symbiosis.

conspecific [SYST] Referring to individuals or populations of a single species.

constancy *See* persistence.

constant [SCI TECH] A value that does not change during a particular process.

constant-amplitude recording [ENG ACOUS] A sound-recording method in which all frequencies having the same intensity are recorded at the same amplitude.

constant-angle fringes *See* Haidinger fringes.

constant area [COMPUT SCI] A part of storage used for constants.

constant-bandwidth analyzer [ACOUS] A tunable sound analyzer which has a fixed pass band that is swept through the frequency range of interest. Also known as constant-bandwidth filter.

constant-bandwidth filter *See* constant-bandwidth analyzer.

constant-conductance network *See* constant-resistance network.

constant-current characteristic [ELECTR] The relation between the voltages of two electrodes in an electron tube when the current to one of them is maintained constant and all other electrode voltages are constant.

constant-current dc potentiometer [ELEC] A potentiometer in which the unknown electromotive force is balanced by a constant current times the resistance of a calibrated resistor or slide-wire. Also known as Poggendorff's first method.

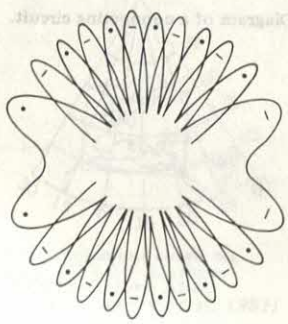
constant-current electrolysis [CHEM] Electrolysis in which a constant current flows through the cell; used in electrodeposition analysis.

constant-current filter [ELECTR] A filter network intended to be connected to a source whose internal impedance is so high it can be assumed as infinite.

constant-current generator [ELECTR] A vacuum-tube circuit, generally containing a pentode, in which the alternating-current anode resistance is so high that anode current remains essentially constant despite variations in load resistance.

constant-current modulation [COMMUN] System of amplitude modulation in which output circuits of the signal amplifier and the carrier-wave generator or amplifier are connected via

CONSOL



Field pattern of a Consol system.

a common coil to a constant-current source. Also known as Heising modulation.

constant-current source [ELECTR] A circuit which produces a specified current, independent of the load resistance or applied voltage.

constant-current supply [ELEC] The power supply for repeatered submarine telephone cables; the voltage is varied automatically to maintain a constant current through the use of variable-voltage rectifiers and constant-current regulators at each shore station.

constant-current titration *See* potentiometric titration.

constant-current transformer [ELEC] A transformer that automatically maintains a constant current in its secondary circuit under varying loads, when supplied from a constant-voltage source.

constant-delay discriminator *See* pulse demoder.

constant-deviation fringes *See* Haidinger fringes.

constant-distance sphere [ENG ACOUS] The relative response of a sonar projector to variations in acoustic intensity, or intensity per unit band, over the surface of a sphere concentric with its center.

constant-effect model [STAT] A model of a test in which the effect of a treatment is the same for all subjects.

constant-false-alarm rate [ELECTR] Radar system devices used to prevent receiver saturation and overload so as to present clean video information to the display, and to present a constant noise level to an automatic detector.

constant field *See* stationary field.

constant-force spring [MECH ENG] A spring which has a constant restoring force, regardless of displacement.

constant-gradient synchrotron [NUCLEO] A synchrotron in which the radial gradient of the magnetic field is constant as a function of angle around the orbit.

constant-head meter [ENG] A flow meter which maintains a constant pressure differential but varies the orifice area with flow, such as a rotameter or piston meter.

constant-height chart [METEOROL] A synoptic chart for any surface of constant geometric altitude above mean sea level (a constant-height surface), usually containing plotted data and analyses of the distribution of such variables as pressure, wind, temperature, and humidity at that altitude. Also known as constant-level chart; fixed-level chart; isohypsic chart.

constant-height surface [METEOROL] A surface of constant geometric or geopotential altitude measured with respect to mean sea level. Also known as constant-level surface; isohypsic surface.

constant instruction [COMPUT SCI] A nonexecutable instruction.

constant-k filter [ELECTR] A filter in which the product of the series and shunt impedances is a constant that is independent of frequency.

constant-k lens [ELECTROMAG] A microwave lens that is constructed as a solid dielectric sphere; a plane electromagnetic wave brought to a focus at one point on the sphere emerges from the opposite side of the sphere as a parallel beam.

constant-k network [ELECTR] A ladder network in which the product of the series and shunt impedances is independent of frequency within the operating frequency range.

constant-level balloon [AERO ENG] A balloon designed to float at a constant pressure level. Also known as constant-pressure balloon.

constant-level chart *See* constant-height chart.

constant-level surface *See* constant-height surface.

constant-load balance [ENG] An instrument for measuring weight or mass which consists of a single pan (together with a set of weights that can be suspended from a counterpoised beam) that has a constant load (200 grams for the microbalance).

constant-luminance transmission [COMMUN] Type of transmission in which the transmission primaries are a luminance primary and two chrominance primaries.

constant of aberration [ASTRON] The maximum aberration of a star observed from the surface of the earth, equal to 20.49 seconds of arc.

constant of gravitation *See* gravitational constant.

constant of motion [MECH] A dynamical variable of a system which remains constant in time.

constant of the cone [MAP] The chart convergence factor for a conic projection.

constant-potential accelerator [NUCLEO] An accelerator in which constant direct-current voltage is applied to an accelerating tube to produce high-energy ions or electrons.

constant-potential electrolysis [CHEM] Electrolysis in which a constant voltage is applied to the cell; used in electrodeposition analysis.

constant-pressure balloon *See* constant-level balloon.

constant-pressure chart [METEOROL] The synoptic chart for any constant-pressure surface, usually containing plotted data and analyses of the distribution of height of the surface, wind temperature, humidity, and so on. Also known as isobaric chart; isobaric contour chart.

constant-pressure combustion [MECH ENG] Combustion occurring without a pressure change.

constant-pressure gas thermometer [ENG] A thermometer in which the volume occupied by a given mass of gas at a constant pressure is used to determine the temperature.

constant-pressure-pattern flight [NAV] A technique of pressure-pattern flight whereby an aircraft is navigated, in the direction of wind flow, along a height contour line on a constant-pressure surface, thereby assuring a continuous, nearly direct tail wind.

constant-pressure surface *See* isobaric surface.

constant radio code [COMMUN] Code in which all characters are represented by combinations having a fixed ratio of ones to zeros.

constant-resistance dc potentiometer [ELEC] A potentiometer in which the ratio of an unknown and a known potential are set equal to the ratio of two known constant resistances. Also known as Poggendorff's second method.

constant-resistance network [ELECTR] A network having at least one driving-point impedance that is a positive constant. Also known as constant-conductance network.

constant series *See* displacement series.

constant-speed drive [MECH ENG] A mechanism transmitting motion from one shaft to another that does not allow the velocity ratio of the shafts to be varied, or allows it to be varied only in steps.

constant-speed propeller [AERO ENG] A variable-pitch propeller having a governor which automatically changes the pitch to maintain constant engine speed.

constant-velocity recording [ENG ACOUS] A sound-recording method in which, for input signals of a given amplitude, the resulting recorded amplitude is inversely proportional to the frequency; the velocity of the cutting stylus is then constant for all input frequencies having that given amplitude.

constant-velocity universal joint [MECH ENG] A universal joint that transmits constant angular velocity from the driving to the driven shaft, such as the Bendix-Weiss universal joint.

constant-voltage generator [ELEC] An axle generator that is equipped with a regulator which keeps voltage constant.

constant-voltage transformer [ELEC] A power transformer which will supply a constant voltage to an unvarying load, even with changes in the primary voltage.

constant-volume gas thermometer *See* gas thermometer.

Constellariidae [PALEON] A family of extinct, marine bryozoans in the order Cystoporata.

constellation [ASTRON] **1.** Any one of the star groups interpreted as forming configurations in the sky; examples are Orion and Leo. **2.** Any one of the definite areas of the sky.

constipation [MED] The passage of hard, dry stools.

constituent [SCI TECH] An essential part or component of a system or group; examples are an ingredient of a chemical system, or a component of an alloy.

constituent day [ASTRON] The duration of one rotation of the earth on its axis with respect to an astre fictif, that is, a fictitious star representing one of the periodic elements in the tidal forces; approximates the length of a lunar or solar day.

constituent number [OCEANOGR] One of the harmonic elements in a mathematical expression for the tide-producing force, and in corresponding formulas for the tide or tidal current.

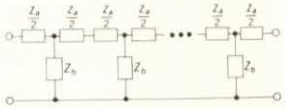
constitutional anthropology [ANTHRO] A branch of physical anthropology concerned with body composition and constitution of an individual.

constitutional isomers [ORG CHEM] Isomers which differ in the manner in which their atoms are linked.

constitution diagram [MET] Graphical representation of phase-stability relationships in an alloy system as a function of temperature. Also known as phase diagram.

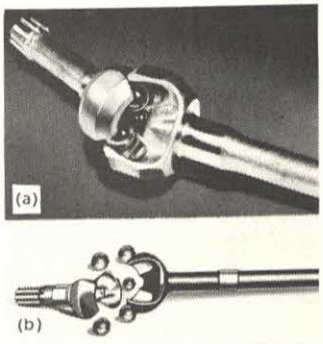
constitutive enzyme [BIOCHEM] An enzyme whose con-

CONSTANT-K NETWORK



T sections, one form of constant-k recurrent ladder network.

CONSTANT-VELOCITY UNIVERSAL JOINT



Constant-velocity universal joint. *(a)* Partially separated cutaway. *(b)* Disassembled joint showing the arrangement; the right-hand member has been cut away. *(Bendix Aviation Corp.)*

centration in a cell is constant and is not influenced by substrate concentration.

constitutive equations [ELECTROMAG] The equations $D = \epsilon E$ and $B = \mu H$, which relate the electric displacement D with the electric field intensity E, and the magnetic induction B with the magnetic field intensity H.

constitutive property [CHEM] Any physical or chemical property that depends on the constitution or structure of the molecule.

constrained mechanism [MECH ENG] A mechanism in which all members move only in prescribed paths.

constrained optimization problem [MATH] A nonlinear programming problem in which there are constraint functions.

constraint [ENG] Anything that restricts the transverse contraction which normally occurs in a solid under longitudinal tension. [MECH] A restriction on the natural degrees of freedom of a system; the number of constraints is the difference between the number of natural degrees of freedom and the number of actual degrees of freedom. [SCI TECH] A condition imposed on a system which limits the freedom of the system; may be physical or mathematical, necessary or incidental.

constraint function [MATH] A function defining one of the prescribed conditions in a nonlinear programming problem.

constraint matrix [COMPUT SCI] The set of equations and inequalities defining the set of admissible solutions in linear programming.

constricting nozzle [MET] A copper nozzle which has a constricting orifice and envelopes the electrode in plasma arc processes.

constriction [MED] *See* stricture. [SCI TECH] Narrowing of a channel or cylindrical member.

constriction disease [PL PATH] A fungus disease of peach trees caused by a species of *Phomopsis* and marked by death of peripheral structures.

constrictive pericarditis [MED] Inflammation and fibrosis of the pericardium resulting in constriction of the heart and restriction of contraction and blood flow. Also known as Pick's disease.

constrictor [AERO ENG] The exit portion of the combustion chamber in some designs of ramjets, where there is a narrowing of the tube at the exhaust.

constringence *See* nu value.

construction [DES ENG] The number of strands in a wire rope and the number of wires in a strand; expressed as two numbers separated by a multiplication sign. [ENG] **1.** Putting parts together to form an integrated object. **2.** The manner in which something is put together. [TEXT] A fabric formula, being the number of warp and filling threads per square inch and the weight of the yarns.

constructional apraxia *See* optic apraxia.

construction area [BUILD] The area of exterior walls and permanent interior walls and partitions.

construction engineering [CIV ENG] A specialized branch of civil engineering concerned with the planning, execution, and control of construction operations for projects such as highways, dams, utility lines, and buildings.

construction equipment [MECH ENG] Heavy power machines which perform specific construction or demolition functions.

construction joint [CIV ENG] A vertical or horizontal surface in reinforced concrete where concreting was stopped and continued later.

construction operator [COMPUT SCI] The part of a data structure which is used to construct composite objects from atoms.

construction paper [MATER] A heavy paper made from mechanical pulp and available in a large range of colors, most of which are not lightfast.

construction survey [CIV ENG] A survey that gives locations for construction work.

construction weight [AERO ENG] The weight of a rocket exclusive of propellant, load, and crew if any. Also known as structural weight.

construction wrench [DES ENG] An open-end wrench with a long handle; the handle is used to align matching rivet or bolt holes.

constructive interference [PHYS] Phenomenon in which the phases of waves arriving at a specified point over two or more paths of different lengths are such that the square of the resultant amplitude is greater than the sum of the squares of the component amplitudes.

consumable electrode [MET] A metal electrode that supplies the filler for welding.

consumable guide electroslag welding [MET] A modification of the wire process of electroslag welding in which the filler metal is supplied by a welding wire held by a stationary metal tube.

consumable insert [MET] Filler metal which is located at the root of a welded joint and which becomes part of the final weldment.

consumer [ECOL] A nutritional grouping in the food chain of an ecosystem, composed of heterotrophic organisms, chiefly animals, which ingest other organisms or particulate organic matter.

consumer's risk [IND ENG] The probability that a lot whose quality equals the poorest quality that a consumer is willing to tolerate in an individual lot will be accepted by a sampling plan.

consummatory behavior [PSYCH] Actions that fulfill a motive and cause appetitive behavior to end.

consumption *See* tuberculosis.

consumptive coagulopathy [MED] Reduction in one or more of the blood elements involved in coagulation as the result of marked blood clotting.

consumptive use [HYD] The total annual land water loss in an area, due to evaporation and plant use.

contact [ELEC] *See* electric contact. [ENG] Initial detection of an aircraft, ship, submarine, or other object on a radarscope or other detecting equipment. [FL MECH] The surface between two immiscible fluids contained in a reservoir. [GEOL] The surface between two different kinds of rocks.

contact acid [INORG CHEM] Sulfuric acid produced by the contact process.

contact adsorption [CHEM ENG] Process for removal of minor constituents from fluids by stirring in direct contact with powdered or granulated adsorbents, or by passing the fluid through fixed-position adsorbent beds (activated carbon or ion-exchange resin); used to decolorize petroleum lubricating oils and to remove solvent vapors from air.

contact aerator [CIV ENG] A tank in which sewage that is settled on a bed of stone, cement-asbestos, or other surfaces is treated by aeration with compressed air.

contact anemometer [ENG] An anemometer which actuates an electrical contact at a rate dependent upon the wind speed. Also known as contact-cup anemometer.

contact angle *See* angle of contact.

contact aureole *See* aureole.

contact bed [CIV ENG] A bed of coarse material such as coke, used to purify sewage.

contact block [ELEC] A block of conducting material such as carbon, used in a relay.

contact bounce [ELEC] The uncontrolled making and breaking of contact one or more times, but not continuously, when relay contacts are moved to the closed position.

contact breccia [PETR] Angular rock fragments resulting from shattering of wall rocks around laccolithic and other igneous masses.

contact catalysis [CHEM ENG] Process of change in the structure of gas molecules adsorbed onto solid surfaces; the basis of many industrial processes.

contact ceiling [BUILD] A ceiling in which the lath and construction are in direct contact, without use of furring or runner channels.

contact chart *See* aeronautical pilotage chart.

contact chatter *See* chatter.

contact clip [ELEC] The clip which the blade of a knife switch is clamped to in the closed condition.

contact condenser [MECH ENG] A device in which a vapor, such as steam, is brought into direct contact with a cooling liquid, such as water, and is condensed by giving up its latent heat to the liquid. Also known as direct-contact condenser.

contact corrosion *See* crevice corrosion.

contact-cup anemometer *See* contact anemometer.

contact dermatitis [MED] An acute or chronic inflammation of the skin resulting from irritation by or sensitization to some substance coming in contact with the skin.

contact electricity [ELEC] An electric charge at the surface of contact of two different materials.

contact electromotive force *See* contact potential difference.

contact filtration [CHEM ENG] A process in which finely divided adsorbent clay is mixed with oil to remove color bodies and to improve the oil's stability.

contact flight [NAV] Flight in which visual contact is maintained with the surface of the earth.

contact follow [ELEC] The distance two contacts travel together after just touching. Also known as contact overtravel.

contact force [ELEC] The force exerted by the moving contact of a switch or relay on a stationary contact.

contact fuse *See* impact fuse.

contact gear ratio *See* contact ratio.

contact inhibition [CYTOL] Cessation of cell division when cultured cells are in physical contact with each other.

contact-initiated discharge machining [MECH ENG] An electromachining process in which the discharge is initiated by allowing the tool and workpiece to come into contact, after which the tool is withdrawn and an arc forms.

contact inspection [ENG] A method by which an ultrasonic search unit scans a test piece in direct contact with a thin layer of couplant for transmission between the search unit and entry surface.

contact lens [OPTICS] **1.** A thin lens fitted over the cornea to correct defects of vision. **2.** A similar lens or prism used with a gonioscope in eye examinations.

contact log [PETRO ENG] Record of electrical-resistivity data pertaining to strata structures along the depth of a drill hole.

contact-making meter *See* instrument-type relay.

contact-mask read-only memory *See* last-mask read-only memory.

contact material [MET] A metal having high electrical and thermal conductivity, low contact resistance, minimum sticking or welding tendencies, and high corrosion resistance.

contact metamorphic rock [PETR] A rock formed by the processes of contact metamorphism.

contact metamorphism [PETR] Metamorphism that is genetically related to the intrusion or extrusion of magmas and takes place in rocks at or near their contact.

contact metasomatism [GEOL] One of the main local processes of thermal metamorphism that is related to intrusion of magmas; takes place in rocks or near their contact with a body of igneous rock.

contact microphone [ENG ACOUS] A microphone designed to pick up mechanical vibrations directly and convert them into corresponding electric currents or voltages.

contact mine [ORD] A mine that is fired when struck by the hull of a passing ship.

contact mineral [MINERAL] A mineral formed by the processes of contact metamorphism.

contactor [ELEC] A heavy-duty relay used to control electric power circuits. Also known as electric contactor.

contactor control system [CONT SYS] A feedback control system in which the control signal is a discontinuous function of the sensed error and may therefore assume one of a limited number of discrete values.

contact overtravel *See* contact follow.

contact paper [GRAPHICS] Photographic paper designed to be exposed when directly in contact with a reproducible document.

contact piston [ELECTROMAG] A waveguide piston that makes contact with the walls of the waveguide. Also known as contact plunger.

contact plunger *See* contact piston.

contact potential *See* contact potential difference.

contact potential difference [ELEC] The potential difference that exists across the space between two electrically connected materials. Also known as contact electromotive force; contact potential; Volta effect.

contact pressure [ELEC] The amount of pressure holding a set of contacts together.

contact-pressure resin *See* contact resin.

contact print [GRAPHICS] A photographic image produced by the exposure of a sensitized emulsion in direct contact with a negative or positive transparency.

contact printer [GRAPHICS] **1.** A device which provides a light source and a means for holding the negative and the sensitive material in contact during exposure. **2.** A specialized device for exposing diapositive plates at the same scale as that of the negative.

contact process [CHEM ENG] Catalytic manufacture of sulfuric acid from sulfur dioxide and oxygen.

contact protection [ELEC] Any method for suppressing the surge which results when an inductive circuit is suddenly interrupted; the break would otherwise produce arcing at the contacts, leading to their deterioration.

contact ratio [DES ENG] The ratio of the length of the path of contact of two gears to the base pitch, equal to approximately the average number of pairs of teeth in contact. Also known as contact gear ratio.

contact rectifier *See* metallic rectifier.

contact resin [MATER] A liquid resin which thickens or polymerizes on heating and, when used for bonding laminates, requires little or no pressure for adherence. Also known as contact-pressure resin.

contact resistance [ELEC] The resistance in ohms between the contacts of a relay, switch, or other device when the contacts are touching each other.

contact screen [GRAPHICS] A photographically made halftone screen on film having a dot structure of graded density, specifically designed for making halftone negatives and positives for photomechanical reproduction; the screen is placed in direct contact with the film or plate to obtain a halftone pattern from a continuous original.

contact thermography [ENG] A method of measuring surface temperature in which a thin layer of luminescent material is spread on the surface of an object and is excited by ultraviolet radiation in a darkened room; the brightness of the coating indicates the surface temperature.

contact time [ENG] The length of time a substance is held in direct contact with a treating agent.

contact transformation *See* canonical transformation.

contact tube [MET] A device which provides electric current to a continuous electrode in a welding process.

contact twin [CRYSTAL] Twinned crystals whose members are symmetrically arranged about a twin plane.

contact vein [GEOL] **1.** A variety of fissure vein formed by deposition of minerals in a fault fissure at a rock contact. **2.** A replacement vein formed by mineralized solutions percolating along the more permeable surface areas of the contact.

contact zone *See* aureole.

contagion [MED] **1.** The process whereby disease spreads from one person to another, by direct or indirect contact. **2.** The bacterium or virus which transmits disease.

contagious abortion [VET MED] Brucellosis in cattle caused by *Brucella abortus* and inducing abortion. Also known as Bang's disease; infectious abortion.

contagious disease [MED] An infectious disease communicable by contact with one suffering from it, with his bodily discharge, or with an object touched by him.

contagious distribution [STAT] A probability distribution which is dependent on a parameter that itself has a probability distribution.

contagious polyarthritis [VET MED] An infectious bacterial disease of mice caused by members of the genus *Bacteroides;* characterized by inflammation and abcess formation in the joints.

contagious pustular dermatitis [VET MED] An infectious disease of sheep and goats characterized by vesicles on the skin which are transformed into pustules.

container [IND ENG] A portable compartment of standard, uniform size, used to hold cargo for air, sea, or ground transport.

container car [ENG] A railroad car designed specifically to hold containers.

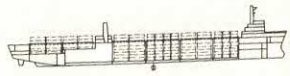
containerization [IND ENG] The practice of placing cargo in large containers such as truck trailers to facilitate loading on and off ships and railroad flat cars.

container ship [NAV ARCH] A cargo ship which carries its cargo in weatherproof boxes (usually metal) of standard size, called containers, which need not be opened and are rapidly loaded or unloaded from the ship.

containment [NUCLEO] **1.** Provision of a gastight enclosure around the highly radioactive components of a nuclear power plant, to contain the radioactivity released by a possible major accident. **2.** The use of remote-control devices (slave apparatus) to remove spent cores from nuclear power plants or, in shielded laboratory hoods, to perform chemical studies of dangerous radioactive materials.

containment vessel [NUCLEO] A gas-tight shell or other enclosure around a reactor.

CONTAINER SHIP



Inboard profile of a container ship.

contaminate [SCI TECH] To render unfit or to soil by the introduction of foreign or unwanted material.

contamination [GEOL] A process in which the chemical composition of a magma changes due to the assimilation of country rocks. [HYD] The addition to water of any substance or property that prevents its use without further treatment. [MICROBIO] The process or act of soiling with bacteria. [NUCLEO] The deposit of radioactive materials, such as fission fragments or radiological warfare agents, on any objective or surface or in the atmosphere. [PSYCH] The fusion of words, resulting in a new word. [SCI TECH] Something that contaminates.

contamination monitor [NUCLEO] A radiation counter used to detect radioactive contamination of surface areas or of the atmosphere.

contemporaneous [GEOL] **1.** Formed, existing, or originating at the same time. **2.** Of a rock, developing during formation of the enclosing rock.

contemporary carbon [CHEM] The isotopic carbon content of living matter, based on the assumption of a natural proportion of carbon-14.

content-addressed storage *See* associative memory.

content analysis [COMPUT SCI] A method of automatically assigning words that identify the content of information items or search requests in an information retrieval system.

content indicator [COMPUT SCI] Display unit that indicates the content in a computer, and the program or mode being used.

contention [COMMUN] A method of operating a multiterminal communication channel in which any station may transmit if the channel is free; if the channel is in use, the queue of contention requests may be maintained in predetermined sequence. [COMPUT SCI] The condition arising when two or more units attempt to transmit over a time-division-multiplex channel at the same time.

contention resolver [COMPUT SCI] A device that enables a central processing unit, memory, or channel whose attention is being requested over several pathways to give its attention to one pathway and ignore all others.

contents [COMPUT SCI] The information stored at any address or in any register of a computer.

context-driven line editor [COMPUT SCI] A line editor in which the user need not know or keep track of line numbers but can call up text by line content; the computer will then search for the indicated pattern.

context-free grammar [COMPUT SCI] A grammar in which any occurrence of a metavariable may be replaced by one of its alternatives.

context-sensitive grammar [COMPUT SCI] A grammar in which the rules are applicable only when a metavariable occurs in a specified context.

contiguous arc [ASTRON] A crater arc in which successive craters are in contact.

contiguous chain [ASTRON] A crater chain in which successive craters are in contact.

contiguous craters [ASTRON] A formation on the moon's surface consisting of two craters in contact; the walls at the point of contact are low, broken, or entirely absent.

continent [GEOGR] A protuberance of the earth's crustal shell, with an area of several million square miles and sufficient elevation so that much of it is above sea level.

continental accretion [GEOL] The theory that continents have grown by the addition of new continental material around an original nucleus, mainly through the processes of geosynclinal sedimentation and orogeny.

continental air [METEOROL] A type of air whose characteristics are developed over a large land area and which therefore has relatively low moisture content.

continental anticyclone *See* continental high.

continental borderland [GEOL] The area of the continental margin between the shoreline and the continental slope.

continental climate [CLIMATOL] Climate characteristic of the interior of a landmass of continental size, marked by large annual, daily, and day-to-day temperature ranges, low relative humidity, and a moderate or small irregular rainfall; annual extremes of temperature occur soon after the solstices.

continental code [COMMUN] The code commonly used for manual telegraph communication, consisting of short (dot) and long (dash) symbols, but not the various-length spaces used in the original Morse code. Also known as international Morse code.

continental crust [GEOL] The basement complex of rock, that is, metamorphosed sedimentary and volcanic rock with associated igneous rocks mainly granitic, that underlies the continents and the continental shelves.

continental deposits [GEOL] Sedimentary deposits laid down within a general land area.

continental drift [GEOL] The concept of continent formation by the fragmentation and movement of land masses on the surface of the earth.

continental geosyncline [GEOL] A geosyncline filled with nonmarine sediments.

continental glacier [HYD] A sheet of ice covering a large tract of land, such as the ice caps of Greenland and the Antarctic.

continental growth [GEOL] The processes contributing to growth of continents at the expense of ocean basins.

continental heat flow [GEOPHYS] The amount of thermal energy escaping from the earth through the continental crust per unit area and unit time.

continental high [METEOROL] A general area of high atmospheric pressure which on mean cnarts of sea-level pressure is seen to overlie a continent during the winter. Also known as continental anticyclone.

continentality [CLIMATOL] The degree to which a point on the earth's surface is in all respects subject to the influence of a land mass.

continental margin [GEOL] Those provinces between the shoreline and the deep-sea bottom; generally consists of the continental borderland, shelf, slope, and rise.

continental mass [GEOGR] The continental land rising more or less abruptly from the ocean floor and also the shallow submerged areas surrounding this land.

continental nucleus [GEOL] A large area of basement rock consisting of basaltic and more mafic oceanic crust and periodotitic mantle from which it is postulated that continents have grown. Also known as continental shield; cratogene; shield.

continental plate [GEOL] Thick continental crust.

continental plateau *See* tableland.

continental platform *See* continental shelf.

continental polar air [METEOROL] Polar air having low surface temperature, low moisture content, and (especially in its source regions) great stability in the lower layers.

continental rise [GEOL] A transitional part of the continental margin; a gentle slope with a generally smooth surface, built up by the shedding of sediments from the continental block, and located between the continental slope and the abyssal plain.

continental shelf [GEOL] The zone around a continent, that part of the continental margin extending from the shoreline and the continental slope; composes with the continental slope the continental terrace. Also known as continental platform; shelf.

continental shield [GEOL] Large areas of Precambrian rocks exposed within the cratons of continents.

continental slope [GEOL] The part of the continental margin consisting of the declivity from the edge of the continental shelf extending down to the continental rise.

continental terrace [GEOL] The continental shelf and slope together.

continental tropical air [METEOROL] A type of tropical air produced over subtropical arid regions; it is hot and very dry.

continent formation [GEOL] A series of six or seven major episodes, resulting from the buildup of radioactive heat and then the melting or partial melting of the earth's interior; the molten rock melt rises to the surface, differentiating into less primitive lavas; the continent then nucleates, differentiates, and grows from oceanic crust and mantle.

contingency interrupt [COMPUT SCI] A processing interruption due to an operator's action or due to an abnormal result from the system or from a program.

contingency table [STAT] A table for classifying elements of a population according to two variables, the rows corresponding to one variable and the columns to the other.

continued fraction [CONT SYS] The sum of a number and a fraction whose denominator is the sum of a number and a fraction, and so forth; it may have either a finite or an infinite number of terms.

continued-fraction expansion [MATH] **1.** An expansion of a driving-point function about infinity (or zero) in a continued fraction, in which the terms are alternately constants and multiples of the complex frequency (or multiples of the reciprocal of

the complex frequency). **2.** A representation of a real number by a continued fraction, in a manner similar to the representation of real numbers by a decimal expansion.

continued product [MATH] A product of three or more factors, or of an infinite number of factors.

continue statement [COMPUT SCI] A nonexecutable statement in FORTRAN used principally as a target for transfers, particularly as the last statement in the range of a do statement.

continuity [CIV ENG] Joining of structural members to each other, such as floors to beams, and beams to beams and to columns, so they bend together and strengthen each other when loaded. Also known as fixity. [ELEC] Continuous effective contact of all components of an electric circuit to give it high conductance by providing low resistance.

continuity chart [METEOROL] A chart maintained for weather analysis and forecasting upon which are entered the positions of significant features (pressure centers, fronts, instability lines, through lines, ridge lines) of the regular synoptic charts at regular intervals in the past.

continuity equation [PHYS] An equation obeyed by any conserved, indestructible quantity such as mass, electric charge, thermal energy, electrical energy, or quantum-mechanical probability, which is essentially a statement that the rate of increase of the quantity in any region equals the total current flowing into the region. Also known as equation of continuity.

continuity test [ELEC] An electrical test used to determine the presence and location of a broken connection.

continuous at a point [MATH] A function f is continuous at a point x if for every sequence $\{x_n\}$ whose limit is x, the sequence $f(x_n)$ converges to $f(x)$; in a general topological space, for every neighborhood W of $f(x)$, there is a neighborhood N of x such that $f^{-1}(W)$ is contained in N.

continuous beam [CIV ENG] **1.** A beam resting upon several supports, which may be in the same horizontal plane. **2.** A beam having several spans in one straight line; generally has at least three supports.

continuous brake [MECH ENG] A train brake that operates on all cars but is controlled from a single point.

continuous bridge [CIV ENG] A fixed bridge supported at three or more points and capable of resisting bending and shearing forces at all sections throughout its length.

continuous bucket elevator [MECH ENG] A bucket elevator on an endless chain or belt.

continuous bucket excavator [MECH ENG] A bucket excavator with a continuous bucket elevator mounted in front of the bowl.

continuous casting [MET] A technique in which an ingot, billet, tube, or other shape is continuously solidified and withdrawn while it is being poured, so that its length is not determined by mold dimensions.

continuous clamp *See* voltage-amplitude-controlled clamp.

continuous coal cutter [MIN ENG] A coal mining machine that cuts the coal face without being withdrawn from the cut.

continuous comparator *See* linear comparator.

continuous contact coking [CHEM ENG] A thermal conversion process using the mass-flow lift principle to give continuous coke circulation; oil-wetted particles of coke move downward into the reactor in which cracking, coking, and drying take place; pelleted coke, gas, gasoline, and gas oil are products of the process.

continuous control [CONT SYS] Automatic control in which the controlled quantity is measured continuously and corrections are a continuous function of the deviation.

continuous countercurrent leaching [CHEM ENG] Process of leaching by the use of continuous equipment in which the solid and liquid are both moved mechanically, and by the use of a series of leach tanks and the countercurrent flow of solvent through the tanks in reverse order to the flow of solid.

continuous distillation [CHEM ENG] Separation by boiling of a liquid mixture with different component boiling points; feed is introduced continuously, with continuous removal of overhead vapors and high-boiling bottoms liquids.

continuous distribution [STAT] Distribution of a continuous population, which is a class of pairs such that the second member of each pair is a value, and the first member of the pair is a proportion density for that value.

continuous dryer [ENG] An apparatus in which drying is accomplished by passing wet material through without interruption.

continuous-duty rating [ELEC] The rating that defines the load which can be carried for an indefinite time without exceeding a specified temperature rise.

continuous dyeing [TEXT] The application of color-producing agents to textiles by impregnating the cloth with dye and then passing it through a series of developing, washing, and drying zones to a final take-up roll.

continuous equilibrium vaporization *See* equilibrium flash vaporization.

continuous extension [MATH] A continuous function which is equal to another continuous function defined on a smaller domain.

continuous filament [TEXT] A long, continuous strand of a manufactured fiber as distinguished from all natural fibers (except raw silk), which are of short staple or length.

continuous film scanner [ELECTR] A television film scanner in which the motion picture film moves continuously while being scanned by a flying-spot kinescope.

continuous fire [ORD] **1.** Fire conducted at a normal rate without interruption, for application of adjustment corrections or for other causes. **2.** In field artillery, a succession of salvos, the pieces being fired consecutively at the interval designated in the command.

continuous-flow conveyor [MECH ENG] A totally enclosed, continuous-belt conveyor pulled transversely through a mass of granular, powdered or small-lump material fed from an overhead hopper.

continuous footing [CIV ENG] A footing that supports a wall.

continuous forms [COMPUT SCI] In character recognition, any batch of source information that exists in reel form, such as tally rolls or cash-register receipts.

continuous function [MATH] A function which is continuous at each point of its domain. Also known as continuous transformation.

continuous furnace [MET] A type of reheating furnace in which the charge introduced at one end moves continuously through the furnace and is discharged at the other end.

continuous gas lift [PETRO ENG] Oil production in which reservoir gas pressure (natural or injected) is sufficient to provide a continuous upward flow of oil through the well tubing.

continuous geometry [MATH] A generalization of projective geometry.

continuous image [MATH] The image of a set under a continuous function.

continuous industry [IND ENG] An industry in which raw material is subjected to successive operations, turning it into a finished product.

continuous kiln [ENG] **1.** A long kiln through which ware travels on a moving device, such as a conveyor. **2.** A kiln through which the fire travels progressively.

continuous leader *See* dart leader.

continuous loading [ELEC] Loading in which the added inductance is distributed uniformly along a line by wrapping magnetic material around each conductor.

continuously adjustable transformer *See* variable transformer.

continuous mill [MET] A rolling mill in which metal is successively rolled thinner as it passes through a series of synchronized rolls in tandem.

continuous miner [MIN ENG] Machine designed to remove coal or other soft minerals from the face and to load it into cars or conveyors continuously, without the use of cutting machines, drills, or explosives.

continuous mining [MIN ENG] A type of mining in which the continuous miner cuts or rips coal or other soft minerals from the face and loads it in a continuous operation.

continuous mixer [MECH ENG] A mixer in which materials are introduced, mixed, and discharged in a continuous flow.

continuous operation [ENG] A process that operates on a continuous flow (materials or time) basis, in contrast to batch, intermittent, or sequenced operations.

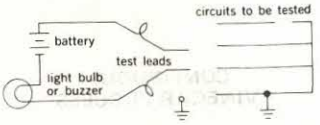
continuous operator [MATH] A linear transformation of Banach spaces which is continuous with respect to their topologies.

continuous permafrost zone [GEOL] Regional zone predominantly underlain by permanently frozen subsoil that is not interrupted by pockets of unfrozen ground.

continuous phase [MET] The matrix or background phase of a multiphasic alloy.

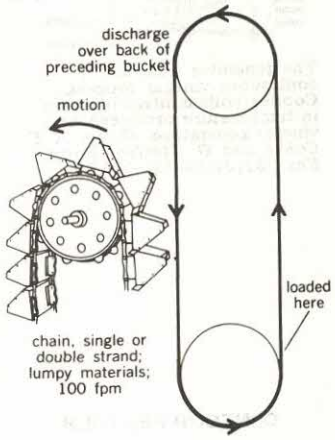
continuous precipitation [MET] Precipitation that is char-

CONTINUITY TEST



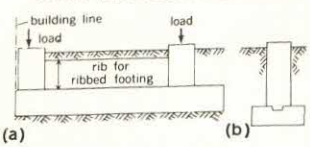
Simple continuity test setup.

CONTINUOUS BUCKET ELEVATOR



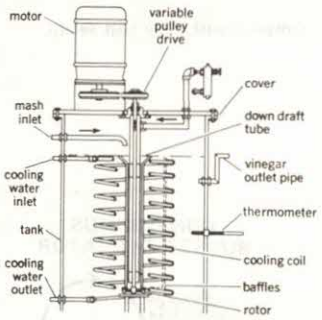
Components of continuous bucket elevator, and typical path of travel.

CONTINUOUS FOOTING



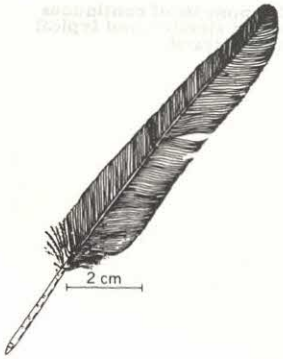
Two types of continuous footings. *(a)* Cantilever and ribbed footings. *(b)* Wall footing.

CONTINUOUS VINEGAR PROCESS



The generator used in the continuous vinegar process. Cooling coils control increase in temperature produced by vinegar generation. *(From R. F. Cohee and G. Steffen, Food Eng., 31(3):58–59, 1959)*

CONTOUR FEATHER



Drawing of a contour feather. *(From J. C. Welty, The Life of Birds, Saunders, 1962)*

acteristic of certain alloys, from a supersaturated solid solution, involving a gradual change of the lattice parameter of the matrix with aging time.

continuous production [IND ENG] Manufacture of products, such as chemicals or paper, involving a sequence of processes performed by a series of machines receiving the materials through a closed channel of flow.

continuous profiling [GEOL] A method of shooting in seismic exploration in which uniformly placed seismometer stations along a line are shot from holes spaced along the same line so that each hole records seismic ray paths geometrically identical with those from adjacent holes.

continuous radio beacon [NAV] A single marine radio beacon operating on a frequency without interruption; used specifically with automatic direction finders.

continuous-rail frog [ENG] A metal fitting that holds continuous welded rail sections to railroad ties.

continuous rating [ENG] The rating of a component or equipment which defines the substantially constant conditions which can be tolerated for an indefinite time without significant reduction of service life.

continuous reaction series [MINERAL] A branch of Bowen's reaction series comprising the plagioclase mineral group in which reaction of early-formed crystals with water takes place continuously, without abrupt changes in crystal structure.

continuous recorder [ENG] A recorder whose record sheet is a continuous strip or web rather than individual sheets.

continuous sequence [MET] A welding sequence in which each succeeding pass is made longitudinally along the entire length of the joint.

continuous sintering [MET] Sintering process in which materials are moved through the furnace at a fixed rate without interruption.

continuous spectrum [MATH] The portion of the spectrum of a linear operator which is a continuum. [SPECT] A radiation spectrum which is continuously distributed over a frequency region without being broken up into lines or bands.

continuous spinning [TEXT] Spinning in which fiber is extruded, coagulated, washed, and wound in a continuous operation on a single machine.

continuous stationery [COMPUT SCI] A continuous ribbon of paper consisting of several hundred or more sheets separated by perforations and folded to form a pack, used to feed a computer printer and generally having sprocket holes along the margin for this purpose.

continuous stationery reader [COMPUT SCI] A type of character reader which processes only continuous forms of predefined dimensions.

continuous still [FOOD ENG] A type of still in which rectification is accomplished, allowing for the collection of several relatively pure fractions of distilled spirits.

continuous system [CONT SYS] A system whose inputs and outputs are capable of changing at any instant of time. Also known as continuous-time signal system.

continuous-time signal system *See* continuous system.

continuous titrator [ANALY CHEM] A titrator so equipped that a reservoir refills the buret.

continuous tone [GRAPHICS] An image which has not been screened and contains unbroken gradient tones from black to white, and may be either in negative or positive form.

continuous-tone squelch [ELECTR] Squelch in which a continuous subaudible tone, generally below 200 hertz, is transmitted by frequency-modulation equipment along with a desired voice signal.

continuous transformation *See* continuous function.

continuous tube process [ENG] Plastics blow-molding process that uses a continuous extrusion of plastic tubing as feed to a series of blow molds as they clamp in sequence.

continous-type furnace [MECH ENG] A furnace used for heat treatment of materials, with or without direct firing; pieces are loaded through one door, progress continuously through the furnace, and are discharged from another door.

continuous vinegar process [FOOD ENG] Continuous, rather than batch, bacterial fermentation of apple cider, wine, other fruit juice, malt, or barley.

continuous wave [ELECTROMAG] A radio or radar wave whose successive sinusoidal oscillations are identical under steady-state conditions. Abbreviated CW. Also known as type A wave.

continuous-wave Doppler radar *See* continuous-wave radar.

continuous-wave gas laser [OPTICS] A laser having a quartz envelope filled with a mixture of helium and neon at low pressure, with Brewster-angle mirrors at opposite ends and an external optical system.

continuous-wave jammer [ELECTR] An electronic jammer that emits a single frequency which gives the appearance of a picket or rail fence on an enemy's radarscope. Also known as rail-fence jammer.

continuous-wave laser [OPTICS] A laser in which the beam of coherent light is generated continuously, as required for communication and certain other applications. Abbreviated CW laser.

continuous-wave modulation [COMMUN] Modulation of a continuous wave by modification of its amplitude or phase, in contrast to pulse modulation.

continuous-wave radar [ENG] A radar system in which a transmitter sends out a continuous flow of radio energy; the target reradiates a small fraction of this energy to a separate receiving antenna. Also known as continuous-wave Doppler radar.

continuous-wave tracking system [ELECTR] Tracking system which operates by keeping a continuous radio beam on a target and determining its behavior from changes in the antenna necessary to keep the beam on the target.

continuous weld [MET] A weld that is continuous along the entire length of the joint.

continuous x-rays [ELECTROMAG] The electromagnetic radiation, having a continuous spectral distribution, that is produced when high-velocity electrons strike a target.

continuum [MATH] A compact, connected set.

continuum mechanics *See* classical field theory.

continuum physics *See* classical field theory.

contorted [BOT] Twisted; applied to proximate leaves whose margins overlap.

contour [MAP] *See* contour line. [PHYS] A curve drawn upon a two-dimensional diagram through points which satisfy $f(x,y) = c$, where c is a constant and f is some function, such as the field strength for a transmitter. [SCI TECH] The periphery of a figure or body.

contour analysis [COMPUT SCI] In optical character recognition, a reading technique that employs a roving spot of light which searches out the character's outline by bouncing around its outer edges.

contour-change line *See* height-change line.

contour code [METEOROL] A code in which data on the topography of constant-pressure surfaces are transmitted; a modification of the international analysis code.

contour feather [VERT ZOO] Any of the large flight feathers or long tail feathers of a bird. Also known as penna; vane feather.

contour finder [GRAPHICS] An optical instrument of simple design for use with photographic prints; used to produce contour lines from differences in relief evident in the print.

contour forming [MET] Shaping a sheet of metal onto a shaped die.

contouring control [COMPUT SCI] The guidance by a computer of a machine tool along a programmed path by interpolating many intermediate points between selected points.

contouring temperature recorder [ENG] A device that records data from temperature sensors towed behind a ship and then plots the vertical distribution of isotherms on a continuous basis.

contour integral [MATH] A line integral of a complex function, usually over a simple closed curve.

contour interval [MAP] The difference in elevation between adjacent contours.

contourite [OCEANOGR] A marine sediment deposited by swift ocean-bottom currents that generally flow along contours.

contour line [MAP] A map line representing a contour, that is, connecting points of equal elevation above or below a datum plane, usually mean sea level. Also known as contour; isoheight; isohypse. [METEOROL] A line on a weather map connecting points of equal atmospheric pressure, temperature, or such.

contour machining [MECH ENG] Machining of an irregular surface.

contour map [MAP] A map displaying topographic or structural contour lines.

contour microclimate [CLIMATOL] That portion of the mi-

croclimate which is directly attributable to the small-scale variations of ground level.

contour milling [MET] Milling of an irregular surface.

contour model [COMPUT SCI] A model for describing the run-time execution of programs written in block-structured languages, consisting of a program component, the data component, and the control component.

contourograph [ELECTR] Device using a cathode-ray oscilloscope to produce imagery that has a three-dimensional appearance.

contour plan [MIN ENG] A plan showing surface contours or calculated contours of coal seams to be developed.

contour plowing [AGR] Cultivation of land along lines connecting points of equal elevation, to prevent water erosion. Also known as terracing.

contour turning [MECH ENG] Making a three-dimensional reproduction of the shape of a template by controlling the cutting tool with a follower that moves over the surface of a template.

contour value [MAP] A numerical value placed upon a contour line to denote its elevation relative to a given datum, usually mean sea level.

contraception [MED] Prevention of impregnation.

contraceptive [MED] Any mechanical device or chemical agent used to prevent conception.

contracted code sonde *See* code-sending radiosonde.

contracted curvature tensor [MATH] A symmetric tensor of second order, obtained by summation on two indices of the Riemann curvature tensor which are not antisymmetric. Also known as contracted Riemann-Christoffel tensor; Ricci tensor.

contracted pelvis [MED] A pelvis having one or more major diameters reduced in size, interfering with parturition.

contracted Riemann-Christoffel tensor *See* contracted curvature tensor.

contractile [BIOL] Displaying contraction; having the property of contracting.

contractile vacuole [CYTOL] A tiny, intracellular, membranous bladder that functions in maintaining intra- and extracellular osmotic pressures in equilibrium, as well as excretion of water, such as occurs in protozoans.

contracting stitching [TEXT] Arranging fibers so that they are parallel, and removing those fibers that are shorter than a specified length.

contraction [MATH] A continuous function of a metric space to itself which moves each pair of points closer together. [MECH] The action or process of becoming smaller or pressed together, as a gas on cooling. [PHYSIO] Shortening of the fibers of muscle tissue.

contraction coefficient *See* coefficient of contraction.

contraction crack [ENG] A crack resulting from restriction of metal in a mold while contracting.

contraction hypothesis [GEOL] Theory that shrinking of the earth is the cause of compression folding and thrusting.

contraction joint [CIV ENG] A break designed in a structure to allow for drying and temperature shrinkage of concrete, brickwork, or masonry, thereby preventing the formation of cracks.

contraction loss [FL MECH] In fluid flow, the loss in mechanical energy in a stream flowing through a closed duct or pipe when there is a sudden contraction of the cross-sectional area of the passage.

contraction rule [MET] A measuring rule having larger divisions than standard measures to allow for shrinkage of a metal casting. Also known as shrinkage rule; shrink rule.

contracture [ARCH] The narrowing of a section of a column. [MED] **1.** Shortening, as of muscle or scar tissue, producing distortion or deformity or abnormal limitation of movement of a joint. **2.** Retarded relaxation of muscle, as when it is injected with veratrine.

contracurrent system *See* katoptric system.

contraflexure point [CIV ENG] The point in a structure where bending occurs in opposite directions.

contrail *See* condensation trail.

contrail-formation graph [METEOROL] A graph containing the parameters pressure, temperature, and relative humidity for critical values at which condensation trails (contrails) form; used as an aid in forecasting the formation of condensation trails.

contraindication [MED] A symptom, indication, or condition in which a remedy or a method of treatment is inadvisable or improper.

contralateral [PHYSIO] Opposite; acting in unison with a similar part on the opposite side of the body.

CONTRAN [COMPUT SCI] Computer programming language in which instructions are written at the compiler level, thereby eliminating the need for translation by a compiling routine.

contrapositive [MATH] The contrapositive of the statement "if p, then q" is the equivalent statement "*if* not q, then not p."

contrapropagating ultrasonic flowmeter [ENG] An instrument for determining the velocity of a fluid flow from the difference between the times required for high-frequency sound to travel between two transducers in opposite directions along a path having a component parallel to the flow.

contrarotating propellers [MECH ENG] A pair of propellers on concentric shafts, turning in opposite directions.

contrarotation [ENG] Rotation in the direction opposite to another rotation.

contra solem [METEOROL] Characterizing air motion that is counterclockwise in the Northern Hemisphere and clockwise in the Southern Hemisphere; literally, against the sun.

contrast [COMMUN] The degree of difference in tone between the lightest and darkest areas in a television or facsimile picture. [COMPUT SCI] In optical character recognition, the difference in color, reflectance, or shading between two areas of a surface, for example, a character and its background.

contrast control [ELECTR] A manual control that adjusts the range of brightness between highlights and shadows on the reproduced image in a television receiver.

contrastes [METEOROL] Winds a short distance apart blowing from opposite quadrants, frequent in the spring and fall in the western Mediterranean.

contrast ratio [ELECTR] The ratio of the maximum to the minimum luminance values in a television picture.

contrast sensitivity *See* threshold contrast.

contrast sharpening [GRAPHICS] A procedure for increasing local contrasts in an image and reducing blurring by using computer processing of the image to emphasize its high spatial frequencies.

contrast threshold *See* threshold contrast.

contravariant functor [MATH] A functor which reverses the sense of morphisms.

contravariant index [MATH] A tensor index such that, under a transformation of coordinates, the procedure for obtaining a component of the transformed tensor for which this index has the value p involves taking a sum over q of the product of a component of the original tensor for which the index has the value q times the partial derivative of the pth transformed coordinate with respect to the qth original coordinate; it is written as a superscript.

contravariant tensor [MATH] A tensor with only contravariant indices.

contravariant vector [MATH] A contravariant tensor of degree 1, such as the tensor whose components are differentials of the coordinates.

contributory *See* tributary.

control [COMPUT SCI] **1.** The section of a digital computer that carries out instructions in proper sequence, interprets each coded instruction, and applies the proper signals to the arithmetic unit and other parts in accordance with this interpretation. **2.** A mathematical check used with some computer operations. [CONT SYS] A means or device to direct and regulate a process or sequence of events. [ELECTR] An input element of a cryotron. [STAT] **1.** A test made to determine the extent of error in experimental observations or measurements. **2.** A procedure carried out to give a standard of comparison in an experiment. **3.** Observations made on subjects which have not undergone treatment, to use in comparison with observations made on subjects which have undergone treatment.

control accuracy [CONT SYS] The degree of correspondence between the ultimately controlled variable and the ideal value in a feedback control system.

control agent [CHEM ENG] In process automatic-control work, material or energy within a process system of which the manipulated (controlled) variable is a condition or characteristic.

control and read-only memory [COMPUT SCI] A read-only memory that also provides storage, sequencing, execution, and translation logic for various microinstructions. Abbreviated CROM.

control area [NAV] An area over which air-traffic control is exercised by a ground-located traffic-control center.

control bit [COMPUT SCI] A bit which marks either the beginning or the end of a character transmitted in asynchronous communication.

control block [COMPUT SCI] A storage area containing (in condensed, formalized form) the information required for the control of a task, function, operation, or quantity of information.

control board [ELEC] A panel at which one can make circuit changes, as in lighting a theater. [ENG] A panel in which meters and other indicating instruments display the condition of a system, and dials, switches, and other devices are used to modify circuits to control the system. Also known as control panel; panel board.

control break [COMPUT SCI] A key change which takes place in a control data field, especially in the execution of a report program.

control card [COMPUT SCI] A punched card containing input data or parameters which are necessary to begin or modify a program, or containing instructions needed for the specific application of a general routine.

control change [COMPUT SCI] A change of function that occurs when successive records (such as those entered on punched cards) differ in the data entered in the control field; for example, a punched-card tabulator may change from adding to printing at the end of a series of items. Also known as comparing control change.

control character [COMPUT SCI] A character whose occurrence in a particular context initiates, modifies, or stops a control operation in a computer or associated equipment.

control characteristic [ELECTR] **1.** The relation, usually shown by a graph, between critical grid voltage and anode voltage of a gas tube. **2.** The relation between control ampere-turns and output current of a magnetic amplifier.

control chart [IND ENG] A chart in which quantities of data concerning some property of a product or process are plotted and used specifically to determine the variation in the process.

control circuit [COMPUT SCI] One of the circuits that responds to the instructions in the program for a digital computer. [ELEC] A circuit that controls some function of a machine, device, or piece of equipment. [ELECTR] The circuit that feeds the control winding of a magnetic amplifier.

control column [AERO ENG] A cockpit control lever pivoted or sliding in front of the pilot; controls operation of the elevator and aileron.

control computer [COMPUT SCI] A computer which uses inputs from sensor devices and outputs connected to control mechanisms to control physical processes.

control counter [COMPUT SCI] A counter providing data used to control the execution of a computer program.

control data [COMPUT SCI] Data used for identifying, selecting, executing, or modifying another set of data, a routine, a record, or the like.

control day [METEOROL] One of several days on which the weather is supposed (according to folklore) to provide the key for the weather of a subsequent period. Also known as key day.

control desk *See* console.

control diagram *See* flow chart.

control drive [NUCLEO] The system of control rods which regulate the reaction rate of a nuclear reactor.

control echo [ENG] In an ultrasonic inspection system, consistent reflection from a surface, such as a back reflection, which provides a reference signal.

control electrode [ELECTR] An electrode used to initiate or vary the current between two or more electrodes in an electron tube.

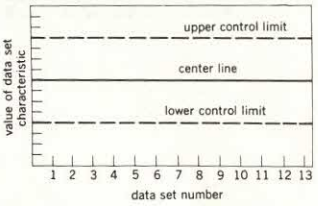
control element [CONT SYS] The portion of a feedback control system that acts on the process or machine being controlled.

control feel [AERO ENG] The impression of the stability and control of an aircraft that a pilot receives through the cockpit controls, either from the aerodynamic forces acting on the control surfaces or from forces simulating these aerodynamic forces.

control field [COMPUT SCI] A constant location where information for control purposes is placed, such as specified columns on punched cards.

control grid [ELECTR] A grid, ordinarily placed between the cathode and an anode, that serves to control the anode current of an electron tube.

CONTROL CHART



Control chart, consisting of a center line and two sets of control lines.

control-grid bias [ELECTR] Average direct-current voltage between the control grid and cathode of a vacuum tube.

control-grid plate transconductance [ELECTR] Ratio of the amplification factor of a vacuum tube to its plate resistance, combining the effects of both into one term.

control head gap [COMPUT SCI] The distance maintained between the read/write head of a disk drive and the disk surface.

control hole *See* designation punch.

control inductor *See* control winding.

control instructions [COMPUT SCI] Those instructions in a computer program which ensure proper sequencing of instructions so that a programmed task can be performed correctly.

control joint [CIV ENG] An expansion joint in masonry to allow movement due to expansion and contraction.

controllability [AERO ENG] The quality of an aircraft or guided weapon which determines the ease of producing changes in flight direction or in altitude by operation of its controls. [CONT SYS] Property of a system for which, given any initial state and any desired state, there exists a time interval and an input signal which brings the system from the initial state to the desired state during the time interval.

controllable-pitch propeller [MECH ENG] An aircraft or ship propeller in which the pitch of the blades can be changed while the propeller is in motion; five types used for aircraft are two-position, variable-pitch, constant-speed, feathering, and reversible-pitch. Abbreviated CP propeller.

controlled aerodrome [NAV] An aerodrome for which air-traffic control facilities are provided.

controlled airspace [NAV] An airspace of defined dimensions within which air-traffic control is provided.

controlled atmosphere [SCI TECH] A specified gas or mixture of gases at a predetermined temperature, and sometimes humidity, in which selected processes take place.

controlled avalanche device [ELECTR] A semiconductor device that has rigidly specified maximum and minimum avalanche voltage characteristics and is able to operate and absorb momentary power surges in this avalanche region indefinitely without damage.

controlled avalanche rectifier [ELECTR] A silicon rectifier in which carefully controlled, nondestructive internal avalanche breakdown across the entire junction area protects the junction surface, thereby eliminating local heating that would impair or destroy the reverse blocking ability of the rectifier.

controlled avalanche transit-time triode [ELECTR] A solid-state microwave device that uses a combination of IMPATT diode and *npn* bipolar transistor technologies; avalanche and drift zones are located between the base and collector regions. Abbreviated CATT.

controlled carrier modulation [COMMUN] System of modulation wherein the carrier is amplitude-modulated by the signal frequencies and, in addition, the carrier is amplitude-modulated according to the envelope of the signal so that the modulation factor remains constant regardless of the amplitude of the signal. Also known as floating carrier modulation; variable carrier modulation.

controlled cooling [MET] Process by which an object is cooled from an elevated temperature in a predetermined manner to avoid cracking, internal damage, or hardening, or to produce a desired microstructure.

controlled fragment [ORD] One of the pieces produced from warhead casings that have been designed to break up in specific patterns; the fragment takes on its final shape during the detonation of the explosive charge. Also known as fire-formed fragment.

controlled fusion [NUCLEO] The use of thermonuclear fusion reactions in a controlled manner to generate power.

controlled-leakage system [AERO ENG] A system that provides for the maintenance of life in an aircraft or spacecraft cabin by a controlled escape of carbon dioxide and other waste from the cabin, with replenishment provided by stored oxygen and food.

controlled medium [CHEM ENG] In process automatic-control work, material within a process system in which a variable (for example, concentration) is controlled.

controlled mercury-arc rectifier [ELECTR] A mercury-arc rectifier in which one or more electrodes control the start of the discharge in each cycle and thereby control output current.

controlled mine [ORD] A mine fitted with firing devices capable of being activated by an electrical system leading to a central control station; may be an underwater or land mine.

controlled mosaic [GRAPHICS] An assemblage of aerial photographs in which various adjustments have been made to improve accuracy and correct for distortions.

controlled parameter [ENG] In the formulation of an optimization problem, one of the parameters whose values determine the value of the criterion parameter.

controlled rectifier [ELECTR] A rectifier that has provisions for regulating output current, such as with thyratrons, ignitrons, or silicon controlled rectifiers.

controlled thermonuclear reaction [NUCLEO] A fusion reaction generated in a controlled manner for research purposes or for production of useful power.

controlled thermonuclear reactor [NUCLEO] The heart of a fusion spacecraft propulsion system, based on the thermonuclear reaction of deuterium with a helium-3 isotope to produce helium-4 and protons. Abbreviated CTR.

controlled time of arrival [NAV] A time of arrival determined in advance, requiring careful planning, accurate navigation, and frequent checking of position and speed.

controlled variable [CONT SYS] In process automatic-control work, that quantity or condition of a controlled system that is directly measured or controlled. [SCI TECH] The quantity or condition that is measured and controlled.

controller *See* automatic controller.

controller-structure interaction [CONT SYS] Feedback of an active control algorithm in the process of model reduction; this occurs through observation spillover and control spillover.

control limits [ELECTR] In radar evaluation, upper and lower control limits are established at those performance figures within which it is expected that 95% of quality-control samples will fall when the radar is performing normally. [IND ENG] In statistical quality control, the limits of acceptability placed on control charts; parts outside the limits are defective.

controlling depth [NAV] The least depth in the approach channel to an area, such as a port or anchorage, governing the maximum draft of vessels that can enter.

controlling obstacle [NAV] In terminal instrument procedures, the highest obstacle relative to a prescribed plane within a specified area; in precision approach procedures where obstacles penetrate the approach surface, the controlling obstacle is the one which results in the requirements for the highest decision height.

control logic [COMPUT SCI] The sequence of steps required to perform a specific function.

control mark *See* tape mark.

control-message display [COMPUT SCI] A device, such as a console typewriter, on which control information, such as information on the progress of a running computer program, is displayed in ordinary language.

control module [COMPUT SCI] The set of registers and circuitry required to carry out a specific function.

control-moment gyro [AERO ENG] An internal momentum storage device that applies torques to the attitude-control system through large rotating gyros.

control of electromagnetic radiation *See* Conelrad.

control panel [COMPUT SCI] **1.** An array of jacks or sockets in which wires (or other elements) may be plugged to control the action of an electromechanical device in a data-processing system such as a printer. Also known as plugboard; wiring board. **2.** *See* panel. [ENG] *See* control board.

control plane [AERO ENG] An aircraft from which the movements of another craft are controlled remotely.

control point [COMPUT SCI] **1.** The numerical value of the controlled variable (speed, temperature, and so on) which, under any fixed set of operating conditions, an automatic controller operates to maintain. **2.** One of the hardware locations at which the output of the instruction decoder of the processor activates the input to and output from specific registers as well as operational resources of the system. [MAP] Any station in a horizontal and vertical grid that is identified on a photograph and used for correlating the data shown on that photograph. [NAV] A position marked by a buoy, boat, aircraft, electronic device, conspicuous terrain feature, or other identifiable object which is given a name or number and used as an aid for navigation or control of ships, boats, or aircraft.

control program [COMPUT SCI] A program which carries on input/output operations, loading of programs, detection of errors, communication with the operator, and so forth.

control punch *See* designation punch.

control register [COMPUT SCI] Any one of the registers in a computer used to control the execution of a computer program.

control rocket [AERO ENG] A vernier engine, retrorocket, or other such rocket used to change the attitude of, guide, or make small changes in the speed of a rocket, spacecraft, or the like.

control rod [NUCLEO] Any rod used to control the reactivity of a nuclear reactor; may be a fuel rod or part of the moderator; in a thermal reactor, commonly a neutron absorber. Also known as absorbing rod.

control room [COMMUN] A room from which engineers and production people control and direct a television or radio program or a sound-recording session; the room is adjacent to the main studios and separated from them by large soundproof glass windows. [ENG] A room from which space flights are directed.

control section [COMPUT SCI] The smallest integral subsection of a program, that is, the smallest unit of code that can be separately relocated during loading.

control sequence [COMPUT SCI] The order in which a set of executions are carried to perform a specific function.

control signal [COMPUT SCI] A set of pulses used to identify the channels to be followed by transferred data. [CONT SYS] The signal applied to the device that makes corrective changes in a controlled process or machine.

control spillover [CONT SYS] The excitation by an active control system of modes of motion that have been omitted from the control algorithm in the process of model reduction.

control state [COMPUT SCI] The operating mode of a system which permits it to override its normal sequence of operations.

control statement *See* job control statement.

control supervisor [COMPUT SCI] The computer software which controls the processing of the system.

control surface [AERO ENG] **1.** Any movable airfoil used to guide or control an aircraft, guided missile, or the like in the air, including the rudder, elevators, ailerons, spoiler flaps, and trim tabs. **2.** In restricted usage, one of the main control surfaces, such as the rudder, an elevator, or an aileron.

control switching point [COMMUN] A telephone office which is an important switching center in the routing of long-distance calls in the direct distance dialing system. Abbreviated CSP.

control symbol [COMPUT SCI] A symbol which, coded into the machine memory, controls certain steps in the mechanical translation process; since control symbols are not contextual symbols, they appear neither in the input nor in the output.

control synchro *See* control transformer.

control system [ENG] A system in which one or more outputs are forced to change in a desired manner as time progresses.

control system feedback [CONT SYS] A signal obtained by comparing the output of a control system with the input, which is used to diminish the difference between them.

control systems equipment [COMPUT SCI] Computers which are an integral part of a total facility or larger complex of equipment and have the primary purpose of controlling, monitoring, analyzing, or measuring a process or other equipment.

control tape [COMPUT SCI] Loop of paper tape to control the carriage operation of character printers. Also known as carriage tape.

control total [COMPUT SCI] The sum of the numbers in a specified record field of a batch of records, determined repetitiously during computer processing so that any discrepancy from the control indicates an error.

control tower *See* airport traffic control tower.

control-tower visibility [METEOROL] The visibility observed from an airport control tower.

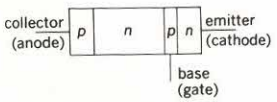
control track [ENG ACOUS] A supplementary sound track, usually containing tone signals that control the reproduction of the sound track, such as by changing feed levels to loudspeakers in a theater to achieve stereophonic effects.

control transformer [ELEC] A synchro in which the electrical output of the rotor is dependent on both the shaft position and the electric input to the stator. Also known as control synchro.

control unit [COMPUT SCI] An electronic device containing data buffers and logical circuitry, situated between the computer channel and the input/output device, and controlling data transfers and such operations as tape rewind.

control valve [ENG] A valve which controls pressure, volume, or flow direction in a fluid transmission system.

CONTROLLED RECTIFIER



Controlled rectifier diagram.

control vane [AERO ENG] A movable vane used for control, especially a movable air vane or jet vane on a rocket used to control flight altitude.

control variable [CONT SYS] One of the input variables of a control system, such as motor torque or the opening of a valve, which can be varied directly by the operator to maximize some measure of performance of the system.

control winding [ELECTR] A winding used on a magnetic amplifier or saturable reactor to apply control magnetomotive forces to the core. Also known as control inductor.

control word [COMPUT SCI] A computer word specifying a certain action to be taken.

control zone [NAV] An airspace of defined dimensions extended upward from the surface to include one or more airports, and within which rules additional to those governing flight in control areas apply for the protection of traffic. Also known as air-traffic control zone.

contusion [MED] A subcutaneous bruise caused by an injury in which the skin is not broken.

Conularida [PALEON] A small group of extinct invertebrates showing a narrow, four-sided, pyramidal-shaped test.

Conulata [INV ZOO] A subclass of free-living coelenterates in the class Scyphozoa; individuals are described as tetraramous cones to elongate pyramids having tentacles on the oral margin.

Conulidae [PALEON] A family of Cretaceous exocyclic Euechinoidea characterized by a flattened oral surface.

conus arteriosus [EMBRYO] The cone-shaped projection from which the pulmonary artery arises on the right ventricle of the heart in man and mammals.

convalescence [MED] The period and process of recovery after an illness or injury.

convalescent carrier [MED] A person who harbors an infectious agent after recovery from a clinical attack of a disease.

convalescent serum [IMMUNOL] The serum of the blood of one or more patients recovering from an infectious disease; used for prophylaxis of the particular infection.

convection [FL MECH] Diffusion in which the fluid as a whole is moving in the direction of diffusion. Also known as bulk flow. [METEOROL] Atmospheric motions that are predominantly vertical, resulting in vertical transport and mixing of atmospheric properties. [OCEANOGR] Movement and mixing of ocean water masses. [PHYS] Transmission of energy or mass by a medium involving movement of the medium itself.

convectional stability *See* static stability.

convection cell [GEOPHYS] A concept in plate tectonics that accounts for the lateral or the upward and downward movement of subcrustal mantle material as due to heat variation in the earth. [METEOROL] An atmospheric unit in which organized convective fluid motion occurs.

convection coefficient *See* film coefficient.

convection cooling [ENG] Heat transfer by natural, upward flow of hot air from the device being cooled.

convection current [ELECTR] The time rate at which the electric charges of an electron stream are transported through a given surface. [GEOPHYS] Mass movement of subcrustal or mantle material as the result of temperature variations. [METEOROL] Any current of air involved in convection; usually, the upward-moving portion of a convection circulation, such as a thermal or the updraft in cumulus clouds. Also known as convective current.

convection modulus [FL MECH] An intrinsic property of a fluid which is important in determining the Nusselt number, equal to the acceleration of gravity times the volume coefficient of thermal expansion divided by the product of the kinematic viscosity and the thermal diffusivity.

convection section [ENG] That portion of the furnace in which tubes receive heat from the flue gases by convection.

convection stability *See* static stability.

convection theory of cyclones [METEOROL] A theory of cyclone development proposing that the upward convection of air (particularly of moist air) due to surface heating can be of sufficient magnitude and duration that the surface inflow of air will attain appreciable cyclonic rotation.

convective activity [METEOROL] Generally, manifestations of convection in the atmosphere, alluding particularly to the development of convective clouds and resulting weather phenomena, such as showers, thunderstorms, squalls, hail, and tornadoes.

convective cloud [METEOROL] A cloud which owes its vertical development, and possibly its origin, to convection.

convective-cloud-height diagram [METEOROL] A graph used as an aid in estimating the altitude of the base of convective clouds; since its basis is the same as that for the dew-point formula, only the surface temperature and dew point need be known to use the diagram.

convective condensation level [METEOROL] On a thermodynamic diagram, the point of intersection of a sounding curve (representing the vertical distribution of temperature in an atmospheric column) with the saturation mixing-ratio line corresponding to the average mixing ratio in the surface layer (that is, approximately the lowest 1500 feet, or 450 meters).

convective current *See* convection current.

convective discharge [ELECTR] The movement of a visible or invisible stream of charged particles away from a body that has been charged to a sufficiently high voltage. Also known as electric wind; static breeze.

convective equilibrium *See* adiabatic equilibrium.

convective instability [METEOROL] The state of an unsaturated layer or column of air in the atmosphere whose wet-bulb potential temperature (or equivalent potential temperature) decreases with elevation. Also known as potential instability.

convective overturn *See* overturn.

convective precipitation [METEOROL] Precipitation from convective clouds, generally considered to be synonymous with showers.

convective region [METEOROL] An area particularly favorable for the formation of convection in the lower atmosphere, or one characterized by convective activity at a given time.

convective zone [ASTROPHYS] A region of instability just below the photosphere of the sun in which part of the heat is carried outward by convective currents.

convector [ENG] A heat-emitting unit for the heating of room air; it has a heating element surrounded by a cabinet-type enclosure with openings below and above for entrance and egress of air.

convectron [ENG] An instrument for indicating deviation from the vertical which is based on the principle that the convection from a heated wire depends strongly on its inclination; it consists of a Y-shaped tube, each of whose arms contains a wire forming part of a bridge circuit.

convenience receptacle *See* outlet.

conventional algorithm [COMMUN] A cryptographic algorithm in which the enciphering and deciphering keys are easily derivable from each other, or are identical, and both must be kept secret.

conventional bomb [ORD] A nonatomic bomb designed primarily for explosive effect.

conventional current [ELEC] The concept of current as the transfer of positive charge, so that its direction of flow is opposite to that of electrons which are negatively charged.

conventional grouping [COMPUT SCI] When a unit record containing a coding field is used for a single item code and the set of codes of the terms which describe the item, the grouping is conventional; for example, a personnel file in which each individual is represented by a card on which are punched codes for his or her age, sex, education, and salary.

conventional milling [MET] Milling in which the cutter and feed move in opposite directions from the point of contact.

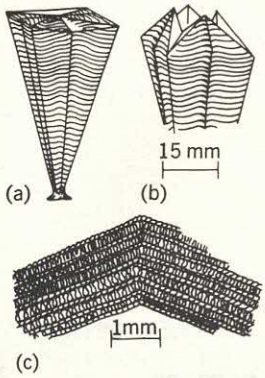
conventional mining [MIN ENG] The cycle which includes cutting the coal, drilling the shot holes, charging and shooting the holes, loading the broken coal, and installing roof support. Also known as cyclic mining.

conventional programming [COMPUT SCI] The use of standard programming languages, as opposed to application development languages, financial planning languages, query languages, and report programs.

conventional spinning *See* manual spinning.

convergence [ANAT] The coming together of a group of afferent nerves upon a motoneuron of the ventral horn of the spinal cord. [ANTHRO] Independent development of similarities between unrelated cultures. [EVOL] Development of similarities between animals or plants of different groups resulting from adaptation to similar habitats. [ELECTR] A condition in which the electron beams of a multibeam cathode-ray tube intersect at a specified point, such as at an opening in the shadow mask of a three-gun color television picture tube; both static convergence and dynamic convergence are required. [GEOL] Diminution of the interval between geo-

CONULARIDA



Conularida restorations. *(a)* Attachment disk. *(b)* Distal part of same individual with triangular flaps raised. *(c)* Part of exterior showing the ornamentation. *(Adapted from R. C. Moore, C. G. Lalicker, and A. G. Fischer, Invertebrate Fossils, McGraw-Hill, 1952)*

logic horizons. [HYD] The line of demarcation between turbid river water and clear lake water. [MATH] The property of having a limit for infinite series, sequences, products, and so on. [METEOROL] The increase in wind setup observed beyond that which would take place in an equivalent rectangular basin of uniform depth, caused by changes in platform or depth. [OCEANOGR] A condition in the ocean in which currents or water masses having different densities, temperatures, or salinities meet; results in the sinking of the colder or more saline water.

convergence circuit [ELECTROMAG] An auxiliary deflection system in a color television receiver which maintains convergence, having separate convergence coils for electromagnetic controls of the positions of the three beams in a convergence yoke around the neck of the kinescope.

convergence coil [ELECTR] One of the coils used to obtain convergence of electron beams in a three-gun color television picture tube.

convergence constant *See* convergence factor.

convergence control [ELECTR] A control used in a color television receiver to adjust the potential on the convergence electrode of the three-gun color picture tube to achieve convergence.

convergence electrode [ELECTR] An electrode whose electric field converges two or more electron beams.

convergence factor [MAP] For a specific chart or map projection, the factor which, when multiplied by the difference of longitude between points on two meridians, will give the convergence of the meridians. Also known as convergence constant.

convergence in measure [MATH] A sequence of functions $f_n(x)$ converges in measure to $f(x)$ if given any $\epsilon>0$, the measure of the set of points at which $|f_n(x) - f(x)| > \epsilon$ is less than ϵ, provided n is sufficiently large.

convergence line [METEOROL] Any horizontal line along which horizontal convergence of the airflow is occurring. Also known as asymptote of convergence.

convergence magnet [ELECTR] A magnet assembly whose magnetic field converges two or more electron beams; used in three-gun color picture tubes. Also known as beam magnet.

convergence of meridians [MAP] **1.** The angular drawing together of the geographic meridians in passing from the equator to the poles. **2.** The relative difference of directions of meridians at specific points on the meridians; it is equal to the product of the difference of longitude and the convergence factor.

convergence pressure [PHYS CHEM] The pressure at which the different constant-temperature K (liquid-vapor equilibrium) factors for each member of a two-component system converge to unity.

convergence zone [ACOUS] A sound transmission channel produced in sea water by a combination of pressure and temperature changes in the depth range between 2500 and 15,000 feet (750 and 4500 meters); utilized by sonar systems.

convergent die [ENG] A die having internal channels which converge.

convergent-divergent nozzle [DES ENG] A nozzle in which supersonic velocities are attained; has a divergent portion downstream of the contracting section. Also known as supersonic nozzle.

convergent integral [MATH] An improper integral which has a finite value.

convergent precipitation [METEOROL] A synoptic type of precipitation caused by local updrafts of moist air.

convergent sequence [MATH] A sequence which has a limit.

convergent series [MATH] A series whose sequence of partial sums has a limit.

convergent zone paths [OCEANOGR] The velocity structure of permanent deep sound channels that produces focusing regions at distant intervals from a shallow source.

converging lens [OPTICS] A lens that has a positive focal length, and therefore causes rays of light parallel to its axis to converge.

Conversational Algebraic Language *See* CAL.

conversational compiler [COMPUT SCI] A compiler which immediately checks the validity of each source language statement entered to the computer and informs the user if the next statement can be entered or if a mistake must be corrected. Also known as interpreter.

conversational mode [COMMUN] A computer operating mode that permits queries and responses between the computer and human operators at keyboard terminals.

conversational processing [COMPUT SCI] The operating mode of a computer system which enables a user to have each statement he keys into the system processed immediately.

conversational time-sharing [COMPUT SCI] The simultaneous utilization of a computer system by multiple users, each user being equipped with a remote terminal with which he communicates with the computer in conversational mode.

converse [MATH] The converse of the statement "if p, then q" is the statement "if q, then p."

conversion [COMPUT SCI] *See* data conversion. [CHEM] Change of a compound from one isomeric form to another. [CHEM ENG] The chemical change from reactants to products in an industrial chemical process. [NAV] Determination of the rhumb-line direction of one point from another when the initial great-circle direction is known, or vice versa, the difference between the two directions being the conversion angle; used in connection with radio bearings, Consol, Consolan, and in great-circle sailing. [NUC PHYS] Nuclear transformation of a fertile substance into a fissile substance. [PHYS] Change in a quantity's numerical value as a result of using a different unit of measurement. [PSYCH] A defense mechanism whereby unconscious emotional conflict is transformed into physical disability, the affected part always having symbolic meaning pertinent to the nature of the conflict.

conversion angle [NAV] The angle between the rhumb line and the great circle between two points. Also known as arc to chord correction; half-convergency.

conversion coating [MET] A metal-surface coating consisting of a compound of the base metal.

conversion coefficient Also known as conversion fraction; internal conversion coefficient. [NUC PHYS] **1.** The ratio of the number of conversion electrons emitted per unit time to the number of photons emitted per unit time in the de-excitation of a nucleus between two given states. **2.** In older literature, the ratio of the number of conversion electrons emitted per unit time to the number of conversion electrons plus the number of photons emitted per unit time in the de-excitation of a nucleus between two given states.

conversion electron [NUC PHYS] An electron which receives energy directly from a nucleus in an internal conversion process and is thereby expelled from the atom.

conversion equipment [COMPUT SCI] Equipment used for conversion of data from one recording medium to another, as from card to tape.

conversion factor [MATH] The numerical factor by which one must multiply (or divide) a quantity that is expressed in terms of a certain unit to express the quantity in terms of another unit. [NUCLEO] *See* conversion ratio.

conversion fraction *See* conversion coefficient.

conversion gain [ELECTR] **1.** Ratio of the intermediate-frequency output voltage to the input signal voltage of the first detector of a superheterodyne receiver. **2.** Ratio of the available intermediate-frequency power output of a converter or mixer to the available radio-frequency power input. [NUCLEO] The conversion ratio minus one in a nuclear reactor.

conversion program [COMPUT SCI] A set of instructions which allows a program written for one system to be run on a different system.

conversion rate [COMPUT SCI] The number of complete conversions an analog-to-digital converter can perform per unit time, usually specified in cycles (or conversions) per second.

conversion ratio [MATH] *See* conversion factor. [NUCLEO] The number of fissionable atoms produced per fissionable atom fissioned in a converter type of nuclear reactor. Also known as conversion factor.

conversion reaction [PSYCH] The form of hysterical neurosis in which the impulse causing anxiety is converted into functional symptoms of the special senses or voluntary nervous system.

conversion routine [COMPUT SCI] A flexible, self-contained, and generalized program used for data conversion, which only requires specifications about very few facts in order to be used by a programmer.

conversion table [SCI TECH] A list of equivalent values for converting from one set of units to another.

conversion time [COMPUT SCI] The time required to read in data from one code into another code.

conversive heating [MED] The conversion of some form of

CONVERGENT-DIVERGENT NOZZLE

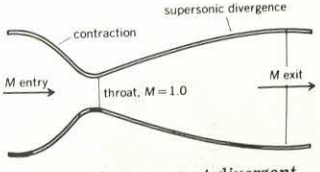


Diagram of convergent-divergent nozzle. M = local Mach number.

energy, especially radio waves, into heat for use in thermotherapy.

convert [COMPUT SCI] To transform the representation of data.

converted water *See* product water.

converter [COMPUT SCI] A computer unit that changes numerical information from one form to another, as from decimal to binary or vice versa, from fixed-point to floating-point representation, or from punched cards to magnetic tape. Also known as data converter. [ELEC] **1.** Any device for changing alternating current to direct current, or direct current to alternating current. **2.** *See* synchronous converter. [ELECTR] **1.** The section of a superheterodyne radio receiver that converts the desired incoming radio-frequency signal to the intermediate-frequency value; the converter section includes the oscillator and the mixer-first detector. Also known as heterodyne conversion transducer; oscillator-mixer-first detector. **2.** An auxiliary unit used with a television or radio receiver to permit reception of channels or frequencies for which the receiver was not originally designed. **3.** In facsimile, a device that changes the type of modulation delivered by the scanner. **4.** Unit of a radar system in which the mixer of a superheterodyne receiver and usually two stages of intermediate-frequency amplification are located; performs a preamplifying operation. **5.** *See* remodulator. [MET] A type of furnace in which impurities are oxidized out by blowing air through or across a path of molten metal or matte. [NUCLEO] Also known as nuclear converter. **1.** A nuclear reactor that converts fertile atoms into fuel by neutron capture, using one kind of fuel and producing another. **2.** A nuclear reactor that produces some fissionable fuel, but less than it consumes; the fuel produced may be the same as that consumed or different.

converter substation [ELEC] An electric power substation whose main function is the conversion of power from ac to dc, and vice versa.

converter tube [ELECTR] An electron tube that combines the mixer and local-oscillator functions of a heterodyne conversion transducer.

convertiplane [AERO ENG] A hybrid form of heavier-than-air craft capable, because of one or more horizontal rotors or units acting as rotors, of taking off, hovering, and landing in a fashion similar to a helicopter; and once aloft and moving forward, capable, by means of a mechanical conversion, of flying purely as a fixed-wing aircraft, especially in higher speed ranges.

convex [SCI TECH] Having a curved form which bulges outward, resembling the exterior of a sphere or cylinder or a section of these bodies.

convex combination [MATH] A linear combination of vectors in which the sum of the coefficients is 1.

convex curve [MATH] A plane curve for which any straight line that crosses the curve crosses it at just two points.

convex function [MATH] A function $f(x)$ is considered to be convex over the interval a,b if for any three points x_1, x_2, x_3 such that $a<x_1<x_2<x_3<b$, $f(x_2)\leq L(x_2)$, where $L(x)$ is the equation of the straight line passing through the points $[x_1, f(x_1)]$ and $[x_3, f(x_3)]$.

convex hull [MATH] The smallest convex set containing a given collection of points in a real linear space. Also known as convex linear hull.

convex linear hull *See* convex hull.

convexo-concave [SCI TECH] Having one side convex and the other concave, usually with greater curvature on the convex side.

convex polyhedron [MATH] A polyhedron in the plane which is a convex set, for example, any regular polyhedron.

convex set [MATH] A set which contains the entire line segment joining any pair of its points.

conveyor [MECH ENG] Any materials-handling machine designed to move individual articles such as solids or free-flowing bulk materials over a horizontal, inclined, declined, or vertical path of travel with continuous motion.

convivium [ECOL] A population exhibiting differentiation within the species and isolated geographically, generally a subspecies or ecotype.

convolute [BIOL] Twisted or rolled together, specifically referring to leaves, mollusk shells, and renal tubules.

convolute bedding [GEOL] The extremely contorted laminae usually confined to a single layer of sediment, resulting from subaqueous slumping.

convolution [ANAT] A fold, twist, or coil of any organ, especially any one of the prominent convex parts of the brain, separated from each other by depressions or sulci. [GEOL] **1.** The process of developing convolute bedding. **2.** A structure resulting from a convolution process, such as a small-scale but intricate fold.

convolution family *See* faltung.

convolution of two functions [MATH] The convolution of the functions f and g is the function F, defined by

$$F(x) = \int_0^x f(t)g(x-t)\,dt.$$

convolution theorem [MATH] A theorem stating that, under specified conditions, the integral transform of the convolution of two functions is equal to the product of their integral transforms.

convolver [ELECTR] A surface acoustic-wave device in which signal processing is performed by a nonlinear interaction between two waves traveling in opposite directions. Also known as acoustic convolver.

Convolvulaceae [BOT] A large family of dicotyledonous plants in the order Polemoniales characterized by internal phloem, the presence of chlorophyll, two ovules per carpel, and plicate cotyledons.

convoy [ORD] An accompanying and protective force on sea or land, such as a fleet or troops.

convulsion [MED] An episode of involuntary, generally violent muscular contractions, rhythmically alternated with periods of relaxation; associated with many systematic and neurological diseases.

Conwell-Weisskopf equation [SOLID STATE] An equation for the mobility of electrons in a semiconductor in the presence of donor or acceptor impurities, in terms of the dielectric constant of the medium, the temperature, the concentration of ionized donors (or acceptors), and the average distance between them.

Cooke objective [OPTICS] A three-lens objective consisting of one biconcave lens, the dispersive component, between two biconvex lens, the collective components; used in astronomical cameras.

Cooke unit [BIOL] A unit for the standardization of pollen antigenicity.

cooking snow *See* water snow.

cook-off [ORD] A cartridge fired by environmental heat, because it remained in the chamber of an overheated weapon.

coolant [MATER] **1.** A cutting fluid for machine operations, which keeps the tool cool to prevent reduction in hardness and resistance to abrasion, and prevents distortion of the work. **2.** A substance, ordinarily fluid, used for cooling any part of a reactor in which heat is generated. **3.** In general, any cooling agent, usually a fluid.

cooled infrared detector [ELECTR] An infrared detector that must be operated at cryogenic temperatures, such as at the temperature of liquid nitrogen, to obtain the desired infrared sensitivity.

cooled-tube pyrometer [ENG] A thermometer for high-temperature flowing gases that uses a liquid-cooled tube inserted in the flowing gas; gas temperature is deduced from the law of convective heat transfer to the outside of the tube and from measurement of the mass flow rate and temperature rise of the cooling liquid.

cooler nail [DES ENG] A thin, cement-coated wire nail.

cool flame [CHEM] A faint, luminous phenomenon observed when, for example, a mixture of ether vapor and oxygen is slowly heated; it proceeds by diffusion of reactive molecules which initiate chemical processes as they go.

Coolidge tube [ELECTROMAG] An x-ray tube in which the needed electrons are produced by a hot cathode.

cooling [NUCLEO] Setting aside a highly radioactive material until the radioactivity has diminished to a desired level.

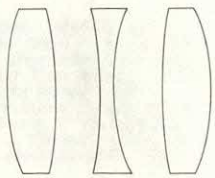
cooling channel [ENG] A channel in the body of mold through which a cooling liquid is circulated.

cooling coil [MECH ENG] A coiled arrangement of pipe or tubing for the transfer of heat between two fluids.

cooling correction [THERMO] A correction that must be employed in calorimetry to allow for heat transfer between a body and its surroundings. Also known as radiation correction.

cooling curve [THERMO] A curve obtained by plotting time against temperature for a solid-liquid mixture cooling under constant conditions.

COOKE OBJECTIVE



Cooke objective, a type of wide-field lens objective for astronomical cameras.

cooling degree day [MECH ENG] A unit for estimating the energy needed for cooling a building; one unit is given for each degree Fahrenheit that the daily mean temperature exceeds 75°F (24°C).

cooling fin [MECH ENG] The extended element of a heat-transfer device that effectively increases the surface area.

cooling fixture [ENG] A wooden or metal block used to hold the shape or dimensional accuracy of a molding until it cools enough to retain its shape.

cooling load [MECH ENG] The total amount of heat energy that must be removed from a system by a cooling mechanism in a unit time, equal to the rate at which heat is generated by people, machinery, and processes, plus the net flow of heat into the system not associated with the cooling machinery.

cooling method [THERMO] A method of determining the specific heat of a liquid in which the times taken by the liquid and an equal volume of water in an identical vessel to cool through the same range of temperature are compared.

cooling pond [CHEM ENG] Outdoor depression into which hot process water is pumped for purposes of cooling by evaporation, convection, and radiation.

cooling power [MECH ENG] A parameter devised to measure the air's cooling effect upon a human body; it is determined by the amount of heat required by a device to maintain the device at a constant temperature (usually 34°C); the entire system should be made to correspond, as closely as possible, to the external heat exchange mechanism of the human body.

cooling-power anemometer [ENG] Any anemometer operating on the principle that the heat transfer to air from an object at an elevated temperature is a function of airspeed.

cooling process [ENG] Physical operation in which heat is removed from process fluids or solids; may be by evaporation of liquids, expansion of gases, radiation or heat exchange to a cooler fluid stream, and so on.

cooling range [MECH ENG] The difference in temperature between the hot water entering and the cold water leaving a cooling tower.

cooling stress [MECH] Stress resulting from uneven contraction during cooling of metals and ceramics due to uneven temperature distribution.

cooling table *See* hotbed.

cooling tower [ENG] A towerlike device in which atmospheric air circulates and cools warm water, generally by direct contact (evaporation).

coolometer [ENG] An instrument which measures the cooling power of the air, consisting of a metal cylinder electrically heated to maintain a constant temperature; the electrical heating power required is taken as a measure of the air's cooling power.

cool star [ASTROPHYS] A low-temperature star, generally visible in the infrared range of the electromagnetic spectrum.

cool time [MET] The period of time between successive heat times in pulsation and seam welding.

Coombs serum [IMMUNOL] An immune serum containing antiglobulin that is used in testing for Rh and other sensitizations.

cooperative observer [METEOROL] An unpaid observer who maintains a meteorological station for the U.S. National Weather Service.

cooperative phenomenon [SOLID STATE] A process that involves a simultaneous collective interaction among many atoms or electrons in a crystal, such as ferromagnetism, superconductivity, and order-disorder transformations.

cooperative system [ENG] A missile guidance system that requires transmission of information from a remote ground station to a missile in flight, processing of the information by the missile-borne equipment, and retransmission of the processed data to the originating or other remote ground stations, as in azusa and dovap.

cooperite [MINERAL] (Pt,Pd)S A steel-gray tetragonal mineral of metallic luster consisting of a sulfide of platinum, occurring in irregular grains in igneous rock.

Cooper pairs [SOLID STATE] Pairs of bound electrons which occur in a superconducting medium according to the Bardeen-Cooper-Schrieffer theory.

coordinate axes [MATH] One of a set of lines or curves used to define a coordinate system; the value of one of the coordinates uniquely determines the location of a point on the axis, while the values of the other coordinates vanish on the axis.

coordinate bond *See* coordinate valence; dative bond.

coordinate conversion [MAP] Changing the map coordinate values from one system to those of another system.

coordinate data receiver [ELECTR] A receiver specifically designed to accept the signal of a coordinate data transmitter and reconvert this signal into a form suitable for input to associated equipment such as a plotting board, computer, or radar set.

coordinate data transmitter [ELECTR] A transmitter that accepts two or more coordinates, such as those representing a target position, and converts them into a form suitable for transmission.

coordinated complex *See* coordination compound.

coordinated geometry *See* COGO.

coordinated transpositions [ELEC] Transpositions which are installed in either electric supply or communications circuits or in both, for the purpose of reducing inductive coupling, and which are located effectively with respect to the discontinuities in both the electric supply and communications circuits.

coordinate indexing [COMPUT SCI] An indexing scheme in which equal-rank descriptors are used to describe a document, for information retrieval by a computer or other means.

coordinate plotter [GRAPHICS] An automated drafting device in which a transverse beam and drafting head are driven over a drawing surface by a computer and tape readers to produce highly precise drawings at high speed. Also known as mechanical plotting board; XY coordinate plotter; XY plotter.

coordinates [MAP] **1.** Linear or angular quantities which designate the position that a point occupies in a given reference frame or system. **2.** A general term to designate the particular kind of reference frame or system, such as plane rectangular coordinates or spherical coordinates. [MATH] A set of numbers which locate a point in space.

coordinate storage *See* matrix storage.

coordinate systems [MATH] A rule for designating each point in space by a set of numbers.

coordinate transformation [MATH] A mathematical or graphic process of obtaining a modified set of coordinates by performing some nonsingular operation on the coordinate axes, such as rotating or translating them.

coordinate valence [CHEM] A chemical bond between two atoms in which a shared pair of electrons forms the bond and the pair has been supplied by one of the two atoms. Also known as coordinate bond.

coordinating holes [DES ENG] Holes in two parts of an assembly which form a single continuous hole when the parts are joined.

coordination chemistry [CHEM] The chemistry of metal ions in their interactions with other molecules or ions.

coordination compound [CHEM] A compound with a central atom or ion and a group of ions or molecules surrounding it. Also known as coordinated complex; Werner complex.

coordination lattice [CRYSTAL] The crystal structure of a coordination compound.

coordination number [PHYS] The number of nearest neighbors of a point in a space lattice, of an atom or an ion in a solid, or of an anion or cation in a solution.

coordination polygon [CHEM] The symmetrical polygonal chemical structure of simple polyatomic aggregates having coordination numbers of 4 or less.

coordination polyhedron [CHEM] The symmetrical polyhedral chemical structure of relatively simple polyatomic aggregates having coordination numbers of 4 to 8.

coordination polymer [ORG CHEM] Organic addition polymer that is neither free-radical nor simply ionic; prepared by catalysts that combine an organometallic (for example, triethyl aluminum) and a transition metal compound (for example, $TiCl_4$).

coorongite [GEOL] A boghead coal in the peat stage.

copaiba balsam [MATER] An oleoresin extracted from trees of the genus *Copaifera* of South America; used as a plasticizer and in medicine.

copal [MATER] Hard, resinous substance exuded from certain trees in the East Indies, South America, and Africa and used in varnish and printing ink.

cope [MET] The upper portion of a flask, mold, or pattern.

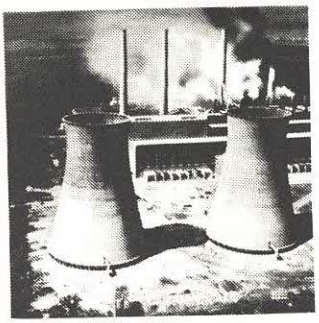
cope chisel [DES ENG] A chisel used to cut grooves in metal.

Copenhagen water *See* normal water.

Copeognatha [INV ZOO] An equivalent name for Psocoptera.

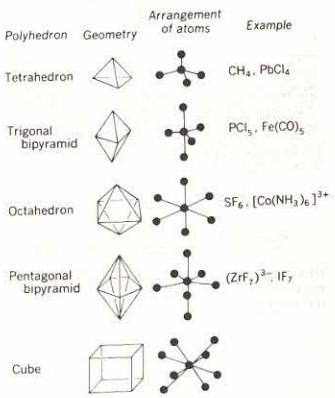
Copepoda [INV ZOO] An order of Crustacea commonly in-

COOLING TOWER



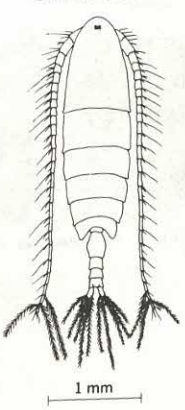
Natural-draft cooling towers. *(Haman, Inc.)*

COORDINATION POLYHEDRON



Types of coordination polyhedrons.

COPEPODA



Calanus finmarchicus, a calcanoid free-living copepod.

cluded in the Entomostraca; contains free-living, parasitic, and symbiotic forms.

Copernican principle [ASTRON] The idea that the earth occupies a typical or unexceptional position in the universe.

Copernican system [ASTRON] The system of planetary motions according to Copernicus, who maintained that the earth revolves about an axis once every day and revolves around the sun once every year while the other planets also move in orbits centered near the sun.

copiapite [MINERAL] **1.** $Fe_5(SO_4)_6(OH)_2 \cdot 20H_2O$ A yellow mineral occurring in granular or scalar aggregates. Also known as ihleite; knoxvillite; yellow copperas. **2.** A group of minerals containing hydrous iron sulfates.

coping [BUILD] A covering course on a wall. [MECH ENG] Shaping stone or other nonmetallic substance with a grinding wheel. [MIN ENG] **1.** Process of cutting and trimming the edges of stone slabs. **2.** Process of cutting a stone slab into two pieces.

coping saw [DES ENG] A type of handsaw that has a narrow blade, usually about ⅛ inch (3 millimeters) wide, held taut by a U-shaped frame equipped with a handle; used for shaping and cutout work.

coplanar electrodes [ELECTR] Electrodes mounted in the same plane.

coplanar forces [MECH] Forces that act in a single plane; thus the forces are parallel to the plane and their points of application are in the plane.

Copodontidae [PALEON] An obscure family of Paleozoic fishes in the order Bradyodonti.

copolymer [ORG CHEM] A mixed polymer, the product of polymerization of two or more substances at the same time.

copolymerization [CHEM] A polymerization reaction that forms a copolymer.

copper [CHEM] A chemical element, symbol Cu, atomic number 29, atomic weight 63.546. [MET] One of the most important nonferrous metals; a ductile and malleable metal found in various ores and used in industry, engineering, and the arts in both pure and alloyed form.

copper-64 [NUC PHYS] Radioactive isotope of copper with mass number of 64; derived from pile-irradiation of metallic copper; used as a research aid to study diffusion, corrosion, and friction wear in metals and alloys.

copper acetate *See* cupric acetate.

copper alloy [MET] A solid solution of one or more metals in copper.

copper amalgam [MET] An alloy of copper and mercury.

copper arsenate [INORG CHEM] $Cu_3(AsO_4)_2 \cdot 4H_2O$ or $Cu_5H_2(AsO_4)_4 \cdot 2H_2O$ Bluish powder, soluble in ammonium hydroxide and dilute acids, insoluble in water and alcohol; used as a fungicide and insecticide.

copper arsenite [INORG CHEM] $CuHAsO_3$ A toxic, light green powder which is soluble in acids and decomposes at the melting point; used as a pigment and insecticide. Also known as copper orthoarsenite; cupric arsenite; Scheele's green.

copper blight [PL PATH] A leaf spot disease of tea caused by the fungus *Guignardia camelliae*.

copper blue *See* mountain blue.

copper brazing [MET] Brazing by using copper as the filler metal.

copper bromide *See* cupric bromide; cuprous bromide.

copper cable [ELEC] A mechanically assembled group of copper wires, used in place of a single, large wire for increased flexibility.

copper carbonate [INORG CHEM] $Cu_2(OH)_2CO_3$ A toxic, green powder; decomposes at 200°C and is soluble in acids; used in pigments and pyrotechnics and as a fungicide and feed additive. Also known as artificial malachite; basic copper carbonate; cupric carbonate; mineral green.

copper chloride *See* cupric chloride; cuprous chloride.

copper chromate *See* cupric chromate.

copper converter [MET] A converter for purifying copper.

copper cyanide *See* cupric cyanide.

copper dirt *See* sour dirt.

copper dish gum [CHEM ENG] The milligrams of gum found in 100 milliliters of gasoline when evaporated under controlled conditions in a polished copper dish.

copper fluoride *See* cupric fluoride; cuprous fluoride.

copper glance *See* chalcocite.

copper gluconate [ORG CHEM] $[CH_2OH(CHOH)_4COO]_2Cu$ A light blue, crystalline powder; soluble in water; used in medicine and as a dietary supplement. Also known as cupric gluconate.

copperhead [VERT ZOO] *Agkistrodon contortrix*. A pit viper of the eastern United States; grows to about 3 feet (90 centimeters) in length and is distinguished by its coppery-brown skin with dark transverse blotches.

copper hydroxide *See* cupric hydroxide.

coppering [ORD] Metal fouling accumulated in the bore of a weapon because of repeated firing; deposited from the rotating bands or jackets of the projectiles.

copperite [MINERAL] An important platinum mineral, composed of platinum sulfide.

copper loss [ELEC] Power loss in a winding due to current flow through the resistance of the copper conductors. Also known as I^2R loss.

copper mica *See* chalcophyllite.

copper nickel *See* niccolite.

copper nitrite *See* cupric nitrate.

copper number [ANALY CHEM] The number of milligrams of copper obtained by the reduction of Benedict's or Fehling's solution by 1 gram of carbohydrate.

copper oleate [ORG CHEM] $Cu[OOC(CH_2)_7CH{=}CH(CH_2)_7CH_3]_2$ A green-blue liquid, used as a fungicide for fruits and vegetables.

copperon *See* cupferron.

copper ore [GEOL] Rock containing copper minerals.

copper orthoarsenite *See* copper arsenite.

copper oxide *See* cupric oxide; cuprous oxide.

copper oxide photovoltaic cell [ELECTR] A photovoltaic cell in which light acting on the surface of contact between layers of copper and cuprous oxide causes a voltage to be produced.

copper oxide rectifier [ELECTR] A metallic rectifier in which the rectifying barrier is the junction between metallic copper and cuprous oxide.

copperplate engraving [GRAPHICS] A thin, rigid plate of copper, with the lines of a picture cut, or engraved, into it, used for printing purposes; it is inked over, the ink is removed so that it is retained only in the engraved lines, and the plate is placed in a handpress where ink is transferred from engraved lines to overlying paper.

copper plating [MET] Coating of a substance with copper by an electrolytic process, to minimize corrosion.

copper powder [MET] A bronzing powder made by saturating nitrous acid with copper and precipitating the latter by the addition of iron.

copper pressure gage *See* Nobel's copper cylinder.

copper pyrite *See* chalcopyrite.

copper-8-quinolinolate [ORG CHEM] $C_{18}H_{14}N_2O_2Cu$ A khaki-colored, water-insoluble solid used as a fungicide in fruit-handling equipment.

copper resinate [ORG CHEM] Poisonous green powder, soluble in oils and ether, insoluble in water; made by heating rosin oil with copper sulfate, followed by filtering and drying of the resultant solids; used as a metal-paint preservative and insecticide.

copper spot [PL PATH] A fungus disease of lawn grasses caused by *Gloeocercospora sorghi* and marked by coppery-red areas.

copper steel [MET] Low-carbon steel containing up to 0.25% copper.

copper strip corrosion [ENG] A qualitative method of determining the corrosivity of a petroleum product by observing its effect on a strip of polished copper suspended or placed in the product.

copper sulfate *See* cupric sulfate.

copper sulfide [INORG CHEM] CuS Black, monoclinic or hexagonal crystals that break down at 220°C; used in paints on ship bottoms to prevent fouling.

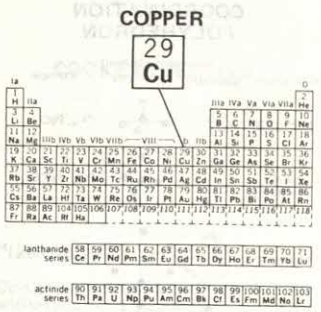
copper sulfide rectifier [ELECTR] A semiconductor rectifier in which the rectifying barrier is the junction between magnesium and copper sulfide.

copper sweetening [CHEM ENG] Those refining processes using cupric chloride to oxidize mercaptans in petroleum.

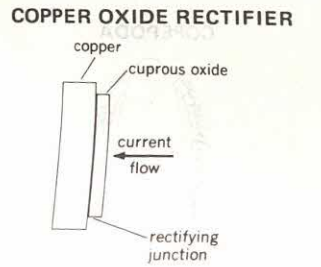
copper uranite *See* torbernite.

copperweld [MET] Copper-covered steel, used as a conductor for high-voltage transmission spans where tensile strength is more important than high conductance.

copper wire [MET] Wire commonly made from copper by



Periodic table of the chemical elements showing the position of copper.



Cross section of a copper oxide rectifier.

drawing from a hot-rolled rod without annealing; however, the smaller sizes may involve intermediate anneals.

coppice [ECOL] A growth of small trees that are repeatedly cut down at short intervals; the new shoots are produced by the old stumps.

coprecipitation [CHEM] Simultaneous precipitation of more than one substance.

coprolite [GEOL] Petrified excrement.

coprophagy [ZOO] Feeding on dung or excrement.

coprophilous [ECOL] Living in dung.

coprophobia [PSYCH] An abnormal fear of fecal matter.

copulation [ZOO] The sexual union of two individuals, resulting in insemination or deposition of the male gametes in close proximity to the female gametes.

copulatory bursa [INV ZOO] **1.** A sac that receives the sperm during copulation in certain insects. **2.** The caudal expansion of certain male nematodes that functions as a clasper during copulation.

copulatory organ [ANAT] An organ employed by certain male animals for insemination.

copulatory spicule *See* spiculum.

copy [COMMUN] **1.** To transcribe Morse code signals into written form. **2.** To reproduce graphical material usually by an electrostatic device. **3.** To reproduce information in a new location and possibly in a different form, leaving the source of the information unchanged. [COMPUT SCI] A string procedure in ALGOL by means of which a new byte string can be generated from an existing byte string. [GRAPHICS] *See* subject copy.

copyboard [GRAPHICS] A frame that holds the original copy in place while it is being photographed.

copying program [COMPUT SCI] A system program which copies a data or program file from one peripheral device onto another.

coquimbite [MINERAL] $Fe_2(SO_4)_3 \cdot 9H_2O$ A white mineral that crystallizes in the hexagonal system; it is dimorphous with paracoquimbite.

coquina [INV ZOO] A small marine clam of the genus *Donax*. [PETR] A coarse-grained, porous, easily crumbled variety of limestone composed principally of mollusk shell and coral fragments cemented together as rock.

coquinoid [PETR] **1.** Of or pertaining to coquina. **2.** Lithified coquina. **3.** An autochthonous deposit of limestone made up of more or less whole mollusk shells.

Coraciidae [VERT ZOO] The rollers, a family of Old World birds in the order Coraciiformes.

Coraciiformes [VERT ZOO] An order of predominantly tropical and frequently brightly colored birds.

coracite *See* uraninite.

coracoid [ANAT] One of the paired bones on the posterior-ventral aspect of the pectoral girdle in vertebrates.

coracoid ligament [ANAT] The transverse ligament of the scapula which crosses over the suprascapular notch.

coracoid process [ANAT] The beak-shaped process of the scapula.

coral [INV ZOO] The skeleton of certain solitary and colonial anthozoan coelenterates; composed chiefly of calcium carbonate.

coral head [GEOL] A small reef patch of coralline material. Also known as coral knoll.

coral knoll *See* coral head.

Corallanidae [INV ZOO] A family of sometimes parasitic, but often free-living, isopod crustaceans in the suborder Flabellifera.

Corallidae [INV ZOO] A family of dimorphic coelenterates in the order Gorgonacea.

Corallimorpharia [INV ZOO] An order of solitary sea anemones in the subclass Zoantharia resembling coral in many aspects.

Corallinaceae [BOT] A family of red algae, division Rhodophyta, having compact tissue with lime deposits within and between the cell walls.

coralline [INV ZOO] Any animal that resembles coral, such as a bryozoan or hydroid.

coralline algae [BOT] Red algae belonging to the family Corallinaceae.

corallite [INV ZOO] Skeleton of an individual polyp in a compound coral.

coralloid [BIOL] Resembling coral, or branching like certain coral.

corallum [INV ZOO] Skeleton of a compound coral.

coral mud [GEOL] Fine-grade deposits of coral fragments formed around coral islands and coasts bordered by coral reefs.

coral pinnacle [GEOL] A sharply upward-projecting growth of coral rising from the floor of an atoll lagoon.

coral reef [GEOL] A ridge or mass of limestone built up of detrital material deposited around a framework of skeletal remains of mollusks, colonial coral, and massive calcareous algae.

coral-reef lagoon [GEOGR] The central, shallow body of water of an atoll or the water separating a barrier reef from the shore.

coral-reef shoreline [GEOL] A shoreline formed by reefs composed of coral polyps. Also known as coral shoreline.

coral rock *See* reef limestone.

coral sand [GEOL] Coarse-grade deposits of coral fragments formed around coral islands and coasts bordered by coral reefs.

coral shoreline *See* coral-reef shoreline.

corange line [MAP] A line on a chart joining points of equal tide range.

corbel [ARCH] An architectural bracket projecting from within a wall, formed by extensions of the masonry and wood beyond the wall surface, and supporting a burdensome weight above.

corbel arch [ARCH] A structure resembling an arch, in which successive courses project farther into a gap until they close.

Corbiculidae [INV ZOO] A family of fresh-water bivalve mollusks in the subclass Eulamellibranchia; an important food in the Orient.

corbino disk [ELECTROMAG] A variable-resistance device utilizing the effect of a magnetic field on the flow of carriers from the center to the circumference of a disk made of semiconducting or conducting material.

corbinotron [ENG] The combination of a corbino disk, made of high-mobility semiconductor material, and a coil arranged to produce a magnetic field perpendicular to the disk.

cord [ELEC] A small, very flexible insulated cable. [MATER] **1.** A unit of measure for wood stacked for fuel or pulp; equals $4 \times 4 \times 8$, or 128 cubic feet (approximately 3.6246 cubic meters). **2.** A long, flexible, cylindrical construction of natural or synthetic fibers twisted or woven together.

cordage [ENG] Number of cords of lumber per given area. [MATER] Ropes or cords, especially those in the rigging of a ship.

Cordaitaceae [PALEOBOT] A family of fossil plants belonging to the Cordaitales.

Cordaitales [PALEOBOT] An extensive natural grouping of forest trees of the late Paleozoic.

cordate [BOT] Heart-shaped; generally refers to a leaf base.

cord circuit [ELEC] Connecting circuit terminating in a plug at one or both ends and used at switchboard positions in establishing telephone connections.

cord factor [MICROBIO] A toxic glycolipid found as a surface component of tubercle bacilli that is responsible for virulence and serpentine growth.

cord foot [ENG] A stack of wood measuring 16 cubic feet (approximately 0.45307 cubic meter).

cordierite [MINERAL] $Mg_2(Al_4Si_5O_{18})$ A blue, orthorhombic magnesium aluminosilicate mineral frequently occurring associated with thermally metamorphosed rocks derived from argillaceous sediments.

cordillera [GEOGR] A mountain range or group of ranges, including valleys, plains, rivers, lakes, and so on, forming the main mountain axis of a continent.

cordilleran geosyncline [GEOL] The Devonian geosynclinal region of western North America.

Cordirie process [MET] The refining of lead by conducting steam through it, while molten, to oxidize certain metallic impurities.

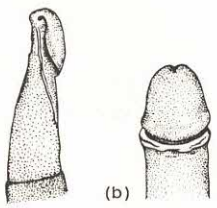
cordite [MATER] A trinitrate cellulose derivative prepared by treating cotton fiber or purified wood pulp with a mixture of nitric and sulfuric acids; an explosive powder.

cordless switchboard [COMMUN] Manual telephone switchboard which uses manually operated keys to make connections.

cord of ore [MIN ENG] A unit of about 7 tons (6.35 metric tons), but measured by wagonloads and not by weight.

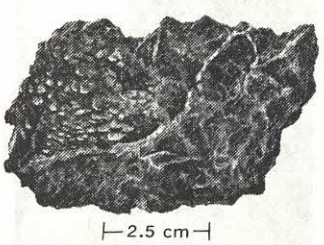
cordon [BOT] A plant trained to grow flat against a vertical

COPULATORY ORGAN



Glans penis of *(a)* bull, *(b)* man.

CORDIERITE



Cordierite from Tsilaizina, Madagascar. *(Specimen from Department of Geology, Bryn Mawr College)*

structure, in a single horizontal shoot or two opposed horizontal shoots.

cordonazo [METEOROL] A southerly wind of hurricane force generated along the western coast of Mexico when a tropical cyclone passes offshore in a northerly direction.

Cordonnier system *See* Batten system.

cordovan [MATER] Nonporous leather made from split horsehide and tanned with vegetable materials.

cord tire [DES ENG] A pneumatic tire made with cords running parallel to the tread.

Cordulegasteridae [INV ZOO] A family of anisopteran insects in the order Odonata.

corduroy [TEXT] Cotton, rayon, or other fabric with a cut-pile surface of wales; may be either plain or twill weave.

cordwood [MATER] Wood stacked and sold in cords.

cordwood module [ELECTR] High-density circuit module in which discrete components are mounted between and perpendicular to two small, parallel printed circuit boards to which their terminals are attached.

cordylite [MINERAL] $(Ce,La)_2Ba(CO_3)_3F_2$ A colorless to wax-yellow mineral consisting of a carbonate and fluoride of cerium, lanthanum, and barium.

core [ELECTR] *See* magnetic core. [ELECTROMAG] *See* magnetic core. [ENG] The inner material of a wall, column, veneered door, or similar structure. [GEOL] **1.** Center of the earth, beginning at a depth of 2900 kilometers. Also known as earth core. **2.** A vertical, cylindrical boring of the earth from which composition and stratification may be determined; in oil or gas well exploration the presence of hydrocarbons or water are items of interest. [MET] A specially formed part of a mold used to form internal holes in a casting. [NUCLEO] The active portion of a nuclear reactor, containing the fissionable material. [OCEANOGR] That area within a layer of ocean water where parameters such as temperature, salinity, or velocity reach extreme values. [SCI TECH] The central part of a body or structure.

core texture *See* atoll texture.

core analysis [GEOL] The use of core samples taken from the borehole during drilling to give information on strata age, composition, and porosity, and the presence of hydrocarbons or water along the length of the borehole.

core array [ELECTR] A rectangular grid arrangement of magnetic cores.

core bank [ELECTR] A stack of core arrays and associated electronics, the stack containing a specific number of core arrays.

core barrel [DES ENG] A hollow cylinder attached to a specially designed bit; used to obtain a continuous section of the rocks penetrated in drilling.

core barrel rod *See* guide rod.

core binder [MATER] A substance for binding core sand together; an example is core oil.

core bit [DES ENG] The hollow, cylindrical cutting part of a core drill.

core blower [MET] A machine using compressed air to blow and pack sand into a core box.

core box [MET] A container for shaping a sand core for a casting.

core catcher *See* split-ring core lifter.

core-catcher case *See* lifter case.

cored ammonium nitrate dynamite [MATER] A class of dynamite that has good water resistance and exhibits velocities higher than straight ammonia dynamite; the gelatin core provides for detonation in the complete explosive column.

cored bar [MET] A bar-shaped powder compact which has been heated by electricity to melt the interior.

cored electrode [MET] An electrode made of metal with a core of flux or other material.

core drier [MET] A light, skeleton cast-iron or aluminum box, whose internal shape conforms closely to the cope portion of a core for molding, used to support, during baking, a core which cannot be placed on a flat plate.

core drill [MECH ENG] A mechanism designed to rotate and to cause an annular-shaped rock-cutting bit to penetrate rock formations, produce cylindrical cores of the formations penetrated, and lift such cores to the surface, where they may be collected and examined.

cored solder [MET] Soldering wire which has a core consisting of flux.

core-dump [COMPUT SCI] To copy the contents of all or part of core storage, usually into an external storage device.

core gripper *See* split-ring core lifter.

core-gripper case *See* lifter case.

core hitch [ELEC] Attachment to a cable core to permit pulling it into a duct without damaging the sheath.

Coreidae [INV ZOO] The squash bugs and leaf-footed bugs, a family of hemipteran insects belonging to the superfamily Coreoidea.

core-image library [COMPUT SCI] A collection of computer programs residing on mass-storage device in ready-to-run form.

core intersection [GEOL] **1.** The point in a borehole where an ore vein or body is encountered as shown by the core. **2.** The width or thickness of the ore body, as shown by the core. Also known as core interval.

core interval *See* core intersection.

core iron [MET] A grade of soft iron suitable for cores of chokes, transformers, and relays.

coreless-type induction heater [ENG] A device in which a charge is heated directly by induction, with no magnetic core material linking the charge. Also known as coreless-type induction furnace.

core lifter *See* split-ring core lifter.

core-lifter case *See* lifter case.

core logging [GEOL] The analysis of the strata through which a borehole passes by the taking of core samples at predetermined depth intervals as the well is drilled.

core logic [ELECTR] Logic performed in ferrite cores that serve as inputs to diode and transistor circuits.

core loss [ELECTROMAG] The rate of energy conversion into heat in a magnetic material due to the presence of an alternating or pulsating magnetic field. Also known as excitation loss; iron loss.

core memory *See* magnetic core storage.

core memory resident [COMPUT SCI] A control program which is in the main memory of a computer at all times to supervise the processing of the computer.

coremium [MYCOL] A small bundle of conidiophores in certain imperfect fungi.

core molding [MET] A molding process which makes use of assembled cores to construct the mold.

core oil [MATER] An oil compound used with sand to make foundry core.

core oven [MET] An oven used for baking cores for molding; the walls are constructed of inner and outer layers of sheet metal separated by rock wool or fiber glass insulation, with interlocked joints.

corepressor [MOL BIO] A certain metabolite which, through combination with a repressor apoprotein produced by a regulator gene, can cause the binding of the protein to the operator gene region of a DNA chain.

core print [MET] A projection on a cylindrical casting pattern which supports a core.

corer [ENG] An instrument used to obtain cylindrical samples of geological materials or ocean sediments.

core rod [MET] The part of a die used to make a hole in a compact.

core rope storage [COMPUT SCI] Direct-access storage consisting of a large number of doughnut-shaped ferrite cores arranged on a common axis, with sense, inhibit, and set wires threaded through or around individual cores in a predetermined manner to provide fixed storage of digital data; each core rope stores one or more complete words, rather than just a single bit.

core sample [GEOL] A sample of rock, soil, snow, or ice obtained by driving a hollow tube into the undisturbed medium and withdrawing it with its contained sample or core.

core sand [MATER] Sand used in a core for molding, made from standard molding-sand mixtures or from silica sand, usually with a binder. Also known as foundry core sand.

core spinning [TEXT] A process in which a sheath of nonstretch fibers is applied to fine-denier elastomeric spandex yarns under tension.

core-spring case *See* lifter case.

core-spun yarn [TEXT] Yarn made by wrapping fibers around an inner fiber.

core stack [ELECTR] A number of core arrays, next to one another and treated as a unit.

core storage [COMPUT SCI] **1.** The main memory of a computer. **2.** *See* magnetic core storage.

core test [TEXT] A test for grading wool in which a core

CORE TEST

Wool coring to test wool content.

sample is withdrawn mechanically from a bag or bale and tested for moisture, ash, vegetable matter, and grease content.

core texture *See* atoll texture.

core-type induction heater [ELECTROMAG] A device in which a charge is heated by induction, with a magnetic core being used to link the induction coil to the charge.

core wall *See* cutoff wall.

core wire [MET] Copper wire having a steel core, often used for antennas.

core yarn [TEXT] The internal member of a yarn produced by core spinning.

coriaceous [BIOL] Leathery, applied to leaves and certain insects.

coriander [BOT] *Coriandrum sativum*. A strong-scented perennial herb in the order Umbellales; the dried fruit is used as a flavoring.

coriander oil [MATER] An essential oil distilled from the fruit of coriander; principal constituents are linalool and pinene; used as a flavoring in gin.

coriandrol *See* linalool.

Cori ester *See* glucose-1-phosphate.

coring [MET] A variable composition of individual crystals across a casting, due to nonequilibrium growth over a range of temperature; the purest material is near the center. [PETRO ENG] The use of a core barrel (hollow length of tubing) to take samples from the underground formation during the drilling operation; used for core analysis.

Coriolis acceleration [MECH] **1.** An acceleration which, when added to the acceleration of an object relative to a rotating coordinate system and to its centripetal acceleration, gives the acceleration of the object relative to a fixed coordinate system. **2.** A vector which is equal in magnitude and opposite in direction to that of the first definition.

Coriolis correction [NAV] A correction applied to an assumed position, celestial line of position, or celestial fix or to a computed or observed altitude to allow for apparent acceleration due to the Coriolis force.

Coriolis deflection *See* Coriolis effect.

Coriolis effect [MECH] Also known as Coriolis deflection. **1.** The deflection relative to the earth's surface of any object moving above the earth, caused by the Coriolis force; an object moving horizontally is deflected to the right in the Northern Hemisphere, to the left in the Southern. **2.** The effect of the Coriolis force in any rotating system. [PHYSIO] Physiological effects (nausea, vertigo, dizziness) felt by a person moving radially in a rotating system, as a rotating space station.

Coriolis force [MECH] A velocity-dependent pseudoforce in a reference frame which is rotating with respect to an inertial reference frame; it is equal and opposite to the product of the mass of the particle on which the force acts and its Coriolis acceleration.

Coriolis operator [SPECT] An operator which gives a large contribution to the energy of an axially symmetric molecule arising from the interaction between vibration and rotation when two vibrations have equal or nearly equal frequencies.

Coriolis parameter [GEOPHYS] Twice the component of the earth's angular velocity about the local vertical $2\Omega \sin \phi$, where Ω is the angular speed of the earth and ϕ is the latitude; the magnitude of the Coriolis force per unit mass on a horizontally moving fluid parcel is equal to the product of the Coriolis parameter and the speed of the parcel.

Coriolis resonance interactions [SPECT] Perturbation of two vibrations of a polyatomic molecule, having nearly equal frequencies, on each other, due to the energy contribution of the Coriolis operator.

Coriolis-type mass flowmeter [ENG] An instrument which determines mass flow rate from the torque on a ribbed disk that is rotated at constant speed when fluid is made to enter at the center of the disk and is accelerated radially.

corium [ANAT] *See* dermis. [INV ZOO] Middle portion of the forewing of hemipteran insects.

Corixidae [INV ZOO] The water boatmen, the single family of the hemipteran superfamily Corixoidea.

Corixoidea [INV ZOO] A superfamily of hemipteran insects belonging to the subdivision Hydrocorisae that lack ocelli.

cork [BOT] A protective layer of cells that replaces the epidermis in older plant stems.

corkboard [MATER] Board made of compressed cork.

cork paint [MATER] A paint containing fine cork particles; used on steel parts on ships to prevent sweating.

corkscrew rule [ELECTROMAG] The rule that the direction of the current and that of the resulting magnetic field are related to each other as the forward travel of a corkscrew and the direction in which it is rotated.

cork tile [MATER] Floor tile made of compressed cork bound with phenolic or other resin binders; used on moisture-free rigid subfloors or on plywood or hardboard.

Corliss valve [MECH ENG] An oscillating type of valve gear with a trip mechanism for the admission and exhaust of steam to and from an engine cylinder.

corm [BOT] A short, erect, fleshy underground stem, usually broader than high and covered with membranous scales.

cormatose [BOT] Having or producing a corm.

cormidium [INV ZOO] The assemblage of individuals dangling in clusters from the main stem of pelagic siphonophores.

corn [BOT] *Zea mays*. A grain crop of the grass order Cyperales grown for its edible seeds (technically fruits).

Cornaceae [BOT] A family of dicotyledonous plants in the order Cornales characterized by perfect or unisexual flowers, a single ovule in each locule, as many stamens as petals, and opposite leaves.

Cornales [BOT] An order of dicotyledonous plants in the subclass Rosidae marked by a woody habit, simple leaves, well-developed endosperm, and fleshy fruits.

cornea [ANAT] The transparent anterior portion of the outer coat of the vertebrate eye covering the iris and the pupil. [INV ZOO] The outer transparent portion of each ommatidium of a compound eye.

corneal reflex [MED] Automatic closing of the eyelids as a result of irritation of the cornea.

corneite [GEOL] A biotite-hornfels formed during deformation of shale by folding.

Corner-Allen unit [BIOL] A unit for the standardization of progesterone.

corner bead [BUILD] **1.** Any vertical molding used to protect the external angle of the intersecting surfaces. **2.** A strip of formed galvanized iron, sometimes combined with a strip of metal lath, placed on corners to reinforce them before plastering.

corner chisel [DES ENG] A chisel with two cutting edges at right angles.

corner cut [COMPUT SCI] A corner cut off a punched card at an oblique angle to aid in orientation.

corner effect [ENG] In ultrasonic testing, reflection of an ultrasonic beam directed perpendicular to the intersection of two surfaces 90° apart.

corner frequency *See* break frequency.

corner head [BUILD] A metal molding that is built into plaster in corners to prevent plaster from accidentally breaking off.

cornering tool [DES ENG] A cutting tool with a curved edge, used to round off sharp corners.

cornerite [BUILD] A corner reinforcement for interior plastering.

corner joint [ENG] An L-shaped joint formed by two members positioned perpendicular to each other.

corner reflector [ELECTROMAG] An antenna consisting of two conducting surfaces intersecting at an angle that is usually 90°, with a dipole or other antenna located on the bisector of the angle. [OPTICS] A reflector which returns a laser beam in the direction of its source, consisting of perpendicular reflecting surfaces; used to make precise determinations of distances in surveying.

cornerstone [BUILD] An inscribed stone laid at the corner of a building, usually at a ceremony.

cornetite [MINERAL] $Cu_3(PO_4)(OH)_3$ A peacock-blue mineral consisting of basic copper phosphate.

cornice [ARCH] The crowning, overhanging part of an architectural structure.

cornice brake [MECH ENG] A machine used to bend sheet metal into different forms.

cornicle [INV ZOO] Either of two protruding horn-shaped dorsal tubes in aphids which secrete a waxy fluid.

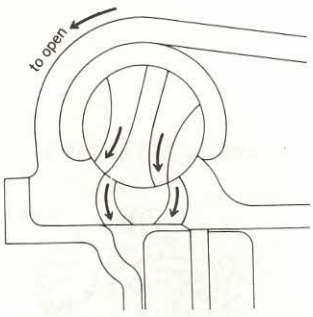
corniculate [BIOL] Possessing small horns or hornlike processes.

corniculate cartilage [ANAT] The cartilaginous nodule on the tip of the arytenoid cartilage.

cornification [PHYSIO] Conversion of stratified squamous epithelial cells into a horny layer and into derivatives such as nails, hair, and feathers.

Cornish rolls [MIN ENG] A geared pair of horizontal cylin-

CORLISS VALVE

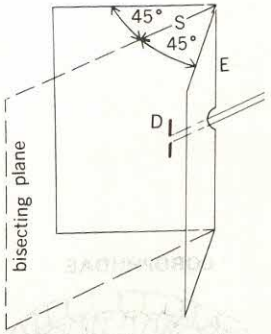


Corliss steam valve in closed position; arrows indicate path steam will take when the valves are opened.

CORM

A corm, a specialized stem.

CORNER REFLECTOR



Configuration of a 90° corner reflector. Distance S from the driven radiator D to edge E need not be critically chosen with respect to wavelength; reflector D may lie between 0.25 and 0.7 wavelength.

ders, one fixed in a frame and the other held by strong springs; used for grinding.

corn oil [MATER] A semidrying, fatty oil of yellowish color, extracted from germs of corn kernels; used mainly as a salad oil, in soft soaps, and in compounded petroleum lubricants.

corn smut [PL PATH] A fungus disease of corn caused by *Ustilago maydis*.

corn snow *See* spring snow.

corn sugar *See* dextrose.

cornu [ANAT] A horn or hornlike structure.

Cornu-Hartmann formula *See* Hartmann dispersion formula.

Cornu quartz prism [OPTICS] A prism constructed of two 30° quartz prisms, left- and right-handed, used in conjunction with left- and right-handed lenses, so that the rotation of polarization occurring in one half of the optical path is exactly compensated by the reverse rotation in the other; used in a quartz spectrograph.

Cornu's spiral [MATH] The graph of the function

$$f(x,y) = \int_{-\infty}^{+\infty} \exp\left[-y^2z^2 - z - xe^{-z}\right]dz.$$

Also known as clothoid.

cornwallite [MINERAL] $Cu_5(AsO_4)_2(OH)_4 \cdot H_2O$ A verdigris green to blackish-green mineral consisting of a hydrated basic arsenate of copper; occurs as small botryoidal crusts.

corn whiskey [FOOD ENG] Whiskey distilled from corn mash containing at least 80% corn, and aged in uncharred oak containers.

corolla [BOT] A collective term for the petals of a flower.

corollate [BOT] Having a corolla.

corolline [BOT] Relating to, resembling, or being borne on a corolla.

coromant cut [MIN ENG] A drill hole pattern; two overlapping holes about 2¼ inches (about 5.5 centimeters) in diameter are drilled in the tunnel center and left uncharged; they form a slot roughly 4 by 2 inches (10 by 5 centimeters) to which the easers can break.

coromell [METEOROL] A land breeze from the south at La Paz, Mexico, near the mouth of the Gulf of California, prevailing from November to May; it sets in at night and usually persists until 8 or 10 A.M.

corona [ARCH] The overhanging vertical member of a cornice. [ASTRON] *See* solar corona. [BOT] **1.** An appendage or series of fused appendages between the corolla and stamens of some flowers. **2.** The region where stem and root of a seed plant merge. Also known as crown. [ELEC] *See* corona discharge. [GEOL] A mineral zone that is usually radial about another mineral or at the area between two minerals. Also known as kelyphite. [INV ZOO] **1.** The anterior ring of cilia in rotifers. **2.** A sea urchin test. **3.** The calyx and arms of a crinoid. [MET] An area sometimes surrounding the nugget at the faying surfaces of a spot weld which provides a degree of bond strength. [METEOROL] A set of one or more prismatically colored rings of small radii, concentrically surrounding the disk of the sun, moon, or other luminary when veiled by a thin cloud; due to diffraction by numerous waterdrops. [MINERAL] An annular zone of minerals disposed either around another mineral or at the contact between two minerals.

Corona Australis [ASTRON] A constellation, right ascension 19 hours, declination 40°S. Abbreviated CrA. Also known as Southern Crown.

Corona Borealis [ASTRON] A constellation, right ascension 16 hours, declination 30°N. Abbreviated CrB. Also known as Northern Crown.

corona current [ELEC] The current of electricity equivalent to the rate of charge transferred to the air from an object experiencing corona discharge.

corona discharge [ELEC] A discharge of electricity appearing as a bluish-purple glow on the surface of and adjacent to a conductor when the voltage gradient exceeds a certain critical value; due to ionization of the surrounding air by the high voltage. Also known as aurora; corona; electric corona.

coronadite [MINERAL] $Pb(Mn^{2+},Mn^{4+})_8O_{16}$ A black mineral consisting of a lead and manganese oxide, occurring in massive form with fibrous structure; an important constituent of manganese ore.

corona failure [ELEC] High-voltage failure initiated by corona discharge at areas of high-voltage stress such as metal inserts or terminals.

coronagraph [ASTRON] An instrument for photographing the corona and prominences of the sun at times other than at solar eclipse.

coronal hole [ASTRON] A large-scale, apparently open structure in the solar corona, devoid of any soft x-ray emission and surrounded by diverging boundary structures.

coronal suture [ANAT] The union of the frontal with the parietal bones transversely across the vertex of the skull.

corona method [GEOPHYS] A method of estimating drop sizes in clouds by utilizing measurements of the angular radii of the rings of a corona.

corona radiata [HISTOL] The layer of cells immediately surrounding a mammalian ovum.

corona resistance [ELEC] Ability of a conductor to resist destruction when a high-voltage electrostatic field ionizes within insulation voids.

corona stabilization [ELEC] The increase in the breakdown voltage of a gas separating two electrodes, where the electric field is very high at one pointed electrode and low at the other, due to the reduction of electric field around the pointed electrode by corona discharge.

coronary artery [ANAT] Either of two arteries arising in the aortic sinuses that supply the heart tissue with blood.

coronary disease [MED] Any condition that reduces the flow of blood to the heart muscles.

coronary failure [MED] Prolonged precordial pain or discomfort without conventional evidence of myocardial infarction; subendocardial ischemia caused by a disparity between coronary blood flow and myocardial needs; this condition is more commonly referred to as coronary artery insufficiency.

coronary occlusion [MED] Complete blockage of a coronary artery.

coronary sinus [ANAT] A venous sinus opening into the heart's right atrium which drains the cardiac veins.

coronary stenosis [MED] Narrowing of the lumen of a coronary artery.

coronary sulcus [ANAT] A groove in the external surface of the heart separating the atria from the ventricles, containing the trunks of the nutrient vessels of the heart.

coronary thrombosis [MED] Formation of a thrombus in a coronary artery.

coronary valve [ANAT] A semicircular fold of the endocardium of the right atrium at the orifice of the coronary sinus.

coronary vein [ANAT] **1.** Any of the blood vessels that bring blood from the heart and empty into the coronary sinus. **2.** A vein along the lesser curvature of the stomach.

corona shield [ELEC] A shield placed about a point of high potential to redistribute electrostatic lines of force.

corona start voltage [ELEC] The voltage difference at which corona discharge is initiated in a given system.

Coronatae [INV ZOO] An order of the class Scyphozoa which includes mainly abyssal species having the exumbrella divided into two parts by a coronal furrow.

corona tube [ELEC] A gas-discharge voltage-reference tube employing a corona discharge.

coronavirus [VIROL] A major group of animal viruses including avian infectious bronchitis virus and mouse hepatitis virus.

corona voltmeter [ELEC] A voltmeter in which the crest value of a voltage is indicated by the inception of corona at a known electrode spacing.

coronizing [MET] Process to electroplate zinc on nickel, thermally treated at 375°C; coating is used on ferrous and copper-based alloys to give resistance to sulfur dioxide, SO_2, and sulfur trioxide, SO_3.

coronoid [BIOL] Shaped like a beak.

coronoid fossa [ANAT] A depression in the humerus into which the apex of the coronoid process of the ulna fits in extreme flexion of the forearm.

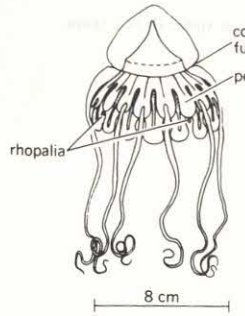
coronoid process [ANAT] **1.** A thin, flattened process projecting from the anterior portion of the upper border of the ramus of the mandible, and serving for the insertion of the temporal muscle. **2.** A triangular projection from the upper end of the ulna, forming the lower part of the radial notch.

coronule [INV ZOO] A peripheral ring of spines on some diatom shells.

Corophiidae [INV ZOO] A family of amphipod crustaceans in the suborder Gammaridea.

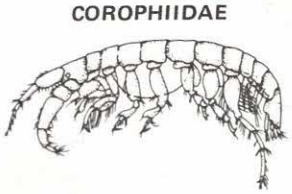
coroutine [COMPUT SCI] A program module for which the lifetime of a particular activation record is independent of the

CORONATAE



Periphylla. (From L. H. Hyman, The Invertebrates, vol. 1, McGraw-Hill, 1940)

COROPHIIDAE



Lateral view of female *Corophium crassicorne* Bruzelius, a tube-builder. *(From G. O. Sars, An Account of the Crustacea of Norway, vol. 1, 1895)*

time when control enters or leaves the module, and in which the activation record maintains a local instruction counter so that, whenever control enters the module, execution begins at the point where it stopped when control last left that particular instance of execution.

corpora quadrigemina [ANAT] The inferior and superior colliculi collectively. Also known as quadrigeminal body.

cor pulmonale [MED] Hypertrophy and dilation of the right ventricle secondary to obstruction to the pulmonary blood flow and consequent pulmonary hypertension.

corpus albicans [HISTOL] The white fibrous scar in an ovary; produced by the involution of the corpus luteum.

corpus allatum [INV ZOO] An endocrine structure near the brain of immature arthropods that secretes a juvenile hormone, neotenin.

corpus callosum [ANAT] A band of nerve tissue connecting the cerebral hemispheres in humans and higher mammals.

corpus cavernosum [ANAT] The cylinder of erectile tissue forming the clitoris in the female and the penis in the male.

corpus cerebelli [ANAT] The central lobe or zone of the cerebellum; regulates reflex tonus of postural muscles in mammals.

corpuscle [ANAT] **1.** A small, rounded body. **2.** An encapsulated sensory-nerve end organ. [OPTICS] A particle of light in the corpuscular theory, corresponding to the photon in the quantum theory.

corpuscular radiation [PHYS] Radiation consisting of subatomic particles, such as electrons, protons, deuterons, and neutrons, as distinguished from electromagnetic radiation.

corpuscular theory of light [OPTICS] Theory that light consists of a stream of particles; now considered a limiting case of the quantum theory. Also known as Newton's theory of light.

corpus luteum [HISTOL] The yellow endocrine body formed in the ovary at the site of a ruptured Graafian follicle.

corpus striatum [ANAT] The caudate and lenticular nuclei, together with the internal capsule which separates them.

corrasion [GEOL] Mechanical wearing away of rock and soil by the action of solid materials moved along by wind, waves, running water, glaciers, or gravity. Also known as mechanical erosion.

corrected altitude [METEOROL] The indicated altitude corrected for temperature deviation from the standard atmosphere. Also known as true altitude.

corrected azimuth [ORD] Azimuth of the axis of the bore of a gun firing on a moving target, after allowances have been made for atmospheric, material, and other variable conditions.

corrected compass course [NAV] Compass course with deviation applied.

corrected compass heading [NAV] Compass heading with deviation applied.

corrected establishment *See* mean high water lunitidal interval.

corrected sextant altitude [NAV] Sextant altitude for which index error, height of eye, parallax, refraction, and so on have been applied. Also known as observed altitude.

correcting [NAV] The process of applying corrections, particularly that of converting compass to magnetic direction, or compass, magnetic, or gyro to true direction.

correcting plate *See* corrector plate.

correcting wedge [MIN ENG] A deflection wedge used to deflect a crooked borehole back into its intended course.

correction [SCI TECH] A quantity added to a calculated or observed value to obtain the true value.

correction of soundings [NAV] In marine operations, the adjustment of soundings for any departure from true depth because of the method of sounding or any fault in the measuring apparatus.

correction time [CONT SYS] The time required for the controlled variable to reach and stay within a predetermined band about the control point following any change of the independent variable or operating condition in a control system. Also known as settling time.

corrective action [CONT SYS] The act of varying the manipulated process variable by the controlling means in order to modify overall process operating conditions.

corrective maintenance [COMPUT SCI] The maintenance performed as required, on an unscheduled basis, by the contractor following equipment failure. Also known as remedial maintenance.

corrective network [ELEC] An electric network inserted in a circuit to improve its transmission properties, impedance properties, or both. Also known as shaping circuit; shaping network.

corrective operation *See* remedial operation.

corrective therapy [MED] A program, and the techniques, designed to improve or maintain the health of a patient by improving neuromuscular activities and personal health habits and promoting relaxation by adjustment to stresses.

corrector [ENG] A magnet, piece of soft iron, or device used in the adjustment or compensation of a magnetic compass.

corrector plate [OPTICS] A thin lens or system of lenses used to correct the spherical aberration of a spherical lens or the coma of a parabolic lens; used particularly in telescopes such as the Schmidt telescope. Also known as correcting plate.

correed relay [ELEC] Hermetically sealed reed capsule surrounded by a coil winding, used as a switching device with telephone equipment.

correlated orientation tracking and range *See* cotar.

correlation [GEOL] **1.** The determination of the equivalence or contemporaneity of geologic events in separated areas. **2.** As a step in seismic study, the selecting of corresponding phases, taken from two or more separated seismometer spreads, of seismic events seemingly developing at the same geologic formation boundary.

correlation coefficient [STAT] A measurement, which is unchanged by both addition and multiplication of the random variable by positive constants, of the tendency of two random variables X and Y to vary together; it is given by the ratio of the covariance of X and Y to the square root of the product of the variance of X and the variance of Y.

correlation curve *See* correlogram.

correlation detection [ENG] A method of detection of aircraft or space vehicles in which a signal is compared, point to point, with an internally generated reference. Also known as cross-correlation detection.

correlation, detection, and ranging [ORD] A method of detecting submerged submarines with sonobuoys dropped in a characteristic pattern from Navy P–3 aircraft, based on difference in time and phase of signals transmitted to the search plane by the sonobuoys. Abbreviated CODAR.

correlation direction finder [ENG] Satellite station separated from a radar to receive jamming signals; by correlating the signals received from several such stations, range and azimuth of many jammers may be obtained.

correlation distance [COMMUN] In tropospheric scatter propagation, the minimum spatial separation between antennas which will give rise to independent fading of the received signals.

correlation tracking and triangulation *See* cotat.

correlation tracking system [ENG] A trajectory-measuring system utilizing correlation techniques where signals derived from the same source are correlated to derive the phase difference between the signals.

correlation-type receiver *See* correlator.

correlation ultrasonic flowmeter [ENG] An instrument for determining the velocity of a fluid flow from the time required for discontinuities in the fluid stream to pass between two pairs of transducers that generate and detect high-frequency sound.

correlative rights [PETRO ENG] Legal rights protecting property over a portion of a gas or oil reservoir from excessive or wasteful withdrawal of hydrocarbons by adjoining properties overlying the same reservoir.

correlator [ELECTR] A device that detects weak signals in noise by performing an electronic operation approximating the computation of a correlation function. Also known as correlation-type receiver.

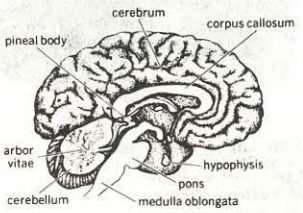
correlogram [MATH] A curve showing the assumed correlation between two mathematical variables. Also known as correlation curve.

correspondence principle [QUANT MECH] The principle that quantum mechanics has a classical limit in which it is equivalent to classical mechanics. Also known as Bohr's correspondence principle.

corresponding points [PHYSIO] Any two retinal areas in the respective eyes so that the area in one eye has an identical direction in the opposite retina.

corresponding states [PHYS CHEM] The condition when two or more substances are at the same reduced pressures, the same reduced temperatures, and the same reduced volumes.

CORPUS CALLOSUM



A sagittal section through the human brain showing corpus callosum. *(From H. E. Walter and L. P. Sayles, Biology of the Vertebrates, 3d ed., copyright 1949 by Macmillan Publishing Co., Inc., renewed 1977 by Leonard P. Sayles; reprinted with permission)*

CORUNDUM

A specimen of corundum from Steinkopf, South Africa. *(American Museum of Natural History)*

corridor [ECOL] A land bridge that allows free migration of fauna in both directions.

Corrigan's pulse [MED] A pulse characterized by a rapid, forceful ascent (water-hammer quality) and rapid downstroke or descent (collapsing quality); seen with aortic regurgitation and hyperkinetic circulatory states.

Corrodentia [INV ZOO] The equivalent name for Psocoptera.

corroding lead [MET] Lead that can be corroded to make white lead.

Corrodkote test [MET] An accelerated corrosion test in which the article is coated with a slurry of clay and a salt solution and then exposed to a high humidity for a specified period.

corrosion [GEOCHEM] Chemical erosion by motionless or moving agents. [MET] Gradual destruction of a metal or alloy due to chemical processes such as oxidation or the action of a chemical agent.

corrosion border *See* corrosion rim.

corrosion fatigue [MET] Damage to or failure of a metal due to corrosion combined with fluctuating fatigue stresses.

corrosion fatigue limit [MET] The maximum stress that a corroded material can withstand for a given number of stress reversals.

corrosion number *See* acid number.

corrosion potential [MET] The measure of corroding surface potential in an electrolyte in relation to a reference electrode while the circuit is open.

corrosion protection [MET] The minimization of corrosion by coating with a protective metal, with an oxide or phosphide or similar substance, or with a protective paint, or by rendering the metal passive.

corrosion rim [MINERAL] A modification of the outlines of a porphyritic crystal due to the corrosive action of a magma on previously stable minerals. Also known as corrosion border.

corrosion test [MET] Any of various tests to determine the resistance of a metal to chemical attack.

corrosive [MATER] A substance that causes corrosion.

corrosive flux [MET] A soldering flux, usually composed of inorganic salts and acids, which provides oxide removal of the base metal upon application of solder; flux remaining on the base metal is corrosive and should be removed.

corrosiveness [MET] The tendency of a metal to wear away another by chemical attack.

corrosive sublimate *See* mercuric chloride.

corrugated bar [DES ENG] Steel bar with transverse ridges; used in reinforced concrete.

corrugated fastener [DES ENG] A thin corrugated strip of steel that can be hammered into a wood joint to fasten it.

corrugated lens [OPTICS] A lens having circular sections cut out from the surface to reduce its weight without lowering its focal power.

corrugating [DES ENG] Forming straight, parallel, alternate ridges and grooves in sheet metal, cardboard, or other material.

corsite [PETR] A spheroidal variety of gabbro. Also known as miagite; napoleonite.

cortex [ANAT] The outer portion of an organ or structure, such as of the brain and adrenal glands. [BOT] A primary tissue in roots and stems of vascular plants that extends inward from the epidermis to the phloem. [INV ZOO] The peripheral layer of certain protozoans.

cortical stimulator [MED] An electronic instrument used in nerve and mental therapy to deliver an electric shock of prescribed strength by means of a pulsating current.

corticoid *See* adrenal cortex hormone.

corticosteroid [BIOCHEM] **1.** Any steroid hormone secreted by the adrenal cortex of vertebrates. **2.** Any steroid with properties of an adrenal cortex steroid.

corticosterone [BIOCHEM] $C_{21}H_{30}O_4$ A steroid hormone produced by the adrenal cortex of vertebrates that stimulates carbohydrate synthesis and protein breakdown and is antagonistic to the action of insulin.

corticotrophic [PHYSIO] Having an effect on the adrenal cortex.

corticotropin [BIOCHEM] A hormonal preparation having adrenocorticotropic activity, derived from the adenohypophysis of certain domesticated animals.

cortin unit [BIOL] A unit for the standardization of adrenal cortical hormones.

cortisol *See* hydrocortisone.

cortisone [BIOCHEM] $C_{26}H_{28}O_8I$ A steroid hormone produced by the adrenal cortex of vertbrates that acts principally in carbohydrate metabolism.

cortlandite [PETR] A peridotite consisting of large crystals of hornblende with poikilitically included crystals of olivine. Also known as hudsonite.

corundum [MINERAL] Al_2O_3 A hard mineral occurring in various colors and crystallizing in the hexagonal system; crystals are usually prismatic or in rounded barrel shapes; gem varieties are ruby and sapphire.

corvette [NAV ARCH] **1.** A warship with a continuous deck from fore to stern, usually with no structure above, and usually with only one row of guns. **2.** A very maneuverable escort ship having antisubmarine and antiaircraft guns, depth charges, and detection equipment.

Corvidae [VERT ZOO] A family of large birds in the order Passeriformes having stout, long beaks; includes the crows, jays, and magpies.

Corvus [ASTRON] A constellation, right ascension 12 hours, declination 20°S. Abbreviated Crv. Also known as Crow.

corvusite [MINERAL] V_2O_4–$6V_2O_5 \cdot nH_2O$ A blue-black to brown mineral consisting of a hydrous oxide of vanadium; occurs in massive form.

Corylophidae [INV ZOO] The equivalent name for Orthoperidae.

corymb [BOT] An inflorescence in which the flower stalks arise at different levels but reach the same height, resulting in a flat-topped cluster.

corymbose [BOT] Resembling or pertaining to a corymb.

Corynebacteriaceae [MICROBIO] Formerly a family of nonsporeforming, usually nonmotile rod-shaped bacteria in the order Eubacteriales including animal and plant parasites and pathogens.

corynebacteriophage [VIROL] Any bacteriophage able to infect *Corynebacterium* species.

Corynebacterium [MICROBIO] A genus of gram-positive, straight or slightly curved rods in the coryneform group of bacteria; club-shaped swellings are common; includes human and animal parasites and pathogens, and plant pathogens.

Corynebacterium diphtheriae [MICROBIO] A facultatively aerobic, nonmotile species of bacteria that causes diphtheria in humans. Also known as Klebs-Loeffler bacillus.

Coryphaenidae [VERT ZOO] A family of pelagic fishes in the order Perciformes characterized by a blunt nose and deeply forked tail.

Coryphodontidae [PALEON] The single family of the Coryphodontoidea, an extinct superfamily of mammals.

Coryphodontoidea [PALEON] A superfamily of extinct mammals in the order Pantodonta.

coryza [MED] Inflammation of the mucous membranes of the nose, usually marked by sneezing and discharge of watery mucus.

cos *See* cosine function.

cosalite [MINERAL] $Pb_2Bi_2S_5$ A lead-gray or steel-gray mineral consisting of lead, bismuth, and sulfur; specific gravity is 6.39–6.75

cosecant [MATH] The reciprocal of the sine. Denoted csc.

cosecant antenna [ELECTROMAG] An antenna that gives a beam whose amplitude varies as the cosecant of the angle of depression below the horizontal; used in navigation radar.

cosecant-squared antenna [ELECTROMAG] An antenna having a cosecant-squared pattern.

cosecant-squared pattern [ELECTROMAG] A ground radar-antenna radiation pattern that sends less power to nearby objects than to those farther away in the same sector; the field intensity varies as the square of the cosecant of the elevation angle.

cosh *See* hyperbolic cosine.

cosine emission law [OPTICS] The law that the energy emitted by a radiating surface in any direction is proportional to the cosine of the angle which that direction makes with the normal.

cosine function [MATH] In a right triangle with an angle θ, the cosine function gives the ratio of adjacent side to hypotenuse; more generally, it is the function which assigns to any real number θ the abscissa of the point on the unit circle obtained by moving from (1,0) counterclockwise θ units along the circle, or clockwise $|\theta|$ units if θ is less than 0. Denoted cos.

cosine pulse [PHYS] A pulse whose amplitude varies during some time interval in proportion to the cosine function over the

range from $-\pi/2$ to $\pi/2$, and vanishes outside this time interval.

cosine-squared pulse [PHYS] A pulse whose amplitude varies during some time interval in proportion to the square of the cosine function over the range from $-\pi/2$ to $\pi/2$, and vanishes outside this time interval.

cosine winding [ELECTR] A winding used in the deflection yoke of a cathode-ray tube to prevent changes in focus as the beam is deflected over the entire area of the screen.

cosmic [ASTRON] Pertaining to the cosmos, the vast extraterrestrial regions of the universe.

cosmic abundance [ASTRON] The amount of a substance believed to be present in the entire universe, relative to other substances.

cosmic dust [ASTRON] Fine particles of solid matter forming clouds in interstellar space.

cosmic electrodynamics [ASTROPHYS] The science concerned with electromagnetic phenomena in ionized media encountered in interstellar space, in stars, and above the atmosphere.

cosmic expansion [ASTRON] The recession of all distant galaxies from each other, as manifested in the red shift of their spectral lines.

cosmic microwave background *See* cosmic microwave radiation.

cosmic microwave radiation [ASTRON] A nearly uniform flux of microwave radiation that is believed to permeate all of space and to have originated in the big bang. Also known as cosmic microwave background; microwave background.

cosmic noise [COMMUN] Radio static caused by a phenomenon outside the earth's atmosphere, such as sunspots.

cosmic radiation *See* cosmic rays.

cosmic radio waves [ASTRON] Radio waves reaching the earth from interstellar or intergalactic sources.

cosmic rays [NUC PHYS] Electrons and the nuclei of atoms, largely hydrogen, that impinge upon the earth from all directions of space with nearly the speed of light. Also known as cosmic radiation; primary cosmic rays.

cosmic-ray shower [NUC PHYS] The simultaneous appearance of a number of downward-directed ionizing particles, with or without accompanying photons, caused by a single cosmic ray. Also known as air shower; shower.

cosmic-ray telescope [ENG] Any device for detecting and determining the directions of either cosmic-ray primary protons and heavier-element nuclei, or the products produced when these particles interact with the atmosphere. [NUCLEO] An array of counters, sensitive to the direction of the rays detected.

cosmic sediment [GEOL] Particles of extraterrestrial origin which are observed as black magnetic spherules in deep-sea sediments.

cosmic year [ASTRON] The period of rotation of the Milky Way Galaxy, about 220 million years.

Cosmocercidae [INV ZOO] A group of nematodes assigned to the suborder Oxyurina by some authorities and to the suborder Ascaridina by others.

cosmochemistry [ASTROPHYS] The branch of science which treats of the chemical composition of the universe and its origin.

cosmogony [ASTROPHYS] Study of the origin and evolution of specific astronomical systems and of the universe as a whole.

cosmoid scale [VERT ZOO] A structure in the skin of primitive rhipidistians and dipnoans that is composed of enamel, a dentine layer (cosmine), and laminated bone.

cosmological [ASTRON] Relating to the overall structure of the universe.

cosmological constant [RELAT] The multiplicative constant for a term proportional to the metric in Einstein's equation relating the curvature of space to the energy-momentum tensor.

cosmological principle [ASTRON] The assumption made in most theories of cosmology that the universe is homogeneous on a large scale.

cosmological red shift [ASTRON] The red shift that can be ascribed entirely to the general expansion of space-time initiated by the big bang.

cosmology [ASTRON] The study of the overall structure of the physical universe.

cosmonaut [AERO ENG] A Soviet astronaut.

cosmopolitan [ECOL] Having a worldwide distribution wherever the habitat is suitable, with reference to the geographical distribution of a taxon.

Cosmos satellites [AERO ENG] A series of earth satellites launched by the Soviet Union starting in 1962, ostensibly for geophysical experiments.

cospectrum [PHYS] **1.** The spectral decomposition of the in-phase components of the covariance of two functions of time. **2.** The real part of the cross spectrum of two functions.

Cossidae [INV ZOO] The goat or carpenter moths, a family of heavy-bodied lepidopteran insects in the superfamily Cossoidea having the abdomen extending well beyond the hindwings.

Cosslett process [MET] A process in which iron or steel articles immersed for 3 or 4 hours in a boiling solution, made by mixing iron filings with concentrated H_3PO_4 (sufficient to form a paste) and then adding to weak phosphoric acid, become coated with a rust-resisting deposit of basic ferrous phosphate.

Cossoidea [INV ZOO] A monofamilial superfamily of lepidopteran insects belonging to suborder Heteroneura.

Cossuridae [INV ZOO] A family of fringe worms belonging to the Sedentaria.

Cossyphodidae [INV ZOO] The lively ant guest beetles, a small family of coleopteran insects in the superfamily Tenebrionoidea.

costa [BIOL] A rib or riblike structure. [BOT] The midrib of a leaf. [INV ZOO] The anterior vein of an insect's wing.

costa bulb [NAV ARCH] A streamlined body of revolution integral with a rudder and directly in line with the propeller, designed to improve propulsion efficiency of ships.

cost accounting [IND ENG] The branch of accounting in which one records, analyzes, and summarizes costs of material, labor, and burden, and compares these actual costs with predetermined budgets and standards.

Costaceae [BOT] A family of monocotyledonous plants in the order Zingiberales distinguished by having one functional stamen with two pollen sacs and spirally arranged leaves and bracts.

costal cartilage [ANAT] The cartilage occupying the interval between the ribs and the sternum or adjacent cartilages.

costal process [ANAT] An anterior or ventral projection on the lateral part of a cervical vertebra. [EMBRYO] An embryonic rib primordium, the ventrolateral outgrowth of the caudal, denser half of a sclerotome.

cost analysis [IND ENG] Analysis of the factors contributing to the costs of operating a business and of the costs which will result from alternative procedures, and of their effects on profits.

costate [BIOL] Having ribs or ridges.

cost control *See* industrial cost control.

cost function [SYS ENG] In decision theory, a loss function which does not depend upon the decision rule.

cost-plus contract [ENG] A contract under which a contractor furnishes all material, construction equipment, and labor at actual cost, plus an agreed-upon fee for his services.

cot *See* cotangent.

cotangent [MATH] The reciprocal of the tangent. Denoted cot; ctn.

cotar [ENG] A passive system used for tracking a vehicle in space by determining the line of direction between a remote ground-based receiving antenna and a telemetering transmitter in the missile, using phase-comparison techniques. Derived from correlated orientation tracking and range.

cotat [ENG] A trajectory-measuring system using several antenna base lines, each separated by large distances, to measure direction cosines to an object; then the object's space position is computed by triangulation. Derived from correlation tracking and triangulation.

cotectic [PHYS CHEM] Referring to conditions of pressure, temperature, and composition under which two or more solid phases crystallize at the same time, with no resorption, from a single liquid over a finite range of decreasing temperature.

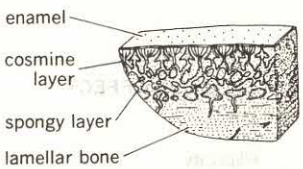
cotectic crystallization [PHYS CHEM] Simultaneous crystallization of two or more solid phases from a single liquid over a finite range of falling temperature without resorption.

coth *See* hyperbolic cotangent.

cotidal chart [MAP] A chart of cotidal lines that show approximate locations of high water at hourly intervals as measured from a reference meridian, usually Greenwich.

cotidal hour [ASTRON] The average interval expressed in solar or lunar hours between the moon's passage over the merid-

COSMOID SCALE



Cross section through a cosmoid scale. *(From A. S. Romer, The Vertebrate Body, Saunders, 1962)*

COSSURIDAE

Cossura, anterior and posterior ends in dorsal view.

ian of Greenwich and the following high water at a specified place.

cotidal line [MAP] A line on a chart passing through all points where high water occurs at the same time.

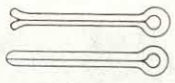
Cotingidae [VERT ZOO] The cotingas, a family of neotropical suboscine birds in the order Passeriformes.

cotter [DES ENG] A tapered piece that can be driven in a tapered hole to hold together an assembly of machine or structural parts.

cottered joint [MECH ENG] A joint in which a cotter, usually a flat bar tapered on one side to ensure a tight fit, transmits power by shear on an area at right angles to its length.

cotter pin [DES ENG] A split pin, inserted into a hole, to hold a nut or cotter securely to a bolt or shaft, or to hold a pair of hinge plates together.

COTTER PIN



Two common forms of cotter pin.

Cottidae [VERT ZOO] The sculpins, a family of perciform fishes in the suborder Cottoidei.

Cottiformes [VERT ZOO] An order set up in some classification schemes to include the Cottoidei.

Cottoidei [VERT ZOO] The mail-cheeked fishes, a suborder of the order Perciformes characterized by the expanded third infraorbital bone.

cotton [BOT] Any plant of the genus *Gossypium* in the order Malvales; cultivated for the fibers obtained from its encapsulated fruits or bolls. [TEXT] The most economical natural fiber, obtained from plants of the genus *Gossypium*, used in making fabrics, cordage, and padding and for producing artificial fibers and cellulose.

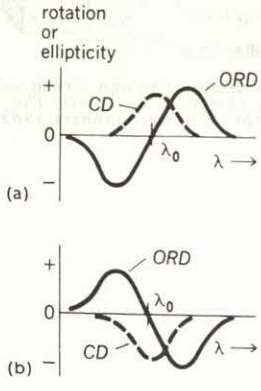
cotton anthracnose [PL PATH] A fungus disease of cotton caused by *Glomerella gossypii* and characterized by reddish-brown to light-colored or necrotic spots.

cotton ball *See* ulexite.

cotton-belt climate [CLIMATOL] A type of warm climate characterized by dry winters and rainy summers; that is, a monsoon climate, in contrast to a Mediterranean climate.

Cotton effect [ANALY CHEM] The characteristic wavelength dependence of the optical rotatory dispersion curve or the circular dichroism curve or both in the vicinity of an absorption band.

COTTON EFFECT



Behavior of optical rotatory dispersion (ORD) and circular dichroism (CD) curves in the vicinity of an absorption band at wavelength λ_0 (idealized). *(a)* Positive Cotton effect. *(b)* Negative Cotton effect.

cotton gin [TEXT] A machine that separates cottonseed from the fibers.

cottonmouth *See* water moccasin.

Cotton-Mouton birefringence *See* Cotton-Mouton effect.

Cotton-Mouton constant [OPTICS] A constant giving the strength of the Cotton-Mouton effect in a liquid; when multiplied by the path length and the square of the magnetic field, it gives the phase difference between the components of light parallel and perpendicular to the field.

Cotton-Mouton effect [OPTICS] The double refraction (birefringence) of light in a liquid in a magnetic field at right angles to the direction of light propagation. Also known as Cotton-Mouton birefringence.

cotton oil [MATER] The yellow, viscous fixed oil, containing principally linoleic acid, pressed from the seeds of various *Gossypium* species; the refined oil is colorless and used in foods and some pharmaceutical preparations. Also known as cottonseed oil; oleum gossypii seminis.

cotton root rot [PL PATH] A fungus disease of cotton caused by *Phymatotrichum omnivorum* and marked by bronzing of the foliage followed by sudden wilting and death of the plant.

cotton rust [PL PATH] A fungus disease of cotton caused by *Puccinia stakmanii* producing low, greenish-yellow or orange elevations on the undersurface of leaves.

cottonseed oil *See* cotton oil.

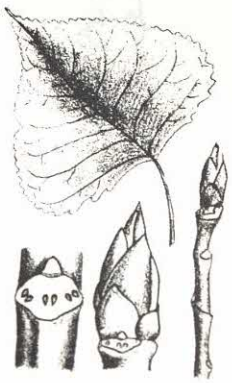
cotton staple [TEXT] Natural cotton fiber.

cotton wax [MATER] The wax composing cottonseed coating.

cotton wilt [PL PATH] **1.** A fungus disease of cotton caused by *Fusarium vasinfectum* growing in the water-conducting vessels and characterized by wilt, yellowing, blighting, and death. **2.** A fungus blight of cotton caused by *Verticillium albo-atrum* and characterized by yellow mottling of the foliage.

cottonwood [BOT] Any of several poplar trees *(Populus)* having hairy, encapsulated fruit.

COTTONWOOD



Cottonwood poplar *(Populus deltoides)* showing leaf, leaf scar, terminal bud, and twig.

cottony rot [PL PATH] A fungus disease of many plants, especially citrus trees, marked by fluffy white growth caused by *Sclerotinia sclerotiorum*, in which there is stem wilt and rot.

Cottrell hardening [SOLID STATE] Hardening of a material caused by locking of its dislocations when impurity atoms whose size differs from that of the solvent cluster around them.

Cottrell precipitator [ENG] A machine for removing dusts and mists from gases, in which the gas passes through a grounded pipe with a fine axial wire at a high negative voltage, and particles are ionized by the corona discharge of the wire and migrate to the pipe.

cotunnite [MINERAL] $PbCl_2$ An alteration product of galena; a soft, white to yellowish mineral that crystallizes in the orthorhombic crystal system.

cotyledon [BOT] The first leaf of the embryo of seed plants.

cotylocercous cercaria [INV ZOO] A digenetic trematode larva characterized by a sucker or adhesive gland on the tail.

Cotylosauria [PALEON] An order of primitive reptiles in the subclass Anapsida, including the stem reptiles, ancestors of all of the more advanced Reptilia.

cotype *See* syntype.

coudé focus [OPTICS] Focus achieved with a coudé telescope.

coudé-Newtonian-Cassegrain telescope [OPTICS] A reflecting telescope designed so that observations can be made at the coudé, Newtonian, or Cassegrain focus.

coudé spectrograph [SPECT] A stationary spectrograph that is attached to the tube of a coudé telescope.

coudé spectroscopy [SPECT] The production and investigation of astronomical spectra using a coudé spectrograph.

coudé telescope [OPTICS] An instrument in which light is reflected along the polar axis to come to focus at a fixed place where it is viewed through a fixed eyepiece or where a spectrograph can be mounted.

Couette flow [FL MECH] Low-speed, steady motion of a viscous fluid between two infinite plates moving parallel to each other.

Couette viscometer [ENG] A viscometer in which the liquid whose viscosity is to be measured fills the space between two vertical coaxial cylinders, the inner one suspended by a torsion wire; the outer cylinder is rotated at a constant rate, and the resulting torque on the inner cylinder is measured by the twist of the wire. Also known as rotational viscometer.

cougar *See* puma.

cough [MED] A sudden, violent expulsion of air after deep inspiration and closure of the glottis.

Couinae [VERT ZOO] The couas, a subfamily of Madagascan birds in the family Cuculidae.

coul *See* coulomb.

coulee [GEOL] **1.** A thick, solidified sheet or stream of lava. **2.** A steep-sided valley or ravine, sometimes with a stream at the bottom.

coulisse [ENG] A piece of wood that has a groove cut in it to enable another piece of wood to slide in it. Also known as cullis.

coulomb [ELEC] A unit of electric charge, defined as the amount of electric charge that crosses a surface in 1 second when a steady current of 1 absolute ampere is flowing across the surface; this is the absolute coulomb and has been the legal standard of quantity of electricity since 1950; the previous standard was the international coulomb, equal to 0.999835 absolute coulomb. Abbreviated coul. Symbolized C.

Coulomb attraction [ELEC] The electrostatic force of attraction exerted by one charged particle on another charged particle of opposite sign. Also known as electrostatic attraction.

Coulomb barrier [NUC PHYS] **1.** The Coulomb repulsion which tends to keep positively charged bombarding particles out of the nucleus. **2.** Specifically, the Coulomb potential associated with this force.

Coulomb excitation [NUC PHYS] Inelastic scattering of a positively charged particle by a nucleus and excitation of the nucleus, caused by the interaction of the nucleus with the rapidly changing electric field of the bombarding particle.

Coulomb field [ELEC] The electric field created by a stationary charged particle.

Coulomb force [ELEC] The electrostatic force of attraction or repulsion exerted by one charged particle on another, in accordance with Coulomb's law.

Coulomb friction [MECH] Friction occurring between dry surfaces.

Coulomb gage [ELECTOMAG] A gage in which the divergence of the magnetic vector potential is equal to 0.

Coulomb interactions [ELEC] Interactions of charged particles associated with the Coulomb forces they exert on one another. Also known as electrostatic interactions.

coulombmeter [ENG] A measuring instrument that mea-

sures quantity of electricity in coulombs by integrating a stored charge in a circuit which has very high input impedance.

Coulomb potential [ELEC] A scalar point function equal to the work per unit charge done against the Coulomb force in transferring a particle bearing an infinitesimal positive charge from infinity to a point in the field of a specific charge distribution.

Coulomb repulsion [ELEC] The electrostatic force of repulsion exerted by one charged particle on another charged particle of the same sign. Also known as electrostatic repulsion.

Coulomb scattering [PHYS] A collision of two charged particles in which the Coulomb force is the dominant interaction.

Coulomb's law [ELEC] The law that the attraction or repulsion between two electric charges acts along the line between them, is proportional to the product of their magnitudes, and is inversely proportional to the square of the distance between them. Also known as law of electrostatic attraction.

coulometer [PHYS CHEM] An electrolytic cell for the precise measurement of electrical quantities or current intensity by quantitative determination of chemical substances produced or consumed.

coulometric analysis [ANALY CHEM] A technique in which the amount of a substance is determined quantitatively by measuring the total amount of electricity required to deplete a solution of the substance.

coulometric titration [ANALY CHEM] The slow electrolytic generation of a soluble species which is capable of reacting quantitatively with the substance sought; some independent property must be observed to establish the equivalence point in the reaction.

coulometry [ANALY CHEM] A determination of the amount of an electrolyte released during electrolysis by measuring the number of coulombs used.

coulostatic analysis [PHYS CHEM] An electrochemical technique involving the application of a very short, large pulse of current to the electrode; the pulse charges the capacitive electrode-solution interface to a new potential, then the circuit is opened, and the return of the working electrode potential to its initial value is monitored; the current necessary to discharge the electrode interface comes from the electrolysis of electroactive species in solution; the change in electrode potential versus time results in a plot, the shape of which is proportional to concentration.

Coulter counter [MICROBIO] An electronic device for counting the number of cells in a liquid culture.

coumachlor [ORG CHEM] $C_{19}H_{15}ClO_4$ A white, crystalline compound with a melting point of 169–171°C; insoluble in water; used as a rodenticide. Also known as 3-(α-acetonyl-4-chlorobenzyl)-4-hydroxy-coumarin.

coumafene *See* warfarin.

coumarin [ORG CHEM] $C_9H_6O_2$ The anhydride of *o*-coumaric acid; a toxic, white, crystalline lactone found in many plants and made synthetically; used in making perfume and soap. Also known as 1,2-benzopyrone.

coumarin glycoside [BIOCHEM] Any of several glycosidic aromatic principles in many plants; contains coumaric acid as the aglycon group.

coumarone [ORG CHEM] C_8H_6O A colorless liquid, boiling point 169°C. Also known as benzofuran.

coumarone-indene resin [ORG CHEM] A synthetic resin prepared by polymerization of coumarone and indene.

coumatetralyl [ORG CHEM] $C_{19}H_{16}O_3$ A yellow-white, crystalline compound with a melting point of 172–176°C; slightly soluble in water; used as a rodenticide. Also known as 4-hydroxy-3-(1,2,3,4-tetrahydro-1-naphthyl)coumarin.

count [AERO ENG] **1.** To proceed from one point to another in a countdown or plus count, normally by calling a number to signify the point reached. **2.** To proceed in a countdown, for example, T minus 90 and counting. [CHEM] An ionizing event. [NUCLEO] **1.** A single response of the counting system in a radiation counter. **2.** The total number of events indicated by a counter. [TEXT] The number of warp and filling threads per square inch of fabric.

countable [MATH] Either finite or denumerable. Also known as enumerable.

countably additive [MATH] Given a measure m, and a sequence of pairwise disjoint measurable sets, the property that the measure of the union is equal to the sum of the measures of the sets.

countably compact set [MATH] A set with the property that every cover with countably many open sets contains a finite number of sets which is also a cover.

countably infinite set *See* denumerable set.

countably subadditive [MATH] A set function m is countably subadditive if, given any sequence of sets, the measure of the union is less than or equal to the sum of the measures of the sets.

count cyle [COMPUT SCI] An increase or decrease of the cycle index by unity or by an arbitrary integer.

countdown [AERO ENG] **1.** The process in the engineering definition, used in leading up to the launch of a large or complicated rocket vehicle, or in leading up to a captive test, a readiness firing, a mock firing, or other firing test. **2.** The act of counting inversely during this process. [COMMUN] The ratio of the number of interrogation pulses not answered by a transponder to the total number received. [ENG] A step-by-step process that culminates in a climatic event, each step being performed in accordance with a schedule marked by a count in inverse numerical order.

counter [COMPUT SCI] **1.** A register or storage location used to represent the number of occurrences of an event. **2.** *See* accumulator. [ELECTR] *See* scaler. [ENG] A complete instrument for detecting, totalizing, and indicating a sequence of events. [NAV ARCH] *See* buttocks. [NUCLEO] *See* radiation counter.

counterbalance *See* counterweight.

counterblow hammer [MECH ENG] A forging hammer in which the ram and anvil are driven toward each other by compressed air or steam.

counterbore [DES ENG] A flat-bottom enlargement of the mouth of a cylindrical bore to enlarge a borehole and give it a flat bottom. [ENG] To enlarge a borehole by means of a counterbore.

counter circuit *See* counting circuit.

counter coupling [COMPUT SCI] The technique of combining two or more counters into one counter of larger capacity in electromechanical devices by means of control panel wiring.

countercurrent [SCI TECH] A current flowing adjacent to the main current but in the opposite direction.

countercurrent cascade [ANALY CHEM] An extraction process involving the introduction of a sample, all at once, into a continuously flowing countercurrent system where both phases are moving in opposite directions and are continuously at equilibrium.

countercurrent distribution [CHEM ENG] A profile of a compound's concentration in different ratios of two immiscible liquids.

countercurrent extraction [CHEM ENG] A liquid-liquid extraction process in which the solvent and the process stream in contact with each other flow in opposite directions. Also known as countercurrent separation.

countercurrent flow [MECH ENG] A sensible heat-transfer system in which the two fluids flow in opposite directions.

countercurrent leaching [CHEM ENG] A process utilizing a series of leach tanks and countercurrent flow of solvent through them in reverse order to the flow of solid.

countercurrent separation *See* countercurrent extraction.

countercurrent spray dryer [ENG] A dryer in which drying gases flow in a direction opposite to that of the spray.

counter dead time [NUCLEO] The time interval between the start of a counted event and the earliest instant at which a new event can be counted by a radiation counter.

counter decade *See* decade scaler.

counterelectromotive cell [ELEC] Cell of practically no ampere-hour capacity, used to oppose the line voltage.

counterelectromotive force [ELECTROMAG] The voltage developed in an inductive circuit by a changing current; the polarity of the induced voltage is at each instant opposite that of the applied voltage. Also known as back electromotive force.

counterfire [ORD] **1.** Fire delivered in answer to the fire of an attacker. **2.** Fire intended to destroy or neutralize enemy weapons.

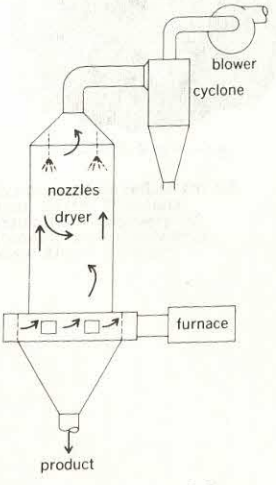
counterflow [ENG] Fluid flow in opposite directions in adjacent parts of an apparatus, as in a heat exchanger.

counterfort [CIV ENG] A strengthening pier perpendicular and bonded to a retaining wall.

counterfort wall [CIV ENG] A type of retaining wall that resembles a cantilever wall but has braces at the back; the toe slab is a cantilever and the main steel is placed horizontally.

counter-free machine [COMPUT SCI] A sequential machine that cannot count modulo any integer greater than 1.

COUNTERCURRENT SPRAY DRYER



Liquid feed is atomized from nozzles at the top; arrows show the path that the drying gases take.

counter/frequency meter [ENG] An instrument that contains a frequency standard and can be used to measure the number of events or the number of cycles of a periodic quantity that occurs in a specified time, or the time between two events.

counterglow *See* gegenschein.

counterimmunoelectrophoresis [IMMUNOL] Immunoelectrophoresis which uses two wells of application, one above the other, along the electrical axis—the anodal well filled with antibody and the cathodal with a negatively charged antigen; electrophoresis results in the antigen and antibody migrating cathodally and anodally, respectively, and a line of precipitation appears where the two meet.

counterlath [BUILD] **1.** A strip placed between two rafters to support crosswise laths. **2.** A lath placed between a timber and a sheet lath. **3.** A lath nailed at a more or less random spacing between two precisely spaced laths. **4.** A lath put on one side of a partition after the other side has been finished.

countermeasures [ORD] Devices and techniques intended to impair the operational effectiveness of enemy activity.

countermeasures set [ELECTR] A complete electronic set specifically designed to provide facilities for intercepting and analyzing electromagnetic energy propagated by transmitter and to provide a source of radio-frequency signals which deprive the enemy of effective use of his electronic equipment.

counterpoise [ELEC] A system of wires or other conductors that is elevated above and insulated from the ground to form a lower system of conductors for an antenna. Also known as antenna counterpoise. [MECH ENG] *See* counterweight.

counterpoise gun carriage [ORD] The mechanism that counterbalances the weight of the breechblock of a large gun.

counterradiation [GEOPHYS] The downward flux of atmospheric radiation passing through a given level surface, usually taken as the earth's surface. Also known as back radiation.

counterrecoil [ORD] Forward movement of a gun returning to firing position after recoil.

countershaft [MECH ENG] A secondary shaft that is driven by a main shaft and from which power is supplied to a machine part.

countersink [DES ENG] The tapered and relieved cutting portion in a twist drill, situated between the pilot drill and the body.

countersinking [MECH ENG] Drilling operation to form a flaring depression around the rim of a hole.

counterstain [BIOL] A second stain applied to a biological specimen to color elements other than those demonstrated by the principal stain.

counter sun *See* anthelion.

countertransference [PSYCH] The conscious or unconscious emotional reaction of the therapist to the patient, which may interfere with psychotherapy.

counter tube [ELECTR] An electron tube having one signal-input electrode and 10 or more output electrodes, with each input pulse serving to transfer conduction sequentially to the next output electrode; beam-switching tubes and cold-cathode counter tubes are examples. [NUCLEO] An electron tube that converts an incident particle or burst of incident radiation into a discrete electric pulse, generally by utilizing the current flow through a gas that is ionized by the radiation; used in radiation counters. Also known as radiation counter tube.

counterweight [MECH ENG] **1.** A device which counterbalances the original load in elevators and skip and mine hoists, going up when the load goes down, so that the engine must only drive against the unbalanced load and overcome friction. **2.** Any weight placed on a mechanism which is out of balance so as to maintain static equilibrium. Also known as counterbalance; counterpoise.

counting chamber [MICROBIO] An accurately dimensioned chamber in a microslide which can hold a specific volume of fluid and which is usually ruled into units to facilitate the counting under the microscope of cells, bacteria, or other structures in the fluid.

counting circuit [ELECTR] A circuit that counts pulses by frequency-dividing techniques, by charging a capacitor in such a way as to produce a voltage proportional to the pulse count, or by other means. Also known as counter circuit.

counting-down circuit *See* frequency divider.

counting glass [TEXT] A magnifying glass for counting the number of threads per inch in textile fabrics.

counting rate [PHYS] The average rate of occurrence of events as observed by means of a counting system.

counting rate meter [NUCLEO] An instrument that indicates the time rate of occurrence of input pulses to a radiation counter, averaged over a time interval. Also known as rate meter.

counting rate–voltage characteristic *See* plateau characteristic.

country rock [GEOL] **1.** Rock that surrounds and is penetrated by mineral veins. **2.** Rock that surrounds and is invaded by an igneous intrusion.

count system *See* numerical system.

couplant [ENG] A substance such as water, oil, grease, or paste used to avoid the retarding of sound transmission by air between the transducer and the test piece during ultrasonic examination.

couple [CHEM] Joining of two molecules. [ELEC] To connect two circuits so signals are transferred from one to the other. [ELECTR] Two metals placed in contact, as in a thermocouple. [ENG] To connect with a coupling, such as of two belts or two pipes. [MECH] A system of two parallel forces of equal magnitude and opposite sense.

coupled antenna [ELECTROMAG] An antenna electromagnetically coupled to another.

coupled circuits [ELEC] Two or more electric circuits so arranged that energy can transfer electrically or magnetically from one to another.

coupled column [ARCH] One of two columns used as a grouped pair.

coupled engine [MECH ENG] A locomotive engine having the driving wheels connected by a rod.

coupled field vectors [ELECTROMAG] The electric- and magnetic-field vectors, which depend upon each other according to Maxwell's field equations.

coupled harmonic oscillators [PHYS] Linear oscillators with an interaction, often also linear or weak.

coupled modes [ACOUS] Modes of acoustic transmission along a duct having a discontinuity, so that the reflected and transmitted waves contain modes other than the incident ones.

coupled oscillators [ELECTROMAG] A set of alternating-current circuits which interact with each other, for example, through mutual inductances or capacitances. [MECH] A set of particles subject to elastic restoring forces and also to elastic interactions with each other.

coupled reaction [CHEM] A reaction which involves two oxidants with a single reductant, where one reaction taken alone would be thermodynamically unfavorable.

coupled systems [PHYS] Mechanical, electrical, or other systems which are connected in such a way that they interact and exchange energy with each other.

coupled transistors [ELECTR] Transistors connected in series by transformers or resistance-capacitance networks, in much the same manner as electron tubes.

coupled wave [FL MECH] A surface wave which is being continuously generated by another wave having the same phase velocity. Also known as C wave.

coupler [ELEC] A component used to transfer energy from one circuit to another. [ELECTROMAG] **1.** A passage which joins two cavities or waveguides, allowing them to exchange energy. **2.** A passage which joins the ends of two waveguides, whose cross section changes continuously from that of one to that of the other. [ENG] A device that connects two railroad cars. [NAV] The portion of a navigation system that receives signals of one type from a sensor and transmits signals of a different type to an actuator.

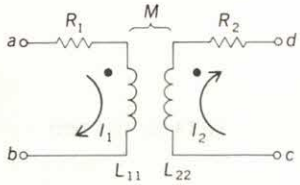
coupling [ELEC] **1.** A mutual relation between two circuits that permits energy transfer from one to another, through a wire, resistor, transformer, capacitor, or other device. **2.** A hardware device used to make a temporary connection between two wires. [ENG] Any device that serves to connect the ends of adjacent parts, as railroad cars. [MECH ENG] The mechanical fastening that connects shafts together for power transmission. Also known as shaft coupling.

coupling aperture [ELECTROMAG] An aperture in the wall of a waveguide or cavity resonator, designed to transfer energy to or from an external circuit. Also known as coupling hole; coupling slot.

coupling capacitor [ELECTR] A capacitor used to block the flow of direct current while allowing alternating or signal current to pass; widely used for joining two circuits or stages. Also known as blocking capacitor; stopping capacitor.

coupling coefficient [ELECTR] The ratio of the maximum change in energy of an electron traversing an interaction space to

COUPLED CIRCUITS



A pair of coupled circuits.

the product of the peak alternating gap voltage and the electronic charge. [PHYS] *See* coupling constant.

coupling constant [PARTIC PHYS] A measure of the strength of a type of interaction between particles, such as the strong interaction between mesons and nucleons, and the weak interaction between four fermions; analogous to the electric charge, which is the coupling constant between charged particles and electromagnetic radiation. [PHYS] **1.** A measure of the strength of the coupling between two systems, especially electric circuits; maximum coupling is 1 and no coupling is 0. Also known as coefficient of coupling; coupling coefficient. **2.** A measure of the dependence of one physical quantity on another.

coupling hole *See* coupling aperture.

coupling loop [ELECTROMAG] A conducting loop projecting into a waveguide or cavity resonator, designed to transfer energy to or from an external circuit.

coupling probe [ELECTROMAG] A probe projecting into a waveguide or cavity resonator, designed to transfer energy to or from an external circuit.

coupling slot *See* coupling aperture.

coupons [CHEM ENG] Polished metal strips of specified size and weight used to detect the corrosive action of liquid or gas products or to test the efficiency of corrosion-inhibitor additives.

course [CIV ENG] A row of stone, block, or brick of uniform height. [NAV] The intended direction of travel expressed as an angle in the horizontal plane between a reference line (true magnetic north) and the course line (the line connecting the point of origin and the point of destination), usually measured clockwise from the reference line. Also known as desired track. [TEXT] A row of stitches across a knitted fabric; corresponds to the filling in woven fabric.

course angle [NAV] Course measured from 0° at the reference direction clockwise or counterclockwise through 90° or 180°; it is labeled with the reference direction as a prefix and the direction of measurement from the reference direction as a suffix; for example, course angle S 21° E is 21° east of south, or course 159°.

coursed rubble [CIV ENG] Masonry in which rough stones are fitted into approximately level courses.

course error [NAV] Angular difference between the course and the course made good.

course line [NAV] **1.** A line of position plotted on a chart, parallel or substantially parallel to the intended course of a craft, showing whether the craft is to the right or the left of its course. **2.** Any line representing a course.

course linearity [NAV] In equisignal radio-range-type beacons, the change in the difference in the depth of modulation of the two signals which produce the course with respect to displacement of the measuring position from the course line but within the course sector.

course-line computer [NAV] An airborne computer that accepts bearing and distance information derived from ground facilities and uses this data to compute a course from the aircraft's present position to any other point which the pilot selects, providing only that it be within the coverage of the ground facilities; the steering information is displayed on a right-left indicator, while additional displays such as distance to go are also provided. Also known as arbitrary course computer; bearing distance computer; off-line computer; parallel course computer; rho-theta computer.

course-line deviation [NAV] The angular or linear difference between the actual track of a vehicle and the intended course line.

course-line deviation indicator [NAV] An instrument that indicates deviation from a desired course line.

course-line selector [NAV] A device providing means for selecting a course to be followed automatically, usually by means of an electronic system of navigation such as omnirange and distance-measuring equipment.

course made good [NAV] The resultant direction of actual travel of a vehicle, equivalent to its bearing from the point of departure.

course over the ground [NAV] The direction of the track that a vessel has actually made, measured clockwise from north through 360°.

course programmer [CONT SYS] An item which initiates and processes signals in a manner to establish a vehicle in which it is installed along one or more projected courses.

course recorder [NAV] A device which makes a graphic record of the headings and distances traveled.

course scalloping [NAV] Irregularities in the field pattern produced by a ground-based beacon caused by terrain features; appears in flight as cyclical variation in the course error.

course softening [NAV] An intentional decrease in course sensitivity as the navigation aid is approached.

coursing joint [CIV ENG] A mortar joint connecting two courses of brick or pebble.

Couvinian [GEOL] Lower Middle Devonian geologic time.

covalence [CHEM] The number of covalent bonds which an atom can form.

covalent bond [CHEM] A bond in which each atom of a bound pair contributes one electron to form a pair of electrons. Also known as electron pair bond.

covalent crystal [CRYSTAL] A crystal held together by covalent bonds. Also known as valence crystal.

covalent hydride [INORG CHEM] A compound formed from a nonmetal and hydrogen, for example, H_2S and NH_3.

covalent radius [PHYS CHEM] The effective radius of an atom in a covalent bond.

covariance [STAT] A measurement of the tendency of two random variables, X and Y, to vary together, given by the expected value of the variable $(X-\bar{X})\,(Y-\bar{Y})$, where $\bar{X}$ and $\bar{Y}$ are the expected values of the variables X and Y respectively.

covariant [RELAT] A scalar, vector, or higher-order tensor.

covariant components [MATH] Vector or tensor components which, in a transformation from one set of basis vectors to another, transform in the same manner as the basis vectors.

covariant functor [MATH] A functor which does not change the sense of morphisms.

covariant index [MATH] A tensor index such that, under a transformation of coordinates, the procedure for obtaining a component of the transformed tensor for which this index has value p involves taking a sum over q of the product of a component of the original tensor for which the index has the value q times the partial derivative of the qth original coordinate with respect to the pth transformed coordinate; it is written as a subscript.

covariant tensor [MATH] A tensor with only covariant indices.

covariant theory [PHYS] A theory in which the equations have the same form in any inertial reference frame, the frames being related to each other by Lorentz transformations.

covariant vector [MATH] A covariant tensor of degree 1, such as the gradient of a function.

cove [GEOGR] **1.** A small, narrow, sheltered bay, inlet, or creek on a coast. **2.** A deep recess or hollow occurring in a cliff or steep mountainside.

covellite [MINERAL] CuS An indigo-blue mineral of metallic luster that crystallizes in the hexagonal system; it is usually massive or occurs in disseminations through other copper minerals and represents an ore of copper. Also known as indigo copper.

cover [MIN ENG] The thickness of rock between the mine workings and the surface.

coverage [COMMUN] *See* service area. [GRAPHICS] In microfilming, the portion of a document plane included in the lens field.

cover crops [AGR] Crops, especially grasses, grown for the express purpose of preventing and protecting a bare soil surface.

covered electrode *See* coated electrode.

covered smut [PL PATH] A seed-borne smut of certain grain crops caused by *Ustilago hordei* in barley and *U. avenae* in oats.

cover half [MET] The stationary portion of a die.

cover hole [MIN ENG] One of a group of boreholes drilled in advance of mine workings to probe for and detect water-bearing fissures or structures.

covering of a set [MATH] A collection of sets whose union contains the given set. Also known as cover of a set.

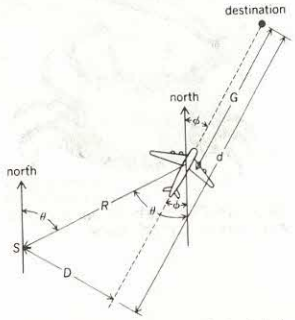
covering power [ENG] The degree to which a coating obscures the underlying material. [MET] The ability of an electroplating bath to produce a coating at a low current density. [OPTICS] The field of view over which a camera lens can produce a sharp image, frequently expressed as an angle.

cover of a set *See* covering of a set.

cover plate [ENG] A pane of glass in a welding helmet or goggles which protects the colored lens excluding harmful light rays from damage by weld spatter.

covers *See* coversed sine.

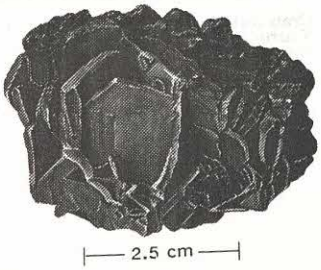
COURSE-LINE COMPUTER



D = shortest distance from transponder to desired course
R = distance from transponder to aircraft
d = distance from perpendicular to destination
G = distance to go
ϕ = bearing of desired course to destination
θ = aircraft bearing from transponder

Arbitrary-course problem. With facility at S, it is desired to generate courses in any arbitrary direction.

COVELLITE

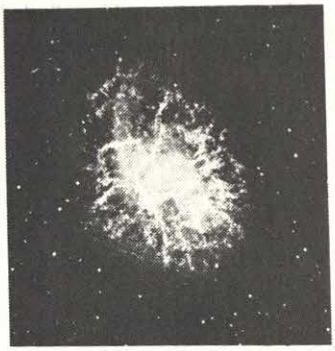


Crystals of covellite found near Butte, Montana. *(Specimen courtesy of Department of Geology, Bryn Mawr College)*

CRAB

Male fiddler crab *(Uca pugnax)*, with an enlarged claw.

CRAB NEBULA



Crab Nebula, in the constellation Taurus, emitter of strong radio waves and of x-rays.

coversed sine [MATH] The coversed sine of A is $1 - \sin A$. Denoted covers. Also known as coversine; versed cosine.

coversine *See* coversed sine.

covert [ECOL] A refuge or shelter, such as a coppice, for game animals. [TEXT] A tightly woven woolen twill fabric made by using a single-color yarn for filling threads and yarns in two different shades in the warp.

covey [VERT ZOO] **1.** A brood of birds. **2.** A small flock of birds of one kind, used typically of partridge and quail.

covite [PETR] A rock of igneous origin composed of sodic orthoclase, hornblende, sodic pyroxene, nepheline, and accessory sphene, apatite, and opaque oxides.

cow [AGR] A domestic bovine of any sex or age. [VERT ZOO] A mature female cattle of the genus *Bos*.

Cowdria [MICROBIO] A genus of the tribe Ehrlichieae; coccoid to ellipsoidal, pleomorphic, or rod-shaped cells; intracellular parasites in cytoplasm and vacuoles of vascular endothelium of ruminants.

Cowell method [AERO ENG] A method of orbit computation using direct step-by-step integration in rectangular coordinates of the total acceleration of the orbiting body.

cowling [AERO ENG] The streamlined metal cover of an aircraft engine. [ENG] A metal cover that houses an engine.

cowpea [BOT] *Vigna sinensis*. An annual legume in the order Rosales cultivated for its edible seeds. Also known as blackeye bean.

Cowper's gland *See* bulbourethral gland.

cowpox *See* vaccinia.

cowpox virus [VIROL] The causative agent of cowpox in cattle.

cowshee *See* kaus.

coxa [INV ZOO] The proximal or basal segment of the leg of insects and certain other arthropods which articulates with the body.

coxal cavity [INV ZOO] A cavity in which the coxa of an arthropod limb articulates.

coxal gland [INV ZOO] One of certain paired glands with ducts opening in the coxal region of arthropods.

Cox chart [CHEM] A straight-line graph of the logarithm of vapor pressure against a special nonuniform temperature scale; vapor pressure–temperature lines for many substances intersect at a common point on the Cox chart.

Coxiella [MICROBIO] A genus of the tribe Rickettsieae; short rods which grow preferentially in host cell vacuoles.

coxitis [MED] Inflammation of the hip joint.

coxopodite [INV ZOO] The basal joint of a crustacean limb.

coxsackie disease [MED] A variety of syndromes resulting from a coxsackievirus infection.

coxsackievirus [VIROL] A large subgroup of the enteroviruses in the picornavirus group including various human pathogens.

coyote [VERT ZOO] *Canis latrans*. A small wolf native to western North America but found as far eastward as New York State. Also known as prairie wolf.

coyote blasting [MIN ENG] A method of blasting in which large charges are fired in small adits or tunnels driven at the level of the floor, in the face of a quarry or the slope of an open-pit mine. Also known as coyote-hole blasting; gopher-hole blasting; heading blasting.

coyote hole *See* gopher hole.

coyote-hole blasting *See* coyote blasting.

COZI [COMMUN] An ionospheric sounding system for determining propagation characteristics of the ionosphere at various angles at any instant; used to determine how well long-distance, high-frequency broadcasts are reaching their intended destinations. Derived from communications zone indicator.

cp *See* candlepower; centipoise; chemically pure.

cpa *See* color-phase alternation.

CPBS *See* fenson.

CPE *See* computer performance evaluation.

CP invariance [PARTIC PHYS] The principle that the laws of physics are left unchanged by a combination of the operations of charge conjugation C and space inversion P; a small violation of this principle has been observed in the decay of neutral K-mesons.

cpm *See* cycle per minute.

CPM *See* critical path method.

CPMC *See* *O*-chlorophenyl-methyl-carbamate.

C power supply [ELECTR] A device connected in the circuit between the cathode and grid of a vacuum tube to apply grid bias.

CP propeller *See* controllable-pitch propeller.

CPR *See* cardiopulmonary resuscitation.

cps *See* hertz.

CPT theorem [PARTIC PHYS] A theorem which states that a Lorentz invariant field theory is invariant to the product of charge conjugation C, space inversion P, and time reversal T.

CPU *See* central processing unit.

Cr *See* chromium.

CR *See* catalytic reforming.

CrA *See* Corona Australis.

crab [INV ZOO] **1.** The common name for a number of crustaceans in the order Decapoda having five pairs of walking legs, with the first pair modified as chelipeds. **2.** The common name for members of the Merostoma. [NAV] To drift sideways or to leeward, as a ship.

crabapple [BOT] Any of several trees of the genus *Malus*, order Rosales, cultivated for their small, edible pomes.

crabbing [NAV] The horizontal attitude of an aircraft in flight when a crosswind causes its heading to differ from the course. [TEXT] A finishing process that sets warp and weft threads by winding the fabric on a roller under tension and then boiling or steaming.

crab locomotive [MIN ENG] A type of trolley locomotive equipped with an electric motor, a drum, and haulage cable mounted on a small truck; used to haul mine cars from workings.

Crab Nebula [ASTRON] A gaseous nebula in the constellation Taurus; an amorphous mass which radiates a continuous spectrum involved in a mesh of filaments that radiate a bright-line spectrum.

crachin [METEOROL] A period of light rain accompanied by low stratus clouds and poor visibility which frequently occurs in the China Sea between January and April.

Cracidae [VERT ZOO] A family of New World tropical upland game birds in the order Galliformes; includes the chachalacas, guans, and curassows.

crack [CHEM] To break a compound into simpler molecules. [ENG] To open something slightly, for instance, a valve. [SCI TECH] A fissure.

crack arrester [NAV ARCH] **1.** On a ship, a plate riveted over another plate where the latter has a crack or a stressed area where a crack might begin. **2.** A hole or slot formed at the end of a crack to keep it from spreading, or in a stressed area to prevent a crack from beginning.

cracked [MATER] Applied to those oils produced by the cracking process rather than straight distillation.

cracked gasoline [MATER] Gasoline manufactured by heating crude petroleum distillation fractions or residues under pressure, or by heating with or without pressure in the presence of a catalyst, so that heavier hydrocarbons are broken into others, some of which distill in the gasoline range.

cracked residue [CHEM ENG] The residue of fuel resulting from decomposition of hydrocarbons during thermal or catalytic cracking.

cracked stem [PL PATH] A boron-deficiency disease of celery characterized by brown mottling of leaves and brittleness and cracking of leaf stalks.

cracking [CHEM ENG] A process that is used to reduce the molecular weight of hydrocarbons by breaking the molecular bonds by various thermal, catalytic, or hydrocracking methods. [ENG] Presence of relatively large cracks extending into the interior of a structure, usually produced by overstressing the structural material.

cracking coil [CHEM ENG] A coil used for cracking heavy petroleum products.

cracking still [CHEM ENG] The furnace, reaction chamber, and fractionator for thermal conversion of heavier charging stock to gasoline.

cradle [ENG] A framework or other resting place for supporting or restraining objects. [ORD] The nonrecoiling structure of a weapon that houses the recoiling parts and rotates to elevate the gun. [TEXT] A device that catches the cards as they fall from a jacquard head.

cradle cap [MED] Heavy, greasy crusts on the scalp of an infant; seborrheic dermatitis of infants.

cradle dump [MIN ENG] A tipple which dumps cars with a rocking motion.

cradle printing [GRAPHICS] Early printing of a crude sort done from movable types. Also known as incunabula printing.

cradle vault *See* barrel vault.

crag [GEOL] A steep, rugged point or eminence of rock, as one projecting from the side of a mountain.

Crambiinae [INV ZOO] The snout moths, a subfamily of lepidopteran insects in the family Pyralididae containing small marshland and grassland forms.

Cramer's rule [MATH] The method of solving a system of linear equations by means of determinants.

cramp [DES ENG] A metal plate with bent ends used to hold blocks together. [MED] **1.** Painful, involuntary contraction of a muscle, such as a leg or foot cramp that may occur in normal individuals at night or in swimming. **2.** Any cramplike pain, as of the intestine, or that accompanying dysmenorrhea. **3.** Spasm of certain muscles, which may be intermittent or constant, from excessive use.

crampon [DES ENG] A device for holding heavy objects such as rock or lumber to be lifted by a crane or hoist; shaped like scissors, with points bent inward for grasping the load. Also spelled crampoon.

crampoon *See* crampon.

cranberry [BOT] Any of several plants of the genus *Vaccinium*, especially *V. macrocarpon*, in the order Ericales, cultivated for its small, edible berries.

Cranchiidae [INV ZOO] A family of cephalopod mollusks in the subclass Dibranchia.

crandallite [MINERAL] $CaAl_3(PO_4)_2(OH)_5 \cdot H_2O$ A white to light-grayish mineral consisting of a hydrous phosphate of calcium and aluminum occurring in fine, fibrous masses.

crane [MECH ENG] A hoisting machine with a power-operated inclined or horizontal boom and lifting tackle for moving loads vertically and horizontally. [VERT ZOO] The common name for the long-legged wading birds composing the family Gruidae of the order Gruiformes.

Crane *See* Grus.

crane hoist [MECH ENG] A mobile construction machine built principally for lifting loads by means of cables and consisting of an undercarriage on which the unit moves, a cab or house which envelops the main frame and contains the power units and controls, and a movable boom over which the cables run.

crane hook [DES ENG] A hoisting fixture designed to engage a ring or link of a lifting chain, or the pin of a shackle or cable socket.

crane ship [NAV ARCH] A ship or barge that carries cranes for handling heavy loads.

crane truck [MECH ENG] A crane with a jiblike boom mounted on a truck. Also known as yard crane.

Craniacea [INV ZOO] A family of inarticulate branchiopods in the suborder Craniidina.

cranial capacity [ANAT] The volume of the cranial cavity.

cranial flexure [EMBRYO] A flexure of the embryonic brain.

cranial fossa [ANAT] Any of the three depressions in the floor of the interior of the skull.

cranial index [ANTHRO] The ratio of maximum skull height to maximum skull breadth multiplied by 100.

cranial nerve [ANAT] Any of the paired nerves which arise in the brainstem of vertebrates and pass to peripheral structures through openings in the skull.

Craniata [VERT ZOO] A major subdivision of the phylum Chordata comprising the vertebrates, from cyclostomes to mammals, distinguished by a cranium.

craniectomy [MED] Surgical removal of strips or pieces of the cranial bones.

Craniidina [INV ZOO] A subdivision of inarticulate branchiopods in the order Acrotretida known to possess a pedicle; all forms are attached by cementation.

craniobuccal pouch [EMBRYO] A diverticulum from the buccal cavity in the embryo from which the anterior lobe of the hypophysis is developed. Also known as Rathke's pouch.

cranioclasis [MED] The operation of breaking the fetal head by means of a cranioclast.

cranioclast [MED] A heavy forceps for crushing the fetal head.

craniofacial index [ANTHRO] The ratio of the width of the cranium to the width of the face.

craniometer [ANTHRO] An instrument used to measure a skull.

craniometry [ANTHRO] The science of measuring the skull, especially for determining characteristics of a particular race, sex, or somatotype.

craniopharyngioma [MED] An epithelial tumor of the craniopharyngeal canal, usually in children.

cranioplasty [MED] Surgical correction of defects in the cranial bones, usually by implants of metal, plastic material, or bone.

cranioscopy [MED] Examination of the human skull.

cranium [ANAT] That portion of the skull enclosing the brain. Also known as braincase.

crank [MECH ENG] A link in a mechanical linkage or mechanism that can turn about a center of rotation.

crank angle [MECH ENG] **1.** The angle between a crank and some reference direction. **2.** Specifically, the angle between the crank of a slider crank mechanism and a line from crankshaft to the piston.

crank arm [MECH ENG] The arm of a crankshaft attached to a connecting rod and piston.

crank axle [MECH ENG] **1.** An axle containing a crank. **2.** An axle bent at both ends so that it can accommodate a large body with large wheels.

crankcase [MECH ENG] The housing for the crankshaft of an engine, where, in the case of an automobile, oil from hot engine parts is collected and cooled before returning to the engine by a pump.

crankpin [DES ENG] A cylindrical projection on a crank which holds the connecting rod.

crank press [MECH ENG] A punch press that applies power to the slide by means of a crank.

crankshaft [MECH ENG] The shaft about which a crank rotates.

crank throw [MECH ENG] **1.** The web or arm of a crank. **2.** The displacement of a crankpin from the crankshaft.

crank web [MECH ENG] The arm of a crank connecting the crankshaft to crankpin, or connecting two adjacent crankpins.

crash [COMPUT SCI] *See* abend. [TEXT] Rough-textured wool, cotton, polyester, linen, or other fabric made by weaving together thick, uneven yarns.

crash locator beacon [COMMUN] An automatic radio beacon carried in aircraft to guide searching forces in the event of a crash.

craspedon [INV ZOO] A coelenterate medusa stage possessing a velum.

craspedote [INV ZOO] Having a velum, used specifically for velate hydroid medusae.

Crassulaceae [BOT] A family of dicotyledonous plants in the order Rosales notable for their succulent leaves and resistance to desiccation.

crater [GEOL] **1.** A large, bowl-shaped topographic depression with steep sides. **2.** A rimmed structure at the summit of a volcanic cone; the floor is equal to the vent diameter. [MECH ENG] A depression in the face of a cutting tool worn down by chip contact. [MET] A depression at the end of the weld head or under the electrode during welding.

Crater [ASTRON] A constellation, right ascension 11 hours, declination 15°S. Abbreviated Crt. Also known as Cup.

crater arc [ASTRON] A series of lunar craters located along a curved line.

crater chain [ASTRON] A series of lunar craters located along a straight line.

crater cone [GEOL] A cone built around a volcanic vent by lava extruded from the vent.

crater cuts [MIN ENG] Cuts with one or more fully charged holes in which blasting is conducted toward the face of the tunnel.

crater lake [HYD] A fresh-water lake formed by the accumulation of rain and groundwater in a caldera or crater.

crater lamp [ELECTR] A glow-discharge tube used as a point source of light whose brightness is proportional to the signal current sent through the tube; used for photographic recording of facsimile signals.

craterlet [ASTRON] A very small lunar crater, with diameter less than about 8 kilometers, that still has raised walls.

crater pit [ASTRON] A small lunar crater with no raised walls surrounding it.

craton [GEOL] The large, relatively immobile portion of continents consisting of both shield and platform areas.

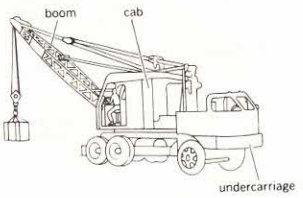
craw [ZOO] **1.** The crop of a bird or insect. **2.** The stomach of a lower animal.

crawler [MECH ENG] **1.** One of a pair of an endless chain of

CRANE HOOK

A typical crane hook.

CRANE TRUCK

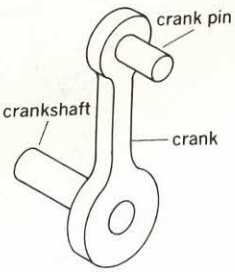


A truck crane lifting a load. *(Link-Belt Co.)*

CRANIACEA

Pedicle valve of *Crania*, a genus in Craniacea. *(From R. C. Moore, ed., Treatise on Invertebrate Paleontology, pt. H, Geological Society of America, Inc., and University of Kansas Press, 1965)*

CRANK



A crank for changing radius of rotation.

plates driven by sprockets and used instead of wheels by certain power shovels, tractors, bulldozers, drilling machines, and such, as a means of propulsion. **2.** Any machine mounted on such tracks.

crawler crane [MECH ENG] A self-propelled crane mounted on two endless tracks that revolve around wheels.

crawler tractor [MECH ENG] A tractor that propels itself on two endless tracks revolving around wheels.

crawler wheel [MECH ENG] A wheel that drives a continuous metal belt, as on a crawler tractor.

crawl space [BUILD] **1.** A shallow space in a building which workers can enter to gain access to pipes, wires, and equipment. **2.** A shallow space located below the ground floor of a house and surrounded by the foundation wall.

crayfish [INV ZOO] The common name for a number of lobsterlike fresh-water decapod crustaceans in the section Astacura.

crayon [GRAPHICS] A small stick for drawing, usually made of a combination of pigments or dyes in a wax or oil medium.

crazing [ENG] A network of fine cracks on or under the surface of a material such as enamel, glaze, metal, or plastic. [MET] Development of a network of cracks on a metal surface.

CrB *See* Corona Borealis.

CRC method [CHEM ENG] A research technique formulated, approved, and published by the Coordinating Research Council, Inc.

cream ice *See* sludge.

cream of tartar *See* potassium bitartrate.

creatine [BIOCHEM] $C_4H_9O_2N_3$ α-Methylguanidine-acetic acid; a compound present in vertebrate muscle tissue, principally as phosphocreatine.

creatinine [BIOCHEM] $C_4H_7ON_3$ A compound present in urine, blood, and muscle that is formed from the dehydration of creatine.

creatinuria [MED] The occurrence of creatine in the urine.

creation operator [COMPUT SCI] The part of a data structure which allows components to be created. [QUANT MECH] An operator which increases the occupation number of a single state by unity and leaves all the other occupation numbers unchanged.

credence [ELECTROMAG] In radar, a measure of confidence in a target detection, generally proportional to target return amplitude.

Credé procedure [MED] Installation of silver nitrate drops into the eyes of a newborn infant to prevent ophthalmia neonatorum.

crednerite [MINERAL] $CuMn_2O_4$ A steel-gray to iron-black foliated mineral consisting of copper, manganese, and oxygen.

creedite [MINERAL] $Ca_3Al_2(SO_4)(F,OH)_{10}\cdot 2H_2O$ A white or colorless monoclinic mineral consisting of hydrous calcium aluminum fluoride with calcium sulfate, occurring in grains and radiating crystalline masses; hardness is 2 on Mohs scale, and specific gravity is 2.7.

creek [HYD] A natural stream of water, smaller than a river but larger than a brook.

creep [ELECTR] A slow change in a characteristic with time or usage. [ENG] The tendency of wood to move while it is being cut, particularly when being mitered. [GEOL] A slow, imperceptible downward movement of slope-forming rock or soil under sheer stress. [GRAPHICS] A forward movement of the blanket during offset printing. [MECH] A time-dependent strain of solids caused by stress. [MIN ENG] *See* squeeze.

creepage [ELEC] The conduction of electricity across the surface of a dielectric.

creep buckling [MECH] Buckling that may occur when a compressive load is maintained on a member over a long period, leading to creep which eventually reduces the member's bending stiffness.

creeper [ENG] A low platform on small casters that is used for back support and mobility when a person works under a car. [MIN ENG] An endless chain that catches mine car axles on projecting bars.

creeping barrage [ORD] An artillery barrage that precedes infantry soldiers at a predetermined rate in their attack to protect them and facilitate their advance.

creeping disk [INV ZOO] The smooth and adhesive undersurface of the foot or body of a mollusk or of certain other invertebrates, on which the animal creeps.

creeping eruption [MED] A red line of eruption on the skin produced by larva burrowing in the dermis; characterizes the condition of larva migrans.

creeping flow [FL MECH] Fluid flow in which the velocity of flow is very small.

creep limit [MECH] The maximum stress a given material can withstand in a given time without exceeding a specified quantity of creep.

creep recovery [MECH] Strain developed in a period of time after release of load in a creep test.

creep rupture strength [MECH] The stress which, at a given temperature, will cause a material to rupture in a given time.

creep strength [MECH] The stress which, at a given temperature, will result in a creep rate of 1 percent deformation in 100,000 hours.

creep test [ENG] Any one of a number of methods of measuring creep, for example, by subjecting a material to a constant stress or deforming it at a constant rate.

cremnophobia [PSYCH] An abnormal fear of steep places or precipices.

cremocarp [BOT] A dry dehiscent fruit consisting of two indehiscent one-seeded mericarps which separate at maturity and remain pendant from the carpophore.

cremone bolt [DES ENG] A fastening for double doors or casement windows; employs vertical rods that move up and down to engage the top and bottom of the frame.

crenate [BIOL] Having a scalloped margin; used specifically for foliar structures, shrunken erythrocytes, and shells of certain mollusks.

crenation [PHYSIO] A notched appearance of shrunken erythrocytes; seen when they are exposed to the air or to strong saline solutions.

crenitic [GEOL] Relating to or resulting from the raising of subterranean minerals by the action of spring water.

Crenothrix [MICROBIO] A genus of sheathed bacteria; cells are nonmotile, sheaths are attached and encrusted with iron and manganese oxides, and filaments may have swollen tips.

Crenotrichaceae [MICROBIO] Formerly a family of bacteria in the order Chlamydobacteriales having trichomes that are differentiated at the base and tip and attached to a firm substrate.

crenulate [BIOL] Having a minutely crenate margin.

crenulation cleavage *See* slip cleavage.

Creodonta [PALEON] A group formerly recognized as a suborder of the order Carnivora.

creosol [ORG CHEM] $CH_3C_6H_4OH$ A combination of isomers, derived from coal tar or petroleum; a yellowish liquid with a phenolic odor; used as a disinfectant, in the manufacture of resins, and in flotation of ore. Also known as hydroxymethylbenzene; methyl phenol.

creosote [MATER] A colorless or yellowish oily liquid containing a mixture of phenolic compounds obtained by distillation of tar; commercial creosote is distilled from coal tar, and pharmaceutical creosote is distilled from wood tar.

creosote bush [BOT] *Larrea divaricata*. A bronze-green, xerophytic shrub characteristic of all the American warm deserts.

creosote oil [MATER] A coal tar fraction, boiling between 240 and 270°F (116–132°C); used for producing materials such as creosote and tar acids and used directly as a germicide, insecticide, or pesticide.

crepe [TEXT] A silk, polyester, wool, rayon, or other fabric with a crinkled surface obtained by using yarns twisted alternately right and left in the filling.

crepe paper [MATER] A lightweight, crinkled paper available in many colors and used for displays, floats, and decorations; it has no strength when wet, and the colors run.

crepitation [MED] A noise produced by the rubbing of fractured ends of bones, by cracking joints, and by pressure upon tissues containing abnormal amounts of air, as in cellular emphysema.

crepuscular [ZOO] Active during the hours of twilight or preceding dawn.

crepuscular arch *See* bright segment.

crepuscular rays [ASTRON] Streaks of light radiating from the sun shortly before and after sunset which shine through breaks in the clouds or through irregular spaces along the horizon.

crescent beach [GEOL] A crescent-shaped beach at the

head of a bay or the mouth of a stream entering the bay, with the concave side facing the sea.

crescent beam [ENG] A beam bounded by arcs having different centers of curvature, with the central section the largest.

crescentic dune *See* barchan.

crescentic lake *See* oxbow lake.

crescent phase [ASTRON] A phase of the moon or an inferior planet in which less than half of the visible hemisphere is illuminated.

cresol [ORG CHEM] $CH_3C_6H_4OH$ One of three poisonous, colorless isomeric methyl phenols: *o*-cresol, *m*-cresol, *p*-cresol; used in the production of phenolic resins, tricresyl phosphate, disinfectants, and solvents.

cresol red [ORG CHEM] $C_{21}H_{18}O_5S$ A compound derived from *o*-cresol and used as an acid-base indicator; color change is yellow to red at pH 0.4 to 1.8, or 7.0 to 8.8, depending on preparation. Also known as *ortho*-cresolsulfonphthalein.

***ortho*-cresolsulfonphthalein** *See* cresol red.

***ortho*-cresotic acid** *See* 3-methylsalicyclic acid.

***ortho*-cresotinic acid** *See* 3-methylsalicyclic acid.

cress [BOT] Any of several prostrate crucifers belonging to the order Capparales and grown for their flavorful leaves; includes watercress (*Nasturtium officinale*), garden cress (*Lepidium sativum*), and upland or spring cress (*Barbarea verna*).

crest [DES ENG] The top of a screw thread. [SCI TECH] The highest point of a structure or natural formation, such as the top edge of a dam, the ridge of a roof, the highest point of a gravity wave, or the highest natural projection of a hill or mountain.

crestal injection *See* external gas injection.

crestal plane [GEOL] The plane formed by joining the crests of all beds of an anticline.

crest clearance [DES ENG] The clearance, in a radial direction, between the crest of the thread of a screw and the root of the thread with which the screw mates.

crest cloud [METEOROL] A type of standing cloud which forms along a mountain ridge, either on the ridge, or slightly above and leeward of it, and remains in the same position relative to the ridge. Also known as cloud crest.

crest factor [PHYS] The ratio of the peak value to the effective value of any periodic quantity such as a sinusoidal alternating current. Also known as amplitude factor; peak factor.

crest gate [CIV ENG] A gate in the spillway of a dam which functions to maintain or change the water level.

crest length [OCEANOGR] The length of a wave measured along its crest. Also known as crest width.

crest line [GEOL] The line connecting the highest points on the same bed of an anticline in an infinite number of cross sections.

crest stage [HYD] The highest stage reached at a point along a stream culminating a rise by waters of that stream.

crest value *See* peak value.

crest voltmeter [ELEC] A voltmeter reading the peak value of the voltage applied to its terminals.

crest width *See* crest length.

cresylic acid [MATER] **1.** A mixture of phenols containing varying amounts of xylenols, cresols, and other high-boiling fractions. **2.** A crude mixture of the three cresol isomers.

***para*-cresyl methyl ether** *See* methyl *para*-cresol.

Cretaceous [GEOL] The latest system of rocks or period of the Mesozoic Era, between 136 and 65 million years ago.

cretin [MED] An individual afflicted with cretinism.

cretinism [MED] A type of dwarfism caused by hypothyroidism and associated with generalized body changes, including mental deficiency.

cretonne [TEXT] A heavy unglazed fabric that is usually printed, and resembles unglazed chintz.

crevasse [GEOL] An open, nearly vertical fissure in a glacier or other mass of land ice or the earth, especially after earthquakes.

crevasse deposit [GEOL] Kame deposited in a crevasse.

crevasse hoar [HYD] Ice crystals which form and grow in glacial crevasses and in other cavities where a large cooled space is formed and in which water vapor can accumulate under calm, still conditions.

crevice [SCI TECH] A deep, narrow opening.

crevice corrosion [MET] Corrosive degradation of metal parts at the crevices left at rolled joints or from other forming procedures; common in stainless steel heat exchangers in contact with chloride-containing fluids or other dissolved corrosives. Also known as contact corrosion.

crew-served [ORD] Of or pertaining to anything served or operated by a crew as distinguished from an individual; for example, a weapon operated by a crew of two or more persons.

criador [METEOROL] The rain-bringing west wind of northern Spain.

crib [CIV ENG] The space between two successive ties along a railway track. [ENG] **1.** Any structure composed of a layer of timber or steel joists laid on the ground, or two layers across each other, to spread a load. **2.** Any structure composed of frames of timber placed horizontally on top of each other to form a wall. [GEOL] *See* arête.

crib death [MED] Sudden death of a sleeping infant without apparent cause. Also known as sudden death syndrome.

cribellum [INV ZOO] **1.** A small accessory spinning organ located in front of the ordinary spinning organ in certain spiders. **2.** A chitinous plate perforated with the openings of certain gland ducts in insects.

Cribrariaceae [BOT] A family of true slime molds in the order Liceales.

cribriform [BIOL] Perforated, like a sieve.

cribriform fascia [ANAT] The sievelike covering of the fossa ovalis of the thigh.

cribriform plate [ANAT] **1.** The horizontal plate of the ethmoid bone, part of the floor of the anterior cranial fossa. **2.** The bone lining a dental alveolus.

Cricetidae [VERT ZOO] A family of the order Rodentia including hamsters, voles, and some mice.

Cricetinae [VERT ZOO] A subfamily of mice in the family Cricetidae.

cricket [BUILD] A device that is used to divert water at the intersections of roofs or at the intersection of a roof and chimney. [INV ZOO] **1.** The common name for members of the insect family Gryllidae. **2.** The common name for any of several related species of orthopteran insects in the families Tettigoniidae, Gryllotalpidae, and Tridactylidae.

cricoid [ANAT] The signet-ring-shaped cartilage forming the base of the larynx in man and most other mammals.

cricondenbar [PHYS CHEM] Maximum pressure at which two phases (for example, liquid and vapor) can coexist.

cricondentherm [PHYS CHEM] Maximum temperature at which two phases (for example, liquid and vapor) can coexist.

criminal abortion [MED] Illegal interruption of pregnancy.

crimp [ENG] **1.** To cause something to become wavy, crinkled, or warped, such as lumber. **2.** To pinch or press together, especially a tubular or cylindrical shape, in order to seal or unite. [TEXT] To give curl to synthetic fibers.

crimp contact [ELEC] A contact whose back portion is a hollow cylinder that will accept a wire; after a bared wire is inserted, a swaging tool is applied to crimp the contact metal firmly against the wire. Also known as solderless contact.

crinal [MECH] A unit of force equal to 0.1 newton.

crinion-menton [ANTHRO] The measurement from the hairline in the center part of the forehead to the midpoint of the lower edge of the chin.

crinoidal limestone [PETR] A rock composed predominantly of crystalline joints of crinoids, with foraminiferans, corals, and mollusks.

Crinoidea [INV ZOO] A class of radially symmetrical crinozoans in which the adult body is flower-shaped and is either carried on an anchored stem or is free-living.

crinoline [TEXT] **1.** A stiff fabric with an open weave that is filled with hard-twist cotton warp and horsehair. **2.** A fabric with a firm starched or permanent resin finish.

Crinozoa [INV ZOO] A subphylum of the Echinodermata comprising radially symmetrical forms that show a partly meridional pattern of growth.

cripple [BUILD] A structural member, such as a stud above a window, that is cut less than full length.

crippled leap-frog test [COMPUT SCI] A variation of the leap-frog test, modified so the computer tests are repeated from a single set of storage locations rather than a changing set of locations.

crippled mode [COMPUT SCI] The operation of a computer at reduced capacity when certain parts are not working.

crisis [MED] The turning point in the course of a disease. [PSYCH] The psychological events associated with a specific stage of life, as an identity crisis or developmental crisis.

crispation number [PHYS] A dimensionless number used in

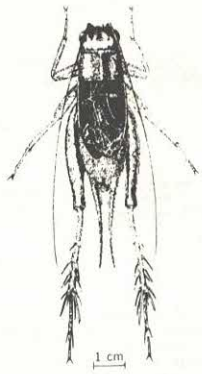
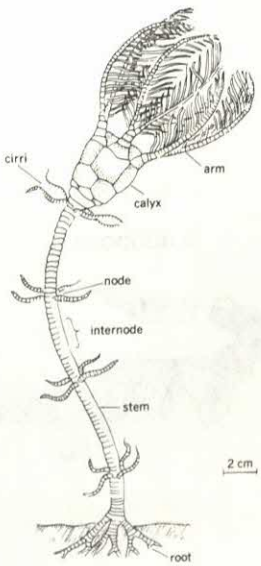
CRICKET



Grass cricket (*Nemobius fasciatus*), a tree cricket of the family Gryllidae. (*From Illinois Natural History Survey*)

CRINOIDEA



Schematic diagram of crinoid.

the study of convection currents, equal to the product of a fluid's dynamic viscosity and its thermal diffusivity, divided by the product of its undisturbed surface tension and a layer thickness.

crissum [VERT ZOO] **1.** The region surrounding the cloacal opening in birds. **2.** The vent feathers covering the circumcloacal region.

crista [BIOL] A ridge or crest.

cristate [BIOL] Having a crista.

Cristispira [MICROBIO] A genus of bacteria in the family Spirochaetaceae; helical cells with 3–10 complete turns; they have ovoid inclusion bodies and bundles of axial fibrils; commensals in mollusks.

cristobalite [MINERAL] SiO_2 A silicate mineral that is a high-temperature form of quartz; stable above 1470°C; crystallizes in the tetragonal system at low temperatures and the isometric system at high temperatures.

crit [NUCLEO] The mass of fissionable material that is critical under a given set of conditions; sometimes applied to the mass of an untamped critical sphere of fissionable material.

crith [MECH] A unit of mass, used for gases, equal to the mass of 1 liter of hydrogen at standard pressure and temperature; it is found experimentally to equal 8.9885×10^{-5} kilogram.

critical [NUCLEO] Capable of sustaining a chain reaction at a constant level.

critical absorption wavelength [SPECT] The wavelength, characteristic of a given electron energy level in an atom of a specified element, at which an absorption discontinuity occurs.

critical altitude [AERO ENG] The maximum altitude at which a supercharger can maintain a pressure in the intake manifold of an engine equal to that existing during normal operation at rated power and speed at sea level without the supercharger. [ORD] The maximum altitude at which the propulsion system of a missile performs satisfactorily.

critical angle [PHYS] An angle associated with total reflection of electromagnetic or acoustic radiation back into a medium from the boundary with another medium in which the radiation has a higher phase velocity; it is the smallest angle with the normal to the boundary at which total reflection occurs.

critical angle of attack [AERO ENG] The angle of attack of an airfoil at which the flow of air about the airfoil changes abruptly so that lift is sharply reduced and drag is sharply increased. Also known as stalling angle of attack.

critical angle refractometer [OPTICS] A refractometer, such as the Abbe or Pulfrich refractometer, in which the index of refraction of a medium A is measured by observing its critical angle with respect to another medium B with a known index of refraction, or by measuring the critical angle of B with respect to A.

critical anode voltage [ELECTR] The anode voltage at which breakdown occurs in a gas tube.

critical area *See* picture element.

critical assembly [NUCLEO] An assembly of sufficient fissionable and moderator material to sustain a fission chain reaction at a low power level.

critical bottom slope [GEOL] The depth distribution in which depth d of an ocean increases with latitude ϕ according to an equation of the form $d = d_0 \sin \phi + \text{constant}$.

critical compression ratio [MECH ENG] The lowest compression ratio which allows compression ignition of a specific fuel.

critical condensation temperature [PHYS CHEM] The temperature at which the sublimand of a sublimed solid recondenses; used to analyze solid mixtures, analogous to liquid distillation. Also known as true condensing point.

critical constant [PHYS CHEM] A characteristic temperature, pressure, and specific volume of a gas above which it cannot be liquefied.

critical cooling rate [MET] The minimum cooling rate that will suppress undesired transformations in a metal.

critical coupling [ELEC] The degree of coupling that provides maximum transfer of signal energy from one radio-frequency resonant circuit to another when both are tuned to the same frequency. Also known as optimum coupling.

critical current [SOLID STATE] The current in a superconductive material above which the material is normal and below which the material is superconducting, at a specified temperature and in the absence of external magnetic fields.

critical current density [PHYS CHEM] The amount of current per unit area of electrode at which an abrupt change occurs in a variable of an electrolytic process.

critical damping [PHYS] Damping in a linear system on the threshold between oscillatory and exponential behavior.

critical density [ASTRON] The mass density above which, it is believed, the expansion of the universe will slow down and reverse. [CHEM] The density of a substance exhibited at its critical temperature and critical pressure. [CIV ENG] For a highway, the density of traffic when the volume equals the capacity. [GEOL] That degree of density of a saturated, granular material below which, as it is rapidly deformed, it will decrease in strength and above which it will increase in strength.

critical depth [HYD] In a water channel, that depth at which the flow is at its minimum energy with respect to the bottom of the channel.

critical elevation [MAP] That elevation which is the high point within the area of a chart.

critical equation [NUCLEO] Any equation relating parameters of a reactor that must be satisfied for the reactor to be critical.

critical experiment [NUCLEO] An experiment in which fissionable material is assembled gradually until the arrangement will support a self-sustaining chain reaction.

critical exponent [THERMO] A parameter n that characterizes the temperature dependence of a thermodynamic property of a substance near its critical point; the temperature dependence has the form $|T - T_c|^n$, where T is the temperature and T_c is the critical temperature.

critical facility [NUCLEO] A facility where critical experiments are conducted.

critical field [ELECTR] The smallest theoretical value of steady magnetic flux density that would prevent an electron emitted from the cathode of a magnetron at zero velocity from reaching the anode. Also known as cutoff field.

critical flicker frequency [OPTICS] That frequency of an intermittent light source at which the light appears half the time as flickering and half the time as continuous.

critical flow [FL MECH] The rate of flow of a fluid equivalent to the speed of sound in that fluid.

critical flow prover [PETRO ENG] Device used to measure the velocity of gas flow during open-flow testing of gas wells.

critical frequency [ELECTR] *See* cutoff frequency. [ELECTROMAG] The limiting frequency below which a radio wave will be reflected by an ionospheric layer at vertical incidence at a given time. [GEOPHYS] The minimum frequency of a vertically directed radio wave which will penetrate a particular layer in the ionosphere; for example, all vertical radio waves with frequencies greater than the E-layer critical frequency will pass through the E layer. Also known as penetration frequency.

critical function [MATH] A function satisfying the Euler equations in the calculus of variations.

critical gas saturation *See* equilibrium gas saturation.

critical grid current [ELECTR] Instantaneous value of grid current when the anode current starts to flow in a gas-filled vacuum tube.

critical grid voltage [ELECTR] The grid voltage at which anode current starts to flow in a gas tube. Also known as firing point.

critical gun pull [ORD] The maximum pulling force in pounds developed by the gun feeder mechanism during operation of automatic guns.

critical humidity [CHEM ENG] The humidity of a system's atmosphere above which a crystal of a water-soluble salt will always become damp (absorb moisture from the atmosphere) and below which it will always stay dry (release moisture to the atmosphere). [MET] The atmospheric humidity above which the corrosion rate increases rapidly for a particular metal.

criticality [NUCLEO] The condition in which a nuclear reactor is just self-sustaining.

critical level of escape [GEOPHYS] **1.** That level, in the atmosphere, at which a particle moving rapidly upward will have a probability of $1/e$ (e is base of natural logarithm) of colliding with another particle on its way out of the atmosphere. **2.** The level at which the horizontal mean free path of an atmospheric particle equals the scale height of the atmosphere.

critical locus [PHYS CHEM] The line connecting the critical points of a series of liquid-gas phase-boundary loops for multicomponent mixtures plotted on a pressure versus temperature graph.

critical Mach number [AERO ENG] The free-stream Mach

number at which a local Mach number of 1.0 is attained at any point on the body under consideration.

critical magnetic field [SOLID STATE] The field below which a superconductive material is superconducting and above which the material is normal, at a specified temperature and in the absence of current.

critical mass [NUCLEO] The mass of fissionable material of a particular shape that is just sufficient to sustain a nuclear chain reaction.

critical micelle concentration [PHYS CHEM] The concentration of a micelle (oriented molecular arrangement of an electrically charged colloidal particle or ion) at which the rate of increase of electrical conductance with increase in concentration levels off or proceeds at a much slower rate.

critical moisture content [CHEM ENG] The average moisture throughout a solid material being dried, its value being related to drying rate, thickness of material, and the factors that influence the movement of moisture within the solid.

critical opalescence [OPTICS] Extreme opalescence resulting from strong density fluctuations in a medium near a critical point.

critical path method [SYS ENG] A systematic procedure for detailed project planning and control. Abbreviated CPM.

critical phenomena [PHYS CHEM] Physical properties of liquids and gases at the critical point (conditions at which two phases are just about to become one); for example, critical pressure is that needed to condense a gas at the critical temperature, and above the critical temperature the gas cannot be liquefied at any pressure.

critical point [MATH] A point at which the first derivative of a function is either 0 or does not exist. [PHYS CHEM] **1.** The temperature and pressure at which two phases of a substance in equilibrium with each other become identical, forming one phase. **2.** The temperature and pressure at which two ordinarily partially miscible liquids are consolute.

critical potential [ATOM PHYS] The energy needed to raise an electron to a higher energy level in an atom (resonance potential) or to remove it from the atom (ionization potential). [ELEC] A potential which results in sudden change in magnitude of the current.

critical pressure [FL MECH] For a nozzle whose cross section at each point is such that a fluid in isentropic flow just fills it, the pressure at the section of minimum area of the nozzle; if the nozzle is cut off at this point with no diverging section, decrease in the discharge pressure below the critical pressure (at constant admission pressure) does not result in increased flow. [THERMO] The pressure of the liquid-vapor critical point.

critical pressure ratio [FL MECH] The ratio of the critical pressure of a nozzle to the admission pressure of the nozzle (equals 0.53 for gases).

critical properties [PHYS CHEM] Physical and thermodynamic properties of materials at conditions of critical temperature, pressure, and volume, that is, at the critical point.

critical range [MET] The temperature range for the reversible change of austenite to ferrite, pearlite, and cementite.

critical ratio [STAT] The ratio of a particular deviation from the mean value to the standard deviation.

critical reactor [NUCLEO] A nuclear reactor in which the ratio of moderator to fuel is either subcritical or just critical; used to study the properties of the system and determine critical size.

critical Reynolds number [FL MECH] The Reynolds number at which there is a transition from laminar to turbulent flow.

critical size [NUCLEO] A set of physical dimensions for the core and reflector of a nuclear reactor at which a critical chain reaction is maintained.

critical slope [HYD] The channel slope or grade that is equal to the loss of head per foot resulting from flow at a depth which will provide uniform flow at critical depth.

critical solution temperature [PHYS CHEM] The temperature at which a mixture of two liquids, immiscible at ordinary temperatures, ceases to separate into two phases.

critical speed [CRYO] *See* critical velocity. [FL MECH] *See* critical velocity. [MECH ENG] The angular speed at which a rotating shaft becomes dynamically unstable with large lateral amplitudes, due to resonance with the natural frequencies of lateral vibration of the shaft.

critical state [PHYS CHEM] Unique condition of pressure, temperature, and composition wherein all properties of coexisting vapor and liquid become identical.

critical strain [MET] The strain at which heating causes rapid growth of large grains in many metals and alloys; phase transformations do not occur.

critical temperature [PHYS CHEM] The temperature of the liquid-vapor critical point, that is, the temperature above which the substance has no liquid-vapor transition.

critical value [MATH] The value of the dependent variable at a critical point of a function. [STAT] A number which causes rejection of the null hypothesis if a given test statistic is this number or more, and acceptance of the null hypothesis if the test statistic is smaller than this number.

critical velocity [AERO ENG] In rocketry, the speed of sound at the conditions prevailing at the nozzle throat. Also known as throat velocity. [CRYO] The velocity of a superfluid in very narrow channels (on the order of 10^{-5} centimeter), which is nearly constant. Also known as critical speed. [FL MECH] **1.** The speed of flow equal to the local speed of sound. Also known as critical speed. **2.** The speed of fluid flow through a given conduit above which it becomes turbulent.

critical voltage [ELECTR] The highest theoretical value of steady anode voltage, at a given steady magnetic flux density, at which electrons emitted from the cathode of a magnetron at zero velocity would fail to reach the anode. Also known as cutoff voltage.

critical volume [PHYS] The volume occupied by one mole of a substance at the liquid-vapor critical point, that is, at the critical temperature and pressure.

critical wavelength [COMMUN] The free-space wavelength corresponding to the critical frequency.

critical zone [FL MECH] In fluid flow, the area on a graph of the Reynolds number versus friction factor indicating unstable flow (Reynolds number 2000 to 4000) between laminar flow and the transition to turbulent flow. [ORD] Area over which a bombing plane in horizontal-flight or glide bombing must maintain straight flight so that the bombsight can be operated properly and bombs dropped accurately.

crivetz [METEOROL] A wind blowing from the northeast quadrant in Rumania and southern Russia, especially a cold boralike wind from the north-northeast, characteristic of the climate of Rumania.

CR law [ELEC] A law which states that when a constant electromotive force is applied to a circuit consisting of a resistor and capacitor connected in series, the time taken for the potential on the plates of the capacitor to rise to any given fraction of its final value depends only on the product of capacitance and resistance.

CRM *See* chemical remanent magnetization.

CRO *See* cathode-ray oscilloscope.

Crocco's equation [FL MECH] A relationship, expressed as $\mathbf{v} \times \omega = -T \operatorname{grad} S$, between vorticity and entropy gradient for the steady flow of an inviscid compressible fluid; $\mathbf{v}$ is the fluid velocity vector, ω ($= \operatorname{curl} \mathbf{v}$) is the vorticity vector, T is the fluid temperature, and S is the entropy per unit mass of the fluid.

crochet file [DES ENG] A thin, flat, round-edged file that tapers to a point.

crocidolite [MINERAL] A lavender-blue, indigo-blue, or leek-green asbestiform variety of riebeckite; occurs in fibrous, massive, and earthy forms. Also known as blue asbestos; krokidolite.

Crockett magnetic separator [MIN ENG] An assembly consisting of a continuous belt submerged in a tank through which ore pulp flows; magnetic solids adhere to the belt, which has a series of flat magnets attached to it, and the solids are dragged clear.

crocking [TEXT] Rubbing off of color as a result of improper dyeing, poor penetration, or poor fixation.

crocodile [ELEC] A unit of potential difference or electromotive force, equal to 10^6 volts; used informally at some nuclear physics laboratories. [VERT ZOO] The common name for about 12 species of aquatic reptiles included in the family Crocodylidae.

crocodile clip *See* alligator clip.

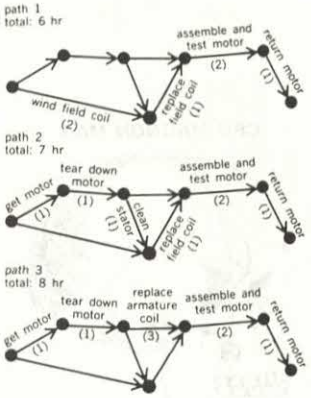
crocodile shears *See* lever shears.

Crocodilia [VERT ZOO] An order of the class Reptilia which is composed of large, voracious, aquatic species, including the alligators, caimans, crocodiles, and gavials.

crocodiling *See* alligatoring.

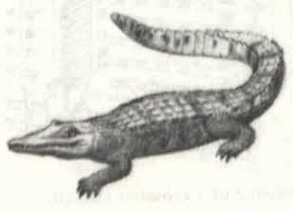
Crocodylidae [VERT ZOO] A family of reptiles in the order Crocodilia including the true crocodiles, false gavial, alligators, and caimans.

CRITICAL PATH METHOD



The critical path method for motor maintenance job, showing activities involved, duration of the activity in hours (numbers in parentheses), and how the activities dovetail together.

CROCODILE



A typical representative of the Crocodylidae, with short, powerful legs and a long, narrow head.

CROCOITE

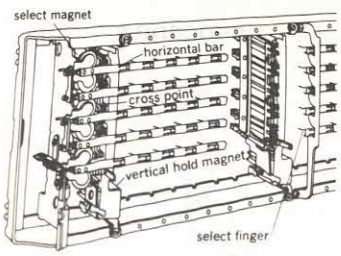
2.5 cm

Needlelike crocoite crystals in association with cerussite and dundasite, Dundas, Tasmania. *(Specimen courtesy of Department of Geology, Bryn Mawr College)*

CRO-MAGNON MAN

Skull of a Cro-Magnon male. *(From M. F. Ashley Montagu, An Introduction to Physical Anthropology, 2d ed., Charles C. Thomas, 1951)*

CROSSBAR SWITCH



Drawing of a crossbar switch.

Crocodylinae [VERT ZOO] A subfamily of reptiles in the family Crocodylidae containing the crocodiles, *Osteolaemus*, and the false gavial.

crocoisite *See* crocoite.

crocoite [MINERAL] $PbCrO_4$ A yellow to orange or hyacinth-red secondary mineral occurring as monoclinic, prismatic crystals; it is also massive granular. Also known as crocoisite; red lead ore.

crocus [BOT] A plant of the genus *Crocus*, comprising perennial herbs cultivated for their flowers. [MATER] Finely powdered oxide of iron, of dark red color, used for buffing and polishing.

crofting [TEXT] The whitening of linen by soaking it in an alkaline solution, then drying it in the sun.

Croixian [GEOL] Upper Cambrian geologic time.

CROM *See* control and read-only memory.

Cro-Magnon man [PALEON] **1.** A race of tall, erect Caucasoid men having large skulls; identified from skeletons found in southern France. **2.** A general term to describe all fossils resembling this race that belong to the upper Paleolithic (35,000–8000 B.C.) in Europe.

cromfordite *See* phosgenite.

Cromwell Current [OCEANOGR] An eastward-setting subsurface current that extends about 1½° north and south of the equator, and from about 150°E to 92°W.

croning process [MET] A shell-molding process.

cronstedtite [MINERAL] $Fe_4^{2+}Fe_2^{3+}(Fe_2^{3+}Si_2)O_{10}(OH)_8$ A black to brownish-black mineral consisting of a hydrous iron silicate crystallizing in hexagonal prisms; specific gravity is 3.34–3.35.

crooked hole [PETRO ENG] A borehole drilled at an angle, often because of steeply dipping formations; not to be confused with holes deliberately deviated from the vertical to avoid obstacles or to tap otherwise unavailable reservoirs.

Crookes dark space *See* cathode dark space.

Crookes glass [MATER] A type of glass that contains cerium and other rare earths and has a high absorption of ultraviolet radiation; used in sunglasses.

crookesite [MINERAL] $(Cu,Tl,Ag)_2Se$ An important selenium mineral occurring in lead-gray masses and having a metallic appearance.

Crookes radiometer [PHYS] A radiometer used to demonstrate that radiant energy from the sun can produce motion; a miniature four-vane windmill is mounted in a glass-envelope vacuum tube, with each vane polished on one side and black on the other.

Crookes tube [ELECTR] An early form of low-pressure discharge tube whose cathode was a flat aluminum disk at one end of the tube, and whose anode was a wire at one side of the tube, outside the electron stream; used to study cathode rays.

crop [AGR] A plant or animal grown for its commercial value. [MET] Defective end portion of an ingot which is removed for scrap before rolling the ingot. [VERT ZOO] A distensible saccular diverticulum near the lower end of the esophagus of birds which serves to hold and soften food before passage into the stomach.

crop coal [MIN ENG] Coal of inferior quality found near the surface.

crop dusting [AGR] Applying fungicides or insecticides in powder form to a crop; usually done from a low-flying aircraft.

crop out *See* outcrop.

cropping [GRAPHICS] The elimination of unwanted details in a picture by removing portions on the edges of the picture.

cropping index [AGR] The number of crops grown per year on a given land area times 100. Abbreviated CI.

crop rotation [AGR] A method of protecting the soil and replenishing its nutrition by planting a succession of different crops on the same land.

Cross *See* Crux.

cross axle [MECH ENG] **1.** A shaft operated by levers at its ends. **2.** An axle with cranks set at 90°.

crossband [COMMUN] Two-way communication in which one radio frequency is used in one direction and a frequency having different propagation characteristics is used in the opposite direction.

crossbar [CIV ENG] In a grating, one of the connecting bars which extend across bearing bars, usually perpendicular to them.

crossbar micrometer [ENG] An instrument consisting of two bars mounted perpendicular to each other in the focal plane of a telescope, and inclined to the east-west path of stars by 45°; used to measure differences in right ascension and declination of celestial objects.

crossbar switch [ELEC] A switch having a three-dimensional arrangement of contacts and a magnet system that selects individual contacts according to their coordinates in the matrix.

crossbar system [COMMUN] Automatic telephone switching system which is generally characterized by the following features: selecting mechanisms are crossbar switches, common circuits select and test the switching paths and control the operation of the selecting mechanisms, and method of operations is one in which the switching information is received and stored by controlling mechanisms that determine the operations necessary in establishing a telephone connection.

cross-bedding [GEOL] The condition of having laminae lying transverse to the main stratification planes of the strata; occurs only in granular sediments. Also known as cross-lamination; cross-stratification.

cross-belt drive [DES ENG] A belt drive having parallel shafts rotating in opposite directions.

crossbolt [DES ENG] A lock bolt with two parts which can be moved in opposite directions.

cross bond [CIV ENG] A masonry bond in which a course of alternating lengthwise and endwise bricks (Flemish bond) alternates with a course of bricks laid lengthwise.

cross box [MECH ENG] A boxlike structure for the connection of circulating tubes to the longitudinal drum of a header-type boiler.

cross bracing [BUILD] Boards which are nailed diagonally across studs or other boards so as to impart rigidity to a framework.

crossbreed [BIOL] To propagate new individuals by breeding two distinctive varieties of a species.

cross-color [ELECTR] In color television, the interference in the receiver chrominance channel caused by cross talk from monochrome signals.

cross-correlation [STAT] **1.** Correlation between corresponding members of two or more series: if $q_1, \ldots q_n$ and $r_1, \ldots r_n$ are two series, correlation between q_i and r_i, or between q_i and r_{i+j} (for fixed j), is a cross correlation. **2.** Correlation between or expectation of the inner product of two series of random variables, where the difference in indices between the corresponding values of the two series is fixed.

cross-correlation detection *See* correlation detection.

cross-correlation function [COMMUN] A function, $\phi_{12}(\tau)$, where τ is a time-delay parameter, equal to the limit, as T approaches infinity, of the reciprocal of $2T$ times the integral over t from $-T$ to T of $f_1(t)f_2(t-\tau)$, where f_1 and f_2 are functions of time, such as the input and output of a communication system.

cross-correlator [ELECTR] A correlator in which a locally generated reference signal is multiplied by the incoming signal and the result is smoothed in a low-pass filter to give an approximate computation of the cross-correlation function. Also known as synchronous detector.

cross-country mill [MET] A rolling mill in which the tables of the mill stands are parallel with a crossover table that connects them; used to produce special forms of bar stock.

cross-coupling [COMMUN] A measure of the undesired power transferred from one channel to another in a transmission medium.

crosscurrent [FL MECH] A current that flows across or opposite to another current.

crosscurrent extraction [ANALY CHEM] Procedure of batchwise liquid-liquid extraction in a separatory funnel; solvent is added to the sample in the funnel, which is then shaken, and the extract phase is allowed to coalesce, then is drawn off.

crosscut [ENG] A cut made through wood across the grain. [MIN ENG] **1.** A small passageway driven at right angles to the main entry of a mine to connect it with a parallel entry of air course. **2.** A passageway in a mine that cuts across the geological structure.

crosscut file [DES ENG] A file with a rounded edge on one side and a thin edge on the other; used to sharpen straight-sided saw teeth with round gullets.

crosscutting relationships [GEOL] Relationships which may occur between two adjacent rock bodies, where the relative age may be determined by observing which rock "cuts" the other, for example, a granitic dike cutting across a sedimentary unit.

crosscut saw [DES ENG] A type of saw for cutting across the grain of the wood; designed with about eight teeth per inch.

cross drum boiler [MECH ENG] A sectional header or box header type of boiler in which the axis of the horizontal drum is perpendicular to the axis of the main bank of tubes.

crossed belt [MECH ENG] A pulley belt arranged so that the sides cross, thereby making the pulleys rotate in opposite directions.

crossed electrophoresis [IMMUNOL] Immunoelectrophoresis that uses an initial separation along one axis of the plate, after which only a strip of medium along the axis is preserved; new medium containing antisera is poured beside the strip, the plate is turned 90°, and electrophoresis is resumed.

crossed-field accelerator [AERO ENG] A plasma engine for space travel in which plasma serves as a conductor to carry current across a magnetic field, so that a resultant force is exerted on the plasma.

crossed-field amplifier [ELECTR] A forward-wave, beam-type microwave amplifier that uses crossed-field interaction to achieve good phase stability, high efficiency, high gain, and wide bandwidth for most of the microwave spectrum.

crossed-field backward-wave oscillator [ELECTR] One of several types of backward-wave oscillators that utilize a crossed field, such as the amplitron and carcinotron.

crossed-field device [ELECTR] Any instrument which uses the motion of electrons in perpendicular electric and magnetic fields to generate microwave radiation, either as an amplifier or oscillator.

crossed-field multiplier phototube [ELECTR] A multiplier phototube in which repeated secondary emission is obtained from a single active electrode by the combined effects of a strong radio-frequency electric field and a perpendicular direct-current magnetic field.

crossed lens [OPTICS] A lens designed with radii of curvature which give minimum spherical aberration for parallel incident rays.

crossed paralysis [MED] Paralysis of the arm and leg on one side, associated with contralateral cranial nerve palsies caused by a brainstem lesion involving cranial nerve nuclei and the ipsilateral pyramidal tract.

crossed-pointer indicator [NAV] A two-pointer indicator used with an instrument-landing system to indicate the position of an airplane with respect to the glide path.

crossed prisms [OPTICS] A pair of Nicol prisms whose principal planes are perpendicular to each other, so that light passing through one is extinguished by the other.

cross-eye *See* esotropia.

cross-fade [ENG ACOUS] In dubbing, the overlapping of two sound tracks, wherein the outgoing track fades out while the incoming track fades in.

cross fault [GEOL] **1.** A fault whose strike is perpendicular to the general trend of the regional structure. **2.** A minor fault that intersects a major fault.

cross-fertilization [BOT] Fertilization between two separate plants. [ZOO] Fertilization between different kinds of individuals.

cross fire [COMMUN] Interfering current in one telegraph or signaling channel resulting from telegraph or signaling currents in another channel.

cross-flow [AERO ENG] A flow going across another flow, as a spanwise flow over a wing.

cross-flow plane [AERO ENG] A plane at right angles to the free-stream velocity.

cross flux [ELECTROMAG] A component of magnetic flux perpendicular to that produced by the field magnets in an electrical rotating machine.

cross fold [GEOL] A secondary fold whose axis is perpendicular or oblique to the axis of another fold. Also known as subsequent fold; superimposed fold; transverse fold.

crossfoot [COMPUT SCI] To add numbers in several different ways in a computer, for checking purposes.

cross furring ceiling [BUILD] A ceiling in which furring members are attached perpendicular to the main runners or other structural members.

cross gateway *See* cross heading.

cross hair [ENG] An inscribed line or a strand of hair, wire, silk, or the like used in an optical sight, transit, or similar instrument for accurate sighting.

crosshatch generator [ELECTR] A signal generator that generates a crosshatch pattern for adjusting color television receiver circuits.

crosshaul [MECH ENG] A device for loading objects onto vehicles, consisting of a chain that is hooked on opposite sides of a vehicle, looped under the object, and connected to a power source and that rolls the object onto the vehicle.

crosshead [MECH ENG] A block sliding between guides and containing a wrist pin for the conversion of reciprocating to rotary motion, as in an engine or compressor. [MET] A device generally employed in wire coating which is attached to the discharge end of the extruder cylinder; designed to facilitate extruding material at an angle. [MIN ENG] A runner or guide positioned just above a sinking bucket to restrict excessive swinging.

cross heading [MIN ENG] Mine passage driven for ventilation from the airway to the gangway, or from one breast through the pillar to the adjoining working. Also known as cross gateway; cross hole; headway.

cross hole *See* cross heading.

crossing angle [NAV] The angle at which two lines of position intersect. Also known as angle of cut.

crossing over [GEN] The exchange of genetic material between paired homologous chromosomes during meiosis. Also known as crossover.

crossing plates [CIV ENG] Plates placed between a crossing and the ties to support the crossing and protect the ties.

crossing symmetry [PARTIC PHYS] The amplitude for a process that involves creation of a particle with four-momentum P_μ is equal to the amplitude for a process which is the same except it involves destruction of the antiparticle with four-momentum $-P_\mu$.

cross joint [GEOL] A fracture in igneous rock perpendicular to the lineation caused by flow magma. Also known as transverse joint.

cross-lamination *See* cross-bedding.

cross-level [ENG] To level at an angle perpendicular to the principal line of sight.

crossline screen [GRAPHICS] In halftone photography, a grid that has opaque lines intersecting at right angles, forming transparent squares (screen apertures). Also known as a glass screen.

cross-linking [ORG CHEM] The setting up of chemical links between the molecular chains of polymers.

cross-magnetizing effect [ELECTROMAG] The distortion in the flux-density distribution in the air gap of an electric rotating machine caused by armature reaction.

crossmarks [GRAPHICS] Register marks used for the exact positioning of images in step-and-repeat, double, or multicolor printing; also used for superimposing overlays onto a base or onto each other.

cross matching [IMMUNOL] Determination of blood compatibility for transfusion by mixing donor cells with recipient serum, and recipient cells with donor serum, and examining for an agglutination reaction.

cross modulation [COMMUN] A type of interference in which the carrier of a desired signal becomes modulated by the program of an undesired signal on a different carrier frequency; the program of the undesired station is then heard in the background of the desired program.

cross multiplication [MATH] Multiplication of the numerator of each of two fractions by the denominator of the other, as when eliminating fractions from an equation.

cross-neutralization [ELECTR] Method of neutralization used in push-pull amplifiers, whereby a portion of the plate-cathode alternating-current voltage of each vacuum tube is applied to the grid-cathode circuit of the other vacuum tube through a neutralizing capacitor.

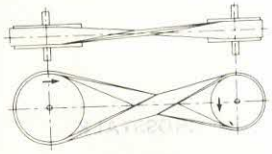
cross office switching time [COMMUN] Time required to connect any input through the switching center to any selected output.

Crossopterygii [PALEON] A subclass of the class Osteichthyes comprising the extinct lobefins or choanate fishes and represented by one extant species; distinguished by two separate dorsal fins.

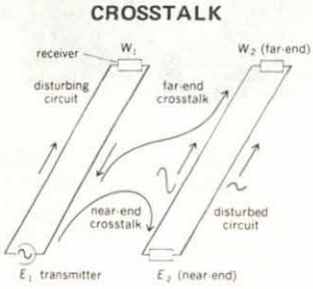
Crossosomataceae [BOT] A monogeneric family of xerophytic shrubs in the order Dilleniales characterized by perigynous flowers, seeds with thin endosperm, and small, entire leaves.

crossover [CIV ENG] An S-shaped section of railroad track joining two parallel tracks. [ELEC] A point at which two

CROSSED BELT



Arrangement of crossed pulley belt showing the directions in which the pulleys rotate.



Crosstalk arising in short section of two parallel circuits (def. 1). Conductor closer to disturbing circuit has larger crosstalk voltage than farther conductor; voltage difference is effective at E_2 and W_2 terminals. Energy in disturbing circuit is assumed to flow from east to west.

conductors cross, with appropriate insulation between them to prevent contact. [GEN] *See* crossing over.

crossover distortion [ELECTR] Amplitude distortion in a class B transistor power amplifier which occurs at low values of current, when input impedance becomes appreciable compared with driver impedance.

crossover experiment [MED] An experiment or clinical investigation in which subjects are divided randomly into at least as many groups as there are kinds of treatment to be given, and then the groups are interchanged until every subject has received each treatment.

crossover flange [ENG] Intermediate pipe flange used to connect flanges of different working pressures.

crossover frequency [ENG ACOUS] **1.** The frequency at which a dividing network delivers equal power to the upper and lower frequency channels when both are terminated in specified loads. **2.** *See* transition frequency.

crossover network [ENG ACOUS] A selective network used to divide the audio-frequency output of an amplifier into two or more bands of frequencies. Also known as dividing network; loudspeaker dividing network.

crossover spiral *See* lead-over groove.

crossover voltage [ELECTR] In a cathode-ray storage tube, the voltage of a secondary writing surface, with respect to cathode voltage, on which the secondary emission is unity.

cross-peen hammer [ENG] A hammer with a wedge-shaped surface at one end of the head.

cross-pointer indicator [NAV] A flight instrument having two needles which cross in the center when the aircraft is on course; the vertical needle indicates the position of the aircraft with respect to the localizer course, and the horizontal needle serves a similar purpose for the glide slope of an instrument landing system.

cross-polarization [ELECTROMAG] The component of the electric field vector normal to the desired polarization component.

cross-pollination [BOT] Transfer of pollen from the anthers of one plant to the stigmata of another plant.

cross product [MATH] An anticommutative multiplication on the vectors of euclidean three-dimensional space. Also known as vector product.

cross-reaction [IMMUNOL] Reaction between an antibody and a closely related, but not complementary, antigen.

cross-referencing program [COMPUT SCI] A computer program used in debugging that produces indexed lists of both the variable names and the statement numbers of the source program.

cross-rolling [MET] **1.** Straightening metal sheets by passing them through rolls at right angles to the principal direction of rolling. **2.** Straightening round bars or tubes by passing the work through parallel to the axes of rolls.

cross sea [OCEANOGR] A series of waves or swell crossing another wave system at an angle.

cross section [GEOL] **1.** A diagram or drawing that shows the downward projection of surficial geology along a vertical plane, for example, a portion of a stream bed drawn at right angles to the mean direction of the flow of the stream. **2.** An actual exposure or cut which reveals geological features. [GRAPHICS] A diagram or drawing representing a cut at right angles to an axis. [MAP] A horizontal grid system that is laid out on the ground for determining contours, quantities of earthwork, and so on, by means of elevations of the grid points. [MATH] **1.** The intersection of an n-dimensional geometric figure in some euclidean space with a lower dimensional hyperplane. **2.** A right inverse for the projection of a fiber bundle. [PHYS] An area characteristic of a collision reaction between atomic or nuclear particles or systems, such that the number of reactions which occur equals the product of the number of target particles or systems and the number of incident particles or systems which would pass through this area if their velocities were perpendicular to it. Also known as collision cross section.

cross section per atom [NUC PHYS] The microscopic cross section for a given nuclear reaction referred to the natural element, even though the reaction involves only one of the natural isotopes.

cross-section symbols [GRAPHICS] Standardized shadings used to represent various materials in a cross section.

cross slide [MECH ENG] A part of a machine tool that allows the tool carriage to move at right angles to the main direction of travel.

cross spectrum [PHYS] The complex vector sum of the co-spectrum and quadrature spectrum.

cross-staff [NAV] A forerunner of the modern sextant, used for measuring altitudes of celestial bodies, consisting essentially of a wooden rod with one or more perpendicular crosspieces free to slide along the main rod. Also known as forestaff; Jacob's staff.

cross-stone *See* harmotome; staurolite.

cross-stratification *See* cross-bedding.

crosstalk [COMMUN] **1.** The sound heard in a receiver along with a desired program because of cross modulation or other undesired coupling to another communication channel; it is also observed between adjacent pairs in a telephone cable. **2.** Interaction of audio and video signals in a television system, causing video modulation of the audio carrier or audio modulation of the video signal at some point. **3.** Interaction of the chrominance and luminance signals in a color television receiver. [ENG ACOUS] *See* magnetic printing.

crosstalk coupling [COMMUN] The cross coupling between speech communications channels or their component parts. Also known as crosstalk loss.

crosstalk level [COMMUN] Volume of crosstalk energy, measured in decibels, referred to a base.

crosstalk loss *See* crosstalk coupling.

crosstalk unit [COMMUN] A measure of the coupling between two circuits; the number of crosstalk units is 1 million times the ratio of the current or voltage at the observing point to the current or voltage at the origin of the disturbing signal, the impedances at these points being equal. Abbreviated cu.

crosstie [ENG] A timber or metal sill placed transversely under the rails of a railroad, tramway, or mine-car track.

cross-tolerance [MED] Tolerance or resistance to the action of a drug brought about by continued use of another drug of similar pharmacologic action.

cross trail error [NAV] The error introduced in a drift observation made by means of an object dropped from an aircraft when the object lands to one side of the track.

cross turret [MECH ENG] A turret that moves horizontally and at right angles to the lathe guides.

cross valley *See* transverse valley.

crossvein [MIN ENG] A vein that intersects an older or larger vein.

crosswind [METEOROL] A wind which has a component directed perpendicularly to the course (or heading) of an exposed, moving object.

cross-wire weld [MET] A weld made across wires or bars in order to make wire mesh or other similar products.

Crotalidae [VERT ZOO] A family of proglyphodont venomous snakes in the reptilian suborder Serpentes.

crotch [SCI TECH] The angular form made by the parting of two branches, legs, or members.

crotch height [ANTHRO] The measure of the vertical distance from the crotch of a standing subject to the floor.

crotonaldehyde [ORG CHEM] C_3H_5CHO A colorless liquid boiling at 104°C, soluble in water; vapors are lacrimatory; used as an intermediate in manufacture of n-butyl alcohol and quinaldine. Also known as propylene aldehyde.

crotonic acid [ORG CHEM] C_3H_5COOH An unsaturated acid, with colorless, monoclinic crystals, soluble in water; used in the preparation of synthetic resins, plasticizers, and pharmaceuticals. Also known as α-butenic acid.

croton oil [MATER] A yellow-brown oil obtained from the seeds of the *Croton tiglium;* used as a purgative and as a substitute for castor oil.

croup [MED] Any condition of upper-respiratory pathway obstruction in children, especially acute inflammation of the pharynx, larynx, and trachea, characterized by a hoarse, brassy, and stridulent cough and difficulties in breathing.

croup-associated virus [VIROL] A virus belonging to subgroup 2 of the parainfluenza viruses and found in children with croup. Also known as CA virus; laryngotracheobronchitis virus.

croute calcaire *See* caliche.

Crout reduction [MATH] Modification of the Gauss procedure for numerical solution of simultaneous linear equations; adapted for use on desk calculators and digital computers.

Crova wavelength [STAT MECH] The wavelength in the spectrum of a radiator whose intensity divided by the intensity

of the total radiation equals the derivative of the intensity of the wavelength with respect to temperature divided by the derivative of the total intensity with respect to temperature.

crow [VERT ZOO] The common name for a number of predominantly black birds in the genus *Corvus* comprising the most advanced members of the family Corvidae.

Crow *See* Corvus.

crowbar [DES ENG] An iron or steel bar that is usually bent and has a wedge-shaped working end; used as a lever and for prying. [ELEC] A device or action that in effect places a high overload on the actuating element of a circuit breaker or other protective device, thus triggering it.

crowbar voltage protector [ELEC] A separate circuit which monitors the output of a regulated power supply and instantaneously throws a short circuit (or crowbar) across the output terminals of the power supply whenever a preset voltage limit is exceeded.

Crowe process [MET] In cyanidation, after extraction of the gold, separation of the solution from the ore tailings by filtration or countercurrent decantation and by passage through a vacuum chamber where deaeration occurs.

crown [ANAT] **1.** The top of the skull. **2.** The portion of a tooth above the gum. [BOT] **1.** The topmost part of a plant or plant part. **2.** *See* corona. [CIV ENG] Center of a roadway elevated above the sides. [ENG] **1.** The part of a drill bit inset with diamonds. **2.** The vertex of an arch or arched surface. **3.** The top or dome of a furnace or kiln. [LAP] The portion of a faceted gem above the girdle. [MET] That part of the sheet or roll where the thickness or diameter increases from edge to center. [MIN ENG] A horizontal roof member of a timber up to 16 feet (4.9 meters) long and supported at each end by an upright.

crown block [PETRO ENG] A wooden or steel beam joined to the tops of derrick posts of an oil well to support pulleys.

crown cell [ELEC] The generic name for alkaline zinc–manganese dioxide dry-cell battery; manganese dioxide–graphite cathode mix is pressed into a steel can onto which a steel cap is spot-welded to contain the amalgamated powdered-zinc anode.

crown-cut *See* backsawing.

crown ether [ORG CHEM] A macrocyclic polyether whose structure exhibits a conformation with a so-called hole capable of trapping cations by coordination with a lone pair of electrons on the oxygen atoms.

crown fire [FOR] A forest fire burning primarily in the tops of trees and shrubs.

crown gall [PL PATH] A bacterial disease of many plants induced by *Bacterium tumefaciens* and marked by abnormal enlargement of the stem near the root crown.

crown glass [MATER] A soda-lime glass, typically having 72% SiO_2, 13% CaO, and 15% Na_2O, which is hard and will take a simple polish; highly transparent for visible light.

crown grafting [BOT] A method of vegetative propagation whereby a scion 3–6 inches (8–15 centimeters) long is grafted at the root crown, just below ground level.

crown rot [PL PATH] Any plant disease or disorder marked by deterioration of the stem at or near ground level.

crown rust [PL PATH] A rust disease of oats and certain other grasses caused by varieties of *Puccinia coronata* and marked by light-orange masses of fungi on the leaves.

crown saw [DES ENG] A saw consisting of a hollow cylinder with teeth around its edge; used for cutting round holes. Also known as hole saw.

crown sheet [MECH ENG] The structural element which forms the top of a furnace in a fire-tube boiler.

crown wheel [DES ENG] A gear that is light and crown-shaped. [HOROL] **1.** The horizontal escape wheel of a verge escapement timepiece. **2.** The wheel in the winding mechanism of a watch that drives the ratchet wheel and is itself driven by the winding-stem pinion.

crow quill pen [GRAPHICS] An artist's pen made from a crow quill and used to form an extremely fine line.

Crt *See* Crater.

CRT *See* cathode-ray tube.

Cru *See* Crux.

cruciate [ANAT] Resembling a cross.

crucible [SCI TECH] A refractory vessel or pot, varying in size from a small laboratory utensil to large industrial equipment for melting or calcining.

crucible melt extraction [MET] Melt extraction in which the molten metal is contained in a crucible.

crucible steel *See* drill steel.

Cruciferae [BOT] A large family of dicotyledonous herbs in the order Capparales characterized by parietal placentation; hypogynous, mostly regular flowers; and a two-celled ovary with the ovules attached to the margins of the partition.

cruciform [SCI TECH] Resembling or arranged like a cross.

cruciform core [ELEC] A transformer core in which all windings are on one center leg, and four additional legs arranged in the form of a cross serve as return paths for magnetic flux.

cruciform wing [AERO ENG] An aircraft wing in the shape of a cross.

α Crucis [ASTRON] A double star in the constellation Crux that is 220 light-years from the sun; spectral classification BO.5V. Also known as Acrux.

β Crucis [ASTRON] A star in the constellation Crux that is 370 light-years from the sun, with magnitude 1.3, spectral classification BO.5IV. Also known as Mimosa.

crude assay [CHEM ENG] A procedure for determining the general distillation characteristics and other quality information of crude oil.

crude desalting [CHEM ENG] The washing of crude oil with water in order to remove materials such as dirt, silt, and water-soluble minerals.

crude drug [PHARM] **1.** A plant or animal drug containing all principles characteristic of the drug. **2.** The dried leaves, bark, or rhizome of a plant containing therapeutically active principles.

crude lecithin *See* lecithin.

crude naphtha [MATER] A light distillate made in the fractionation of crude oil.

crude oil [GEOL] A comparatively volatile liquid bitumen composed principally of hydrocarbon, with traces of sulfur, nitrogen, or oxygen compounds; can be removed from the earth in a liquid state.

crude ore [MIN ENG] The ore as it leaves the mine in an unconcentrated form.

crude scale *See* scale wax.

crude still [CHEM ENG] The distillation equipment in which crude oil is separated into various products.

crude yellow scale [MATER] The trade name for a low-grade paraffin wax.

crufomate [ORG CHEM] $C_{12}H_{19}ClNO_3P$ A white, crystalline compound, with a melting point of 61.8°C, which is insoluble in water; used both internally and externally for cattle parasites. Also known as 4-*tert*-butyl-2-chlorophenyl-*ortho*-methyl methylphosphoramidate.

cruise control [NAV] The act or practice of operating an aircraft so as to achieve the most efficient performance on a given flight under available conditions; it may be instituted to obtain maximum economy, endurance, speed, or range, or maximum efficiency at a predetermined airspeed or power setting.

cruise missile [AERO ENG] A pilotless airplane that can be launched from a submarine, surface ship, ground vehicle, or another airplane; range can be up to 1500 miles (2400 kilometers), flying at a constant altitude that can be as low as 60 meters.

cruiser [NAV ARCH] A type of large warship, but smaller than a battleship, having a displacement of 6000 to 15,000 tons (5442–13,605 metric tons), moderately armed and armored, and capable of any naval duty except combat with battleships.

cruising altitude [NAV] An indicated pressure altitude maintained in cruising.

cruising radius [NAV] **1.** The maximum distance that an aircraft, starting with full fuel tanks, can cruise under given or specified conditions from its takeoff point before returning with a specified fuel reserve remaining. **2.** The distance a craft can travel at cruising speed without refueling. Also known as cruising range.

cruising range *See* cruising radius.

crunode [MATH] A point on a curve through which pass two branches of the curve with different tangents. Also known as node.

crura [ANAT] Plural of crus.

crus [ANAT] **1.** The shank of the hindleg, that portion between the femur and the ankle. **2.** Any of various parts of the body resembling a leg or root.

crush [MET] Casting defect caused by damage to the mold

CROWN FIRE

Characteristic crown fire. *(U.S. Forest Service)*

before pouring the metal. [MIN ENG] **1.** A general settlement of the strata above a coal mine due to failure of pillars; generally accompanied by numerous local falls of roof in mine workings. **2.** To reduce ore or quartz by stamps, crushers, or rolls.

crush breccia [GEOL] A breccia formed in place by mechanical fragmentation of rock during movements of the earth's crust.

crush conglomerate [GEOL] Beds similar to a fault breccia, except that the fragments are rounded by attrition. Also known as tectonic conglomerate.

crushed steel [MATER] An abrasive used in the stone, brick, glass, and metal trades, made by heating high-grade crucible steel to white heat, quenching in a bath of cold water, and crushing the fragments.

crushed stone [MIN ENG] Irregular fragments of rock crushed or ground to smaller sizes after quarrying. Also known as broken stone.

crusher [MECH ENG] A machine for crushing rock and other bulk materials.

crush fold [GEOL] A fold of large dimensions that may involve considerable minor folding and faulting such as would produce a mountain chain or an oceanic deep.

crush-forming [ENG] Shaping the face of a grinding wheel by forcing a rotating metal roll into it.

crushing [MIN ENG] The quantity of ore pulverized or crushed at a single operation in processing.

crushing mill *See* stamping mill.

crushing strain [MECH] Compression which causes the failure of a material.

crushing strength [MECH] The compressive stress required to cause a solid to fail by fracture; in essence, it is the resistance of the solid to vertical pressure placed upon it.

crushing test [ENG] A test of the suitability of stone that might be mined for roads or building use. [MET] A test to determine quality of tubing, especially welded tubing, by applying compression parallel to the axis.

crush kidney *See* lower nephron nephrosis.

crush syndrome [MED] A severe, often fatal condition that follows a severe crushing injury, particularly involving large muscle masses, characterized by fluid and blood loss, shock, hematuria, and renal failure. Also known as compression syndrome.

crush zone [GEOL] A zone of fault breccia on fault gouge.

crust [GEOL] The outermost solid layer of the earth, mostly consisting of crystalline rock and extending no more than a few miles from the surface to the Mohorovičić discontinuity. Also known as earth crust. [HYD] A hard layer of snow lying on top of a soft layer.

Crustacea [INV ZOO] A class of arthropod animals in the subphylum Mandibulata having jointed feet and mandibles, two pairs of antennae, and segmented, chitin-encased bodies.

crustal motion [GEOL] Movement of the earth's crust.

crustal plate *See* tectonic plate.

crustecdysone [BIOCHEM] $C_{27}H_{44}O_7$ 20-Hydroxyecdysone, the molting hormone produced by Y organs in crustaceans.

crustose [BOT] Of a lichen, forming a thin crustlike thallus which adheres closely to the substratum of rock, bark, or soil.

crust vegetation [ECOL] Zonal growths of algae, mosses, lichens, or liverworts having variable coverage and a thickness of only a few centimeters.

crutter [MIN ENG] **1.** A worker who drills blasting holes and prepares the blasting charge. **2.** A worker who removes blasted rock.

Crux [ASTRON] A constellation having four principal bright stars which form the figure of a cross; right ascension 12 hours, declination 60°S. Abbreviated Cru. Also known as Cross; Southern Cross.

Crv *See* Corvus.

cry-, cryo- [SCI TECH] Combining form meaning cold, freezing.

cryobiology [BIOL] The use of low-temperature environments in the study of living plants and animals.

cryobiosis [PHYSIO] A type of cryptobiosis induced by low temperatures.

cryochem process [CHEM ENG] A freeze-drying technique involving conduction heat transfer to the frozen solid held on a metallic surface.

cryoconite [GEOL] A dark, powdery dust transported by wind and deposited on the surface of snow or ice; found, however, mainly in cryoconite holes. [MINERAL] A mixture of garnet, sillimanite, zircon, pyroxene, quartz, and various other minerals.

cryoconite hole [GEOL] A cylindrical dust well filled with cryoconite; absorbs solar radiation, causing melting of glacier ice around and below it.

cryoelectronics [ELECTR] A branch of electronics concerned with the study and application of superconductivity and other low-temperature phenomena to electronic devices and systems.

cryogen *See* cryogenic fluid.

cryogenic coil [CRYO] A high-purity coil refrigerated to very low temperatures to reduce effective coil resistivity.

cryogenic conductor *See* superconductor.

cryogenic device [CRYO] A device whose operation depends on superconductivity as produced by temperatures near absolute zero. Also known as superconducting device.

cryogenic engineering [ENG] A branch of engineering specializing in technical operations at very low temperatures (about 200 to 400°R, or −160 to −50°C).

cryogenic film [COMPUT SCI] A storage element using superconducting thin films of lead at liquid-helium temperature.

cryogenic fluid [CRYO] A liquid which boils at temperatures of less than about 110 K at atmospheric pressure, such as hydrogen, helium, nitrogen, oxygen, air, or methane. Also known as cryogen.

cryogenic freezing [FOOD ENG] A freezing technique for preserving shrimp and other foods that are high-priced or have low moisture content by spraying them with liquid nitrogen as they pass through a tunnel on a conveyor belt.

cryogenic gyroscope [ENG] A gyroscope in which a spherical rotor of superconducting niobium spins while in levitation at cryogenic temperatures. Also known as superconducting gyroscope.

cryogenic period [GEOL] A time period in geologic history during which large bodies of ice appeared at or near the poles and climate favored the formation of continental glaciers.

cryogenic propellant [MATER] A rocket fuel, oxidizer, or propulsion fluid which is liquid only at very low temperatures.

cryogenic pump [CRYO] A high-speed vacuum pump that can produce an extremely low vacuum and has a low power consumption; to reduce the pressure, gases are condensed on surfaces within an enclosure at extremely low temperatures, usually attained by using liquid helium or liquid or gaseous hydrogen. Also known as cryopump.

cryogenics [PHYS] The production and maintenance of very low temperatures, and the study of phenomena at these temperatures.

cryogenic temperature [CRYO] A temperature within a few degrees of absolute zero.

cryogenic transformer [ELECTR] A transformer designed to operate in digital cryogenic circuits, such as a controlled-coupling transformer.

cryoglobulin [PATH] An abnormal protein, usually an immunoglobulin, which precipitates from plasma between 40 and 70°F (4.4 and 21°C).

cryohydrate [CHEM] A salt that contains water of crystallization at low temperatures. Also known as cryosel.

cryohydric point [PHYS CHEM] The eutectic point of an aqueous salt solution.

cryolaccolith *See* hydrolaccolith.

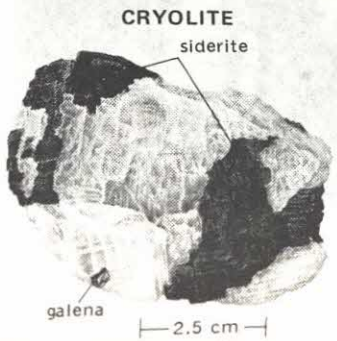
cryolectronics [ELECTR] Technology concerning the characteristics of electronic components at cryogenic temperatures.

cryolite [MINERAL] Na_3AlF_6 A white or colorless mineral that crystallizes in the monoclinic system but has a pseudocubic aspect; found in masses of waxy luster; hardness is 2.5 on Mohs scale, and specific gravity is 2.95–3.0; used chiefly as a flux in producing aluminum from bauxite and for making salts of sodium and aluminum and porcelaneous glass. Also known as Greenland spar; ice stone.

cryolithionite [MINERAL] $Na_3Li_3Al_2F_{12}$ A colorless mineral that crystallizes in the isometric system; found in the Ural Mountains.

cryology [HYD] The study of ice and snow. [MECH ENG] The study of low-temperature (approximately 200°R, or −160°C) refrigeration.

cryomagnetic [CRYO] Pertaining to production of very low



White, translucent cryolite in association with siderite and galena, Ivigtut, Greenland. *(Specimen from Department of Geology, Bryn Mawr College)*

temperatures by adiabatic demagnetization of paramagnetic salts.

cryometer [ENG] A thermometer for measuring low temperatures.

cryomorphology [GEOL] The branch of geomorphology that treats the processes and topographic features of regions where the ground is permanently frozen.

cryopedology [GEOL] A branch of geology that deals with the study of intensive frost action and permanently frozen ground.

cryophilic *See* cryophilous.

cryophilous [ECOL] Having a preference for low temperatures. Also known as cryophilic.

cryophysics [CRYO] Physics as restricted to phenomena occurring at very low temperatures, approaching absolute zero.

cryophyte [ECOL] A plant that forms winter buds below the soil surface.

cryoplanation [GEOL] Land erosion at high latitudes or elevations due to processes of intensive frost action.

cryoprecipitate [BIOCHEM] The precipitate of a cryoglobulin.

cryopreservation [ENG] Preservation of food, biologicals, and other materials at extremely low temperatures.

cryopump *See* cryogenic pump.

cryoresistive transmission line [ELEC] An electric power transmission line whose conducting cables are cooled to the temperature of liquid nitrogen, 77 K (−196°C), resulting in a reduction of the resistance of the conductor by a factor of approximately 10, leading to increased transmission capacity.

cryosar [ELECTR] A cryogenic, two-terminal, negative-resistance semiconductor device, consisting essentially of two contacts on a germanium wafer operating in liquid helium.

cryoscope [ENG] A device to determine the freezing point of a liquid.

cryoscopic constant [ANALY CHEM] Equation constant expressed in degrees per mole of pure solvent; used to calculate the freezing-point-depression effects of a solute.

cryoscopy [ANALY CHEM] A phase-equilibrium technique to determine molecular weight and other properties of a solute by dissolving it in a liquid solvent and then ascertaining the solvent's freezing point.

cryosel *See* cryohydrate.

cryosistor [ELECTR] A cryogenic semiconductor device in which a reverse-biased *pn* junction is used to control the ionization between two ohmic contacts.

cryosorption pump [MECH ENG] A high-vacuum pump that employs a sorbent such as activated charcoal or synthetic zeolite cooled by nitrogen or some other refrigerant; used to reduce pressure from atmospheric pressure to a few millitorr.

cryosphere [GEOL] That region of the earth in which the surface is perennially frozen.

cryostat [ENG] An apparatus used to provide low-temperature environments in which operations may be carried out under controlled conditions.

cryosurgery [MED] Selective destruction of tissue by freezing, as the use of a liquid nitrogen probe to the brain in parkinsonism.

cryotherapy [MED] A form of therapy which consists of local or general use of cold.

cryotron [ELECTR] A switch that operates at very low temperatures at which its components are superconducting; when current is sent through a control element to produce a magnetic field, a gate element changes from a superconductive zero-resistance state to its normal resistive state.

cryotronics [ELECTR] The branch of electronics that deals with the design, construction, and use of cryogenic devices.

cryoturbation *See* congeliturbation.

Cryphaeaceae [BOT] A family of mosses in the order Isobryales distinguished by a rough calyptra.

crypt [ANAT] **1.** A follicle or pitlike depression. **2.** A simple glandular cavity.

cryptanalysis [COMMUN] Steps and operations performed in converting encrypted messages into plain text without previous knowledge of the key employed.

cryptand [ORG CHEM] A macropolycyclic polyazo-polyether, where the three-coordinate nitrogen atoms provide the vertices of a three-dimensional structure.

cryptic behavior [ZOO] A behavior pattern that maximizes an organism's ability to conceal itself.

cryptic coloration [ZOO] A phenomenon of protective coloration by which an animal blends with the background through color matching or countershading.

Cryptobiidae [INV ZOO] A family of flagellate protozoans in the order Kinetoplastida including organisms with two flagella, one free and one with an undulating membrane.

cryptobiosis [PHYSIO] A state in which metabolic rate of the organism is reduced to an imperceptible level.

cryptobiotic [ECOL] Living in concealed or secluded situations.

Cryptobranchidae [VERT ZOO] The giant salamanders and hellbenders, a family of tailed amphibians in the suborder Cryptobranchoidea.

Cryptobranchoidea [VERT ZOO] A primitive suborder of amphibians in the order Urodela distinguished by external fertilization and aquatic larvae.

Cryptocerata [INV ZOO] A division of hemipteran insects in some systems of classification that includes the water bugs (Hydrocorisae).

Cryptochaetidae [INV ZOO] A family of myodarian cyclorrhaphous dipteran insects in the subsection Acalypteratae.

cryptochannel [COMMUN] A complete system of communication that uses electronic encryption and decryption equipment and has two or more radio or wire terminals.

cryptoclastic [GEOL] Composed of extremely fine, almost submicroscopic, broken or fragmental particles.

cryptoclimate [ENG] The climate of a confined space, such as inside a house, barn, or greenhouse, or in an artificial or natural cave; a form of microclimate. Also spelled kryptoclimate.

cryptoclimatology [CLIMATOL] The science of climates of confined spaces (cryptoclimates); basically, a form of microclimatology. Also spelled kryptoclimatology.

Cryptococcaceae [MYCOL] A family of imperfect fungi in the order Moniliales in some systems of classification; equivalent to the Cryptococcales in other systems.

Cryptococcales [MYCOL] An order of imperfect fungi, in some systems of classification, set up to include the yeasts or yeastlike organisms whose perfect or sexual stage is not known.

cryptococcal meningitis [MED] Inflammation of the meninges due to yeasts of the genus *Cryptococcus*.

cryptococcosis [MED] A yeast infection of man, primarily of the central nervous system, caused by *Cryptococcus neoformans*. Also known as torulosis.

Cryptococcus [MYCOL] A genus of encapsulated pathogenic yeasts in the order Moniliales.

cryptocrystalline [GEOL] Having a crystalline structure but of such a fine grain that individual components are not visible with a magnifying lens.

Cryptodira [VERT ZOO] A suborder of the reptilian order Chelonia including all turtles in which the cervical spines are uniformly reduced and the head folds directly back into the shell.

cryptogam [BOT] An old term for nonflowering plants.

cryptogram [COMMUN] Information written in code or cipher.

cryptographic algorithm [COMMUN] An unchanging set of rules or steps for enciphering and deciphering messages in a cipher system.

cryptographic bitstream [COMMUN] An unending sequence of digits which is combined with ciphertext to produce plaintext or with plaintext to recover ciphertext in a stream cipher system.

cryptographic key [COMMUN] A sequence of numbers or characters selected by the user of a cipher system to implement a cryptographic algorithm for enciphering and deciphering messages.

cryptography [COMMUN] The science of preparing messages in a form which cannot be read by those not privy to the secrets of the form.

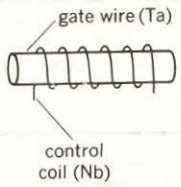
cryptohalite [MINERAL] $(NH_4)_2SiF_6$ A colorless to white or gray, isometric mineral consisting of ammonium silicon fluoride; occurs in massive and arborescent forms.

cryptolite *See* monazite.

cryptology [COMMUN] The science of preparing messages in forms which are intended to be unintelligible to those not privy to the secrets of the form, and of deciphering such messages.

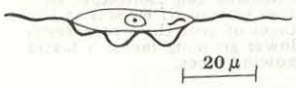
cryptomedusa [INV ZOO] The final stage in the reduction of a hydroid medusa to a rudiment having sex cells within the gonophore.

CRYOTRON



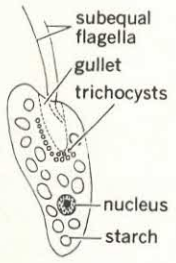
The wire-wound cryotron operated at temperatures close to absolute zero.

CRYPTOBIIDAE



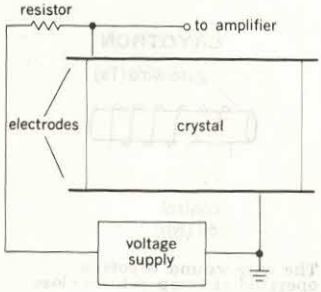
Cryptobia, a genus in Cryptobiidae showing the characteristic two flagella, one free and one with undulating membrane.

CRYPTOMONADIDA



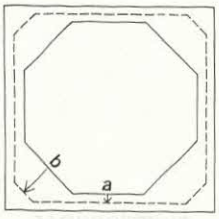
Chilomonas paramecium, an example of a cryptomonad.

CRYSTAL COUNTER



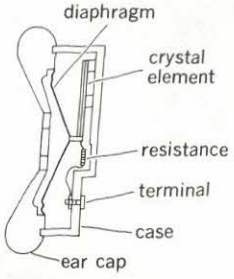
Circuit diagram of a crystal counter.

CRYSTAL GROWTH



Schematic representation of cross section of crystal at three stages of growth; *a* represents slower growing faces, *b* faster growing faces.

CRYSTAL HEADPHONES



Section through a crystal headphone.

cryptomelane [MINERAL] $KMn_8O_{16}\cdot H_2O$ A usually massive mineral, common in manganese ores; contains an oxide of manganese and potassium and crystallizes in the monoclinic system.

cryptomitosis [INV ZOO] Cell division in certain protozoans in which a modified spindle forms, and chromatin assembles with no apparent chromosome differentiation.

Cryptomonadida [BIOL] An order of the class Phytamastigophorea considered to be protozoans by biologists and algae by botanists.

Cryptomonadina [BIOL] The equivalent name for Cryptomonadida.

cryptopart [COMMUN] One of several portions of a cryptotext; each cryptopart bears a different message indicator.

cryptoperthite [MINERAL] A fine-grained, submicroscopic variety of perthite consisting of an intergrowth of potassic and sodic feldspar, detectable only by means of x-rays or with the aid of an electron microscope.

Cryptophagidae [INV ZOO] The silken fungus beetles, a family of coleopteran insects in the superfamily Cucujoidea.

Cryptophyceae [BOT] A class of algae of the Pyrrhophyta in some systems of classification; equivalent to the division Cryptophyta.

Cryptophyta [BOT] A division of the algae in some classification schemes; equivalent to the Cryptophyceae.

cryptophyte [BOT] A plant that produces buds either underwater or underground on corms, bulbs, or rhizomes.

Cryptopidae [INV ZOO] A family of epimorphic centipedes in the order Scolopendromorpha.

cryptorchidism *See* cryptorchism.

cryptorchism [MED] Failure of the testes to descend into the scrotum from the abdomen or inguinal canals. Also known as cryptorchidism.

Cryptostomata [PALEON] An order of extinct bryozoans in the class Gymnolaemata.

cryptotext [COMMUN] In cryptology, a text of visible writing which conveys no intelligible meaning in any language, or which apparently conveys an intelligible meaning that is not the real meaning.

cryptotope [IMMUNOL] A determinant (or epitope) of an immunological antigen or immunogen which is initially hidden and becomes functional only when the molecule is broken or degraded.

cryptovolcanic [GEOL] A small, nearly circular area of highly disturbed strata in which there is no evidence of volcanic materials to confirm the origin as being volcanic.

cryptoxanthin [BIOCHEM] $C_{40}H_{57}O$ A xanthophyll carotenoid pigment found in plants; convertible to vitamin A by many animal livers.

cryptozoon [PALEOBOT] A hemispherical or cabbagelike reef-forming fossil algae, probably from the Cambrian and Ordovician.

crypts of Lieberkühn [ANAT] Simple, tubular glands which arise as evaginations into the mucosa of the small intestine.

crystal [CRYSTAL] A homogeneous solid made up of an element, chemical compound or isomorphous mixture throughout which the atoms or molecules are arranged in a regularly repeating pattern. [ELECTR] A natural or synthetic piezoelectric or semiconductor material whose atoms are arranged with some degree of geometric regularity. [MINERAL] *See* rock crystal.

crystal activity [ELECTR] A measure of the amplitude of vibration of a piezoelectric crystal plate under specified conditions.

crystal aerugo *See* cupric acetate.

crystal-audio receiver [ELECTR] Similar to the crystal-video receiver, except for the path detection bandwidth which is audio rather than video.

crystal axis [CRYSTAL] A reference axis used for the vectoral properties of a crystal.

crystal blank [ELECTR] The result of the final cutting operation on a piezoelectric or semiconductor crystal.

crystal calibrator [ELECTR] A crystal-controlled oscillator used as a reference standard to check frequencies.

crystal cartridge [ENG ACOUS] A piezoelectric unit used with a stylus in a phonograph pickup to convert disk recordings into audio-frequency signals, or used with a diaphragm in a crystal microphone to convert sound waves into af signals.

crystal chemistry [CRYSTAL] The study of the crystalline structure and properties of a mineral or other solid.

crystal class [CRYSTAL] One of 32 categories of crystals according to the inversions, rotations about an axis, reflections, and combinations of these which leaves the crystal invariant. Also known as symmetry class.

crystal clock [HOROL] A clock which uses the mechanical resonance of a crystal plate coupled piezoelectrically into an electronic circuit.

crystal control [ELECTR] Control of the frequency of an oscillator by means of a quartz crystal unit.

crystal-controlled oscillator [ELECTR] An oscillator whose frequency of operation is controlled by a crystal unit.

crystal-controlled transmitter [ELECTR] A transmitter whose carrier frequency is directly controlled by the electromechanical characteristics of a quartz crystal unit.

crystal counter [NUCLEO] A particle detector in which the sensitive material is a dielectric (nonconducting) crystal mounted between two metallic electrodes.

crystal current [ELECTR] The actual alternating current flowing through a crystal unit.

crystal cutter [ENG ACOUS] A cutter in which the mechanical displacements of the recording stylus are derived from the deformations of a crystal having piezoelectric properties.

crystal defect [CRYSTAL] Any departure from crystal symmetry caused by free surfaces, disorder, impurities, vacancies and interstitials, dislocations, lattice vibrations, and grain boundaries. Also known as lattice defect.

crystal detector [ELECTR] **1.** A crystal diode, or an equivalent earlier crystal-catwhisker combination, used to rectify a modulated radio-frequency signal to obtain the audio or video signal directly. **2.** A crystal diode used in a microwave receiver to combine an incoming radio-frequency signal with a local oscillator signal to produce an intermediate-frequency signal.

crystal diffraction [SOLID STATE] Diffraction by a crystal of beams of x-rays, neutrons, or electrons whose wavelengths (or de Broglie wavelengths) are comparable with the interatomic spacing of the crystal.

crystal diffraction spectrometer *See* Bragg spectrometer.

crystal diode *See* semiconductor diode.

crystal dynamics *See* lattice dynamics.

crystal face [CRYSTAL] One of the outward planar surfaces which define a crystal and reflect its internal structure. Also known as face.

crystal field theory [PHYS CHEM] The theory which assumes that the ligands of a coordination compound are the sources of negative charge which perturb the energy levels of the central metal ion and thus subject the metal ion to an electric field analogous to that within an ionic crystalline lattice.

crystal filter [ELECTR] A highly selective tuned circuit employing one or more quartz crystals; sometimes used in intermediate-frequency amplifiers of communication receivers to improve the selectivity.

crystal glass [MATER] A water-clear lead glass which polishes readily and has a high index of refraction.

crystal gliding [CRYSTAL] Slip along a crystal plane due to plastic deformation; often produces crystal twins. Also known as translation gliding.

crystal grating [SPECT] A diffraction grating for gamma rays or x-rays which uses the equally spaced lattice planes of a crystal.

crystal growth [CRYSTAL] The growth of a crystal, which involves diffusion of the molecules of the crystallizing substance to the surface of the crystal, diffusion of these molecules over the crystal surface to special sites on the surface, incorporation of molecules into the surface at these sites, and diffusion of heat away from the surface.

crystal habit [CRYSTAL] The size and shape of the crystals in a crystalline solid. Also known as habit.

crystal harmonic generator [ELECTR] A type of crystal-controlled oscillator which produces an output rich in harmonics (overtones or multiples) of its fundamental frequency.

crystal headphones [ENG ACOUS] Headphones using Rochelle salt or other crystal elements to convert audio-frequency signals into sound waves. Also known as ceramic earphones.

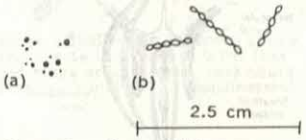
crystal holder [DES ENG] A housing designed to provide proper support, mechanical protection, and connections for a quartz crystal plate.

crystal hydrophone [ENG ACOUS] A crystal microphone that responds to waterborne sound waves.

crystal indices *See* Miller indices.

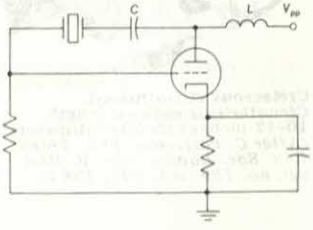
crystal laser [OPTICS] A laser that uses a pure crystal of ruby or other material for generating a coherent beam of output light.
crystal lattice [CRYSTAL] A lattice from which the structure of a crystal may be obtained by associating with every lattice point an assembly of atoms identical in composition, arrangement, and orientation.
crystal lattice filter [ELECTR] A crystal filter that uses two matched pairs of series crystals and a higher-frequency matched pair of shunt or lattice crystals.
crystalliferous bacteria [MICROBIO] *Bacillus thuringiensis* and related species characterized by the formation of a protein crystal in the sporangium at the time of spore formation.
crystalline [CRYSTAL] Of, pertaining to, resembling, or composed of crystals.
crystalline alumina [MATER] An abrasive which consists of essentially the same mineral as corundum, but whose physical properties such as crystal structure, size, and shape of grain are so controlled as to produce the most desirable abrasives for specific types of grinding.
crystalline anisotropy [SOLID STATE] The tendency of crystals to have different properties in different directions; for example, a ferromagnet will spontaneously magnetize along certain crystallographic axes.
crystalline chloral *See* chloral hydrate.
crystalline double refraction [OPTICS] The splitting which a wavefront experiences when a wave disturbance propagates through an anisotropic crystal.
crystalline field [SOLID STATE] The internal electric field in a solid due to localized charges, especially ions, inside.
crystalline fracture [MET] A break in a polycrystalline metal, with the fractured surface having a grainy appearance.
crystalline frost [HYD] Hoarfrost that exhibits a relatively simple macroscopic crystalline structure.
crystalline-granular texture [PETR] A primary texture of an igneous rock due to crystallization from a fluid medium.
crystalline laser [OPTICS] A solid laser in which the lasing material is a pure crystal like ruby or a doped crystal like neodymium-doped ruby or neodymium-doped yttrium aluminum garnet.
crystalline lens *See* lens.
crystalline polymer [CHEM] A polymer whose sections of adjacent chains are packed in a regular array.
crystalline porosity [GEOL] Porosity in crystalline limestone and dolomite, making possible underground oil reservoirs.
crystalline rock [PETR] **1.** Rock made up of minerals in a clearly crystalline state. **2.** Igneous and metamorphic rock, as opposed to sedimentary rock.
crystallinity [CRYSTAL] The quality or state of being crystalline. [PETR] Degree of crystallization exhibited by igneous rock.
crystallite [GEOL] A small, rudimentary form of crystal which is of unknown mineralogic composition and which does not polarize light.
crystallization [CRYSTAL] The formation of crystalline substances from solutions or melts.
crystallization differentiation *See* fractional crystallization.
crystallizer [CHEM ENG] Process vessel within which dissolved solids in a supersaturated solution are forced out of solution by cooling or evaporation, and then recovered as solid crystals.
crystalloblast [MINERAL] A mineral crystal produced by metamorphic processes.
crystalloblastic series [GEOL] A series of metamorphic minerals ordered according to decreasing formation energy, so crystals of a listed mineral have a tendency to form idioblastic outlines at surfaces of contact with simultaneously developed crystals of all minerals in lower positions.
crystalloblastic texture [GEOL] A crystalline texture resulting from metamorphic recrystallization under conditions of high viscosity and directed pressure.
crystallogram [CRYSTAL] A photograph of the x-ray diffraction pattern of a crystal.
crystallographic axis [CRYSTAL] One of three lines (sometimes four, in the case of a hexagonal crystal), passing through a common point, that are chosen to have definite relation to the symmetry properties of a crystal, and are used as a reference in describing crystal symmetry and structure.
crystallographic texture [MINERAL] A texture of replacement or exsolution mineral deposits, with the distribution and form of the inclusions controlled by the host-mineral crystallography.
crystallography [PHYS] The branch of science that deals with the geometric description of crystals and their internal arrangement.
crystallomagnetic [SOLID STATE] Pertaining to magnetic properties of crystals.
crystallophobia [PSYCH] An abnormal fear of glass.
crystal loudspeaker [ENG ACOUS] A loudspeaker in which movements of the diaphragm are produced by a piezoelectric crystal unit that twists or bends under the influence of the applied audio-frequency signal voltage. Also known as piezoelectric loudspeaker.
crystal microphone [ENG ACOUS] A microphone in which deformation of a piezoelectric bar by the action of sound waves or mechanical vibrations generates the output voltage between the faces of the bar. Also known as piezoelectric microphone.
crystal mixer [ELECTR] A mixer that uses the nonlinear characteristic of a crystal diode to mix two frequencies; widely used in radar receivers to convert the received radar signal to a lower intermediate-frequency value by mixing it with a local oscillator signal.
crystal monochromator [SPECT] A spectrometer in which a collimated beam of slow neutrons from a reactor is incident on a single crystal of copper, lead, or other element mounted on a divided circle.
crystal operation [ELECTR] Operation using crystal-controlled oscillators.
crystal optics [OPTICS] The study of the propagation of light, and associated phenomena, in crystalline solids.
crystal oscillator [ELECTR] An oscillator in which the frequency of the alternating-current output is determined by the mechanical properties of a piezoelectric crystal. Also known as piezoelectric oscillator.
crystal oven [ENG] A temperature-controlled oven in which a crystal unit is operated to stabilize its temperature and thereby minimize frequency drift.
crystal phase [MET] A crystal structure formed by an alloy over a certain range of values of the relative proportions of its constituents.
crystal pickup [ENG ACOUS] A phonograph pickup in which movements of the needle in the record groove cause deformation of a piezoelectric crystal, thereby generating an audio-frequency output voltage between opposite faces of the crystal. Also known as piezoelectric pickup.
crystal plate [ELECTR] A precisely cut slab of quartz crystal that has been lapped to final dimensions, etched to improve stability and efficiency, and coated with metal on its major surfaces for connecting purposes. Also known as quartz plate.
crystal pulling [CRYSTAL] A method of crystal growing in which the developing crystal is gradually withdrawn from a melt.
crystal rectifier *See* semiconductor diode.
crystal resonator [ELECTR] A precisely cut piezoelectric crystal whose natural frequency of vibration is used to control or stabilize the frequency of an oscillator. Also known as piezoelectric resonator.
crystal sandstone [GEOL] Siliceous sandstone in which deposited silica is precipitated upon the quartz grains in crystalline position.
crystal set [ELECTR] A radio receiver having a crystal detector stage for demodulation of the received signals, but no amplifier stages.
crystal settling [GEOL] Sinking of crystals in magma from the liquid in which they formed, by the action of gravity.
crystal shutter [ELECTROMAG] Mechanical waveguide or coaxial-cable shorting switch that, when closed, prevents undesired radio-frequency energy from reaching and damaging a crystal detector.
crystals of Venus *See* cupric acetate.
crystal spectrometer *See* Bragg spectrometer.
crystal-stabilized transmitter [ELECTR] A transmitter employing automatic frequency control, in which the reference frequency is that of a crystal oscillator.
crystal structure [CRYSTAL] The arrangement of atoms or ions in a crystalline solid.
crystal symmetry [CRYSTAL] The existence of nontrivial operations, consisting of inversions, rotations around an axis, reflections, and combinations of these, which bring a crystal into a position indistinguishable from its original position.

CRYSTALLITE



Examples of crystallites. *(a)* Globulites and *(b)* margarites.

CRYSTAL OSCILLATOR

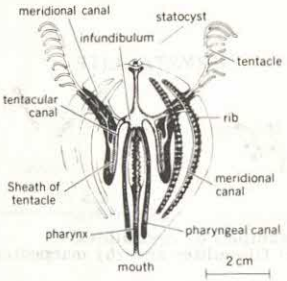


Circuit diagram of Pierce crystal oscillator; C is capacitor, L is inductor, and V_{pp} is plate voltage.

CTENOID SCALE

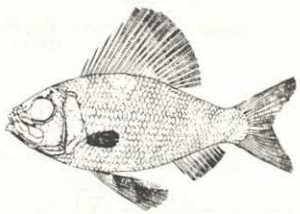
Ctenoid scale from carp. *(From K. F. Lagler et al., Ichthyology, copyright © 1962 by John Wiley & Sons, Inc.; reprinted by permission)*

CTENOPHORA



Structure of a cydippid ctenophore.

CTENOTHRISSIFORMES



Cretaceous ctenothrissid, *Ctenothrissus radians*; length 10–12 inches (25–30 centimeters). *(After C. Patterson, Phil. Trans. Roy. Soc. London Ser. B. Biol. Sci. no. 739, vol. 247, 1964)*

C-TUBE BOURDON ELEMENT

C-tube bourdon element with mechanism composing an industrial pressure gage. *(Foxboro Co.)*

crystal system [CRYSTAL] One of seven categories (cubic, hexagonal, tetragonal, trigonal, orthorhombic, monoclinic, and triclinic) into which a crystal may be classified according to the shape of the unit cell of its Bravais lattice, or according to the dominant symmetry elements of its crystal class.

crystal transducer [ELECTR] A transducer in which a piezoelectric crystal serves as the sensing element.

crystal tuff [GEOL] Consolidated volcanic ash in which crystals and crystal fragments predominate.

crystal twin *See* twin.

crystal unit [ELECTR] A complete assembly of one or more quartz plates in a crystal holder.

crystal video receiver [ELECTR] A broad-tuning radar or other microwave receiver consisting only of a crystal detector and a video or audio amplifier.

crystal video rectifier [ELECTR] A crystal rectifier transforming a high-frequency signal directly into a video-frequency signal.

crystal violet *See* methyl violet.

crystal-vitric tuff [GEOL] Consolidated volcanic ash composed of 50–75% crystal fragments and 25–50% glass fragments.

crystal whiskers [CRYSTAL] Single crystals that have grown in a filamentary form.

crystogen *See* cystamine.

crystosphene [HYD] A buried sheet or mass of ice, as in the tundra of northern America, formed by the freezing of rising and spreading springwater beneath alluvial deposits.

cs *See* centistoke.

Cs *See* cesium; cirrostratus cloud.

csc *See* cosecant.

C scan *See* C scope.

csch *See* hyperbolic cosecant.

C scope [ELECTR] A cathode-ray scope on which signals appear as spots, with bearing angle as the horizontal coordinate and elevation angle as the vertical coordinate. Also known as C indicator; C scan.

C size [ENG] One of a series of sizes to which trimmed paper and board are manufactured; for size C*N*, with *N* equal to any integer, the length of the longer side is $2^{3/8-N/2}$ meters, while the length of the shorter side is $2^{1/8-N/2}$ meters, with both lengths rounded off to the nearest millimeter.

CSP *See* control switching point.

C stage [ORG CHEM] The final stage in a thermosetting resin reaction in which the material is relatively insoluble and infusible; the resin in a fully cured thermoset molding is in this stage. Also known as resite.

CSW *See* channel status word.

CT *See* center tap.

CTC *See* centralized traffic control.

CTD recorder *See* salinity-temperature-depth recorder.

ctenidium [INV ZOO] **1.** The comb- or featherlike respiratory apparatus of certain mollusks. **2.** A row of spines on the head or thorax of some fleas.

Ctenodrilidae [INV ZOO] A family of fringe worms belonging to the Sedentaria.

ctenoid scale [VERT ZOO] A thin, acellular structure composed of bonelike material and characterized by a serrated margin; found in the skin of advanced teleosts.

Ctenophora [INV ZOO] The comb jellies, a phylum of marine organisms having eight rows of comblike plates as the main locomotory structure.

Ctenostomata [INV ZOO] An order of bryozoans in the class Gymnolaemata recognized as inconspicuous, delicate colonies made up of relatively isolated, short, tubular zooecia with chitinous walls.

Ctenostomatida [INV ZOO] The equivalent name for Odontostomatida.

Ctenothrissidae [PALEON] A family of extinct teleostean fishes in the order Ctenothrissiformes.

Ctenothrissiformes [PALEON] A small order of extinct teleostean fishes; important as a group on the evolutionary line leading from the soft-rayed to the spiny-rayed fishes.

ctn *See* cotangent.

CTR *See* controlled thermonuclear reactor.

C-tube bourdon element [ENG] Hollow tube of flexible (elastic) metal shaped like the arc of a circle; changes in internal gas or liquid pressure flexes the tube to a degree related to the pressure change; used to measure process-stream pressures.

C-type asteroid [ASTRON] A type of asteroid whose surface is very dark and neutral-colored, and probably is of carbonaceous composition similar to primitive carbonaceous chondritic meteorites.

cu *See* crosstalk unit; cubic.

Cu *See* copper.

cubanite [MINERAL] $CuFe_2S_3$ Bronze-yellow mineral that crystallizes in the orthorhombic system. Also known as chalmersite.

cube [MATH] Regular polyhedron whose faces are all square.

cubeb [BOT] The dried, nearly ripe fruit (berries) of a climbing vine, *Piper cubeba*, of the pepper family (Piperaceae).

cubeb oil *See* oil of cubeb.

cube of a number [MATH] The new number that is obtained by taking the three-fold product of the given number a with itself: $a \times a \times a$.

cube ore *See* pharmacosiderite.

cube root [MATH] Another number whose cube is the original number.

cube spar *See* anhydrite.

cube-surface coil [ELECTROMAG] A system of five equally spaced square coils that produces a region of uniform magnetic field over a large volume which is easily accessible from outside the coils.

cubic [MECH] Denoting a unit of volume, so that if x is a unit of length, a cubic x is the volume of a cube whose sides have length 1x; for example, a cubic meter, or a meter cubed, is the volume of a cube whose sides have a length of 1 meter. Abbreviated cu.

cubical antenna [ELECTROMAG] An antenna array, the elements of which are positioned to form a cube.

cubical dilation [MECH] The isotropic part of the strain tensor describing the deformation of an elastic solid, equal to the fractional increase in volume.

cubical expansion [PHYS] The increase in volume of a substance with a change in temperature or pressure.

cubic cleavage [CRYSTAL] Isometric crystal cleavage occuring parallel to the faces of a cube.

cubic crystal [CRYSTAL] A crystal whose lattice has a unit cell with perpendicular axes of equal length.

cubic curve [MATH] A plane curve which has an equation of the form $f(x, y) = 0$, where $f(x,y)$ is a polynomial of degree three in x and y.

cubic determinant [MATH] A mathematical form analogous to an ordinary determinant, with the elements forming a cube instead of a square.

cubic equation [MATH] A polynomial equation with no exponent larger than 3.

cubic foot per second *See* cusec.

cubicle [BUILD] Any small, approximately square room or compartment. [ENG] An enclosure for high-voltage equipment.

cubic measure [MECH] A unit or set of units to measure volume.

cubic packing [CRYSTAL] The spacing pattern of uniform solid spheres in a clastic sediment or crystal lattice in which the unit cell is a cube.

cubic plane [CRYSTAL] A plane that is at right angles to any one of the three crystallographic axes of the cubic system.

cubic polynomial [MATH] A polynomial in which all exponents are no greater than 3.

cubic spline [MATH] One of a collection of cubic polynomials used in interpolating a function whose value is specified at each of a collection of distinct ordered values, $X_i (i = 1, \ldots, n)$, and whose slope is specified at X_1 and X_n; one cubic polynomial is found for each interval, such that the interpolating system has the prescribed values at each of the X_i, the prescribed slope at X_1 and X_n, and a continuous slope at each of the X_i.

cubic system *See* isometric system.

cuboctahedron [MATH] A polyhedron whose faces consist of six equal squares and eight equal equilateral triangles, and which can be formed by cutting the corners off a cube; it is one of the 13 Archimedean solids. Also spelled cubooctahedron.

cuboid [ANAT] The outermost distal tarsal bone in vertebrates. [INV ZOO] Main vein of the wing in many insects, particularly the flies (Diptera). [SCI TECH] Nearly cubic in shape.

cuboidal epithelium [HISTOL] A single-layered epithelium made up of cubelike cells.

Cubomedusae [INV ZOO] An order of coelenterates in the class Scyphozoa distinguished by a cubic umbrella.
cubooctahedron *See* cuboctahedron.
Cuccia coupler *See* electron coupler.
cuckoo [VERT ZOO] The common name for about 130 species of primarily arboreal birds in the family Cuculidae; some are social parasites.
cucoloris [GRAPHICS] Material having a cutout that allows light to pass through it and project a form.
Cucujidae [INV ZOO] The flat-back beetles, a family of predatory coleopteran insects in the superfamily Cucujoidea.
Cucujoidea [INV ZOO] A large superfamily of coleopteran insects in the suborder Polyphaga.
Cuculidae [VERT ZOO] A family of perching birds in the order Cuculiformes, including the cuckoos and the roadrunner, characterized by long tails, heavy beaks and conspicuous lashes.
Cuculiformes [VERT ZOO] An order of birds containing the cuckoos and allies, characterized by the zygodactyl arrangement of the toes.
Cucumariidae [INV ZOO] A family of dendrochirotacean holothurian echinoderms in the order Dendrochirotida.
cucumber [BOT] *Cucumis sativus*. An annual cucurbit, in the family Cucurbitaceae grown for its edible, immature fleshy fruit.
cucumber mildew [PL PATH] **1.** A downy mildew of cucumbers and melons caused by *Peronoplasmopara cubensis*. **2.** A powdery mildew of cucumbers and melons caused by *Erysiphe cichoracearum*.
cucumber mosaic [PL PATH] A virus disease of cucumbers and related fruits, producing mottling of terminal leaves and fruits and dwarfing of vines.
cucurbit wilt [PL PATH] A bacterial disease of cucumbers and related plants caused by *Erwinia tracheiphila*, characterized by sudden wilting of the plant.
cue circuit [ELECTR] A one-way communication circuit used to convey program control information.
cuesta [GEOGR] A gently sloping plain which terminates in a steep slope on one side.
cul-de-sac [ANAT] Blind pouch or diverticulum. [CIV ENG] A dead-end street with a circular area for turning around.
culdoscope [MED] An instrument used to visualize female pelvic organs, introduced through the vagina or a perforation into the retrouterine pouch.
Culex [INV ZOO] A genus of mosquitoes important as vectors for malaria and several filarial parasites.
Culicidae [INV ZOO] The mosquitoes, a family of slender, orthorrhaphous dipteran insects in the series Nematocera having long legs and piercing mouthparts.
Culicinae [INV ZOO] A subfamily of the dipteran family Culicidae.
cull [CHEM ENG] In a plastics molding operation, material remaining in the transfer chamber after the mold has been filled. [SCI TECH] Material rejected for being below standard grade.
Cullender isochronal method [PETRO ENG] Procedure for back-pressure testing to analyze gas wells that produce from low-permeability reservoirs with a consequent slow approach to stabilized producing conditions.
cullet *See* collet.
cullis *See* coulisse.
culm [BOT] **1.** A jointed and usually hollow grass stem. **2.** The solid stem of certain monocotyledons, such as the sedges. [MIN ENG] Fine, refuse coal, screened and separated from larger pieces.
culmen [VERT ZOO] The edge of the upper bill in birds.
culmination [ASTRON] **1.** The position of a heavenly body when at highest apparent altitude. **2.** For a heavenly body which is continually above the horizon, the position of lowest apparent altitude. [GEOL] A high point on the axis of a fold.
cultellation [ENG] Transferring a surveyed point from a high level (such as on overhang) to a lower level by dropping a marking pin.
cultigen [BIOL] A cultivated variety or species of organism for which there is no known wild ancestor. Also known as cultivar.
cultivar *See* cultigen.
cultivate [AGR] To prepare soil for the raising of crops.
cultivator [AGR] A farm implement pulled behind a powered machine that is used to break up soil, kill weeds, and create a surface mulch for moisture.
cultural anthropology [ANTHRO] The division of anthropology dealing with the study of all aspects of culture.
cultural-familial mental retardation [PSYCH] Subnormal general intellectual functioning, usually borderline or mild, presumably on the basis of some degree of environmental deprivation resulting from familial retardation as evidenced by its presence in one parent and one or more siblings.
culture [ANTHRO] The complex pattern of behavior that distinguishes a social, ethnic, or religious group. [BIOL] A growth of living cells or microorganisms in a controlled artificial environment.
culture community [ECOL] A plant community which is established or modified through human intervention; for example, a fencerow, hedgerow, or windbreak.
cultured pearl [INV ZOO] A natural pearl grown by means of controlled stimulation of the oyster.
culture medium [MICROBIO] The nutrients and other organic and inorganic materials used for the growth of microorganisms and plant and animal tissue in culture.
culvert [ENG] A covered channel or a large-diameter pipe that takes a watercourse below ground level.
Cumacea [INV ZOO] An order of the class Crustacea characterized by a well-developed carapace which is fused dorsally with at least the first three thoracic somites and overhangs the sides.
cumatophyte [ECOL] A plant that grows under surf conditions.
cumberlandite [PETR] A coarse-grained, ultramafic, ultrabasic rock composed principally of olivine crystals in a ground mass of magnetite and ilmenite with minor plagioclase.
cumbraite [PETR] A variety of dacite or rhyodacite containing very calcic plagioclase and pyroxene in a glassy groundmass.
cumec [MECH] A unit of volume flow rate equal to 1 cubic meter per second.
cumene [ORG CHEM] $C_6H_5CH(CH_3)_2$ A colorless, oily benzenoid hydrocarbon cooling at 152.4°C; used as an additive for high-octane motor fuel. Also known as isopropylbenzene.
cumene hydroperoxide [ORG CHEM] $C_6H_5C(CH_3)_2$-OOH An isopropyl hydroperoxide of cumene; an oily liquid, used to make phenol and acetone.
cumengite [MINERAL] $Pb_4Cu_4Cl_8(OH)_8 \cdot H_2O$ A deep-blue or light-indigo-blue tetragonal mineral consisting of a basic lead-copper chloride occurring in crystals.
cumidine [ORG CHEM] $C_9H_{13}N$ A colorless, water-insoluble liquid, boiling at 225°C. Also known as *para*-isopropylaniline.
cumin [BOT] *Cuminum cyminum* An annual herb in the family Umbelliferae; the fruit is valuable for its edible, aromatic seeds.
cumin oil [MATER] A colorless to yellow liquid with a sharp, spicy taste; soluble in alcohol, ether, and chloroform; used in medicine, flavoring, and perfumes.
cummingtonite [MINERAL] $(Fe,Mg)_7Si_8O_{22}(OH)_2$ A brownish mineral that crystallizes in the monoclinic system; usually occurs as lamellae or fibers in metamorphic rocks.
cum sole [GEOPHYS] With the sun; hence anticyclonic or clockwise in the Northern Hemisphere.
cumulants [STAT] A set of parameters k_h $(h = 1, \ldots, r)$ of a one-dimensional probability distribution defined by

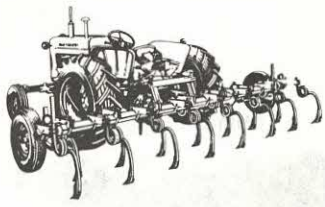
$$\ln \chi_x(q) = \sum_{h=1}^{r} k_h[(iq)^h/h!] + o(q^r)$$

where $\chi_x(q)$ is the characteristic function of the probability distribution of x. Also known as semi-invariants.
cumulate [PETR] Any igneous rock formed by the accumulation of crystals settling out of a magma.
cumulated double bond [CHEM] Two double bonds on the same carbon atom, as in >C=C=C<.
cumulative compound generator [ELEC] A compound generator in which the series field is connected to aid the shunt field magnetomotive force.
cumulative compound motor [MECH ENG] A motor with operating characteristics between those of the constant-speed (shunt-wound) and the variable-speed (series-wound) types.

CUCKOO

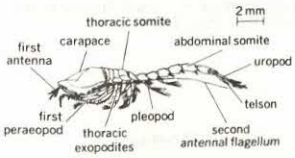
Black-billed cuckoo, brown above and white underneath with thin red rings around eyes, maximum length 12 inches (30 centimeters).

CULTIVATOR



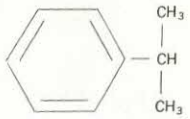
Coil-shank field cultivator. *(Allis-Chalmers)*

CUMACEA



Typical adult male cumacean.

CUMENE



Cumene structural formula.

cumulative dose [NUCLEO] The total dose resulting from repeated exposures to radiation.
cumulative error [STAT] An error whose magnitude does not approach zero as the number of observations increases. Also known as accumulative error.
cumulative excitation [ATOM PHYS] Process by which the atom is raised from one excited state to a higher state by collision, for example, with an electron.
cumulative gas [PETRO ENG] Measurement of total gas produced from a reservoir, usually expressed in graphical relationship to total (cumulative) oil produced from the same reservoir.
cumulative ionization [ATOM PHYS] Ionization of an excited atom in the metastable state by means of cumulative excitation. [ELECTR] *See* avalanche.
cumulative sum chart [IND ENG] A statistical control chart on which the cumulative sum of deviations is plotted over a period of time and which often has a sliding V-shaped mask for comparing the plot with allowable limits. Also known as cusum chart.
cumulene [ORG CHEM] A compound with a molecular structure which contains two or more double bonds in succession.
cumuliform cloud [METEOROL] A fundamental cloud type, showing vertical development in the form of rising mounds, domes, or towers.
cumulonimbus calvus cloud [METEOROL] A species of cumulonimbus cloud evolving from cumulus congestus: the protuberances of the upper portion have begun to lose the cumuliform outline; they loom and usually flatten, then transform into a whitish mass with a more or less diffuse outline and vertical striation; cirriform cloud is not present, but the transformation into ice crystals often proceeds with great rapidity.
cumulonimbus capillatus cloud [METEOROL] A species of cumulonimbus cloud characterized by the presence of distinct cirriform parts, frequently in the form of an anvil, a plume, or a vast and more or less disorderly mass of hair, and usually accompanied by a thunderstorm.
cumulonimbus cloud [METEOROL] A principal cloud type, exceptionally dense and vertically developed, occurring either as isolated clouds or as a line or wall of clouds with separated upper portions.
cumulus [GEOCHEM] The accumulation of minerals which have precipitated from a liquid without having been modified by later crystallization.
cumulus cloud [METEOROL] A principal type of cloud in the form of individual, detached elements which are generally dense and possess sharp nonfibrous outlines; these elements develop vertically, appearing as rising mounds, domes, or towers, the upper parts of which often resemble a cauliflower.
cumulus congestus cloud [METEOROL] A strongly sprouting cumulus species with generally sharp outline and sometimes a great vertical development, and with cauliflower or tower aspect.
cumulus humilis cloud [METEOROL] A species of cumulus cloud characterized by small vertical development and a generally flattened appearance, vertical growth is usually restricted by the existence of a temperature inversion in the atmosphere, which in turn explains the unusually uniform height of the cloud. Also known as fair-weather cumulus.
cumulus mediocris cloud [METEOROL] A cloud species unique to the species cumulus, of moderate vertical development, the upper protuberances or sproutings being not very marked; there may be a small cauliflower aspect; while this species does not give any precipitation, it frequently develops into cumulus congestus and cumulonimbus.
cumulus oophorus [HISTOL] The layer of gelatinous, follicle cells surrounding the ovum in a Graafian follicle.
cuneate [BIOL] Wedge-shaped with the acute angle near the base, as in certain insect wings and the leaves of various plants.
cuneiform [ANAT] **1.** Any of three wedge-shaped tarsal bones. **2.** Either of a pair of cartilages lying dorsal to the thyroid cartilage of the larynx. **3.** Wedge-shaped, chiefly referring to skeletal elements.
cunnus [ANAT] The vulva.
cup [DES ENG] A cylindrical part with only one end open. [MET] Sheet metal part formed during the first deep-drawing operation.
Cup *See* Crater.
cup-and-ball joint [GEOL] A dish-shaped transverse fracture which divides a basalt column into segments. Also known as ball-and-socket joint.

CUMULUS CLOUD

Small cumulus cloud formation. *(U.S. Weather Bureau)*

cup-and-cone fracture *See* cup fracture.
cup anemometer [ENG] A rotation anemometer, usually consisting of three or four hemispherical or conical cups mounted with their diametral planes vertical and distributed symmetrically about the axis of rotation; the rate of rotation of the cups, which is a measure of the wind speed, is determined by a counter.
cup barometer [ENG] A barometer in which one end of a graduated glass tube is immersed in a cup, both cup and tube containing mercury.
cup-case thermometer [ENG] Total-immersion type of thermometer with a cup container at the bulb end to hold a specified amount and depth of the material whose temperature is to be measured.
cup core [ELECTROMAG] A core that encloses a coil to provide magnetic shielding; usually has a powdered iron center post through the coil.
cup crystal [HYD] A crystal of ice in the form of a hollow hexagonal cup; a common form of depth hoar.
Cupedidae [INV ZOO] The reticulated beetles, the single family of the coleopteran suborder Archostemata.
cupel [MET] Acup made of bone ash or magnesite, used in assaying precious metals.
cupellation [MET] **1.** Method using a cupel for assaying precious metals. **2.** Process for refining gold and silver by alloying them with lead and then oxidizing the molten lead to separate the base metal from the precious metal.
cupferron [ORG CHEM] $NH_4ONONC_6H_5$ A colorless salt that forms crystals with a melting point of 164°C; its acid solution is a precipitating reagent. Also known as copperon; nitrosophenylhydroxylamine.
cup fracture [MET] A break in a ductile material under tensile stress in which the surface of failure on one piece has a central flat area with an exterior extended rim. Also known as cup-and-cone fracture.
cup grease [MATER] A lubricating grease, usually lime base, for many applications.
cupola [GEOL] An isolated, upward-projecting body of plutonic rock that lies near a larger body; both bodies are presumed to unite at depth. [MET] A vertical cylindrical furnace for melting gray iron for foundry use; the metal, coke, and flux are put into the top of the furnace onto a bed of coke through which air is blown. Also known as furnace cupola.
cupola drop [MET] The bed and unmelted charges dropped from a cupola at the end of a heat.
cupped pebble [GEOL] A pebble fragment that has become hollow after being subjected to solution.
cupping [MET] **1.** First operation of a deep-drawing process. **2.** Fracture of a wire or rod in which one fracture surface is conical and the other concave.
cup product [MATH] A multiplication defined on cohomology classes; it gives cohomology a ring structure.
cuprammonium cellulose [TEXT] The cellulose of cotton linters treated with copper sulfate and ammonium.
cuprammonium process [TEXT] A process by which rayon is made from regenerated cellulose in a solution of ammoniacal copper oxide.
cuprammonium rayon [TEXT] Rayon made from cuprammonium cellulose.
cupreine [ORG CHEM] $C_{19}H_{22}O_2N_2 \cdot H_2O$ Colorless, anhydrous crystals with a melting point of 198°C; soluble in chloroform and ether; used in medicine. Also known as hydroxycinchonine.
cupreous [SCI TECH] Containing or resembling copper.
cupric [CHEM] The divalent ion of copper.
cupric acetate [ORG CHEM] $Cu(C_2H_3O_2)_2 \cdot H_2O$ Blue-green crystals, soluble in water; used as a raw material to make paris green. Also known as copper acetate; crystal aerugo; crystals of Venus; verdigris.
cupric arsenite *See* copper arsenite.
cupric bromide [INORG CHEM] $CuBr_2$ Black prismatic crystals; used in photography as an intensifier and in organic synthesis as a brominating agent. Also known as copper bromide.
cupric carbonate *See* copper carbonate.
cupric chloride [INORG CHEM] Also known as copper chloride. **1.** $CuCl_2$ Yellowish-brown, deliquescent powder soluble in water, alcohol, and ammonium chloride. **2.** $CuCl_2 \cdot H_2O$ A dihydrate of cupric chloride forming green crystals

soluble in water; used as a mordant in dyeing and printing textile fabrics and in the refining of copper, gold, and silver.

cupric chromate [INORG CHEM] $CuCrO_4$ A yellow liquid, used as a mordant. Also known as copper chromate.

cupric cyanide [INORG CHEM] $Cu(CN)_2$ A green powder, insoluble in water; used in electroplating copper on iron. Also known as copper cyanide.

cupric fluoride [INORG CHEM] CuF_2 White crystalline powder used in ceramics and in the preparation of brazing and soldering fluxes. Also known as copper fluoride.

cupric gluconate *See* copper gluconate.

cupric hydroxide [INORG CHEM] $Cu(OH)_2$ Blue macro- or microscopic crystals; used as a mordant and pigment, in manufacture of many copper salts, and for staining paper. Also known as copper hydroxide.

cupric nitrate [INORG CHEM] $Cu(NO_3)_2 \cdot 3H_2O$ Green powder or blue crystals soluble in water; used in electroplating copper on iron. Also known as copper nitrate.

cupric oxide [INORG CHEM] CuO Black, monoclinic crystals, insoluble in water; used in making fibers and ceramics, and in organic and gas analyses. Also known as copper oxide.

cupric sulfate [INORG CHEM] $CuSO_4$ A water-soluble salt used in copper-plating baths; crystallizes as hydrous copper sulfate, which is blue. Also known as copper sulfate.

cuprite [MINERAL] Cu_2O A red mineral that crystallizes in the isometric system and is found in crystals and fine-grained aggregates or is massive; a widespread supergene copper ore. Also known as octahedral copper ore; red copper ore; ruby copper ore.

cuprocopiapite [MINERAL] $CuFe_4(SO_4)_6(OH)_2 \cdot 20H_2O$ A sulfur yellow to orange-yellow, triclinic mineral consisting of a hydrated basic sulfate of copper and iron.

cuprodescloizite *See* mottramite.

cupronickel [MET] A copper-base alloy with 10–30% nickel and small amounts of manganese and iron; used in industrial and marine installations as condenser and heat-exchanger tubing.

cuprotungstite [MINERAL] $Cu_2(WO_4)(OH)_2$ A green mineral that forms compact masses; soluble in acids; the crystal system is not known.

cuprouranite *See* torbernite.

cuprous bromide [INORG CHEM] Cu_2Br_2 White or gray crystals slightly soluble in cold water. Also known as copper bromide.

cuprous chloride [INORG CHEM] CuCl or Cu_2Cl_2 Green, tetrahedral crystals, insoluble in water. Also known as copper chloride; resin of copper.

cuprous fluoride [INORG CHEM] Cu_2F_2 Red, crystalline powder, melting point 908°C. Also known as copper fluoride.

cuprous oxide [INORG CHEM] Cu_2O An oxide of copper found in nature as cuprite and formed on copper by heat; used chiefly as a pigment and as a fungicide. Also known as copper oxide.

cupule [BOT] **1.** The cup-shaped involucre characteristic of oaks. **2.** A cup-shaped corolla. **3.** The gemmae cup of the Marchantiales. [INV ZOO] A small sucker on the feet of certain male flies.

curare [MATER] Poisonous extract from the plant *Strychnos toxifera* containing alkaloids that produce paralysis of the voluntary muscles by acting on synaptic junctions; used as an adjunct to anesthesia in surgery.

curb [CIV ENG] A border of concrete or row of joined stones forming part of a gutter along a street edge. [MIN ENG] A timber frame, circular or square, wedged in a shaft to make a foundation for walling or tubbing, or to support, with or without other timbering, the walls of the shaft.

curb roof [ARCH] A roof with a ridge at its center and a parallel lower ridge on both sloping sides.

Curculionidae [INV ZOO] The true weevils or snout beetles, a family of coleopteran insects in the superfamily Curculionoidea.

Curculionoidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.

Curcurbitaceae [BOT] A family of dicotyledonous herbs or herbaceous vines in the order Violales characterized by an inferior ovary, unisexual flowers, one to five stamens but typically three, and a sympetalous corolla.

Curcurbitales [BOT] The ordinal name assigned to the Cucurbitaceae in some systems of classification.

curd [BOT] The edible flower heads of members of the mustard family such as broccoli. [FOOD ENG] **1.** The clotted portion of soured milk or milk treated with an acid or enzyme; used in making cheese. **2.** Any food resembling milk curd.

cure [CHEM] To change the properties of a resin material by chemical polycondensation or addition reactions. [ENG] A process by which concrete is kept moist for its first week or month to provide enough water for the cement to harden. Also known as mature.

curet [MED] An instrument, shaped like a spoon or scoop, for scraping away tissue.

curettage [MED] Scraping of the inside of a body cavity or the hollow of an organ with a curet.

curie [NUCLEO] A unit of radioactivity, defined as that quantity of any radioactive nuclide which has 3.700×10^{10} disintegrations per second. Abbreviated c; Ci.

Curie constant [ELECTROMAG] The electric or magnetic susceptibility at some temperature times the difference of the temperature and the Curie temperature, which is a constant at temperatures above the Curie temperature according to the Curie-Weiss law.

Curie point *See* Curie temperature.

Curie principle [THERMO] The principle that a macroscopic cause never has more elements of symmetry than the effect it produces; for example, a scalar cause cannot produce a vectorial effect.

Curie's law [ELECTROMAG] The law that the magnetic susceptibilities of most paramagnetic substances are inversely proportional to their absolute temperatures.

Curie temperature [ELECTROMAG] The temperature marking the transition between ferromagnetism and paramagnetism, or between the ferroelectric phase and paraelectric phase. Also known as Curie point.

Curie-Weiss law [ELECTROMAG] A relation between magnetic or electric susceptibilities and the absolute temperatures which is followed by ferromagnets, antiferromagnets, nonpolar ferroelectrics, antiferroelectrics, and some paramagnets.

curine *See* bebeerine.

curing agent *See* hardener.

curing temperature [CHEM] That temperature at which a resin or adhesive is subjected to curing.

curing time [CHEM] The period of time in which a part is subjected to heat or pressure to cure the resin. [ENG] Time interval between the stopping of moving parts during thermoplastics molding and the release of mold pressure. Also known as molding time.

curite [MINERAL] $Pb_2U_5O_{17} \cdot 4H_2O$ An orange-red radioactive mineral, occurring in acicular crystals, an alteration product of uraninite.

curium [CHEM] An element, symbol Cm, atomic number 96; the isotope of mass 244 is the principal source of this artificially produced element.

curium-242 [NUC PHYS] An isotope of curium, mass number 242; half-life is 165.5 days for α-particle emission; 7.2×10^6 years for spontaneous fission.

curium-244 [NUC PHYS] An isotope of curium, mass number 244; half-life is 16.6 years for α-particle emission; 1.4×10^7 years for spontaneous fission; potential use as compact thermoelectric power source.

curl [FOR] A block of timber cut from a crotch for cutting into veneers. [MATER] A defect of paper caused by unequal alteration in the dimensions of the top and underside of the sheet. [MATH] The curl of a vector function is a vector which is formally the cross product of the del operator and the vector. Also known as rotation (rot).

curling dies [MECH ENG] A set of tools that shape the ends of a piece of work into a form with a circular cross section.

curling factor *See* griseofulvin.

curling machine [MECH ENG] A machine with curling dies; used to curl the ends of cans.

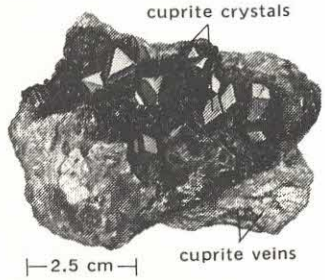
Curling's ulcer [MED] An acute gastric ulcer associated with severe skin burns.

curly top [PL PATH] A virus disease of sugarbeets and certain other plants that is transmitted by a leafhopper; affected plants are dwarfed and have curled, upturned leaves.

currant [BOT] A shrubby, deciduous plant of the genus *Ribes* in the order Rosales; the edible fruit, a berry, is borne in clusters on the plant.

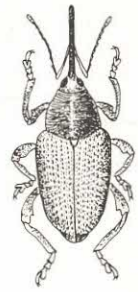
currant leaf spot [PL PATH] **1.** An angular leaf spot of currants caused by the fungus *Cercospora angulata*. **2.** An an-

CUPRITE



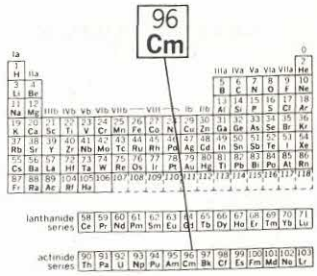
Crystals and veins of cuprite in limonite-bearing rocks. *(Specimen from Department of Geology, Bryn Mawr College)*

CURCULIONIDAE



Snout beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

CURIUM



Periodic table of the chemical elements showing the position of curium.

CURRANT

The black currant *(Ribes nigrum)*.

thracnose of currants caused by *Pseudopeziza ribis* and characterized by brown or black spots.

current [ELEC] The net transfer of electric charge per unit time; a specialization of the physics definition. Also known as electric current. [PHYS] **1.** The rate of flow of any conserved, indestructible quantity across a surface per unit time. **2.** *See* current density.

current algebra [PARTIC PHYS] The application of algebraic relationships among currents derived from approximate symmetries, such as broken SU_3 symmetry, to the study of hadrons.

current amplification [ELECTR] The ratio of output-signal current to input-signal current for an electron tube, transistor, or magnetic amplifier, the multiplier section of a multiplier phototube, or any other amplifying device; often expressed in decibels by multiplying the common logarithm of the ratio by 20.

current amplifier [ELECTR] An amplifier capable of delivering considerably more signal current than is fed in.

current antinode [ELEC] A point at which current is a maximum along a transmission line, antenna, or other circuit element having standing waves. Also known as current loop.

current attenuation [ELECTR] The ratio of input-signal current for a transducer to the current in a specified load impedance connected to the transducer; often expressed in decibels.

current awareness system [COMPUT SCI] A system for notifying users on a periodic basis of the acquisition, by a central file or library, of information (usually literature) which should be of interest to the user.

current balance [ELEC] An apparatus with which force is measured between current-carrying conductors, with the purpose of assigning the value of the ampere.

current-bedding [GEOL] Cross-bedding resulting from water or air currents.

current-carrying capacity [ELEC] The maximum current that can be continuously carried without causing permanent deterioration of electrical or mechanical properties of a device or conductor.

current chart [MAP] A map of a water area depicting current speeds and directions by current roses, vectors, or other means.

current constants [OCEANOGR] Tidal current relations that remain practically constant for any particular locality.

current-controlled switch [ELECTR] A semiconductor device in which the controlling bias sets the resistance at either a very high or very low value, corresponding to the "off" and "on" conditions of a switch.

current curve [OCEANOGR] In marine operations, a graphic representation of the flow of a current, consisting of a rectangular-coordinate graph on which speed is represented by the ordinates and time by the abscissas.

current cycle [OCEANOGR] A complete set of tidal current conditions, as those occurring during a tidal day, lunar month, or Metonic cycle.

current decay [MET] In certain types of welding operations, controlled reduction of the welding impulse over a predetermined time interval to prevent rapid cooling of the weld nugget.

current density [ELEC] The current per unit cross-sectional area of a conductor; a specialization of the physics definition. Also known as electric current density. [PHYS] A vector quantity whose component perpendicular to any surface equals the rate of flow of some conserved, indestructible quantity across that surface per unit area per unit time. Also known as current.

current diagram [OCEANOGR] A graph showing the average speeds of flood and ebb currents throughout the current cycle for a considerable part of a tidal waterway.

current difference [OCEANOGR] In marine operations, the difference between the time of slack water or strength of current at a subordinate station and its reference station.

current divider [ELEC] A device used to deliver a desired fraction of a total current to a circuit.

current drain [ELEC] The current taken from a voltage source by a load. Also known as drain.

current drift [HYD] A broad, shallow, slow-moving ocean or lake current.

current drogue [ENG] A current-measuring assembly consisting of a weighted current cross, sail, or parachute, and an attached surface buoy.

current efficiency [PHYS CHEM] The ratio of the amount of electricity, in coulombs, theoretically required to yield a given quantity of material in an electrochemical process, to the amount actually consumed.

current ellipse [OCEANOGR] In marine operations, a graphic representation of a rotary current, in which the speed and direction of the current at various hours of the current cycle are represented by radius vectors; a line connecting the ends of the radius vectors approximates an ellipse.

current-equalizing reactor [ELEC] A reactor that is used to achieve a desired division of current between several circuits operating in parallel.

current feed [ELECTR] Feed to a point where current is a maximum, as at the center of a half-wave antenna.

current feedback [ELECTR] Feedback introduced in series with the input circuit of an amplifier.

current feedback circuit [ELECTR] A circuit used to eliminate effects of amplifier gain instability in an indirect-acting recording instrument, in which the voltage input (error signal) to an amplifier is the difference between the measured quantity and the voltage drop across a resistor.

current function *See* Lagrange stream function.

current gain [ELECTR] The fraction of the current flowing into the emitter of a transistor which flows through the base region and out the collector.

current generator [ELECTR] A two-terminal circuit element whose terminal current is independent of the voltage between its terminals.

current hogging [ELECTR] A condition in which the largest fraction of a current passes through one of several parallel logic circuits because it has a lower resistance than the others.

current hour [OCEANOGR] The average time interval between the moon's transit over the meridian of Greenwich and the time of the following strength of flood current modified by the times of slack water and strength of ebb.

current-instruction register *See* instruction register.

current intensity [ELEC] The magnitude of an electric current. Also known as current strength.

current interrupter [ELEC] Mechanism connected into a current-carrying line to periodically interrupt current flow to allow no-current tests of system components.

current limiter [ELECTR] A device that restricts the flow of current to a certain amount, regardless of applied voltage. Also known as demand limiter.

current-limiting reactor *See* series reactor.

current-limiting resistor [ELEC] A resistor inserted in an electric circuit to limit the flow of current to some predetermined value; used chiefly to protect tubes and other components during warm-up.

current line [ENG] In marine operations, a graduated line attached to a current pole, used to measure the speed of a current; as the pole moves away with the current, the speed of the current is determined by the amount of line paid out in a specified time. Also known as log line.

current lineation *See* parting lineation.

current location reference [COMPUT SCI] A symbolic expression, such as a star, which indicates the current location reached by the program; a transfer to * + 2 would bring control to the second statement after the current statement.

current loop *See* current antinode.

current margin [COMMUN] Difference between the steady-state currents flowing through a telegraph receiving instrument corresponding respectively to the two positions of the telegraph transmitter.

current mark [GEOL] Any structure formed by direct or indirect action of a water current on a sedimentary surface.

current measurement [ELEC] The measurement of the flow of electric current.

current meter *See* ammeter; velocity-type flowmeter.

current-mode logic [ELECTR] Integrated-circuit logic in which transistors are paralleled so as to eliminate current hogging.

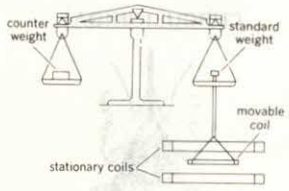
current node [ELEC] A point at which current is zero along a transmission line, antenna, or other circuit element having standing waves.

current noise [ELECTR] Electrical noise of uncertain origin which is observed in certain resistances when a direct current is present, and which increases with the square of this current.

current phasor [ELEC] A line referenced to a point, whose length and angle represent the magnitude and phase of a current.

current pole [ENG] A pole used to determine the direction and speed of a current; the direction is determined by the direction of motion of the pole, and the speed by the amount of an attached current line paid out in a specified time.

CURRENT BALANCE



Rayleigh current balance.

CURRENT FEEDBACK CIRCUIT

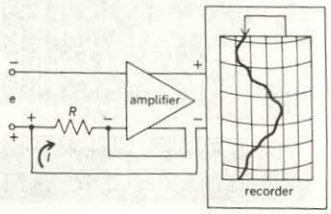


Diagram of a current feedback circuit.

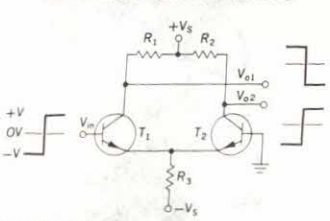
CURRENT-MODE LOGIC



Circuit diagram of a current-mode logic circuit, a nonsaturating circuit, with complementary outputs.

current ratio [ELECTROMAG] In a waveguide, the ratio of maximum to minimum current.
current regulator [ELECTR] A device that maintains the output current of a voltage source at a predetermined, essentially constant value despite changes in load impedance.
current relay [ELEC] A relay that operates at a specified current value rather than at a specified voltage value.
current ripple [GEOL] A type of ripple mark having a long, gentle slope toward the direction from which the current flows, and a shorter, steeper slope on the lee side.
current rips [OCEANOGR] Small waves formed on the surface of water by the meeting of opposing ocean currents; vertical oscillation, rather than progressive waves, is characteristic of current rips.
current rose [MAP] A graphic presentation of ocean currents for specified areas, utilizing arrows at the cardinal and intercardinal compass points to show the direction toward which the prevailing current flows and the present frequency of set for a given period of time.
current saturation *See* anode saturation.
current strength *See* current intensity.
current tables [OCEANOGR] Tables listing predictions of the time and speeds of tidal currents at various places.
current tap *See* multiple lamp holder; plug adapter lamp holder.
current transformer [ELEC] An instrument transformer intended to have its primary winding connected in series with a circuit carrying the current to be measured or controlled; the current is measured across the secondary winding.
current transformer phase angle [ELEC] Angle between the primary current vector and the secondary current vector reversed; it is conveniently considered as positive when the reversed secondary current vector leads the primary current vector.
current-type flowmeter [ENG] A mechanical device to measure liquid velocity in open and closed channels; similar to the vane anemometer (where moving liquid turns a small windmill-type vane), but more rugged.
current-type telemeter [COMMUN] A telemeter in which the magnitude of a single current is the translating means.
current-voltage dual [ELEC] A circuit which is equivalent to a specified circuit when one replaces quantities with dual quantities; current and voltage impedance and admittance, and meshes and nodes are examples of dual quantities.
curry [FOOD ENG] A mixture of plant spices including turmeric, coriander, cinnamon, cumin, ginger, cardamon, cayenne pepper, cloves, and nutmeg.
cursor [COMPUT SCI] A movable spot of light that appears on the screen of a visual display terminal and can be positioned horizontally and vertically through keyboard controls to instruct the computer at what point a change is to be made. [DES ENG] A clear or amber-colored filter that can be placed over a radar screen and rotated until an etched diameter line on the filter passes through a target echo; the bearing from radar to target can then be read accurately on a stationary 360° scale surrounding the filter.
cursorial [VERT ZOO] Adapted for running.
curtain [GEOL] **1.** A thin sheet of dripstone that hangs or projects from a cave wall. **2.** A rock formation connecting two adjacent bastions. [NUCLEO] A thin shield, usually cadmium, used in a nuclear reactor to shut off a flow of slow neutrons.
curtain array [ELECTROMAG] An antenna array consisting of vertical wire elements stretched between two suspension cables.
curtain board [BUILD] A fire-retardant partition applied to a ceiling.
curtain coating [CHEM ENG] A method in which the substrate to be coated with low-viscosity resins or solutions is passed through, and is perpendicular to, a freely falling liquid curtain.
curtain rhombic antenna [ELECTROMAG] A multiple-wire rhombic antenna having a constant input impedance over a wide frequency range; two or more conductors join at the feed and terminating ends but are spaced apart vertically from 1 to 5 feet (30 to 150 centimeters) at the side poles.
curtain wall [CIV ENG] An external wall that is not load-bearing.
curtate [COMPUT SCI] A group of adjacent rows on a punch card.
curtate distance [ASTRON] The distance between the earth or the sun and the foot of a perpendicular from a planet or comet to the plane of the earth's orbit.
Curtis-Doisy unit [BIOL] A unit for the standardization of estrogens.
Curtis stage [MECH ENG] A velocity-staged impulse turbine using reversing buckets between stages.
Curtis turbine [MECH ENG] A velocity-staged, impulse-type steam engine.
Curtius reaction [ORG CHEM] A laboratory method for degrading a carboxylic acid to a primary amine by converting the acid to an acyl azide to give products which can be hydrolyzed to amines.
curvature [MATH] The reciprocal of the radius of the circle which most nearly approximates a curve at a given point; the rate of change of the unit tangent vector to a curve with respect to arc length of the curve.
curvature correction [ASTRON] A correction applied to the mean of a series of observations on a star or planet to take account of the divergence of the apparent path of the star or planet from a straight line. [GEOD] The correction applied in some geodetic work to take account of the divergence of the surface of the earth (spheroid) from a plane.
curvature effect [ELECTR] Generally, the condition in which the dielectric strength of a liquid or vacuum separating two electrodes is higher for electrodes of smaller radius of curvature.
curvature of field [OPTICS] Error in the image of a plane object formed on a flat screen by an optical system when the best image lies on a curved surface.
curvature of space [RELAT] **1.** The deviation of a spacelike three-dimensional subspace of curved space-time from euclidean geometry. **2.** The Gaussian curvature of a spacelike three-dimensional subspace of curved space-time.
curvature tensor *See* Riemann-Christoffel tensor.
curve [MATH] The continuous image of the unit interval.
curved beam [ENG] A beam bounded by circular arcs.
curved plate [GRAPHICS] In letterpress printing, pieces of type which have been curved to fit the cylinder of a rotary press.
curved space-time [RELAT] A four-dimensional Riemannian space, in which there are no straight lines but only curves, which is a generalization of the Minkowski universe in the general theory of relativity.
curve fitting [STAT] The calculation of a curve of some particular character (as a logarithmic curve) that most closely approaches a number of points in a plane.
curve follower [COMPUT SCI] A device in which a photoelectric, capacitive or inductive pick-off guided by a servomechanism reads data in the form of a graph, such as a curve drawn on paper with suitable ink. Also known as graph follower.
curve of constant bearing *See* curve of equal bearing.
curve of equal bearing [NAV] On a map plot, a curve connecting all points at which the great-circle bearing of a given point is the same. Also known as curve of constant bearing.
curve resistance [MECH] The force opposing the motion of a railway train along a track due to track curvature.
curves of form [NAV ARCH] Graphs of properties of a vessel's form, such as the displacement and the area of wetted surface, versus the vessel's draft.
curve tracing [MATH] The method of graphing a function by plotting points and analyzing symmetries, derivatives, and so on.
curvilinear [SCI TECH] Pertaining to curved lines, as in curvilinear coordinates or curvilinear motion.
curvilinear coordinates [MAP] Any linear coordinates which are not cartesian coordinates; frequently used curvilinear coordinates are polar coordinates and cylindrical coordinates.
curvilinear motion [MECH] Motion along a curved path.
curvilinear regression [STAT] Regression study of jointly distributed random variables where the function measuring their statistical dependence is analyzed in terms of curvilinear coordinates.
curvilinear transformation [MATH] A transformation from one coordinate system to another in which the coordinates in the new system are arbitrary twice-differentiable functions of the coordinates in the old system.
cuscus oil *See* vetiver oil.
Cuscutaceae [BOT] A family of parasitic dicotyledonous plants in the order Polemoniales which lack internal phloem and

chlorophyll, have capsular fruit, and are not rooted to the ground at maturity.

cusec [MECH] A unit of volume flow rate, used primarily to describe pumps, equal to a uniform flow of 1 cubic foot in 1 second. Also known as cubic foot per second (cfs).

Cushing's syndrome [MED] A complex of symptoms including facial and truncal obesity, hypertension, edema, and osteoporosis, resulting from oversecretion of adrenocortical hormones.

cusp [ANAT] **1.** A pointed or rounded projection on the masticating surface of a tooth. **2.** One of the flaps of a heart valve. [ARCH] A pointed projection or peak created by the intersection of two arcs. [GEOL] One of a series of low, crescent-shaped mounds of beach material separated by smoothly curved, shallow troughs spaced at more or less regular intervals along and generally perpendicular to the beach face. Also known as beach cusp. [GEOPHYS] Any of the funnel-shaped regions in the magnetosphere extending from the front magnetopause to the polar ionosphere, and filled with solar wind plasma. [MATH] A singular point of a curve at which the limits of the tangents of the portions of the curve on either side of the point coincide. Also known as spinode.

cuspate bar [GEOL] A crescentic bar joining with the shore at each end.

cuspate ripple mark *See* linguoid ripple mark.

cusp cap [ASTRON] One of the 10 bright areas observed near one of the extremities of the illuminated portion of Venus during the crescent phase.

cusped magnetic field [ELECTROMAG] A magnetic field created by adjacent parallel coils that carry current in opposite directions; used in fusion research, to contain a plasma of high-energy deuterium ions.

cuspid *See* canine.

cuspidal cubic [MATH] A cubic curve that has one cusp, one point of inflection, and no node.

cuspidal locus [MATH] A curve consisting of the cusps of some family of curves.

cuspidate [BIOL] Having a cusp; terminating in a point.

custard winds [METEOROL] Cold easterly winds on the northeastern coast of England.

custodial area [BUILD] Area of a building designated for service and custodial personnel; includes rooms, closets, storage, toilets, and lockers.

custom-designed device [ELECTR] An integrated logic circuit element that is generated by a series of steps resembling photographic development from highly complicated artwork patterns.

customer substation [ELEC] A distribution substation located on the premises of a larger customer, such as a shopping center, commercial building, or industrial plant.

custom millwork *See* architectural millwork.

cusum chart *See* cumulative sum chart.

cut [CHEM ENG] A fraction obtained by a separation process. [CRYSTAL] A section of a crystal having two parallel major surfaces; cuts are specified by their orientation with respect to the axes of the natural crystal, such as X cut, Y cut, BT cut, and AT cut. [GRAPHICS] A photoengraving used in letterpress printing. [LAP] The style in which a gem is cut, such as brilliant cut, single cut, or rose cut. [MET] *See* fraction. [MIN ENG] **1.** To intersect a vein or a working. **2.** To excavate coal. **3.** To shear one side of an entry or a crosscut by digging out the coal from floor to roof with a pick. [NUCLEO] The fraction that is removed as product or advanced to the next separative element in an isotope separation process. [TEXT] The number of needles per inch in the cylinder or needle bed in a knitting frame.

cut-and-carry method [MET] A die-fabricating method in which the part remains attached to the strip or is forced back into the strip to be fed through the succeeding stations of a progressive die.

cut and fill [CIV ENG] Construction of a road, a railway, or a canal which is partly embanked and partly below ground. [GEOL] **1.** Lateral corrosion of one side of a meander accompanied by deposition on the other. **2.** A sedimentary structure consisting of a small filled-in channel.

cut and paste [COMPUT SCI] An editing function of a word processing system in which a portion of text is marked with a particular character at the beginning and at the end and is then copied to another location within the text.

cutaneous anaphylaxis [IMMUNOL] Hypersensitivity that is marked by an intense skin reaction following parenteral contact with a sensitizing agent.

cutaneous anthrax *See* malignant pustule.

cutaneous appendage [ANAT] Any of the epidermal derivatives, including the nails, hair, sebaceous glands, mammary glands, and sweat glands.

cutaneous blastomycosis [MED] A form of North American blastomycosis considered by some to be a clinical manifestation of the systemic form.

cutaneous coccidioidomycosis [MED] A primary skin infection by the fungus *Coccidioides immitis;* a skin infection secondary to a pulmonary lesion.

cutaneous leishmaniasis [MED] A parasitic skin infection by *Leishmania tropica* characterized by deep ulcers of the skin and subcutaneous tissue.

cutaneous pain [PHYSIO] A sensation of pain arising from the skin.

cutaneous reaction [MED] **1.** Any change in the outer layers of the skin, as in sunburn or the rash in measles. **2.** Any immediate or delayed immune reaction in the skin resulting from antigen-antibody interaction.

cutaneous sensation [PHYSIO] Any feeling originating in sensory nerve endings of the skin, including pressure, warmth, cold, and pain.

cutaway [GRAPHICS] An illustration of an object with a part of its covering or surface removed to show its interior construction or movement.

cutback [CHEM ENG] Blending of heavier oils with lighter ones to bring the heavier to desired specifications.

cutback asphalt [MATER] Asphalt which has been softened or liquefied by blending with petroleum distillates.

cutbank [GEOL] The concave bank of a winding stream that is maintained as a steep or even overhanging cliff by the action of water at its base.

cut capacity [MATH] For a network whose points have been partitioned into two specified classes, C_1 and C_2, the sum of the capacities of all the segments directed from a point in C_1 to a point in C_2. Also known as cut value.

cutch [MATER] Tannin extracted from mangrove bark.

cut constraint [SYS ENG] A condition sometimes imposed in an integer programming problem which excludes parts of the feasible solution space without excluding any integer points.

Cuterebridae [INV ZOO] The robust botflies, a family of myodarian cyclorrhaphous dipteran insects in the subsection Calypteratae.

cut form [COMPUT SCI] In optical character recognition, any document form, receipt, or such, of standard dimensions which must be issued a separate read command in order to be recognized.

cut glass [MATER] Flint glass ornamented with patterns cut into its surface.

cuticle [ANAT] The horny layer of the nail fold attached to the nail plate at its margin. [BIOL] A noncellular, hardened or membranous secretion of an epithelial sheet, such as the integument of nematodes and annelids, the exoskeleton of arthropods, and the continuous film of cutin on certain plant parts.

cutie pie [NUCLEO] A radiation dose-rate meter having a pistol grip, a plastic cylinder or barrel containing an ionization chamber, and an indicating meter mounted above the grip.

cut in [NAV] To observe and plot lines of position locating an object or craft, particularly by bearings.

cutin [BIOCHEM] A mixture of fatty substances characteristically found in epidermal cell walls and in the cuticle of plant leaves and stems.

cutinite [GEOL] A variety of exinite consisting of plant cuticles.

cutis *See* dermis.

Cutler feed [ELECTROMAG] A resonant cavity that transfers radio-frequency energy from the end of a waveguide to the reflector of a radar spinner assembly.

cut methods [SYS ENG] Methods of solving integer programming problems that employ cut constraints derived from the original problem.

cut nail [DES ENG] A flat, tapered nail sheared from steel plate; it has greater holding power than a wire nail and is generally used for fastening flooring.

cutoff [CIV ENG] **1.** A channel constructed to straighten a stream or to bypass large bends, thereby relieving an area normally subjected to flooding or channel erosion. **2.** An impermeable wall, collar, or other structure placed beneath the base or

within the abutments of a dam to prevent or reduce losses by seepage along otherwise smooth surfaces or through porous strata. [ELECTR] **1.** The minimum value of negative grid bias that will prevent the flow of anode current in an electron tube. **2.** *See* cutoff frequency. [ENG] **1.** A misfire in a round of shots because of severance of fuse owing to rock shear as adjacent charges explode. **2.** The line on a plastic object formed by the meeting of the two halves of a compression mold. Also known as flash groove; pinch-off. [GEOL] A new, relatively short channel formed when a stream cuts through the neck of an oxbow or horseshoe bend. [MECH ENG] **1.** The shutting off of the working fluid to an engine cylinder. **2.** The time required for this process. [MIN ENG] **1.** A quarryman's term for the direction along which the granite must be channeled, because it will not split. **2.** The number of feet a bit may be used in a particular type of rock (as specified by the drill foreman). **3.** Minimum percentage of mineral in an ore that can be mined profitably. [PHYS] Technique used when the contribution to the value of a physical quantity given by integration over a certain variable is absurd (in particular, when the contribution is infinite); involves cutting off the integral at some limit.

cutoff attenuator [ELECTROMAG] Variable length of waveguide used below its cutoff frequency to introduce variable nondissipative attenuation.

cutoff bias [ELECTR] The direct-current bias voltage that must be applied to the grid of an electron tube to stop the flow of anode current.

cutoff field *See* critical field.

cutoff frequency [ELECTR] A frequency at which the attenuation of a device begins to increase sharply, such as the limiting frequency below which a traveling wave in a given mode cannot be maintained in a waveguide, or the frequency above which an electron tube loses efficiency rapidly. Also known as critical frequency; cutoff.

cutoff high [METEOROL] A warm high which has become displaced out of the basic westerly current, and lies to the north of this current.

cutoff lake *See* oxbow lake.

cutoff limiting [ELECTR] Limiting the maximum output voltage of a vacuum tube circuit by driving the grid beyond cutoff.

cutoff low [METEOROL] A cold low which has become displaced out of the basic westerly current, and lies to the south of this current.

cutoff point [MECH ENG] **1.** The point at which there is a transition from spiral flow in the housing of a centrifugal fan to straight-line flow in the connected duct. **2.** The point on the stroke of a steam engine where admission of steam is stopped.

cutoff tool [MECH ENG] A tool used on bar-type lathes to separate the finished piece from the bar stock.

cutoff trench [CIV ENG] A trench which is below the foundation base line of a dam or other structure and is filled with an impervious material, such as clay or concrete, to form a watertight barrier.

cutoff valve [MECH ENG] A valve used to stop the flow of steam to the cylinder of a steam engine.

cutoff voltage [ELECTR] **1.** The electrode voltage value that reduces the dependent variable of an electron-tube characteristic to a specified low value. **2.** *See* critical voltage.

cutoff wall [CIV ENG] A thin, watertight wall of clay or concrete built up from a cutoff trench to reduce seepage. Also known as core wall.

cutoff wavelength [ELECTROMAG] **1.** The ratio of the velocity of electromagnetic waves in free space to the cutoff frequency in a uniconductor waveguide. **2.** The wavelength corresponding to the cutoff frequency.

cutoff wheel [MECH ENG] A thin wheel impregnated with an abrasive used for severing or cutting slots in a material or part.

cut oil [MATER] An oil which has been partially emulsified with water in the presence of air.

cutout [ELEC] **1.** Pairs brought out of a cable and terminated at some place other than at the end of the cable. **2.** An electrical device that is used to interrupt the flow of current through any particular apparatus or instrument, either automatically or manually. Also known as electric cutout. [GEOL] *See* horseback.

cutout box [ELEC] A fireproof cabinet or box with one or more hinged doors that contains fuses and switches for various leads in an electrical wiring system. Also known as fuse box.

cut over [FOREST] To cut marketable timber.

cut platform *See* wave-cut platform.

cut point [CHEM ENG] The boiling-temperature division between cuts of a crude oil or base stock. [MATH] A point in a component of a graph whose removal disconnects that component. Also known as articulation point.

cutscore [ENG] A knife used in die-cutting processes, designed to cut just partway into the paper or board so that it can be folded.

cut-set [ELEC] A set of branches of a network such that the cutting of all the branches of the set increases the number of separate parts of the network, but the cutting of all the branches except one does not.

cut shot [MIN ENG] A shot designed to bring down coal which has been sheared or opened on one side.

cut-signal-branch operation [ELECTR] In systems where radio reception continues without cutting off the carrier, the cut-signal-branch operation technique disables a signal branch in one direction when it is enabled in the other to preclude unwanted signal reflections.

cutter [ENG ACOUS] An electromagnetic or piezoelectric device that converts an electric input to a mechanical output, used to drive the stylus that cuts a wavy groove in the highly polished wax surface of a recording disk. Also known as cutting head; head; phonograph cutter; recording head. [MECH ENG] *See* cutting tool. [MIN ENG] **1.** An operator of a coal-cutting or rock-cutting machine, or a worker engaged in underholing by pick or drill. **2.** A joint, usually a dip joint, running in the direction of working; usually in the plural.

cutter bar [MECH ENG] The bar that supports the cutting tool in a lathe or other machine.

cutterhead [MECH ENG] A device on a machine tool for holding a cutting tool.

cutter sweep [MECH ENG] The section that is cut off or eradicated by the milling cutter or grinding wheel in entering or leaving the flute.

cutting [BOT] A piece of plant stem with one or more nodes, which, when placed under suitable conditions, will produce roots and shoots resulting in a complete plant.

cutting angle [MECH ENG] The angle that the cutting face of a tool makes with the work surface back of the tool.

cutting down [MET] Removing surface roughness or irregularities from metal by the use of an abrasive.

cutting drilling [MECH ENG] A rotary drilling method in which drilling occurs through the action of the drill steel rotating while pressed against the rock.

cutting edge [DES ENG] **1.** The point or edge of a diamond or other material set in a drill bit. Also known as cutting point. **2.** The edge of a lathe tool in contact with the work during a machining operation.

cutting fluid [MATER] A fluid flowed over the tool and work in metal cutting to reduce heat generated by friction, lubricate, prevent rust, and flush away chips.

cutting head *See* cutter.

cutting machine [MIN ENG] A power-driven apparatus used to undercut or shear the coal to help in its removal from the face.

cutting-off machine [MECH ENG] A machine for cutting off metal bars and shapes; includes the lathe type using single-point cutoff tools, and several types of saws.

cutting-off process [METEOROL] A sequence of events by which a warm high or cold low, originally within the westerlies, becomes displaced either poleward (cutoff high) or equatorward (cutoff low) out of the westerly current; this process is evident at very high levels in the atmosphere, and it frequently produces, or is part of the production of, a blocking situation.

cutting oil [MATER] A type of cutting fluid used in machining metals to lubricate the tool and workpiece, reducing tool wear, increasing cutting speeds, and decreasing power needs; there are two types: active and inactive.

cutting pliers [DES ENG] Pliers with cutting blades on the jaws.

cutting point *See* cutting edge.

cutting process [MET] A process where metal is severed by the application of a gas or an electric arc.

cutting ratio [ENG] As applied to metal cutting, the ratio of depth of cut to chip thickness for a given shear angle.

cutting rule [ENG] A sharp steel rule used in a machine for cutting paper or cardboard.

cuttings [MIN ENG] Rock fragments broken from the penetrated rock during drilling operations.

cutting speed [MECH ENG] The speed of relative motion

between the tool and workpiece in the main direction of cutting. Also known as feed rate; peripheral speed.

cutting stylus [ENG ACOUS] A recording stylus with a sharpened tip that removes material to produce a groove in the recording medium.

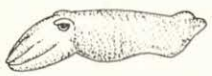
cutting tip [ENG] The end of the snout of a cutting torch from which gas flows.

cutting tool [MECH ENG] The part of a machine tool which comes into contact with and removes material from the workpiece by the use of a cutting medium. Also known as cutter.

cutting torch [ENG] A torch that preheats metal while the surface is rapidly oxidized by a jet of oxygen issuing through the flame from an additional feed line.

cuttlefish [INV ZOO] An Old World decapod mollusk of the genus *Sepia;* shells are used to manufacture dentifrices and cosmetics.

CUTTLEFISH



Drawing of cuttlefish. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

cut value *See* cut capacity.

cutwater [CIV ENG] A sharp-edged structure built around a bridge pier to protect it from the flow of water and material carried by the water.

Cuvieroninae [PALEON] A subfamily of extinct proboscidean mammals in the family Gomphotheriidae.

CVC *See* conserved vector current.

CVn *See* Canes Venatici.

CW *See* continuous wave.

C wave *See* coupled wave.

CW laser *See* continuous-wave laser.

cwt *See* hundredweight.

Cyamidae [INV ZOO] The whale lice, a family of amphipod crustaceans in the suborder Caprellidea that bear a resemblance to insect lice.

cyanalcohol *See* cyanohydrin.

cyanamide [INORG CHEM] NHCNH An acidic compound that forms colorless needles, melting at 46°C, soluble in water. Also known as urea anhydride.

cyanate [INORG CHEM] A salt or ester of cyanic acid containing the radical CNO.

cyanazine [ORG CHEM] $C_9H_{13}N_6Cl$ A white solid with a melting point of 166.5–167°C; used as a pre- and postemergence herbicide for corn, sorghum, soybeans, alfalfa, cotton, and wheat. Also known as 2-(4-chloro-6-ethylamino-*s*-triazin-2-yl-amino)-2-methylpropionitrile.

cyanic acid [ORG CHEM] HCNO A colorless, poisonous liquid, which polymerizes to cyamelide and fulminic acid.

4-cyanic acid *See* fulminic acid.

cyanidation [CHEM] Joining of cyanide to an atom or molecule. [MET] *See* cyanide process.

cyanide [INORG CHEM] Any of a group of compounds containing the CN group and derived from hydrogen cyanide, HCN.

cyanide copper [MET] **1.** An electrolytic solution containing a complex of copper and the cyanide radical. **2.** Copper electrodeposited from the solution.

cyanide process [MET] Process of dissolving powdered gold and silver ores in a weak solution of sodium cyanide or potassium cyanide; the precious metals are precipitated from solution by zinc. Also known as cyanidation.

cyanide pulp [MET] The mixture resulting from grinding of gold and silver ore, then dissolving out the precious-metal content in a solution of sodium cyanide.

cyanide slime [MET] Minute particles of precious metals precipitated from cyanide solutions used in extracting the metals from ore.

cyaniding [MET] Introduction of carbon and nitrogen simultaneously into a ferrous alloy by heating while in contact with molten cyanide; usually followed by quenching to produce a hardened case.

cyanine dye [ORG CHEM] $C_{29}H_{35}N_2I$ Green metallic crystals, soluble in water; unstable to light, the dye is used in the photography industry as a chemical sensitizer for film. Also known as iodocyanin; quinoline blue.

cyanite *See* kyanite.

cyano- [CHEM] Combining form indicating the radical CN.

cyanoacetamide [ORG CHEM] $C_3H_4N_2O$ Needlelike crystals with a melting point of 119.5°C; soluble in water; used in organic synthesis. Also known as malonamide nitrile.

cyanoacetic acid [ORG CHEM] $NCCH_2COOH$ Hygroscopic crystals with a melting point of 66°C; decomposes at 160°C; soluble in ether, water, and alcohol; used in the synthesis of intermediates and in the commercial preparation of barbital. Also known as malonic mononitrile.

cyanoacrylate adhesive [MATER] An adhesive having a base of an alkyl 2-cyanoacrylate compound and characterized by excellent polymerizing and bonding properties; used for rubber printing plates, tools, and rubber swimming masks.

cyanocarbon [ORG CHEM] A derivative of hydrocarbon in which all of the hydrogen atoms are replaced by the CN group.

cyanochroite [MINERAL] $K_2Cu(SO_4)_2 \cdot 6H_2O$ A blue mineral consisting of a hydrous sulfate of potassium and copper.

cyanocobalamin *See* vitamin B_{12}.

cyano complex [CHEM] A coordination compound containing the CN group.

cyanoethylation [ORG CHEM] A chemical reaction involving the addition of acrylonitrile to compounds with a reactive hydrogen. [TEXT] Treating cotton fibers with acrylonitrile and caustic soda to improve dyeing, rot-resistance, and strength characteristics.

2-cyanoethanol *See* ethylene cyanohydrin.

cyanogen [CHEM] A univalent radical, CN. [INORG CHEM] C_2N_2 A colorless, highly toxic gas with a pungent odor; a starting material for the production of complex thiocyanates used as insecticides. Also known as dicyanogen.

cyanogen absorption [ASTROPHYS] Bands in the absorption spectra of stars at wavelengths near 418 nanometers, caused by atmospheric cyanogen; used as a measure of absolute stellar magnitude.

cyanogen bromide [INORG CHEM] CNBr White crystals melting at 52°C, vaporizing at 61.3°C, and having toxic fumes that affect nerve centers; used in the synthesis of organic compounds and as a fumigant.

cyanogen chloride [INORG CHEM] ClCN A poisonous, colorless gas or liquid, soluble in water; used in organic synthesis.

cyanogen fluoride [INORG CHEM] CNF A toxic, colorless gas, used as a tear gas.

cyanogen iodide *See* iodine cyanide.

cyanohydrin [ORG CHEM] A compound containing the radicals CN and OH. Also known as cyanalcohol.

cyanometer [OPTICS] An instrument designed to measure or estimate the degree of blueness of light, as of the sky.

cyanometry [OPTICS] The study and measurement of the blueness of light.

cyanonitroacetamide *See* fulminuric acid.

***O-para*-cyanophenyl-*O*-ethylphenylphosphonothioate** *See* cyanophosphos.

cyanophilous [BIOL] Having an affinity for blue or green dyes.

cyanophosphos [ORG CHEM] $C_{15}H_{14}NO_2PS$ A white, crystalline solid with a melting point of 83°C; used as an insecticide to control larval pests on rice and vegetables. Also known as *O-para*-cyanophenyl-*O*-ethylphenylphosphonothioate.

Cyanophyceae [BOT] The blue-green algae, a class of plants in the division Schizophyta.

cyanophycin [BIOCHEM] A granular protein food reserve in the cells of blue-green algae, especially in the peripheral cytoplasm.

Cyanophyta [BOT] An equivalent name for the Cyanophyceae.

cyanoplatinate *See* platinocyanide.

cyanosis [MED] A bluish coloration in the skin and mucous membranes due to deficient levels of oxygen in the blood.

cyanotrichite [MINERAL] $Cu_4Al_2(SO_4)(OH)_{12} \cdot 2H_2O$ A bright-blue or sky-blue mineral consisting of a hydrous basic copper aluminum sulfate.

cyanuric acid [ORG CHEM] $HOC(NCOH)_2N \cdot 2H_2O$ Colorless, monoclinic crystals, slightly soluble in water; formed by polymerization of cyanic acid. Also known as pyrolithic acid; pyrouric acid; pyruric acid; *s*-triazinetriol; trihydroxycyanidine; trioxycyanidine.

cyanurtriamide *See* melamine.

Cyatheaceae [BOT] A family of tropical and pantropical tree ferns distinguished by the location of sori along the veins.

cyathium [BOT] An inflorescence in which the flowers arise from the base of a cuplike involucre.

Cyathoceridae [INV ZOO] The equivalent name for the Leptoceridae.

Cybele [ASTRON] An asteroid with a diameter of about 295

kilometers, mean distance from the sun of 3.423 astronomical units, and C-type surface composition.

cybernation [IND ENG] The use of computers in connection with automation.

cybernetics [SCI TECH] **1.** The science of control and communication in all of their manifestations within and between machines, animals, and organizations. **2.** Specifically, the interaction between automatic control and living organisms, especially humans and animals.

cybotaxis [PHYS] A transient molecular orientation in a liquid evidenced by x-ray diffraction effects.

Cycadales [BOT] An ancient order of plants in the class Cycadopsida characterized by tuberous or columnar stems that bear a crown of large, usually pinnate leaves.

Cycadatae *See* Cycadopsida.

Cycadeoidaceae [PALEOBOT] A family of extinct plants in the order Cycadeoidales characterized by sparsely branched trunks and a terminal crown of leaves.

Cycadeoidales [PALEOBOT] An order of extinct plants that were abundant during the Triassic, Jurassic, and Cretaceous periods.

Cycadicae [BOT] A subdivision of large-leaved gymnosperms with stout stems in the plant division Pinophyta; only a few species are extant.

Cycadofilicales [PALEOBOT] The equivalent name for the extinct Pteridospermae.

Cycadophyta [BOT] An equivalent name for Cycadecae elevated to the level of a division.

Cycadophytae [BOT] An equivalent name for Cycadicae.

Cycadopsida [BOT] A class of gymnosperms in the plant subdivision Cycadicae.

cyclamate [ORG CHEM] The calcium or sodium salt of cyclohexylsulfamate, an artificial sweetener.

cyclane *See* alicyclic.

Cyclanthaceae [BOT] The single family of the order Cyclanthales.

Cyclanthales [BOT] An order of monocotyledonous plants composed of herbs; or, seldom, composed of more or less woody plants with leaves that usually have a bifid, expanded blade.

cycle [ENG] To run a machine through an operating cycle. [FL MECH] A system of phases through which the working substance passes in an engine, compressor, pump, turbine, power plant, or refrigeration system. [MATH] **1.** A member of the kernel of a boundary homomorphism. **2.** In graph theory, a walk, $(v_0, v_1, \ldots, v_n)$, such that $v_0 = v_n$, and all other vertices are distinct. Also known as circuit. [SCI TECH] **1.** One complete sequence of values of an alternating quantity, or of a sequence of process operations. **2.** A set of operations that is repeated as a unit.

cycle annealing [MET] Annealing at a controlled time-temperature cycle to achieve a specific microstructure.

cycle count [COMPUT SCI] The operation of keeping track of the number of cycles a computer system goes through during processing time.

cycle criterion [COMPUT SCI] Total number of times a cycle in a computer program is to be repeated.

cycle delay selector [COMPUT SCI] An electromechanical device in a sorter which causes a cycle to be skipped so that the card out of sequence may be directed to a different pocket.

cyclegraph technique [IND ENG] Recording a brief work cycle by attaching small lights to various parts of a worker and then exposing the work motions on a still-film time plate; motion will appear on the plate as superimposed streaks of light constituting a cyclegraph.

cycle index [COMPUT SCI] **1.** The number of times a cycle has been carried out by a computer. **2.** The difference, or its negative, between the number of executions of a cycle which are desired and the number which have actually been carried out.

cycle index counter [COMPUT SCI] A device that counts the number of times a given cycle of instructions in a computer program has been carried out.

cycle-matching loran *See* low-frequency loran.

cycle of erosion *See* geomorphic cycle.

cycle of sedimentation [GEOL] Also known as sedimentary cycle. **1.** A series of related processes and conditions appearing repeatedly in the same sequence in a sedimentary deposit. **2.** The sediments deposited from the beginning of one cycle to the beginning of a second cycle of the spread of the sea over a land area, consisting of the original land sediments, followed by those deposited by shallow water, then deep water, and then the reverse process of the receding water. **3.** *See* cyclothem.

cycle per minute [PHYS] A unit of frequency of action, equal to 1/60 hertz. Abbreviated cpm.

cycle per second *See* hertz.

cycle plant [CHEM ENG] A plant in which the liquid hydrocarbons are removed from natural gas and then the gas is put back into the earth to maintain pressure in the oil reservoir.

cycle reset [COMPUT SCI] The resetting of a cycle index to its initial or other specified value.

cycle skip *See* skip logging.

cycle stealing [COMPUT SCI] A technique for memory sharing whereby a memory may serve two autonomous masters, commonly a central processing unit and an input-output channel or device controller, and in effect provide service to each simultaneously.

cycle stock [CHEM ENG] The unfinished product taken from a stage of a refinery process and recharged to the process at an earlier stage in the operation.

cyclethrin [ORG CHEM] $C_{21}H_{28}O_3$ A viscous, brown liquid, soluble in organic solvents; used as an insecticide.

cycle time [COMPUT SCI] The shortest time elapsed between one store (or fetch) and the next store (or fetch) in the same memory unit. Also known as memory cycle. [PETRO ENG] In a drilling operation, the time needed for the pump to move the drilling fluid in a bore hole. [SCI TECH] The time required to carry out a cycle; used principally for time-and-motion studies.

cycle timer [ELECTR] A timer that opens or closes circuits according to a predetermined schedule.

cyclic [SCI TECH] **1.** Pertaining to some cycle. **2.** Repeating itself in some manner in space or time.

cyclic adenylic acid [BIOCHEM] $C_{10}H_{12}N_5O_6P$ An isomer of adenylic acid; crystal platelets with a melting point of 219–220°C; a key regulator which acts to control the rate of a number of cellular processes in bacteria, most animals, and some higher plants. Abbreviated cAMP. Also known as adenosine 3′,5′-cyclic monophosphate; adenosine 3′,5′-cyclic phosphate; adenosine 3′,5′-monophosphate; 3′,5′-AMP; cyclic AMP.

cyclic amide [ORG CHEM] An amide arranged in a ring of carbon atoms.

cyclic AMP *See* cyclic adenylic acid.

cyclic anhydride [ORG CHEM] A ring compound formed by the removal of water from a compound; an example is phthalic anhydride.

cyclic catalytic reforming process [CHEM ENG] A method for the production of low-Btu reformed gas consisting of the conversion of carbureted water-gas sets by installing a bed of nickel catalyst in the superheater and using the carburetor as a combustion chamber and process steam superheater. Abbreviated CCR process.

cyclic check [COMPUT SCI] One of the two-byte elements replacing the parity bit stripped off each byte transferred from main storage to disk volume (the other element is the bit count appendage); these two elements are appended to the block during the write operation; on a subsequent read operation these elements are calculated and compared to the appended elements for accuracy.

cyclic chronopotentiometry [ANALY CHEM] An analytic electrochemical method in which instantaneous current reversal is imposed at the working electrode, and its potential is monitored with time.

cyclic code [COMPUT SCI] A code, such as a binary code, that changes only in one digit when going from one number to the number immediately following, and in that digit by only one unit.

cyclic coil *See* random coil.

cyclic compound [ORG CHEM] A compound that contains a ring of atoms.

cyclic coordinate [MECH] A generalized coordinate on which the Lagrangian of a system does not depend explicitly.

cyclic currents *See* mesh currents

cyclic curve [MATH] **1.** A curve (such as a cycloid, cardioid, or epicycloid) generated by a point of a circle that rolls (without slipping) on a given curve. **2.** The intersection of a quadric surface with a sphere. Also known as spherical cyclic curve. **3.** The stereographic projection of a spherical cyclic curve. Also known as plane cyclic curve.

cyclic feeding [COMPUT SCI] In character recognition, a

CYCADALES

Sago palm *(Cycas revoluta)* showing megasporophylls grouped into cones. *(New York Botanical Garden)*

system employed by character readers in which each input document is issued to the document transport in a predetermined and constant period of time.

cyclic identity [MATH] The principle that the sum of any component of the Riemann-Christoffel tensor and two other components obtained from it by cyclic permutation of any three indices, while the fourth is held fixed, is zero.

cyclic magnetization [ELECTROMAG] A magnetizing force varying between two specific limits long enough so that the magnetic induction has the same value for corresponding points in successive cycles.

cyclic mining *See* conventional mining.

cyclic permutation [MATH] A permutation of an ordered set of symbols which sends the first to the second, the second to the third, ..., the last to the first.

cyclic salt [OCEANOGR] Salt removed from the sea as spray, blown inland, and returned to its source by land drainage.

cyclic sedimentation [GEOL] Deposition of various kinds of sediment in a repeated regular sequence.

cyclic shift [COMPUT SCI] A computer shift in which the digits dropped off at one end of a word are returned at the other end of the word. Also known as circuit shift; circular shift; end-around shift; nonarithmetic shift; ring shift.

cyclic storage [COMPUT SCI] A computer storage device, such as a magnetic drum, whose storage medium is arranged in such a way that information can be read into or extracted from individual locations at only certain fixed times in a basic cycle.

cyclic train [MECH ENG] A set of gears, such as an epicyclic gear system, in which one or more of the gear axes rotates around a fixed axis.

cyclic transfer [COMPUT SCI] The automatic transfer of data from some medium to memory or from memory to some medium until all the data are read.

cyclic twinning [CRYSTAL] Repeated twinning of three or more individuals in accordance with the same twinning law but without parallel twinning axes.

cyclic voltammetry [PHYS CHEM] An electrochemical technique for studying variable potential at an electrode involving application of a triangular potential sweep, allowing one to sweep back through the potential region just covered.

cycling [CHEM ENG] A series of operations in petroleum refining or natural-gas processing in which the steps are repeated periodically in the same sequence. [CONT SYST] A periodic change of the controlled variable from one value to another in an automatic control system. Also known as oscillation.

cyclitis [MED] Inflammation of the ciliary body of the eye.

cyclization [ORG CHEM] Changing an open-chain hydrocarbon to a closed ring.

cyclized rubber [MATER] A thermoplastic, nonrubbery, tough or hard rubber derivative formed by the action of certain agents, such as sulfonic acid and chlorostannic acid, on rubber; used in paints and adhesives and for insulation.

cyclizine hydrochloride [PHARM] $(C_6H_5)_2CHC_4H_8N_2$-$CH_3 \cdot HCl$ A white, crystalline powder with a melting point of 285°C; used in medicine.

cycloaddition [ORG CHEM] A reaction in which unsaturated molecules combine to form a cyclic compound.

cycloaliphatic *See* alicyclic.

cycloalkane *See* alicyclic.

cycloalkene [ORG CHEM] An unsaturated, monocyclic hydrocarbon having the formula C_nH_{2n-2}. Also known as cycloolefin.

cycloalkyne [ORG CHEM] A cyclic compound containing one or more triple bonds between carbon atoms.

cycloate [ORG CHEM] $C_{11}H_{21}NOS$ A yellow liquid with limited solubility in water; boiling point is 145–146°C; used as an herbicide to control weeds in sugarbeets, spinach, and table beets. Also known as *S*-ethyl-*N*-ethyl-*N*-cyclohexylthiocarbamate.

cyclobarbital [PHARM] $C_{12}H_{16}N_2O_3$ A hypnotic and sedative of short duration.

cyclobutadiene [ORG CHEM] C_4H_4 A cyclic compound containing two alternate double bonds; used in organic synthesis. Also known as butene; tetramethyldiene; $\Delta^{1,3}$-tetramethylene.

cyclobutane [ORG CHEM] C_4H_8 An alicyclic hydrocarbon, boiling point 11°C; synthesized as a condensable gas; used in organic synthesis. Also known as tetramethylene.

cyclobutene [ORG CHEM] C_4H_6 An asymmetrical cyclic hydrocarbon occurring in several isomeric forms. Also known as cyclobutylene.

cycloconverter [ELEC] A device that produces an alternating current of constant or precisely controllable frequency from a variable-frequency alternating-current input, with the output frequency usually one-third or less of the input frequency.

Cyclocystoidea [PALEON] A class of small, disk-shaped, extinct echinozoans in which the lower surface of the body probably consisted of a suction cup.

cyclodextrin [ORG CHEM] Cyclic degradation products of starch which contain six, seven, or eight glucose residues and have the shape of large-ring molecules.

cyclodialysis [MED] Detaching the ciliary body from the sclera in order to effect reduction of intraocular tension in certain cases of glaucoma, especially in aphakia.

cyclodiathermy [MED] Destruction, by diathermy, of the ciliary body.

cyclodiolefin [ORG CHEM] A cycloalkene with two double bonds; sometimes included with alkenes, cycloalkenes, and hydrocarbons containing more than one ethylene bond as olefins in a generic sense.

cyclododecatriene [ORG CHEM] $C_{12}H_{18}$ One of two cyclic hydrocarbons with three double bonds; the two forms are stereoisomeric; used to make nylon-6 and nylon-12.

cyclogenesis [METEOROL] Any development or strengthening of cyclonic circulation in the atmosphere.

cyclograph [ENG] An electronic instrument that produces on a cathode-ray screen a pattern which changes in shape according to core hardness, carbon content, case depth, and other metallurgical properties of a test sample of steel inserted in a sensing coil.

1,3-cyclohexadiene [ORG CHEM] C_6H_8 A partly saturated benzene compound with two double bonds; used in organic synthesis. Also known as dihydrobenzene.

cyclohexane [ORG CHEM] C_6H_{12} A colorless liquid that is a cyclic hydrocarbon synthesized by hydrogenation of benzene; used in organic synthesis. Also known as hexamethylene.

cyclohexanol [ORG CHEM] $C_6H_{11}OH$ An oily, colorless, hygroscopic liquid with a camphorlike odor and a boiling point of 160.9°C; used in soapmaking, insecticides, dry cleaning, plasticizers, and germicides. Also known as hexahydrophenol.

cyclohexanone [ORG CHEM] $C_6H_{10}O$ An oily liquid with an odor suggesting peppermint and acetone; soluble in alcohol, ether, and other organic solvents; used as an industrial solvent, in the production of adipic acid, and in the preparation of cyclohexanone resins. Also known as ketohexamethylene; pimelic ketone.

cyclohexene [ORG CHEM] C_6H_{10} A compound that occurs in coal tar; a liquid that is used as an alkylation component; used in the manufacture of hexahydrobenzoic acid, adipic acid, and maleic acid. Also known as 1,2,3,4-tetrahydrobenzene.

1-cyclohexene-1,2-dicarboximidomethyl-2,2-dimethyl-3-(2-methylpropenyl)-cyclopropanecarboxylate *See* tetramethrin.

cycloheximide [MICROBIO] $C_{15}H_{23}NO_4$ Colorless crystals with a melting point of 119.5–121°C; soluble in water, in amyl acetate, and in common organic solvents such as ether, acetone, and chloroform; used as an agricultural fungicide. Also known as 3-[2-(3,5-dimethyl-2-oxocyclohexyl)2-hydroxyethyl]-glutarimide; naramycin A.

cyclohexylamine [ORG CHEM] $C_6H_{11}NH_2$ A liquid with a strong, fishy, amine odor; miscible with water and common organic solvents; used in organic synthesis and in the manufacture of plasticizers, rubber chemicals, corrosion inhibitors, dyestuffs, dry-cleaning soaps, and emulsifying agents. Also known as aminocyclohexane; hexahydroaniline.

cyclohexylbenzene *See* phenylcyclohexane.

1-cyclohexyl-2-methylaminopropane *See* propylhexedrine.

3-cyclohexyl-5,6-trimethyleneuracil *See* lenacil.

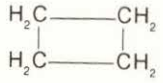
cycloid [MATH] The curve traced by a point on the circumference of a circle as the circle rolls along a straight line.

cycloidal gear teeth [DES ENG] Gear teeth whose profile is formed by the trace of a point on a circle rolling without slippage on the outside or inside of the pitch circle of a gear; now used only for clockwork and timer gears.

cycloidal mass spectrometer [SPECT] Small mass spectrometer of limited mass range fitted with a special-type analyzer that generates a cycloidal-path beam of the sample mass.

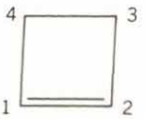
cycloidal pendulum [MECH] A modification of a simple pendulum in which a weight is suspended from a cord which is

CYCLOBUTANE



Structural formula of cyclobutane.

CYCLOBUTENE



Structural formula of cyclobutene showing numbered carbons.

slung between two pieces of metal shaped in the form of cycloids; as the bob swings, the cord wraps and unwraps on the cycloids; the pendulum has a period that is independent of the amplitude of the swing.

cycloidal propeller [NAV ARCH] A type of vertical-axis propeller; used especially on shallow-draft craft.

cycloidal wave [FL MECH] A very steep, symmetrical wave in the form of a cycloid whose crest forms an angle of 120°.

cycloid scale [VERT ZOO] A thin, acellular structure which is composed of a bonelike substance and shows annual growth rings; found in the skin of soft-rayed fishes.

cyclolysis [METEOROL] The weakening or decay of cyclonic circulation in the atmosphere.

cyclomorphosis [ECOL] Cyclic recurrent polymorphism in certain planktonic fauna in response to seasonal temperature or salinity changes.

cyclone [CHEM ENG] A static reaction vessel in which fluids under pressure form a vortex. [MECH ENG] Any cone-shaped air-cleaning apparatus operated by centrifugal separation that is used in particle collecting and fine grinding operations. [METEOROL] A low-pressure region of the earth's atmosphere with roundish to elongated-oval ground plan, in moving air currents, centrally upward air movement, and generally outward movement at various higher elevations in the troposphere.

cyclone cellar [CIV ENG] An underground shelter, often built in areas frequented by tornadoes. Also known as storm cellar; tornado cellar.

cyclone classifier *See* cyclone separator.

cyclone family [METEOROL] A series of wave cyclones occurring in the interval between two successive major outbreaks of polar air, and traveling along the polar front, usually eastward and poleward.

cyclone furnace [ENG] A water-cooled, horizontal cylinder in which fuel is fired cyclonically and heat is released at extremely high rates.

cyclone separator [MECH ENG] A funnel-shaped device for removing particles from air or other fluids by centrifugal means; used to remove dust from air or other fluids, steam from water, and water from steam, and in certain applications to separate particles into two or more size classes. Also known as cyclone classifier.

cyclone wave [METEOROL] **1.** A disturbance in the lower troposphere, of wavelength 1000–2500 kilometers; cyclone waves are recognized on synoptic charts as migratory high- and low-pressure systems. **2.** A frontal wave at the crest of which there is a center of cyclonic circulation, that is, the frontal wave of a wave cyclone.

cyclonic [GEOPHYS] Having a sense of rotation about the local vertical that is the same as that of the earth's rotation: as viewed from above, counterclockwise in the Northern Hemisphere, clockwise in the Southern Hemisphere, undefined at the Equator.

cyclonic scale [METEOROL] The scale of the migratory high- and low-pressure systems (or cyclone waves) of the lower troposphere, with wavelengths of 1000–2500 kilometers. Also known as synoptic scale.

cyclonic shear [METEOROL] Horizontal wind shear of such a nature that it contributes to the cyclonic vorticity of the flow; that is, it tends to produce cyclonic rotation of the individual air particles along the line of flow.

cyclonite [ORG CHEM] $(CH_2)_3N_3(NO_2)_3$ A white, crystalline explosive, consisting of hexahydro-trinitro-triazine, and having high sensitivity and brisance; mixed with other explosives or substances. Abbreviated RDX. Also known as cyclotrimethylenetrinitramine.

1,5-cyclooctadiene [ORG CHEM] C_8H_{12} A cyclic hydrocarbon with two double bonds; prepared from butadiene and used to make cyclooctene and cyclooctane, which are intermediates for the production of plastics, fibers, and so on.

cyclooctane [ORG CHEM] $(CH_2)_8$ A cyclic alkane melting at 9.5°C; used as an intermediate in production of plastics, fibers, adhesives, and coatings. Also known as octomethylene.

cyclooctatetraene [ORG CHEM] C_8H_8 A cyclic olefin with alternate double bonds; highly reactive; rearranges to styrene.

cycloolefin *See* cycloalkene.

cycloparaffin *See* alicyclic.

cyclopean [MATER] Mass concrete with aggregate larger than 6 inches (15 centimeters); used for thick structures such as dams. [PETR] *See* mosaic.

1,3-cyclopentadiene [ORG CHEM] C_5H_6 A colorless liquid boiling at 41.5°C; used to make resins.

cyclopentadienyl anion [ORG CHEM] C_5H_5— A radical formed from cyclopentadiene.

cyclopentane [ORG CHEM] C_5H_{10} A cyclic hydrocarbon that is a colorless liquid; present in crude petroleum, it is converted during refining to aromatics which improve antiknock and combustion properties of gasoline.

cyclopentanol [ORG CHEM] C_5H_9OH A colorless liquid boiling at 139°C; used as a solvent for perfumes and pharmaceuticals. Also known as cyclopentyl alcohol.

cyclopentanone [ORG CHEM] C_5H_8O A saturated monoketone; a colorless liquid boiling at 130°C; used as an intermediate in pharmaceutical preparation. Also known as adipinketone.

cyclopentene [ORG CHEM] $(CH_2)_3CHCH$ A colorless liquid boiling at 45°C; used as a chemical intermediate in petroleum chemistry. Also known as Δ^1-pentamethylene.

cyclopentenylundecylic acid *See* hydnocarpic acid.

cyclopentyl alcohol *See* cyclopentanol.

cyclophon *See* beam-switching tube.

Cyclophoracea [INV ZOO] A superfamily of gastropod mollusks in the order Prosobranchia.

Cyclophoridae [INV ZOO] A family of land snails in the order Pectinibranchia.

Cyclophyllidea [INV ZOO] An order of platyhelminthic worms comprising most tapeworms of warm-blooded vertebrates.

cyclopia [MED] A congenital anomaly characterized by fusion of the eye sockets with various degrees of fusion of the eyes, to the occurrence of a single median eye.

Cyclopinidae [INV ZOO] A family of copepod crustaceans in the suborder Cyclopoida, section Gnathostoma.

Cyclopoida [INV ZOO] A suborder of small copepod crustaceans.

cyclopropane [ORG CHEM] C_3H_6 A colorless gas, insoluble in water; used as an anesthetic.

α-cyclopropyl-α-(*para*-methoxyphenyl)-5-pyrimidine-methanol [ORG CHEM] $C_{12}H_{11}N_2O$ White crystals with a melting point of 110–111°C; solubility in water is 650 parts per million; used as a growth regulator for greenhouse plants.

***N*-(cyclopropylmethy)-α,α,α-trifluoro-2,6-dinitro-*N*-propyl-*para*-toluidine** *See* profluralin.

Cyclopteridae [VERT ZOO] The lumpfishes and snailfishes, a family of deep-sea forms in the suborder Cottoidei of the order Perciformes.

cyclorama [GRAPHICS] A vertical surface, often curved, used to form the background for theatrical settings; an illusion of depth is achieved by even lighting.

Cyclorhagae [INV ZOO] A suborder of benthonic, microscopic marine animals in the class Kinorhyncha of the phylum Aschelminthes.

Cyclorrhapha [INV ZOO] A suborder of true flies, order Diptera, in which developing adults are always formed in a puparium from which they emerge through a circular opening.

cycloserine [MICROBIO] $C_3H_6O_2N_2$ Broad-spectrum, crystalline antibiotic produced by several species of *Streptomyces;* useful in the treatment of tuberculosis and urinary-tract infections caused by resistant gram-negative bacteria.

cyclosilicate [MINERAL] A silicate having the SiO_4 tetrahedra linked to form rings, with a silicon-oxygen ratio of 1:3, such as $Si_3O_9^{6-}$ or $Si_6O_{18}^{12-}$. Also known as ring silicate.

cyclosis [CYTOL] Massive rotational streaming of cytoplasm in certain vacuolated cells, such as the stonewort *Nitella* and *Paramecium*.

Cyclosporeae [BOT] A class of brown algae, division Phaeophyta, in which there is only a free-living diploid generation.

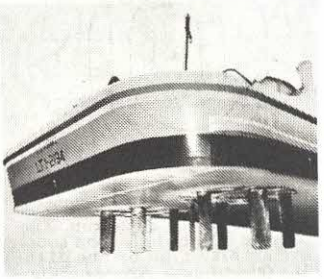
Cyclosteroidea [PALEON] A class of Middle Ordovician to Middle Devonian echinoderms in the subphylum Echinozoa.

Cyclostomata [INV ZOO] An order of bryozoans in the class Stenolaemata. [VERT ZOO] A subclass comprising the simplest and most primitive of living vertebrates characterized by the absence of jaws and the presence of a single median nostril and an uncalcified cartilaginous skeleton.

cyclostrophic flow [FL MECH] A form of gradient flow in which the centripetal acceleration exactly balances the horizontal pressure force.

cyclostrophic wind [METEOROL] The horizontal wind velocity for which the centripetal acceleration exactly balances the horizontal pressure force.

CYCLOIDAL PROPELLER

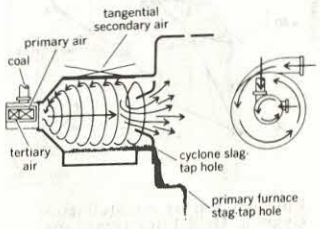


Twin cycloidal propellers, rated at 1100 horsepower (820 kilowatts) each, on U.S. Army towboat. Blade length is 4½ feet (1.4 meters). *(Pacific Car and Foundry Co.)*

CYCLOID SCALE

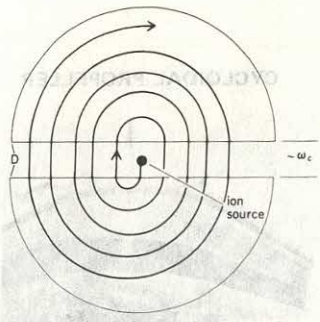
Cycloid scale, a primitive vertebrate scale. *(From K. F. Lagler et al., Ichthyology, copyright © 1962 by John Wiley & Sons, Inc.; reprinted by permission)*

CYCLONE FURNACE



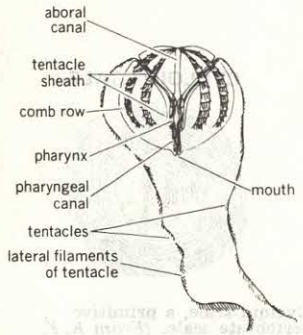
Schematic diagram of cyclone furnace. *(From T. Baumeister, ed., Standard Handbook for Mechanical Engineers, 7th ed., McGraw-Hill, 1967)*

CYCLOTRON



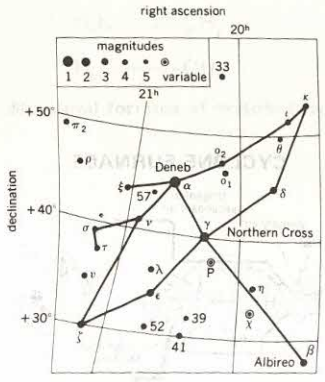
Principle of the cyclotron. The ions are formed in the ion source and are drawn out by one of the D's (electrodes). Arrows show circular orbit path of the ions. Period of orbit equals period $(2\pi/\omega_c)$ of applied D voltage.

CYDIPPIDEA



Pleurobranchia, a cydippid ctenophore. *(From L. H. Hyman, The Invertebrates, vol. 1, McGraw-Hill, 1940)*

CYGNUS



Line pattern of constellation Cygnus. Grid lines represent coordinates of sky. Apparent brightness, or magnitude, of stars is shown by sizes of dots, which are graded by appropriate numbers as indicated.

cyclothem [GEOL] A rock stratigraphic unit associated with unstable shelf of interior basin conditions, in which the sea has repeatedly covered the land.

cyclothymia [PSYCH] A disposition marked by alterations of mood between elation and depression out of proportion to apparent external events and stimulated, rather, by internal factors.

cyclotol [MATER] High explosive composed of RDX (cyclonite) and TNT.

cyclotomic equation [MATH] An equation which has the form $x^{n-1} + x^{n-2} + \ldots + x + 1 = 0$, where n is a prime number.

cyclotomy [MATH] Theory of dividing the circle into equal parts or constructing regular polygons or, analytically, of finding the nth roots of unity.

cyclotrimethylenetrinitramine *See* cyclonite.

cyclotron [NUCLEO] An accelerator in which charged particles are successively accelerated by a constant-frequency alternating electric field that is synchronized with movement of the particles on spiral paths in a constant magnetic field normal to their path. Also known as phasotron.

cyclotron cataract *See* irradiation cataract.

cyclotron D *See* dee.

cyclotron emission *See* cyclotron radiation.

cyclotron frequency [ELECTROMAG] The frequency at which an electron traverses an orbit when moving subject to a uniform magnetic field, at right angles to the field. Also known as gyrofrequency.

cyclotron-frequency magnetron [ELECTR] A magnetron whose frequency of operation depends on synchronism between the alternating-current electric field and the electrons oscillating in a direction parallel to this field.

cyclotron magnets [NUCLEO] The magnets which bend charged-particle orbits and confine the extent of particle motion in a cyclotron.

cyclotron radiation [ELECTROMAG] The electromagnetic radiation emitted by charged particles as they orbit in a magnetic field, at a speed which is not close to the speed of light. Also known as cyclotron emission.

cyclotron resonance [PHYS] Resonance absorption of energy from an alternating-current electric field by electrons in a uniform magnetic field when the frequency of the electric field equals the cyclotron frequency, or the cyclotron frequency corresponding to the electron's effective mass if the electrons are in a solid. Also known as diamagnetic resonance.

cyclotron resonance heating [PL PHYS] A modification of magnetic pumping that involves compressing and expanding plasma at a frequency approximating the cyclotron frequency of the ions in the plasma; the goal is temperatures above several million degrees.

cyclotron resonance maser *See* gyrotron.

cyclotron wave [ELECTROMAG] A wave associated with the electron beam of a traveling-wave tube.

Cydippidea [INV ZOO] An order of the Ctenophora having well-developed tentacles.

Cydnidae [INV ZOO] The ground or burrower bugs, a family of hemipteran insects in the superfamily Pentatomorpha.

Cyg *See* Cygnus.

Cygnus [ASTRON] A conspicuous northern summer constellation; the five major stars are arranged in the form of a cross, but the constellation is represented by a swan with spread wings flying southward; right ascension 21 hours, declination 40°N. Abbreviated Cyg. Also known as Northern Cross; Swan.

Cygnus A [ASTRON] A strong, discrete radio source in the constellation Cygnus, associated with two spiral galaxies in collision.

Cygnus X-1 [ASTROPHYS] A source of x-rays whose intensity varies in an irregular manner, associated with a weak variable radio source and a ninth-magnitude spectroscopic binary star, designated HDE226868, that consists of a blue supergiant and an invisible companion, which may be a black hole. Abbreviated Cyg X-1.

Cygnus X-3 [ASTROPHYS] A variable source of x-rays, with a period of 4.8 hours, associated with a variable radio source that flared up to enormous levels in September 1972 with no observed increase in x-ray emission. Abbreviated Cyg X-3.

Cyg X-1 *See* Cygnus X-1.

Cyg X-3 *See* Cygnus X-3.

cyhexatin [ORG CHEM] $C_{18}H_{34}OSn$ A whitish solid, insoluble in water; used as a miticide to control plant-feeding mites. Also known as tricyclohexyltin hydroxide.

cylinder [CIV ENG] **1.** A steel tube 10–60 inches (25–152 centimeters) in diameter with a wall at least 1/8 inch (3 millimeters) thick that is driven into bedrock, excavated inside, filled with concrete, and used as a pile foundation. **2.** A domed, closed tank for storing hot water to be drawn off at taps. Also known as storage calorifier. [COMPUT SCI] **1.** The virtual cylinder represented by the tracks of equal radius of a set of disks on a disk drive. **2.** *See* seek area. [ENG] A container used to hold and transport compressed gas for various pressurized applications. [MATH] **1.** A solid bounded by a cylindrical surface and two parallel planes, or the surface of such a solid. **2.** *See* cylindrical surface. [MECH ENG] *See* engine cylinder.

cylinder actuator [MECH ENG] A device that converts hydraulic power into useful mechanical work by means of a tight-fitting piston moving in a closed cylinder.

cylinder block [DES ENG] The metal casting comprising the piston chambers of a multicylinder internal combustion engine. Also known as block; engine block.

cylinder bore [DES ENG] The internal diameter of the tube in which the piston of an engine or pump moves.

cylinder gap [GRAPHICS] The space in the cylinders of a printing press where a mechanism for plate (or blanket) clamps and grippers is located.

cylinder head [MECH ENG] The cap that serves to close the end of the piston chamber of a reciprocating engine, pump, or compressor.

cylinder liner [MECH ENG] A separate cylindrical sleeve inserted in an engine block which serves as the cylinder.

cylinder machine [ENG] A paper-making machine consisting of one or a series of rotary cylindrical filters on which wet paper sheets are formed.

cylinder oil [MATER] A viscous lubricating oil for the cylinders and valves of steam engines.

cylinder press [GRAPHICS] A large printing press in which paper is rolled against a flat, reciprocating printing surface by a rotating cylinder.

cylinder stock [MATER] **1.** Residual material in a still after vaporization of lighter petroleum stock. **2.** Compounded or straight oil used for lubricating steam cylinders.

cylinder stop [ORD] Device on a pistol that checks the action of the cylinder and acts as a lock to prevent it from moving.

cylindrarthrosis [ANAT] A joint characterized by rounded articular surfaces.

cylindrical antenna [ELECTROMAG] An antenna in which hollow cylinders serve as radiating elements.

cylindrical array [ELECTR] An electronic scanning antenna that may consist of several hundred columns of vertical dipoles mounted in cylindrical radomes arranged in a circle.

cylindrical bow [NAV ARCH] A type of bow used principally on full, slow-speed, bulk-cargo-carrying ships; in general, the bow ends in a large-radius, vertical cylinder.

cylindrical cam [MECH ENG] A cam mechanism in which the cam follower undergoes translational motion parallel to the camshaft as a roller attached to it rolls in a groove in a circular cylinder concentric with the camshaft.

cylindrical capacitor [ELEC] A capacitor made of two concentric metal cylinders of the same length, with dielectric filling the space between the cylinders. Also known as coaxial capacitor.

cylindrical cavity [ELECTROMAG] A cavity resonator in the shape of a right circular cylinder.

cylindrical coordinates [MATH] A system of curvilinear coordinates in which the position of a point in space is determined by its perpendicular distance from a given line, its distance from a selected reference plane perpendicular to this line, and its angular distance from a selected reference line when projected onto this plane.

cylindrical cutter [DES ENG] Any cutting tool with a cylindrical shape, such as a milling cutter.

cylindrical-film storage [ELECTR] A computer storage in which each storage element consists of a short length of glass tubing having a thin film of nickel-iron alloy on its outer surface.

cylindrical grinder [MECH ENG] A machine for doing work on the peripheries or shoulders of workpieces composed of concentric cylindrical or conical shapes, in which a rotating grinding wheel cuts a workpiece rotated from a power headstock and carried past the face of the wheel.

cylindrical helix [MATH] A curve lying on a cylinder which intersects the elements of the cylinder at a constant angle.

cylindrical map projection [MAP] A map projection produced by projecting the geographic meridians and parallels onto a cylinder which is tangent to (or intersects) the surface of a sphere, and then developing the cylinder into a plane.

cylindrical pinch *See* pinch effect.

cylindrical reflector [ELECTROMAG] A reflector that is a portion of a cylinder; this cylinder is usually parabolic.

cylindrical surface [MATH] A surface consisting of each of the straight lines which are parallel to a given straight line and pass through a given curve. Also known as cylinder.

cylindrical wave [ELECTROMAG] A wave whose equiphase surfaces form a family of coaxial cylinders.

cylindrical winding [ELEC] The current-carrying element of a core-type transformer, consisting of a single coil of one or more layers wound concentrically with the iron core.

cylindrite [MINERAL] $Pb_3Sn_4Sb_2S_{14}$ A blackish-gray mineral consisting of sulfur, lead, antimony, and tin, occurring in cylindrical forms that separate under pressure into distinct sheets or folia.

Cylindrocapsaceae [BOT] A family of green algae in the suborder Ulotrichineae comprising thick-walled, sheathed cells having massive chloroplasts.

cymbocephalic [ANTHRO] Of a head or skull, having an unusually prolonged receding forehead and a protrudent occiput.

cyme [BOT] An inflorescence in which each main axis terminates in a single flower; secondary and tertiary axes may also have flowers, but with shorter flower stalks.

cymene [ORG CHEM] Any of the isomeric hydrocarbons metacymene, paracymene, and orthocymene; paracymene is a liquid that is colorless, has a pleasant odor, and is made from oil of cumin or oil of wild thyme.

cymophane *See* cat's eye.

cymose [BOT] Of, pertaining to, or resembling a cyme.

Cymothoidae [INV ZOO] A family of isopod crustaceans in the suborder Flabellifera; members are fish parasites with reduced maxillipeds ending in hooks.

cymrite [MINERAL] $Ba_2Al_5Si_5O_{19}(OH)\cdot 3H_2O$ Zeolite mineral consisting of a basic aluminosilicate of barium.

***meta*-cym-*s*-yl-methylcarbamate** *See* promecarb.

Cynipidae [INV ZOO] A family of hymenopteran insects in the superfamily Cynipoidea.

Cynipoidea [INV ZOO] A superfamily of hymenopteran insects in the suborder Apocrita.

Cynoglossidae [VERT ZOO] The tonguefishes, a family of Asiatic flatfishes in the order Pleuronectiformes.

cynophobia [PSYCH] An abnormal fear of dogs.

Cyperaceae [BOT] The sedges, a family of monocotyledonous plants in the order Cyperales characterized by spirally arranged flowers on a spike or spikelet; a usually solid, often triangular stem; and three carpels.

Cyperales [BOT] An order of monocotyledonous plants in the subclass Commelinidae with reduced, mostly wind-pollinated or self-pollinated flowers that have a unilocular, two- or three-carpellate ovary bearing a single ovule.

Cypheliaceae [BOT] A family of typically crustose lichens with sessile apothecia in the order Caliciales.

cyphonautes [INV ZOO] The free-swimming bivalve larva of certain bryozoans.

Cyphophthalmi [INV ZOO] A family of small, mitelike arachnids in the order Phalangida.

Cypraecea [INV ZOO] A superfamily of gastropod mollusks in the order Prosobranchia.

Cypraeidae [INV ZOO] A family of colorful marine snails in the order Pectinibranchia.

cypress [BOT] The common name for members of the genus *Cupressus* and several related species in the order Pinales.

Cypridacea [INV ZOO] A superfamily of mostly fresh-water ostracods in the suborder Podocopa.

Cypridinacea [INV ZOO] A superfamily of ostracods in the suborder Myodocopa characterized by a calcified carapace and having a round back with a downward-curving rostrum.

cypridophobia [PSYCH] An abnormal fear of acquiring venereal disease.

Cyprinidae [VERT ZOO] The largest family of fishes, including minnows and carps in the order Cypriniformes.

Cypriniformes [VERT ZOO] An order of actinopterygian fishes in the suborder Ostariophysi.

Cyprinodontidae [VERT ZOO] The killifishes, a family of actinopterygian fishes in the order Atheriniformes that inhabit ephemeral tropical ponds.

Cyprinoidei [VERT ZOO] A suborder of primarily freshwater actinopterygian fishes in the order Cypriniformes having toothless jaws, no adipose fin, and faliciform lower pharyngeal bones.

cypris [INV ZOO] An ostracod-like, free-swimming larval stage in the development of Cirripedia.

Cyrtophorina [INV ZOO] The equivalent name for Gymnostomatida.

cyrtopia [INV ZOO] A type of crustacean larva (Ostracoda) characterized by an elongation of the first pair of antennae and loss of swimming action in the second pair.

cyrtosis [PL PATH] A virus disease of cotton characterized by stunting, distortion, and abnormal branching and coloration.

cyst [MED] A normal or pathologic sac with a distinct wall, containing fluid or other material.

cystacanth [INV ZOO] The infective larva of the Acanthocephala; lies in the hemocele of the intermediate host.

cystamine [ORG CHEM] $(CH_2)_6N_4$ A white, crystalline powder, melting at 280°C; used to make synthetic resins. Also known as aminiform; crystogen; cystamine methenamine; hexamethylene tetramine; urotropin.

cystamine methenamine *See* cystamine.

L-cystathionine [BIOCHEM] $C_7H_{14}N_2O_4S$ An amino acid formed by condensation of homocysteine with serine, catalyzed by an enzyme transsulfurase; found in high concentration in the brain of primates.

cysteamine *See* 2-aminoethanethiol.

cystectomy [MED] **1.** Excision of the gallbladder, or part of the urinary bladder. **2.** Removal of a cyst. **3.** Removal of a piece of the anterior capsule of the lens for the extraction of a cataract.

cysteine [BIOCHEM] $C_3H_7O_2NS$ A crystalline amino acid occurring as a constituent of glutathione and cystine.

cystic disease [MED] A disorder of women, usually at or near menopause, characterized by the development of large cysts in the breast.

cystic duct [ANAT] The duct of the gallbladder.

cysticercosis [MED] The infestation in humans by cysticerci of the genus *Taenia*.

cysticercus [INV ZOO] A larva of tapeworms in the order Cyclophyllidea that has a bladder with a single invaginated scolex.

cystic fibrosis [MED] A hereditary disease of the pancreas transmitted as an autosomal recessive; involves obstructive lesions, atrophy, and fibrosis of the pancreas and lungs, and the production of mucus of high viscosity. Also known as mucoviscidosis.

cystic kidney [MED] A kidney with one or more cysts.

cystine [BIOCHEM] $C_6H_{12}N_2S_2$ A white, crystalline amino acid formed biosynthetically from cysteine.

cystinosis [MED] A congenital metabolic disorder involving sulfur-containing amino acids, usually cystine; characterized by deposits of cystine crystals in the body organs.

cystinuria [MED] The presence in the urine of crystals of cystine together with some lysine, arginine, and ornithine.

cystitis [MED] Inflammation of a fluid-filled organ, especially the urinary bladder.

Cystobacter [MICROBIO] A genus of bacteria in the family Cystobacteraceae; vegetative cells are tapered, sporangia are sessile, and microcysts are rigid rods.

Cystobacteraceae [MICROBIO] A family of bacteria in the order Myxobacterales; vegetative cells are tapered, and microcysts are rod-shaped and enclosed in sporangia.

cystocarp [BOT] A fruiting structure with a special protective envelope, produced after fertilization in red algae.

cystocele [MED] Herniation of the urinary bladder into the vagina.

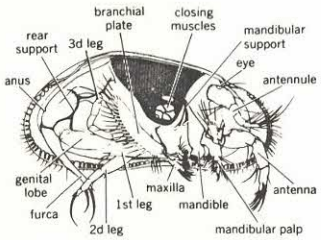
cystocercous cercariae [INV ZOO] A digenetic trematode larva that can withdraw the body into the tail.

cystography [MED] Radiography of the urinary bladder after the injection of a contrast medium.

Cystoidea [PALEON] A class of extinct crinozoans characterized by an ovoid body that was either sessile or attached by a short aboral stem.

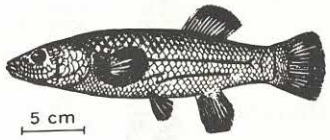
cystolith [BOT] A concretion of calcium carbonate arising from the cell walls of modified epidermal cells in some flowering plants.

CYPRIDACEA



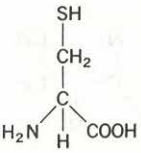
Female *Candona suburbana* Hoff, an ostracod of the Cypridacea. *(After D. J. McGregor and R. V. Kesling, Contributions from the Museum of Paleontology of the University of Michigan, 1969)*

CYPRINODONTIDAE



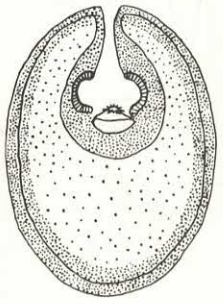
Striped killifish *(Fundulus majalis). (After G. B. Goode, Fishery Industries of the U.S., 1884)*

CYSTEINE



Structural formula of cysteine.

CYSTICERCUS



Cysticercus, the metacestode larva of cyclophyllidean tapeworms.

cystoma [MED] A cystic mass, especially in or near the ovary.

cystometer [MED] An instrument used to determine pressure in the urinary bladder under standard conditions.

Cystoporata [PALEON] An order of extinct, marine bryozoans characterized by cystopores and minutopores.

cystopyelitis [MED] Inflammation of the urinary bladder and the renal pelvis.

cystopyelography [MED] Radiography of the urinary bladder, ureter, and renal pelvis after injection of a radiopaque material.

cystopyelonephritis [MED] Inflammation of the urinary bladder, renal pelvis, and renal parenchyma.

cystoscope [MED] An optical instrument for visual examination of the urinary bladder, ureters, and kidneys.

cystoureteritis [MED] Inflammation of the urinary bladder and the ureters.

cytac [NAV] A system in which hyperbolic lines of position are determined by measuring the time relationship between two synchronized radio signals; similar to loran but capable of higher accuracy and greater range.

cytase [BIOCHEM] Any of several enzymes in the seeds of cereals and other plants, which hydrolyze the cell-wall material.

Cytheracea [INV ZOO] A superfamily of ostracods in the suborder Podocopa comprising principally crawling and digging marine forms.

Cytherellidae [INV ZOO] The family comprising all living members of the ostracod suborder Platycopa.

cytidine [BIOCHEM] $C_9H_{13}N_3O_5$ Cytosine riboside, a nucleoside composed of one molecule each of cytosine and D-ribose.

cytidylic acid [BIOCHEM] $C_9H_{14}O_8N_3P$ A nucleotide synthesized from the base cytosine and obtained by hydrolysis of nucleic acid. Also known as cytidine monophosphate.

cytocentrum *See* central apparatus.

cytochalasin [BIOCHEM] One of a series of structurally related fungal metabolic products which, among other effects on biological systems, selectively and reversibly block cytokinesis while not affecting karyokinesis; the molecule with minor variations consists of a benzyl-substituted hydroaromatic isoindolone system, which in turn is fused to a small macrolide-like cyclic ring.

cytochemistry [CYTOL] The science concerned with the chemistry of cells and cell components, primarily with the location of chemical constituents and enzymes.

cytochrome [BIOCHEM] Any of the complex protein respiratory pigments occurring within plant and animal cells, usually in mitochondia, that function as electron carriers in biological oxidation.

cytochrome a_3 *See* cytochrome oxidase.

cytochrome oxidase [BIOCHEM] Any of a family of respiratory pigments that react directly with oxygen in the reduced state. Also known as cytochrome a_3.

cytocidal unit [BIOL] A unit for the standardization of adrenal cortical hormones.

cytocrine gland [CYTOL] A cell, especially a melanocyte, that passes its secretion directly to another cell.

cytodiagnosis [PATH] The determination of the nature of an abnormal liquid by the study of cells it contains.

cytogenetics [CYTOL] The comparative study of the mechanisms and behavior of chromosomes in populations and taxa, and the effect of chromosomes on inheritance and evolution.

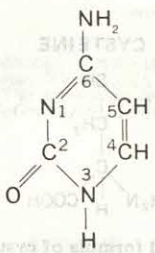
cytogenous gland [PHYSIO] A structure that secretes living cells; an example is the testis.

cytokinesis [CYTOL] Division of the cytoplasm following nuclear division.

cytokinin [BIOCHEM] Any of a group of plant hormones which elicit certain plant growth and development responses, especially by promoting cell division.

cytology [BIOL] A branch of the biological sciences which deals with the structure, behavior, growth, and reproduction of cells and the function and chemistry of cell components.

CYTOSINE



Structural formula of cytosine.

cytolysis [PATH] Disintegration or dissolution of cells, usually associated with a pathologic process.

cytolysosome [CYTOL] An enlarged lysosome that contains organelles such as mitochondria.

cytomegalic [MED] Of, pertaining to, or characterizing the greatly enlarged cells with enlarged nuclei and inclusion bodies found in tissues in cytomegalic inclusion disease.

cytomegalic inclusion disease [MED] A virus infection primarily of infants characterized by jaundice, liver enlargement, and circulatory disturbances.

cytomegalovirus [VIROL] An animal virus belonging to subgroup B of the herpesvirus group; causes cytomegalic inclusion disease and pneumonia.

cytomorphosis [CYTOL] All the structural alterations which cells or successive generations of cells undergo from the earliest undifferentiated stage to their final destruction.

cytopathology [PATH] A branch of pathology concerned with abnormalities within cells.

cytopenia [PATH] A blood cell count below normal.

Cytophaga [MICROBIO] A genus of bacteria in the family Cytophagaceae; cells are unsheathed, unbranched rods or filaments and are motile; microcysts are not known; decompose agar, cellulose, and chitin.

Cytophagaceae [MICROBIO] A family of bacteria in the order Cytophagales; cells are rods or filaments, unsheathed cells are motile, filaments are not attached, and carotenoids are present.

Cytophagales [MICROBIO] An order of gliding bacteria; cells are rods or filaments and motile by gliding, and fruiting bodies are not produced.

cytopharynx [INV ZOO] A channel connecting the surface with the protoplasm in certain protozoans; functions as a gullet in ciliates.

cytophilic antibody [IMMUNOL] A substance capable of combining directly with the receptors of a corresponding antigenic cell. Also known as cytotropic antibody.

cytoplasm [CYTOL] The protoplasm of an animal or plant cell external to the nucleus.

cytoplasmic inheritance [GEN] The control of genetic difference by hereditary units carried in cytoplasmic organelles. Also known as extrachromosomal inheritance.

cytoplasmic streaming [CYTOL] Intracellular movement involving irreversible deformation of the cytoplasm produced by endogenous forces.

cytopyge [INV ZOO] A fixed point for waste discharge in the body of a protozoan, especially a ciliate.

cytosine [BIOCHEM] $C_4H_5ON_3$ A pyrimidine occurring as a fundamental unit or base of nucleic acids.

cytoskeleton [CYTOL] Protein fibers composing the structural framework of a cell.

cytosome [CYTOL] The cytoplasm of the cell, as distinct from the nucleus.

cytostome [INV ZOO] The mouth-like opening in many unicellular organisms, particularly Ciliophora.

cytotaxis [PHYSIO] Attraction of motile cells by specific diffusible stimuli emitted by other cells.

cytotechnologist [PATH] A person trained to prepare smears of and examine exfoliated cells, referring abnormalities to a physician.

cytotrophoblast [EMBRYO] The inner, cellular layer of a trophoblast, covering the chorion and the chorionic villi during the first half of pregnancy.

cytotropic antibody *See* cytophilic antibody.

cytotropism [BIOL] The tendency of individual cells and groups of cells to move toward or away from each other.

Czapek's agar [MICROBIO] A nutrient culture medium consisting of salt, sugar, water, and agar; used for certain mold cultures.

Czochralski method [ECOL] Alteration of the original state of a community by human agencies.

Czochralski process [CRYSTAL] A method of producing large single crystals by inserting a small seed crystal of germanium, silicon, or other semiconductor material into a crucible filled with similar molten material, then slowly pulling the seed up from the melt while rotating it.

D

D *See* dee; diopter.

2,4-D *See* 2,4-dichlorophenoxyacetic acid.

DABS *See* discrete address beacon system.

dac *See* digital-to-analog converter.

dachiardite [MINERAL] $(Na_2Ca)_2(Al_4Si_{20}O_{48})\cdot 12H_2O$ A white to colorless mineral in the mordenite group of the zeolite family that crystallizes in the monoclinic system.

Dacian [GEOL] Lower upper Pliocene geologic time.

dacite [GEOL] Very fine crystalline or glassy rock of volcanic origin, composed chiefly of sodic plagioclase and free silica with subordinate dark-colored minerals.

dacite glass [GEOL] A natural glass formed by rapid cooling of dacite lava.

Dacromycetales [MYCOL] An order of jelly fungi in the subclass Heterobasidiomycetidae having branched basidia with the appearance of a tuning fork.

dacryoblennorrhea [MED] Chronic inflammation of the lacrimal sac of the eye accompanied by discharge of mucus.

dacryocyst *See* lacrimal sac.

dacryocystitis [MED] Inflammation of the lacrimal sac.

dacryon [ANAT] The point of the face where the frontomaxillary, the maxillolacrimal, and frontolacrimal sutures meet.

dactylitic [GEOL] Of a rock texture, characterized by fingerlike projections of a mineral that penetrate another mineral.

Dactylochirotida [INV ZOO] An order of dendrochirotacean holothurians in which there are 8–30 digitate or digitiform tentacles, which sometimes bifurcate.

dactylognathite [INV ZOO] The distal segment of a maxilliped in crustaceans.

dactylography [SCI TECH] The scientific study of fingerprints as a device for identifying people.

Dactylogyroidea [INV ZOO] A superfamily of trematodes in the subclass Monogenea; all are fish ectoparasites.

dactylopodite [INV ZOO] The distal segment of ambulatory limbs in decapods and of certain limbs in other arthropods.

dactylopore [INV ZOO] Any of the small openings on the surface of Milleporina through which the bodies of the polyps are extended.

Dactylopteridae [VERT ZOO] The flying gurnards, the single family of the perciform suborder Dactylopteroidei.

Dactylopteroidei [VERT ZOO] A suborder of marine shore fishes in the order Perciformes, characterized by tremendously expansive pectoral fins.

Dactyloscopidae [VERT ZOO] The sand stargazers, a family of small tropical and subtropical perciform fishes in the suborder Blennioidei.

Dactylosporangium [MICROBIO] A genus of bacteria in the family Actinoplanaceae; fingerlike sporangia are formed in clusters, each containing a single row of three or four motile spores.

dactylosternal [VERT ZOO] Of turtles, having marginal fingerlike processes joining the plastron to the carapace.

dactylozooid [INV ZOO] One of the long, defensive polyps of the Milleporina, armed with stinging cells.

dactylus [INV ZOO] The structure of the tarsus of certain insects which follows the first joint; usually consists of one or more joints.

dado [ARCH] **1.** The lower portion of an interior wall set off by molding or other decoration. **2.** The portion of a pedestal between surbase and base. **3.** The portion of a wall basement between surbase and base course.

dado head [MECH ENG] A machine consisting of two circular saws with one or more chippers in between; used for cutting flat-bottomed grooves in wood.

dado plane [DES ENG] A narrow plane for cutting flat grooves in woodwork.

dadur [METEOROL] In India, a wind blowing down the Ganges Valley from the Siwalik hills at Hardwar.

dagger board [NAV ARCH] A device used in a sailing vessel to increase the area of lateral resistance; it is a narrow metal flat or wooden board that slides up and down in the trunk, which extends from inside the hull to the bottom.

Dagor lens [OPTICS] An anastigmatic lens consisting of two lens systems that are nearly symmetrical with respect to the stop, each system containing three or more lenses.

daguerreotype [GRAPHICS] A photograph produced on a silver plate or a copper plate coated with silver sensitized by the action of iodine; after exposure of the plate in a camera, a latent image is developed by use of mercury vapor.

Dahlin's algorithm [CONT SYS] A digital control algorithm in which the requirement of minimum response time used in the deadbeat algorithm is relaxed to reduce ringing in the system response.

dahoma *See* African greenheart.

daily aberration *See* diurnal aberration.

daily forecast [METEOROL] A forecast for periods of from 12 to 48 hours in advance.

daily keying element [COMMUN] Part of a specific cipher key that changes at predetermined intervals, usually daily.

daily mean [METEOROL] The average value of a meteorological element over a period of 24 hours.

daily rate *See* watch rate.

daily retardation [OCEANOGR] The amount of time by which corresponding tidal phases grow later day by day; averages approximately 50 minutes.

daily variation [GEOPHYS] Oscillation occurring in the earth's magnetic field in a 1-day period.

dairy [AGR] A farm concerned with the production of milk. [FOOD ENG] An establishment where milk products are made.

dairy cattle [AGR] A cattle breed selected, raised, and bred for ability to produce large quantities of milk.

dairy machinery [FOOD ENG] Equipment, such as pasteurizers, used in the production and processing of milk and milk products.

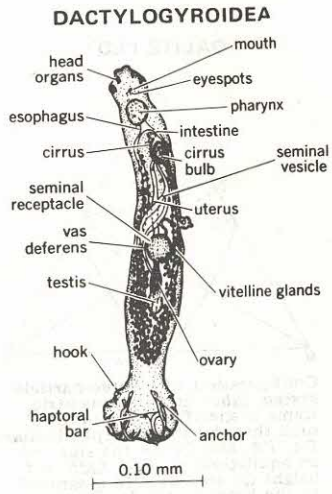
dairy product [FOOD ENG] Any food made from milk or milk products.

daisy chain [COMPUT SCI] A means of connecting devices (readers, printers, and so on) to a central processor by party-line input/output buses which join these devices by male and female connectors, the last female connector being shorted by a suitable line termination.

daisy wheel printer [COMPUT SCI] A serial printer in which the printing element is a plastic hub that has a large number of flexible radial spokes, each spoke having one or more different raised printing characters; the wheel is rotated as it is moved horizontally step by step under computer control, and stops when a desired character is in a desired print position so a hammer can drive that character against an inked ribbon.

Dakotan [GEOL] Lower Upper Cretaceous geologic time.

dalapon [ORG CHEM] Generic name for 2,2-dichloropropionic acid; a liquid with a boiling point of 185–190°C at 760



Pseudohaliotrema carbunculus Hargis from the pinfish.

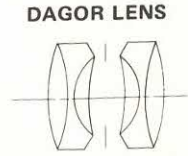


Diagram of Dagor lens.

mmHg; solule in water, alcohol, and ether; used as an herbicide.

Dalatiidae [VERT ZOO] The spineless dogfishes, a family of modern sharks belonging to the squaloid group.

d'Alembertian [MATH] A differential operator in four-dimensional space,

$$\frac{\partial^2}{\partial x^2}+\frac{\partial^2}{\partial y^2}+\frac{\partial^2}{\partial z^2}-\frac{1}{c^2}\frac{\partial^2}{\partial t^2}$$

which is used in the study of relativistic mechanics.

d'Alembert's paradox [FL MECH] The paradox that no forces act on a body moving at constant velocity in a straight line through a large mass of incompressible, inviscid fluid which was initially at rest, or in uniform motion.

d'Alembert's principle [MECH] The principle that the resultant of the external forces and the kinetic reaction acting on a body equals zero.

d'Alembert's test for convergence [MATH] A series Σa_n converges if there is an N such that the absolute value of the ratio a_n/a_{n-1} is always less than some fixed number smaller than 1, provided n is at least N, and diverges if the ratio is always greater than 1.

d'Alembert's wave equation *See* wave equation.

Dalitz pair [PARTIC PHYS] The electron and positron resulting from the decay of a neutral pion to these particles and a photon.

Dalitz plot [PARTIC PHYS] Pictorial representation for data on the distribution of certain three-particle configurations that result from elementary-particle decay processes or high-energy nuclear reactions.

Dallis grass [BOT] The common name for the tall perennial forage grasses composing the genus *Paspalum* in the order Cyperales.

Dall tube [MECH ENG] Fluid-flow measurement device, similar to a venturi tube, inserted as a section of a fluid-carrying pipe; flow rate is measured by pressure drop across a restricted throat.

Dalmatian wettability [PETRO ENG] Theory of wettability that some in situ reservoir rocks are partly preferentially oil-wet and partly preferentially water-wet.

dalmatian sage oil *See* oil of sage.

dalton *See* atomic mass unit.

Dalton's atomic theory [CHEM] Theory forming the basis of accepted modern atomic theory, according to which matter is made of particles called atoms, reactions must take place between atoms or groups of atoms, and atoms of the same element are all alike but differ from atoms of another element.

Dalton's law [PHYS] The law that the pressure of a gas mixture is equal to the sum of the partial pressures of the gases composing it. Also known as law of partial pressures.

Dalton's temperature scale [THERMO] A scale for measuring temperature such that the absolute temperature T is given in terms of the temperature on the Dalton scale τ by $T = 273.15(373.15/273.15)^{\tau/100}$.

dam [CIV ENG] **1.** A barrier constructed to obstruct the flow of a watercourse. **2.** A pair of cast-steel plates with interlocking fingers built over an expansion joint in the road surface of a bridge.

damage [ORD] **1.** An injury short of complete destruction inflicted upon persons, equipment, or installations. **2.** To cause damage.

damage assessment [ORD] The result of examination of combat material, particularly aircraft, ships, and armored vehicles, after a simulated attack, to determine the category in which the damage resulting from the attack would be placed.

damage control [ORD] Procedures for maintaining or restoring integrity, stability, or weapon power of a ship or aircraft.

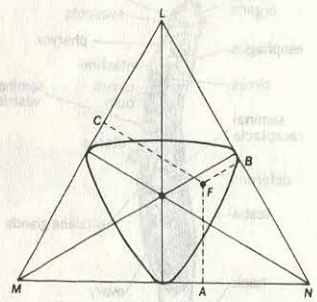
damage potential [ORD] The damage which a projectile or explosive can be expected to do to a specific target.

damage radius [ORD] **1.** The distance at which, in terms of experience or theoretical calculations, certain types of damage can be expected from a specified type of explosive item. **2.** In atomic explosion, the distance from ground zero at which there is a 50% probability that a target element susceptible to the weapon effect considered will be damaged.

damaging stress [MECH] The minimum unit stress for a given material and use that will cause damage to the member and make it unfit for its expected length of service.

damask [TEXT] A fabric with a satin-weave pattern against a plainwoven background, made on a jacquard loom.

DALITZ PLOT



Configuration of a three-particle system *(abc)* in its barycentric frame is specified by a point F such that the three perpendiculars FA, FB, and FC to the sides of an equilateral triangle LMN (of height Q) are equal in magnitude to the kinetic energies T_a, T_b, T_c, where Q denotes the sum. Heavy curve encloses points which correspond to physically allowed configurations.

damkjernite [PETR] A melanocratic dike rock composed of biotite and pyroxene phenocrysts in a groundmass of pyroxene, biotite, and magnetite.

Damköhler number I [PHYS] A dimensionless number, equal to the ratio of the time it takes a fluid to flow some characteristic distance, to the time it takes some chemical reaction or other physical process to be completed. Symbolized *Da* I. Also known as Damköhler's ratio.

Damköhler number II [PHYS] A measure of the ratio of the rate of a chemical reaction to the rate of molecular diffusion, equal to the square of a characteristic length divided by the product of the diffusivity and the time it takes for a chemical reaction or other physical process to be completed. Symbolized *Da* II.

Damköhler number III [PHYS] A measure of the ratio of the heat liberated by a chemical reaction to the bulk transport of heat in a fluid, equal to the time it takes the fluid to travel a characteristic length, divided by the product of the fluid temperature and the time it would take for the chemical reaction to raise this temperature one unit if all the heat liberated by it were immediately absorbed by the fluid. Symbolized *Da* III.

Damköhler number IV [PHYS] A measure of the ratio of the heat liberated by a chemical reaction to the conductive heat transfer, equal to a characteristic length times the heat liberated per unit volume per unit time divided by the product of the thermal conductivity and the temperature. Symbolized *Da* IV.

Damköhler number V *See* Reynold's number.

Damköhler's ratio *See* Damköhler number I.

dammar [MATER] **1.** A type of hard resin obtained from evergreen trees of the genus *Agathis*. **2.** A type of soft, clear to yellow East Indian resin derived from several trees of the family Dipterocarpaceae. Also known as gum dammar.

dammar varnish [MATER] Varnish made from East Indian dammar.

damp [ENG] To reduce the fire in a boiler or a furnace by putting a layer of damp coals or ashes on the fire bed. [MIN ENG] A poisonous gas in a coal mine. [PHYS] To gradually diminish the amplitude of a vibration or oscillation.

damp air [METEOROL] Air that has a high relative humidity.

damp course [CIV ENG] A layer of impervious material placed horizontally in a wall to keep out water.

damp down [MET] To stop the blast in a blast furnace by closing the openings in the furnace.

damped harmonic motion [PHYS] Also known as damped oscillation; damped vibration. **1.** The linear motion of a particle subject both to an elastic restoring force proportional to its displacement and to a frictional force in the direction opposite to its motion and proportional to its speed. **2.** A similar variation in a quantity analogous to the displacement of a particle, such as the charge on a capacitor in a simple series circuit containing a resistance.

damped oscillation [PHYS] **1.** Any oscillation in which the amplitude of the oscillating quantity decreases with time. Also known as damped vibration. **2.** *See* damped harmonic motion.

damped regression analysis *See* ridge regression analysis.

damped vibration *See* damped harmonic motion; damped oscillation.

damped wave [PHYS] **1.** A wave whose amplitude drops exponentially with distance because of energy losses which are proportional to the square of the amplitude. **2.** A wave in which the amplitudes of successive cycles progressively diminish at the source.

dampener [ENG] A device for damping spring oscillations after abrupt removal or application of a load. [GRAPHICS] In offset printing, one of the rollers that transfers water to the nonprinting areas of the total surface that is printed.

damper [ELECTR] A diode used in the horizontal deflection circuit of a television receiver to make the sawtooth deflection current decrease smoothly to zero instead of oscillating at zero; the diode conducts each time the polarity is reversed by a current swing below zero. [MECH ENG] A valve or movable plate for regulating the flow of air or the draft in a stove, furnace, or fireplace.

damper loss [ENG] The reduction in rate of flow or of pressure of gas across a damper.

damper pedal [ENG] A pedal that controls the damping of piano strings.

damper winding [ELEC] A winding consisting of several conducting bars on the field poles of a synchronous machine, short-circuited by conducting rings or plates at their ends, and

used to prevent pulsating variations of the position or magnitude of the magnetic field linking the poles. Also known as amortisseur winding.

damp haze [METEOROL] Small water droplets or very hygroscopic particles in the air, reducing the horizontal visibility somewhat, but to not less than 1¼ miles (2 kilometers); similar to a very thin fog, but the droplets or particles are more scattered than in light fog and presumably smaller.

damping [ENG] Reducing or eliminating reverberation in a room by placing sound-absorbing materials on the walls and ceiling. Also known as soundproofing. [PHYS] **1.** The dissipation of energy in motion of any type, especially oscillatory motion and the consequent reduction or decay of the motion. **2.** The extent of such dissipation and decay.

damping capacity [MECH] A material's capability in absorbing vibrations.

damping coefficient *See* damping factor; resistance.

damping constant *See* resistance.

damping factor [PHYS] **1.** The ratio of the logarithmic decrement of any underdamped harmonic motion to its period. Also known as damping coefficient. **2.** *See* decrement.

damping magnet [ELECTROMAG] A permanent magnet used in conjunction with a disk or other moving conductor to produce a force that opposes motion of the conductor and thereby provides damping.

damping-off [PL PATH] A fungus disease of seedlings and cuttings in which the parasites invade the plant tissues near the ground level, causing wilting and rotting.

damping ratio [PHYS] The ratio of the actual resistance in damped harmonic motion to that necessary to produce critical damping. Also known as relative damping ratio.

damp sheet [MIN ENG] A curtain used in a mine to direct airflow, thus preventing gas accumulation.

Danaidae [INV ZOO] A family of large tropical butterflies, order Lepidoptera, having the first pair of legs degenerate.

danalite [MINERAL] $(Fe,Mn,Zn)_4Be_3(SiO_4)_3S$ A mineral consisting of a silicate and sulfide of iron and beryllium; it is isomorphous with helvite and genthelvite.

dan buoy [NAV] A floating marker buoy used temporarily, as on fishing grounds and in minesweeping operations.

danburite [MINERAL] $CaB_2(SiO_4)_2$ An orange-yellow, yellowish-brown, grayish, or colorless transparent to translucent borosilicate mineral with a feldspar structure crystallizing in the orthorhombic system; it resembles topaz and is used as an ornamental stone.

dancing dervish *See* dust whirl.

dancing devil *See* dust whirl.

dancing step *See* balanced step.

dancing winder *See* balanced step.

Danckwerts model [CHEM ENG] Theory applied to liquid flow across packing in a liquid-gas absorption tower; allows for liquid eddies that bring fresh liquid from the interior of the liquid body to the surface, thus contacting the gas in the column.

dandruff [MED] Scales of dry sebum formed on the scalp in seborrhea.

dandy fever *See* dengue.

dandy roll [MECH ENG] A roll in a Fourdrinier paper-making machine; used to compact the sheet and sometimes to imprint a watermark.

Dane particle [VIROL] The causative virus of type B viral hepatitis visualized ultrastructurally in its complete form.

danger angle [NAV] The angle between two known points as measured by an observer at a third point (the vessel), which is the safety limit for a vessel approaching a dangerous obstacle such as a reef.

danger area [NAV] A specified area within, below, or over which there may exist activities constituting potential danger to aircraft flying over it, or to persons, property, and traffic on land or sea.

danger bearing [NAV] The bearing of any object or obstruction as measured on board a vessel which will put a ship in jeopardy.

danger buoy [NAV] A buoy marking an isolated danger to navigation.

danger coefficient [NUCLEO] The change in reactivity per unit mass of a substance resulting from inserting the substance in a particular nuclear reactor.

danger line [NAV] A line on a chart representing a boundary, beyond which some hazard will be encountered.

dangerous semicircle [METEOROL] The half of the circular area of a tropical cyclone having the strongest winds and heaviest seas, where a ship tends to be drawn into the path of the storm.

danger sounding [NAV] A minimum sounding chosen for a vessel of specific draft in a given area to indicate the limit of safe navigation.

danger space [ORD] **1.** That portion of the range within which a target of given dimensions could be hit by a projectile with a given angle of fall. **2.** Space around the bursting point of an antiaircraft projectile.

dangler [MET] The flexible electrode used in barrel plating.

dangling bond [SOLID STATE] A chemical bond associated with an atom in the surface layer of a solid that does not join the atom with a second atom but extends in the direction of the solid's exterior.

dangling ELSE [COMPUT SCI] A situation in which it is not clear to which part of a compound conditional statement an ELSE instruction belongs.

Danian [GEOL] Lowermost Paleocene or uppermost Cretaceous geologic time.

Daniell cell [PHYS CHEM] A primary cell with a constant electromotive force of 1.1 volts, having a copper electrode in a copper sulfate solution and a zinc electrode in dilute sulfuric acid or zinc sulfate, the solutions separated by a porous partition or by gravity.

Daniell hygrometer [ENG] An instrument for measuring dew point; dew forms on the surface of a bulb containing ether which is cooled by evaporation into another bulb, the second bulb being cooled by the evaporation of ether on its outer surface.

Danjon prismatic astrolabe [ENG] A type of astrolabe in which a Wollaston prism just inside the focus of the telescope converts converging beams of light into parallel beams, permitting a great increase in accuracy.

dannemorite [MINERAL] $(Fe,Mn,Mg)_7Si_8O_{22}(OH)_2$ A yellowish-brown to greenish-gray monoclinic mineral consisting of a columnar or fibrous amphibole.

dansyl chloride [ORG CHEM] $(CH_3)_2NC_{10}H_6SO_2Cl$ A reagent for fluorescent labeling of amines, amino acids, proteins, and phenols.

Danysz reaction [IMMUNOL] A toxin-antitoxin reaction that occurs when an exact equivalence of toxin is added to antitoxin, not in one portion but in successive increments.

DAP *See* diallyl phthalate; diaminopimelate.

daphnite [MINERAL] $(MgFe)_3(Fe,Al)_3(Si,Al)_4O_{10}(OH)_8$ A mineral of the chlorite group consisting of a basic aluminosilicate of magnesium, iron, and aluminum.

Daphoenidae [PALEON] A family of extinct carnivoran mammals in the superfamily Miacoidea.

dapsone *See* 4,4′-sulfonyldianiline.

daraf [ELEC] The unit of elastance, equal to the reciprocal of 1 farad.

darapskite [MINERAL] $Na_3(NO_3)(SO_4)\cdot H_2O$ A naturally occurring hydrate mineral consisting of a hydrous nitrate and sulfate of sodium.

darby [ENG] A flat-surfaced tool for smoothing plaster.

darcy [PHYS] A unit of permeability, equivalent to the passage of 1 cubic centimeter of fluid of 1 centipoise viscosity flowing in 1 second under a pressure of 1 atmosphere through a porous medium having a cross-sectional area of 1 square centimeter and a length of 1 centimeter.

Darcy number 1 [FL MECH] A dimensionless group, equal to four times the Fanning friction factor. Symbolized Da_1. Also known as Darcy-Weisbach coefficient; resistance coefficient 2.

Darcy number 2 [FL MECH] A dimensionless group used in the study of the flow of fluids in porous media, equal to the fluid velocity times the flow path divided by the permeability of the medium. Symbolized Da_2.

Darcy's law [FL MECH] The law that the rate at which a fluid flows through a permeable substance per unit area is equal to the permeability, which is a property only of the substance through which the fluid is flowing, times the pressure drop per unit length of flow, divided by the viscosity of the fluid.

Darcy-Weisbach coefficient *See* Darcy number 1.

Darcy-Weisbach equation [FL MECH] An equation for the loss of head due to friction h_f during turbulent flow of a fluid through a duct of any shape; in the case of a circular pipe, $h_f = f(L/d)(V^2/2g)$, where L and d are length and diameter of the

DARK-FIELD ILLUMINATION

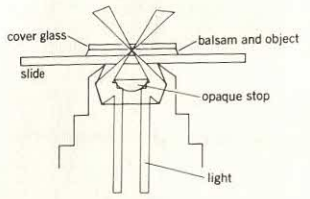


Diagram of dark-field illumination. *(American Optical Corp.)*

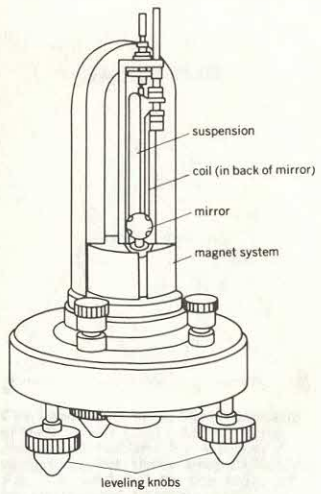
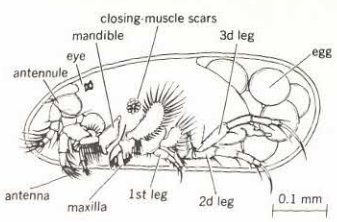
D'ARSONVAL GALVANOMETER



Drawing of d'Arsonval galvanometer. *(From D. M. Considine, ed., Process Instruments and Control Handbook, McGraw-Hill, 1957)*

DARWINULACEA



Darwinula stevensoni (Brady and Robertson), a podocopan ostracod of the Darwinulacea. In this parthenogenetic species, eggs and young are protected in a brood space behind the body. *(After R. C. Moore, ed., Treatise on Invertebrate Paleontology, pt. Q, 1961)*

pipe, V is the fluid velocity, g the acceleration of gravity, and f a dimensionless number called Darcy number 1.

dark box [GRAPHICS] A light-proof box used to store certain light-sensitive photographic papers.

dark conduction [ELECTR] Residual conduction in a photosensitive substance that is not illuminated.

dark current *See* electrode dark current.

dark-current pulse [ELECTR] A phototube dark-current excursion that can be resolved by the system employing the phototube.

dark discharge [ELECTR] An invisible electrical discharge in a gas.

dark-eclipsing variables [ASTRON] A binary star system, comprising a bright star and an almost dark companion that revolve about each other.

dark-field illumination [OPTICS] A method of microscope illumination in which the illuminating beam is a hollow cone of light formed by an opaque stop at the center of the condenser large enough to prevent direct light from entering the objective; the specimen is placed at the concentration of the light cone, and is seen with light scattered or diffracted by it.

dark lightning [GRAPHICS] A photographic effect in which lightning gives black photographic streaks instead of white due to multiple exposures caused by successive members of a composite flash. Also known as Clayden effect.

dark-line spectrum [SPECT] The absorption spectrum that results when white light passes through a substance, consisting of dark lines against a bright background.

dark nebula [ASTRON] A cloud of solid particles which absorbs or scatters away radiation directed toward an observer and becomes apparent when silhouetted against a bright nebula or rich star field. Also known as absorption nebula.

dark of the moon [ASTRON] **1.** The time period of approximately a week at the time of a new moon, when the light of the moon is absent at night. **2.** Any period in which the light of the moon is obscured.

dark plaster [MATER] A plaster made from calcined, unground gypsum.

dark-red silver ore *See* pyrargyrite.

dark resistance [ELECTR] The resistance of a selenium cell or other photoelectric device in total darkness.

darkroom [GRAPHICS] A light-free room illuminated by a safelight for processing light-sensitive materials.

dark-ruby silver *See* pyrargyrite.

dark satellite [AERO ENG] Satellite that gives no information to a friendly ground environment, either because it is controlled or because the radiating equipment is inoperative.

dark segment [METEOROL] A bluish-gray band appearing along the horizon opposite the rising or setting sun and lying just below the antitwilight arch. Also known as earth's shadow.

dark space [ELECTR] A region in a glow discharge that produces little or no light.

dark spot [ELECTR] A spot on a television receiver tube that results from a spurious signal generated in the television camera tube during rescan, generally from the redistribution of secondary electrons over the mosaic in the tube.

dark star [ASTRON] A star that is not visible but is a part of a binary star system; in particular, a star which causes, in an eclipsing variable, a primary eclipse.

dark-trace tube [ELECTR] A cathode-ray tube with a bright face that does not necessarily luminesce, on which signals are displayed as dark traces or dark blips where the potassium chloride screen is hit by the electron beam. Also known as skiatron.

Darling shower [METEOROL] A dust storm caused by cyclonic winds in the vicinity of the River Darling in Australia.

Darlington amplifier [ELECTR] A current amplifier consisting essentially of two separate transistors and often mounted in a single transistor housing.

d'Arsonval current [ELEC] A current consisting of isolated trains of heavily damped high-frequency oscillations of high voltage and relatively low current, used in diathermy.

d'Arsonval galvanometer [ENG] A galvanometer in which a light coil of wire, suspended from thin copper or gold ribbons, rotates in the field of a permanent magnet when current is carried to it through the ribbons; the position of the coil is indicated by a mirror carried on it, which reflects a light beam onto a fixed scale. Also known as light-beam galvanometer.

dart [INV ZOO] A small sclerotized structure ejected from the dart sac of certain snails into the body of another individual as a stimulant before copulation.

dart configuration [AERO ENG] An aerodynamic configuration in which the control surfaces are at the tail of the vehicle.

dart leader [GEOPHYS] The leader which, after the first stroke, initiates each succeeding stroke of a composite flash of lightning. Also known as continuous leader.

dart sac [INV ZOO] A dart-forming pouch associated with the reproductive system of certain snails.

darwin [EVOL] A unit of evolutionary rate of change; if some dimension of a part of an animal or plant, or of the whole animal or plant, changes from l_o to l_t over a time of t years according to the formula $l_t = l_o \exp(Et/10^6)$, its evolutionary rate of change is equal to E darwins.

Darwin-Doodson system [GEOPHYS] A method for predicting tides by expressing them as sums of harmonic functions of time.

Darwin glass [GEOL] A highly siliceous, vesicular glass shaped in smooth blobs or twisted shreds, found in the Mt. Darwin range in western Tasmania. Also known as queenstownite.

Darwinism [BIOL] The theory of the origin and perpetuation of new species based on natural selection of those offspring best adapted to their environment because of genetic variation and consequent vigor. Also known as Darwin's theory.

Darwin's finch [VERT ZOO] A bird of the subfamily Fringillidae; Darwin studied the variation of these birds and used his data as evidence for his theory of evolution by natural selection.

Darwin's theory *See* Darwinism.

Darwinulacea [INV ZOO] A small superfamily of nonmarine, parthenogenetic ostracods in the suborder Podocopa.

Darzen's procedure [ORG CHEM] Preparation of alkyl halides by refluxing a molecule of an alcohol with a molecule of thionyl chloride in the presence of a molecule of pyridine.

Darzen's reaction [ORG CHEM] Condensation of aldehydes and ketones with α-haloesters to produce glycidic esters.

Dasayatidae [VERT ZOO] The stingrays, a family of modern sharks in the batoid group having a narrow tail with a single poisonous spine.

Dascillidae [INV ZOO] The soft-bodied plant beetles, a family of coleopteran insects in the superfamily Dascilloidea.

Dascilloidea [INV ZOO] Superfamily of coleopteran insects in the suborder Polyphaga.

dasheen [BOT] *Colocasia esculenta*. A plant in the order Arales, grown for its edible corm.

dashkesanite [MINERAL] $(Na,K)Ca_2(Fe,Mg)_5(Si,Al)_8O_{22}Cl_2$ A monoclinic mineral of the amphibole group consisting of a chloroaluminosilicate of sodium, potassium, iron, and magnesium.

dashpot [MECH ENG] A device used to dampen and control a motion, in which an attached piston is loosely fitted to move slowly in a cylinder containing oil.

Dasycladaceae [BOT] A family of green algae in the order Dasycladales comprising plants formed of a central stem from which whorls of branches develop.

Dasycladales [BOT] An order of lime-encrusted marine algae in the division Chlorophyta, characterized by a thallus composed of nonseptate, highly branched tubes.

dasymeter [PHYS] A thin glass globe used to measure the density of gas by weighing the globe in the gas.

Dasyonygidae [INV ZOO] A family of biting lice, order Mallophaga, that are confined to rodents of the family Procaviidae.

Dasypodidae [VERT ZOO] The armadillos, a family of edentate mammals in the infraorder Cingulata.

Dasytidae [INV ZOO] An equivalent name for Melyridae.

Dasyuridae [VERT ZOO] A family of mammals in the order Marsupialia characterized by five toes on each hindfoot.

Dasyuroidea [VERT ZOO] A superfamily of marsupial mammals.

data [COMPUT SCI] **1.** General term for numbers, letters, symbols, and analog quantities that serve as input for computer processing. **2.** Any representations of characters or analog quantities to which meaning, if not information, may be assigned. [SCI TECH] Numerical or qualitative values derived from scientific experiments.

data acquisition [COMMUN] The phase of data handling that begins with the sensing of variables and ends with a magnetic recording or other record of raw data; may include a complete radio telemetering link.

data acquisition computer [COMPUT SCI] A computer used to acquire and analyze data generated by instruments.

data aggregate [COMPUT SCI] The set of data items within a record.

data analysis [COMPUT SCI] The evaluation of digital data.

data automation [COMPUT SCI] The use of electronic, electromechanical, or mechanical equipment and associated techniques to automatically record, communicate, and process data and to present the resultant information.

data bank [COMPUT SCI] A complete collection of information such as contained in automated files, a library, or a set of computer disks. Also known as data base.

data base *See* data bank.

data-base machine [COMPUT SCI] A computer that handles the storage and retrieval of data into and out of a data base.

data-base management system [COMPUT SCI] A special data-processing system, or part of a data-processing system, which aids in the storage, manipulation, reporting, management, and control of data.

data break [COMPUT SCI] A facility which permits input/output transfers to occur without disturbing program execution in a computer.

data carrier [COMPUT SCI] A medium on which data can be recorded, and which is usually easily transportable, such as cards, tape, paper, or disks.

data carrier storage [COMPUT SCI] Any type of storage in which the storage medium is outside the computer, such as tape, cards, or disks, in contrast to inherent storage.

data cartridge [COMPUT SCI] A tape cartridge used for nonvolatile and removable data storage in small digital systems.

data cell drive [COMPUT SCI] A large-capacity storage device consisting of strips of magnetic tape which can be individually transferred to the read-write head.

data center [COMPUT SCI] An organization established primarily to acquire, analyze, process, store, retrieve, and disseminate one or more types of data.

data chain [COMPUT SCI] Any combination of two or more data elements, data items, data codes, and data abbreviations in a prescribed sequence to yield meaningful information; for example, "date" consists of data elements year, month, and day.

data chaining [COMPUT SCI] A technique used in scatter reading or scatter writing in which new storage areas are defined for use as soon as the current data transfer is completed.

data channel [COMPUT SCI] A bidirectional data path between input/output devices and the main memory of a digital computer permitting one or more input/output operations to proceed concurrently with computation.

data circuit [ELECTR] A telephone facility allowing transmission of digital data pulses with minimum distortion.

data code [COMPUT SCI] A number, letter, character, symbol, or any combination thereof, used to represent a data item.

data collection [COMPUT SCI] The process of sending data to a central point from one or more locations.

data communication network [COMPUT SCI] A set of nodes, consisting of computers, terminals, or some type of communication control units in various locations, connected by links consisting of communication channels providing a data path between the nodes.

data communications [COMMUN] The conveying from one location to another by electrical means of information that originates or is recorded in alphabetic, numeric, or pictorial form, or as a signal that represents a measurement; includes telemetering, telegraphy, and facsimile but not voice or television. Also known as data transmission.

data communications processor [COMPUT SCI] A small computer used to control the flow of data between machines and terminals over communications channels.

data compression [COMPUT SCI] Any means of increasing the quantity of data that can be stored in a given space, or decreasing the space needed to store a given quantity of data. Also known as compression.

data concentrator [ELECTR] A device, such as a microprocessor, that takes data from several different teletypewriter or other slow-speed lines and feeds them to a single higher-speed line.

data conversion [COMPUT SCI] The changing of the representation of data from one form to another, as from binary to decimal, or from one physical recording medium to another, as from card to disk. Also known as conversion.

data conversion line [COMPUT SCI] The channel, electronic or manual, through which data elements are transferred between data banks.

data converter *See* converter.

data dependence graph [COMPUT SCI] A chart that represents a program in a data flow language, in which each node is a function and each arc carries a value.

data descriptor [COMPUT SCI] A pointer indicating the memory location of a data item.

data dictionary [COMPUT SCI] A catalog containing the names and structures of all data types.

data display [COMPUT SCI] Visual presentation of processed data by specially designed electronic or electromechanical devices through interconnection (either on- or off-line) with digital computers or component equipments; although line printers and punch cards may display data, they are not usually categorized as displays but as output equipments.

data distribution [COMPUT SCI] Data transmission to one or more locations from a central point.

data division [COMPUT SCI] The section of a program (written in the COBOL language) which describes each data item used for input, output, and storage.

data-driven execution [COMPUT SCI] A mode of carrying out a program in a data flow system, in which an instruction is carried out whenever all its input values are present.

data element [COMPUT SCI] A set of data items pertaining to information of one kind, such as months of a year.

data encryption standard [COMMUN] A cryptographic algorithm of validated strength which is in the public domain and is accepted as a standard. Abbreviated DES.

data entry terminal [COMPUT SCI] A portable keyboard and small numeric display designed for interactive communication with a computer.

data error [COMPUT SCI] A deviation from correctness in data, usually an error, which occurred prior to processing the data.

data field [COMPUT SCI] An area in the main memory of the computer in which a data record is contained.

data flow [COMPUT SCI] The transfer of data from an external storage device, through the processing unit and memory, and out to an external storage device.

data flow language [COMPUT SCI] A programming language used in a data flow system.

data flow system [COMPUT SCI] An alternative to conventional programming languages and architectures which is able to achieve a high degree of parallel computation, in which values rather than value containers are dealt with, and in which all processing is achieved by applying functions to values to produce new values.

data formatting [COMPUT SCI] Structuring the presentation of data as numerical or alphabetic and specifying the size and type of each datum.

data generator [COMPUT SCI] A specialized word generator in which the programming is designed to test a particular class of device, the pulse parameters and timing are adjustable, and selected words may be repeated, reinserted later in the sequence, omitted, and so forth.

data-handling system [COMPUT SCI] Automatically operated equipment used to interpret data gathered by instrument installations. Also known as data-reduction system.

data independence [COMPUT SCI] Separation of data from processing, either so that changes in the size or format of the data elements require no change in the computer programs processing them or so that these changes can be made automatically by the data-base management system.

data-initiated control [COMPUT SCI] The automatic handling of a program dependent only upon the value of input data fed into the computer.

data interchange [COMPUT SCI] Switching of data in and out of storage units.

data item [COMPUT SCI] A single member of a data element. Also known as datum.

data level [COMPUT SCI] The rank of a data element in a source language with respect to other elements in the same record.

data library [COMPUT SCI] A center for the storage of data not in current use by the computer.

data link [COMMUN] The physical equipment for automatic transmission and reception of information. Also known as communication link; information link; tie line; tie-link.

data logging [COMPUT SCI] Conversion of electrical impulses from process instruments into digital data to be recorded, stored, and periodically tabulated.

data management [COMPUT SCI] The collection of functions of a control program that provide access to data sets, enforce data storage conventions, and regulate the use of input/output devices.

data management program [COMPUT SCI] A computer program that keeps track of what is in a computer system and where it is located, and of the various means to store and access the data efficiently.

data manipulation [COMPUT SCI] The standard operations of sorting, merging, input/output, and report generation.

datamation [COMPUT SCI] A shortened term for automatic data processing; taken from data and automation.

data move instruction [COMPUT SCI] An instruction in a computer program to transfer data between memory locations and registers or between the central processor and peripheral devices.

data name [COMPUT SCI] A symbolic name used to represent an item of data in a source program, in place of the address of the data item.

data organization [COMPUT SCI] Any one of the data-management conventions for physical and spatial arrangement of the physical records of a data set. Also known as data-set organization.

data origination [COMPUT SCI] The process of putting data in a form that can be read by a machine.

data plotter [COMPUT SCI] A device which plots digital information in a continuous fashion.

data processing [COMPUT SCI] Any operation or combination of operations on data, including everything that happens to data from the time they are observed or collected to the time they are destroyed. Also known as information processing.

data-processing center [COMPUT SCI] A computer installation providing data-processing service for others, sometimes called customers, on a reimbursable or nonreimbursable basis.

data-processing inventory [COMPUT SCI] An identification of all major data-processing areas in an agency for the purpose of selecting and focusing upon those in which the use of automatic data-processing (ADP) techniques appears to be potentially advantageous, establishing relative priorities and schedules for embarking on ADP studies, and identifying significant relationships among areas to pinpoint possibilities for the integration of systems.

data-processing machine [COMPUT SCI] A computer or a component of a data-processing system, such as a card reader or tape unit.

data processor [COMPUT SCI] **1.** Any device capable of performing operations on data, for instance, a desk calculator, an analog computer, or a digital computer. **2.** Person engaged in processing data.

data purification [COMPUT SCI] The process of removing as many inaccurate or incorrect items as possible from a mass of data before automatic data processing is begun.

data record [COMPUT SCI] A collection of data items related in some fashion and usually contiguous in location.

data reduction [COMPUT SCI] The transformation of raw data into a more useful form.

data-reduction system *See* data-handling system.

data retrieval [COMPUT SCI] The searching, selecting, and retrieving of actual data from a personnel file, data bank, or other file.

data rules [COMPUT SCI] Conditions which must be met by data to be processed by a computer program.

data security [COMPUT SCI] The protection of data against the deliberate or accidental access of unauthorized persons. Also known as file security.

data set [COMPUT SCI] **1.** A named collection of similar and related data records recorded upon some computer-readable medium. **2.** A data file in IBM 360 terminology.

data set coupler [COMPUT SCI] The interface between a parallel computer input-output bus and the serial input-output of a modem.

data set label [COMPUT SCI] A data element that describes a data set, and usually includes the name of the data set, its boundaries in physical storage, and certain characteristics of data items within the set.

data set migration [COMPUT SCI] The process of moving inactive data sets from on-line storage to back up storage in a time-sharing environment.

data-set organization *See* data organization.

data sink [COMPUT SCI] A memory or recording device capable of accepting data signals from a data transmission device and storing data for future use.

data source [COMPUT SCI] A device capable of originating data signals for a data transmission device.

data stabilization [ELECTR] Stabilization of the display of radar signals with respect to a selected reference, regardless of changes in radar-carrying vehicle attitude, as in azimuth-stabilized plan-position indicator.

data statement [COMPUT SCI] An instruction in a source program that identifies an item of data in the program and specifies its format.

data station [COMPUT SCI] A remote input/output device which handles a variety of transmissions to and from certain centralized computers.

data station control [COMPUT SCI] The supervision of a data station by means of a program resident in the central computer.

data structure [COMPUT SCI] A collection of data components that are constructed in a regular and characteristic way.

data system [COMPUT SCI] The means, either manual or automatic, of converting data into action or decision information, including the forms, procedures, and processes which together provide an organized and interrelated means of recording, communicating, processing, and presenting information relative to a definable function or activity.

data system interface [COMPUT SCI] **1.** A common aspect of two or more data systems involving the capability of intersystem communications. **2.** A common boundary between automatic data-processing systems or parts of a single system.

data systems integration [COMPUT SCI] Achievement through systems design of an improved or broader capability by functionally or technically relating two or more data systems, or by incorporating a portion of the functional or technical elements of one data system into another.

data system specifications [COMPUT SCI] **1.** The delineation of the objectives which a data system is intended to accomplish. **2.** The data-processing requirements underlying that accomplishment; includes a description of the data output, the data files and record content, the volume of data, the processing frequencies, training, and such other facts as may be necessary to provide a full description of the system.

data tablet *See* electronic tablet.

data tracks [COMPUT SCI] Information storage positions on drum storage devices; information is stored on the drum surface in the form of magnetized or nonmagnetized areas.

data transcription equipment [COMPUT SCI] Those devices or equipment designed to convey data from its original state to a data-processing media.

data transfer [COMPUT SCI] The technique used by the hardware manufacturer to transmit data from computer to storage device or from storage device to computer; usually under specialized program control.

data transmission *See* data communications.

data transmission equipment [COMPUT SCI] The communications equipment used in direct support of data-processing equipment.

data transmission line [ELEC] A system of electrical conductors, such as a coaxial cable or pair of wires, used to send information from one place to another or one part of a system to another.

data transmission-utilization measure [COMM] The ratio of useful data output to the sum total of data input.

data type [COMPUT SCI] The manner in which a sequence of bits represents data in a computer program.

data under voice [COMMUN] A telephone digital data service that allows digital signals to travel on the lower portion of the frequency spectrum of existing microwave radio systems; digital channels initially available handled speeds of 2.4, 4.8, 9.6, and 56 kilobits per second. Abbreviated DUV.

data unit [COMPUT SCI] A set of digits or characters treated as a whole.

data validation [COMPUT SCI] The checking of data for correctness, or the determination of compliance with applicable standards, rules, and conventions.

data word [COMPUT SCI] A computer word that is part of the

data which the computer is manipulating, in contrast with an instruction word. Also known as information word.

date time group [COMMUN] The date and time, expressed in digits and zone suffix, at which the message was prepared for transmission (expressed as six digits followed by the zone suffix; first pair of digits denoting the date, second pair the hours, third pair the minutes).

dating [SCI TECH] The use of methods and techniques to fix dates, assign periods of time, and determine age in archeology, biology, and geology.

dative bond *See* coordinate valence.

datolite [MINERAL] $CaBSiO_4(OH)$ A mineral nesosilicate crystallizing in the monoclinic system; luster is vitreous, and crystals are colorless or white with a greenish tinge.

datum [COMPUT SCI] *See* data item. [ENG] **1.** A direction, level, or position from which angles, heights, speeds or distances are conveniently measured. **2.** Any numerical or geometric quantity or value that serves as a base reference for other quantities or values (such as a point, line, or surface in relation to which others are determined). [GEOD] The latitude and longitude of an initial point; the azimuth of a line from this point. [GEOL] The top or bottom of a bed of rock on which structure contours are drawn.

datum level *See* datum plane.

datum line *See* reference line.

datum plane [ENG] A permanently established horizontal plane, surface, or level to which soundings, ground elevations, water surface elevations, and tidal data are referred. Also known as chart datum; datum level; reference level; reference plane.

datum point [MAP] Any reference point of known or assumed coordinates from which calculation or measurements may be taken.

Daubentoniidae [VERT ZOO] A family of Madagascan prosimian primates containing a single species, the aye-aye.

Daubenton's plane [ANTHRO] A plane passing through the opisthion and the orbital points on the skull.

daubreeite [MINERAL] $FeCr_2S_4$ A mineral composed of a black chromium iron sulfide; occurs in some meteors.

daughter [NUC PHYS] The immediate product of radioactive decay of an element, such as uranium. Also known as decay product; radioactive decay product.

Dauphine law [CRYSTAL] A twin law in which the twinned parts are related by a rotation of 180° around the *c* axis.

Davian [GEOL] A subdivision of the Upper Cretaceous in Europe; a limestone formation with abundant hydrocorals, bryozoans, and mollusks in Denmark; marine limestone and nonmarine rocks in southeastern France; and continental formations in the Davian of Spain and Portugal.

Davida [ASTRON] An asteroid with a diameter of about 280 kilometers, mean distance from the sun of 3.191 astronomical units, and C-type surface composition.

davidite [MINERAL] A black primary pegmatite uranium mineral of the general formula $A_6B_{15}(O,OH)_{36}$, where A = Fe^{2+}, rare earths, uranium, calcium, zirconium, and thorium, and B = titanium, Fe^{3+}, vanadium, and chromium.

Davidson Current [OCEANOGR] A coastal countercurrent of the Pacific Ocean running north, inshore of the California Current, along the western coast of the United States (from northern California to Washington to at least latitude 48°N) during the winter months.

daviesite [MINERAL] An orthorhombic mineral consisting of a lead oxychloride, occurring in minute crystals.

Davis correction [FL MECH] Empirical relation of flow-line diameters used to correct data calculated from the Atherton equation (friction loss in annular passages).

Davis magnetic tester [MIN ENG] An instrument used to determine the magnetic contents of ores.

davisonite [MINERAL] $Ca_3Al(PO_4)_2(OH)_3H_2O$ A white mineral consisting of a hydrous basic phosphate of calcium and aluminum.

Davisson-Germer experiment [QUANT MECH] The first experiment to demonstrate electron diffraction, in which a beam of electrons was directed at the surface of a nickel crystal, and the distribution of electrons scattered back from the crystal was measured by a Faraday cylinder.

Davis wing [AERO ENG] A narrow-chord wing that has comparatively low drag and a stable center of pressure and develops lift at relatively small angles of attack.

davit [NAV ARCH] A fixed or movable shipboard crane projecting over the side or over a hatchway, which hoists and lowers boats, anchors, or cargo.

Davy lamp [MIN ENG] An early safety lamp with a mantle of wire gauze around the flame to dissipate the heat from the flame to below the ignition temperature of methane.

Dawes' limit [OPTICS] The resolving power of a telescope, limited by diffraction effects, is $4.5/a$ seconds of arc, where a is the aperture in inches.

dawn [ASTRON] The first appearance of light in the eastern sky before sunrise, or the time of that appearance. Also known as daybreak.

dawn side [ASTRON] That side of a celestial object, such as a planet, which points in the direction of its orbital movement.

Dawsoniales [BOT] An order of mosses comprising rigid plants with erect stems rising from a rhizomelike base.

dawsonite [MINERAL] $NaAl(OH)_2CO_3$ A white, bladed mineral found in certain oil shales that contains large quantities of alumina; specific gravity is 2.40.

day [ASTRON] One of various units of time equal to the period of rotation of the earth with respect to one or another direction in space; specific examples are the mean solar day and the sidereal day.

day beacon [NAV] An unlighted structure serving as an aid to navigation in the daytime.

daybreak *See* dawn.

day clock [COMPUT SCI] An internal binary counter, with a resolution usually of a microsecond and a cycle measured in years, providing an accurate measure of elapsed time independent of system activity.

day drift [MIN ENG] A mine passageway that has one end at the surface.

dayglow [ASTRON] Airglow of the day sky.

daylight [ASTRON] Light of the day, from sun and sky.

daylight controls [ENG] Special devices which automatically control the electric power to the lamp, causing the light to operate during hours of darkness and to be extinguished during daylight hours.

daylight glass [MATER] A glass that absorbs red light; used in incandescent lamps to remove excess red emission so that the light spectrum resembles natural daylight.

daylighting [CIV ENG] To light an area with daylight.

daylight lamp [ELEC] An incandescent or fluorescent lamp that emits light whose spectral distribution is approximately that of daylight.

daylight opening [ENG] The space between two press platens when open.

daylight saving meridian [ASTRON] The meridian used for reckoning daylight saving time; generally 15° east of the zone of standard meridian.

daylight saving noon [ASTRON] Twelve o'clock daylight saving time, or the instant the mean sun is over the upper branch of the daylight saving meridian; during a war, when daylight saving time may be used throughout the year and called war time, the expression war noon applies. Also known as summer noon.

daylight saving time [ASTRON] A variation of zone time, usually 1 hour more advanced than standard time, frequently kept during the summer to make better use of daylight. Also known as summer time.

daymark [NAV] The daytime-identifying characteristics of an aid to navigation, unique and distinctive to facilitate its recognition; a conspicuous target added to a day beacon or light.

day neutral [BOT] Reaching maturity regardless of relative length of light and dark periods.

Day's multiplexing system [COMMUN] A system of phase-discrimination multiplexing applicable to pairs of channels; used to multiplex the two so-called color components in color television broadcasting.

day's run [NAV] The distance traveled by a vessel in 1 day, usually reckoned from noon to noon.

day's work [NAV] In marine operations, the daily routine of the navigation of a vessel at sea, usually consisting principally of the dead reckoning from noon to noon, evening and morning twilight observations, a morning sun observation for a line of position and for checking the compass, and a sun observation at or near noon to obtain a running fix.

day wage [IND ENG] A fixed rate of pay per shift or per daily hours of work, irrespective of the amount of work completed.

dazomet [ORG CHEM] $C_5H_{10}N_2S_2$ A white, crystalline compound that decomposes at 100°C; used as an herbicide and

nematicide for soil fungi and nematodes, weeds, and soil insects. Also known as tetrahydro-3,5-dimethyl-2*H*-1,3,5-thiadiazine-6-thione.

dB *See* decibel.

dBa *See* adjusted decibel.

DBCP *See* dibromochloropropane.

dBf *See* decibels above 1 femtowatt.

dBk *See* decibels above 1 kilowatt.

dBm *See* decibels above 1 milliwatt.

dBp *See* decibels above 1 picowatt.

dBrn *See* decibels above reference noise.

dBV *See* decibels above 1 volt.

dBW *See* decibels above 1 watt.

dBx *See* decibels above reference coupling.

dc *See* direct current.

D cable [ELEC] Two-conductor cable, each conductor having the shape of the letter D, with insulation between the conductors and between the conductors and the sheath.

DCB *See* 1,4-dichlorobutane.

DCC *See* dicyclohexylcarbodiimide.

dc casting *See* direct-chill casting.

DCCI *See* dicyclohexylcarbodiimide.

4-D chart [METEOROL] A chart showing the field of D values (deviations of the actual altitudes along a constant-pressure surface from the standard atmosphere altitude of that surface) in terms of the three dimensions of space and one of time; it is a form of a four-dimensional display of pressure altitude; the space dimensions are represented by D-value contours, and the time dimension is provided by tau-value lines.

DCNA *See* 2,6-dichloro-4-nitroaniline.

DCPA *See* dimethyl-2,3,5,6-tetrachloroterephthalate.

DCTL *See* direct-coupled transistor logic.

dc-to-ac converter *See* inverter.

dc-to-ac inverter *See* inverter.

dc-to-dc converter [ELEC] An electronic circuit which converts one direct-current voltage into another, consisting of an inverter followed by a step-up or step-down transformer and rectifier.

dcwv *See* direct-current working volts.

DDA *See* digital differential analyzer.

DDA value *See* depth-duration-area value.

DDBS *See* Digital Data Broadcast System.

DDD *See* 2,2-bis(*para*-chlorophenyl)-1,1-dichloroethane.

D display [ELECTR] In radar, a C display in which the blips extend vertically to give a rough estimate of distance.

DDS *See* digital data service.

DDT [ORG CHEM] Common name for an insecticide; melting point 108.5°C, insoluble in water, very soluble in ethanol and acetone, colorless, and odorless; especially useful against agricultural pests, flies, lice, and mosquitoes. Also known as dichlorodiphenyltrichloroethane.

DDTA *See* derivative differential thermal analysis.

DDVP *See* dichlorvos.

DEA *See* diethanolamine.

deaccentuator [ELECTR] A circuit used in a frequency-modulation receiver to offset the preemphasis of higher audio frequencies introduced at the transmitter.

deacetylate [ORG CHEM] The removal of an acetyl grouping from a molecule.

deacidify [CHEM] **1.** Removal of acid. **2.** A process of reducing acidity.

Deacon process [CHEM ENG] A method of chlorine production by passing a hot mixture of gaseous hydrochloric acid with oxygen over a cuprous chloride catalyst.

deactivation [CHEM] **1.** Rendering inactive, as of a catalyst. **2.** Loss of radioactivity. [MET] Chemical removal of the active constituents of a corrosive liquid. [MIN ENG] Treatment of one or more species of mineral particles to reduce floating during froth flotation.

dead [ELEC] Free from any electric connection to a source of potential difference from electric charge; not having a potential different from that of earth; the term is used only with reference to current-carrying parts which are sometimes alive or charged. [GEOL] In economic geology, designating a region with no economic value. [MIN ENG] An area of subsidence that has totally settled and is not likely to move.

dead ahead [NAV] In marine operations, a position directly ahead of the ship; a bearing relative 000°.

dead air [MIN ENG] Air in a mine when it is stagnant or contains carbonic acid.

dead-air space [BUILD] A sealed air space, such as in a hollow wall.

dead area *See* blind spot.

dead arm [PL PATH] A fungus disease caused by *Cryptosporella viticola* in which the main lateral shoots are destroyed; common in grapes.

dead astern [NAV] In marine navigation, a bearing 180° relative; if the bearing is approximate, the term astern should be used. Also known as right astern.

dead axle [MECH ENG] An axle that carries a wheel but does not drive it.

dead band [ELEC] The portion of a potentiometer element that is shortened by a tap; when the wiper traverses this area, there is no change in output. [ENG] The range of values of the measured variable to which an instrument will not effectively respond. Also known as dead zone; neutral zone.

deadbeat [MECH] Coming to rest without vibration or oscillation, as when the pointer of a meter moves to a new position without overshooting. Also known as deadbeat response.

deadbeat algorithm [CONT SYS] A digital control algorithm which attempts to follow set-point changes in minimum time, assuming that the controlled process can be modeled approximately as a first-order plus dead-time system.

deadbeat compass *See* aperiodic compass.

deadbeat escapement [HOROL] A watch escapement without recoil, having arresting faces of the pallets described by a circular arc whose center is at the pivot point of the anchor; escape-wheel teeth are contoured to give impulses to these pallet faces, over which they slide without recoil.

deadbeat response *See* deadbeat.

dead block [ENG] A device placed on the ends of railroad passenger cars to absorb the shock of impacts.

dead bolt [DES ENG] A lock bolt that is moved directly by the turning of a knob or key, not by spring action.

dead-bright [MET] Of a metal, polished to remove tool marks.

dead-burn [MIN ENG] A calcination to produce a dense refractory substance; done at a higher temperature and for a longer time than for normal calcination.

dead-burnt gypsum *See* anhydrous calcium sulfate.

dead cave [GEOL] A cave where there is no moisture or no growth of mineral deposits associated with moisture.

dead center [MECH ENG] **1.** A position of a crank in which the turning force applied to it by the connecting rod is zero; occurs when the crank and rod are in a straight line. **2.** A support for the work on a lathe which does not turn with the work.

dead-center position [ELEC] Position in which a brush would be placed on the commutator of a direct-current motor or generator if the field flux were not distorted by armature reaction.

dead earth [ELEC] A connection between a line conductor and earth by means of a path of low resistance.

dead end [ACOUS] The end of a sound studio that has the greater sound-absorbing characteristics. [ELEC] The portion of a tapped coil through which no current is flowing at a particular switch position. [SCI TECH] The end of a conduit, passage, power line, or similar system having no exit or continuation.

dead-end effect [ELEC] Absorption of energy by unused portions of a tapped coil.

dead-end switch [ELEC] A switch used to short-circuit unused portions of a tapped coil to prevent dead-end effects.

dead-end tower [CIV ENG] Antenna or transmission line tower designed to withstand unbalanced mechanical pull from all the conductors in one direction together with the wind strain and vertical loads.

deadeye [NAV ARCH] A flat, rounded wooden block usually pierced with three holes to receive the lanyard; used to fasten shrouds and stays.

dead flat [NAV ARCH] A portion of length in the middle of a ship in which all sections have the same shape. Also known as parallel middle body.

dead ground [ELEC] A low-resistance connection between the ground and an electric circuit.

dead halt *See* drop-dead halt.

deadhead [MET] The portion of a casting that fills up the ingate. [MIN ENG] To begin a new cut without excavating the material from the preceding cut.

deadlight [NAV ARCH] **1.** A strong plate or a cover with light-

obstructing baffles fitted over ventilation ports or windows in stormy weather. **2.** A strong glass or plastic window set in the deck or side of a ship to admit light.

deadline [PETRO ENG] The end of the drilling line that is not reeled on the hoisting drum of the rotary rig; usually it is anchored to the derrick substructure and does not move as the traveling block is hoisted.

dead load *See* static load.

deadlock [COMPUT SCI] A situation in which a task in a multiprogramming system cannot proceed because it is waiting for an event that will never occur. Also known as deadly embrace; interlock; knot.

deadlocking latch bolt *See* auxiliary dead latch.

deadly embrace *See* deadlock.

deadly nightshade *See* belladonna.

deadman [CIV ENG] **1.** A buried plate, wall, or block attached at some distance from and forming an anchorage for a retaining wall. Also known as anchorage; anchor block; anchor wall. **2.** *See* anchor log.

deadman's brake [MECH ENG] An emergency device that automatically is activated to stop a vehicle when the driver removes his foot from the pedal.

deadman's handle [MECH ENG] A handle on a machine designed so that the operator must continuously press on it in order to keep the machine running.

dead oil [MATER] An oil, of density greater than water, distilled from tar.

dead rail [CIV ENG] One of two rails on a railroad weighing platform that permit an excessive load to leave the platform.

dead reckoning [NAV] Determination of position of a craft by advancing a previous position to a new one on the basis of assumed distance and direction traveled.

dead-reckoning analyzer *See* dead-reckoning equipment.

dead-reckoning equipment [NAV] A computing device which continuously indicates the dead-reckoning position of a craft, vessel, or vehicle and which may provide a graphical record of the dead-reckoning track. Also known as dead-reckoning analyzer.

dead-reckoning plot [NAV] **1.** In marine navigation, the graphic plot of consecutive course lines representing courses steered or planned to be steered, originating from a fix or running fix position, and suitably labeled as to course, speeds, and times of periodic dead-reckoning positions. **2.** In air navigation, the graphic plot of track and ground speed, suitably labeled. Also known as ground plot.

dead-reckoning position [NAV] A position determined by advancing a known position of the past to the position of the present time by adding one or more vectors representing known or assumed speed, bearing, and wind or current.

dead-reckoning tracer [NAV] A mechanical device used to produce a continuous plot of all ships within range of a ship's radar.

dead-reckoning track [NAV] A line representing successive dead-reckoning positions of a craft. Also known as DR track line.

dead-rise [NAV ARCH] The vertical distance between the bottom of a vessel's keel and the intersection of a line drawn along the bottom of a vessel's midship section with a vertical line tangent to the widest part of the underwater body. Also known as rise of bottom; rise of floor.

dead rising [NAV ARCH] In a wooden ship's profile or sheer plan, a curved fore-and-aft line that passes through the upper end of the floor timbers.

dead-roast [MIN ENG] **1.** A roasting process for driving off sulfur. Also known as sweet roast. **2.** Removing volatiles by roasting within a specified temperature range.

dead room *See* anechoic chamber.

dead sea [HYD] A body of water that has undergone precipitation of its rock salt, gypsum, or other evaporites.

Dead Sea [GEOGR] A salt lake between Jordan and Israel.

dead short [ELEC] A short-circuit path that has extremely low resistance.

dead soft steel [MET] **1.** Steel very low in carbon. **2.** Steel annealed until it is very soft.

dead space [ANAT] The space in the trachea, bronchi, and other air passages which contains air that does not reach the alveoli during respiration, the amount of air being about 140 milliliters. Also known as anatomical dead space. [MED] A cavity left after closure of a wound. [PHYSIO] A calculated expression of the anatomical dead space plus whatever degree of overventilation or underperfusion is present; it is alleged to reflect the relationship of ventilation to pulmonary capillary perfusion. Also known as physiological dead space. [THERMO] A space filled with gas whose temperature differs from that of the main body of gas, such as the gas in the capillary tube of a constant-volume gas thermometer.

dead spot [COMMUN] A geographic location in which signals from a radio, television, or radar transmitter are received poorly or not at all. [ELECTR] A portion of the tuning range of a receiver in which stations are heard poorly or not at all, due to improper design of tuning circuits.

dead stick [AERO ENG] The propeller of an airplane that is not rotating because the engine has stopped.

dead-stroke [MECH ENG] Having a recoilless or nearly recoilless stroke.

dead-stroke hammer [MECH ENG] A power hammer provided with a spring on the hammer head to reduce recoil.

dead time [CONT SYS] The time interval between a change in the input signal to a process control system and the response to the signal. [ENG] The time interval, after a response to one signal or event, during which a system is unable to respond to another. Also known as insensitive time.

dead-time compensation [CONT SYS] The modification of a controller to allow for time delays between the input to a control system and the response to the signal.

dead-time correction [ENG] A correction applied to an observed counting rate to allow for the probability of the occurrence of events within the dead time. Also known as coincidence correction.

dead track [CIV ENG] **1.** Railway track that is no longer used. **2.** A section of railway track that is electrically isolated from the track signal circuits.

dead water [OCEANOGR] The mass of eddying water associated with formation of internal waves near the keel of a ship; forms under a ship of low propulsive power when it negotiates water which has a thin layer of fresher water over a deeper layer of more saline water.

deadweight capacity *See* deadweight tonnage.

deadweight gage [ENG] An instrument used as a standard for calibrating pressure gages in which known hydraulic pressures are generated by means of freely balanced (dead) weights loaded on a calibrated piston.

deadweight tonnage [NAV ARCH] The total carrying capacity of a ship expressed in long tons (2240 pounds); displacement of a fully loaded ship, less the weight of the ship itself. Abbreviated dwt. Also known as deadweight capacity.

dead work [MIN ENG] Preparatory work which is for future operations and not directly productive.

dead zone *See* dead band.

dead zone unit [COMPUT SCI] An analog computer device that maintains an output signal at a constant value over a certain range of values of the input signal.

DEAE-cellulose *See* diethylaminoethyl cellulose.

deaeration [ENG] Removal of gas or air from a substance, as from feedwater or food.

deaerator [MECH ENG] A device in which oxygen and carbon dioxide are removed from boiler feedwater.

deafness [MED] Temporary or permanent impairment or loss of hearing.

deagglomeration [CHEM ENG] Size-reduction process in which loosely adhered clumps (agglomerates) of powders or crystals are broken apart without further disintegration of the powder or crystal particles themselves.

deaister *See* doister.

deal [DES ENG] **1.** A face on which numbers are registered by means of a pointer. **2.** A disk usually with a series of markings around its border, which can be turned to regulate the operation of a machine or electrical device.

dealkalize [CHEM] **1.** The removal of alkali. **2.** The reduction of alkalinity as in the neutralization process.

dealkylate [CHEM] To remove alkyl groups from a compound.

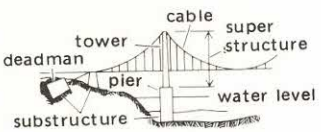
dealuminization [CHEM] Removal of aluminum.

deamidase [BIOCHEM] An enzyme that catalyzes the removal of an amido group from a compound.

deamidate [ORG CHEM] Removal from a molecule of the amido group.

deaminase [BIOCHEM] An enzyme that catalyzes the hydrolysis of amino compounds, removing the amino group.

DEADMAN



A drawing of a bridge showing buried block used as a deadman.

deaminate [ORG CHEM] Removal from a molecule of the amino group.

Dean number [FL MECH] A dimensionless number giving the ratio of the viscous force acting on a fluid flowing in a curved pipe to the centrifugal force; equal to the Reynolds number times the square root of the ratio of the radius of the pipe to its radius of curvature. Symbolized N_D.

deanol *See* 2-dimethylaminoethanol.

deashing [CHEM] A form of deionization in which inorganic salts are removed from solution by the adsorption of both the anions and cations by ion-exchange resins.

deasphalting [CHEM ENG] The process of removing asphalt from petroleum fractions.

death [MED] Cessation of all life functions; can involve the whole organism, an organ, individual cells, or cell parts.

death assemblage *See* thanatocoenosis.

death instinct [PSYCH] In psychoanalytic theory, the unconscious drive which leads the individual toward dissolution and death, and which coexists with the life instinct.

death point [PHYSIO] The limit (as of extremes of temperature) beyond which an organism cannot survive.

death rate *See* mortality rate.

debatable time [COMPUT SCI] In the keeping of computer usage statistics, time that cannot be attributed with certainty to any one of various categories of computer use.

debenzylation [ORG CHEM] Removal from a molecule of the benzyl group.

de Beurmann–Gougerot disease *See* sporotrichosis.

deblocking [COMPUT SCI] Breaking up a block of records into individual records.

deblooming [CHEM ENG] The process by which the fluorescence, or bloom, is removed from petroleum oils by exposing them in shallow tanks to the sun and atmospheric conditions or by using chemicals.

Deborah number [MECH] A dimensionless number used in rheology, equal to the relaxation time for some process divided by the time it is observed. Symbolized D.

debossed [GRAPHICS] Having a depressed pattern on the surface of a material.

Debot effect [GRAPHICS] A variation of the Herschel effect, in which red or infrared radiation converts an internal latent image into a surface latent image.

debriefing [AERO ENG] The relating of factual information by a flight crew at the termination of a flight, consisting of flight weather encountered, the condition of the aircraft, or facilities along the airways or at the airports.

debris [GEOL] Large fragments arising from disintegration of rocks and strata.

debris avalanche [GEOL] The sudden and rapid downward movement of incoherent mixtures of rock and soil on deep slopes.

debris cone [GEOL] **1.** A mound of ice or snow on a glacier covered with a thin layer of debris. **2.** *See* alluvial cone.

debris dam [CIV ENG] A fixed dam that is built across a stream channel for the retention of sand, gravel, driftwood, or other debris.

debris fall [GEOL] A relatively free downward or forward falling of unconsolidated or poorly consolidated earth or rocky debris from a cliff, cave, or arch.

debris flow [GEOL] A variety of rapid mass movement involving the downslope movement of high-density coarse clast-bearing mudflows, usually on alluvial fans.

debris glacier [HYD] A glacier formed from ice fragments that have fallen from a larger and taller glacier.

debris line *See* swash mark.

debris slide [GEOL] A type of landslide involving a rapid downward sliding and forward rolling of comparatively dry, unconsolidated earth and rocky debris.

debris slope *See* talus slope.

de Broglie equation *See* de Broglie relation.

de Broglie relation [QUANT MECH] The relation in which the de Broglie wave associated with a free particle of matter, and the electromagnetic wave in a vacuum associated with a photon, has a wavelength equal to Planck's constant divided by the particle's momentum and a frequency equal to the particle's energy divided by Planck's constant. Also known as de Broglie equation.

de Broglie's theory [QUANT MECH] The theory that particles of matter have wavelike properties which can give rise to interference effects, and electrons in an atom are associated with standing waves on a Bohr orbit.

de Broglie wave [QUANT MECH] The quantum-mechanical wave associated with a particle of matter. Also known as matter wave.

de Broglie wavelength [QUANT MECH] The wavelength of the wave associated with a particle as given by the de Broglie relation.

debromoaplysiatoxin [BIOCHEM] A bislactone toxin related to aplysiatoxin and produced by the blue-green alga *Lyngbya majuscula*.

de Brun–van Eckstein rearrangement [ORG CHEM] The isomerization of an aldose or ketose when mixed with aqueous calcium hydroxide to form a mixture of various monosaccharides and unfermented ketoses; used to prepare certain ketoses.

debubblizer [ENG] A worker who removes bubbles from plastic rods and tubing.

debug [COMPUT SCI] To test for, locate, and remove mistakes from a program or malfunctions from a computer. [ELECTR] To detect and remove secretly installed listening devices popularly known as bugs. [ENG] To eliminate from a newly designed system the components and circuits that cause early failures.

debugging routine [COMPUT SCI] A routine to aid programmers in the debugging of their routiness; some typical routines are storage printout, tape printout, and drum printout routines.

debugging statement [COMPUT SCI] Temporary instructions inserted into a program being tested so as to pinpoint problem areas.

debug on-line [COMPUT SCI] **1.** To detect and correct errors in a computer program by using only certain parts of the hardware of a computer, while other routines are being processed simultaneouly. **2.** To detect and correct errors in a program from a console distant from a computer in a multiaccess system.

debunching [ELECTR] A tendency for electrons in a beam to spread out both longitudinally and transversely due to mutual repulsion; the effect is a drawback in velocity modulation tubes.

deburr [MET] To remove burrs, sharp edges, or fins from metal parts by placing them in a revolving barrel containing abrasives suspended in a liquid.

debutanization [CHEM ENG] Removal of butane and lighter components in a natural-gasoline plant.

debutanizer [CHEM ENG] The fractionating column in a natural-gasoline plant in which butane and lighter components are removed.

debye [ELEC] A unit of electric dipole moment, equal to 10^{-18} Franklin centimeter.

Debye effect [ELECTROMAG] Selective absorption of electromagnetic waves by a dielectric, due to molecular dipoles.

Debye equation [SOLID STATE] The equation for the Debye specific heat, which satisfies the Dulong and Petit law at high temperatures and the Debye T^3 law at low temperatures.

Debye equation for polarization [STAT MECH] Langevin-Debye formula for the polarization of a dielectric material, relating the total polarization for n molecules to the permanent moment of the specific molecule and its polarizability.

Debye-Falkenhagen effect [PHYS CHEM] The increase in the conductance of an electrolytic solution when the applied voltage has a very high frequency.

Debye force *See* induction force.

Debye frequency [SOLID STATE] The maximum allowable frequency in the computation of the Debye specific heat.

Debye-Hückel screening radius *See* Debye shielding length.

Debye-Hückel theory [PHYS CHEM] A theory of the behavior of strong electrolytes, according to which each ion is surrounded by an ionic atmosphere of charges of the opposite sign whose behavior retards the movement of ions when a current is passed through the medium.

Debye-Jauncey scattering [SOLID STATE] Incoherent background scattering of x-rays from a crystal in directions between those of the Bragg reflections.

Debye length *See* Debye shielding length.

Debye potentials [ELECTROMAG] Two scalar potentials, designated Π_e and Π_m, in terms of which one can express the electric and magnetic fields resulting from radiation or scattering of electromagnetic waves by a distribution of localized sources in a homogeneous isotropic medium.

Debye relaxation time [PHYS CHEM] According to the Debye-Hückel theory, the time required for the ionic atmosphere of a charge to reach equilibrium in a current-carrying electrolyte, during which time the motion of the charge is retarded.

Debye-Scherrer method [SOLID STATE] An x-ray diffraction method in which the sample, consisting of a powder stuck to a thin fiber or contained in a thin-walled silica tube, is rotated in a monochromatic beam of x-rays, and the diffraction pattern is recorded on a cylindrical film whose axis is parallel to the axis of rotation of the sample.

Debye-Sears ultrasonic cell [ACOUS] A process in ultrasonic imaging for which the acoustic wavefronts act as optical gratings to diffract the light on either side of the central spot.

Debye shielding length [PL PHYS] A characteristic distance in a plasma beyond which the electric field of a charged particle is shielded by particles having charges of the opposite sign. Also known as Debye-Hückel screening radius; Debye length; shielding distance.

Debye specific heat [SOLID STATE] The specific heat of a solid under the assumption that the energy of the lattice arises entirely from acoustic lattice vibration modes which all have the same sound velocity, and that frequencies are cut off at a maximum such that the total number of modes equals the number of degrees of freedom of the solid.

Debye T^3 law [SOLID STATE] The law that the specific heat of a solid at constant volume varies as the cube of the absolute temperature T at temperatures which are small with respect to the Debye temperature.

Debye temperature [SOLID STATE] The temperature Θ arising in the computation of the Debye specific heat, defined by $k\Theta = h\nu$, where k is the Boltzmann constant, h is Planck's constant, and ν is the Debye frequency. Also known as characteristic temperature.

Debye-Waller factor [SOLID STATE] A reduction factor for the intensity of coherent (Bragg) scattering of x-rays, neutrons, or electrons by a crystal, arising from thermal motion of the atoms in the lattice.

deca- [SCI TECH] A prefix denoting 10.

decaborane (14) [INORG CHEM] $B_{10}H_{14}$ A binary compound of boron and hydrogen that is relatively stable at room temperature; melting point 99.5°C, boiling point 213°C.

decade [ELEC] A group or assembly of 10 units; for example, a decade counter counts 10 in one column, and a decade box inserts resistance quantities in multiples of powers of 10. [SCI TECH] The interval between any two quantities having the ratio of 10 to 1.

decade box [ELEC] An assembly of precision resistors, coils, or capacitors whose individual values vary in submultiples and multiples of 10; by appropriately setting a 10-position selector switch for each section, the decade box can be set to any desired value within its range.

decade bridge [ELECTR] Electronic apparatus for measurement of unknown values of resistances or capacitances by comparison with known values (bridge); one secondary section of the oscillator-driven transformer is tapped in decade steps, the other in 10 uniform steps.

decade counter *See* decade scaler.

decade scaler [ELECTR] A scaler that produces one output pulse for every 10 input pulses. Also known as counter decade; decade counter; scale-of-ten circuit.

decagon [MATH] A 10-sided polygon.

decahedron [MATH] A polyhedron that has 10 faces.

decahydrate [CHEM] A compound that has 10 water molecules.

decahydronaphthalene [ORG CHEM] $C_{10}H_{18}$ A liquid hydrocarbon, used in some paints and lacquers as a solvent.

decalcification [CHEM] Loss or removal of calcium or calcium compounds from a calcified material such as bone or soil.

decalescence [MET] Darkening of a metal surface due to isothermal absorption of the latent heat of phase transformation.

decaliter [MECH] A unit of volume, equal to 10 liters, or to 0.01 cubic meter.

decameter [MECH] A unit of length in the metric system equal to 10 meters.

decametric wave [ELECTROMAG] British term for a radio wave ranging from 10 to 100 meters long.

decanal *See* decyl aldehyde.

decane [ORG CHEM] $C_{10}H_{22}$ Any of several saturated aliphatic hydrocarbons, especially $CH_3(CH_2)_8CH_3$.

decanedioic acid *See* sebacic acid.

decanning [NUCLEO] Removing the outer container of an enriched uranium fuel rod, in preparation for reprocessing of the fuel.

***n*-decanoic acid** *See* capric acid.

decanol *See* decyl alcohol.

decantation [ENG] A method for mechanical dewatering of a wet solid by pouring off the liquid without disturbing underlying sediment or precipitate.

decanter [ENG] Tank or vessel in which solids or immiscible dispersions in a carrier liquid settle or coalesce, with clear upper liquid withdrawn (decanted) as overflow from the top.

decanth larva *See* lycophore larva.

Decapoda [INV ZOO] **1.** A diverse order of the class Crustacea including the shrimps, lobsters, hermit crabs, and true crabs; all members have a carapace, well-developed gills, and the first three pairs of thoracic appendages specialized as maxillipeds. **2.** An order of dibranchiate cephalopod mollusks containing the squids and cuttle fishes, characterized by eight arms and two long tentacles.

decarbonize [CHEM] To remove carbon by chemical means.

decarboxycysteine *See* 2-aminoethanethiol.

decarboxylase [BIOCHEM] An enzyme that hydrolyzes the carboxyl radical, COOH.

decarboxylate [ORG CHEM] To remove the carboxyl radical, especially from amino acids and protein.

decarburize [MET] To remove carbon from the surface of a ferrous alloy, particularly steel, by heating in a medium that reacts with carbon.

decastere [MECH] A unit of volume, equal to 10 cubic meters.

decating [TEXT] A finishing process in which fabric is sponged or steamed in rollers to set the width and length as well as to achieve smoothness. Also known as decatizing.

decatizing *See* decating.

decatoic acid *See* capric acid.

decatyl alcohol *See* decyl alcohol.

decay [GEOCHEM] *See* chemical weathering. [MATER] To undergo decomposition. [NUC PHYS] *See* radioactive decay. [OCEANOGR] In ocean-wave studies, the loss of energy from wind-generated ocean waves after they have ceased to be acted on by the wind; this process is accompanied by an increase in length and a decrease in height of the wave. [PHYS] Gradual reduction in the magnitude of a quantity, as of current, magnetic flux, a stored charge, or phosphorescence.

decay area [OCEANOGR] The area into which ocean waves travel (as swell) after leaving the generating area.

decay chain *See* radioactive series.

decay coefficient *See* decay constant.

decay constant [PHYS] The constant c in the equation $I = I_0e^{-ct}$, for the time dependence of rate of decay of a radioactive species; here, I is the number of disintegrations per unit time. Also known as decay coefficient; disintegration constant; radioactive decay constant; transformation constant.

decay curve [NUC PHYS] A graph showing how the activity of a radioactive sample varies with time; alternatively, it may show the amount of radioactive material remaining at any time.

decay distance [OCEANOGR] The distance through which ocean waves pass after leaving the generating area.

decay family *See* radioactive series.

decay gammas [NUC PHYS] The characteristic gamma rays emitted during the decay of most radioisotopes.

decay heat [NUCLEO] Heat produced by the decay of radioactive nuclides.

decay mode [NUC PHYS] A possible type of decay of a radionuclide or elementary particle.

decay of waves [OCEANOGR] The decrease in height and increase in length of waves after leaving a generating area and passing through a calm,or region of lighter winds.

decay product *See* daughter.

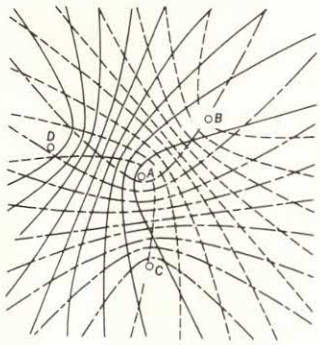
decay rate [NUC PHYS] The time rate of disintegration of radioactive material, generally accompanied by emission of particles or gamma radiation.

decay series *See* radioactive series.

decay time [PHYS] The time taken by a quantity to decay to a stated fraction of its initial value; the fraction is commonly $1/e$. Also known as storage time (deprecated).

Decca [NAV] A hyperbolic navigation system which establishes a line of position from measurement of the phase difference between two continuous-wave signals; the intersection

DECCA CHART



Decca station locations and lines of position. *A* is master station and *B*, *C*, and *D* are slave stations. *(From P. C. Sandretto, Electronic Avigation Engineering, International Telephone and Telegraph Corp., 1958)*

of the two lines of position from two pairs of transmitting stations establishes a navigational fix, or location.

Decca chain [NAV] A system or combination of three slave radio transmitting stations disposed about a master Decca station. Also known as star chain.

Decca chart [NAV] A chart showing Decca lines of position.

Deccan basalt [GEOL] Fine-grained, nonporphyritic, tholeiitic basaltic lava consisting essentially of labradorite, clinopyroxene, and iron ore; found in the Deccan region of southeastern India. Also known as Deccan trap.

Deccan trap *See* Deccan basalt.

decelerating electrode [ELECTR] Of an electron-beam tube, an electrode to which a potential is applied to decrease the velocity of the electrons in the beam.

deceleration [MECH] The rate of decrease of speed of a motion.

deceleration parachute *See* drogue.

deceleration time [COMPUT SCI] For a storage medium, such as magnetic tape that must be physically moved in order for reading or writing to take place, the minimum time that must elapse between the completion of a reading or writing operation and the moment that motion ceases. Also known as stop time.

decelerometer [ENG] An instrument that measures the rate at which the speed of a vehicle decreases.

deceleron [AERO ENG] A lateral control surface of an airplane that is divided so as to combine the functions of an airbrake and an aileron.

December solstice [ASTRON] Winter solstice in the Northern Hemisphere.

decentered lens [OPTICS] A lens whose optical center does not coincide with the geometrical center of the rim of the lens; has the effect of a lens combined with a weak prism.

decentralized data processing [COMPUT SCI] An arrangement comprising a data-processing center for each division or location of a single organization.

deception [ELECTR] The deliberate radiation, reradiation, alteration, absorption, or reflection of electromagnetic energy in a manner intended to mislead an enemy in the interpretation of information received by his electronic systems.

decerebellate [MED] Lacking the cerebellum, generally by experimental removal.

decerebrate [MED] Lacking the cerebrum either by experimental removal or by disconnection.

decerebrate rigidity [MED] Exaggerated postural tone in the antigravity muscles due to release of vestibular nuclei from cerebral control.

dechlorination [CHEM] Removal of chlorine from a substance.

deci- [SCI TECH] A prefix indicating 10^{-1}, 0.1, or a tenth.

deciare [MECH] A unit of area, equal to 0.1 are or 10 square meters.

decibar [MECH] A metric unit of pressure equal to one-tenth bar.

decibel [PHYS] A unit for describing the ratio of two powers or intensities, or the ratio of a power to a reference power; in the measurement of sound intensity, the pressure of the reference sound is usually taken as 2×10^{-4} dyne per square centimeter; equal to one-tenth bel; if P_1 and P_2 are two amounts of power, the first is said to be n decibels greater, where $n = 10 \log_{10}(P_1/P_2)$. Abbreviated dB.

decibel adjusted *See* adjusted decibel.

decibel loss [COMMUN] Loss of a signal over a conductor expressed in decibels.

decibel meter [ENG] An instrument calibrated in logarithmic steps and labeled with decibel units and used for measuring power levels in communication circuits.

decibels above 1 femtowatt [ELEC] A power level equal to 10 times the common logarithm of the ratio of the given power in watts to 1 femtowatt (10^{-15} watt). Abbreviated dBf.

decibels above 1 kilowatt [ELEC] A measure of power equal to 10 times the common logarithm of the ratio of a given power to 1000 watts. Abbreviated dBk.

decibels above 1 milliwatt [ELEC] A measure of power equal to 10 times the common logarithm of the ratio of a given power to 0.001 watt; a negative value, such as -2.7 dBm, means decibels below 1 milliwatt. Abbreviated dBm.

decibels above 1 picowatt [ELEC] A measure of power equal to 10 times the common logarithm of the ratio of a given power to 1 picowatt. Abbreviated dBp.

decibels above 1 volt [ELEC] A measure of voltage equal to 20 times the common logarithm of the ratio of a given voltage to 1 volt. Abbreviated dBV.

decibels above 1 watt [ELEC] A measure of power equal to 10 times the common logarithm of the ratio of a given power to 1 watt. Abbreviated dBW.

decibels above reference coupling [ELEC] A measure of the coupling between two circuits, expressed in relation to a reference value of coupling that gives a specified reading on a specified noise-measuring set when a test tone of 90 dBa is impressed on one circuit. Abbreviated dBx.

decibels above reference noise [ELEC] Units used to show the relationship between the interfering effect of a noise frequency, or band of noise frequencies, and a fixed amount of noise power commonly called reference noise; a 1000-hertz tone having a power level of -90 dBm was selected as the reference noise power; superseded by the adjusted decibel unit. Abbreviated dBrn.

decicaine *See* tetracaine hydrochloride.

decidable predicate [MATH] A predicate for which there exists an algorithm which, for any given value of its independent variables, provides a definite answer as to whether or not it is true.

decidua [MED] The endometrium of pregnancy and associated fetal membranes which are cast off at parturition.

deciduous [BIOL] Falling off or being shed at the end of the growing period or season.

deciduous teeth [ANAT] Teeth of a young mammal which are shed and replaced by permanent teeth. Also known as milk teeth.

decigram [MECH] A unit of mass, equal to 0.1 gram.

decile [STAT] Any of the points which divide the total number of items in a frequency distribution into 10 equal parts.

deciliter [MECH] A unit of volume, equal to 0.1 liter, or 10^{-4} cubic meter.

decimal [MATH] A number expressed in the scale of tens.

decimal attenuator [ELECTR] System of attenuators arranged so that a voltage or current can be reduced decimally.

decimal balance [ENG] A balance having one arm 10 times the length of the other, so that heavy objects can be weighed by using light weights.

decimal-binary switch [ELEC] A switch that connects a single input lead to appropriate combinations of four output leads (representing 1, 2, 4, and 8) for each of the decimal-numbered settings of its control knob; thus, for position 7, output leads 1, 2, and 4 would be connected to the input.

decimal code [COMPUT SCI] A code in which each allowable position has one of 10 possible states; the conventional decimal number system is a decimal code.

decimal-coded digit [COMPUT SCI] One of 10 arbitrarily selected patterns of 1 and 0 used to represent the decimal digits. Also known as coded decimal.

decimal fraction [MATH] Any number written in the form: an integer followed by a decimal point followed by a (possibly infinite) string of digits.

decimal number [MATH] A number signifying a decimal fraction by a decimal point to the left of the numerator with the number of figures to the right of the point equal to the power of 10 of the denominator.

decimal number system [MATH] A representational system for the real numbers in which place values are read in powers of 10.

decimal place [MATH] Reference to one of the digits following the decimal point in a decimal fraction; the kth decimal place registers units of 10^{-k}.

decimal point [MATH] A dot written either on or slightly above the line; used to mark the point at which place values change from positive to negative powers of 10 in the decimal number system.

decimal processor [COMPUT SCI] A digital computer organized to calculate by decimal arithmetic.

decimal system [MATH] A number system based on the number 10; in theory, each unit is 10 times the next smaller one.

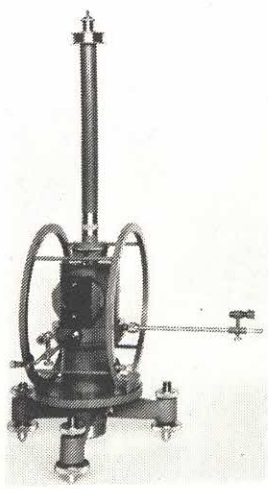
decimal-to-binary conversion [COMPUT SCI] The mathematical process of converting a number written in the scale of 10 into the same number written in the scale of 2.

decimeter [MECH] A metric unit of length equal to one-tenth meter.

decimetric wave [ELECTROMAG] An electromagnetic wave having a wavelength between 0.1 and 1 meter, corresponding to a frequency between 300 and 3000 megahertz.

decineper [PHYS] One-tenth of a neper.
decinormal [CHEM] Pertaining to a chemical solution that is one-tenth normality in reference to a 1 normal solution.
decision [COMPUT SCI] The computer operation of determining if a certain relationship exists between words in storage or registers, and taking alternative courses of action; this is effected by conditional jumps or equivalent techniques.
decision box [COMPUT SCI] A flow-chart symbol indicating a decision instruction; usually diamond-shaped.
decision calculus [SYS ENG] A guide to the process of decision-making, often outlined in the following steps: analysis of the decision area to discover applicable elements; location or creation of criteria for evaluation; appraisal of the known information pertinent to the applicable elements and correction for bias; isolation of the unknown factors; weighting of the pertinent elements, known and unknown, as to relative importance; and projection of the relative impacts on the objective, and synthesis into a course of action.
decision element [ELECTR] A circuit that performs a logical operation such as "and," "or," "not," or "except" on one or more binary digits of input information representing "yes" or "no" and that expresses the result in its output. Also known as decision gate.
decision gate [ELECTR] *See* decision element. [NAV] In an instrument landing, that point along the path at which the pilot must decide to land or to execute a missed-approach procedure.
decision height [NAV] A height specified in MSL (mean sea level) above the highest runway elevation in the touchdown zone at which a missed approach shall be initiated if the required visual reference has not been established; this term is used only in procedure where an electronic glide slope provides a reference for descent or in ILS (instrument landing systems) or PAR (precision approach radar). Abbreviated d.h.
decision instruction *See* conditional jump.
decision mechanism [COMPUT SCI] In character recognition, that component part of a character reader which accepts the finalized version of the input character and makes an assessment as to its most probable identity.
decision rule [SYS ENG] In decision theory, the mathematical representation of a physical system which operates upon the observed data to produce a decision.
decision support system [COMPUT SCI] A computer-based system that enables management to interrogate the computer system on an ad hoc basis for various kinds of information on the organization and to predict the effect of potential decisions beforehand. Abbreviated DSS.
decision table [COMPUT SCI] **1.** A table of contingencies to be considered in the definition of a problem, together with the actions to be taken; sometimes used in place of a flow chart for program documentation. **2.** *See* DETAB.
decision theory [SYS ENG] A broad spectrum of concepts and techniques which have been developed to both describe and rationalize the process of decision making, that is, making a choice among several possible alternatives.
decision tree [IND ENG] Graphic display of the underlying decision process involved in the introduction of a new product by a manufacturer.
deck [COMPUT SCI] A set of punched cards. [CIV ENG] **1.** A floor, usually of wood, without a roof. **2.** The floor or roadway of a bridge. [ENG] A magnetic-tape transport mechanism. [NAV ARCH] Horizontal or cambered and sloping surfaces on a ship, corresponding to the floors of a building.
deck beam [NAV ARCH] A strengthening member of the deck that may run the length or width of the deck and is connected at both ends to the ship's frames or bulkheads by girders.
deck bridge [CIV ENG] A bridge that carries the deck on the very top of the superstructure.
deck charge [MIN ENG] A charge that is separated into several smaller components and placed along a quarry borehole.
deck erection [NAV ARCH] A forecastle, bridge, poop, or deckhouse erected on the upper deck of a ship.
deck fitting [NAV ARCH] **1.** A fitting where a pipeline penetrates the deck to maintain watertightness. **2.** Any fitting attached to the deck.
deck height [NAV ARCH] Vertical distance between the molded lines of two adjacent decks.
deckhouse [NAV ARCH] A low building or superstructure, such as a cabin, constructed on the top deck of a ship which may or may not extend to the edges of the deck.
decking [CIV ENG] Surface material on a deck. [MIN ENG] Changing tubs on a cage at both ends of a shaft.
deckle [ENG] A detachable wood frame fitted around the edges of a papermaking mold. [MATER] In paper manufacturing, the width of the wet sheet as it comes off the wire of a paper machine.
deckle edge [MATER] The unfinished edge of paper having a characteristic appearance as a result of leakage under the frame (deckle) in which the paper is made; handmade paper has a deckle edge on all four sides, machine-made paper only on two sides.
deckle rod [ENG] A small rod inserted at each end of the extrusion coating die to adjust the die opening length.
deckle strap [ENG] An endless rubber band which runs longitudinally along the wire edges of a paper machine and determines web width.
deck light [NAV ARCH] Any opening in the deck covered with glass; allows daylight to come in below deck.
deck line [NAV ARCH] A line that passes through the intersection of the molded line of the deck beams and the molded line of the frames.
deck loading [MIN ENG] The method of loading deck charges in a quarry borehole.
deck log [NAV] A record of significant navigational data and events of a ship's voyage written (usually by the quartermaster) in chronological order.
deck machinery [NAV ARCH] Any machinery on the decks of a ship; includes capstans, windlasses, and winches.
deck roof [BUILD] A roof that is nearly flat and without parapet walls.
deck stringer plate [NAV ARCH] The outboard fore-and-aft plate on any deck.
deck switch *See* gang switch.
deck truss [CIV ENG] The frame of a deck.
deckzelle [INV ZOO] In certain hydroids, one of the supporting or epithelial cells which are usually columnar or cuboidal.
declarative macroinstruction [COMPUT SCI] An instruction in an assembly language which directs the compiler to take some action or take note of some condition and which does not generate any instruction in the object program.
declarative statement [COMPUT SCI] Any program statement describing the data which will be used or identifying the memory locations which will be required.
declinate [BIOL] Curved toward one side or downward.
declination [ASTRON] The angular distance of a celestial object north or south of the celestial equator. [GEOPHYS] The angle between the magnetic and geographical meridians, expressed in degrees and minutes east or west to indicate the direction of magnetic north from true north. Also known as magnetic declination; variation. [NAV] **1.** In a system of polar or spherical coordinates, the angle at the origin between a line to a point and the equatorial plane, measured in a plane perpendicular to the equatorial plane. **2.** The arc between the equator and the point measured on a great circle perpendicular to the equator.
declination axis [ENG] For an equatorial mounting of a telescope, an axis of rotation that is perpendicular to the polar axis and allows the telescope to be pointed at objects of different declinations.
declination circle [ENG] For a telescope with an equatorial mounting, a setting circle attached to the declination axis that shows the declination to which the telescope is pointing.
declination compass *See* declinometer.
declination difference [NAV] The difference between two declinations, particularly between the declination of a celestial body and the value used as an argument for entering a table.
declination of grid north *See* grid declination.
declination variometer [ENG] An instrument that measures changes in the declination of the earth's magnetic field, consisting of a permanent bar magnet, usually about 1 centimeter long, suspended with a plane mirror from a fine quartz fiber 5–15 centimeters in length; a lens focuses to a point a beam of light reflected from the mirror to recording paper mounted on a rotating drum. Also known as D variometer.
declining population [ECOL] A population in which old individuals outnumber young individuals.
declinometer [ENG] A magnetic instrument similar to a sur-

DECLINATION VARIOMETER



Declination variometer equipped with Helmholtz coil for calibration. *(U.S. Coast and Geodetic Survey)*

veyor's compass, but arranged so that the line of sight can be rotated to conform with the needle or to any desired setting on the horizontal circle; used in determining magnetic declination. Also known as declination compass.

declivity [GEOL] **1.** A slope descending downward from a point of reference. **2.** A downward deviation from the horizontal.

decode [COMMUN] **1.** To translate coded characters into a more understandable form. **2.** *See* demodulate.

decoder [COMMUN] A device that decodes. [ELECTR] **1.** A matrix of logic elements that selects one or more output channels, depending on the combination of input signals present. **2.** *See* decoder circuit; matrix; tree.

decoder circuit [ELECTR] A circuit that responds to a particular coded signal while rejecting others. Also known as decoder.

decoding gate [COMPUT SCI] The use of combinatorial logic in circuitry to select a device identified by a binary address code. Also known as recognition gate.

decoking [CHEM ENG] Removal of petroleum coke from equipment.

decollator [COMPUT SCI] A device which separates the sheets of continuous stationery that form the output of a computer printer into separate stacks.

décollement [GEOL] Folding or faulting of sedimentary beds by sliding over the underlying rock.

decolorize [CHEM ENG] To remove the color from, as from a liquid.

decolorizer [CHEM ENG] An agent used to decolorize; the removal of color may occur by a chemical reaction or a physical reaction.

decolorizing carbon [CHEM] Porous or finely divided carbon (activated or bone) with large surface area; used to adsorb colored impurities from liquids, such as lube oils.

decometer [ELECTR] An adding-type phasemeter which rotates continuously and adds up the total number of degrees of phase shift between two signals, such as those received from two transmitters in the Decca navigation system.

decommissioning [NUCLEO] The process of shutting down a nuclear facility such as a nuclear reactor or reprocessing plant so as to provide adequate protection from radiation exposure and to isolate radioactive contamination from the human environment.

decommutation [ELECTR] The process of recovering a signal from the composite signal previously created by a commutation process.

decommutator [ELECTR] The section of a telemetering system that extracts analog data from a time-serial train of samples representing a multiplicity of data sources transmitted over a single radio-frequency link.

decomposable process [MATH] A process which can be reduced to several basic events.

decomposer [ECOL] A heterotrophic organism (including bacteria and fungi) which breaks down the complex compounds of dead protoplasm, absorbs some decomposition products, and releases substances usable by consumers. Also known as microcomposer; microconsumer; reducer.

decomposition [CHEM] The more or less permanent structural breakdown of a molecule into simpler molecules or atoms. [GEOCHEM] *See* chemical weathering.

decomposition potential [PHYS CHEM] The electrode potential at which the electrolysis current begins to increase appreciably. Also known as decomposition voltage.

decomposition voltage *See* decomposition potential.

decompound [BOT] Divided or compounded several times, with each division being compound.

decompression [ENG] Any procedure for the relief of pressure or compression.

decompression chamber [ENG] **1.** A steel chamber fitted with auxiliary equipment to raise its air pressure to a value two to six times atmospheric pressure; used to relieve a diver who has decompressed too quickly in ascending. **2.** Such a chamber in which conditions of high atmospheric pressure can be simulated for experimental purposes.

decompression illness *See* aeroembolism.

deconcentrator [ENG] An apparatus for removing dissolved or suspended material from feedwater.

decontamination [ENG] The removing of chemical, biological, or radiological contamination from, or the neutralizing of it on, a person, object, or area.

decontamination factor [NUCLEO] The ratio of initial specific radioactivity to final specific radioactivity resulting from a separation process.

decontamination index [NUCLEO] The logarithm of the ratio of initial specific radioactivity to final specific radioactivity resulting from a separation process.

decoppering agent [ORD] Material, such as finely divided tin, included in a propelling charge, or inserted in the chamber with the propelling charge, for the purpose of removing the coppering from the surface of the bore.

decorative stone [MATER] A stone that serves for architectural decoration, as in mantles or store fronts.

decorticate [BIOL] Lacking a cortical layer. [TEXT] To remove woody residual matter, such as flax from bast fibers after retting.

decouple [ENG] **1.** To minimize or eliminate airborne shock waves of a nuclear or other explosion by placing the explosives deep under the ground. **2.** To minimize the seismic effect of an underground explosion by setting it off in the center of an underground cavity.

decoupling [ELEC] Preventing transfer or feedback of energy from one circuit to another.

decoupling filter [ELECTR] One of a number of low-pass filters placed between each of several amplifier stages and a common power supply.

decoupling network [ELEC] Any combination of resistors, coils, and capacitors placed in power supply leads or other leads that are common to two or more circuits, to prevent unwanted interstage coupling.

decoy [ORD] **1.** An object with reflective characteristics of a target, used in radar deception. **2.** Underwater device which reflects acoustic radiation, used by submarines in the deception of acoustic listening devices and acoustic homing torpedoes.

decoy target [ORD] A device assembled from prefabricated materials, designed to simulate miscellaneous types of field equipment.

decoy transponder [ELECTR] A transponder that returns a strong signal when triggered directly by a radar pulse, to produce large and misleading target signals on enemy radar screens.

decreasing function [MATH] **1.** A function of x whose value gets smaller as x gets larger, that is, if $x<y$, then $f(x)>f(y)$. **2.** *See* monotone nonincreasing function.

decrement [COMPUT SCI] A specific part of an instruction word in some binary computers, thus a set of digits. [HYD] *See* groundwater discharge. [MATH] The quantity by which a variable is decreased. [PHYS] The ratio of the amplitudes of an underdamped harmonic motion during two successive oscillations. Also known as damping factor; numerical decrement.

decremental arc [ASTRON] A crater arc in which the diameters of the craters decrease from one end of the arc to the other.

decremental chain [ASTRON] A crater chain in which the diameters of the craters decrease from one end of the chain to the other.

decrement field [COMPUT SCI] That part of an instruction word which is used to modify the contents of a storage location or register.

decremeter [ENG] An instrument for measuring the logarithmic decrement (damping) of a train of waves.

decrepitation [GEOPHYS] Breaking up of mineral substances when exposed to heat; usually accompanied by a crackling noise.

decrypt [ELECTR] To convert a crypotogram or series of electronic pulses into plain text by electronic means.

Dectra [NAV] A radio navigation aid that provides coverage over a specific section of a long ocean route, using equipment and techniques similar to Decca; a master station and a slave station are located at each end of the route; by comparing the phase difference of a master and its slave, guidance is provided to the right or left of the course; comparison of transmission with those of a high-precision quartz clock provides distance information along the course.

decubitus ulcer [MED] An ulcer of the skin and subcutaneous tissues following prolonged lying down, due to pressure on bony protuberances. Also known as bedsore; pressure ulcer.

decumbent [BOT] Lying down on the ground but with an ascending tip, specifically referring to a stem.

decurrent [BOT] Running downward, especially of a leaf

base extended past its insertion in the form of a winged expansion.

decussate [BOT] Of the arrangement of leaves, occurring in alternating pairs at right angles. [SCI TECH] To intersect in the form of an X.

decussate structure [GEOL] A crisscross microstructure of certain minerals; most noticeable in rocks composed predominantly of minerals with a columnar habit.

decyclic acid *See* capric acid.

decyl [ORG CHEM] An isomeric grouping of univalent radicals, all with formulas $C_{10}H_{21}$, and derived from the decanes by removing one hydrogen.

decyl acetate [ORG CHEM] $CH_3(CH_2)_9OOCCH_3$ Perfumery liquid with a floral orange-rose aroma.

decyl alcohol [ORG CHEM] $C_{10}H_{21}OH$ A colorless oil, boiling at 231°C; used in plasticizers, synthetic lubricants, and detergents. Also known as decanol; decatyl alcohol; nonylcarbinol.

decyl aldehyde [ORG CHEM] $CH_3(CH_2)_8CHO$ A liquid aldehyde, found in essential oils; used in flavorings and perfumes. Also known as capraldehyde; capric aldehyde; decanal.

decylene [ORG CHEM] Any of a group of isomeric hydrocarbons with formula $C_{10}H_{20}$; the group is part of the ethylene series.

decylethylene *See* 1-dodecene.

decyltrichlorosilane [ORG CHEM] $n\text{-}C_{10}H_{21}SiCl_3$ An organochlorosilane that boils at 183°C at 84 mm Hg; used in coupling agents or primers to obtain improved bonding between organic polymers and mineral surfaces.

Dedekind cut [MATH] A set of rational numbers satisfying certain properties, with which a unique real number may be associated; used to define the real numbers as an extension of the rationals.

Dedekind test [MATH] If the series $\sum_i (b_i - b_{i+1})$ converges absolutely, the b_i converge to zero, and the series $\sum_i a_i$ has bounded partial sums, then the series $\sum_i a_i b_i$ converges.

dedendum [DES ENG] The difference between the radius of the pitch circle of a gear and the radius of its root circle.

dedendum circle [DES ENG] A circle tangent to the bottom of the spaces between teeth on a gear wheel.

dedicated line [COMPUT SCI] A permanent communications link that is used solely to transmit information between a computer and a data-processing system.

dedicated terminal [COMPUT SCI] A computer terminal that is permanently connected to a data-processing system by a communications link that is used only to transmit information between the two.

dedifferentiation [BIOL] Disintegration of a specialized habit or adaptation. [PHYSIO] Return of a specialized cell or structure to a more general or primitive condition.

dedolomitization [GEOL] Destruction of dolomite to form calcite and periclase, usually by contact metamorphism at low pressures.

deduction [MATH] The process of deriving a statement from certain assumed statements by applying the rules of logic.

dedusting [MIN ENG] Cleaning ore, using pneumatic means and screening, to remove dust and other fine impurities. Also known as aspirating.

dee [NUCLEO] A hollow accelerating-cyclotron electrode in the shape of the letter D. Also known as cyclotron D; D.

dee line [NUCLEO] A structural member that supports the dee of a cyclotron and acts with the dee to form the resonant circuit.

deemphasis [ENG ACOUS] A process for reducing the relative strength of higher audio frequencies before reproduction, to complement and thereby offset the preemphasis that was introduced to help override noise or reduce distortion. Also known as postemphasis; postequalization.

deemphasis network [ENG ACOUS] An *RC* filter inserted in a system to restore preemphasized signals to their original form.

deenergize [ELEC] To disconnect from the source of power.

deep [OCEANOGR] An area of great depth in the ocean, representing a depression in the ocean floor.

deep-casting [OCEANOGR] Sampling ocean water at great depths by lowering a number of self-sealing bottles, usually made of brass or bronze, on a cable.

deep-draw [MET] To form shapes with large depth-diameter ratios in sheet or strip metal by considerable plastic distortion in dies.

deep easterlies *See* equatorial easterlies.

deepening [METEOROL] A decrease in the central pressure of a pressure system on a constant-height chart, or an analogous decrease in height on a constant-pressure chart.

deep-etch [GRAPHICS] The etching of an offset printing plate so that the printing area becomes slightly recessed, thereby leading to sharper definition and longer life on press. [MET] Severe etching of a metal surface to reveal gross features, such as abnormal grain size, segregation, or cracks, at magnifications of 10 diameters or less. Also known as macroetching.

deep-etch printing [GRAPHICS] Printing with plates produced by deep-etching.

deep fascia [ANAT] The fibrous tissue between muscles and forming the sheaths of muscles, or investing other deep, definitive structures, as nerves and blood vessels.

deep fording [ORD] The ability of a gun or vehicle, equipped with built-in waterproofing with its suspension in contact with the ground, to negotiate a water obstacle by application of a special waterproofing kit.

deep hibernation [PHYSIO] Profound decrease in metabolic rate and physiological function during winter, with a body temperature near 0°C, in certain warm-blooded vertebrates. Also known as hibernation.

deep inelastic transfer *See* quasifission.

deep inland sea [GEOGR] A sea adjacent to but in restricted communication with the sea; depth exceeds 200 meters.

deep pain [PHYSIO] Pattern of somesthetic sensation of pain, usually indefinitely localized, originating in the viscera, muscles, and other deep tissues.

deep palmar arch [ANAT] The anastomosis between the terminal part of the radial artery and the deep palmar branch of the ulnar artery. Also known as deep volar arch; palmar arch.

deep-penetration bomb [ORD] A bomb designed to enter deeply into a target before it explodes.

deep-pile fabric [TEXT] Any of various woven or knitted fabrics that simulate fur.

deep scattering layer [OCEANOGR] The stratified populations of organisms which scatter sound in most oceanic waters.

deep-sea basin [GEOL] A depression of the sea floor more or less equidimensional in form and of variable extent.

deep-sea channel [GEOL] A trough-shaped valley of low relief beyond the continental rise on the deep-sea floor. Also known as mid-ocean canyon.

deep-sea plain [GEOL] A broad, almost level area forming the predominant portion of the ocean floor.

deep-seated *See* plutonic.

deep-sea trench [GEOL] A long, narrow depression of the deep-sea floor having steep sides and containing the greatest ocean depths; formed by depression, to several kilometers' depth, of the high-velocity crustal layer and the mantle.

deep sleep [PSYCH] The third and fourth stage of the sleep cycle, determined by electroencephalographic recording and characterized by slow brain waves. Also known as slow wave sleep (SWS).

deep space [ASTRON] Space beyond the gravitational influence of the earth.

Deep Space Network [AERO ENG] A spacecraft network operated by NASA which tracks, commands, and receives telemetry for all types of spacecraft sent to explore deep space, the moon, and solar system planets. Abbreviated DSN.

deep-space probe [AERO ENG] A spacecraft designed for exploring space beyond the gravitational and magnetic fields of the earth.

deep-submergence rescue vehicle [NAV ARCH] A small rescue and research submarine; intended primarily to rescue the crew of another submarine to depths of 5000 feet (1500 meters). Abbreviated DSRV.

deep tank [NAV ARCH] A tank that extends from the bottom of a ship up to or higher than the lower deck.

deep trades *See* equatorial easterlies.

deep underwater muon and neutrino detector [ENG] A proposed device for detecting and determining the direction of extraterrestrial neutrinos passing through a volume of approximately 1 cubic kilometer of ocean water, using an array of several thousand Cerenkov counters suspended in the water to

sense the showers of charged particles generated by neutrinos. Abbreviated DUMAND.

deep volar arch *See* deep palmar arch.

deep water [OCEANOGR] An ocean area where depth of the water layer is greater than one-half the wave length.

deep waterline [NAV ARCH] The height of the line on a ship's hull that is reached by the water when the ship is loaded to its maximum safe capacity.

deep-water wave [OCEANOGR] A surface wave whose length is less than twice the depth of the water.

deep well [CIV ENG] A well that draws its water from beneath shallow impermeable strata, at depths exceeding 22 feet (6.7 meters).

deep-well pump [MECH ENG] A multistage centrifugal pump for lifting water from deep, small-diameter wells; a surface electric motor operates the shaft. Also known as vertical turbine pump.

deer [VERT ZOO] The common name for 41 species of even-toed ungulates that compose the family Cervidae in the order Artiodactyla; males have antlers.

deerhorn antenna [ELECTROMAG] A dipole antenna whose ends are swept back to reduce wind resistance when mounted on an airplane.

Deerparkian [GEOL] A North American stage of geologic time in the Lower Devonian, above Helderbergian and below Onesquethawan.

DEET *See* diethyltoluamide.

deethanize [CHEM ENG] To separate and remove ethane and sometimes lighter fractions from heavy substances, such as propane, by distillation.

deethanizer [CHEM ENG] The equipment used to deethanize.

defecation [CHEM ENG] Industrial purification, or clarification, of sugar solutions. [PHYSIO] The process by which fecal wastes that reach the lower colon and rectum are evacuated from the body.

defect [SCI TECH] An irregularity that spoils the appearance or impairs the usefulness or effectiveness of an object or a material by causing weakness or failure.

defect chemistry [SOLID STATE] The study of the dynamic properties of crystal defects under particular conditions, such as raising of the temperature or exposure to electromagnetic particle radiation.

defect cluster [CRYSTAL] A macroscopic cluster of crystal defects which can arise from attraction among defects.

defect conduction [SOLID STATE] Electric conduction in a semiconductor by holes in the valence band.

defective [SCI TECH] An item or product which has at least one defect.

defective number *See* deficient number.

defective track [COMPUT SCI] Any circular path on the surface of a magnetic disk which is detected by the system as unable to accept one or more bits of data.

defective virus [VIROL] A virus, such as adeno-associated satellite virus, that can grow and reproduce only in the presence of another virus.

defect motion [CRYSTAL] Movement of a point defect from one lattice point to another.

defeminization [PHYSIO] Loss or reduction of feminine attributes, usually caused by ovarian dysfunction or removal. [PSYCH] Psychic process involving a deep and permanent change in the character of a woman, resulting in a giving up of feminine feelings, and the assumption of masculine qualities.

defender [IND ENG] A machine or facility which is being considered for replacement.

defense information [ORD] Official information which requires protection in the interests of national defense, which is not common knowledge, and which would be of intelligence value to an enemy or potential enemy in the planning or waging of war against a nation.

defense mechanism [PSYCH] Any psychic device, such as rationalization, denial, or repression, for concealing unacceptable feelings or for protecting oneself against unpleasant feelings, memories, or experiences.

defensive minefield [ORD] A minefield so situated that an adversary's attack will be delayed or repulsed.

deferent [ASTRON] An imaginary circle around the earth, postulated by Ptolemy, in whose circumference a celestial body or its epicycle is supposed to move.

deferment factor *See* discount factor.

deferred addressing [COMPUT SCI] A type of indirect addressing in which the address part of an instruction specifies a location containing an address, the latter in turn specifies another location containing an address, and so forth, the number of iterations being controlled by a preset counter.

deferred entry [COMPUT SCI] The passing of control of the central processing unit to a subroutine or to an entry point as the result of an asynchronous event.

deferred processing [COMPUT SCI] The making of computer runs which are postponed until nonpeak periods.

defervescence *See* lysis.

defibrillation [MED] Stopping a local quivering of muscle fibers, especially of the heart.

defibrillator [MED] An electronic instrument used for stopping fibrillation during a heart attack by applying controlled electric pulses to the heart muscles.

deficiency disease [MED] Any disease resulting from a dietary deficiency of minerals, vitamins, or essential nutrients.

deficiency index [MATH] For a curve or equation involving two complex variables this is the genus of the Riemann surface associated to the equation.

deficient number [MATH] A positive integer the sum of whose divisors, including 1 but excluding itself, is less than itself. Also known as defective number.

defilade [ORD] An arrangement of fortifications that minimizes the effect of frontal or enfilading fire and plunging or reverse fire.

definite composition law [CHEM] The law that a given chemical compound always contains the same elements in the same fixed proportions by weight. Also known as definite proportions law.

definite network [COMPUT SCI] A sequential network in which no feedback loops exist.

definite proportions law *See* definite composition law.

definite Riemann integral [MATH] A number associated with a function defined on an interval $[a,b]$ which is

$$\lim_{N\to\infty} \sum_{k=0}^{N-1} f\left(a + \frac{k}{N}\right) \cdot \frac{b-a}{N},$$

if f is bounded and continuous; denoted by

$$\int_a^b f(x)\,dx;$$

if f is a positive function, the definite integral measures the area between the graph of f and the x axis.

definition [COMMUN] The fidelity with which a television or facsimile receiver forms an image. [ELECTR] The extent to which the fine-line details of a printed circuit correspond to the master drawing. [OPTICS] Lens image clarity or discernible detail.

definitive host [BIOL] The host in which a parasite reproduces sexually.

deflagrating spoon [CHEM] A long-handled spoon used in chemistry to demonstrate deflagration.

deflagration [CHEM] A chemical reaction accompanied by vigorous evolution of heat, flame, sparks, or spattering of burning particles.

deflashing [ENG] Finishing technique to remove excess material (flash) from a plastic or metal molding.

deflation [GEOL] The sweeping erosive action of the wind over the ground.

deflation basin [GEOL] A topographic depression formed by deflation.

deflation lake [HYD] A lake in a basin that was formed primarily by wind erosion, especially in arid or semiarid regions.

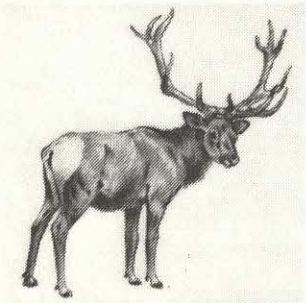
deflected jet fluidic flowmeter *See* fluidic flow sensor.

deflecting torque [MECH] An instrument's moment, resulting from the quantity measured, that acts to cause the pointer's deflection.

deflection [ELECTR] The displacement of an electron beam from its straight-line path by an electrostatic or electromagnetic field. [ENG] **1.** Shape change or reduction in diameter of a conduit, produced without fracturing the material. **2.** Elastic movement or sinking of a loaded structural member, particularly of the mid-span of a beam. [ORD] **1.** Horizontal clockwise angle between the axis of the bore and the line of sighting. **2.** The setting on the scale to compensate for deflection.

deflection angle [GEOD] The angle at a point on the earth

DEER



North American elk *(Cervus canadensis)*, a deer common in Canada, stands about 5½ feet (1.7 meters) at shoulder.

between the direction of a plumb line (the vertical) and the perpendicular (the normal) to the reference spheroid; this difference seldom exceeds 30 seconds of arc. [ORD] **1.** An angle that measures the departure of a moving object from its directed course. **2.** The angle of a deflection shot in gunnery, measured between the line of sight to the target and the line of sight to the aiming point.

deflection bit [DES ENG] A long, cone-shaped, noncoring bit used to drill past a deflection wedge in a borehole.

deflection board [ORD] Instrument used in artillery for figuring azimuth or deflection corrected for wind, drift, and other factors. Also known as gun deflection board.

deflection change [ORD] Change in azimuth setting applying to all guns in a battery when the target moves, or when a shift is made from one target to another; it does not include the deflection difference, which allows for the difference in positions of the various guns firing at the same target.

deflection circuit [ELECTR] A circuit which controls the deflection of an electron beam in a cathode-ray tube.

deflection coil [ELECTR] One of the coils in a deflection yoke.

deflection correction [ORD] A correction that must be applied to the azimuth or shift measured on a firing chart so that the line of fire will pass through the target.

deflection curve [MECH] The curve, generally downward, described by a shot deviating from its true course.

deflection defocusing [ELECTR] Defocusing that becomes greater as deflection is increased in a cathode-ray tube, because the beam hits the screen at a greater slant and the beam spot becomes more elliptical as it approaches the edges of the screen.

deflection difference [ORD] The amount that an artillery piece in a battery is traversed toward or away from a given piece.

deflection electrode [ELECTR] An electrode whose potential provides an electric field that deflects an electron beam. Also known as deflection plate.

deflection error [ORD] **1.** In artillery, the distance to the right or left of a target between the point aimed at and the burst of the projectile. **2.** In bombing, the distance between the point of impact and the mean point of impact and the center of the target measured at right angles from the line of the aircraft's approach.

deflection factor [ELECTR] The reciprocal of the deflection sensitivity in a cathode-ray tube.

deflection meter [ENG] A flowmeter that applies the differential pressure generated by a differential-producing primary device across a diaphragm or bellows in such a way as to create a deflection proportional to the differential pressure.

deflection-modulated indicator *See* amplitude-modulated indicator.

deflection of the vertical [GEOD] The angle between the direction of gravity, defining astronomical latitude and longitude, and the normal to the reference ellipsoid defining geodetic latitude and longitude.

deflection plate *See* deflection electrode.

deflection polarity [ELECTR] Relationship between the direction of a displacement of the cathode beam and the polarity of the applied signal wave.

deflection probable error [ORD] The directional error, caused by dispersion, which will be exceeded, as often as not, in an infinite number of rounds fired at a single deflection; it is one-eighth the width of the dispersion pattern at its greatest width; this value is given in the firing tables.

deflection scale [ORD] Scale on a sight, marked in mils or degrees, for applying corrections in deflection or for moving the piece in direction.

deflection sensitivity [ELECTR] The displacement of the electron beam at the target or screen of a cathode-ray tube per unit of change in the deflection field; usually expressed in inches per volt applied between deflection electrodes or inches per ampere in a deflection coil.

deflection ultrasonic flowmeter [ENG] A flowmeter for determining velocity from the deflection of a high-frequency sound beam directed across the flow. Also known as drift ultrasonic flowmeter.

deflection voltage [ELECTR] The voltage applied between a pair of deflection electrodes to produce an electric field.

deflection wedge [DES ENG] A wedge-shaped tool inserted into a borehole to direct the drill bit.

deflection yoke [ELECTR] An assembly of one or more electromagnets that is placed around the neck of an electron-beam tube to produce a magnetic field for deflection of one or more electron beams. Also known as scanning yoke; yoke.

deflectometer [ENG] An instrument for measuring minute deformations in a structure under transverse stress.

deflector [ENG] A plate, baffle, or the like that diverts the flow of a forward-moving stream.

deflexed [BIOL] Turned sharply downward.

deflocculant [CHEM] An agent that causes deflocculation; examples are sodium carbonate and other basic materials used to deflocculate clay slips.

deflocculate [CHEM ENG] To break up and disperse agglomerates and form a stable colloid.

defluorination [CHEM] Removal of fluorine.

defluvium [PATH] The pathological loss of a part of an animal or plant, as nails or bark.

defoaming [CHEM ENG] Reduction or elimination of foam.

defocus [ENG] To make a beam of x-rays, electrons, light, or other radiation deviate from an accurate focus at the intended viewing or working surface.

defocus-dash mode [ELECTR] A mode of cathode-ray tube storage of binary digits in which the writing beam is initially defocused so as to excite a small circular area on the screen; for one kind of binary digit it remains defocused, and for the other kind it is suddenly focused to a concentric dot and drawn out into a dash.

defocus-focus mode [ELECTR] A variation of the defocus-dash mode in which the focused dot is drawn out into a dash.

defoliant [MATER] A chemical sprayed on plants that causes leaves to fall off prematurely.

defoliate [BOT] To remove leaves or cause leaves to fall, especially prematurely.

deforestation [FOR] The act or process of removing trees from or clearing a forest.

deformation [MATH] A homotopy of the identity map to some other map. [MECH] Any alteration of shape or dimensions of a body caused by stresses, thermal expansion or contraction, chemical or metallurgical transformations, or shrinkage and expansions due to moisture change.

deformation bands *See* Lüder's lines.

deformation curve [MECH] A curve showing the relationship between the stress or load on a structure, structural member, or a specimen and the strain or deformation that results. Also known as stress-strain curve.

deformation ellipsoid *See* strain ellipsoid.

deformation energy [NUC PHYS] The energy which must be supplied to an initially spherical nucleus to give it a certain deformation in the Bohr-Wheeler theory.

deformation fabric [GEOL] The space orientation of rock elements produced by external stress on the rock.

deformation lamella [GEOL] A type of slipband in the crystalline grains of a material (particularly quartz) produced by intracrystalline slip during tectonic deformation.

deformation potential [SOLID STATE] The effective electric potential experienced by free electrons in a semiconductor or metal resulting from a local deformation in the crystal lattice.

deformation thermometer [ENG] A thermometer with transducing elements which deform with temperature; examples are the bimetallic thermometer and the Bourdon-tube type of thermometer.

deformed bar [CIV ENG] A steel bar with projections or indentations to increase mechanical bonding; used to reinforce concrete.

deformeter [ENG] An instrument used to measure minute deformations in materials in structural models.

defrost [ENG] To keep free of ice or to remove ice. [THERMO] To thaw out from a frozen state.

defruit [ELECTR] To remove random asynchronous replies from the video input of a display unit in a radar beacon system by comparing the video signals on successive sweeps.

defuse [ORD] To remove the fuse from a munition.

degas [ELECTR] To drive out and exhaust the gases occluded in the internal parts of an electron tube or other gastight apparatus, generally by heating during evacuation. [ENG] To remove gas from a liquid or solid.

degasifier [MET] An alloy added to molten metal to facilitate the removal of dissolved gases.

degasser *See* getter.

degassing *See* breathing.

degauss [ELECTR] To remove, erase, or clear information from a magnetic tape, disk, drum, or core. [ELECTROMAG]

To neutralize (demagnetize) a magnetic field of, for example, a ship hull or television tube; a direct current of the correct value is sent through a cable around the ship hull; a current-carrying coil is brought up to and then removed from the television tube. Also known as deperm.

degaussing cable [ELECTROMAG] A single-conductor or multiple-conductor cable used on ships for degaussing.

degaussing coil [ELECTROMAG] A plastic-encased coil, about 1 foot (0.3 meter) in diameter, that can be plugged into a 120-volt alternating-current wall outlet and moved slowly toward and away from a color television picture tube to demagnetize adjacent parts.

degaussing control [ELECTROMAG] A control that automatically varies the current in the degaussing cable as a ship changes heading or rolls and pitches.

degeneracy [MATH] The condition in which two characteristic functions of an operator have the same characteristic value. [PHYS] The condition in which two or more modes of a vibrating system have the same frequency; a special case of the mathematics definition. [QUANT MECH] The condition in which two or more stationary states of the same system have the same energy even though their wave functions are not the same; a special case of the mathematics definition.

degenerate amplifier [ELECTR] Parametric amplifier with a pump frequency exactly twice the signal frequency, producing an idler frequency equal to that of the signal input; it is considered as a single-frequency device.

degenerate code [GEN] A genetic code in which more than one triplet sequence of nucleotides (codon) can specify the insertion of the same amino acid into a polypeptide chain.

degenerate conduction band [SOLID STATE] A band in which two or more orthogonal quantum states exist that have the same energy, the same spin, and zero mean velocity.

degenerate electron gas [STAT MECH] An electron gas that is far below its Fermi temperature and is therefore described in first approximation by the Fermi distribution; most of the electrons completely fill the lower energy levels and are unable to take part in physical processes until excited out of these levels.

degenerate four-wave mixing [OPTICS] A method of achieving optical phase conjugation in which two strong counterpropagating pump beams, having the same frequency, set up a standing wave in a clear material whose index of refraction varies linearly with intensity, thereby providing the conditions in which a third beam, at the same frequency, incident upon the material from any direction, results in a fourth beam which precisely retraces the third one.

degenerate matter [PHYS] Matter that has been stripped of its orbital electrons, so the nuclei are packed close together.

degenerate semiconductor [SOLID STATE] A semiconductor in which the number of electrons in the conduction band approaches that of a metal.

degeneration [ELECTR] The loss or gain in an amplifier through unintentional negative feedback. [MED] **1.** Deterioration of cellular integrity with no sign of response to injury or disease. **2.** General deterioration of a physical, mental, or moral state. [STAT MECH] A phenomenon which occurs in gases at very low temperatures when the molecular heat drops to less than ½ the gas constant.

degenerative arthritis *See* degenerative joint disease.

degenerative disease [MED] General debility and diseases associated with advancing age.

degenerative joint disease [MED] A chronic joint disease characterized pathologically by degeneration of articular cartilage and hypertrophy of bone, clinically by pain on activity which subsides with rest. Also known as degenerative arthritis; hypertrophic arthritis; osteoarthritis; senescent arthritis.

degenerative recrystallization *See* degradation recrystallization.

Degeneriaceae [BOT] A family of dicotyledonous plants in the order Magnoliales characterized by laminar stamens; a solitary, pluriovulate, unsealed carpel; and ruminate endosperm.

deglaciation [HYD] Exposure of an area from beneath a glacier or ice sheet as a result of shrinkage of the ice by melting.

deglitcher [ELECTR] A nonlinear filter or other special circuit used to limit the duration of switching transients in digital converters.

deglutition [PHYSIO] Act of swallowing.

degradation [COMPUT SCI] Condition under which a computer operates when some area of memory or some units of peripheral equipment are not available to the user. [GEOL] The wearing down of the land surface by processes of erosion and weathering. [HYD] **1.** Lowering of a steam bed. **2.** Shrinkage or disappearance of permafrost. [ORG CHEM] Conversion of an organic compound to one containing a smaller number of carbon atoms. [PHYS] Loss of energy of a particle, such as a neutron or photon, through a collision. [THERMO] The conversion of energy into forms that are increasingly difficult to convert into work, resulting from the general tendency of entropy to increase.

degradation failure [ENG] Failure of a device because of a shift in a parameter or characteristic which exceeds some previously specified limit.

degradation recrystallization [GEOL] Recrystallization resulting in a decrease in the size of crystals. Also known as degenerative recrystallization; grain dimunition.

degraded illite [MINERAL] Illite with a depleted potassium content because of prolonged leaching. Also known as stripped illite.

degrading stream [HYD] A stream actively deepening its channel or valley and capable of transporting more load than is presently provided.

degras [MATER] **1.** A semioxidized fat obtained from sheep skins by subjecting them to the action of oxidized fish oil and pressing them; used to dress leather. Also known as moellen. **2.** A mixture of this material with other fatty oils or fats or with wool grease. **3.** *See* wool grease.

degrease [CHEM ENG] **1.** To remove grease from wool with chemicals. **2.** To remove grease from hides or skins in tanning by tumbling them in solvents. [MET] To remove grease, oil, or fatty material from a metal surface with fumes from a hot solvent.

degreaser [ENG] A machine designed to clean grease and foreign matter from mechanical parts and like items, usually metallic, by exposing them to vaporized or liquid solvent solutions confined in a tank or vessel. [MATER] A solvent, such as a polyhalogenated hydrocarbon, that removes fat or oil in many industrial processes.

degree [CHEM] Any one of several units for measuring hardness of water, such as the English or Clark degree, the French degree, and the German degree. [FL MECH] One of the units in any of various scales of specific gravity, such as the Baumé scale. [MATH] **1.** A unit for measurement of plane angles, equal to 1/360 of a complete revolution, or 1/90 of a right angle. Symbolized °. **2.** For a vertex in a graph, the number of arcs which have that vertex as an end point. [THERMO] One of the units of temperature or temperature difference in any of various temperature scales, such as the Celsius, Fahrenheit, and Kelvin temperature scales (the Kelvin degree is now known as the kelvin).

degree-day [MECH ENG] A measure of the departure of the mean daily temperature from a given standard; one degree-day is recorded for each degree of departure above (or below) the standard during a single day; used to estimate energy requirements for building heating and, to a lesser extent, for cooling.

degree Engler [FL MECH] A measure of viscosity; the ratio of the time of flow of 200 milliliters of the liquid through a viscometer devised by Engler, to the time for the flow of the same volume of water.

degree of current rectification [ELECTR] Ratio between the average unidirectional current output and the root mean square value of the alternating current input from which it was derived.

degree of curve [CIV ENG] A measure of the curvature of a railway or highway, equal to the angle subtended by a 100-foot (30-meter) chord (railway) or by a 100-foot arc (highway).

degree of degeneracy [MATH] The number of characteristic functions of an operator having the same characteristic value. Also known as order of degeneracy.

degree of enrichment [NUCLEO] The enrichment factor minus 1.

degree of freedom [MECH] Of a gyro, the number of orthogonal axes about which the spin axis is free to rotate, the spin axis freedom not being counted; this is not a universal convention; for example, the free gyro is frequently referred to as a three-degree-of-freedom gyro, the spin axis being counted. [MECH ENG] Any one of the number of ways in which the space configuration of a mechanical system may change. [PHYS CHEM] Any one of the variables, including pressure, temperature, composition, and specific volume, which must be specified to define the state of a system. [STAT] A number

one less than the number of frequencies being tested with a chi-square test.

degree of polymerization [ORG CHEM] The number of structural units in the average polymer molecule in a particular sample. Abbreviated D.P.

degree of voltage rectification [ELECTR] Ratio between the average unidirectional voltage and the root mean square value of the alternating voltage from which it was derived.

degrees of frost [METEOROL] In England, the number of degrees Fahrenheit that the temperature falls below the freezing point; thus a day with a minimum temperature of 27°F may be designated as a day of five degrees of frost.

degritting [CHEM ENG] Removal of fine solid particles (grit) from a liquid carrier by gravity separation (settling) or centrifugation.

de Gua's rule [MATH] The rule that if, in a polynomial equation $f(x) = 0$, a group of r consecutive terms is missing, then the equation has at least r imaginary roots if r is even, or the equation has at least $r + 1$ or $r - 1$ imaginary roots if r is odd (depending on whether the terms immediately preceding and following the group have like or unlike signs).

degumming [TEXT] Removing sericin, a gluelike substance, from silk by using a solution of soap, to improve the quality of the silk.

de Haas–Van Alphen effect [SOLID STATE] An effect occurring in many complex metals at low temperatures, consisting of a periodic variation in the diamagnetic susceptibility of conduction electrons with changes in the component of the applied magnetic field at right angles to the principal axis of the crystal.

dehiscence [BOT] Spontaneous bursting open of a mature plant structure, such as fruit, anther, or sporangium, to discharge its contents. [MED] A defect in the boundary of a bony canal or cavity.

dehrnite [MINERAL] $(Ca,Na,K)_5(PO_4)_3(OH)$ A colorless to pale green, greenish-white, or gray, hexagonal mineral consisting of a basic phosphate of calcium, sodium, and potassium; occurs as botryoidal crusts and minute hexagonal prisms.

dehumidification [MECH ENG] The process of reducing the moisture in the air; serves to increase the cooling power of air.

dehumidifier [MECH ENG] Equipment designed to reduce the amount of water vapor in the ambient atmosphere.

dehydrase [BIOCHEM] An enzyme which catalyzes the removal of water from a substrate.

dehydration [CHEM] Removal of water from any substance.

dehydration tank [CHEM ENG] A tank in which warm air is blown through oil to remove moisture.

dehydrator [CHEM] A substance that removes water from a material; an example is sulfuric acid. [CHEM ENG] Vessel or process system for the removal of liquids from gases or solids by the use of heat, absorbents, or adsorbents.

dehydroacetic acid [ORG CHEM] $C_8H_8O_4$ Crystals that melt at 108.5°C and are insoluble in water, soluble in acetone; used as a fungicide and bactericide. Also known as DHA; methylacetopyranone.

dehydroascorbic acid [ORG CHEM] $C_6H_6O_6$ A relatively inactive acid resulting from elimination of two hydrogen atoms from ascorbic acid when the latter is oxidized by air or other agents; has potential ascorbic acid activity.

dehydrocholesterol [BIOCHEM] $C_{27}H_{43}OH$ A provitamin of animal origin found in the skin of man, in milk, and elsewhere, which upon irradiation with ultraviolet rays becomes vitamin D.

dehydrocholic acid [ORG CHEM] $C_{24}H_{34}O_5$ A white powder melting at 231–240°C, very slightly soluble in water; used as a pharmaceutical intermediate and in medicine.

dehydrocyclization [CHEM ENG] Any process involving both dehydrogenation and cyclization, as in petroleum refining.

dehydroepiandrosterone [ORG CHEM] $C_{19}H_{28}O_2$ Dimorphous crystals with a melting point of 140–141°C, or leaflet crystals with a melting point of 152–153°C; soluble in alcohol, benzene, and ether; used as an androgen. Also known as dehydroisoandrosterone; 3β-hydroxy-5-androsten-17-one.

dehydrofreezing [FOOD ENG] A dual process for preserving food which involves partial dehydration followed by quick freezing.

dehydrogenase [BIOCHEM] An enzyme which removes hydrogen atoms from a substrate and transfers it to an acceptor other than oxygen.

dehydrogenation [CHEM] Removal of hydrogen from a compound.

dehydrohalogenation [CHEM] Removal of hydrogen and a halogen from a compound.

dehydroisoandrosterone *See* dehydroepiandrosterone.

deicer [AERO ENG] Any device to keep the wings and propeller of an airplane free of ice. [MATER] Any substance used to keep a surface free of ice or to rid it of ice; ethylene glycol is used to deice windshields of automobiles and airplanes.

deicing [ENG] The removal of ice deposited on any object, especially as applied to aircraft icing, by heating, chemical treatment, and mechanical rupture of the ice deposit.

Deimos [ASTRON] A satellite of Mars orbiting at a mean distance of 23,500 kilometers.

Deinotheriidae [PALEON] A family of extinct proboscidean mammals in the suborder Deinotherioidea; known only by the genus *Deinotherium*.

Deinotherioidea [PALEON] A monofamilial suborder of extinct mammals in the order Proboscidea.

deion circuit breaker [ELEC] Circuit breaker built so that the arc that forms when the circuit is broken is magnetically blown into a stack of insulated copper plates, giving the effect of a large number of short arcs in series; each arc becomes almost instantly deionized when the current drops to zero in the alternating current cycle, and the arc cannot reform.

deionization [CHEM] An ion-exchange process in which all charged species or ionizable organic and inorganic salts are removed from solution. [ELECTR] The return of an ionized gas to its neutral state after all sources of ionization have been removed, involving diffusion of ions to the container walls and volume recombination of negative and positive ions.

deionization potential [ELECTR] The potential at which ionization of the gas in a gas-filled tube ceases and conduction stops.

deionization time [ELECTR] The time required for a gas tube to regain its preconduction characteristics after interruption of anode current, so that the grid regains control. Also called recontrol time.

Deister phase [GEOL] A subdivision of the late Ammerian phase of the Jurassic period between the Kimmeridgian and lower Portlandian.

dekapoise [FL MECH] A unit of absolute viscosity, equal to 10 poises.

Delaborne prism [OPTICS] A special compound prism which, when rotated about an axis parallel to the reflecting face and lying in a plane perpendicular to the refracting faces, rotates the image through twice the angle. Also known as Dove prism.

delafossite [MINERAL] $CuFeO_2$ A mineral consisting of an oxide of copper and iron.

delamination [BIOL] The separation of cells into layers. [EMBRYO] Gastrulation in which the endodermal layer splits off from the inner surface of the blastoderm and the space between this layer and the yolk represents the archenteron. [ENG] Separation of a laminate into its constituent layers.

de la Rue and Miller's law [ELECTR] The law that in a field between two parallel plates, the sparking potential of a gas is a function of the product of gas pressure and sparking distance only.

de la Tour method [ANALY CHEM] Measurement of critical temperature, involving sealing the sample in a tube and heating it; the temperature at which the meniscus disappears is the critical temperature.

Delaunay orbit element [MECH] In the n-body problem, certain functions of variable elements of an ellipse with a fixed focus along which one of the bodies travels; these functions have rates of change satisfying simple equations.

de Laval nozzle [AERO ENG] A converging-diverging nozzle used in certain rockets. Also known as Laval nozzle.

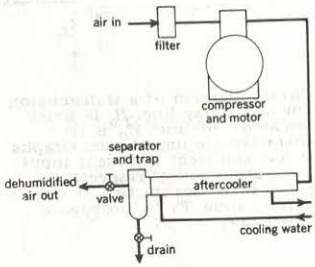
de Lavaud process [MET] A centrifugal casting process employing water-cooled metal molds, used to produce cast iron pipe, gun barrels, and other cylindrical objects.

delay [COMMUN] **1.** Time required for a signal to pass through a device or a conducting medium. **2.** Time which elapses between the instant at which any designated point of a transmitted wave passes any two designated points of a transmission circuit; such delay is primarily determined by the constants of the circuit. [IND ENG] Interruption of the normal tempo of an operation; may be avoidable or unavoidable.

delay-action detonator *See* delay blasting cap.

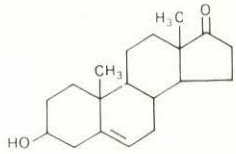
delay allowance [IND ENG] A percentage of the normal operating time added to the normal time to allow for delays.

DEHUMIDIFIER



Dehumidifying by compression and aftercooling.

DEHYDROEPI-ANDROSTERONE



Structural formula.

DELABORNE PRISM

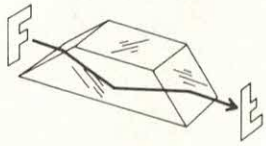


Diagram of Delaborne prism.

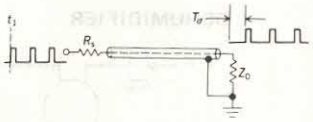
DELAY LINE



Circuit diagram of a transmission line as a delay line. R_s is series resistance of line; Z_O is its characteristic impedance. Graphs at left and right represent input and output pulses respectively. Series of pulses starting at time t_1 require time T_d to propagate down line.

delay blasting cap [ENG] A blasting cap which explodes at a definite time interval after the firing current has been passed by the exploder. Also known as delay-action detonator.

delay circuit *See* time-delay circuit.

delay counter [COMPUT SCI] A counter which inserts a time delay in a sequence of events.

delay distortion [ELECTR] Phase distortion in which the rate of change of phase shift with frequency of a circuit or system is not constant over the frequency range required for transmission. Also called envelope delay distortion.

delay Doppler mapping [MAP] Mapping of a planet by illuminating it with a radar beam and measuring the Doppler shift caused by rotation of the planet.

delayed action bomb [ORD] A bomb with a delay fuse; the delay action may vary from a fraction of a second to several days after impact.

delayed action mine [ORD] A mine that explodes some time after being activated.

delayed alpha particle [NUC PHYS] An alpha particle emitted by an excited nucleus that was formed an appreciable time after a beta disintegration process.

delayed automatic gain control [ELECTR] An automatic gain control system that does not operate until the signal exceeds a predetermined magnitude; weaker signals thus receive maximum amplification. Also known as biased automatic gain control; delayed automatic volume control; quiet automatic volume control.

delayed automatic volume control *See* delayed automatic gain control.

delayed coincidence [NUCLEO] Occurrence of a count in one detector at a short but measurable time later than a count in another detector, the two counts being due to successive events in the same nucleus.

delayed coking [CHEM ENG] A semicontinuous thermal process for converting heavy petroleum stock to lighter material.

delayed combustion [ENG] Secondary combustion in succeeding gas passes beyond the furnace volume of a boiler.

delayed critical [NUCLEO] The condition in which a nuclear reactor is critical because of delayed neutrons alone, without requiring the contribution of prompt neutrons.

delayed development well *See* step-out well.

delayed hypersensitivity [IMMUNOL] Abnormal reactivity in a sensitized individual beginning several hours after contact with the allergen.

delayed neutron [NUC PHYS] A neutron emitted spontaneously from a nucleus as a consequence of excitation left from a preceding radioactive decay event; in particular, a delayed fission neutron.

delayed neutron fraction [NUC PHYS] The ratio of the mean number of delayed fission neutrons per fission to the mean total number of neutrons (prompt plus delayed) per fission.

delayed-opening chaff [ORD] Chaff packages, with parachutes and time fuses, deployed from aircraft or ballistic missiles; intended to make the enemy believe there are flying targets far removed from the dispensing aircraft or missiles. Abbreviated DOC.

delayed PPI [ELECTR] A plan position indicator in which initiation of the time base is delayed a fixed time after each transmitted pulse, to give expansion of the range scale for distant targets so that they show more clearly on the screen.

delayed proton [NUC PHYS] A proton emitted spontaneously from a nucleus as a consequence of excitation left from a previous radioactive decay event.

delayed repeater satellite [AERO ENG] Satellite which stores information obtained from a ground terminal at one location, and upon interrogation by a terminal at a different location, transmits the stored message.

delayed speech [MED] A speech disorder characterized by a complete absence of vocalization or vocalization with no communicative value; speech is considered delayed when it fails to develop by the second year, caused by impaired hearing, severe childhood illness, or emotional disturbance.

delayed sweep [ELECTR] A sweep whose beginning is delayed for a definite time after the pulse that initiates the sweep.

delayed yield [MET] Time delay between the sudden application of a yield stress and the appearance of yielding.

delay element *[ORD]* A component which provides a specified delay between actuation of the propellant-actuated devices and ignition of the propellant.

delay equalizer [ELECTR] A corrective network used to make the phase delay or envelope delay of a circuit or system substantially constant over a desired frequency range.

delayer [MATER] A substance mixed with solid rocket propellants to decrease the rate of combustion.

delay flip-flop *See* D flip-flop.

delay/frequency distortion [COMMUN] That form of distortion which occurs when the delay of a circuit or system is not constant over the frequency range required for transmissions.

delay line [ELECTR] A transmission line (as dissipationless as possible), or an electric network approximation of it, which, if terminated in its characteristic impedance, will reproduce at its output a waveform applied to its input terminals with little distortion, but at a time delayed by an amount dependent upon the electrical length of the line. Also known as artificial delay line.

delay-line memory *See* circulating memory.

delay-line storage *See* circulating memory.

delay multivibrator [ELECTR] A monostable multivibrator that generates an output pulse a predetermined time after it is triggered by an input pulse.

delay relay [ELEC] A relay having predetermined delay between energization and closing of contacts or between deenergization and dropout.

delay time [CONT SYS] The amount of time by which the arrival of a signal is retarded after transmission through physical equipment or systems. [ELECTR] The time taken for collector current to start flowing in a transistor that is being turned on from the cutoff condition.

delay unit [COMPUT SCI] *See* transport delay unit. [ELECTR] Unit of a radar system in which pulses may be delayed a controllable amount.

Delbrück scattering [NUC PHYS] Elastic scattering of gamma rays by a nucleus caused by virtual electron-positron pair production.

Delco Remy distributor [ELEC] A distributor in which two breaker arms are connected in parallel, one coil and one capacitor are used, and one set of contacts closes a few degrees after the other is broken.

d electron [ATOM PHYS] An atomic electron that has an orbital angular momentum of 2 in the central field approximation.

Delepine reaction [ORG CHEM] Slow ammonolysis of alkyl halides in acid to primary amines in the presence of hexamethylenetetramine.

deleted representation [COMPUT SCI] In paper tape codes, the superposition of a pattern of holes upon another pattern of holes representing a character, to effectively remove or obliterate the latter.

deletion [GEN] Loss of a chromosome segment of any size, down to a part of a single gene.

deletion operator [COMPUT SCI] The part of a data structure which allows components to be deleted.

deletion record [COMPUT SCI] A record which removes and replaces an existing record when it is added to a file.

deliberate fire [ORD] Fire which is conducted at a rate intentionally less than the normal rate of fire for the purpose of applying adjustment corrections between each round or salvo, for tactical reasons, or for conserving ammunition.

delimiter [COMPUT SCI] A character that separates items of data.

delinquency [PSYCH] **1.** The tendency to commit legal or moral offenses, especially by a minor. **2.** The offense committed.

delinquency proneness [PSYCH] The likelihood of becoming delinquent, measured by estimates of the probability that an individual will become delinquent if exposed to fairly commonplace temptations and opportunities.

deliquescence [BOT] The condition of repeated divisions ending in fine divisions; seen especially in venation and stem branching. [PHYS CHEM] The absorption of atmospheric water vapor by a crystalline solid until the crystal eventually dissolves into a saturated solution.

delirium [MED] Severely disordered mental state associated with fever, intoxication, head trauma, and other encephalopathies.

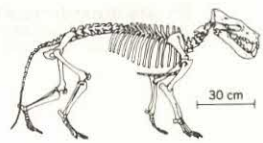
delirium tremens [MED] Delirium associated with tremors, insomnia, and other physical and neurological symptoms frequently following chronic alcoholism.

delivery system [ORD] The means of delivering atomic weapons to the target.
dell [GEOGR] A small, secluded valley or vale.
dellenite *See* rhyodacite.
Dellinger fadeout [COMMUN] Type of fadeout that occurs during shortwave reception, believed to be caused by rapid shifting of ionosphere layers during solar eruptions.
Delmontian [GEOL] Upper Miocene or lower Pliocene geologic time.
delomorphous cell *See* parietal cell.
del operator [MATH] The rule which replaces the function f of three variables, x, y, z, by the vector valued function whose components in the x, y, z directions are the respective partial derivatives of f. Written ∇f. Also known as nabla.
delorenzite *See* tanteuxenite.
delphidenoion *See* myricetin.
Delphinidae [VERT ZOO] A family of aquatic mammals in the order Cetacea; includes the dolphins.
delphinidin [BIOCHEM] $C_{15}H_{11}O_7Cl$ A purple or brownish-red anthocyanin compound occurring widely in plants.
Delphinus [ASTRON] A northern constellation, right ascension, 21 hours, declination, 10° north. Also known as Dolphin. [VERT ZOO] A genus of cetacean mammals, including the dolphin.
Delrac [NAV] An electronic long-range navigation system in which the position of a vessel is ascertained by comparing the phase of signal bursts from different transmission stations.
delta [ELECTR] The difference between a partial-select output of a magnetic cell in a one state and a partial-select output of the same cell in a zero state. [GEOL] An alluvial deposit, usually triangular in shape, at the mouth of a river, stream, or tidal inlet.
delta baryon [PARTIC PHYS] **1.** Any excited baryon state belonging to a multiplet having a total isospin of 3/2, a hypercharge of +1, a spin of 3/2, positive parity, and an approximate mass of 1236 MeV. Designated $\Delta(1236)$. **2.** Any excited baryon state belonging to any multiplet having a total isospin of 3/2 and a hypercharge of +1.
Delta Cephei [ASTRON] A cepheid variable, from which the name of this type of star is derived; it has a period of 5.3 days.
delta connection [ELEC] A combination of three components connected in series to form a triangle like the Greek letter delta. Also known as mesh connection.
delta current [ELEC] Electricity going through a delta connection.
delta ferrite *See* delta iron.
delta function [MATH] A distribution δ such that

$$\int_{-\infty}^{\infty} f(t)\,\delta(x-t)dt \text{ is } f(x).$$

Also known as Dirac delta function.
delta geosyncline *See* exogeosyncline.
delta-gun tube [ELECTR] A color television picture tube in which three electron guns, arranged in a triangle, provide electron beams that fall on phosphor dots on the screen, causing them to emit light in three primary colors; a shadow mask located just behind the screen ensures that each beam excites only dots of one color.
deltaic deposits [GEOL] Sedimentary deposits in a delta.
delta iron [MET] The nonmagnetic polymorphic form of iron stable between about 1403°C and the melting point, about 1535°C. Also known as delta ferrite.
deltaite [MINERAL] A mixture of crandallite and hydroxylapatite.
delta matching transformer [ELEC] Impedance device used to match the impedance of an open-wire transmission line to an antenna; the two ends of the transmission line are fanned out so that the impedance of the line gradually increases; the ends of the transmission line are attached to the antenna at points of equal impedance, symmetrically located with respect to the center of the antenna.
delta meson [PARTIC PHYS] Any scalar meson resonance, with positive charge conjugation parity, belonging to a multiplet with a total isospin of 1, a hypercharge of zero, a mass of 962 ± 5 MeV, and a width <5 MeV. Designated $\delta(962)$.
delta modulation [ELECTR] A pulse-modulation technique in which a continuous signal is converted into a binary pulse pattern, for transmission through low-quality channels.
delta moraine *See* ice-contact delta.
delta network [ELEC] A set of three branches connected in series to form a mesh.
delta plain [GEOL] A plain formed by deposition of silt at the mouth of a stream or by overflow along the lower stream courses.
delta pulse code modulation [ELECTR] A modulation system that converts audio signals into corresponding trains of digital pulses to give greater freedom from interference during transmission over wire or radio channels.
delta ray [ATOM PHYS] An electron or proton ejected by recoil when a rapidly moving alpha particle or other primary ionizing particle passes through matter.
delta region [METEOROL] A region in the atmosphere characterized by difluence.
delta rhythm [PHYSIO] An electric current generated in slow waves with frequencies of 0.5–3 per second from the forward portion of the brain of normal subjects when asleep.
Deltatheridia [PALEON] An order of mammals that includes the dominant carnivores of the early Cenozoic.
delta wing [AERO ENG] A triangularly shaped wing of an aircraft.
delta-Y transformation *See* Y-delta transformation.
deltic method [ELECTR] A method of sampling incoming radar, sonar, seismic, speech, or other waveforms along with reference signals, compressing the samples in time, and comparing them by autocorrelation.
deltohedron [CRYSTAL] A polyhedron which has 12 quadrilateral faces, and is the form of a crystal belonging to the cubic system and having hemihedral symmetry. Also known as deltoid dodecahedron; tetragonal tristetrahedron.
deltoid [ANAT] The large triangular shoulder muscle; originates on the pectoral girdle and inserts on the humerus. [BIOL] Triangular in shape.
deltoid dodecahedron *See* deltohedron.
deltoid ligament [ANAT] The ligament on the medial side of the ankle joint; the fibers radiate from the medial malleolus to the talus, calcaneus, and navicular bones.
delusion [PSYCH] A conviction based on faulty perceptions, feelings, and thinking.
deluster [TEXT] To reduce brightness, for example, by adding pigment to the spinning solution of a yarn.
delvauxite [MINERAL] A mineral, with the approximate formula $Fe_4(PO_4)_2(OH)_6 \cdot nH_2O$, consisting of a hydrous phosphate of iron.
demagnetization [ELECTROMAG] **1.** The process of reducing or removing the magnetism of a ferromagnetic material. **2.** The reduction of magnetic induction by the internal field of a magnet. [MIN ENG] Deflocculation in dense-media process using ferrosilicon by passing the fluid through an alternating-current field.
demagnetizer [ELECTR] A device for removing undesired magnetism, as from the playback head of a tape recorder or from a recorded reel of magnetic tape that is to be erased.
demal [CHEM] A unit of concentration, equal to the concentration of a solution in which 1 gram-equivalent of solute is dissolved in 1 cubic decimeter of solvent.
demand *See* demand factor.
demand-driven execution [COMPUT SCI] A mode of carrying out a program in a data flow system in which no calculation is carried out until its results are demanded as input to another calculation. Also known as lazy evaluation.
demand factor [ELEC] The ratio of the maximum demand of a building for electric power to the total connected load. Also known as demand.
demand limiter *See* current limiter.
demand meter [ENG] Any of several types of instruments used to determine a customer's maximum demand for electric power over an appreciable time interval; generally used for billing industrial users.
demand paging [COMPUT SCI] The characteristic of a virtual memory system which retrieves only that part of a user's program which is required during execution.
demand processing [COMPUT SCI] The processing of data by a computer system as soon as it is received, so that it is not necessary to store large amounts of raw data. Also known as immediate processing.
demand rate [ELEC] The maximum amount of electric power that must be kept available to a customer.
demand reading [COMPUT SCI] A method of carrying out

DELTATHERIDIA



The deltatheridian *Hyaenodon*, original about 4 feet (1.2 meters) long. *(After Scott, from A. S. Romer, Vertebrate Paleontology, 3d ed., University of Chicago Press, 1966)*

S.C.E.R.T., West Bengal Library Calcutta

input operations in which blocks of data are transmitted to the central processing unit as needed for processing.

demand staging [COMPUT SCI] Moving blocks of data from one storage device to another when programs request them.

demand system [ENG] A system in an airplane that automatically dispenses oxygen according to the demand of the flyer's body.

demand writing [COMPUT SCI] A method of carrying out output operations in which blocks of data are transmitted from the central processing unit as they are needed by the user.

demantoid [MINERAL] A lustrous, green variety of andradite; used as a gem.

demarcation potential *See* injury potential.

De Marre formula [ORD] A formula expressing the relationship between projectile characteristics and armor-plate penetration capabilities.

demasking [CHEM] A process by which a masked substance is made capable of undergoing its usual reactions; can be brought about by a displacement reaction involving addition of, for example, another cation that reacts more strongly with the masking ligand and liberates the masked ion.

Dematiaceae [MYCOL] A family of fungi in the order Moniliales; sporophores are not grouped, hyphae are always dark, and the spores are hyaline or dark.

Dember effect [ELECTR] Creation of a voltage in a conductor or semiconductor by illumination of one surface. Also known as photodiffusion effect.

Dembowska [ASTRON] The only moderately large asteroid whose surface composition resembles that of ordinary chondritic meteorites; has a diameter of about 140 kilometers and a mean distance from the sun of 2.924 astronomical units.

deme [ECOL] A local population in which the individuals freely interbreed among themselves but not with those of other demes.

dementia [PSYCH] Deterioration of intellectual and other mental processes due to organic brain disease.

dementia praecox *See* schizophrenia.

dementia simplex [PSYCH] A subtype of schizophrenia broadly characterized by a slow, progressive deterioration, often combined with mental deficiency.

demersal [BIOL] Living at or near the bottom of the sea.

demethanation *See* demethanization.

demethanator [CHEM ENG] The apparatus in which demethanization is conducted.

demethanization [CHEM ENG] The process of distillation in which methane is separated from the heavier components. Also known as demethanation.

demethylation [ORG CHEM] Removal of the methyl group from a compound.

demethylchlortetracycline [MICROBIO] $C_{21}H_{21}O_8N_2Cl$ A broad-spectrum tetracycline antibiotic produced by a mutant strain of *Streptomyces aureofaciens*.

demeton-*S*-methyl [ORG CHEM] $C_6H_{15}O_3PS_2$ An oily liquid with a 0.3% solubility in water; used as an insecticide and miticide to control aphids. Also known as *O,O*-dimethyl-*S*-[2(ethylthio)ethyl[phosphorothioate.

demeton-*S*-methyl sulfoxide [ORG CHEM] $C_6H_{15}O_4PS_2$ A clear, amber liquid; limited solubility in water; used as an insecticide and miticide for pests of vegetable, fruit, and field crops, ornamental flowers, shrubs, and trees. Also known as *S*-[2-(ethylsulfinyl)ethyl[*O,O*-dimethyl phosphorodithioate; oxydemeton methyl.

demilune [BIOL] Crescent-shaped.

demineralization [CHEM ENG] Removal of mineral constituents from water. [MED] Removal or loss of minerals and salts from the body, especially by disease.

demister [MECH ENG] A series of ducts in automobiles arranged so that hot, dry air directed from the heat source is forced against the interior of the windscreen or windshield to prevent condensation.

Demjanov rearrangement [ORG CHEM] A structural rearrangement that accompanies treatment of certain primary aliphatic amines with nitrous acid; the amine will undergo a ring contraction or expansion.

DEMO *See* carboxin.

Demodicidae [INV ZOO] The pore mites, a family of arachnids in the suborder Trombidiformes.

demodifier [COMPUT SCI] A data element used to restore part of an instruction which has been modified to its original value.

demodulate [COMMUN] To recover the modulating wave from a modulated carrier. Also known as decode; detect.

demodulator *See* detector.

demography [ECOL] The statistical study of populations with reference to natality, mortality, migratory movements, age, and sex, among other social, ethnic, and economic factors.

De Moivre's theorem [MATH] The nth power of the quantity $\cos\theta + i\sin\theta$ is $\cos n\theta + i\sin n\theta$ for any integer n.

demolition [CIV ENG] The act or process of tearing down a building or other structure. [ORD] Destroying a structure or an area by the use of explosives.

demolition block [ORD] An explosive charge, usually in a nonmetallic container, used for demolition purposes.

demolition bomb [ORD] Former classification for a bomb that explodes after a short penetration, accomplishing damage and destruction by both blast and underground explosion.

demolition kit [ORD] A group of items of an explosive nature, with the necessary nonexplosive accessories and tools, specially designed containers, and carrying attachments, to enable efficient performance of designated demolition tasks.

demon of Maxwell [THERMO] Hypothetical creature who controls a trapdoor over a microscopic hole in an adiabatic wall between two vessels filled with gas at the same temperature, so as to supposedly decrease the entropy of the gas as a whole and thus violate the second law of thermodynamics. Also known as Maxwell's demon.

demonophobia [PSYCH] An abnormal fear of devils and demons.

Demon Star *See* Algol.

De Morgan's rules [MATH] The complement of the union of two sets equals the intersection of their respective complements; the complement of the intersection of two sets equals the union of their complements.

De Morgan's test [MATH] A series with term u_n, for which $|u_{n+1}/u_n|$ converges to 1, will converge absolutely if there is $c > 0$ such that the limit superior of $n(|u_{n+1}/u_n| - 1)$ equals $-1-c$.

demorphism *See* weathering.

Demospongiae [INV ZOO] A class of the phylum Porifera, including sponges with a skeleton of one- to four-rayed siliceous spicules, or of spongin fibers, or both.

demountable tube [ELECTR] High-power radio tube having a metal envelope with porcelain insulation; can be taken apart for inspection and for renewal of electrodes.

demulsification [CHEM ENG] Prevention or breaking of liquid-liquid emulsions by chemical, mechanical or electrical demulsifiers.

demulsifier [CHEM ENG] A chemical, mechanical, or electrical system that either breaks liquid-liquid emulsions or prevents them from forming.

demultiplexer [ELECTR] A device used to separate two or more signals that were previously combined by a compatible multiplexer and transmitted over a single channel.

demultiplexing circuit [ELECTR] A circuit used to separate the signals that were combined for transmission by multiplex.

demyelinating disease [MED] Any disease associated with the destruction or removal of myelin from nerves.

demyelination [PATH] Destruction of myelin; loss of myelin from nerve sheaths or nerve tracts.

denaturant [CHEM] An inert, bad-tasting, or poisonous chemical substance added to a product such as ethyl alcohol to make it unfit for human consumption. [NUCLEO] A nonfissionable isotope that can be added to fissionable material to make it unsuitable for use in atomic weapons without extensive processing.

denature [CHEM] **1.** To change a protein by heating it or treating it with alkali or acid so that the original properties such as solubility are changed as a result of the protein's molecular structure being changed in some way. **2.** To add a denaturant, such as methyl alcohol, to grain alcohol to make the grain alcohol poisonous and unfit for human consumption.

denatured alcohol [CHEM] Ethyl alcohol containing a poisonous substance, such as methyl alcohol or benzene, which makes it unfit for human consumption.

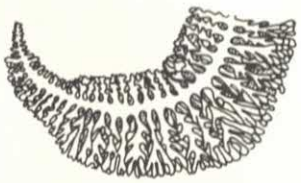
dendrite [ANAT] The part of a neuron that carries the unidirectional nerve impulse toward the cell body. Also known as dendron. [CRYSTAL] A crystal having a treelike structure.

dendritic [SCI TECH] Having a branching, treelike structure or pattern.

dendritic drainage [HYD] Irregular stream branching, with tributaries joining the main stream at all angles.

dendritic powder [MET] Fine metal particles having a dendritic structure; usually of electrolytic origin. Also known as arborescent powder.
dendritic valleys [GEOL] Treelike extensions of the valleys in a region lying upon horizontally bedded rock.
Dendrobatinae [VERT ZOO] A subfamily of anuran amphibians in the family Ranidae, including the colorful poisonous frogs of Central and South America.
dendrobranchiate gill [INV ZOO] A respiratory structure of certain decapod crustaceans, characterized by extensive branching of the two primary series.
Dendroceratida [INV ZOO] A small order of sponges of the class Demospongiae; members have a skeleton of spongin fibers or lack a skeleton.
Dendrochirotacea [INV ZOO] A subclass of echinoderms in the class Holothuroidea.
Dendrochirotida [INV ZOO] An order of dendrochirotacean holothurian echinoderms with 10–30 richly branched tentacles.
dendrochronology [GEOL] The science of measuring time intervals and dating events and environmental changes by reading and dating growth layers of trees as demarcated by the annual rings.
Dendrocolaptidae [VERT ZOO] The woodcreepers, a family of passeriform birds belonging to the suboscine group.
dendrogram [BIOL] A genealogical tree; the trunk represents the oldest common ancestor, and the branches indicate successively more recent divisions of a lineage for a group.
dendrohydrology [HYD] The science of determining hydrologic occurrences by the comparison of tree ring thickness with streamflow or precipitation.
dendroid [BIOL] Branched or treelike in form.
Dendroidea [PALEON] An order of extinct sessile, branched colonial animals in the class Graptolithina occurring among typical benthonic fauna.
dendrology [FOR] The division of forestry concerned with the classification, identification, and distribution of trees and other woody plants.
dendrometer [FOR] A device used to measure a tree's height and diameter using principles based on the relation of the sides of similar triangles.
Dendromurinae [VERT ZOO] The African tree mice and related species, a subfamily of rodents in the family Muridae.
dendron *See* dendrite.
dendrophagous [ZOO] Feeding on trees, referring to insects.
dendrophysis [MYCOL] A hyphal thread with arboreal branching in certain fungi.
Deneb [ASTRON] A white star of spectral classification A2-Ia in the constellation Cygnus; the star α Cygni.
Denebola [ASTRON] A white star of stellar magnitude 2.2, spectral classification A2, in the constellation Leo; the star β Leonis.
denervate [MED] To interfere with or cut off the nerve supply to a part of the body, or to remove a nerve; may occur by excision, drugs, or a disease process.
denervation hypersensitivity [PHYSIO] Extreme sensitivity of an organ that has recovered from the removal or interruption of its nerve supply.
dengue [MED] An acute viral disease of man characterized by fever, rash, prostration, and lymphadenopathy; transmitted by the mosquito *Aedes aegypti*. Also known as breakbone fever; dandy fever.
denial [PSYCH] An unconscious defense mechanism in which an individual denies himself recognition of an observation in order to avoid pain or anxiety.
denier [TEXT] A unit expressing the mass of a fiber divided by its length, equal to 1 gram for 9000 meters of fiber.
denim [TEXT] A sturdy twill-weave cotton fabric having a solid-colored warp and a white filling.
Denison sampler [ENG] A soil sampler consisting of a central nonrotating barrel which is forced into the soil as friction is removed by a rotating external barrel; the bottom can be closed to retain the sample during withdrawal.
denitration [CHEM] Removal of nitrates or nitrogen. Also known as denitrification.
denitrification [CHEM] *See* denitration. [MICROBIO] The reduction of nitrate or nitrite to gaseous products such as nitrogen, nitrous oxide, and nitric oxide; brought about by denitrifying bacteria.
denitrifying bacteria [MICROBIO] Bacteria that reduce nitrates to nitrites or nitrogen gas; most are found in soil.
denitrogenate [PHYSIO] To remove nitrogen from the body by breathing nitrogen-free gas.
denominator [MATH] In a fraction, the term that divides the other term (called the numerator), and is written below the line.
De Nora cell [CHEM ENG] Mercury-cathode cell used for production of chlorine and caustic soda by electrolysis of sodium chloride brine.
dense [GRAPHICS] Very opaque because of a concentration of material, as pertaining to a negative or transparency that has been overdeveloped or overexposed.
dense-air refrigeration cycle *See* reverse Brayton cycle.
dense-air system *See* cold-air machine.
dense binary code [COMPUT SCI] A code in which all possible states of the binary pattern are used.
dense connective tissue [HISTOL] A fibrous connective tissue with an abundance of enlarged collagenous fibers which tend to crowd out the cells and ground substance.
dense-in-itself set [MATH] A set every point of which is an accumulation point; a set without any isolated points.
dense list [COMPUT SCI] A list in which all the cells contain records of the file.
dense-media separator [MIN ENG] A device in which a heavy mineral is dispersed in water, causing heavier ores to sink and lighter ores to float.
dense subset [MATH] A subset of a topological space whose closure is the entire space.
densify [ENG] To increase the density of a material such as wood by subjecting it to pressure or impregnating it with another material.
densimeter [ENG] An instrument which measures the density or specific gravity of a liquid, gas, or solid. Also known as densitometer; density gage; density indicator; gravitometer.
densitometer [ENG] **1.** An instrument which measures optical density by measuring the intensity of transmitted or reflected light; used to measure photographic density. **2.** *See* densimeter.
density [MATER] Closeness of texture or consistency. [MECH] The mass of a given substance per unit volume. [OPTICS] **1.** The degree of opacity of a translucent material. **2.** The common logarithm of opacity. [PHYS] The total amount of a quantity, such as energy, per unit of space.
density airspeed [AERO ENG] Calibrated airspeed corrected for pressure altitude and true air temperature.
density altitude [METEOROL] The altitude, in the standard atmosphere, at which a given density occurs.
density bombing [ORD] Dropping a given tonnage of bombs onto an area in order to make certain of striking particular targets.
density bottle *See* specific gravity bottle.
density channel [METEOROL] A channel used to investigate a density current; for example, in experiments relating to the behavior of cold masses of air in the atmosphere and related frontal structures.
density correction [AERO ENG] A correction made necessary because the airspeed indicator is calibrated only for standard air pressure; it is applied to equivalent airspeed to obtain true airspeed, or to calibrated airspeed to obtain density airspeed. [ENG] **1.** The part of the temperature correction of a mercury barometer which is necessitated by the variation of the density of mercury with temperature. **2.** The correction, applied to the indications of a pressure-tube anemometer or pressure-plate anemometer, which is necessitated by the variation of air density with temperature.
density current [METEOROL] Intrusion of a dense air mass beneath a lighter air mass; the usage applies to cold fronts. [OCEANOGR] *See* turbidity current.
density error [AERO ENG] The error in the indications of a differential-pressure-type airspeed indicator due to nonstandard atmospheric density.
density function [MATH] A density function for a measure m is a function which gives rise to m when it is integrated with respect to some other specified measure. [STAT] *See* probability density function.
density gage *See* densimeter.
density gradient centrifugation [ANALY CHEM] Separation of particles according to density by employing a gradient of varying densities; at equilibrium each particle settles in the gradient at a point equal to its density.
density indicator *See* densimeter.

DENDROBRANCHIATE GILL



Dendrobranchiate gill of penaeid shrimp, *Benthesicymus*. *(Smithsonian Institution)*

DENDROCERATIDA

Dendritic skeleton of *Dendrilla cactus*. *(After Lendenfeld, 1889)*

DENDROIDEA

Whole colony of a dendroid graptolite.

density log [PETRO ENG] Radioactivity logging of reservoir structure densities down an oil-well bore by emission and detection of gamma rays.

density matrix [QUANT MECH] A matrix ρ_{mn} describing an ensemble of quantum-mechanical systems in a representation based on an orthonormal set of functions ϕ_n; for any operator G with representation G_{mn}, the ensemble average of the expectation value of G is the trace of ρG.

density modulation [ELECTR] Modulation of an electron beam by making the density of the electrons in the beam vary with time.

density of states [SOLID STATE] A function of energy E equal to the number of quantum states in the energy range between E and $E + dE$ divided by the product of dE and the volume of the substance.

density packing [COMPUT SCI] In computers, the number of binary digit magnetic pulses stored on tape or drum per linear inch on a single track by a single head.

density ratio [METEOROL] The ratio of the density of the air at a given altitude to the air density at the same altitude in a standard atmosphere.

density rule [ENG] A grading system for lumber based on the width of annual rings.

density specific impulse [AERO ENG] The product of the specific impulse of a propellant combination and the average specific gravity of the propellants.

density step tablet [COMMUN] Facsimile test chart consisting of a series of areas; density of the areas increases from a low value to a maximum value in steps. Also known as step tablet.

density transmitter [ENG] An instrument used to record the density of a flowing stream of liquid by measuring the buoyant force on an air-filled chamber immersed in the stream.

density-wave theory [ASTROPHYS] A theory explaining the spiral structure of galaxies by a periodic variation in space in the density of matter which rotates with a fixed angular velocity while the angular velocity of the matter itself varies with distance from the galaxy's center.

densofacies *See* metamorphic facies.

dental [ANAT] Pertaining to the teeth.

dental arch [ANAT] The parabolic curve formed by the cutting edges and masticating surfaces of the teeth.

dental calculi [MED] Calcareous deposits of organic and mineral matter on the teeth. Also known as tartar.

dental caries *See* caries.

dental coupling [MECH ENG] A type of flexible coupling used to join a steam turbine to a reduction-gear pinion shaft; consists of a short piece of shaft with gear teeth at each end, and mates with internal gears in a flange at the ends of the two shafts to be joined.

dental epithelium [HISTOL] The cells forming the boundary of the enamel organ.

dental follicle *See* dental sac.

dental formula [VERT ZOO] An expression of the number and kind of teeth in each half jaw, both upper and lower, of mammals.

dental gold [MET] An alloy composed of 5 to 12% silver, 4 to 10% copper, with the balance gold.

Dentaliidae [INV ZOO] A family of mollusks in the class Scaphopoda; members have pointed feet.

dental index [ANTHRO] A ratio of the length of the teeth to the distance from the nasion to the basion multiplied by 100, used to determine the relative size of teeth.

dental pad [VERT ZOO] A firm ridge that replaces incisors in the maxilla of cud-chewing herbivores.

dental papilla [EMBRYO] The mass of connective tissue located inside the enamel organ of a developing tooth, and forming the dentin and dental pulp of the tooth.

dental plate [INV ZOO] A flat plate that replaces teeth in certain invertebrates, such as some worms. [VERT ZOO] A flattened plate that represents fused teeth in parrot fishes and related forms.

dental pulp [HISTOL] The vascular connective tissue of the roots and pulp cavity of a tooth.

dental ridge [EMBRYO] An elevation of the embryonic jaw that forms a cusp or margin of a tooth.

dental sac [EMBRYO] The connective tissue that encloses the developing tooth. Also known as dental follicle.

dental work *See* cementation.

dentate [BIOL] **1.** Having teeth. **2.** Having toothlike or conical marginal projections.

dentate fissure *See* hippocampal sulcus.

dentate nucleus [ANAT] An ovoid mass of nerve cells located in the center of each cerebellar hemisphere, which give rise to fibers found in the superior cerebellar peduncle.

denticle [ZOO] A small tooth or toothlike projection, as the type of scale of certain elasmobranchs.

denticulate [ZOO] Having denticles; serrate.

dentigerous [BIOL] Having teeth or toothlike structures.

dentil [ARCH] One of a series of small rectangular blocks under a cornice.

dentil band [ARCH] A molding or band on a cornice resembling a row of dentils, but with the spaces between dentils filled.

dentin [HISTOL] A bonelike tissue composing the bulk of a vertebrate tooth; consists of 70% inorganic materials and 30% water and organic matter.

dentinoblast [HISTOL] A mesenchymal cell that forms dentin.

dentinogenesis [PHYSIO] The formation of dentin.

dentinoma [MED] A benign odontogenic tumor made up of dentin.

dentist [MED] One who practices dentistry.

dentistry [MED] A branch of medical science concerned with the prevention, diagnosis, and treatment of diseases of the teeth and adjacent tissues and the restoration of missing dental structures.

dentition [VERT ZOO] The arrangement, type, and number of teeth which are variously located in the oral or in the pharyngeal cavities, or in both, in vertebrates.

denture [MED] A partial or complete prostnetic appliance to replace one or more missing teeth.

denudation [GEOL] General wearing away of the land; laying bare of subjacent lands.

denumerable set [MATH] A set which may be put in one-to-one correspondence with the positive integers. Also known as countably infinite set.

Denver cell [MIN ENG] A subaeration type of flotation cell, mechanized and self-aerating.

Denver jig [MIN ENG] A pulsion-suction diaphragm for separating sulfur from coal before flotation; hydraulic water is admitted through a rotary valve.

deodorant [MATER] A substance used to remove, correct, or repress undesirable odors.

deodorized kerosine [MATER] A highly refined petroleum kerosine that has very little odor; used as an illuminant for wick lamps. Also known as refined kerosine.

deodorizing [CHEM ENG] A process for removing odor-creating substances from oil or fat, in which the oil or fat is held at high temperatures and low pressure while steam is blown through.

deoil [CHEM ENG] To reduce the amount of liquid oil entrained in solid wax.

deoperculate [BOT] Of mosses and liverworts, to shed the operculum.

deorbit [AERO ENG] To recover a spacecraft from earth orbit by providing a new orbit which intersects the earth's atmosphere.

deoxidant *See* deoxidizer.

deoxidation [CHEM] **1.** The condition of a molecule's being deoxidized. **2.** The process of deoxidizing.

deoxidation sphere *See* bleach spot.

deoxidize [CHEM] **1.** To remove oxygen by any of several processes. **2.** To reduce from the state of an oxide. [MET] To remove an oxide film from a metal surface.

deoxidized copper [MET] Pure copper deoxidized with phosphorus to reduce cuprous oxide and eliminate porosity.

deoxidizer [CHEM] Any substance which reduces the amount of oxygen in a substance, especially a metal, or reduces oxide compounds. Also known as deoxidant.

deoxycholate [BIOCHEM] A salt or ester of deoxycholic acid.

deoxycholic acid [BIOCHEM] $C_{24}H_{40}O_4$ One of the unconjugated bile acids; in bile it is largely conjugated with glycine or taurine.

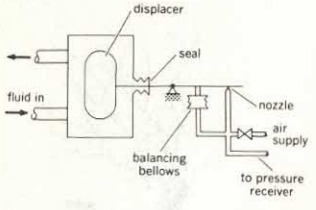
deoxycorticosterone [BIOCHEM] $C_{21}H_{30}O_3$ A steroid hormone secreted in small amounts by the adrenal cortex.

6-deoxy-L-galactose *See* L-fucose.

deoxygenation [CHEM] Removal of oxygen from a substance, such as blood or polluted water.

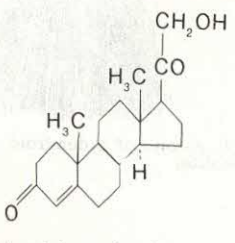
1-(2-deoxy-β-D-ribofuranosyl)-5-iodouracil *See* 5-iodo-2′-deoxyuridine.

DENSITY TRANSMITTER



Buoyancy-type density transmitter which is used to obtain a continuous record of liquid density. *(From D. M Considine, ed., Process Instruments and Controls Handbook, McGraw-Hill, 1957)*

DEOXYCORTICOSTERONE



Structural formula of deoxycorticosterone.

deoxyribonuclease [BIOCHEM] An enzyme that catalyzes the hydrolysis of deoxyribonucleic acid to nucleotides.

deoxyribonucleic acid [BIOCHEM] A linear polymer made up of deoxyribonucleotide repeating units (composed of the sugar 2-deoxyribose, phosphate, and a purine or pyrimidine base) linked by the phosphate group joining the 3′ position of one sugar to the 5′ position of the next; most molecules are double-stranded and antiparallel, resulting in a right-handed helix structure kept together by hydrogen bonds between a purine on one chain and a pyrimidine on another; carrier of genetic information, which is encoded in the sequence of bases; present in chromosomes and chromosomal material of cell organelles such as mitochondria and chloroplasts, and also present in some viruses. Abbreviated DNA.

deoxyribonucleic acid–directed RNA polymerase [BIOCHEM] An enzyme which transcribes a ribonucleic acid molecule complementary to DNA; required for initiation of DNA replication as well as transcription of RNA.

deoxyribonucleic acid ligase [BIOCHEM] An enzyme which joins the ends of two DNA chains by catalyzing the synthesis of a phosphodiester bond between a 3′-hydroxyl group at the end of one chain and a 5′-phosphate at the end of the other.

deoxyribonucleic acid polymerase I [BIOCHEM] An enzyme which catalyzes the addition of deoxyribonucleotide residues to the end of a DNA strand; generally considered to function in the repair of damaged DNA.

deoxyribonucleic acid polymerase II [BIOCHEM] An enzyme similar in action to DNA polymerase I but with lower activity.

deoxyribonucleic acid polymerase III [BIOCHEM] An enzyme thought to be the primary enzyme involved in DNA replication.

deoxyribonucleoprotein [BIOCHEM] A protein containing molecules of deoxyribonucleic acid in close association with protein molecules.

deoxyribose [BIOCHEM] $C_5H_{10}O_4$ A pentose sugar in which the hydrogen replaces the hydroxyl groups of ribose; a major constituent of deoxyribonucleic acid.

deoxy sugar [BIOCHEM] A substance which has the characteristics of a sugar, but which shows a deviation from the required hydrogen-to-oxygen ratio.

2,4-DEP *See* tris[2-(2,4-dichlorophenoxy)ethyl]phosphite.

departure [METEOROL] The amount by which the value of a meteorological element differs from the normal value. [NAV] **1.** The distance between two meridians at any given parallel of latitude, expressed in linear units, usually nautical miles; the distance to the east or west made good by a craft in proceeding from one point to another. **2.** The point at which reckoning of a voyage begins; usually established by bearings of prominent landmarks as the vessel clears a harbor and proceeds to sea; when a person establishes this point, he is said to take departure. Also known as point of departure. **3.** Act of departing or leaving.

departure point [NAV] A navigational checkpoint used by aircraft as a marker for setting course.

departure track [CIV ENG] A railroad yard track for combining freight cars into outgoing trains.

depauperate [BIOL] Inferiority of natural development or size.

DEPC *See* diethly pyrocarbonate.

depegram [METEOROL] On a diagram having entropy and temperature as coordinates, a curve representing the distribution of the dew point as a function of pressure for a given sounding of the atmosphere.

dependence [STAT] The existence of a relationship between frequencies obtained from two parts of an experiment which does not arise from the direct influence of the result of the first part on the chances of the second part but indirectly from the fact that both parts are subject to influences from a common outside factor.

dependency needs [PSYCH] The vital, originally infantile needs for mothering, love, affection, shelter, protection, security, food, and warmth, which are also present in some degree even in adult life.

dependent variable [MATH] If y is a function of x, that is, if the function assigns a single value of y to each value of x, then y is the dependent variable.

dependentizer [CHEM ENG] A fractionating column for removal of pentane and lighter fractions from a hydrocarbon mixture.

depéq [METEOROL] Strong winds over Loet Tawar (Sumatra, East Indies) during the southwest monsoon.

depergelation [HYD] The act or process of thawing permafrost.

deperm *See* degauss.

depersonalization [PSYCH] Loss of the sense of one's identity or of reality concerning the self.

Depertellidae [PALEON] A family of extinct perissodactyl mammals in the superfamily Tapiroidea.

dephlegmation [CHEM ENG] In a distillation operation, the partial condensation of vapor to form a liquid richer in higher boiling constituents than the original vapor.

dephlegmator [CHEM ENG] An apparatus used in fractional distillation to cool the vapor mixture, thereby condensing higher-boiling fractions.

dephosphorize [MET] Removal of phosphorus from a molten metal such as steel.

depilation [ENG] Removal of hair from animal skins in processing leather.

depilatory [MATER] A chemical that removes hairs from skin.

depleted material [NUCLEO] Material in which the amount of one or more isotopes of a constituent has been reduced by an isotope separation process or by a nuclear reaction.

depleted uranium [NUCLEO] Uranium having a smaller percentage of uranium-235 than the 0.7% found in natural uranium.

depletion [ECOL] Using a resource, such as water or timber, faster than it is replenished. [ELECTR] Reduction of the charge-carrier density in a semiconductor below the normal value for a given temperature and doping level. [NUCLEO] The percentage reduction in the quantity of fissionable atoms in the fuel assemblies or fuel mixture that occurs during operation of a nuclear reactor.

depletion drive [PETRO ENG] Displacement mechanism (type of drive) to expel hydrocarbons from porous reservoir formations, that is, to remove more hydrocarbon from the reservoir; types of drives are gas or water (natural or injected) and injected LPG.

depletion layer [ELECTR] An electric double layer formed at the surface of contact between a metal and a semiconductor having different work functions, because the mobile carrier charge density is insufficient to neutralize the fixed charge density of donors and acceptors. Also known as barrier layer (deprecated); blocking layer (deprecated); space-charge layer.

depletion-layer rectification [ELECTR] Rectification at the junction between dissimilar materials, such as a *pn* junction or a junction between a metal and a semiconductor. Also known as barrier-layer rectification.

depletion-layer transistor [ELECTR] A transistor that relies directly on motion of carriers through depletion layers, such as spacistor.

depletion-mode field-effect transistor *See* junction-gate field-effect transistor.

depletion region [ELECTR] The portion of the channel in a metal oxide field-effect transistor in which there are no charge carriers.

depletion-type reservoir [PETRO ENG] Oil reservoir which is initially in (and during depletion remains in) a state of equilibrium between the gas and liquid phases; includes single-phase gas, two-phase bubble-point, and retrograde-gas-condensate (or dew-point) reservoirs.

depocenter [GEOL] A site of maximum deposition.

depolarization [ELEC] The removal or prevention of polarization in a substance (for example, through the use of a depolarizer in an electric cell) or of polarization arising from the field due to the charges induced on the surface of a dielectric when an external field is applied. [OPTICS] The resolution of polarized light in an optical depolarizer.

depolarization factor [ELEC] The ratio of the internal electric field induced by the charges on the surface of a dielectric when an external field is applied to the polarization of the dielectric.

depolarizer [PHYS CHEM] A substance added to the electrolyte of a primary cell to prevent excessive buildup of hydrogen bubbles by combining chemically with the hydrogen gas as it forms. Also known as battery depolarizer.

depolymerization [ORG CHEM] Decomposition of macromolecular compounds into relatively simple compounds.

deposit [COMPUT SCI] To preserve the contents of a portion of a computer memory by copying it in a backing storage. [GEOL] Consolidated or unconsolidated material that has accumulated by a natural process or agent. [MATER] Any material applied to a base by means of vacuum, electrical, chemical, screening, or vapor methods. [SCI TECH] Any solid matter which is gradually laid down on a surface by a natural process.

deposit attack [MET] Corrosion under or around the edge of a noncontinuous local deposit on a metal surface.

deposit dose [NUCLEO] The residual radioactivity deposited on the surface after a nuclear explosion, as by water falling as rain from the base surge of an underwater atomic explosion.

deposited carbon resistor [ELECTR] A resistor in which the resistive element is a carbon film pyrolytically deposited on a ceramic substrate.

deposited metal [MET] Molten metal used during a welding operation for the fusion of base metals.

deposit feeder [INV ZOO] Any animal that feeds on the detritus that collects on the substratum at the bottom of water. Also known as detritus feeder.

deposit gage [ENG] The general name for instruments used in air pollution studies for determining the amount of material deposited on a given area during a given time.

deposition [GEOL] The laying, placing, or throwing down of any material; specifically, the constructive process of accumulation into beds, veins, or irregular masses of any kind of loose, solid rock material by any kind of natural agent.

depositional dip *See* primary dip.

depositional fabric [PETR] Arrangement of detrital particles settled from suspension or of crystals from a differentiating magma determined by the plane of the surface on which they come to rest.

depositional sequence [GEOL] A major but informal assemblage of formations or groups and supergroups, bounded by regionally extensive unconformities at both their base and top and extending over broad areas of continental cratons.

depositional strike [GEOL] Sedimentary deposits that are continuous laterally on a gently sloping surface.

deposition efficiency [MET] The ratio of the weight of deposited metal to the net weight of the consumed electrodes, exclusive of stubs, in welding.

deposition potential [PHYS CHEM] The smallest potential which can produce electrolytic deposition when applied to an electrolytic cell.

deposition rate [MET] The amount of welding material deposited per unit of time, expressed in pounds per hour.

deposition sequence [MET] The order of deposition of weld-metal increments.

depot [ORD] **1.** An establishment for storing supplies or for maintaining equipment. **2.** The installation for this establishment.

deprecated usage [SCI TECH] Word usage which is disapproved by experts in the pertinent field because the term in question has misleading connotations; for example, a capacitor has frequently been called a "condenser," but it does not condense anything.

depreciation [IND ENG] Loss of value due to physical deterioration.

depressed center car [ENG] A flat railroad car having a low center section; used to provide adequate tunnel clearance for oversized loads.

depressed fracture [MED] A fracture of the skull in which the fractured part is depressed below the normal level.

depression [GEOL] **1.** A hollow of any size on a plain surface having no natural outlet for surface drainage. **2.** A structurally low area in the crust of the earth. [METEOROL] An area of low pressure; usually applied to a certain stage in the development of a tropical cyclone, to migratory lows and troughs, and to upper-level lows and troughs that are only weakly developed. Also known as low. [PSYCH] A mood provoked by conscious awareness of an idea or feeling that was previously pushed into the unconscious.

depression angle *See* angle of depression.

depression spring [HYD] A type of gravity spring that flows onto the land surface because the surface slopes down to the water table.

depression storage [HYD] Water retained in puddles, ditches, and other depressions in the surface of the ground.

depressor [ANAT] A muscle that draws a part down. [CHEM ENG] An agent that prevents or retards a chemical reaction or process.

depressor nerve [PHYSIO] A nerve which, upon stimulation, lowers the blood pressure either in a local part or throughout the body.

depropanize [CHEM ENG] In petroleum processing, the removal of propane and sometimes lighter fractions from the petroleum.

depropanized material [MATER] Material that has undergone distillation to remove lighter components from butanes and heavier material.

depropanizer [CHEM ENG] A fractionating column in a gasoline plant for removal of propane and lighter components.

deproteinize [ORG CHEM] To remove protein from a substance.

depside [ORG CHEM] One of a class of esters that form from the joining of two or more molecules of phenolic carboxylic acid.

depsidone [ORG CHEM] One of a class of compounds that consists of esters such as depsides, but are also cyclic ethers.

depth [NAV ARCH] The vertical distance amidships from the upper surface of the flat plate keel to the underside of the plating of a specified deck at ship's side. [OCEANOGR] The vertical distance from a specified sea level to the sea floor.

depth bomb [ORD] An explosive item designed to be dropped from an aircraft for use against underwater targets.

depth charge [ORD] A cylindrical or teardrop-shaped container holding a charge of TNT or other explosive, dropped from the deck of a ship, and detonated at a preset depth as an antisubmarine weapon.

depth contour *See* isobath.

depth curve *See* isobath.

depth dose [NUCLEO] The radiation dose delivered at a particular depth beneath the surface of a body; usually expressed as percent of surface dose or of air dose.

depth-duration-area value [METEOROL] The average depth of precipitation that has occurred within a specified time interval over an area of given size. Abbreviated DDA value.

depth finder [ENG] A radar or ultrasonic instrument for measuring the depth of the sea.

depth gage [DES ENG] An instrument or tool for measuring the depth of depression to a thousandth inch.

depth hoar [HYD] A layer of ice crystals formed between the ground and snow cover by sublimation. Also known as sugar snow.

depth magnification [OPTICS] The ratio of the distance between two nearby points of the axis on the image side of an optical system to the distance between their conjugate points on the object side.

depth marker [ENG] A thin board or other lightweight substance used as a means of identifying the surface of snow or ice which has been covered by a more recent snowfall.

depth micrometer [DES ENG] A micrometer used to measure the depths of holes, slots, and distances of shoulders and projections.

depth of compensation [GEOPHYS] That depth at which density differences occurring in the earth's crust are compensated isostatically; calculated to be between 100 and 113–117 kilometers. [HYD] The depth in a body of water at which illuminance has diminished to the extent that oxygen production through photosynthesis and oxygen consumption through respiration by plants are equal; it is the lower boundary of the euphotic zone.

depth of engagement [DES ENG] The depth of contact, in a radial direction, between mating threads.

depth of field [OPTICS] The range of distances over which a camera gives satisfactory definition, its lens in the best focus for a certain specific distance.

depth of fusion [MET] The distance that fusion extends from the original surface into the base metal in a welding operation.

depth of thread [DES ENG] The distance, in a radial direction, from the crest of a screw thread to the base.

depth perception [PHYSIO] Ability to judge spatial relationships.

depth sounder [ENG] An instrument for mechanically measuring the depth of the sea beneath a ship.

depth-type filtration [CHEM ENG] Removal of solids by passing the carrier fluid through a mass-filter medium that provides a tortuous path with many entrapments to catch the solids.

depth zone [GEOL] A zone within the earth giving rise to different metamorphic assemblages. [OCEANOGR] Any one of four oceanic environments: the littoral, neritic, bathyal, and abyssal zones.

depurination [BIOCHEM] Detachment of guanine from sugar in a deoxyribonucleic acid molecule.

derail [ENG] **1.** To cause a railroad car or engine to run off the rails. **2.** A device to guide railway cars or engines off the tracks to avoid collision or other accident.

derating [ELECTR] The reduction of the rating of a device to improve reliability or to permit operation at high ambient temperatures.

derby [MET] A large, usually cylindrical piece of primary metal, whose weight may exceed 100 pounds (45 kilograms), formed by bomb reduction.

derbylite [MINERAL] $Fe_6Ti_6Sb_2O_{23}$ A black or brown orthorhombic mineral occurring in cinnabar-bearing gravels.

Derbyshire spar *See* fluorite.

derealization [PSYCH] Loss of the sense of the reality of people or objects in one's environment.

derelict [NAV] Any property abandoned at sea, often of sufficient size as to constitute a menace to navigation; especially an abandoned vessel.

derelict land [ECOL] Land that, because of mining, drilling, or other industrial processes, or by serious neglect, is unsightly and cannot be beneficially utilized without treatment.

derepression [MICROBIO] Transfer of microbial cells from an enzyme-repressing medium to a nonrepressing medium.

derichment [ANALY CHEM] In gravimetric analysis by coprecipitation of salts, a system with λ less than unity, when λ is the logarithmic distribution coefficient expressed by the ratio of the logarithms of the ratios of the initial and final solution concentrations of the two salts.

derivation [MATH] **1.** The process of deducing a formula. **2.** A function D on an algebra which satisfies the equation $D(uv) = uD(v) + vD(u)$.

derivative [CHEM] A substance that is made from another substance. [MATH] The slope of a graph $y = f(x)$ at a given point c; more precisely, it is the limit as h approaches zero of $f(c+h) - f(c)$ divided by h. Also known as differential coefficient; rate of change.

derivative action [CONT SYS] Control action in which the speed at which a correction is made depends on how fast the system error is increasing. Also known as derivative compensation; rate action.

derivative compensation *See* derivative action.

derivative differential thermal analysis [ANALY CHEM] A method for precise determination in thermograms of slight temperature changes by taking the first derivative of the differential thermal analysis curve (thermogram) which plots time versus differential temperature as measured by a differential thermocouple. Also known as DDTA.

derivative network [CONT SYS] A compensating network whose output is proportional to the sum of the input signal and its derivative. Also known as lead network.

derivative polarography [ANALY CHEM] Polarography technique in which the rate of change of current with respect to applied potential is measured as a function of the applied potential (di/dE vs. E, where i is current and E is applied potential).

derivative rock *See* sedimentary rock.

derivative thermometric titration [ANALY CHEM] The use of a special resistance-capacitance network to record first and second derivatives of a thermometric titration curve (temperature versus weight change upon heating) to produce a sharp endpoint peak.

derived curve [MATH] A curve whose ordinate, for each value of the abscissa, is equal to the slope of some given curve. Also known as first derived curve.

derived gust velocity [METEOROL] The maximum velocity of a sharp-edged gust that would produce a given acceleration on a particular airplane flown in level flight at the design cruising speed of the aircraft at a given air density.

derived quantity [PHYS] A physical quantity which, in a specified system of measurement, is defined by operations based on other physical quantities.

derived set [MATH] The set of cluster points of a given set.

derived sound system [ENG ACOUS] A four-channel sound system that is artificially synthesized from conventional two-channel stereo sound by an adapter, to provide feeds to four loudspeakers for approximating quadraphonic sound.

derived unit [PHYS] A unit that is formed, in a specified system of measurement, by combining base units and other derived units according to the algebraic relations linking the corresponding quantities.

Dermacentor [INV ZOO] A genus of ticks, important as vectors of disease.

Dermacentor andersoni [INV ZOO] The wood tick, which is the vector of Rocky Mountain spotted fever and tularemia.

Dermacentor variabilis [INV ZOO] A North American tick, parasitic primarily on dogs but may attack man and other mammals.

dermal [ANAT] Pertaining to the dermis.

dermal bone [ANAT] A type of bone that ossifies directly from membrane without a cartilaginous predecessor; occurs only in the skull and shoulder region. Also known as investing bone; membrane bone.

dermal denticle [VERT ZOO] A toothlike scale composed mostly of dentine with a large central pulp cavity, found in the skin of sharks.

dermalia [INV ZOO] Dermal microscleres in sponges.

dermal pore [INV ZOO] One of the minute openings on the surface of poriferans leading to the incurrent canals.

Dermaptera [INV ZOO] An order of small or medium-sized, slender insects having incomplete metamorphosis, chewing mouthparts, short forewings, and cerci.

Dermatemydinae [VERT ZOO] A family of reptiles in the order Chelonia; includes the river turtles.

dermatitis [MED] Inflammation of the skin.

Dermatocarpaceae [BOT] A family of lichens in the order Pyrenulales having an umbilicate or squamulose growth form; most members grow on limestone or calcareous soils.

dermatocranium [ANAT] Bony parts of the skull derived from ossifications in the dermis of the skin.

dermatogen [BOT] The outer layer of primary meristem or the primordial epidermis in embryonic plants. Also known as protoderm.

dermatoglyphics [ANAT] **1.** The integumentary patterns on the surface of the fingertips, palms, and soles. **2.** The study of these patterns.

dermatograph [MED] A crayonlike or similar instrument, used to mark the skin before surgery to outline positions of organs.

dermatologist [MED] A physician who specializes in diseases of the skin.

dermatology [MED] The science of the structure, function, and diseases of the skin.

dermatome [ANAT] An area of skin delimited by the supply of sensory fibers from a single spinal nerve. [EMBRYO] Lateral portion of an embryonic somite from which the dermis will develop. [MED] Instrument for cutting skin for grafting.

dermatomyositis [MED] An inflammatory reaction of unknown cause involving degenerative changes of skin and muscle.

dermatopathic lymphadenitis *See* lipomelanotic reticulosis.

dermatopathology [MED] A branch of pathology concerned with diseases of the skin.

dermatopathophobia [PSYCH] An abnormal fear of contracting a skin disease.

Dermatophilaceae [MICROBIO] A family of bacteria in the order Actinomycetales; cells produce mycelial filaments or muriform thalli; includes human and mammalian pathogens.

Dermatophilus [MICROBIO] A genus of bacteria in the family Dermatophilaceae; mycelial filaments are long, tapering, and branched, and are divided transversely and longitudinally (in two planes) by septa; spherical spores are motile.

dermatophyte [MYCOL] A fungus parasitic on skin or its derivatives.

dermatophytosis [MED] A fungus infection, such as ringworm, of the skin of humans caused by the organism living in the keratinized tissues, characterized by vesicles, cracking, and scaling.

dermatosclerosis *See* scleroderma.

dermatosis [MED] Any skin disease.

Dermestidae [INV ZOO] The skin beetles, a family of col-

DERMESTIDAE

A drawing of a skin beetle. *(From T. I. Storer and R. L. Usinger, General Zoology, 3d ed., McGraw-Hill, 1957)*

eopteran insects in the superfamily Dermestoidea, including serious pests of stored agricultural grain products.

Dermestoidea [INV ZOO] A superfamily of coleopteran insects in the suborder Polyphaga.

dermis [ANAT] The deep layer of the skin, a dense connective tissue richly supplied with blood vessels, nerves, and sensory organs. Also known as corium; cutis.

Dermitron [MET] An electrical instrument which applies a high-frequency current and the resulting eddy current series as a measure of thickness of nonmagnetic coatings on nonmagnetic basis metals, provided the conductivity of the coating and that of the basis metal are different.

Dermochelidae [VERT ZOO] A family of reptiles in the order Chelonia composed of a single species, the leatherback turtle.

dermoepidermal junction [HISTOL] The area of separation between the stratum basale of the epidermis and the papillary layer of the dermis.

dermographia [MED] A condition in which the skin is peculiarly susceptible to irritation, characterized by elevations or wheals with surrounding erythematous axon reflex flare, caused by tracing a fingernail or a blunt instrument over the skin.

dermoid cyst [MED] A benign cystic teratoma with skin, skin appendages, and their products as the most prominent components, usually involving the ovary or the skin.

Dermoptera [VERT ZOO] The flying lemurs, an ancient order of primatelike herbivorous and frugivorous gliding mammals confined to southeastern Asia and eastern India.

de Robertis unit [BIOL] A unit for the standardization of thyroid extracts.

Derodontidae [INV ZOO] The tooth-necked fungus beetles, a small family of coleopteran insects in the superfamily Dermestoidea.

derosination [CHEM ENG] Removing excess resins from wood by saponification with alkaline aqueous solutions or organic solvents.

derrick [MECH ENG] A hoisting machine consisting usually of a vertical mast, a slanted boom, and associated tackle; may be operated mechanically or by hand.

derrick barge [PETRO ENG] A crane barge used in offshore drilling platform construction and suitable for work in rough seas.

derrick crane *See* stiffleg derrick.

derrick post *See* king post.

derris [BOT] Any of certain tropical shrubs in the genus *Derris* in the legume family (Leguminosae), having long climbing branches.

Derxia [MICROBIO] A genus of bacteria in the family Azotobacteraceae; rod-shaped, pleomorphic, motile cells; older cells contain large refractive bodies.

Deryagin number [PHYS] A dimensionless group equal to the ratio of the thickness of a film coating a liquid to the capillary length of the liquid. Symbolized *De*.

DES *See* data encryption standard.

desalination [CHEM ENG] Removal of salt, as from water or soil. Also known as desalting.

desalting [CHEM ENG] **1.** The process of extracting inorganic salts from oil. **2.** *See* desalination.

Desargues' theorem [MATH] If the three lines passing through corresponding vertices of two triangles are concurrent, then the intersections of the three pairs of corresponding sides lie on a straight line, and conversely.

DeSauty's bridge [ELEC] A four-arm bridge used to compare two capacitances; two adjacent arms contain capacitors in series with resistors, while the other two arms contain resistors only. Also known as Wien–DeSauty bridge.

descaling [ENG] Removing scale, usually oxides, from the surface of a metal or the inner surface of a pipe, boiler, or other object.

Descartes laws of refraction *See* Snell laws of refraction.

Descartes ray [OPTICS] A ray of light incident on a sphere of transparent material, such as a water droplet, which after one internal reflection leaves the drop at the smallest possible angle of deviation from the direction of the incident ray; these rays make the primary rainbow.

Descartes' rule of signs [MATH] A polynomial with real coefficients has at most k real positive roots, where k is the number of sign changes in the polynomial.

Descemet's membrane [HISTOL] A layer of the cornea between the posterior surface of the stroma and the anterior surface of the endothelium which contains collagen arranged on a crystalline lattice.

descendant [GEOL] A topographic feature that is formed from the mass beneath an older topographic form, now removed.

descender [GRAPHICS] The segment of certain letters which extends below the general level of cross-alignment with other letters; for example, the lower part of "g" or "y."

descending [ANAT] Extending or directed downward or caudally, as the descending aorta. [PHYSIO] In the nervous system, efferent; conducting impulses or progressing down the spinal cord or from central to peripheral.

descending branch [MECH] That portion of a trajectory which is between the summit and the point where the trajectory terminates, either by impact or air burst, and along which the projectile falls, with altitude constantly decreasing. Also known as descent trajectory.

descending chromatography [ANALY CHEM] A type of paper chromatography in which the sample-carrying solvent mixture is fed to the top of the developing chamber, being separated as it works downward.

descending node [AERO ENG] That point at which an earth satellite crosses to the south side of the equatorial plane of its primary. Also known as southbound node. [ASTRON] The point at which a planet, planetoid, or comet crosses the ecliptic from north to south.

descending vertical angle *See* angle of depression.

descent [AERO ENG] Motion of a craft in which the path is inclined with respect to the horizontal.

descent trajectory *See* descending branch.

describing function [CONT SYS] A function used to represent a nonlinear transfer function by an approximately equivalent linear transfer function; it is the ratio of the phasor representing the fundamental component of the output of the nonlinearity, determined by Fourier analysis, to the phasor representing a sinusoidal input signal.

descriptive anatomy [ANAT] Study of the separate and individual portions of the body, with regard to form, size, character, and position.

descriptive astronomy [ASTRON] Astronomy as presented by graphic and verbal description.

descriptive botany [BOT] The branch of botany that deals with diagnostic characters or systematic description of plants.

descriptive climatology [CLIMATOL] Climatology as presented by graphic and verbal description, without going into causes and theory.

descriptive geometry [MATH] The application of graphical methods to the solution of three-dimensional space problems.

descriptive meteorology [METEOROL] A branch of meteorology which deals with the description of the atmosphere as a whole and its various phenomena, without going into theory. Also known as aerography.

descriptor [COMPUT SCI] A word or phrase used to identify a document in a computer-based information storage and retrieval system.

deseaming [MET] Removing defects from the surfaces of ingots, blooms, or semifinished products, usually by means of a chipping hammer or an oxy-gas flame.

desensitization [COMMUN] Reduction in receiver sensitivity due to the presence of a high-level off-channel signal overloading the radio-frequency amplifier or mixer stages, or causing automatic gain control action. [IMMUNOL] Loss or reduction of sensitivity to infection or an allergen accomplished by means of frequent, small doses of the antigen. Also known as hyposensitization. [PSYCH] Relief from or removal of a mental complex.

desensitizer [GRAPHICS] **1.** A substance whose main ingredient is a gum and is used for rendering the nonimage portions of a lithographic plate nonreceptive to ink. **2.** A chemical used in photography to decrease the color sensitivity of a photographic emulsion.

desert [GEOGR] **1.** A wide, open, comparatively barren tract of land with few forms of life and little rainfall. **2.** Any waste, uninhabited tract, such as the vast expanse of ice in Greenland.

desert climate [CLIMATOL] A climate type which is characterized by insufficient moisture to support appreciable plant life; that is, a climate of extreme aridity.

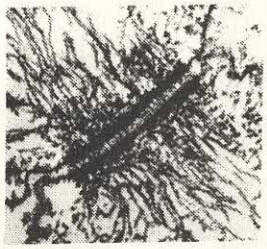
desert crust *See* desert pavement.

desert devil *See* dust whirl.

deserticolous [ECOL] Living in a desert.

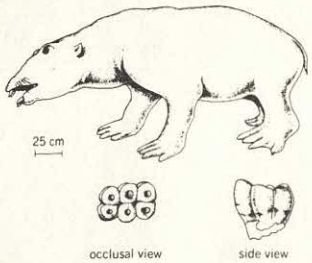
desertification [ECOL] The creation of desiccated, barren, desertlike conditions due to natural changes in climate or possibly through mismanagement of the semiarid zone.
desert pavement [GEOL] A mosaic of pebbles and large stones which accumulate as the finer dust and sand particles are blown away by the wind. Also known as desert crust.
desert peneplain *See* pediplain.
desert plain *See* pediplain.
desert polish [GEOL] A smooth, shining surface imparted to rocks and other hard substances by the action of windblown sand and dust of desert regions.
desert soil [GEOL] In early United States classification systems, a group of zonal soils that have a light-colored surface soil underlain by calcareous material and a hardpan.
desert varnish [GEOL] A brown or black stain or crust of manganese or iron oxide characterizing many exposed rock surfaces in the desert.
desert wind [METEOROL] A wind blowing off the desert, which is very dry and usually dusty, hot in summer but cold in winter, and with a large diurnal range of temperature.
desexualization [PHYSIO] Depriving an organism of sexual characters or power, as by spaying or castration. [PSYCH] Repression of the sexual drive or rechanneling of sexual energy into areas considered by the individual to be more socially acceptable.
desiccant *See* drying agent.
desiccation [HYD] The permanent decrease or disappearance of water from a region, caused by a decrease of rainfall, a failure to maintain irrigation, or deforestation or overcropping. [SCI TECH] Thorough removal of water from a substance, often with the use of a desiccant.
desiccation breccia [GEOL] Fragments of a mud-cracked layer of sediment deposited with other sediments.
desiccation crack *See* mud crack.
desiccator [CHEM ENG] A closed vessel, usually made of glass and having an airtight lid, used for drying solid chemicals by means of a desiccant.
design [SCI TECH] The act of conceiving and planning the structure and parameter values of a system, device, process, or work of art.
designation [COMPUT SCI] An item of data forming part of a computer record that indicates the type of record and thus determines how it is to be processed.
designation hole *See* designation punch.
designation punch [COMPUT SCI] A hole in a punched card indicating what is the nature of the data on the card or which functions are to be performed by the computer. Also known as control hole; control punch; designation hole; function hole.
design climatology [CLIMATOL] The scientific analysis of climatic data for the purpose of improving the design of equipment and structures intended to operate in or withstand extremes of climate.
design engineering [ENG] A branch of engineering concerned with the creation of systems, devices, and processes useful to and sought by society.
design flood [CIV ENG] The flood, either observed or synthetic, which is chosen as the basis for the design of a hydraulic structure.
design gross weight [AERO ENG] The gross weight at takeoff that an aircraft, rocket, or such is expected to have, used in design calculations.
design head [CIV ENG] The planned elevation between the free level of a water supply and the point of free discharge or the level of free discharge surface.
design load [DES ENG] The most stressful combination of weight or other forces a building, structure, or mechanical system or device is designed to sustain.
design pressure [CIV ENG] **1.** The force exerted by a body of still water on a dam. **2.** The pressure which the dam can withstand. [DES ENG] The pressure used in the calculation of minimum thickness or design characteristics of a boiler or pressure vessel in recognized code formulas; static head may be added where appropriate for specific parts of the structure.
design speed [CIV ENG] The highest continuous safe vehicular speed as governed by the design features of a highway.
design standards [DES ENG] Generally accepted uniform procedures, dimensions, materials, or parts that directly affect the design of a product or facility.
design storm [CIV ENG] A storm whose magnitude, rate, and intensity do not exceed the design load for a storm drainage system or flood protection project.
design stress [DES ENG] A permissible maximum stress to which a machine part or structural member may be subjected, which is large enough to prevent failure in case the loads exceed expected values, or other uncertainties turn out unfavorably.
design thickness [DES ENG] The sum of required thickness and corrosion allowance utilized for individual parts of a boiler or pressure vessel.
design waterline [NAV ARCH] The waterline on a ship when it is floating freely at rest in still water in its normally loaded condition. Abbreviated DWL.
desilication [GEOCHEM] Removal of silica, as from rock or a magma.
desilker [FOOD ENG] A machine consisting of a series of revolving rolls and brushes for removing silk from ears of corn.
desilter [MECH ENG] Wet, mechanical solids classifier (separator) in which silt particles settle as the carrier liquid is slowly stirred by horizontally revolving rakes; solids are plowed outward and removed at the periphery of the container bowl.
desilting basin [CIV ENG] A space or structure constructed just below a diversion structure of a canal to remove bed, sand, and silt loads. Also known as desilting works.
desilting works *See* desilting basin.
desilverization [MET] The act or process of removing silver; specifically, the process used to remove silver and gold from ore after softening.
desired ground zero [ORD] For a surface burst, the point on the earth's surface where atomic detonation is desired; for an air burst or underground burst, the point is on the earth's surface directly below or directly above the desired point of detonation.
desired track *See* course.
de Sitter space [RELAT] A constant-curvature, vacuum solution to Einstein's equations of general relativity with cosmological term.
desize [TEXT] To remove size or sizing agents from warp yarns prior to weaving to protect them against the abrasive action of loom parts.
desk calculator [COMPUT SCI] A device that is used to perform arithmetic operations and is small enough to be conveniently placed on a desk.
desk check *See* dry run.
deslimer [MECH ENG] Apparatus, such as a bowl-type centrifuge, used to remove fine, wet particles (slime) from cement rocks and to size pigments and abrasives.
desma [INV ZOO] A branched, knobby spicule in some Demospongiae.
desmacyte [INV ZOO] A bipolar collencyte found in the cortex of certain sponges.
Desmanthos [MICROBIO] A genus of bacteria in the family Pelonemataceae; unbranched, relatively straight filaments with a thickened base which are arranged in bundles partially enclosed in a sheath.
desmetryn [ORG CHEM] $C_9H_{17}N_5S$ A white, crystalline compound with a melting point of 84–86°C; used as a postemergence herbicide for broadleaf and grassy weeds. Also known as 2-methylmercapto-4-methylamino-6-isopropylamino-*S*-triazine.
Desmidiaceae [BOT] A family of desmids, mostly unicellular algae in the order Conjugales.
desmin [BIOCHEM] The muscle protein forming the Z lines in striated muscle.
desmine *See* stilbite.
desmochore [ECOL] A plant having sticky or barbed disseminules.
Desmodonta [PALEON] An order of extinct bivalve, burrowing mollusks.
Desmodontidae [VERT ZOO] A small family of chiropteran mammals comprising the true vampire bats.
Desmodoroidea [INV ZOO] A superfamily of marine- and brackish-water-inhabiting nematodes with an annulated, usually smooth cuticle.
Des Moinesian [GEOL] Lower Middle Pennsylvanian geologic time.
Desmokontae [BOT] The equivalent name for Desmophyceae.
desmolase [BIOCHEM] Any of a group of enzymes which catalyze rupture of atomic linkages that are not cleaved through hydrolysis, such as the bonds in the carbon chain of D-glucose.

DESMOSOME



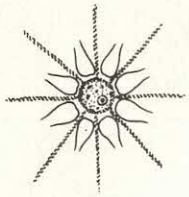
Electron micrograph of desmosome in skin of newt. *(Courtesy of D. Kelly)*

DESMOSTYLIA



Restoration of *Desmostylus* from the Miocene of California. *(Redrawn from R. A. Stirton, 1959)*

DESMOTHORACIDA



Choanocystis lepidula, a floating species. *(From R. P. Hall, Protozoology, Prentice-Hall, 1953)*

DETACHED-LEVER ESCAPEMENT

Detached-lever escapement, often used in modern watches. Banking pins *B* limit oscillation of anchor and lever; impulse pin *E* causes recoil of the escape wheel to release the pallet. *(From F. J. Britten, Britten's Old Clocks and Watches and Their Makers, 7th ed., Dutton, 1956)*

desmoneme [INV ZOO] A nematocyst having a long coiled tube which is extruded and wrapped around the prey.

desmopelmous [VERT ZOO] A type of bird foot in which the hindtoe cannot be bent independently because planter tendons are united.

Desmophyceae [BOT] A class of rare, mostly marine algae in the division Pyrrhophyta.

desmoplasia [MED] **1.** The formation and proliferation of connective tissue, frequently in the growth of tumors. **2.** The formation of adhesions.

Desmoscolecida [INV ZOO] An order of the class Nematoda.

Desmoscolecidae [INV ZOO] A family of nematodes in the superfamily Desmoscolecoidea; individuals resemble annelids in having coarse annulation.

Desmoscolecoidea [INV ZOO] A small superfamily of free-living nematodes characterized by a ringed body, an armored head set, and hemispherical amphids.

desmose [INV ZOO] A fibril connecting the centrioles during mitosis in certain protozoans.

desmosome [CYTOL] A surface modification of stratified squamous epithelium formed by the apposition of short cytoplasmic processes of neighboring cells.

Desmostylia [PALEON] An extinct order of large hippopotamuslike, amphibious, gravigrade, shellfish-eating mammals.

Desmostylidae [PALEON] A family of extinct mammals in the order Desmostylia.

Desmothoracida [INV ZOO] An order of sessile and free-living protozoans in the subclass Heliozoia having a spherical body with a perforate, chitinous test.

desorption [PHYS CHEM] The process of removing a sorbed substance by the reverse of adsorption or absorption.

Desor's larva [INV ZOO] An oval, ciliated larva of certain nemertineans in which the gastrula remains inside the egg membrane.

despun antenna [ELECTROMAG] Satellite directional antenna pointed continuously at earth by electrically or mechanically despinning the antenna at the same rate that the satellite is spinning for stabilization.

desquamation [PHYSIO] Shedding; a peeling and casting off, as of the superficial epithelium, mucous membranes, renal tubules, and the skin.

destearinate [CHEM ENG] A process of removing from a fatty oil the lower melting point compounds.

destination address [COMPUT SCI] The location to which a jump instruction passes control in a program.

destination time [COMPUT SCI] The time involved in a memory access plus the time required for indirect addressing.

destraction [CHEM ENG] A high-pressure technique for separating high-boiling or nonvolatile material by dissolving it with application of supercritical gases.

destressing [MIN ENG] Relieving stress on the abutments of an excavation by drilling and blasting to loosen peak stress zones.

Destriau effect [SOLID STATE] Sustained emission of light by suitable phosphor powders that are embedded in an insulator and subjected only to the action of an alternating electric field.

destroyer [NAV ARCH] A small, fast, lightly armored warship capable of a variety of functions, usually armed with 5-inch (15 centimeter) guns, torpedoes, depth charges, and mines, and sometimes with guided missiles.

destruct [AERO ENG] The deliberate action of destroying a rocket vehicle after it has been launched, but before it has completed its course.

destruction operator *See* annihilation operator.

destructive breakdown [ELECTR] Breakdown of the barrier between the gate and channel of a field-effect transistor, causing failure of the transistor.

destructive distillation [ORG CHEM] Decomposition of organic compounds by heat without the presence of air.

destructive interference [OPTICS] The interaction of superimposed light from two different sources when the phase relationship is such as to reduce or cancel the resultant intensity to less than the sum of the individual lights.

destructive read [COMPUT SCI] Reading that partially or completely erases the stored information as it is being read.

destructive readout memory [COMPUT SCI] A memory type in which reading the contents of a storage location destroys the contents of that location.

destructive testing [ENG] Intentional operation of equipment until it fails, to reveal design weaknesses.

destruct line [AERO ENG] On a rocket test range, a boundary line on each side of the down-range course beyond which a rocket cannot fly without being destroyed under destruct procedures; or a line beyond which the impact point cannot pass.

destructor [ORD] An explosive device used intentionally by the control center to destroy a missile after launching. Also known as destruct system.

destruct system [ORD] **1.** An explosive device enabling destruction of materials, weapons, or other objects to prevent acquisition by the enemy. **2.** *See* destructor.

desulfonate [CHEM] Removal from a sulfonated molecule of the sulfonate group.

Desulfotomaculum [MICROBIO] A genus of bacteria in the family Bacillaceae; motile, straight or curved rods with terminal to subterminal spores; anaerobic and reduce sulfate.

Desulfovibrio [MICROBIO] A genus of gram-negative, strictly anaerobic bacteria of uncertain affiliation; motile, curved rods reduce sulfates and other sulfur compounds to hydrogen sulfide.

desulfurization [CHEM ENG] The removal of sulfur, as from molten metals or petroleum oil.

desulfurization unit [CHEM ENG] A unit in petroleum refining for removal of sulfur compounds or sulfur.

desyl [ORG CHEM] The radical $C_6H_5COCH(C_6H_5)$—; may be formed from desoxybenzoin. Also known as α-phenyl phenacyl.

DET *See* diethyltoluamide.

DETAB [COMPUT SCI] A programming language based on COBOL in which problems can be specified in the form of decision tables. Acronym for decision table.

detachable bit [ENG] An all-steel drill bit that can be removed from the drill steel, and can be resharpened. Also known as knock-off bit; rip bit.

detachable plugboard [COMPUT SCI] A control panel that can be removed from the computer or other system and exchanged for another without altering the positions of the plugs and cords. Also known as removable plugboard.

detached core [GEOL] The inner bed or beds of a fold that may become separated or pinched off from the main body of the strata due to extreme folding and compression.

detached-lever escapement [HOROL] A watch escapement whose regulating device is given an impulse during only a small part of its operating cycle.

detached meristem [BOT] A meristematic region originating from apical meristem but becoming discontinuous with it because of differentiation of intervening tissue.

detached shock wave [FL MECH] A shock wave not in contact with the body which originates it.

detail [GRAPHICS] The extent to which image elements that are close together can be individually distinguished.

detail chart [COMPUT SCI] A flow chart representing every single step of a program.

detail drawing [GRAPHICS] A large-scale drawing of a small part of a structure or machine.

detailed balance [STAT MECH] The hypothesis that when a system is in equilibrium any process occurs with the same frequency as the reverse process.

detail file [COMPUT SCI] A file containing current or transient data used to update a master file or processed with the master file to obtain a specific result. Also known as transaction file.

detailing *See* screening.

detail printing [COMPUT SCI] The printing of information for each card as the card passes through the machine; the function is used to prepare reports that show complete detail about each card; during this listing operation, the machine adds, subtracts, cross-adds, or cross-subtracts, and prints many combinations of totals.

det drill *See* fusion-piercing drill.

detect *See* demodulate.

detectivity [ELECTR] The normalized radiation power required to give a signal from a photoconductor that is equal to the noise.

detector [ELECTR] The stage in a receiver at which demodulation takes place; in a superheterodyne receiver this is called the second detector. Also known as demodulator; envelope detector. [SCI TECH] Apparatus or system used to detect

the presence of an object, radiation, chemical compound, or such.

detector balanced bias [ELECTR] Controlling circuit used in radar systems for anticlutter purposes.

detector bar [CIV ENG] A device that keeps a railroad switch locked while a train is passing over it.

detector car [ENG] A railroad car used to detect flaws in rails.

detent [MECH ENG] A catch or lever in a mechanism which initiates or locks movement of a part, especially in escapement mechanisms.

detention basin [CIV ENG] A reservoir without control gates for storing water over brief periods of time until the stream has the capacity for ordinary flow plus released water; used for flood regulation.

detergent [MATER] A synthetic cleansing agent resembling soap in the ability to emulsify oil and hold dirt, and containing surfactants which do not precipitate in hard water; may also contain protease enzymes and whitening agents.

detergent additive [MATER] A substance incorporated in lubricating oils which gives them the property of keeping insoluble material in suspension.

detergent alkylate *See* dodecylbenzene.

detergent oil [MATER] A lubricating oil with special sludge-dispersing properties for use in internal combustion engines.

deteriorating supplies [ORD] Those items that may reasonably be expected to become unusable within 1 or 2 years, whether used or not.

deterioration [ENG] Decline in the quality of equipment or structures over a period of time due to the chemical or physical action of the environment.

determinant [CONT SYS] The product of the partial return differences associated with the nodes of a signal-flow graph. [MATH] A certain real-valued function of the column vectors of a square matrix which is zero if and only if the matrix is singular; used to solve systems of linear equations and to study linear transformations.

determinant tensor [MATH] A tensor whose components are each equal to the corresponding component of the Levi-Civita tensor density times the square root of the determinant of the metric tensor, and whose contravariant components are each equal to the corresponding component of the Levi-Civita density divided by the square root of the metric tensor. Also known as permutation tensor.

determinate [SCI TECH] Bounded by definite limits.

determinate cleavage [EMBRYO] A type of cleavage which separates portions of the zygote with specific and distinct potencies for development as specific parts of the body.

determinate growth [BOT] Growth in which the axis, or central stem, being limited by the development of the floral reproductive structure, does not grow or lengthen indefinitely.

determinate structure [MECH] A structure in which the equations of statics alone are sufficient to determine the stresses and reactions.

determination [ANALY CHEM] The finding of the value of a chemical or physical property of a compound, such as reaction-rate determination or specific-gravity determination.

determinism *See* causality.

deterministic algorithm *See* static algorithm.

detonating agent [MATER] An explosive, such as PETN, contained in the blasting cap or detonator.

detonating fuse [ENG] A device consisting of a core of high explosive within a waterproof textile covering and set off by an electrical blasting cap fired from a distance by means of a fuse line; used in large, deep boreholes.

detonating net [ORD] Network of detonating cord that is interlaced in a mesh design; used for clearing paths through mine fields by exploding the mines over which the nets are placed and detonated.

detonating primer [MATER] A primer used to fire high explosives that is exploded by a fuse.

detonating rate [MECH] The velocity at which the explosion wave passes through a cylindrical charge.

detonating relay [ENG] A device used in conjunction with the detonating fuse to avoid short-delay blasting.

detonation [CHEM] An exothermic chemical reaction that propagates with such rapidity that the rate of advance of the reaction zone into the unreacted material exceeds the velocity of sound in the unreacted material; that is, the advancing reaction zone is preceded by a shock wave. [MECH ENG] Spontaneous combustion of the compressed charge after passage of the spark in an internal combustion engine; it is accompanied by knock.

detonation flame spraying [MET] A flame-spraying method in which the combined mixture of fuel gas, oxygen, and powdered coating liquefies and explodes the material to the workpiece.

detonation front [ENG] The reaction zone of a detonation.

detonation wave [FL MECH] A shock wave that accompanies detonation and has a shock front followed by a region of decreasing pressure in which the reaction occurs.

detonator [ENG] A device, such as a blasting cap, employing a sensitive primary explosive to detonate a high-explosive charge.

detonator safety [ENG] A fuse has detonator safety or is detonator safe when the functioning of the detonator cannot initiate subsequent explosive train components.

detonics [ENG] The study of detonating and explosives performance.

detorsion [INV ZOO] Untwisting of the 180° visceral twist imposed by embryonic torsion on many gastropod mollusks. [MED] Untwisting of an abnormal torsion, as of a ureter or intestine.

detoxification [BIOCHEM] The act or process of removing a poison or the toxic properties of a substance in the body.

detrainment [METEOROL] The transfer of air from an organized air current to the surrounding atmosphere.

detrital fan *See* alluvial fan.

detrital minerals [MINERAL] Grains of heavy minerals found in sediment, resulting from mechanical disintegration of the parent rock.

detrital ratio *See* clastic ratio.

detrital remanent magnetization [GEOPHYS] Magnetization acquired by magnetic grains during formation of a sedimentary rock. Abbreviated DRM.

detrital reservoir [GEOL] A clastic or detrital-granular reservoir, classified by rock type and other factors such as sediments (quartzose-type, graywacke, or arkose sediments).

detrital sediment [GEOL] Accumulations of the organic and inorganic fragmental products of the weathering and erosion of land transported to the place of deposition.

detritus [GEOL] Any loose material removed directly from rocks and minerals by mechanical means, such as disintegration or abrasion.

detritus feeder *See* deposit feeder.

detritus tank [CIV ENG] A tank in which heavy suspended matter is removed in sewage treatment.

detrivorous [BIOL] Referring to an organism that feeds on dead animals or partially decomposed organic matter.

Detroit rocking furnace [ENG] An indirect arc type of rocking furnace having graphite electrodes entering horizontally from opposite ends.

detune [ELECTR] To change the inductance or capacitance of a tuned circuit so its resonant frequency is different from the incoming signal frequency.

detuning stub [ELECTROMAG] Quarter-wave stub used to match a coaxial line to a sleeve-stub antenna; the stub detunes the outside of the coaxial feed line while tuning the antenna itself.

deutencephalon *See* epichordal brain.

deuteranomaly [MED] A partial deuteranopia.

deuteranopia [MED] Defective vision consisting of red-green color confusion, with no marked reduction in the brightness of any color.

deuteration [CHEM] The addition of deuterium to a chemical compound.

deuteric [GEOL] Of or pertaining to alterations in igneous rock during the later stages and as a direct result of consolidation of magma or lava. Also known as epimagmatic; paulopost.

deuteride [CHEM] A hydride in which the hydrogen is deuterium.

deuterium [CHEM] The isotope of the element hydrogen

with one neutron and one proton in the nucleus; atomic weight 2.0144. Designated D, d, H^2, or ^2H.

deuterium cycle *See* proton-proton chain.

deuterium discharge tube [ELECTR] A tube similar to a hydrogen discharge lamp, but with deuterium replacing the hydrogen; source of high-intensity ultraviolet radiation for spectroscopic microanalysis.

deuterium oxide *See* heavy water.

deuterogamy [BOT] Secondary pairing of sexual cells or nuclei replacing direct copulation in many fungi, algae, and higher plants.

Deuteromycetes [MYCOL] The equivalent name for Fungi Imperfecti.

deuteron [NUC PHYS] The nucleus of a deuterium atom, consisting of a neutron and a proton. Designated d. Also known as deuton.

deuteron accelerator [NUCLEO] An accelerator that produces a flux of slow neutrons by bombarding a metal-tritium target with deuterons.

deuteron capture [NUC PHYS] The absorption of a deuteron by a nucleus, giving rise to a compound nucleus which subsequently decays.

Deuterophlebiidae [INV ZOO] A family of dipteran insects in the suborder Cyclorrhapha.

Deuterostomia [ZOO] A division of the animal kingdom which includes the phyla Echinodermata, Chaetognatha, Hemichordata, and Chordata.

deutocerebrum [INV ZOO] The median lobes of the insect brain.

deuton *See* deuteron.

deutoplasm [EMBRYO] The nutritive yolk granules in egg cells.

DeVecchis process [MIN ENG] A smelting process for pyrites in which the raw material is roasted, concentrated magnetically, and then reduced in a rotary kiln or electric furnace.

developed blank [MET] A blank requiring little or no trimming after being formed.

developed dye [CHEM] A direct azo dye that can be further diazotized by a developer after application to the fiber; it couples with the fiber to form colorfast shades. Also known as diazo dye.

developed muzzle velocity [ORD] The actual muzzle velocity produced by any gun.

developed ore *See* developed reserves.

developed planform [AERO ENG] The plan of an airfoil as drawn with the chord lines at each section rotated about the airfoil axis into a plane parallel to the plane of projection and with the airfoil axis rotated or developed and projected into the plane of projection.

developed reserves [MIN ENG] Ore that is exposed on three sides and for which tonnage yield and quality estimates have been made. Also known as assured mineral; blocked-out ore; developed ore; measured ore; ore in sight.

developer [CHEM] An organic compound which interacts on a textile fiber to develop a dye. [GRAPHICS] A chemical solution used to develop exposed photographic materials by reducing silver salts to metallic silver.

developing [GRAPHICS] The complete process of producing an image on sensitized material by means of chemical agents.

development [GEOL] The progression of changes in fossil groups which have succeeded one another during deposition of the strata of the earth. [METEOROL] The process of intensification of an atmospheric disturbance, most commonly applied to cyclones and anticyclones. [MIN ENG] Opening of a coal seam or ore body by sinking shafts or driving levels, as well as installing equipment, for proving ore reserves and exploiting them. [SCI TECH] The work required to determine the best production techniques to bring a new process or piece of equipment to the production stage.

development age [PSYCH] An index of physical, mental, social, or emotional development stated in age equivalent as determined by standardized methods.

developmental alexia [PSYCH] A deficiency in learning to read in the absence of physical defects or mental deficiency.

developmental aphasia [PSYCH] A deficiency in learning to speak, in contrast with the child's mental or development age.

developmental crisis [PSYCH] A period of childhood stress related to unsuccessful attempts to establish trust, identity, autonomy, or initiative.

developmental psychology [PSYCH] The branch of psychology that deals with changes in behavior occurring with changes in age.

development drift [MIN ENG] A tunnel dug in a mine either from the surface or a point underground to get to coal or ore for exploitation or mining purposes.

development drilling [MIN ENG] Drilling boreholes to locate, identify, and prove an ore body or coal seam.

development index [METEOROL] An index used as an aid in forecasting cyclogenesis; the development index I is defined most frequently as the difference in divergence between two well-separated, tropospheric, constant-pressure surfaces. Also known as relative divergence.

development rock [MIN ENG] Rock containing both barren and valuable rock, broken during development work.

development well [PETRO ENG] A well drilled to produce oil or gas from a proven productive area.

Devereaux agitator [MIN ENG] An agitator that utilizes an upthrust propeller to stir pulp; used in leach agitation of minerals.

devernalization [BOT] Annulment of the vernalization effect.

deviation [ENG] The difference between the actual value of a controlled variable and the desired value corresponding to the set point. [EVOL] Evolutionary differentiation involving interpolation of new stages in the ancestral pattern of morphogenesis. [OPTICS] The angle between the incident ray on an object or optical system and the emergent ray, following reflection, refraction, or diffraction. Also known as angle of deviation. [STAT] The difference between any given number in a set and the mean average of those numbers.

deviation absorption [COMMUN] Distortion in a frequency-modulated receiver due to inadequate bandwidth, inadequate amplitude-modulation rejection, or inadequate discriminator linearity.

deviation card [NAV] A card having a table of the deviation of an aircraft magnetic compass on various headings; this card is usually mounted on the compass.

deviation factor *See* compressibility factor.

deviation hole [PETRO ENG] Drilled hole with deviation from true vertical, usually limited by contract to 3–5°; not to be confused with a crooked hole, resulting from carelessness or a steeply dipping formation.

deviation loss [COMMUN] The transmission loss measured on a transducer when relative response is considered as a function of bearing.

deviation ratio [COMMUN] Ratio of the maximum frequency deviation to the maximum modulating frequency of a frequency-modulated system under specified conditions.

deviation sensitivity [NAV] A value expressed as the ratio of the rate of change in course indication to the deviation from the course line.

deviation table [NAV] A table of the deviation of a magnetic compass on various headings, magnetic or compass; for an aircraft compass, this information is usually placed on a card called a deviation card. Also known as magnetic compass table.

deviatonic stress [MECH] The portion of the total stress that differs from an isostatic hydrostatic pressure; it is equal to the difference between the total stress and the spherical stress.

device [COMPUT SCI] A general-purpose term used, often indiscriminately, to refer to a computer component or the computer itself. [ELECTR] An electronic element that cannot be divided without destroying its stated function; commonly applied to active elements such as transistors and transducers. [ENG] A mechanism, tool, or other piece of equipment designed for specific uses.

device address [COMPUT SCI] The binary code which corresponds to a unique device, referred to when selecting this specific device.

device assignment [COMPUT SCI] The use of a logical device number used in conjunction with an input/output instruction, and made to refer to a specific device.

device driver [COMPUT SCI] A subroutine which handles a complete input/output operation.

device-end condition [COMPUT SCI] The completion of an input/output operation, such as the transfer of a complete data block, recognized by the hardware in the absence of a byte count.

device flag [COMPUT SCI] A flip-flop output which indicates the ready status of an input/output device.

device independence [COMPUT SCI] Property of a computer program whose successful execution (without recompilation) does not depend on the type of physical unit associated with a given logical unit employed by the program.

device number [COMPUT SCI] The physical or logical number which refers to a specific input/output device.

device selector [COMPUT SCI] A circuit which gates data-transfer or command pulses to a specific input/output device.

devillite [MINERAL] $Cu_4Ca(SO_4)_2(OH)_6 3H_2O$ A dark-green mineral consisting of a hydrous basic sulfate of copper and calcium, occurring in six-sided platy crystals.

devil's pitchfork [DES ENG] A tool with flexible prongs used in recovery of a bit, underreamer, cutters, or such lost during drilling.

devitrification [CHEM] The process by which the glassy texture of a material is converted into a crystalline texture.

devitrified glass [MATER] A glassy material which has been changed from a vitreous to a brittle crystalline state during manufacture.

Devonian [GEOL] The fourth period of the Paleozoic Era.

De Vries effect [GEOCHEM] A relatively short-term oscillation, on the order of 100 years, in the radiocarbon content of the atmosphere, and the resulting variation in the apparent radiocarbon age of samples.

devrinol [ORG CHEM] $C_{17}H_{21}O_2N$ A brown solid with a melting point of 68.5–70.5°C; slight solubility in water; used as an herbicide for crops. Also known as 2-(α-naphthoxy)-*N*,*N*-diethylpropionamide.

dew [HYD] Water condensed onto grass and other objects near the ground, the temperatures of which have fallen below the dew point of the surface air because of radiational cooling during the night but are still above freezing.

Dewar flask [PHYS] A vessel having double walls, the space between being evacuated to prevent the transfer of heat and the surfaces facing the vacuum being heat-reflective; used to hold liquid gases and to study low-temperature phenomena.

Dewar structure [ORG CHEM] A structural formula for benzene that contains a bond between opposite atoms.

dewaterer [MECH ENG] Wet-type mechanical classifier (solids separator) in which solids settle out of the carrier liquid and are concentrated for recovery.

dewatering [ENG] **1.** Removal of water from solid material by wet classification, centrifugation, filtration, or similar solid-liquid separation techniques. **2.** Removing or draining water from an enclosure or a structure, such as a riverbed, caisson, or mine shaft, by pumping or evaporation.

dewaxed oil [MATER] Lubricating oil that has had a portion of the wax removed.

dewaxing [CHEM ENG] Removing wax from a material or object; a process used to separate solid hydrocarbons from petroleum.

dewcap [OPTICS] An open tube attached to the end of a refracting telescope to prevent moisture from condensing on the objective.

dew cell [ENG] An instrument used to determine the dew point, consisting of a pair of spaced, bare electrical wires wound spirally around an insulator and covered with a wicking wetted with a water solution containing an excess of lithium chloride; an electrical potential applied to the wires causes a flow of current through the lithium chloride solution, which raises the temperature of the solution until its vapor pressure is in equilibrium with that of the ambient air.

dewclaw [VERT ZOO] **1.** A vestigial digit on the foot of a mammal which does not reach the ground. **2.** A claw or hoof terminating such a digit.

dewetting [MET] Flow of solder away from the soldered surface during reheating following initial soldering.

deweylite [MINERAL] A mixture of clinochrysolite and stevensite. Also known as gymnite.

dewindtite [MINERAL] $Pb(UO_2)_2(PO_4)_2 3H_2O$ A canary-yellow secondary mineral consisting of a hydrous phosphate of lead and uranium.

de Witte relation [GEOPHYS] Graphical plot of the relation between electrical conductivity and distance over which the conductivity is measured through reservoir rock with clay minerals, (the effect is similar to two parallel electrical circuits), the current passing through the conducting clay minerals and the water-filled pores.

dewlap [ANAT] A fleshy or fatty fold of skin on the throat of some humans. [BOT] One of a pair of hinges at the joint of a sugarcane leaf blade. [VERT ZOO] A fold of skin hanging from the neck of some reptiles and bovines.

dew point [CHEM] The temperature at which water vapor begins to condense. [METEOROL] The temperature at which air becomes saturated when cooled without addition of moisture or change of pressure; any further cooling causes condensation. Also known as dew-point temperature.

dew-point boundary [CHEM ENG] On a phase diagram for a gas-condensate reservoir (pressure versus temperature with constant gas-oil ratios), the area along which the gas-oil ratio approaches zero.

dew-point composition [CHEM ENG] The water vapor–air composition at saturation, that is, at the temperature at which water exerts a vapor pressure equal to the partial pressure of water vapor in the air-water mixture.

dew-point curve [CHEM ENG] On a PVT phase diagram, the line that separates the two-phase (gas-liquid) region from the one-phase (gas) region, and indicates the point at a given gas temperature or pressure at which the first dew or liquid phase occurs.

dew-point depression [CHEM ENG] Reduction of the liquid-vapor dew point of a gas by removal of a portion of the liquid (such as water) from the gas (such as air). [METEOROL] The number of degrees the dew point is found to be lower than the temperature.

dew-point formula [METEOROL] A formula for the calculation of the approximate height of the lifting condensation level; employed to estimate the height of the base of convective clouds, under suitable atmospheric and topographic conditions.

dew-point hygrometer [CHEM ENG] An instrument for determining the dew point by measuring the temperature at which vapor being cooled in a silver vessel begins to condense. Also known as cold-spot hygrometer.

dew-point pressure [CHEM ENG] The gas pressure at which a system is at its dew point, that is, the conditions of gas temperature and pressure at which the first dew or liquid phase occurs.

dew-point recorder [ENG] An instrument which gives a continuous recording of the dew point; it alternately cools and heats the target and uses a photocell to observe and record the temperature at which the condensate appears and disappears. Also known as mechanized dew-point meter.

dew-point reservoir [PETRO ENG] A hydrocarbon reservoir in which the temperature lies between the critical temperature and the cricondentherm (maximum temperature and pressure at which two phases can coexist) and in the one-phase region. Also known as retrograde gas-condensate reservoir.

dew-point spread [METEOROL] The difference in degrees between the air temperature and the dew point.

dew-point temperature *See* dew point.

dex *See* brig.

Dexaminidae [INV ZOO] A family of amphipod crustaceans in the suborder Gammeridea.

dexterotropic [BIOL] Turning toward the right; applied to cleavage, shell formation, and whorl patterns.

dextral drag fold [GEOL] A drag fold in which the trace of a given surface bed is displaced to the right.

dextral fault [GEOL] A strike-slip fault in which an observer approaching the fault sees the opposite block as having moved to the right. Also known as right-lateral fault; right-lateral slip fault; right-slip fault.

dextral fold [GEOL] An asymmetric fold in which the long limb appears to be offset to the right to an observer looking along the long limb.

dextran [BIOCHEM] Any of the several polysaccharides, $(C_5H_{10}O_5)_n$, that yield glucose units on hydrolysis.

dextrin [BIOCHEM] A polymer of D-glucose which is intermediate in complexity between starch and maltose.

dextrinization [ORG CHEM] Any process that involves dextrinizing.

dextrinize [ORG CHEM] To convert a starch into dextrins.

dextro *See* dextrorotatory.

dextrocamphoric acid *See* camphoric acid.

dextrocardia [MED] The presence of the heart in the right hemithorax, with the cardiac apex directed to the right.

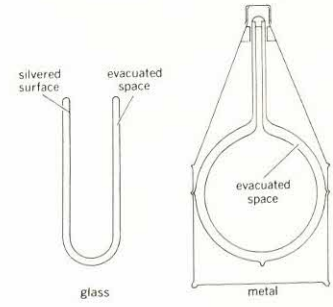
dextromethorphan hydrobromide [PHARM] $C_{18}H_{25}NO \cdot HBr \cdot H_2O$ White crystals or a crystalline powder; soluble in alcohol and chloroform; used in medicine.

dextrophobia [PSYCH] An abnormal fear of objects to the right of the body.

DEVONIAN

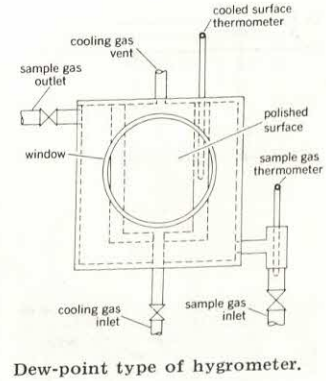
Chart showing relationship of Devonian to other periods.

DEWAR FLASK



Typical Dewar containers.

DEW-POINT HYGROMETER



Dew-point type of hygrometer.

dextropimeric acid [ORG CHEM] $C_{19}H_{29}COOH$ A compound found in particular in oleoresins of pine trees.

dextrorotatory [OPTICS] Rotating clockwise the plane of polarization of a wave traveling through a medium in a clockwise direction, as seen by an eye observing the light. Abbreviated dextro.

dextrorse [BOT] Twining toward the right.

dextrose [BIOCHEM] $C_6H_{12}O_6 \cdot H_2O$ A dextrorotatory monosaccharide obtained as a white, crystalline, odorless, sweet powder, which is soluble in about one part of water; an important intermediate in carbohydrate metabolism; used for nutritional purposes, for temporary increase of blood volume, and as a diuretic. Also known as corn sugar; grape sugar.

dextrotopic cleavage [EMBRYO] A clockwise spiral cleavage pattern.

dezincification [CHEM] Removal of zinc. [MET] Corrosion of brass in which both components of the alloy are dissolved and the copper is redeposited as a porous surface residue.

D flip-flop [ELECTR] A flip-flop whose output is a function of the input which appeared one pulse earlier. Also known as delay flip-flop.

DFP *See* isofluorphate.

DG synchro amplifier [ELECTR] Synchro differential generator driven by servosystem.

DHA *See* dehydroacetic acid; dihydroxyacetone.

d.h. *See* decision height.

D horizon [GEOL] A soil horizon sometimes occurring below a B or C horizon, consisting of unweathered rock.

di- [SCI TECH] Prefix meaning two.

Di *See* didymium.

DI *See* temperature-humidity index.

diabantite [MINERAL] $(Mg,Fe^{2+},Al)_6(Si,Al)_4O_{10}(OH)_8$ Mineral of the chlorite group consisting of a basic silicate of magnesium, iron, and aluminum, occurring in cavities in basic igneous rock.

diabase [PETR] An intrusive rock consisting principally of labradorite and pyroxene.

diabase amphibolite [PETR] Amphibolite formed by dynamic metamorphism of diabase.

diabasic [PETR] Denoting igneous rock in which the interstices between the feldspar crystals are filled with discrete crystals or grains of pyroxene.

diabatic [THERMO] Involving a thermodynamic change of state of a system in which there is a transfer of heat across the boundaries of the system.

diabetes [MED] Any of various abnormal conditions characterized by excessive urinary output, thirst, and hunger; usually refers to diabetes mellitus.

diabetes insipidus [MED] A form of diabetes due to a disfunction of the hypothalamus.

diabetes mellitus [MED] A metabolic disorder arising from a defect in carbohydrate utilization by the body, related to inadequate or abnormal insulin production by the pancreas.

diabetic acidosis [MED] Metabolic acidosis seen in diabetes mellitus, due to an excess of ketone bodies.

diabetic gangrene [MED] A moist form of gangrene occurring in persons with diabetes mellitus, often following a minor injury.

diabetic glomerulosclerosis *See* intercapillary glomerulosclerosis.

diabetophobia [PSYCH] An abnormal fear of becoming diabetic.

diablastic [PETR] Pertaining to a texture in metamorphic rock that consists of intergrown and interpenetrating rod-shaped components.

diaboleite [MINERAL] $Pb_2CuCl_2(OH)_4$ A sky-blue mineral consisting of a basic chloride of lead and copper.

diac *See* trigger diode.

diacetate [ORG CHEM] An ester or salt that contains two acetate groups.

diacetic acid *See* acetoacetic acid.

diacetic ether *See* ethyl acetoacetate.

diacetin [ORG CHEM] $C_3H_5(OH)(CH_3COO)_2$ A colorless, hygroscopic liquid that is soluble in water, alcohol, ether, and benzene; boiling point 259°C; used as a plasticizer and softening agent and as a solvent. Also known as glyceryl diacetate.

diacetone alcohol [ORG CHEM] $CH_3COCH_2C(CH_3)_2OH$ A colorless liquid used as a solvent for nitrocellulose and resins.

diacetyl [ORG CHEM] **1.** $CH_3COCOCH_3$ A yellowish-green liquid with a boiling point of 88°C; has a strong odor that resembles quinone; occurs naturally in bay oil and butter and is produced from methyl ethyl ketone or by a special fermentation of glucose; used as an aroma carrier in food manufacturing. Also known as biacetyl; 2-3-butanedione. **2.** A prefix indicating two acetyl groups.

diacetylmethane *See* acetylacetone.

diacetyl peroxide *See* acetyl peroxide.

diacetylurea [ORG CHEM] $C_5H_8O_3N_2$ An acyl derivative of urea containing two acetyl groups.

diachronous [GEOL] Of a rock unit, varying in age in different areas or cutting across time planes or biostratigraphic zones. Also known as time-transgressive.

diacid [CHEM] An acid that has two acidic hydrogen atoms; an example is oxalic acid.

diaclinal [GEOL] Pertaining to a stream crossing a fold, perpendicular to the strike of the underlying strata it traverses.

Diacodectidae [PALEON] A family of extinct artiodactyl mammals in the suborder Palaeodonta.

diactine [INV ZOO] A type of sponge spicule which develops in two directions from a central point.

diactor [ELEC] Direct-acting automatic regulator for control of shunt generator voltage output.

diadelphous stamen [BOT] A stamen that has its filaments united into two sets.

Diadematacea [INV ZOO] A superorder of Euchinoidea having a rigid or flexible test, perforate tubercles, and branchial slits.

Diadematidae [INV ZOO] A family of large euechinoid echinoderms in the order Diadematoida having crenulate tubercles and long spines.

Diadematoida [INV ZOO] An order of echinoderms in the superorder Diadematacea with hollow primary radioles and crenulate tubercles.

diadochite [MINERAL] $Fe_2(PO_4)(SO_4)(OH)5H_2O$ A brown or yellowish mineral consisting of a basic hydrous ferric phosphate and sulfate.

diadochy [CRYSTAL] Replacement or ability to be replaced of one atom or ion by another in a crystal lattice.

diadromous [BOT] Having venation in the form of fanlike radiations. [VERT ZOO] Of fish, migrating between salt and fresh waters.

Diadumenidae [INV ZOO] A family of anthozoans in the order Actiniaria.

diafocal point [OPTICS] For a ray of light refracted by a lens, a point on the ray which lies on a plane passing through the axis of the lens which is parallel to the ray on the opposite side of the lens.

diagenesis [GEOL] Chemical and physical changes occurring in sediments during and after their deposition but before consolidation.

diageotropism [BIOL] Growth orientation of a sessile organism or structure perpendicular to the line of gravity.

diagnosis [COMPUT SCI] The process of locating and explaining detectable errors in a computer routine or hardware component. [MED] Identification of a disease from its signs and symptoms. [SYST] In taxonomic study, a statement of the characters that distinguish a taxon from coordinate taxa.

diagnostic check *See* diagnostic routine.

diagnostic equation [METEOROL] Any equation governing a system which contains no time derivative and therefore specifies a balance of quantities in space at a moment of time; examples are a hydrostatic equation or a balance equation.

diagnostic routine [COMPUT SCI] A routine designed to locate a computer malfunction or a mistake in coding. Also known as diagnostic check; diagnostic subroutine; diagnostic test; error detection routine.

diagnostics [ENG] Information on what tests a device has failed and how they were failed; used to aid in troubleshooting.

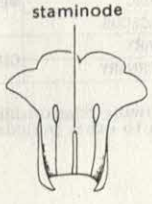
diagnostic subroutine *See* diagnostic routine.

diagnostic test *See* diagnostic routine.

diagnotor [COMPUT SCI] A combination diagnostic and edit routine which questions unusual situations and notes the implied results.

diagonal [CIV ENG] A sloping structural member, under compression or tension or both, of a truss or bracing system. [MATH] **1.** The set of points all of whose coordinates are equal to one another in an n-dimensional coordinate system. **2.** A line joining opposite vertices of a polygon with an even number of sides. [OPTICS] A plane mirror or prism face mounted near

DIADELPHOUS STAMEN



Cutaway drawing of a flower showing diadelphous stamen.

the eyepiece of a telescope at an angle to the light path, to redirect the light for convenience of observation or to reduce the intensity of the image of the sun so that it can be observed directly. [TEXT] A heavy twilled fabric.

diagonal bond [CIV ENG] A masonry bond with diagonal headers.

diagonal fault [GEOL] A fault whose strike is diagonal or oblique to the strike of the adjacent strata. Also known as oblique fault.

diagonal horn antenna [ELECTROMAG] Horn antenna in which all cross sections are square and the electric vector is parallel to one of the diagonals; the radiation pattern in the far field has almost perfect circular symmetry.

diagonal joint [GEOL] A joint having its strike oblique to the strike of the strata of the sedimentary rock, or to the cleavage plane of the metamorphic rock in which it occurs. Also known as oblique joint.

diagonally dominant matrix [MATH] A matrix in which the absolute value of each diagonal element is either greater than the sum of the absolute values of the off-diagonal elements of the same row or greater than the sum of the off-diagonal elements in the same column.

diagonal pitch [ENG] In rows of staggered rivets, the distance between the center of a rivet in one row to the center of the adjacent rivet in the next row.

diagonal pliers [DES ENG] Pliers with cutting jaws at an angle to the handles to permit cutting off wires close to terminals.

diagonal stay [MECH ENG] A diagonal member between the tube sheet and shell in a fire-tube boiler.

diagram [COMPUT SCI] A schematic representation of a sequence of subroutines designed to solve a problem; it is a coarser and less symbolic representation than a flow chart, frequently including descriptions in English words. [GRAPHICS] **1.** A line drawing that represents an object or area according to a scale. **2.** A graph which shows the relation between two variables or which plots the occurrence of events or objects as a function of two variables.

diagram factor [MECH ENG] The ratio of the actual mean effective pressure, as determined by an indicator card, to the map of the ideal cycle for a steam engine.

diagram on the plane of the celestial equator *See* time diagram.

diagram on the plane of the equinoctial *See* time diagram.

diagravitropism [PL PHYS] A response of plant organs to gravity where growth is horizontal.

diaheliotropism [BOT] Movement of plant leaves which follow the sun such that they remain perpendicular to the sun's rays throughout the day.

diakinesis [CYTOL] The last stage of meiotic prophase, when the chromatids attain maximum contraction and the bivalents move apart and position themselves against the nuclear membrane.

dial [COMMUN] In automatic telephone switching, a type of calling device which, when wound up and released, generates pulses required for establishing connections. [DES ENG] A separate scale or other device for indicating the value to which a control is set.

DIAL *See* differential absorption lidar.

dial cable [DES ENG] Braided cord or flexible wire cable used to make a pointer move over a dial when a separate control knob is rotated, or used to couple two shafts together mechanically.

dial central office [COMMUN] Telephone or teletypewriter office where necessary automatic equipment is located for connecting two or more users together by wires for communications purposes.

dial cord [DES ENG] A braided cotton, silk, or glass fiber cord used as a dial cable.

dialdehyde [ORG CHEM] A molecule that has two aldehyde groups, such as dialdehyde starch.

dial exchange [COMMUN] A telephone exchange area in which all subscribers originate their calls by dialing.

dial feed [MECH ENG] A device that rotates workpieces into position successively so they can be acted on by a machine.

dialifor [ORG CHEM] $C_{14}H_{17}ClNO_4S_2P$ A white, crystalline compound with a melting point of 67–69°C; insoluble in water; used to control pests in citrus fruits, grapes, and pecans. Also known as *S*-(2-chloro-1-phthalimidoethyl) *O*,*O*-diethyl phosphorodithioate.

dial indicator [DES ENG] Meter or gage with a calibrated circular face and a pivoted pointer to give readings.

dialing key [COMMUN] Method of dialing in which a set of numerical keys is used to originate dial pulses instead of a dial; generally used in connection with voice-frequency dialing.

dial jacks [ELEC] Strip of jacks associated with and bridged to a regular out-going trunk jack circuit to provide a connection between the dial cords and the outgoing trunks.

dial key [ELEC] Key unit of the subscriber's cord circuit used to connect the dial into the line.

dialkyl [ORG CHEM] A molecule that has two alkyl groups.

dialkyl amine [ORG CHEM] An amine that has two alkyl groups bonded to the amino nitrogen.

diallage [MINERAL] A green, brown, gray, or bronze-colored clinopyroxene characterized by prominent parting parallel to the front pinacoid *a* (100).

dial lamp [ELEC] A small lamp used to illuminate a dial.

dial leg [ELEC] Conductor in a circuit brought out for direct-current dial signaling.

4-diallylamino-3,5-xylyl-*N*-methylcarbamate *See* allyxycarb.

***N*,*N*-diallyl-2-chloroacetamide** *See* allidochlor.

diallyl phthalate [ORG CHEM] $C_6H_4(COOCH_2CH{:}CH_2)_2$ A colorless, oily liquid with a boiling range of 158–165°C; used as a plasticizer and for polymerization. Abbreviated DAP.

diallyl sulfide *See* allyl sulfide.

dial office [COMMUN] Central office operating on dial signals.

dial press [MECH ENG] A punch press with dial feed.

dial pulse interpreter [ELECTR] A device that converts the signaling pulses of a dial telephone to a form suitable for data entry to a computer.

dial pulsing *See* loop pulsing.

dial telegraph [COMMUN] A telegraph system in which there is a rotating circular dial plate at each station with letters, numbers, and other symbols along the edge, and the movements of the dial at the receiving station copy those at the transmitting station.

dial telephone system [COMMUN] A telephone system in which telephone connections between customers are ordinarily established by electronic and mechanical apparatus, controlled by manipulations of dials operated by calling parties.

dial tone [COMMUN] A tone employed in a dial telephone system to indicate that the equipment is ready for dialing operation.

dial-up [COMMUN] **1.** The service whereby a dial telephone can be used to initiate and effect station-to-station telephone calls. **2.** In computer networks, pertaining to terminals which must dial up to receive service, as contrasted with those hand-wired or permanently connected into the network.

dialuric acid [ORG CHEM] $C_4H_4N_2O$ An acid that is derived by oxidation of uric acid or by the reduction of alloxan; may be used in organic synthesis. Also known as 5-hydroxybarbituric acid.

dialysis [PHYS CHEM] A process of selective diffusion through a membrane; usually used to separate low-molecular-weight solutes which diffuse through the membrane from the colloidal and high-molecular-weight solutes which do not.

dialyzate [CHEM] The material that does not diffuse through the membrane during dialysis; alternatively, it may be considered the material that has diffused.

dialyzer [CHEM ENG] **1.** The semipermeable membrane used for dialyzing liquid. **2.** The container used in dialysis; it is separated into compartments by membranes.

diamagnet [ELECTROMAG] A substance which is diamagnetic, such as the alkali and alkaline earth metals, the halogens, and the noble gases.

diamagnetic [ELECTROMAG] Having a magnetic permeability less than 1; materials with this property are repelled by a magnet and tend to position themselves at right angles to magnetic lines of force.

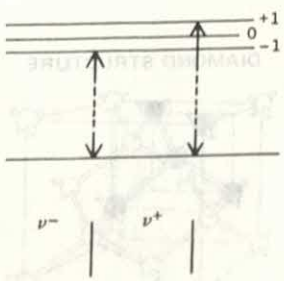
diamagnetic Faraday effect [OPTICS] Faraday effect at frequencies near an absorption line which is split due to the splitting of the upper level only.

diamagnetic resonance *See* cyclotron resonance.

diamagnetic susceptibility [ELECTROMAG] The susceptibility of a diamagnetic material, which is always negative and usually on the order of -10^{-5} cm^3/mole.

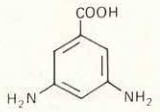
diamagnetism [ELECTROMAG] The property of a material which is repelled by magnets.

DIAMAGNETIC FARADAY EFFECT



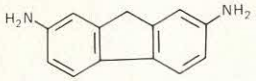
Diamagnetic Faraday effect which is temperature-independent; ν = frequency of light. Splitting of the absorption line is due to the splitting of the upper level only, and the lower level of the line is not split.

3,5-DIAMINOBENZOIC ACID



Structural formula.

2,7-DIAMINOFLUORENE

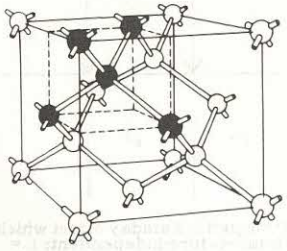


Structural formula.

DIAMOND

Diamond crystals from Kimberley, South Africa. *(American Museum of Natural History Specimens)*

DIAMOND STRUCTURE



Crystal structure of diamond. Large cube is unit cell. Small cube emphasizes arrangement of bonds between atom at center of tetrahedron and nearest neighbors at vertices.

diamantine [MINERAL] Consisting of or resembling diamond.

diameter [MATH] **1.** A line segment which passes through the center of a circle, and whose end points lie on the circle. **2.** The length of such a line.

diameter group [MECH ENG] A dimensionless group, used in the study of flow machines such as turbines and pumps, equal to the fourth root of pressure number 2 divided by the square root of the delivery number.

diameter of a conic [MATH] Any straight line that passes through the midpoints of all the chords of the conic that are parallel to a given chord.

diameter of a set [MATH] The smallest number which is greater than or equal to the distance between every pair of points of the set.

diameter tape [ENG] A tape for measuring the diameter of trees; when wrapped around the circumference of a tree, it reads the diameter directly.

diametral curve [MATH] A curve that passes through the midpoints of a family of parallel chords of a given curve.

diametral pitch [DES ENG] A gear tooth design factor expressed as the ratio of the number of teeth to the diameter of the pitch circle measured in inches.

diametral plane [MATH] **1.** A plane that passes through the center of a sphere. **2.** A plane that passes through the midpoints of a family of parallel chords of a quadric surface that are parallel to a given chord.

diametral surface [MATH] A surface that passes through the midpoints of a family of parallel chords of a given surface that are parallel to a given chord.

diamictite [PETR] A calcareous, terrigenous sedimentary rock that is not sorted or poorly sorted and contains particles of many sizes. Also known as mixtite.

diamicton [PETR] A nonlithified diamictite. Also known as symmicton.

diamide [ORG CHEM] A molecule that has two amide ($—CONH_2$) groups.

diamidine [ORG CHEM] A molecule that has two amidine ($—C{=}NHNH_2$) groups.

diamine [ORG CHEM] Any compound containing two amino groups.

diamine oxidase [BIOCHEM] A flavoprotein which catalyzes the aerobic oxidation of amines to the corresponding aldehyde and ammonia.

diamino [ORG CHEM] A term used in chemical nomenclature to indicate the presence in a molecule of two amino ($—NH_2$) groups.

6-diaminoacridinium hydrogen sulfate *See* proflavine sulfate.

***meta*-diaminoazobenzene hydrochloride** *See* chrysoidine.

diaminobenzene *See* phenylenediamine.

***ortho*-diaminobenzene** *See* phenylenediamine.

3,5-diaminobenzoic acid [ORG CHEM] $C_7H_8N_2O_2$ Monohydrate crystals with a melting point of 228°C; soluble in organic solvents such as alcohol and benzene; used in the detection and determination of nitrites.

diaminoditolyl *See ortho*-tolidine.

diaminoethane *See* ethylenediamine.

2,7-diaminofluorene [ORG CHEM] $C_{13}H_{12}N_2$ A compound crystallizing as needlelike crystals from water; melting point is 165°C; soluble in alcohol; used to detect bromide, chloride, nitrate, persulfate, cadmium, zinc, copper, and cobalt. Also known as 2,7-fluorenediamine.

1,6-diaminohexane *See* hexamethylenediamine.

2,4-diaminophenolhydrochloride *See* amidol.

diaminopimelate [BIOCHEM] $C_7H_{14}O_4N_2$ A compound that serves as a component of cell wall mucopeptide in some bacteria and as a source of lysine in all bacteria. Abbreviated DAP. Also known as diaminopimelic acid.

diaminopimelic acid *See* diaminopimelate.

***S*-(4,6-diamino-*s*-triazin-2-yl-methyl) *O,O*-dimethyl-phosphorodithioate** *See* menazon.

diamond [MINERAL] A colorless mineral composed entirely of carbon crystallized in the isometric system as octahedrons, dodecahedrons, and cubes; the hardest substance known; used as a gem and in cutting tools.

diamond antenna *See* rhombic antenna.

diamond bit [DES ENG] A rotary drilling bit crowned with bort-type diamonds, used for rock boring. Also known as bort bit.

diamond boring [ENG] Boring with a diamond tool.

diamond canker [PL PATH] A virus disease that affects the bark of certain stone-fruit trees, resulting in weakening of the trunk and limbs.

diamond chisel [DES ENG] A chisel having a V-shaped or diamond-shaped cutting edge.

diamond circuit [ELECTR] A gate circuit that provides isolation between input and output terminals in its off state, by operating transistors in their cutoff region; in the on state the output voltage follows the input voltage as required for gating both analog and digital signals, while the transistors provide current gain to supply output current on demand.

diamond coring [ENG] Obtaining core samples of rock by using a diamond drill.

diamond count [DES ENG] The number of diamonds set in a diamond crown bit.

diamond crossing [CIV ENG] An oblique railroad crossing that forms a diamond shape between the tracks.

diamond crown [DES ENG] The cutting bit used in diamond drilling; it consists of a steel shell set with black diamonds on the face and cutting edges.

diamond drill [DES ENG] A drilling machine with a hollow, diamond-set bit for boring rock and yielding continuous and columnar rock samples.

Diamond-Hinman radiosonde [ENG] A variable audio-modulated radiosonde used by United States weather services; the carrier signal from the radiosonde is modulated by audio signals determined by the electrical resistance of the humidity- and temperature-transducing elements and by fixed reference resistors; the modulating signals are transmitted in a fixed sequence at predetermined pressure levels by means of a baro-switch.

diamond indenter [ENG] An instrument that measures hardness by indenting a material with a diamond point.

diamond matrix [DES ENG] The metal or alloy in which diamonds are set in a drill crown. [GEOL] The rock material in which diamonds are formed.

diamond orientation [DES ENG] The set of a diamond in a cutting tool so that the crystal face will be in contact with the material being cut.

diamond-particle bit [DES ENG] A diamond bit set with small fragments of diamonds.

diamond paste [MATER] An abrasive consisting of diamond dust in a viscous material.

diamond pattern [DES ENG] The arrangement of diamonds set in a diamond crown.

diamond plate [LAP] A plate with a layer of diamond dust and oil; used for rubbing down gems.

diamond point [DES ENG] A cutting tool with a diamond tip.

diamond-point bit *See* mud auger.

diamond-pyramid hardness number [MET] The quotient of the load applied in the diamond-pyramid hardness test divided by the pyramidal area of the impression.

diamond-pyramid hardness test [MET] An indentation hardness test in which a diamond-pyramid indenter, with a 136° angle between opposite faces, is forced under variable loads into the surface of a test specimen. Also known as Vickers hardness test.

diamond reamer [DES ENG] A diamond-inset pipe behind, and larger than, the drill bit and core barrel that is used for enlarging boreholes.

diamonds [FL MECH] The pattern of shock waves often visible in a rocket exhaust which resembles a series of diamond shapes placed end to end.

diamond saw [DES ENG] A circular, band, or frame saw inset with diamonds or diamond dust for cutting sections of rock and other brittle substances.

diamond setter [ENG] A person skilled at setting diamonds by hand in a diamond bit or a bit mold.

diamond size [ENG] In the bit-setting and diamond-drilling industries, the number of equal-size diamonds having a total weight of 1 carat; a 10-diamond size means 10 stones weighing 1 carat.

diamond structure [CRYSTAL] A crystal structure in which each atom is the center of a tetrahedron formed by its nearest neighbors.

diamond stylus [ENG ACOUS] A stylus having a ground diamond as its point.

diamond tool [DES ENG] **1.** Any tool using a diamond-set bit

to drill a borehole. **2.** A diamond shaped to the contour of a single-pointed cutting tool, used for precision machining.

diamond washer [MIN ENG] An apparatus for shaking and separating rock gravel containing diamonds, utilizing a vertical series of screens with 8-, 4-, 2-, and 1-millimeter mesh.

diamond wheel [DES ENG] A grinding wheel in which synthetic diamond dust is bonded as the abrasive to cut very hard materials such as sintered carbide or quartz.

diamyl phenol [ORG CHEM] $(C_5H_{11})_2C_6H_3OH$ A straw-colored liquid with a boiling range of 280–295°C; used in synthetic resins, lubricating oil additives, plasticizers, detergents, and fungicides.

diamyl sulfide [ORG CHEM] $(C_5H_{11})_2S$ A combustible, yellow liquid with a distillation range of 170–180°C; used as a flotation agent and an odorant.

diandrous [BOT] Having two stamens.

Dianemaceae [MICROBIO] A family of slime molds in the order Trichales.

dianite *See* columbite.

Dianulitidae [PALEON] A family of extinct, marine bryozoans in the order Cystoporata.

diapause [PHYSIO] A period of spontaneously suspended growth or development in certain insects, mites, crustaceans, and snails.

diapedesis [MED] Hemorrhage of blood cells, especially erythrocytes, through an intact vessel wall into the tissues.

Diapensiaceae [BOT] The single family of the Diapensiales, an order of flowering plants.

Diapensiales [BOT] A monofamilial order of dicotyledonous plants in the subclass Dilleniidae comprising certain herbs and dwarf shrubs in temperate and arctic regions of the Northern Hemisphere.

Diaphanocephalidae [INV ZOO] A family of parasitic roundworms belonging to the Strongyloidea; snakes are the principal host.

diaphone [NAV] A fog signal device that produces sounds similar to a siren and uses a reciprocating piston actuated by compressed air.

diaphorase [BIOCHEM] Mitochondrial flavoprotein enzymes which catalyze the reduction of dyes, such as methylene blue, by reduced pyridine nucleotides such as reduced diphosphopyridine nucleotide.

diaphorite [MINERAL] $PB_2Ag_3Sb_3S_8$ A gray-black orthorhombic mineral consisting of sulfide of lead, silver, and antimony, occurring in crystals. Also known as ultrabasite.

diaphragm [ANAT] The dome-shaped partition composed of muscle and connective tissue that separates the abdominal and thoracic cavities in mammals. [ELECTROMAG] *See* iris. [ENG] A thin sheet placed between parallel parts of a member of structural steel to increase its rigidity. [ENG ACOUS] A thin, flexible sheet that can be moved by sound waves, as in a microphone, or can produce sound waves when moved, as in a loudspeaker. [OPTICS] Any opening in an optical system which controls the cross section of a beam of light passing through it, to control light intensity, reduce aberration, or increase depth of focus. Also known as lens stop. [PHYS] **1.** A separating wall or membrane, especially one which transmits some substances and forces but not others. **2.** In general, any opening, sometimes adjustable in size, which is used to control the flow of a substance or radiation.

diaphragmatic hernia [MED] Protrusion of an abdominal organ through the diaphragm into the thoracic cavity.

diaphragmatic respiration [PHYSIO] Respiration effected primarily by movement of the diaphragm, changing the intrathoracic pressure.

diaphragm cell [CHEM ENG] An electrolytic cell used to produce sodium hydroxide and chlorine from sodium chloride brine; porous diaphragm separates the anode and cathode compartments.

diaphragm compressor [MECH ENG] Device for compression of small volumes of a gas by means of a reciprocally moving diaphragm, in place of pistons or rotors.

diaphragm gage [ENG] Pressure- or vacuum-sensing instrument in which pressures act against opposite sides of an enclosed diaphragm that consequently moves in relation to the difference between the two pressures, actuating a mechanical indicator or electric-electronic signal.

diaphragm horn [ENG ACOUS] A horn that produces sound by means of a diaphragm vibrated by compressed air, steam, or electricity.

diaphragm jig [MIN ENG] A jig having a flexible diaphragm to pulse water; used in gravity concentration of minerals.

diaphragm meter [ENG] A flow meter which uses the movement of a diaphragm in the measurement of a difference in pressure created by the flow, such as a force-balance-type or a deflection-type meter.

diaphragm pump [MECH ENG] A metering pump which uses a diaphragm to isolate the operating parts from pumped liquid in a mechanically actuated diaphragm pump, or from hydraulic fluid in a hydraulically actuated diaphragm pump.

diaphragm setting [OPTICS] The position of a camera's diaphragm after opening or closing it.

diaphragm valve [ENG] A fluid valve in which the open-close element is a flexible diaphragm; used for fluids containing suspended solids, but limited to low-pressure systems.

diaphthoresis *See* retrograde metamorphism.

diaphthorite [PETR] Schistose rocks in which minerals have formed by retrograde metamorphism.

diaphyseal aclasis *See* multiple hereditary exostoses.

diaphysis [ANAT] The shaft of a long bone.

diapir [GEOL] A dome or anticlinal fold in which a mobile plastic core has ruptured the more brittle overlying rock. Also known as diapiric fold; piercement; piercement dome; piercing fold.

diapiric fold *See* diapir.

diapophysis [ANAT] The articular portion of a transverse process of a vertebra.

diapositive [GRAPHICS] A positive formed on a transparent support such as glass.

Diapriidae [INV ZOO] A family of hymenopteran insects in the superfamily Proctotrupoidea.

diarrhea [MED] The passage of loose or watery stools, usually at more frequent than normal intervals.

diarsine [ORG CHEM] An arsenic compound containing an As-As bond with the general formula $(R_2As)_2$, where R represents a functional group such as CH_3.

diarthrosis [ANAT] A freely moving articulation, characterized by a synovial cavity between the bones.

diarylamine [ORG CHEM] A molecule that contains an amine group and two aryl groups joined to the amino nitrogen.

diaspore [MINERAL] AlO(OH) A mineral composed of some bauxites occurring in white, lamellar masses; crystallizes in the orthorhombic system.

diasporometer [OPTICS] Oppositely rotating wedges used in optical rangefinders to obtain deviation of the axis of the image.

diastase [BIOCHEM] An enzyme that catalyzes the hydrolysis of starch to maltose. Also known as vegetable diastase.

diastasis [MED] Any simple separation of parts normally joined together, as the separation of an epiphysis from the body of a bone without true fracture, or the dislocation of an amphiarthrosis. [PHYSIO] The final phase of diastole, the phase of slow ventricular filling.

diastem [GEOL] A temporal break between adjacent geologic strata that represents nondeposition or local erosion but not a change in the general regimen of deposition.

diastema [ANAT] A space between two types of teeth, as between an incisor and premolar. [CYTOL] Modified cytoplasm of the equatorial plane prior to cell division.

diastereoisomer [ORG CHEM] One of a pair of optical isomers which are not mirror images of each other. Also known as diastereomer.

diastereomer *See* diastereoisomer.

diastereotopic ligand [ORG CHEM] A ligand whose replacement or addition gives rise to diastereoisomers.

diastole [PHYSIO] The rhythmic relaxation and dilation of a heart chamber, especially a ventricle.

diastolic pressure [PHYSIO] The lowest arterial blood pressure during the cardiac cycle; reflects relaxation and dilation of a heart chamber.

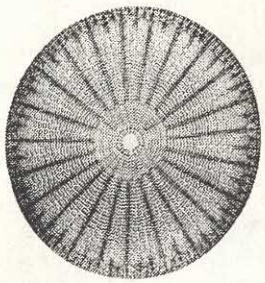
diastrophism [GEOL] **1.** The general process or combination of processes by which the earth's crust is deformed. **2.** The results of this deforming action.

diathermanous [PHYS] Capable of transmitting radiant heat. Also known as diathermic.

diathermic *See* diathermanous.

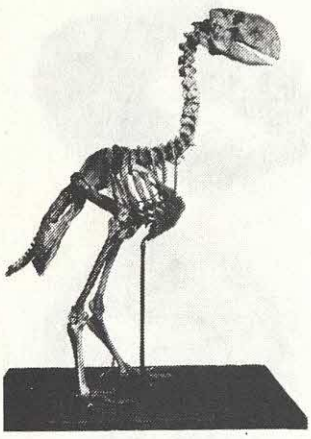
diathermous envelope [THERMO] A surface enclosing a thermodynamic system in equilibrium that is not an adiabatic envelope; this means that heat can flow through the surface.

DIATOM



Arachnoidiscus ehrenbergii, a concentric diatom with radial symmetry. *(From H. J. Fuller and O. Tippo, College Botany, rev. ed., Holt, 1954)*

DIATRYMIFORMES



Diatryma steini (reconstruction). *(American Museum of Natural History)*

DIBRANCHIA

The luminous deep-sea squid *Lycoteuthis diadema*.

diathermy [MED] The therapeutic use of high-frequency electric currents to produce localized heat in body tissues.

diathermy interference [COMMUN] Television interference caused by diathermy equipment; produces a herringbone pattern in a dark horizontal band across the picture.

diathermy machine [ELECTR] A radio-frequency oscillator, sometimes followed by rf amplifier stages, used to generate high-frequency currents that produce heat within some part of the body for therapeutic purposes.

diathesis [MED] A constitutional or hereditary predisposition to some disease or a structural or mental abnormality.

diatom [INV ZOO] The common name for algae composing the class Bacillariophyceae; noted for the symmetry and sculpturing of the siliceous cell walls.

diatomaceous earth [GEOL] A yellow, white, or light-gray, siliceous, porous deposit made of the opaline shells of diatoms; used as a filter aid, paint filler, adsorbent, abrasive, and thermal insulator. Also known as kieselguhr; tripolite.

diatomaceous ooze [GEOL] A pelagic, siliceous sediment composed of more than 30% diatom tests, up to 40% calcium carbonate, and up to 25% mineral grains.

diatomic [CHEM] Consisting of two atoms.

diatomite [GEOL] Dense, chert-like, consolidated diatomaceous earth.

diatonic scale [ACOUS] A musical scale in which the octave is divided into intervals of two different sizes, five of one and two of the other, with adjustments in tuning systems other than equal temperament.

diatreme [GEOL] A circular volcanic vent produced by the explosive energy of gas-charged magmas.

diatropism [BOT] Growth orientation of certain plant organs that is transverse to the line of action of a stimulus.

Diatrymiformes [PALEON] An order of extinct large, flightless birds having massive legs, tiny wings, and large heads and beaks.

diauxic growth [MICROBIO] The diphasic response of a culture of microorganisms based on a phenotypic adaptation to the addition of a second substrate; characterized by a growth phase followed by a lag after which growth is resumed.

diazine [ORG CHEM] **1.** A hydrocarbon consisting of an unsaturated hexatomic ring of two nitrogen atoms and four carbons. **2.** Suffix indicating a ring compound with two nitrogen atoms.

diazinon [ORG CHEM] $C_{12}H_{21}N_2O_3PS$ A light amber to dark brown liquid with a boiling point of 83–84°C; used as an insecticide for soil and household pests, and as an insecticide and nematicide for fruits and vegetables. Also known as *O,O*-diethyl *O*-(2-isopropyl-4-methyl-6-primidinyl)phosphorothioate.

diazoalkane [ORG CHEM] A compound with the general formula $R_2C{=}N_2$ in which two hydrogen atoms of an alkane molecule have been replaced by a diazo group.

diazoamine [ORG CHEM] The grouping —N=NNH—. Also known as azimino.

diazoaminobenzene [ORG CHEM] $C_6H_5NNNHC_6H_5$ Golden yellow scales with a melting point of 96°C; soluble in alcohol, ether, and benzene; used for dyes and insecticides. Also known as benzeneazoanilide; diazobenzeneanilide; 1,3-diphenyltriazine.

diazoate [ORG CHEM] A salt with molecular formula of the type $C_6H_5N{=}NOOM$, where M is a nonvalent metal.

diazobenzeneanilide *See* diazoaminobenzene.

diazo compound [ORG CHEM] An organic compound containing the radical —N=N—.

diazo dye *See* developed dye.

diazo group [ORG CHEM] A functional group with the formula $=N_2$.

diazoic acid [ORG CHEM] $C_6H_5N{=}NOOH$ An isomeric form of phenylnitramine.

diazoimide *See* hydrazoic acid.

diazole [ORG CHEM] A cyclic hydrocarbon with five atoms in the ring, two of which are nitrogen atoms and three are carbon.

1,3-diazole *See* imidazole.

diazomethane [ORG CHEM] CH_2N_2 A poisonous gas used in organic synthesis to methylate compounds. Also known as azimethane; azimethylene.

diazonium [ORG CHEM] The grouping $=N{\equiv}N$.

diazonium salts [ORG CHEM] Compounds of the type R·X·N:N, with X being an acid radical such as chlorine.

diazo oxide [ORG CHEM] An organic molecule or a grouping of organic molecules that have a diazo group and an oxygen atom joined to ortho positions of an aromatic nucleus. Also known as diazophenol.

diazophenol *See* diazo oxide.

diazo print [GRAPHICS] A reduction made by the whiteprint process.

diazo process *See* diazotization.

diazosulfonate [ORG CHEM] A salt formed from diazosulfonic acid.

diazosulfonic acid [ORG CHEM] $C_6H_5N{=}NSO_3H$ Any of a group of aromatic acids containing the diazo group bonded to the sulfonic acid group.

diazotization [ORG CHEM] Reaction between a primary aromatic amine and nitrous acid to give a diazo compound. Also known as diazo process.

diazotroph [MICROBIO] An organism that carries out nitrogen fixation; examples are *Clostridium* and *Azotobacter*.

diazotype [GRAPHICS] A photograph or photocopy produced on a surface by coating with a photosensitive solution containing a diazo compound.

Dibamidae [VERT ZOO] The flap-legged skinks, a small family of lizards in the suborder Sauria comprising three species confined to southeastern Asia.

dibasic [CHEM] **1.** Compounds containing two hydrogens that may be replaced by a monovalent metal or radical. **2.** An alcohol that has two hydroxyl groups, for example, ethylene glycol.

dibasic acid [CHEM] An acid having two hydrogen atoms capable of replacement by two basic atoms or radicals.

dibasic calcium phosphate *See* calcium phosphate.

dibasic magnesium citrate [ORG CHEM] $MgHC_6H_5O_7 \cdot 5H_2O$ A white or yellowish powder soluble in water; used as a dietary supplement or in medicine. Also known as acid magnesium citrate.

dibenzofuran *See* diphenylene oxide.

dibenzopyrone *See* xanthone.

dibenzothiazine *See* phenothiazine.

dibenzoyl *See* benzil.

dibenzoyl peroxide *See* benzoyl peroxide.

dibenzyl *See* bibenzyl.

dibenzyl disulfide [ORG CHEM] $C_6H_5CH_2SSCH_2C_6H_5$ A compound crystallizing in leaflets with a melting point of 71–72°C; soluble in hot methanol, benzene, ether, and hot ethanol; used as an antioxidant in compounding of rubber and as an additive to silicone oils. Also known as benzyl disulfide; α-(benzyldithio)toluene; di(phenylmethyl)disulfide.

dibenzyl ether *See* benzyl ether.

***N,N'*-dibenzylethylenediamine** [PHARM] $C_6H_5CH_2NHCH_2CH_2NHCH_2C_6H_5$ An oily liquid, soluble in most organic solvents; used in the manufacture of a repository form of penicillin. Also known as 1,2-bis(benzylamino)ethane.

dibit [COMPUT SCI] A pair of binary digits, used to specify one of four values.

diborane [INORG CHEM] B_2H_6 A colorless, volatile compound that is soluble in ether; boiling point −92.5°C, melting point −165.5°C; can be used to produce pentaborane and decaborane, proposed for use as rocket fuels; also used to synthesize organic boron compounds. Also known as boroethane; diboron hexahydride.

diborate *See* borax.

diboron hexahydride *See* diborane.

Dibothriocephalus *See* Diphyllobothrium.

Dibranchia [INV ZOO] A subclass of the Cephalopoda containing all living cephalopods except *Nautilus;* members possess two gills and, when present, an internal shell.

dibromide [CHEM] Indicating the presence of two bromine atoms in a molecule.

dibromo- [CHEM] A prefix indicating two bromine atoms.

2,4'-dibromoacetophenone *See para*-bromophenacyl bromide.

***para*,α-dibromoacetophenone** *See para*-bromophenacyl bromide.

dibromochloropropane [ORG CHEM] $C_3H_5Br_2Cl$ A light yellow liquid with a boiling point of 195°C; used as a nematicide for crops. Abbreviated DBCP. Also known as 1,2-dibromo-3-chloropropane.

1,2-dibromo-3-chloropropane *See* dibromochloropropane.

2,6-dibromo-*N*-chloroquinonimine *See* 2,6-dibromoquinone-4-chlorimide.

1,2-dibromo-2,2-dichloroethyl dimethyl phosphate *See* naled.

dibromodifluoromethane [ORG CHEM] CF_2Br_2 A colorless, heavy liquid with a boiling point of 24.5°C; soluble in methanol and ether; used in the synthesis of dyes and pharmaceuticals and as a fire-extinguishing agent.

1,2-dibromoethane *See* ethylene dibromide.

3,5-dibromo-4-hydroxybenzaldehyde *O*-(2′,4′-dinitrophenyl)oxime *See* bromofenoxim.

3,5-dibromo-4-hydroxybenzonitrile *See* bromoxynil.

5,7-dibromo-8-hydroxyquinoline *See* broxyquinoline.

dibromomethane *See* methylene bromide.

3,5-dibromo-4-octanoyloxybenzonitrile *See* bromoxynil.

2,6-dibromoquinone-4-chlorimide [ORG CHEM] $C_6H_2Br_2ClNO$ Yellow prisms, soluble in water; used as a reagent for phenol and phosphatases. Also known as 2,6-dibromo-*N*-chloroquinonimine.

3,5-dibromosalicylaldehyde [ORG CHEM] $Br_2C_6H_2(OH)CHO$ Pale yellow crystals with a melting point of 86°C; readily soluble in ether, chloroform, benzene, alcohol, and glacial acetic acid; used as an antibacterial agent.

dibromothymolsulfonphthalein *See* bromthymol blue.

***para*-α-dibromotoluene** *See para*-bromobenzyl bromide.

dibucaine [ORG CHEM] $C_{20}H_{29}O_2N_3$ A local anesthetic used both as the base and the hydrochloride salt.

dibutalin *See N-sec*-butyl-4-*tert*-butyl-2,6-dinitroaniline.

dibutyl [ORG CHEM] Indicating the presence of two butyl groupings bonded through a third atom or group in a molecule.

dibutyl amine [ORG CHEM] $C_8H_{19}N$ A colorless, clear liquid with amine aroma; either di-*n*-butylamine, $(C_4H_9)_2NH$, boiling at 160°C, insoluble in water, soluble in hydrocarbon solvents, or di-*sec*-butylamine, $(CH_3CHCH_2CH_3)_2NH$, boiling at 133°C, flammable; used in the manufacture of dyes.

dibutyl maleate [ORG CHEM] $C_4H_9OOCCHCHCOOC_4H_9$ Oily liquid used for copolymers and plasticizers and as a chemical intermediate.

dibutyl oxalate [ORG CHEM] $(COOC_4H_9)_2$ High-boiling, water-white liquid with mild odor, used as a solvent and in organic synthesis.

3,4-di-(*tert*-butyl)-phenyl-*N*-methylcarbamate [ORG CHEM] $C_{16}H_{25}O_2N$ A white, crystalline compound that melts at 102–103°C; used as an insecticide for sheep blowflies.

dibutyl phthalate [ORG CHEM] $C_{16}H_{22}O_4$ A colorless liquid, used as a plasticizer and insect repellent.

dibutyl succinate [ORG CHEM] $C_{12}H_{22}O_4$ A colorless liquid, insoluble in water; used as a repellent for cattle flies, cockroaches, and ants around barns.

dibutyl tartrate [ORG CHEM] $(COOC_4H_9)_2(CHOH)_2$ Liquid used as a solvent and plasticizer for cellulosics and as a lubricant.

2,6-di-*tert*-butyl-*para*-tolylmethylcarbamate [ORG CHEM] $C_{17}H_{27}O_2N$ A colorless solid with a melting point of 200–201°C; solubility in water is 6–7 parts per million; used as a preemergence herbicide on established turf.

dicalcium [CHEM] A molecule containing two atoms of calcium.

dicalcium orthophosphate *See* calcium phosphate.

dicalcium phosphate *See* calcium phosphate.

di-cap storage [ELECTR] Device capable of holding data in the form of an array of charged capacitors and using diodes for controlling information flow.

dicarbamylamine *See* biuret.

dicarbocyanine [ORG CHEM] **1.** A member of a group of dyes termed the cyanine dyes; structure consists of two heterocyclic rings joined to the five-carbon chain: =CH—CH=CH—CH=CH—. **2.** A particular dicarbocyanine dye containing two quinoline heterocyclic rings. Also known as pentamethine.

dicarboxylic acid [ORG CHEM] A compound with two carboxyl groups.

dicarpellate [BOT] Having two carpels.

dicaryon *See* dikaryon.

dication [CHEM] A doubly charged cation with the general formula X^{2+}.

dice *See* die.

DICE *See* digital intercontinental conversion equipment.

dicentric [CYTOL] Having two centromeres.

dicephaly [MED] A severe congenital anomaly in which the infant is born with two distinct heads.

dicerous [INV ZOO] Having two tentacles or two antennae.

Dice's life zones [ECOL] Biomes proposed by L.R. Dice based on the concept of the biotic province.

dichasium [BOT] A cyme producing two main axes from the primary axis or shoot.

Dichelesthiidae [INV ZOO] A family of parasitic copepods in the suborder Caligoida; individuals attach to the gills of various fishes.

dichlamydeous [BOT] Having both calyx and corolla.

dichlobenil [ORG CHEM] $C_7H_3Cl_2N$ A colorless, crystalline compound with a melting point of 139–145°C; used as an herbicide to control weeds in orchards and nurseries. Also known as 2,6-dichlorobenzonitrile.

dichlofenthion [ORG CHEM] $C_{10}H_{13}Cl_2O_3PS$ A white, liquid compound, insoluble in water; used as an insecticide and nematicide for ornamentals, flowers, and lawns. Also known as *O,O*-diethyl-*O*-2,4-dichlorophenyl phosphorothioate.

dichlofluanid [ORG CHEM] $C_9H_{11}Cl_2FN_2O_2S$ A white powder with a melting point of 105–105.6°C; insoluble in water; used as a fungicide for fruits, garden crops, and ornamental flowers. Also known as *N′*-dichlorofluoromethylthio-*N,N*-dimethyl-*N′*-phenylsulfamide.

dichlone [ORG CHEM] $C_{10}H_4O_2Cl_2$ A yellow, crystalline compound, used as a fungicide for foliage and as an algicide. Also known as 2,3-dichloro-1.4-naphthoquinone.

dichloramine [INORG CHEM] **1.** NH_2Cl_2 An unstable molecule considered to be formed from ammonia by action of chlorine. Also known as chlorimide. **2.** Any chloramine with two chlorine atoms joined to the nitrogen atom.

dichloride [CHEM] Any inorganic salt or organic compound that has two chloride atoms in its molecule.

dichloroacetic acid [ORG CHEM] $CHCl_2COOH$ A strong liquid acid, formed by chlorinating acetic acid; used in organic synthesis.

***sym*-dichloroacetic anhydride** *See* chloroacetic anhydride.

3,6-dichloro-*ortho*-anisic acid [ORG CHEM] $C_6H_2Cl_2OCH_3COOH$ A light tan, granular solid with a melting point of 114–116°C; used as an herbicide on roadways, crops, and rangelands.

dichlorobenzene [ORG CHEM] $C_6H_4Cl_2$ Any of a group of substitution products of benzene and two atoms of chlorine; the three forms are *meta*-dichlorobenzene, colorless liquid boiling at 172°C, soluble in alcohol and ether, insoluble in water, or *ortho*-, colorless liquid boiling at 179°C, used as a solvent and chemical intermediate, or *para*-, volatile white crystals, insoluble in water, soluble in organic solvents, used as a germicide, insecticide, and chemical intermediate.

2,6-dichlorobenzonitrile *See* dichlobenil.

1,4-dichlorobutane [ORG CHEM] $Cl(CH_2)_4Cl$ A colorless, flammable liquid with a pleasant odor, boiling point 155°C; soluble in organic solvents; used in organic synthesis, including adiponitrile. Abbreviated DCB. Also known as tetramethylene dichloride.

4,6-dichloro-*N*-(2-chlorophenyl)-1,3,5-triazin-2-amine *See* anilazine.

2,2′-dichlorodiethyl ether *See* dichloroethyl ether.

dichlorodiethylsulfide *See* mustard gas.

dichlorodifluoromethane [ORG CHEM] CCl_2F_2 A nontoxic, nonflammable, colorless gas made from carbon tetrachloride; boiling point −30°C; used as a refrigerant and as a propellant in aerosols.

1,4-dichloro-2,5-dimethoxybenzene *See* chloroneb.

***p,p′*-dichlorodiphenylmethyl carbinol** [ORG CHEM] $(ClC_6H_4)_2C(CH_3)OH$ Crystals with a melting point of 69–69.5°C; soluble in organic solvents; used as an insecticide. Abbreviated DMC. Also known as 1,1-bis(*para*-chlorophenyl)methyl carbinol.

dichlorodiphenyltrichloroethane *See* DDT.

dichloroether *See* dichloroethyl ether.

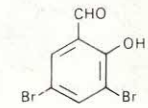
***sym*-dichloroethylene** [ORG CHEM] CHClCHCl Colorless, toxic liquid with pleasant aroma, boiling at 59°C; decomposes in light, air, and moisture; soluble in organic solvents, insoluble in water; exists in cis and trans forms; used as solvent, in medicine, and for chemical synthesis. Also known as acetylene dichloride.

dichloroethyl ether [ORG CHEM] $ClCH_2CH_2OCH_2CH_2Cl$ A colorless liquid insoluble in water, soluble in organic solvents; used as a solvent in paints, varnishes, lacquers, and as

2,6-DIBROMOQUINONE-4-CHLORIMIDE

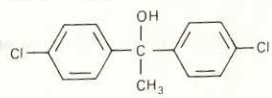
Structural formula.

3,5-DIBROMOSALICYLALDEHYDE



Structural formula.

P,P′-DICHLORODIPHENYLMETHYL CARBINOL



Structural formula.

a soil fumigant. Also known as 2,2′-dichlorodiethyl ether; dichloroether; dichloroethyl oxide.

dichloroethyl oxide *See* dichloroethyl ether.

dichlorofluoromethane [ORG CHEM] $CHCl_2F$ A colorless, heavy gas with a boiling point of 8.9°C and a freezing point of −135°C; soluble in alcohol and ether; used in fire extinguishers and as a solvent, refrigerant, and aerosol propellant. Also known as fluorocarbon 21; fluorodichloromethane.

***N′*-dichlorofluoromethylthio-*N,N*-dimethyl-*N′*-phenylsulfamide** *See* dichlofluanid.

2-dichlorohydrin *See* 1,3-dichloro-2-propanol.

α-dichlorohydrin [ORG CHEM] $CH_2ClCHOHCH_2Cl$ Unstable liquid, the commercial product consisting of a mixture of two isomers; used as a solvent and a chemical intermediate. Also known as GDCH; glycerol dichlorohydrin; α-propenyldichlorohydrin.

dichloromethane *See* methylene chloride.

di-(5-chloro-2-hydroxyphenyl)methane *See* dichlorophen.

5,7-dichloro-8-hydroxyquinoline *See* chloroxine.

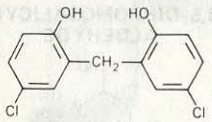
***sym*-dichloroisopropyl alcohol** *See* 1,3-dichloro-2-propanol.

2,3-dichloro-1,4-naphthoquinone *See* dichlone.

2,6-dichloro-4-nitroaniline [ORG CHEM] $C_6H_4Cl_2N_2O_2$ A yellow, crystalline compound that melts at 192–194°C; used as a fungicide for fruits, vegetables, and ornamental flowers. Abbreviated DCNA.

dichloropentane [ORG CHEM] $C_5H_{10}Cl_2$ Mixed dichloro derivatives of normal pentane and isopentane; clear, light-yellow liquid used as solvent, paint and varnish remover, insecticide, and soil fumigant.

DICHLOROPHEN



Structural formula.

dichlorophen [ORG CHEM] $C_{13}H_{10}Cl_2O_2$ A white, crystalline compound with a melting point of 177–178°C; used as an agricultural fungicide, germicide in soaps, and antihelminthic drug in humans. Also known as di-(5-chloro-2-hydroxyphenyl)methane.

2,4-dichlorophenoxyacetic acid [ORG CHEM] $Cl_2C_6H_3OCH_2COOH$ Yellow crystals, melting at 142°C; used as an herbicide and pesticide. Also known as 2,4-D.

2-(2,4-dichlorophenoxy)propionic acid *See* dichlorprop.

3-(3,4-dichlorophenyl)-1,1-dimethylurea *See* diuron.

3-(3,4-dichlorophenyl)-1-methoxy-1-methylurea *See* linuron.

2-(3,4-dichlorophenyl)-4-methyl-1,2,4-oxadiazolidine-3,5-dione *See* methazole.

2,4-dichlorophenyl *para*-nitrophenyl ether [ORG CHEM] $C_{12}H_7Cl_2NO_3$ A dark brown, crystalline compound with a melting point of 70–71°C; slightly soluble in water; used as a pre- and postemergence herbicide for vegetable crops and paddy rice.

***N*-(3,5-dichlorophenyl)succinimide** *See* dimethachlon.

1,2-dichloropropane *See* propylene dichloride.

1,3-dichloro-2-propanol [ORG CHEM] $ClCH_2CHOHCH_2Cl$ A liquid soluble in water and miscible with alcohol and ether; used as a solvent for nitrocellulose and hard resins, as a binder for watercolors, in the production of photographic lacquer, and in the determination of vitamin A. Also known as α-dichlorohydrin; *sym*-dichloroisopropyl alcohol; *sym*-glycerol dichlorohydrin.

3,4-dichloropropionanilide *See* propanil.

2,6-dichlorothiobenzamide *See* chlorthiamid.

dichlorotoluene [ORG CHEM] $C_7H_6Cl_2$ A colorless liquid, soluble in organic solvents, insoluble in water; isomers are 2,4-$CH_3C_6H_3Cl_2$, boiling at 200–202°C, and 3,4-$(CH_3C_6H_3Cl_2)$, boiling at 209°C; used as solvent and chemical intermediate.

2,2-dichlorovinyldimethyl phosphate *See* dichlorvos.

dichlorprop [ORG CHEM] $C_9H_8Cl_2O_3$ A colorless, crystalline solid with a melting point of 117–118°C; used as an herbicide and fumigant for brush control on rangeland and rights-of-way. Also known as 2-(2,4-dichlorophenoxy)-propionic acid; 2,4-DP.

dichlorvos [ORG CHEM] $C_4H_7O_4Cl_2P$ An amber liquid, used as an insecticide and miticide on public health pests, stored products, and flies on cattle. Also known as DDVP; 2,2-dichlorovinyldimethyl phosphate.

Dichobunidae [PALEON] A family of extinct artiodactyl mammals in the superfamily Dichobunoidea.

Dichobunoidea [PALEON] A superfamily of extinct artiodactyl mammals in the suborder Paleodonta composed of small- to medium-size forms with tri- to quadritubercular bunodont upper teeth.

dichogamous [BOT] Referring to a type of flower in which the pistils and stamens reach maturity at different times.

dichogamy [BIOL] Producing mature male and female reproductive structures at different times.

dichoptous [INV ZOO] Having the margins of the compound eyes separate.

dichotomic variable [QUANT MECH] A variable with a range consisting of two values; used, for example, to describe a particle with spin ½.

dichotomizing search [COMPUT SCI] A procedure for searching an item in a set, in which, at each step, the set is divided into two parts, one part being then discarded if it can be logically shown that the item could not be in that part.

dichotomy [ASTRON] The phase of the moon or an inferior planet at which exactly half of its disk is illuminated and the terminator is a straight line. [BIOL] **1.** Divided in two parts. **2.** Repeated branching or forking. [COMPUT SCI] A division into two subordinate classes; for example, all white and all nonwhite, or all zero and all nonzero.

dichotriaene [INV ZOO] A type of sponge spicule with three rays.

dichroic mirror [OPTICS] A glass surface coated with a special metal film that reflects certain colors of light while allowing others to pass through.

dichroism [OPTICS] In certain anisotropic materials, the property of having different absorption coefficients for light polarized in different directions.

dichromate [INORG CHEM] A salt of dichromic acid, usually orange or red.

dichromate treatment [MET] Processing technique involving the formation of a corrosion-resistant film on the surface of a magnesium alloy by boiling the alloy in a sodium dichromate solution.

dichromatic [BIOL] Having or exhibiting two color phases independently of age or sex.

dichromatic dye [CHEM] Dye or indicator in which different colors are seen, depending upon the thickness of the solution.

dichromatism [MED] Partial color blindness in which vision is apparently based on two primary colors rather than the normal three.

dichromic [CHEM] Pertaining to a molecule with two atoms of chromium.

dichromic acid [INORG CHEM] $H_2Cr_2O_7$ An acid known only in solution, especially in the form of dichromates.

dicing [ELECTR] Sawing or otherwise machining a semiconductor wafer into small squares, or dice, from which transistors and diodes can be fabricated.

dicing cutter [MECH ENG] A cutting mill for sheet material; sheet is first slit into horizontal strands by blades, then fed against a rotating knife for dicing.

Dicke fix [ELECTR] Technique designed to protect a receiver from fast sweep jamming.

Dicke radiometer [ELECTR] A radiometer-type receiver that detects weak signals in noise by modulating or switching the incoming signal before it is processed by conventional receiver circuits.

Dickinsoniidae [PALEON] A family that comprises extinct flat-bodied, mutisegmented coelomates; identified as ediacaran fauna.

dickinsonite [MINERAL] $H_2Na_6(Mn,Fe,Ca,Mg)_{14}(PO_4)_{12}\cdot H_2O$ A green mineral consisting of foliated hydrous acid phosphate, chiefly of manganese, iron, and sodium, and is isostructural with arrojadite; specific gravity is 3.34.

dickite [MINERAL] $Al_2Si_2O_5(OH)_4$ A mineral of the kaolin group found crystallized in clay in hydrothermal veins; it is polymorphous with kaolinite and nacrite.

Dicksoniaceae [BOT] A family of tree ferns characterized by marginal sori which are terminal on the veins and protected by a bivalved indusium.

Dick test [IMMUNOL] A skin test to determine immunity to scarlet fever; *Streptococcus pyogenes* toxin is injected intracutaneously and produces a reaction if there is no circulating antitoxin.

diclinous [BOT] Having stamens and pistils on different flowers.

dicoccous [BOT] Composed of two adherent one-seeded carpels.

dicofol [ORG CHEM] $C_{14}H_9Cl_5O$ A white solid with a melt-

ing point of 77–78°C; used as a miticide on crops. Also known as 1,1-bis(*para*-chlorophenyl)-2,2,2-trichloroethanol.

dicotyledon [BOT] Any plant of the class Magnoliopsida, all having two cotyledons.

Dicotyledoneae [BOT] The equivalent name for Magnoliopsida.

dicovalent carbon *See* divalent carbon.

Dicranales [BOT] An order of mosses having erect stems, dichotomous branching, and dense foliation.

dicrotic [MED] Pertaining to a secondary pressure wave in an artery on the descending limb of a main wave during diastole of the heart.

dicrotophos [ORG CHEM] $C_8H_{16}O_5P$ The dimethyl phosphate of 3-hydroxy-*N*,*N*-dimethyl-*cis*-crotonamide; a brown liquid with a boiling point of 400°C; miscible with water; used as an insecticide and miticide for cotton, soybeans, seeds, and ornamental flowers.

dictionary [COMPUT SCI] A table establishing the correspondence between specific words and their code representations.

dictionary code [COMPUT SCI] An alphabetical arrangement of English words and terms, associated with their code representations.

dictyoblastospore [MYCOL] A blastospore with both cross and longitudinal septa.

Dictyoceratida [INV ZOO] An order of sponges of the class Demospongiae; includes the bath sponges of commerce.

Dictyonellidina [PALEON] A suborder of extinct articulate brachiopods.

dictyonema bed [GEOL] A thin shale bed rich in remains of graptolites of the genus *Dictyonema*.

dictyosome [CYTOL] A stack of two or more cisternae; a component of the Golgi apparatus.

Dictyospongiidae [PALEON] A family of extinct sponges in the subclass Amphidiscophora having spicules resembling a one-ended amphidisc (paraclavule).

Dictyosporae [MYCOL] A spore group of the imperfect fungi characterized by multicelled spores with cross and longitudinal septae.

dictyospore [MYCOL] A multicellular spore in certain fungi characterized by longitudinal walls and cross septa.

dictyostele [BOT] A modified siphonostele in which the vascular tissue is dissected into a network of distinct strands; found in certain fern stems.

Dictyosteliaceae [MICROBIO] A family of microorganisms belonging to the Acrasiales and characterized by strongly differentiated fructifications.

dicyandiamide [ORG CHEM] $NH_2C(NH)(NHCN)$ White crystals with a melting range of 207–209°C; soluble in water and alcohol; used in fertilizers, explosives, oil well drilling muds, pharmaceuticals, and dyestuffs. Also known as cyanoguanidine.

dicyanide [CHEM] A salt that has two cyanide groups.

dicyanoargentates I *See* argentocyanides.

***O*-dicyanobenzene** *See* phthalonitrile.

dicyclohexylamine [ORG CHEM] $(C_6H_{11})_2NH$ A clear, colorless liquid with a boiling point of 256°C; used for insecticides, corrosion inhibitors, antioxidants, and detergents, and as a plasticizer and catalyst.

dicyclohexylcarbodiimide [ORG CHEM] $C_{13}H_{22}N_2$ Crystals with a melting point of 35–36°C; used in peptide synthesis. Abbreviated DCC; DCCI. Also known as carbodicyclohexylimide.

dicyclopentadienyl iron *See* ferrocene.

dicyclopentadienylnickel *See* nickelocene.

Dicyemida [INV ZOO] An order of mesozoans comprising minute, wormlike parasites of the renal organs of cephalopod mollusks.

DIDA *See* diisodecyl adipate.

didelphic [ANAT] Having a double uterus or genital tract.

Didelphidae [VERT ZOO] The opossums, a family of arboreal mammals in the order Marsupialia.

didodecyl ether *See* dilauryl ether.

Didolodontidae [PALEON] A family consisting of extinct medium-sized herbivores in the order Condylarthra.

DIDP *See* diisodecyl phthalate.

Didymiaceae [MICROBIO] A family of slime molds in the order Physarales.

didymium [CHEM] A mixture of the rare-earth elements praeseodymium and neodymium. Abbreviated Di.

didymolite [MINERAL] $Ca_2Al_6Si_9O_{29}$ A dark-gray monoclinic mineral consisting of a calcium aluminum silicate, occurring in twinned crystals.

Didymosporae [MYCOL] A spore group of the imperfect fungi characterized by two-celled spores.

didymous [BIOL] Occurring in pairs.

didynamous [BOT] Having four stamens occurring in two pairs, one pair long and the other short.

die [DES ENG] A tool or mold used to impart shapes to, or to form impressions on, materials such as metals and ceramics. [ELECTR] The tiny, sawed or otherwise machined piece of semiconductor material used in the construction of a transistor, diode, or other semiconductor device; plural is dice. [MED] To pass from physical life. [MIN ENG] *See* bell tap.

die adapter [ENG] That part of an extrusion die which holds the die block.

dieback [ECOL] A large area of exposed, unprotected swamp or marsh deposits resulting from the salinity of a coastal lagoon. [PL PATH] Of a plant, to die from the top or peripheral parts.

die blade [ENG] A deformable member attached to a die body which determines the slot opening and is adjusted to produce uniform thickness across plastic film or sheet.

die block [ENG] **1.** A tool-steel block which is bolted to the bed of a punch press and into which the desired impressions are machined. **2.** The part of an extrusion mold die holding the forming bushing and core.

die body [ENG] The stationary part of an extrusion die, used to separate and form material.

die bushing *See* button die.

die casting [ENG] A metal casting process in which molten metal is forced under pressure into a permanent mold; the two types are hot-chamber and cold-chamber.

die chaser [ENG] One of the cutting parts of a composite die or a die used to cut threads.

Dieckman condensation [CHEM ENG] Any condensation of esters of dicarboxylic acids which produce cyclic β-ketoesters.

die clearance [ENG] The distance between die members that meet during an operation.

die collar *See* bell tap.

die cushion [ENG] A device located in or under a die block or bolster to provide additional pressure or motion for stamping.

die cutting [ENG] *See* blanking. [GRAPHICS] Cutting special shapes, such as labels, from printed sheets by using sharp steel rules; often done at the same time as the printing.

die down [BOT] Normal seasonal death of aboveground parts of herbaceous perennials.

die drawing [MET] Reducing the diameter of wire or tubing by pulling it through a die.

die forging [MET] Shaping metal by plastic deformation in a die.

die forming [MET] Shaping metal by means of a die under pressure.

die gap [ENG] In plastics and metals forming, the distance between the two opposing metal faces forming the opening of a die.

Diego blood group [IMMUNOL] A genetically determined, immunologically distinct group of human erythrocyte antigens recognized by reaction with a specific antibody.

die holder [ENG] A plate or block on which the die block is mounted; it is fastened to the bolster or press bed.

dieing machine [MECH ENG] A vertical press with the slide activated by pull rods attached to the drive mechanism below the bed of the press.

die insert [ENG] A removable part or the liner of a die body or punch.

dieldrin [ORG CHEM] $C_{12}H_8Cl_6O$ A white, crystalline contact insecticide obtained by oxidation of aldrin; used in mothproofing carpets and other furnishings.

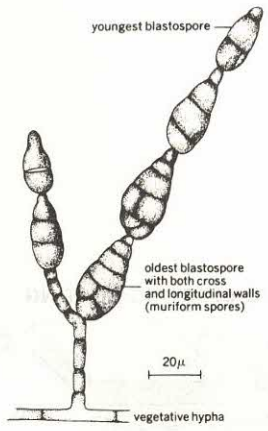
dielectric [MATER] A material which is an electrical insulator or in which an electric field can be sustained with a minimum dissipation in power.

dielectric absorption [ELEC] The persistence of electric polarization in certain dielectrics after removal of the electric field. [ELECTROMAG] *See* dielectric loss.

dielectric amplifier [ELECTR] An amplifier using a ferroelectric capacitor whose capacitance varies with applied voltage so as to give signal amplification.

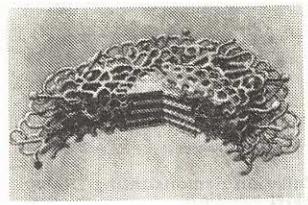
dielectric antenna [ELECTROMAG] An antenna in which a

DICTYOBLASTOSPORE



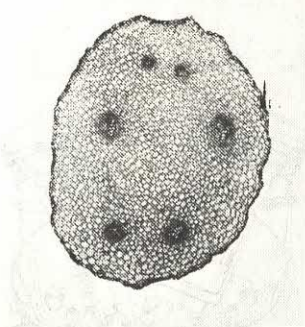
Alternaria tenuis. Sporophore with branched chain of dictyoblastospores. *(After G. Goidanich, 1938)*

DICTYOSOME



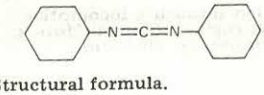
Cutaway view of a model of a portion of a dictyosome composed of six cisternae. Cisternal maturation is depicted from top to bottom.

DICTYOSTELE



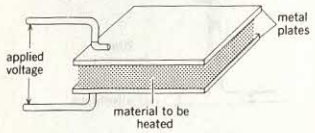
Dictyostele of *Polypodium*.

DICYCLOHEXYL-CARBODIIMIDE



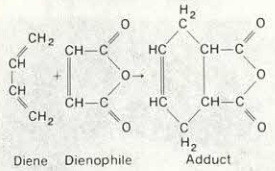
Structural formula.

DIELECTRIC HEATING



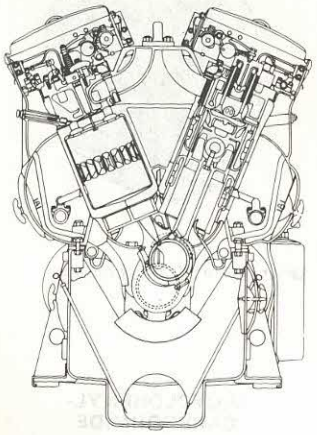
Basic assembly for dielectric heating.

DIELS-ALDER REACTION



Equation demonstrating Diels-Alder reaction.

DIESEL ENGINE



Section through a locomotive diesel engine. *(General Motors, Electromotive Division)*

dielectric is the major component used to produce a desired radiation pattern.

dielectric breakdown [ELECTR] Breakdown which occurs in an alkali halide crystal at field strengths on the order of 10^6 volts per centimeter.

dielectric circuit [ELEC] Any electric circuit which has capacitors.

dielectric constant [ELEC] **1.** For an isotropic medium, the ratio of the capacitance of a capacitor filled with a given dielectric to that of the same capacitor having only a vacuum as dielectric. **2.** More generally, $1 + \gamma\chi$, where γ is 4π in Gaussian and cgs electrostatic units or 1 in rationalized mks units, and χ is the electric susceptibility tensor. Also known as relative dielectric constant; relative permittivity; specific inductive capacity (SIC).

dielectric crystal [ELEC] A crystal which is electrically nonconducting.

dielectric current [ELEC] The current flowing at any instant through a surface of a dielectric that is located in a changing electric field.

dielectric displacement *See* electric displacement.

dielectric ellipsoid [ELEC] For an anisotropic medium in which the dielectric constant is a tensor quantity $\mathbf{K}$, the locus of points $\mathbf{r}$ satisfying $\mathbf{r}\cdot\mathbf{K}\cdot\mathbf{r} = 1$.

dielectric fatigue [ELECTR] The property of some dielectrics in which resistance to breakdown decreases after a voltage has been applied for a considerable time.

dielectric film [ELEC] A film possessing dielectric properties; used as the central layer of a capacitor.

dielectric flux density *See* electric displacement.

dielectric gas [ELEC] A gas having a high dielectric constant, such as sulfur hexafluoride.

dielectric heating [ELEC] Heating of a nominally electrical insulating material due to its own electrical (dielectric) losses, when the material is placed in a varying electrostatic field.

dielectric hysteresis *See* ferroelectric hysteresis.

dielectric lens [ELECTROMAG] A lens made of dielectric material so that it refracts radio waves in the same manner that an optical lens refracts light waves; used with microwave antennas.

dielectric-lens antenna [ELECTROMAG] An aperture antenna in which the beam width is determined by the dimensions of a dielectric lens through which the beam passes.

dielectric loss [ELECTROMAG] The electric energy that is converted into heat in a dielectric subjected to a varying electric field. Also known as dielectric absorption.

dielectric loss angle [ELEC] Difference between 90° and the dielectric phase angle.

dielectric loss factor [ELEC] Product of the dielectric constant of a material and the tangent of its dielectric loss angle.

dielectric matching plate [ELECTROMAG] In waveguide technique, a dielectric plate used as an impedance transformer for matching purposes.

dielectric phase angle [ELEC] Angular difference in phase between the sinusoidal alternating potential difference applied to a dielectric and the component of the resulting alternating current having the same period as the potential difference.

dielectric polarization *See* polarization.

dielectric power factor [ELEC] Cosine of the dielectric phase angle (or sine of the dielectric loss angle).

dielectric-rod antenna [ELECTROMAG] A surface-wave antenna in which an end-fire radiation pattern is produced by propagation of a surface wave on a tapered dielectric rod.

dielectric shielding [ELEC] The reduction of an electric field in some region by interposing a dielectric substance, such as polystyrene, glass, or mica.

dielectric soak *See* absorption.

dielectric strength [ELEC] The maximum electrical potential gradient that a material can withstand without rupture; usually specified in volts per millimeter of thickness. Also known as electric strength.

dielectric susceptibility *See* electric susceptibility.

dielectric test [ELEC] A test involving application of a voltage higher than the rated value for a specified time, to determine the margin of safety against later failure of insulating materials.

dielectric vapor detector [ANALY CHEM] Apparatus to measure the change in the dielectric constant of gases or gas mixtures; used as a detector in gas chromatographs to sense changes in carrier gas.

dielectric waveguide [ELEC] A waveguide consisting of a dielectric cylinder surrounded by air.

dielectric wedge [ELECTROMAG] A wedge-shaped piece of dielectric used in a waveguide to match its impedance to that of another waveguide.

dielectric wire [ELECTROMAG] A dielectric waveguide used to transmit ultra-high-frequency radio waves short distances between parts of a circuit.

dielectronic recombination [ATOM PHYS] The combination of an electron with a positive-ion in a gas, so that the energy released is taken up by two electrons of the resulting atom.

dielectrophoresis [PHYS CHEM] The ability of an uncharged material to move when subjected to an electric field.

die lines [ENG] Lines or markings on the surface of a drawn, formed, or extruded product due to imperfections in the surface of the die.

Diels-Alder reaction [ORG CHEM] The 1,4 addition of a conjugated diolefin to a compound, known as a dienophile, containing a double or triple bond; the dienophile may be activated by conjugation with a second double bond or with an electron acceptor.

die lubricant [MATER] Any material applied to a die to facilitate movement of the work in the die in certain die-forming operations.

die match [MET] The proper alignment of forging dies in relation to each other in forging equipment.

diencephalon [EMBRYO] The posterior division of the embryonic forebrain in vertebrates.

diene [ORG CHEM] One of a class of organic compounds containing two ethylenic linkages (carbon-to-carbon double bonds) in the molecules. Also known as diolefin.

diene resin [ORG CHEM] Material containing the diene group of double bonds that may polymerize.

diene value [ORG CHEM] A number that represents the amount of conjugated bonds in a fatty acid or fat.

die nipple *See* bell tap.

dienophile [ORG CHEM] The alkene component of a reaction between an alkene and a diene.

die opening [MET] The distance between electrodes in flash or upset welding; it is measured with parts in contact but before the beginning or immediately after completion of the weld cycle.

die radius [MET] The radius on the exposed edge of a deep-drawing die.

die scalping [MET] Drawing wire, tubing, bars, or rods through a sharp-edged die to remove surface layers containing defects.

diesel cycle [THERMO] An internal combustion engine cycle in which the heat of compression ignites the fuel.

diesel electric locomotive [MECH ENG] A locomotive with a diesel engine driving an electric generator which supplies electric power to traction motors for propelling the vehicle. Also known as diesel locomotive.

diesel electric power generation [MECH ENG] Electric power generation in which the generator is driven by a diesel engine.

diesel engine [MECH ENG] An internal combustion engine operating on a thermodynamic cycle in which the ratio of compression of the air charge is sufficiently high to ignite the fuel subsequently injected into the combustion chamber. Also known as compression-ignition engine.

diesel fuel [MATER] Fuel used for internal combustion in diesel engines; usually that fraction of crude oil that distills after kerosine.

diesel fuel additives [MATER] Compounds added to diesel fuels to improve performance, such as cetane number improvers, metal deactivators, corrosion inhibitors, antioxidants, rust inhibitors, and dispersants.

diesel fuel grades [MATER] Fuels suitable for various classes of engines and service, which must meet specifications for flash point temperature, distillation temperature, cetane number, and concentrations of impurities.

diesel fuel water and sediment [MATER] Undesirable constituents of diesel fuel which should not exceed certain limits to ensure clean fuel.

diesel index [CHEM ENG] An empirical expression for the correlation between the aniline number of a diesel fuel and its ignitability. [MECH ENG] Diesel fuel rating based on ignition qualities; high-quality fuel has a high index number.

diesel knock [MECH ENG] A combustion knock caused when the delayed period of ignition is long so that a large quantity of atomized fuel accumulates in the combustion cham-

ber; when combustion occurs, the sudden high pressure resulting from the accumulated fuel causes diesel knock.

diesel locomotive *See* diesel electric locomotive.

diesel oil [MATER] Heavy oil residue used as fuel for certain types of diesel engines.

diesel rig [MECH ENG] Any diesel engine apparatus or machinery.

diesel squeeze [PETRO ENG] A technique of forcing dry cement mixed with diesel oil through casing openings to repair water-bearing areas without affecting the oil-bearing areas.

die set [ENG] A tool or tool holder consisting of a die base for the attachment of a die and a punch plate for the attachment of a punch.

die shoe [MECH ENG] A block placed beneath the lower part of a die upon which the die holder is mounted; spreads the impact over the die bed, thereby reducing wear.

diesinking [ENG] Making a depressed pattern in a die by forming or machining.

die slide [MECH ENG] A device in which the lower die of a power press is mounted; it slides in and out of the press for easy access and safety in feeding the parts.

die stamping [GRAPHICS] A procedure in which steel, brass, or bronze dies are used to impress an image on a surface by using a relief counterpart or the reverse thereof.

die steel [MET] Plain carbon steel or alloy steel used in making tools for cutting, machining, shearing, stamping, punching, and chipping.

diester [ORG CHEM] A compound containing two ester groupings.

diesterase [BIOCHEM] An enzyme such as a nuclease which splits the linkages binding individual nucleotides of a nucleic acid.

diestrus [PHYSIO] The long, quiescent period following ovulation in the estrous cycle in mammals; the stage in which the uterus prepares for the reception of a fertilized ovum.

die swell ratio [ENG] The ratio of the outer parison diameter (or parison thickness) to the outer diameter of the die (or die gap).

diet [BIOL] The food or drink regularly consumed. [MED] Food prescribed, regulated, or restricted as to kind and amount, for therapeutic or other purpose.

Dieterici equation of state [THERMO] An empirical equation of state for gases, $pe^{a/vRT}(v-b) = RT$, where p is the pressure, T is the absolute temperature, v is the molar volume, R is the gas constant, and a and b are constants characteristic of the substance under consideration.

Dietert tester [MET] An apparatus for reading Brinell hardness directly from the impression made in the part being tested by means of a depth pin pressed into the depression.

dietetics [MED] The science concerned with applying the principle of nutrition to the feeding of people under various economic conditions or for therapeutic purposes.

diethanolamine [ORG CHEM] $(HOCH_2CH_2)_2NH$ Colorless, water-soluble, deliquescent crystals, or liquid boiling at 217°C; soluble in alcohol and acetone, insoluble in ether and benzene; used in detergents, as an absorbent of acid gases, and as a chemical intermediate. Also known as DEA.

diether [ORG CHEM] A molecule that has two oxygen atoms with ether bonds.

1,1-diethoxyethane *See* acetal.

diethyl [ORG CHEM] Pertaining to a molecule with two ethyl groups.

diethyl adipate [ORG CHEM] $C_2H_5OCO(CH_2)_4OCOC_2H_5$ Water-insoluble, colorless liquid, boiling at 245°C; used as a plasticizer.

diethylamine [ORG CHEM] $(C_2H_5)_2NH$ Water-soluble, colorless liquid with ammonia aroma, boiling at 56°C; used in rubber chemicals and pharmaceuticals and as a solvent and flotation agent.

diethylaminoethyl cellulose [ORG CHEM] A positively charged resin used in ion-exchange chromatography; an anion exchanger. Also known as DEAE-cellulose.

2-diethylamino-6-methylpyrimidin-4-yl diethyl phosphorothioate *See* pirimiphosethyl.

2-diethylamino-6-methylpyrimidin-4-yl dimethyl phosphorothionate [ORG CHEM] $C_{11}H_{20}O_3N_3PS$ A straw-colored liquid which decomposes below 100°C; solubility in water is 5 parts per million at 30°C; used as a pesticide. Also known as pirimiphosmethyl.

5,5-diethylbarbituric acid *See* barbital.

diethylbarbituric acid *See* barbital.

diethylbenzene [ORG CHEM] $C_6H_4(C_2H_5)_2$ Colorless liquid, boiling at 180–185°C; soluble in organic solvents, insoluble in water; usually a mixture of three isomers, which are 1,2- (or *ortho*-diethylbenzene), boiling at 183°C, and 1,3- (or *meta*-), boiling at 181°C, and 1,4- (or *para*-), boiling at 184°C; used as a solvent.

diethylcarbamazine [ORG CHEM] $C_{16}H_{29}O_8N_3$ White, water-soluble, hygroscopic crystals, melting at 136°C; used as an anthelminthic.

diethyl carbinol [ORG CHEM] $(CH_3CH_2)_2CHOH$ Colorless, alcohol-soluble liquid, boiling at 116°C; slightly soluble in water; used in pharmaceuticals and as a solvent and flotation agent. Also known as sec-*n*-amyl alcohol.

diethyl carbonate [ORG CHEM] $(C_2H_5)_2CO_3$ Stable, colorless liquid with mild aroma, boiling at 126°C; soluble with most organic solvents; used as a solvent and for chemical synthesis. Also known as ethyl carbonate.

***O,O*-diethyl *S*-[(6-chloro-2-oxobenzoxazolin-3-yl)methyl]phosphorodithioate** *See* phosalone.

***O,O*-diethyl *O*-2,4-dichlorophenyl phosphorothioate** *See* dichlofenthion.

***O,O*-diethyl *S*-(2,5-dichlorophenylthiomethyl)phosphorodithioate** *See* phencapton.

N^3,N^3-diethyl-2,4-dinitro-6-trifluoromethyl-*meta*-phenylenediamine *See* dinitramine.

diethylenediamine *See* piperazine.

diethylene dioxide *See* 1,4-dioxane.

diethylene glycol [ORG CHEM] $CH_2OHCH_2OCH_2CH_2OH$ Clear, hygroscopic, water-soluble liquid, boiling at 245°C; soluble in many organic solvents; used as a softener, conditioner, lubricant, and solvent, and in antifreezes and cosmetics.

diethylene glycol distearate *See* diglycol stearate.

diethylene glycol monoethyl ether [ORG CHEM] $C_6H_{14}O_3$ A hygroscopic liquid used as a solvent for cellulose esters and in lacquers, varnishes, and enamels. Also known as 2-(2-ethoxyethoxy)-ethanol.

diethylene glycol monolaurate *See* diglycol laurate.

diethylenetriamine [ORG CHEM] $(NH_2C_2H_4)_2NH$ A yellow, hygroscopic liquid with a boiling point of 206.7°C; soluble in water and hydrocarbons; used as a solvent, saponification agent, and fuel component.

diethyl ether [ORG CHEM] $C_4H_{10}O$ A colorless liquid, slightly soluble in water; used as a reagent and solvent. Also known as ethyl ether; ethyl oxide; ethylic ether.

***O,O*-diethyl-*S*[2-(ethylthio)-ethyl]phosphorodithioate** *See* disulfoton.

***O,O*-diethyl *S*-(ethylthio)-methyl phosphorodithioate** *See* phorate.

di-(2-ethylhexyl)phthalate *See* dioctyl phthalate.

***O,O*-diethyl-*S*-(*N*-isopropylcarbamoylmethyl)phosphorodithioate** *See* prothoate.

***O,O*-diethyl *O*-(2-isopropyl-4-methyl-6-pyrimidinyl)phosphorothioate** *See* diazinon.

diethyl ketone *See* pentanone.

diethyl maleate [ORG CHEM] $(HCCOOC_2H_5)_2$ Clear, colorless liquid, boiling at 225°C; slightly soluble in water, soluble in most organic solvents; used as a chemical intermediate.

diethylmalonylurea *See* barbital.

diethylmethylmethane *See* 3-methylpentane.

***O,O*-diethyl-*O*-*para*-(methylsulfinylphenyl)phosphorothioate** *See* fensulfothion.

***O,O*-diethyl-*O*-*para*-nitrophenyl phosphate** *See* paraoxon.

***O,O*-diethyl-*O*-*para*-nitrophenyl phosphorothioate** *See* parathion.

diethyl oxydiformate *See* diethyl pyrocarbonate.

diethyl 4,4′-*O*-phenylene-bis(3-thioallophanate) *See* thiophanate.

***O,O*-diethyl-*O*-(5-phenyl-3-isoxazolyl)phosphorothioate** *See* isoxathion.

diethyl phosphite [ORG CHEM] $(C_2H_5O)_2HPO$ A colorless liquid with a boiling point of 138°C; soluble in water and common organic solvents; used as a paint solvent, antioxidant, and reducing agent.

diethyl phthalate [ORG CHEM] $C_6H_4(CO_2C_2H_5)_2$ Clear, colorless, odorless liquid with bitter taste, boiling at 298°C; soluble in alcohols, ketones, esters, and aromatic hydrocarbons, partly soluble in aliphatic solvents; used as a cellulosic

solvent, wetting agent, alcohol denaturant, mosquito repellent, and in perfumes.

2,2-diethyl-1,3-propanediol [PHARM] $HOCH_2C(C_2H_5)_2CH_2OH$ Crystals with a melting point of 61–61.6°C; used as a skeletal muscle relaxant. Also known as 3,3-bis(hydroxymethyl)pentane.

***O,O*-diethyl-*O*-(2-pyrazinyl)phosphorothioate** *See* thionazin.

diethyl pyrocarbonate [ORG CHEM] $C_6H_{10}O_5$ A viscous liquid, soluble in alcohols, esters, and ketones; used as a gentle esterifying agent, as a preservative for fruit juices, soft drinks, and wines, and as an inhibitor for ribonuclease. Abbreviated DEPC. Also known as diethyl oxydiformate; pyrocarbonic acid diethyl ester.

diethylstilbesterol [BIOCHEM] $C_{18}H_{20}O_2$ A white, crystalline, nonsteroid estrogen that is used therapeutically as a substitute for natural estrogenic hormones. Also known as stilbestrol.

diethyl succinate [ORG CHEM] $(CH_2COOC_2H_5)_2$ Water-white liquid with pleasant aroma, boiling at 216°C; soluble in alcohol and ether, slightly soluble in water; used as a chemical intermediate and plasticizer.

diethyl sulfate [ORG CHEM] $(C_2H_5)_2SO_4$ A colorless oil with a peppermint odor, and boiling at 208°C; used as an intermediate in organic synthesis. Also known as ethyl sulfate.

diethyl sulfide *See* ethyl sulfide.

diethylsulfide 2,2′-dicarboxylic acid *See* 3,3′-thiodipropionic acid.

2-(*O,O*-diethyl thionophosphoryl)-5-methyl-6-carbethoxypyrazolo-(1,5a)pyrimidine [ORG CHEM] $C_{13}H_{20}N_3O_4P$ A colorless, crystalline solid with a melting point of 50–51°C; insoluble in water; used as a fungicide for powdery mildew on fruits. Also known as pyrazophos.

diethyltoluamide [ORG CHEM] $C_{12}H_{17}ON$ A liquid whose color ranges from off-white to light yellow; used as an insect repellent for people and clothing. Also known as DEET; DET; *N,N*-diethyl-*meta*-toluamide.

***N,N*-diethyl-*meta*-toluamide** *See* diethyltoluamide.

***O,O*-diethyl *O*-(3,5,6-trichloro-2-pyridyl)phosphorothioate** *See* chlorpyrifos.

dietician [MED] A person trained in dietetics, or the scientific management of meals for individuals or groups.

Dietl's crisis [MED] Recurrent attacks of radiating pain in the costovertebral angle, accompanied by nausea, vomiting, tachycardia, and hypotension, caused by kinking or twisting of the ureter with intermittent obstructive dilation.

dietrichite [MINERAL] $(Zn,Fe,Mn)Al_2(SO_4)_4 \cdot 22H_2O$ Mineral consisting of a hydrous sulfate of aluminum and one or more of the metals zinc, iron, and manganese.

dietzeite [MINERAL] $Ca_2(IO_3)_2(CrO_4)$ A dark-golden-yellow iodate mineral commonly in fibrous or columnar form as a component of caliche.

die welding [MET] Forge welding in which the weld is completed under pressure between dies.

difference [MATH] The result of subtracting one number from another.

difference amplifier *See* differential amplifier.

difference channel [ENG ACOUS] An audio channel that handles the difference between the signals in the left and right channels of a stereophonic sound system.

difference detector [ELECTR] A detector circuit in which the output is a function of the difference between the amplitudes of the two input waveforms.

difference equation [MATH] An equation expressing a functional relationship of one or more independent variables, one or more functions dependent on these variables, and successive differences of these functions.

difference in depth modulation [COMMUN] In directive systems employing overlapping lobes with modulated signals, a ratio obtained by subtracting from the percentage of modulation of the larger signal the percentage of modulation of the smaller signal and dividing by 100.

difference limen *See* just-noticeable difference.

difference number *See* neutron excess.

difference of latitude [GEOD] The shorter arc of any meridian between the parallels of two places, expressed in angular measure.

difference of longitude [GEOD] The smaller angle at the pole or the shorter arc of a parallel between the meridians of two places, expressed in angular measure.

difference of meridional parts *See* meridional difference.

difference spectrophotometer *See* absorption spectrophotometer.

difference threshold *See* just-noticeable difference.

difference tone [ACOUS] A combination tone whose frequency equals the difference of the frequencies of the pure tones producing it.

differentiable atlas [MATH] A family of embeddings $h_i:E^n \rightarrow M$ of euclidean space into a topological space M with the property that $h_i^{-1}h_j:E^n \rightarrow E^n$ is a differentiable map for each pair of indices, i, j.

differentiable function [MATH] A function which has a derivative at each point of its domain.

differentiable manifold [MATH] A topological space with a maximal differentiable atlas; roughly speaking, a smooth surface.

differential [CONT SYS] The difference between levels for turn-on and turn-off operation in a control system. [MATH] **1.** The differential of a real-valued function $f(x)$, where x is a vector, evaluated at a given vector c, is the linear, real-valued function whose graph is the tangent hyperplane to the graph of $f(x)$ at $x=c$; if x is a real number, the usual notation is $df = f'(c)dx$. **2.** *See* total differential. [MECH ENG] Any arrangement of gears forming an epicyclic train in which the angular speed of one shaft is proportional to the sum or difference of the angular speeds of two other gears which lie on the same axis; allows one shaft to revolve faster than the other, the speed of the main driving member being equal to the algebraic mean of the speeds of the two shafts. Also known as differential gear.

differential absorption lidar [ENG] A technique for the remote sensing of atmospheric gases, in which lasers transmit pulses of radiation into the atmosphere at two wavelengths, one of which is absorbed by the gas to be measured and one is not, and the difference between the return signals from atmospheric backscattering on the absorbed and nonabsorbed wavelengths is used as a direct measure of the concentration of the absorbing species. Abbreviated DIAL.

differential air thermometer [ENG] A device for detecting radiant heat, consisting of a U-tube manometer with a closed bulb at each end, one clear and the other blackened.

differential amplifier [ELECTR] An amplifier whose output is proportional to the difference between the voltages applied to its two inputs. Also called difference amplifier.

differential analysis [METEOROL] Synoptic analysis of change charts or of vertical differential charts (such as thickness charts) obtained by the graphical or numerical subtraction of the patterns of some meteorological variable at two times or two levels.

differential analyzer [COMPUT SCI] A mechanical or electromechanical device designed primarily to solve differential equations.

differential ballistic wind [ORD] In bombing, a hypothetical wind equal to the difference in velocity between the ballistic wind and the actual wind at release altitude.

differential blood count *See* differential leukocyte count.

differential brake [MECH ENG] A brake in which operation depends on a difference between two motions.

differential calculus [MATH] The study of the manner in which the value of a function changes as one changes the value of the independent variable; includes maximum-minimum problems and expansion of functions into Taylor series.

differential calorimetry [THERMO] Technique for measurement of and comparison (differential) of process heats (reaction, absorption, hydrolysis, and so on) for a specimen and a reference material.

differential capacitance [ELECTR] The derivative with respect to voltage of a charge characteristic, such as an alternating charge characteristic or a mean charge characteristic, at a given point on the characteristic.

differential capacitor [ELEC] A two-section variable capacitor having one rotor and two stators so arranged that as capacitance is reduced in one section it is increased in the other.

differential centrifugation [CYTOL] The separation of mixtures such as cellular particles in a medium at various centrifugal forces to separate particles of different density, size, and shape from each other.

differential chart [METEOROL] A chart showing the amount and direction of change of a meteorological quantity in time or space.

differential chemical reactor [CHEM ENG] A flow reactor

operated at constant temperature and very low concentrations (resulting from very short residence times), with product and reactant concentrations essentially constant at the levels in the feed.

differential coefficient *See* derivative.

differential compaction [GEOL] Compression in sediments, such as sand or limestone, as the weight of overburden causes reduction in pore space and forcing out of water.

differential comparator [ELECTR] A comparator having at least two high-gain differential-amplifier stages, followed by level-shifting and buffering stages, as required for converting a differential input to single-ended output for digital logic applications.

differential compound motor [ELEC] A direct-current motor whose speed may be made nearly constant or may be adjusted to increase with increasing load.

differential correction [ASTRON] A method for finding from the observed residuals minus the computed residuals ($O - C$) small corrections which, when applied to the orbital elements or constants, will reduce the deviations from the observed motion to a minimum.

differential cross section [PHYS] The cross section for a collision process resulting in the emission of particles or photons at a specified angle relative to the direction of the incident particles, per unit angle or per unit solid angle.

differential delay [COMMUN] The difference between the maximum and minimum frequency delays occurring across a band.

differential diagnosis [MED] Distinguishing between diseases of similar character by comparing their signs and symptoms. [SYST] In taxonomic study, a statement of the characters that distinguish a given taxon from other, specifically mentioned equivalent taxa.

differential discriminator [ELECTR] A discriminator that passes only pulses whose amplitudes are between two predetermined values, neither of which is zero.

differential duplex system [ELECTR] System in which the sent currents divide through two mutually inductive sections of a receiving apparatus, connected respectively to the line and to a balancing artificial line in opposite directions, so that there is substantially no net effect on the receiving apparatus; the received currents pass mainly through one section, or through the two sections in the same direction, and operate the apparatus.

differential ebuliometer [ANALY CHEM] Apparatus for precise and simultaneous measurement of both the boiling temperature of a liquid and the condensation temperature of the vapors of the boiling liquid.

differential effects [MECH] The effects upon the elements of the trajectory due to variations from standard conditions.

differential entrapment [PETRO ENG] Controlling oil and gas migration and accumulation by means of selective trapping or gas flushing in interconnecting reservoirs.

differential equation [MATH] An equation expressing a relationship between functions and their derivatives.

differential erosion [GEOL] Rapid erosion of one area of the earth's surface relative to another.

differential extraction [CHEM ENG] Theoretical limiting case of crosscurrent extraction in a single vessel where feed is continuously extracted with infinitesimal amounts of fresh solvent; true differential extraction cannot be achieved.

differential fault *See* scissor fault.

differential flotation [MIN ENG] Separation of a complex ore into two or more mineral components and gangue by flotation.

differential form [MATH] A homogeneous polynomial in differentials.

differential frequency circuit [ELEC] A circuit that provides a continuous output frequency equal to the absolute difference between two continuous input frequencies.

differential frequency meter [ENG] A circuit that converts the absolute frequency difference between two input signals to a linearly proportional direct-current output voltage that can be used to drive a meter, recorder, oscilloscope, or other device.

differential gain control [ELECTR] Device for altering the gain of a radio receiver according to expected change of signal level, to reduce the amplitude differential between the signals at the output of the receiver. Also known as gain sensitivity control.

differential galvanometer [ELEC] A galvanometer having a magnetic needle which is free to rotate in the magnetic field produced by currents flowing in opposite directions through two separate identical coils, so that there is no deflection when the currents are equal.

differential game [CONT SYS] A two-sided optimal control problem. [MATH] A game in which the describing equations are differential equations.

differential gap controller [CONT SYS] A two-position (on-off) controller that actuates when the manipulated variable reaches the high or low value of its range (differential gap).

differential gear *See* differential.

differential geometry [MATH] The study of curves and surfaces using the methods of differential calculus.

differential heating [MET] A thermal gradient caused as heating takes place; can result in a distribution of stress in a material.

differential heat of dilution *See* heat of dilution.

differential heat of solution [THERMO] The partial derivative of the total heat of solution with respect to the molal concentration of one component of the solution, when the concentration of the other component or components, the pressure, and the temperature are held constant.

differential indexing [MECH ENG] A method of subdividing a circle based on the difference between movements of the index plate and index crank of a dividing engine.

differential input [ELECTR] Amplifier input circuit that rejects voltages that are the same at both input terminals and amplifies the voltage difference between the two input terminals.

differential-input capacitance [ELECTR] The capacitance between the inverting and noninverting input terminals of a differential amplifier.

differential-input impedance [ELECTR] The impedance between the inverting and noninverting input terminals of a differential amplifier.

differential-input measurement [ELECTR] A measurement in which the two inputs to a differential amplifier are connected to two points in a circuit under test and the amplifier displays the difference voltage between the points.

differential-input resistance [ELECTR] The resistance between the inverting and noninverting input terminals of a differential amplifier.

differential-input voltage [ELECTR] The maximum voltage that can be applied across the input terminals of a differential amplifier without causing damage to the amplifier.

differential instrument [ENG] Galvanometer or other measuring instrument having two circuits or coils, usually identical, through which currents flow in opposite directions; the difference or differential effect of these currents actuates the indicating pointer.

differential interferometer *See* lateral shear interferometer.

differential ionization chamber [NUCLEO] A two-section ionization chamber in which electrode potentials are such that output current is equal to the difference between the separate ionization currents of the two sections.

differential keying [ELECTR] Method for obtaining chirp-free break-in keying of continuous wave transmitters by using circuitry that arranges to have the oscillator turn on fast before the keyed amplifier stage can pass any signal, and turn off fast after the keyed amplifier stage has cut off.

differential leak detector [ENG] A leak detector consisting of two tubes and a trap which directs the tracer gas from the system into the desired tube.

differential leukocyte count [PATH] The percentage of each variety of leukocytes in the blood, usually based on counting 100 leukocytes. Also known as differential blood count.

differential leveling [ENG] A surveying process in which a horizontal line of sight of known elevation is intercepted by a graduated standard, or rod, held vertically on the point being checked.

differentially coherent phase-shift keying *See* differential phase-shift keying.

differential manometer [ENG] An instrument in which the difference in pressure between two sources is determined from the vertical distance between the surfaces of a liquid in two legs of an erect or inverted U-shaped tube when each of the legs is connected to one of the sources.

differential microphone *See* double-button microphone.

differential-mode gain [ELECTR] The ratio of the output voltage of a differential amplifier to the differential-mode input voltage.

differential-mode input [ELECTR] The voltage difference between the two inputs of a differential amplifier.

differential-mode signal [ELECTR] A signal that is applied between the two ungrounded terminals of a balanced three-terminal system.

differential modulation [COMMUN] Modulation in which the choice of the significant condition for any signal element is dependent on the choice for the previous signal element.

differential motion [MECH ENG] A mechanism in which the follower has two driving elements; the net motion of the follower is the difference between the motions that would result from either driver acting alone.

differential operational amplifier [ELECTR] An amplifier that has two input terminals, used with additional circuit elements to perform mathematical functions on the difference in voltage between the two input signals.

differential operator [MATH] An operator on a space of functions which maps a function f into a linear combination of higher-order derivatives of f.

differential output voltage [ELECTR] The difference between the values of two ac voltages, 180° out of phase, present at the output terminals of an amplifier when a differential input voltage is applied to the input terminals of the amplifier.

differential permeability [ELECTROMAG] The slope of the magnetization curve for a magnetic material.

differential phase [ELECTR] Difference in output phase of a small high-frequency sine-wave signal at two stated levels of a low-frequency signal on which it is superimposed in a video transmission system.

differential phase-shift keying [COMMUN] Form of phase-shift keying in which the reference phase for a given keying interval is the phase of the signal during the preceding keying interval. Also known as differentially coherent phase-shift keying.

differential piece-rate system [IND ENG] A wage plan based on a standard task time whereby the worker receives increased or decreased piece rates as his production varies from that expected for the standard time. Also known as accelerating incentive.

differential polarography [ANALY CHEM] Technique of polarographic analysis which measures the difference in current flowing between two identical dropping-mercury electrodes at the same potential but in different solutions.

differential pressure [PHYS] The difference in pressure between two points of a system, such as between the well bottom and wellhead or between the two sides of an orifice.

differential pressure fuel valve [MECH ENG] A needle or spindle normally closed, with seats at the back side of the valve orifice.

differential pressure gage [ENG] Apparatus to measure pressure differences between two points in a system; it can be a pressured liquid column balanced by a pressured liquid reservoir, a formed metallic pressure element with opposing force, or an electrical-electronic gage (such as strain, thermal-conductivity, or ionization).

differential pressure pickup [ELEC] An instrument that measures the difference in pressure between two pressure sources and translates this difference into a change in inductance, resistance, voltage, or some other electrical quality.

differential process [CHEM ENG] A process in which a system is caused to move through a bubble point and as a result to form two phases, the minor phase being removed from further contact with the major phase; thus the system continuously changes in quantity and composition.

differential producing primary device [ENG] An instrument that modifies the flow pattern of a fluid passing through a pipe, duct, or open channel, and thereby produces a difference in pressure between two points, which can then be measured to determine the rate of flow.

differential psychology [PSYCH] The comparative study of the psychological differences between groups of people, for example, men and women.

differential pulley [MECH ENG] A tackle in which an endless cable passes through a movable lower pulley, which carries the load, and two fixed coaxial upper pulleys having different diameters; yields a high mechanical advantage.

differential pulse-code modulation [COMMUN] A type of pulse-code modulation proposed for television transmission, in which only the differences between the continuous picture elements on the scanning lines are transmitted, enabling the bandwidth of the signal to be reduced. Abbreviated DPCM.

differential reaction rate [PHYS CHEM] The order of a chemical reaction expressed as a differential equation with respect to time; for example, $dx/dt = k(a - x)$ for first order, $dx/dt = k(a - x)(b - x)$ for second order, and so on, where k is the specific rate constant, a is the concentration of reactant A, b is the concentration of reactant B, and dx/dt is the rate of change in concentration for time t.

differential relay [ELEC] A two-winding relay that operates when the difference between the currents in the two windings reaches a predetermined value.

differential scatter [ENG] A technique for the remote sensing of atmospheric particles in which the backscattering from laser beams at a number of infrared wavelengths is measured and correlated with scattering signatures that are uniquely related to particle composition. Abbreviated DISC.

differential screw [MECH ENG] A type of compound screw which produces a motion equal to the difference in motion between the two component screws.

differential selection [STAT] A biased selection of a conditioned sample.

differential selsyn [ELEC] Selsyn in which both rotor and stator have similar windings that are spread 120° apart; position of the rotor corresponds to the algebraic sum of the fields produced by the stator and rotor.

differential separation [CHEM ENG] Release of gas (vapor) from liquids by a reduction in pressure that allows the vapor to come out of the solution, so that the vapor can be removed from the system; differs from flash separation, in which the vapor and liquid are kept in contact following pressure reduction.

differential spectrophotometry [SPECT] Spectrophotometric analysis of a sample when a solution of the major component of the sample is placed in the reference cell; the recorded spectrum represents the difference between the sample and the reference cell.

differential stage [ELECTR] A symmetrical amplifier stage with two inputs balanced against each other so that with no input signal or equal input signals, no output signal exists, while a signal to either input, or an input signal unbalance, produces an output signal proportional to the difference.

differential steam calorimeter [ENG] An instrument for measuring small specific-heat capacities, such as those of gases, in which the amount of steam condensing on a body containing the substance whose heat capacity is to be measured is compared with the amount condensing on a similar body which is evacuated or contains a substance of known heat capacity.

differential synchro *See* synchro differential receiver; synchro differential transmitter.

differential temperature survey [PETRO ENG] Well-temperature logging method that detects very small temperature anomalies; two thermometers, 6 feet (1.8 meters) apart, record the temperature gradient down the well bore, with small difference changes showing up anomalies.

differential thermal analysis [THERMO] A method of determining the temperature at which thermal reactions occur in a material undergoing continuous heating to elevated temperatures; also involves a determination of the nature and intensity of such reactions.

differential thermogravimetric analysis [THERMO] Thermal analysis in which the rate of material weight change upon heating versus temperature is plotted; used to simplify reading of weight-versus-temperature thermogram peaks that occur close together.

differential thermometer *See* bimetallic thermometer.

differential thermometric titration [ANALY CHEM] Thermometric titration in which titrant is added simultaneously to the reaction mixture and to a blank in identically equipped cells.

differential topology [MATH] The branch of mathematics dealing with differentiable manifolds.

differential transducer [ELEC] A transducer that simultaneously senses two separate sources and provides an output proportional to the difference between them.

differential transformer [ELEC] A transformer used to join two or more sources of signals to a common transmission line.

differential-transformer transducer [ELEC] A transducer in which movement of the iron core of a transformer varies the output voltage across two series-opposing secondary windings.

differential voltage gain [ELECTR] Ratio of the change in output signal voltage at either terminal, or in a differential

device, to the change in signal voltage applied to either input terminal, all voltages being measured to common reference.

differential voltmeter [ELEC] A voltmeter that measures only the difference between a known voltage and an unknown voltage.

differential wind [ORD] In bomb ballistics, the vector difference between the wind at the bomb-release altitude and the wind at some other specific lower altitude; differential winds are required for the computation of the differential ballistic wind.

differential winding [ELEC] A winding whose magnetic field opposes that of a nearby winding.

differential windlass [MECH ENG] A windlass in which the barrel has two sections, each having a different diameter; the rope winds around one section, passes through a pulley (which carries the load), then winds around the other section of the barrel.

differential wound field [ELEC] Type of motor or generator field having both series and shunt coils that are connected to oppose each other.

differentiating circuit [ELEC] A circuit whose output voltage is proportional to the rate of change of the input voltage. Also known as differentiating network.

differentiating network *See* differentiating circuit.

differentiation [MATH] The act of taking a derivative.

differentiator [ELECTR] A device whose output function is proportional to the derivative, or rate of change, of the input function with respect to one or more variables.

diffluence [FL MECH] A region of fluid flow in which the fluid is diverging from the direction of flow.

diffracted wave [PHYS] A wave whose front has been changed in direction by an obstacle or other nonhomogeneity in a medium, other than by reflection or refraction.

diffraction [PHYS] Any redistribution in space of the intensity of waves that results from the presence of an object causing variations of either the amplitude or phase of the waves; found in all types of wave phenomena.

diffractional pulse-height discriminator *See* pulse-height selector.

diffraction grating [SPECT] An optical device consisting of an assembly of narrow slits or grooves which produce a large number of beams that can interfere to produce spectra. Also known as grating.

diffraction instrument *See* diffractometer.

diffraction pattern [PHYS] Pattern produced on a screen or plate by waves which have undergone diffraction.

diffraction propagation [ELECTROMAG] Propagation of electromagnetic waves around objects or over the horizon by diffraction.

diffraction ring [OPTICS] Circular light pattern which appears to surround particles in a microscope field.

diffraction scattering [PHYS] Elastic scattering that occurs when inelastic processes remove particles from a beam.

diffraction spectrum [SPECT] Parallel light and dark or colored bands of light produced by diffraction.

diffraction symmetry [CRYSTAL] Any symmetry in a crystal lattice which causes the systematic annihilation of certain beams in x-ray diffraction.

diffraction velocimeter [OPTICS] A velocity-measuring instrument that uses a continuous-wave laser to send a beam of coherent light at objects moving at right angles to the beam; the needlelike diffraction lobes reflected by the moving objects sweep past the optical grating in the receiver, thereby generating in a photomultiplier a series of impulses from which velocity can be determined and read out. Also known as optical diffraction velocimeter.

diffraction zone [ELECTROMAG] The portion of a radio propagation path which lies outside a line-of-sight path.

diffractometer [PHYS] An instrument used to study the structure of matter by means of the diffraction of x-rays, electrons, neutrons, or other waves. Also known as diffraction instrument.

diffractometry [CRYSTAL] The science of determining crystal structures by studying the diffraction of beams of x-rays or other waves.

diffuse aurora [GEOPHYS] A widespread and relatively uniform type of aurora which is easily overlooked from the ground but is prominent in satellite pictures.

diffuse-cutting filter [OPTICS] A color filter that gradually changes in absorption with wavelength.

diffused-alloy transistor [ELECTR] A transistor in which the semiconductor wafer is subjected to gaseous diffusion to produce a nonuniform base region, after which alloy junctions are formed in the same manner as for an alloy-junction transistor; it may also have an intrinsic region, to give a *pnip* unit. Also known as drift transistor.

diffused-base transistor [ELECTR] A transistor in which a nonuniform base region is produced by gaseous diffusion; the collector-base junction is also formed by gaseous diffusion, while the emitter-base junction is a conventional alloy junction.

diffused emitter-collector transistor [ELECTR] A transistor in which both the emitter and collector are produced by diffusion.

diffused junction [ELECTR] A semiconductor junction that has been formed by the diffusion of an impurity within a semiconductor crystal.

diffused-junction rectifier [ELECTR] A semiconductor diode in which the *pn* junction is produced by diffusion.

diffused-junction transistor [ELECTR] A transistor in which the emitter and collector electrodes have been formed by diffusion by an impurity metal into the semiconductor wafer without heating.

diffused-mesa transistor [ELECTR] A diffused-junction transistor in which an *n*-type impurity is diffused into one side of a *p*-type wafer; a second *pn* junction, required for the emitter, is produced by alloying or diffusing a *p*-type impurity into the newly formed *n*-type surface; after contacts have been applied, undesired diffused areas are etched away to create a flat-topped peak called a mesa.

diffused resistor [ELECTR] An integrated-circuit resistor produced by a diffusion process in a semiconductor substrate.

diffuse front [METEOROL] A front across which the characteristics of wind shift and temperature change are weakly defined.

diffuse hypergammaglobulinemia [MED] General increase in serum immunoglobulins due to infection, hepatic disease, collagen diseases, and advanced sarcoidosis.

diffuse illumination [OPTICS] Lighting so arranged that the object is illuminated from many directions or sources.

diffuse nebula [ASTRON] A type of nebula ranging from huge masses presenting relatively high surface brightness down to faint, milky structures that are detectable only with long exposures and special filters; may contain both dust and gas or may be purely gaseous.

diffuse placenta [EMBRYO] A placenta having villi diffusely scattered over most of the surface of the chorion; found in whales, horses, and other mammals.

diffuser [ENG] A duct, chamber, or section in which a high-velocity, low-pressure stream of fluid (usually air) is converted into a low-velocity, high-pressure flow.

diffuse radiation [PHYS] Radiant energy propagating in many different directions through a given small volume of space.

diffuse reflection [PHYS] Reflection of light, sound, or radio waves from a surface in all directions according to the cosine law.

diffuse reflector [OPTICS] Any surface whose irregularities are so large compared to the wavelength of the incident radiation that the reflected rays are sent back in a multiplicity of directions.

diffuse series [SPECT] A series occurring in the spectra of many atoms having one, two, or three electrons in the outer shell, in which the total orbital angular momentum quantum number changes from 2 to 1.

diffuse skylight *See* diffuse sky radiation.

diffuse sky radiation [ASTROPHYS] Solar radiation reaching the earth's surface after having been scattered from the direct solar beam by molecules or suspensoids in the atmosphere. Also known as diffuse skylight; skylight; sky radiation.

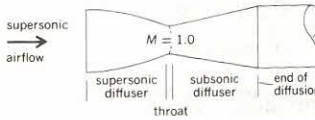
diffuse sound [ACOUS] Sound that has uniform energy density in a given region so that all directions of energy flux at all parts of the region are equally probable.

diffuse spectrum [SPECT] Any spectrum having lines which are very broad even when there is no possibility of line broadening by collisions.

diffuse transmission [PHYS] Transmission of electromagnetic or acoustic radiation in all directions by a transmitting body.

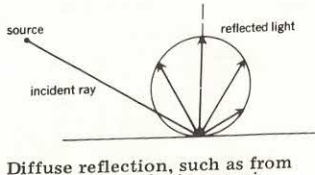
diffuse transmission density [OPTICS] The value of the photographic transmission density obtained when light flux

DIFFUSER



Idealized diffuser for decreasing supersonic velocities to subsonic velocities. Velocity equals speed of sound ($M = 1.0$) at throat.

DIFFUSE REFLECTION



Diffuse reflection, such as from a mat surface of microscopic roughness. *(From W. B. Boast, Illumination Engineering, 2d ed., McGraw-Hill, 1953)*

impinges normally on the sample and all the transmitted flux is collected and measured.

diffusing disk *See* diffusion disk.

diffusing screen [GRAPHICS] A translucent screen used in contact printing to ensure even diffusion of light; the screen is sometimes denser at those points immediately facing the electric lamps, to avoid increased light in those areas.

diffusiometer [PHYS] An instrument which measures diffusion in liquids.

diffusion [ELECTR] A method of producing a junction by diffusing an impurity metal into a semiconductor at a high temperature. [MECH ENG] The conversion of air velocity into static pressure in the diffuser casing of a centrifugal fan, resulting from increases in the radius of the air spin and in area. [METEOROL] The exchange of fluid parcels (and hence the transport of conservative properties) between regions in space, in the apparently random motions of the parcels on a scale too small to be treated by the equations of motion; the diffusion of momentum (viscosity), vorticity, water vapor, heat (conduction), and gaseous components of the atmospheric mixture have been studied extensively. [OPTICS] **1.** The distribution of incident light by reflection. **2.** Transmission of light through a translucent material. [PHYS] The spontaneous movement and scattering of particles (atoms and molecules), of liquids, gases, and solids. [SOLID STATE] **1.** The actual transport of mass, in the form of discrete atoms, through the lattice of a crystalline solid. **2.** The movement of carriers in a semiconductor.

diffusion annealing [MET] Heat treatment of metal to promote homogeneity by diffusion of components.

diffusion barrier [CHEM ENG] Porous barrier through which gaseous mixtures are passed for enrichment of the lighter-molecular-weight constituent of the diffusate; used as a many-stage cascade system for the recovery of $U^{235}F_6$ isotopes from a $U^{238}F_6$ stream.

diffusion bonding [MET] A solid-state process for joining metals by using only heat and pressure to achieve atomic bonding.

diffusion brazing [MET] A process which produces bonding of the faying surfaces by heating them to suitable temperatures; the filler metal is diffused with the base metal and approaches the properties of the base metal.

diffusion capacitance [ELECTR] The rate of change of stored minority-carrier charge with the voltage across a semiconductor junction.

diffusion cloud chamber [NUCLEO] A cloud chamber in which vapor diffuses from a source near a hot plate and condenses on a cold plate; the resulting layer of supersaturated vapor between the plates is sensitive to the passage of ionizing particles.

diffusion coating [MET] An alloy coating produced by allowing the coating material to diffuse into the base at high temperature.

diffusion coefficient [PHYS] The weight of a material, in grams, diffusing across an area of 1 square centimeter in 1 second in a unit concentration gradient. Also known as diffusivity.

diffusion constant [SOLID STATE] The diffusion current density in a homogeneous semiconductor divided by the charge carrier concentration gradient.

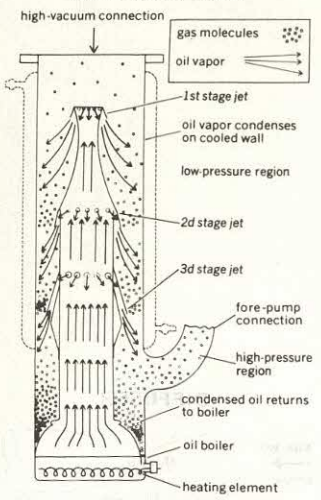
diffusion current [ANALY CHEM] In polarography with a dropping-mercury electrode, the flow that is controlled by the rate of diffusion of the active solution species across the concentration gradient produced by the removal of ions or molecules at the electrode surface.

diffusion diagram [METEOROL] A diagram for displaying the comparative properties of various diffusion processes, with coordinates of the mean free path or mixing length and mean molecular speed or diffusion velocity, for molecular or eddy diffusion, respectively; each point of the diagram determines diffusivity.

diffusion disk [OPTICS] A piece of transparent material that is marked or embossed, and is used with a camera lens to give the image a hazy softened quality. Also known as diffusing disk.

diffusion equation [PHYS] **1.** An equation for diffusion which states that the rate of change of the density of the diffusing substance, at a fixed point in space, equals the sum of the diffusion coefficient times the Laplacian of the density, the amount of the quantity generated per unit volume per unit time, and the negative of the quantity absorbed per unit volume per unit time. **2.** More generally, any equation which states that the rate of change of some quantity, at a fixed point in space, equals a positive constant times the Laplacian of that quantity.

DIFFUSION PUMP



Main operating features of diffusion pump.

diffusion flame [CHEM] A long gas flame that radiates uniformly over its length and precipitates free carbon uniformly.

diffusion gradient [PHYS] The graphed distance of penetration (diffusion) versus concentration of the material (or effect) diffusing through a second material; applies to heat, liquids, solids, or gases.

diffusion hygrometer [ENG] A hygrometer based upon the diffusion of water vapor through a porous membrane; essentially, it consists of a closed chamber having porous walls and containing a hygroscopic compound, whose absorption of water vapor causes a pressure drop within the chamber that is measured by a manometer.

diffusion kernel [NUCLEO] The neutron flux resulting from a point source emitting one neutron per second; it is a function of the distance between the source and the point where the flux is measured.

diffusion length [PHYS] The average distance traveled by a particle, such as a minority carrier in a semiconductor or a thermal neutron in a nuclear reactor, from the point at which it is formed to the point at which it is absorbed.

diffusion-limited current density [MET] The density corresponding to the maximum transfer rate that a material can sustain due to diffusion limits.

diffusion number [FL MECH] A dimensionless number used in the study of mass transfer, equal to the diffusivity of a solute through a stationary solution contained in the solid, times a characteristic time, divided by the square of the distance from the midpoint of the solid to the surface. Symbolized β.

diffusion plant [NUCLEO] A plant which separates isotopes by isotopic diffusion or thermal diffusion.

diffusion pump [ENG] A vacuum pump in which a stream of heavy molecules, such as mercury vapor, carries gas molecules out of the volume being evacuated; also used for separating isotopes according to weight, the lighter molecules being pumped preferentially by the vapor stream.

diffusion respiration [PHYSIO] Exchange of gases through the cell membrane, between the cells of unicellular or other simple organisms and the environment.

diffusion theory [ELEC] The theory that in semiconductors, where there is a variation of carrier concentration, a motion of the carriers is produced by diffusion in addition to the drift determined by the mobility and the electric field.

diffusion-transfer process [GRAPHICS] Any of several photographic processes for copying documents in which the copy is produced by developing a photographic image, transferring by diffusion the silver salts in undeveloped areas of the receiving paper, and developing the transferred image.

diffusion transistor [ELECTR] A transistor in which current flow is a result of diffusion of carriers, donors, or acceptors, as in a junction transistor.

diffusion velocity [FL MECH] **1.** The relative mean molecular velocity of a selected gas undergoing diffusion in a gaseous atmosphere, commonly taken as a nitrogen (N_2) atmosphere; a molecular phenomenon that depends upon the gaseous concentration as well as upon the pressure and temperature gradients present. **2.** The velocity or speed with which a turbulent diffusion process proceeds as evidenced by the motion of individual eddies.

diffusion welding [MET] A welding process which utilizes high temperatures and pressures to coalesce the faying surfaces by solid-state bonding; there is no physical movement, visible deformation of the parts involved, or melting.

diffusiophoresis [CHEM ENG] A process in a scrubber whereby water vapor moving toward the cold water surface carries particulates with it.

diffusive equilibrium [METEOROL] The steady state resulting from the diffusion process, primarily of interest when external forces and sources and sinks exist within the field; in such a state the constituent gases of the atmosphere would be distributed independently of each other, the heavier decreasing more rapidly with height than the lighter; but the presence of turbulent mixing precludes establishment of complete diffusive equilibrium.

diffusivity [PHYS] *See* diffusion coefficient. [THERMO] The quantity of heat passing normally through a unit area per unit time divided by the product of specific heat, density, and temperature gradient. Also known as thermometric conductivity.

diffusivity analysis [ANALY CHEM] Analysis of difficult-to-separate materials in solution by diffusion effects, using, for example, dialysis, electrodialysis, interferometry, amperometric titration, polarography, or voltammetry.

1,1,1-difluorochloroethane *See* 1,1,1-chlorodifluoroethane.
difluoromonochloroethane *See* 1,1,1-chlorodifluoroethane.
difluoromonochloromethane *See* chlorodifluoromethane.
difluron [ORG CHEM] $C_{14}H_9N_2F_2ClO_2$ A solid with a melting point of 239°C; slightly soluble in water; used as an insecticide for larvae of mosquitoes and of leaf-sucking insects.
digallic acid *See* tannic acid.
digastric [ANAT] Of a muscle, having a fleshy part at each end and a tendinous part in the middle.
Digenea [INV ZOO] A group of parasitic flatworms or flukes constituting a subclass or order of the class Trematoda and having two types of generations in the life cycle.
digenesis [BIOL] Sexual and asexual reproduction in succession.
digenite [MINERAL] Cu_9S_5 A blue to black mineral consisting of an isometric copper sulfide having a variable deficiency in copper. Also known as alpha chalcocite; blue chalcocite.
Di George's syndrome *See* thymic aplasia.
digested sludge [CIV ENG] Sludge or thickened mixture of sewage solids with water that has been decomposed by anaerobic bacteria.
digester [CHEM ENG] A vessel used to produce cellulose pulp from wood chips by cooking under pressure. [CIV ENG] A sludge-digestion tank containing a system of hot water or steam pipes for heating the sludge.
digestion [CHEM ENG] **1.** Preferential dissolving of mineral constituents in concentrations of ore. **2.** Liquefaction of organic waste materials by action of microbes. **3.** Separation of fabric from tires by the use of hot sodium hydroxide. **4.** Removing lignin from wood in manufacture of chemical cellulose paper pulp. [CIV ENG] The process of sewage treatment by the anaerobic decomposition of organic matter. [PHYSIO] The process of converting food to an absorbable form by breaking it down to simpler chemical compounds.
digestive enzyme [BIOCHEM] Any enzyme that causes or aids in digestion.
digestive gland [PHYSIO] Any structure that secretes digestive enzymes.
digestive system [ANAT] A system of structures in which food substances are digested.
digestive tract [ANAT] The alimentary canal.
digger [ENG] A tool or apparatus for digging in the ground. [MIN ENG] A person who digs in the ground; usually refers to a coal miner.
digging [ENG] A sudden increase in cutting depth of a cutting tool due to an erratic change in load.
digging height *See* bank height.
digging line *See* inhaul cable.
diggings [SCI TECH] **1.** Excavated materials. **2.** A place of excavating.
digicitrin [BIOCHEM] $C_{21}H_{21}O_{10}$ A flavone compound that is found in foxglove leaves.
digicom [COMMUN] A wire communication system that transmits speech signals in the form of corresponding trains of pulses and transmits digital information directly from computers, radar, tape readers, teleprinters, and telemetering equipment.
digit [COMPUT SCI] In a decimal digital computer, the space reserved for storage of one digit of information. [MATH] A character used to represent one of the nonnegative integers smaller than the base of a system of positional notation. Also known as numeric character.
digit absorbing selector [ELECTR] Dial switch arranged to set up and then fall back on the first one of two digits dialed; it then operates on the next digit dialed.
digital [COMPUT SCI] Pertaining to data in the form of digits.
digital circuit [ELECTR] A circuit designed to respond at input voltages at one of a finite number of levels and, similarly, to produce output voltages at one of a finite number of levels.
digital communications [COMMUN] System of telecommunications employing a nominally discontinuous signal that changes in frequency, amplitude, or polarity.
digital comparator [ELECTR] A comparator circuit operating on input signals at discrete levels. Also known as discrete comparator.
digital computer [COMPUT SCI] A computer operating on discrete data by performing arithmetic and logic processes on these data.
digital control [CONT SYS] The use of digital or discrete technology to maintain conditions in operating systems as close as possible to desired values despite changes in the operating environment.
digital converter [ELECTR] A device that converts voltages to digital form; examples include analog-to-digital converters, pulse-code modulators, encoders, and quantizing encoders.
digital counter [ELECTR] A discrete-state device (one with only a finite number of output conditions) that responds by advancing to its next output condition.
digital data [COMPUT SCI] Data that are electromagnetically stored in the form of discrete digits.
Digital Data Broadcast System [NAV] A system that will provide information aiding air-traffic control; digital data to aircraft over vortac channels will carry information on the geographic location, elevation, magnetic variation, and related data of the vortac station being received. Abbreviated DDBS.
digital data modulation system [COMMUN] A digital communications system in which the information source consists of a finite number of discrete messages which are coded into a sequence of waveforms or symbols, each one selected from a specified and finite set.
digital data recorder [COMPUT SCI] Electronic device that converts continuous electrical analog signals into number (digital) values and records these values onto a data log via a high-speed typewriter.
digital data service [COMMUN] A telephone communication system developed specifically for digital data, using existing local digital lines combined with data-under-voice microwave transmission facilities. Abbreviated DDS.
digital delay generator [ELECTR] A high-precision adjustable time-delay generator in which delays may be selected in increments such as 1, 10, or 100 nanoseconds by means of panel switches and sometimes by remote programming.
digital differential analyzer [COMPUT SCI] A differential analyzer which uses numbers to represent analog quantities. Abbreviated DDA.
digital display [COMPUT SCI] A display in which the result is indicated in directly readable numerals.
digital filter [ELECTR] An electrical filter that responds to an input which has been quantified, usually as pulses.
digital format [COMPUT SCI] Use of discrete integral numbers in a given base to represent all the quantities that occur in a problem or calculation.
digital frequency meter [ELECTR] A frequency meter in which the value of the frequency being measured is indicated on a digital display.
digital incremental plotter [COMPUT SCI] A device for converting digital signals in the output of a computer into graphical form, in which the digital signals control the motion of a plotting pen and of a drum that carries the paper on which the graph is drawn.
digital integrator [COMPUT SCI] A device for computing definite integrals in which increments in the input variables and output variable are represented by digital signals.
digital intercontinental conversion equipment [ELECTR] Equipment which uses pulse-code modulation to convert a 525-line, 60-frame-per-second television signal used in the United States into a 625-line, 50-frame-per-second phase-alternation line signal used in Europe; the 525-line signal is sampled and quantized into a pulse-code modulation signal which is stored in shift registers from which the phase-alternation line signal is read out. Abbreviated DICE.
digitalis [PHARM] The dried leaf of the purple foxglove plant (*Digitalis purpurea*), containing digitoxin and gitoxin; constitutes a powerful cardiac stimulant and diuretic.
Digitalis [BOT] A genus of herbs in the figwort family, Scrophulariaceae.
digital log [ENG] A well log that has undergone discrete sampling and recording on a magnetic tape preparatory to use in computerized interpretation and plotting.
digital loop carrier [COMMUN] A technology for providing 24 telephone circuits on two pairs of wires, in which analog input signals are first sampled and digitized, and the binary digital signals from 24 users are then time-multiplexed into a single bit stream.
digital message entry system [ELECTR] A system that encodes formatted messages in digital form; it enters the encoded digital information into a voice communications transceiver by frequency shift techniques.
digital microwave radio [COMMUN] Transmission of voice and data signals in digital form on microwave links, as in the 2--

DIGENEA

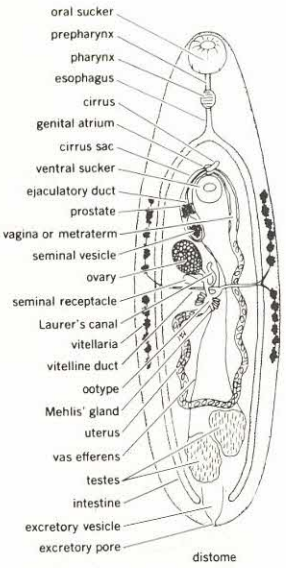


Diagram of an adult digenetic trematode. *(From R.M. Cable, An Illustrated Laboratory Manual of Parasitology, Burgess, 1940)*

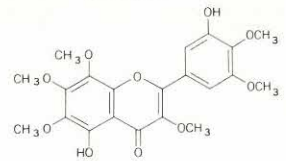
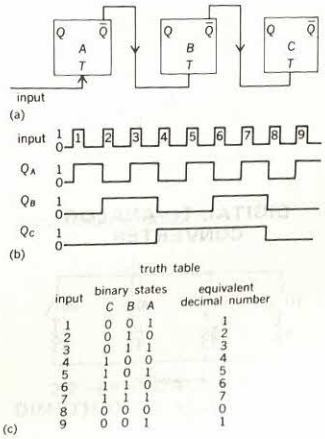
DIGICITRIN



Structural formula of digicitrin.

DIGITAL COUNTER



An octal counter. T stands for trigger input, Q and $\bar{Q}$ represent output terminals, and A, B, and C identify different flip-flop stages. *(a)* Three successive flip-flop stages. *(b)* Input signal and Q-terminal states of each flip-flop. *(c)* Truth table.

gigahertz common-carrier bands; pulse-code modulation is used.

digital modulation [COMMUN] A method of placing digital traffic on a microwave system without use of modems, by transmitting the information in the form of discrete phase or frequency states determined by the digital signal.

digital multiplier [ELECTR] A multiplier that accepts two numbers in digital form and gives their product in the same digital form, usually by making repeated additions; the multiplying process is simpler if the numbers are in binary form wherein digits are represented by a 0 or 1.

digital output [ELECTR] An output signal consisting of a sequence of discrete quantities coded in an appropriate manner for driving a printer or digital display.

digital phase shifter [ELECTR] Device which provides a signal phase shift by the application of a control pulse; a reversal or phase shift requires a control pulse of opposite polarity.

digital plotter [ELECTR] A recorder that produces permanent hard copy in the form of a graph from digital input data.

digital printer [COMPUT SCI] A printer that provides a permanent readable record of binary-coded decimal or other coded data in a digital form that may include some or all alphanumeric characters and special symbols along with numerals. Also known as digital recorder.

digital private automatic branch exchange [COMMUN] A central communications switching system for a local-area network, which employs existing telephone wires in a building for the connection of telephones and computer terminals and systems.

digital recorder *See* digital printer.

digital recording [ELECTR] Magnetic recording in which the information is first coded in a digital form, generally with a binary code that uses two discrete values of residual flux.

digital representation [COMPUT SCI] The use of discrete impulses or quantities arranged in coded patterns to represent variables or other data in the form of numbers or characters.

digital resolution [COMPUT SCI] The ability of a digital computer to approach a truly correct answer, generally established by the number of places expressed, and the value of the least significant digit in a digitally coded representation.

digital signal analyzer [ELECTR] A signal analyzer in which one or more analog inputs are sampled at regular intervals, converted to digital form, and fed to a memory.

digital signature [COMMUN] A set of alphabetic or numeric characters used to authenticate a cryptographic message by ensuring that the sender cannot later disavow the message, the receiver cannot forge the message or signature, and the receiver can prove to others that the contents of the message are genuine and originated with the sender.

digital simulation [COMPUT SCI] The representation of a system in a form acceptable to a digital computer as opposed to an analog computer.

digital speech communications [COMMUN] Transmission of voice in digitized or binary form via landline or radio.

digital synchronometer [ELECTR] A time comparator that provides a direct-reading digital display of time with high precision by making accurate comparisons between its own digital clock and high-accuracy time transmissions from radio station WWV or a loran C station.

digital system [COMPUT SCI] Any of the levels of operation for a digital computer, including the wires and mechanical parts, the logical elements, and the functional units for reading, writing, storing, and manipulating information.

digital telemetering [COMPUT SCI] Conversion of a continuous electrical analog signal into a digital (number system) code prior to transmitting the signal to a receiver (such as digital readout, card punch, or tape).

digital television [COMMUN] Television in which picture redundancy is reduced or eliminated by transmitting only the data needed to define motion in the picture, as represented by changes in the areas of continuous white or continuous black.

digital television converter [ELECTR] A converter used to convert television programs from one system to another, such as for converting 525-line 60-field United States broadcasts to 625-line 50-field European PAL (phase-alternation line) or SECAM (sequential couleur á memoire) standards; the video signal is digitized before conversion.

digital-to-analog converter [ELECTR] A converter in which digital input signals are changed to essentially proportional analog signals. Abbreviated dac.

digital-to-synchro converter [ELECTR] A converter that changes BCD or other digital input data to a three-wire synchro output signal representing corresponding angular data.

digital transducer [ELECTR] A transducer that measures physical quantities and transmits the information as coded digital signals rather than as continuously varying currents or voltages.

digital voltmeter [ELECTR] A voltmeter in which the unknown voltage is compared with an internally generated analog voltage, the result being indicated in digital form rather than by a pointer moving over a meter scale.

digitate [ANAT] Having digits or digitlike processes.

digitation [GEOL] A secondary recumbent anticline emanating from a larger recumbent anticline.

digit-coded voice [COMPUT SCI] A limited, spoken vocabulary, each word of which corresponds to a code and which, upon keyed inquiry, can be strung in meaningful sequence and can be outputted as audio response to the inquiry.

digit compression [COMPUT SCI] Any process which increases the number of digits stored at a given location.

digit delay element [ELECTR] A logic element that introduces a delay of one digit period in a series of signals or pulses.

digitellum [INV ZOO] A tentaclelike gastric filament in scyphozoans.

digit emitter [COMPUT SCI] A character emitter limited to the twelfth-row pulses in a punched card.

digit filter [COMPUT SCI] A device used with punched-card equipment that detects the presence of a designation punch in a specified card column.

digitigrade [VERT ZOO] Pertaining to animals, such as dogs and cats, which walk on the digits with the posterior part of the foot raised from the ground.

digitinervate [BOT] Having straight veins extending from the petiole like fingers.

digitipinnate [BOT] Having digitate leaves with pinnate leaflets.

digitize [COMPUT SCI] To convert an analog measurement of a quantity into a numerical value.

digitonin [PHARM] $C_{41}H_{64}O_{13}$ A glycoside derived from the purple foxglove plant (*Digitalis purpurea*); a white powder melting at 255–256°C, used as a medicine for cardiac conditions.

digitoxigenin [ORG CHEM] $C_{23}H_{34}O_4$ The steroid aglycone formed by removal of three molecules of the sugar digitoxose from digitoxin.

digitoxin [ORG CHEM] $C_{41}H_{64}O_{13}$ A poisonous steroid glycoside found as the most active principle of digitalis, from the foxglove leaf.

digit period [ELECTR] The time interval between successive pulses, usually representing binary digits, in a computer or in pulse modulation, determined by the pulse-repetition frequency. Also known as digit time.

digit plane [COMPUT SCI] In a computer memory consisting of magnetic cores arranged in a three-dimensional array, a plane containing elements for a particular digit position in various words.

digit pulse [ELECTR] An electrical pulse which induces a magnetizing force in a number of magnetic cores in a computer storage, all corresponding to a particular digit position in a number of different words.

digit rearrangement [COMPUT SCI] A method of hashing which consists of selecting and shifting digits of the original key.

digit selector [COMPUT SCI] A device which separates a card column into individual pulses corresponding to punched row positions.

digit time *See* digit period.

digitus [INV ZOO] In insects, the claw-bearing terminal segment of the tarsus.

diglucoside [BIOCHEM] A compound containing two glucose molecules.

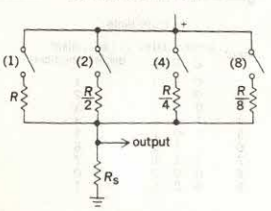
diglycerol [ORG CHEM] A compound that is a diester of glycerol.

diglycine *See* iminodiacetic acid.

diglycolic acid [ORG CHEM] $O(CH_2COOH)_2$ A white powder that forms a monohydrate; used in the manufacture of plasticizers and in organic synthesis, and to break emulsions.

diglycol laurate [ORG CHEM] $C_{11}H_{23}COOC_2H_4OC_2H_4OH$ A light, straw-colored, oily liquid; soluble in methanol, ethanol, toluene, and mineral oil; used in emulsions and as an

DIGITAL-TO-ANALOG CONVERTER



Circuit diagram for simple digital-to-analog converter. Each of the four switches represents binary 1 when closed and 0 when open. Current flowing through summing resistor R_s and voltage at output are proportional to value of number represented.

antifoaming agent. Also known as diethylene glycol monolaurate.

diglycol stearate [ORG CHEM] $(C_{17}H_{35}COOC_2H_4)_2O$ A white, waxy solid with a melting point of 54–55°C; used as an emulsifying agent, suspending medium for powders in the manufacture of polishes, and thickening agent, and in pharmaceuticals. Also known as diethylene glycol distearate.

digoxin [ORG CHEM] $C_{41}H_{64}O_{14}$ A crystalline steroid obtained from a foxglove leaf (*Digitalis lanata*); similar to digitalis in pharmacological effects.

digraph *See* directed graph.

dihalide [CHEM] A molecule containing two atoms of halogen combined with a radical or element.

dihedral [AERO ENG] The upward or downward inclination of an airplane's wing or other supporting surface in respect to the horizontal; in some contexts, the upward inclination only. [MATH] *See* dihedron.

dihedral angle [MATH] The angle between two planes; it is said to be zero if the planes are parallel; if the planes intersect, it is the plane angle between two lines, one in each of the planes, which pass through a point on the line of intersection of the two planes and are perpendicular to it.

dihedral reflector [OPTICS] A corner reflector having two sides meeting at a line.

dihedron [MATH] A geometric figure formed by two half planes that are bounded by the same straight line. Also known as dihedral.

diheptal base [ELECTR] A tube base having 14 pins or 14 possible pin positions; used chiefly on television cathode-ray tubes.

dihexagonal [CRYSTAL] Of crystals, having a symmetrical form with 12 sides.

dihexagonal-dipyramidal [CRYSTAL] Characterized by the class of crystals in the hexagonal system in which any section perpendicular to the sixfold axis is dihexagonal.

dihexahedron [CRYSTAL] A type of crystal that has 12 faces, such as a double six-sided pyramid.

dihexy *See* dodecane.

dihydrate [CHEM] A compound with two molecules of water of hydration.

dihydrazone [ORG CHEM] A molecule containing two hydrazone radicals.

dihydro- [CHEM] A prefix indicating combination with two atoms of hydrogen.

dihydrobenzene *See* 1,3-cyclohexadiene.

dihydrocamphane *See* camphane.

dihydrochloride [CHEM] A compound containing two molecules of hydrochloric acid.

dihydrocoumarin *See* benzodihydropyrone.

dihydrodiketoanthracene *See* anthraquinone.

3,3-dihydro-2,2-dimethyl-7-benzofuranyl methylcarbamate *See* carbofuran.

5,6-dihydro-2-methyl-1,4-oxathiin-3-carboxanilide *See* carboxin.

dihydrostreptomycin [MICROBIO] $C_{21}H_{41}O_{12}N_7$ A hydrogenated derivative of streptomycin having the same action as streptomycin.

dihydroxy [CHEM] A molecule containing two hydroxyl groups.

dihydroxyacetone [ORG CHEM] $(HOCH_2)_2CO$ A colorless, crystalline solid with a melting point of 80°C; soluble in water and alcohol; used in medicine, fungicides, plasticizers, and cosmetics. Abbreviated DHA. Also known as dihydroxypropanone.

dihydroxyacetone phosphate *See* dihydroxyacetonephosphoric acid.

dihydroxyacetonephosphoric acid [BIOCHEM] $C_3H_7O_6P$ A phosphoric acid ester of dehydroxyacetone, produced as an intermediate substance in the conversion of glycogen to lactic acid during muscular contraction. Also known as dihydroxyacetone phosphate.

2,4′-dihydroxyacetophenone [ORG CHEM] $(HO)_2C_6H_3COCH_3$ Needlelike or leafletlike crystals with a melting point of 145–147°C; soluble in pyridine, warm alcohol, and glacial acetic acid; used as a reagent for the determination of iron. Also known as resacetophenone.

dihydroxy alcohol *See* glycol.

1,2-dihydroxyanthraquinone *See* alizarin.

1,8-dihydroxyanthraquinone [ORG CHEM] $C_{14}H_8O_4$ Orange, needlelike crystals that dissolve in glacial acetic acid; used as an intermediate in the commercial preparation of indanthrene and alizarin dyestuffs. Also known as chrysazin.

***O*-dihydroxybenzene** *See* pyrocatechol.

2,4-dihydroxybenzene carboxylic acid *See* β-resorcylic acid.

2,4-dihydroxybenzoic acid *See* β-resorcylic acid.

3,4-dihydroxycinnamic acid *See* caffeic acid.

3-(3,4-dihydroxycinnamoyl)quinic acid *See* chlorogenic acid.

6,7-dihydroxycoumarin-6-glucoside *See* esculin.

2,2′-dihydroxy-4,4′-dimethoxybenzophenone [ORG CHEM] $[CH_3OC_6H_3(OH)]_2CO$ Crystals with a melting point of 139–140°C; used in paint and plastics as a light absorber.

***p,p′*-dihydroxydiphenyldimethylene** *See* bisphenol.

1,2-dihydroxyethylenedicarboxylic acid *See* dihydroxymaleic acid.

dihydroxyethylsulfide *See* thiodiglycol.

1,6-dihydroxyhexane *See* 1,6-hexanediol.

dihydroxymaleic acid [ORG CHEM] $C_4H_4O_6$ Crystals soluble in alcohol; used in the detection of titanium and fluorides. Also known as 1,2-dihydroxyethylenedicarboxylic acid.

3,5-dihydroxy-3-methyl valeric acid *See* mevalonic acid.

1,3-dihydroxynaphthalene *See* naphthoresorcinol.

1,8-dihydroxynaphthalene-3,6-disulfonic acid *See* chromotropic acid.

2,4-dihydroxy-4′-nitroazobenzene *See* magneson.

dihydroxyphenylalanine [BIOCHEM] $C_9H_{11}NO_4$ An amino acid that can be formed by oxidation of tyrosine; it is converted by a series of biochemical transformations, utilizing the enzyme dopa oxidase, to melanins. Also known as dopa.

β-(3,4-dihydroxyphenyl)-*d*-alanine *See* levodopa.

2,3-dihydroxypropanal *See* glyceraldehyde.

1,2-dihydroxypropane *See* propylene glycol.

dihydroxypropanone *See* dihydroxyacetone.

dihydroxysuccinic acid *See* tartaric acid.

3,5-dihydroxytoluene *See* orcin.

diiodomethane *See* methylene iodide.

2,6-diiodo-4-nitrophenol *See* disophenol.

3,5-diiodosalicylic acid [ORG CHEM] $C_7H_4I_2O_3$ Crystals with a sweetish, bitter taste and a melting point of 235–236°C; soluble in most organic solvents; used as a source of iodine in foods and a growth promoter in poultry, hog, and cattle feeds.

di-iron enneacarbonyl *See* iron nonacarbonyl.

diisobutylene [ORG CHEM] C_8H_{16} Any one of a number of isomers, but most often 2,4,4-trimethylpentene-1 and 2,4,4-trimethylpentene-2; used in alkylation and as a chemical intermediate.

diisobutyl ketone [ORG CHEM] $(CH_3)_2CHCH_2COCH_2CH(CH_3)_2$ Stable liquid, boiling at 168°C; soluble in most organic liquids; toxic and flammable; used as a solvent, in lacquers and coatings, and as a chemical intermediate.

diisobutyl phenol *See* octyl phenol.

diisobutylphenoxyethoxyethyl dimethyl benzyl ammonium chloride *See* benzethonium chloride.

diisocyanate [ORG CHEM] A compound that contains two NCO (isocyanate) groups; used to produce polyurethane foams, resins, and rubber.

2,4-diisocyanotololuene *See* toluene 2,4-diisocyanate.

diisodecyl adipate [ORG CHEM] $(C_{10}H_{21}OOC)_2(CH_2)_4$ A light-colored, oily liquid with a boiling range of 239–246°C; used as a primary plasticizer for polymers. Abbreviated DIDA.

diisodecyl phthalate [ORG CHEM] $C_6H_4(COOC_{10}H_{21})_2$ A clear liquid with a boiling point of 250–257°C; used as a plasticizer. Abbreviated DIDP.

diisopropanolamine [ORG CHEM] $(CH_3CHOHCH_2)_2NH$ A white, crystalline solid with a boiling point of 248.7°C; used as an emulsifying agent for polishes, insecticides, and water paints. Abbreviated DIPA.

diisopropyl [ORG CHEM] **1.** A molecule containing two isopropyl groups. **2.** *See* 2,3-dimethylbutane.

diisopropyl ether *See* isopropyl ether.

diisopropyl fluorophonate *See* isofluorphate.

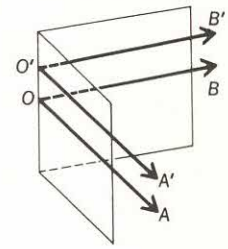
diisopropyl fluorophosphate *See* isofluorphate.

diisopropylphosphofluoridate *See* isofluorphate.

diisopropyl phosphorofluoridate [PHARM] $[(CH_3)_2CHO]_2FPO$ A colorless, oily liquid that inhibits cholinesterase, prolongs meiosis, and is effective in treating glaucoma.

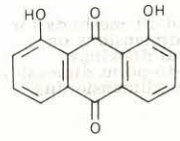
dikaryon [MYCOL] Also spelled dicaryon. **1.** A pair of distinct, unfused nuclei in the same cell brought together by union

DIHEDRON



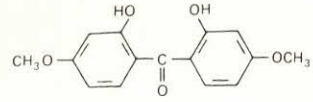
Dihedron is formed by the half-planes bounded by the line passing through O and O'. AOB and $A'O'B'$ are dihedral angles.

1,8-DIHYDROXY-ANTHRAQUINONE



Structural formula.

2,2′–DIHYDROXY-4,4′-DIMETHOXYBENZOPHENONE



Structural formula.

of plus and minus hyphae in certain mycelia. **2.** Mycelium containing dikaryotic cells.

dike [CIV ENG] An embankment constructed on dry ground along a riverbank to prevent overflow of lowlands and to retain floodwater. [GEOL] A tabular body of igneous rock that cuts across adjacent rocks or cuts massive rocks.

dike ridge [GEOL] Any small wall-like ridge created by differential erosion.

dike set [GEOL] A small group of dikes arranged linearly or parallel to each other.

dike swarm [GEOL] A large group of parallel, linear, or radially oriented dikes.

diketene [ORG CHEM] $CH_3COCHCO$ A colorless, readily polymerized liquid with pungent aroma; insoluble in water, soluble in organic solvents; used as a chemical intermediate. Also known as acetyl ketene.

diketone [ORG CHEM] A molecule containing two ketone carbonyl groups.

diketopiperazine [ORG CHEM] **1.** $C_4H_6N_2O_2$ A compound formed by dehydration of two molecules of glycine. Also known as 2,5-piperazine-dione. **2.** Any of the cyclic molecules formed from α-amino acids other than glycine or by partial hydrolysis of protein.

2,5-diketopyrrolidine *See* succinimide.

2,5-diketotetrahydrofurane *See* succinic anhydride.

diktoma *See* neuroepithelioma.

dilactone [ORG CHEM] A molecule that contains two lactone groups.

dilatancy [CHEM] The property of a viscous suspension which sets solid under the influence of pressure. [GEOL] Expansion of deformed masses of granular material, such as sand, due to rearrangement of the component grains.

dilatant [CHEM] A material with the ability to increase in volume when its shape is changed.

dilatation [PHYS] The increase in volume per unit volume of any continuous substance, caused by deformation.

dilatational wave *See* compressional wave.

dilation [MATH] A transformation which changes the size, and only the size, of a geometric figure. [SCI TECH] The act or process of stretching or expanding.

dilatometer [ENG] An instrument for measuring thermal expansion and dilation of liquids or solids.

dilatometry [PHYS] The measurement of changes in the volume of a liquid or dimensions of a solid which occur in phenomena such as allotropic transformations, thermal expansion, compression, creep, or magnetostriction.

dilator [PHYSIO] Any muscle, instrument, or drug causing dilation of an organ or part.

dilauryl ester *See* dilauryl thiodipropionate.

dilauryl ether [ORG CHEM] $(C_{12}H_{25})_2NH$ A liquid with a boiling point of 190–195°C; used for electrical insulators, water repellents, and antistatic agents. Also known as didodecyl ether.

dilauryl thiodipropionate [ORG CHEM] $(C_{12}H_{25}OOCCH_2CH_2)_2S$ White flakes with a melting point of 40°C; soluble in most organic solvents; used as an antioxidant, plasticizer, and preservative, and in food wraps and edible fats and oils. Also known as dilauryl ester; thiodipropionic acid.

dilepton event [PARTIC PHYS] The inelastic scattering of a neutrino or antineutrino from a nucleus in which there are two leptons among the products of the collision.

dilinoleic acid [ORG CHEM] $C_{34}H_{62}(COOH)_2$ A light yellow, viscous liquid used as an emulsifying agent and shellac substitute.

dill [BOT] *Anethum graveolens*. A small annual or biennial herb in the family Umbelliferae; the aromatic leaves and seeds are used for food flavoring.

Dilleniaceae [BOT] A family of dicotyledonous trees, woody vines, and shrubs in the order Dilleniales having hypogynous flowers and mostly entire leaves.

Dilleniales [BOT] An order of dicotyledonous plants in the subclass Dilleniidae characterized by separate carpels and numerous stamens.

Dilleniidae [BOT] A subclass of plants in the class Magnoliopsida distinguished by being syncarpous, having centrifugal stamens, and usually having bitegmic ovules and binucleate pollen.

dill oil [MATER] A yellowish essential oil, soluble in propylene glycol, slightly soluble in glycerine, obtained by steam distillation of the dill plant *Anethum graveolens;* chief ingredient is carvone. Also known as American dillweed oil; anethum oil.

diluent [CHEM] An inert substance added to some other substance or solution so that the volume of the latter substance is increased and its concentration per unit volume is decreased.

dilute [CHEM] To make less concentrated.

dilute phase [CHEM ENG] In liquid-liquid extraction, the liquid phase that is dilute with respect to the material being extracted.

dilution [CHEM] Increasing the proportion of solvent to solute in any solution and thereby decreasing the concentration of the solute per unit volume. [MET] The use of a welding filler metal deposit with a base metal or a previously deposited weld material having a lower alloy content. [OPTICS] Reducing the intensity of a color by adding white.

dilution gene [GEN] Any modifier gene that acts to reduce the effect of another gene.

dilution method [MICROBIO] A technique in which a series of cultures is tested with various concentrations of an antibiotic to determine the minimum inhibiting concentration of antibiotic.

DIM *See* nonthermal decimetric emission.

dimedone *See* 5,5-dimethyl-1,3-cyclohexanedione.

dimension [GRAPHICS] In a mechanical drawing, a labeled measure in a straight line of the breadth, height, or thickness of a part, the angular position of a line, or the location of a detail such as a hole or boss.

dimensional analysis [PHYS] A technique that involves the study of dimensions of physical quantities, used primarily as a tool for obtaining information about physical systems too complicated for full mathematical solutions to be feasible.

dimensional constant [PHYS] A physical quantity whose numerical value depends on the units chosen for fundamental quantities but not on the system being considered.

dimensional formula [PHYS] The expression of a derived quantity as a product of powers of the fundamental quantities.

dimensional stability [GRAPHICS] The percentage of change in size of paper under two different conditions of temperature and humidity. [MATER] The ability of a material, such as a textile or plastic, to hold its shape over a period of time and under specific conditions.

dimension declaration statement [COMPUT SCI] A FORTRAN statement identifying arrays and specifying the number and bounds of the subscripts.

dimensioning [GRAPHICS] Assigning of dimensions to a mechanical drawing.

dimensionless group [PHYS] Any combination of dimensional or dimensionless quantities possessing zero overall dimensions; an example is the Reynold's number.

dimensionless number [MATH] A ratio of various physical properties (such as density or heat capacity) and conditions (such as flow rate or weight) of such nature that the resulting number has no defining units of weight, rate, and so on. Also known as nondimensional parameter.

dimension line [GRAPHICS] A line on a drawing pointing to another line or part to which the dimensions relate.

dimension of a simplex [MATH] One less than the number of vertices of the simplex.

dimension of a vector space [MATH] The number of vectors in any basis of the vector space.

dimensions [PHYS] The product of powers of fundamental quantities (or of convenient derived quantities) which are used to define a physical quantity; the fundamental quantities are often mass, length, and time.

dimension stone [MATER] Large, sound, relatively flawless blocks of stone used as building stone, monumental stone, paving stone, curbing, and flagging.

dimension theory [MATH] The study of abstract notions of dimension, which are topological invariants of a space.

dimer [CHEM] A condensation product consisting of two molecules.

dimercaprol [PHARM] $C_3H_8OS_2$ 2,3-Dimercapto-1-propanol, a colorless, water-soluble oily liquid with a mercaptanlike odor; used as an antidote for arsenic, gold, and mercury poisoning. Also known as British antilewisite (BAL); dithiol.

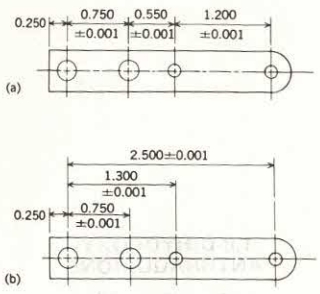
dimeric water [INORG CHEM] Water in which pairs of molecules are joined by hydrogen bonds.

dimerization [CHEM] Formation of dimers.

dimerous [BIOL] Composed of two parts.

dimetan [ORG CHEM] The generic name for 5,5-di-

DIMENSIONING



Two standard methods for marking dimensions on mechanical drawings.
(a) Point-to-point dimensioning.
(b) Datum dimensioning.

methyldehydroresorcinol dimethylcarbamate, a synthetic carbamate insecticide.

dimethachlon [ORG CHEM] $C_{10}H_7Cl_2NO_2$ A yellowish, crystalline solid with a melting point of 136.5–138°C; insoluble in water; used as a fungicide. Also known as *N*-(3,5-dichlorophenyl)succinimide.

1,4-di(methanesulfonyloxy)butane *See* busulfan.

dimethicone [PHARM] $CH_63[Si(CH_3)_2O]Si(CH_3)_3$ A colorless oil consisting of dimethylsiloxane polymers; used in ointments and topical drugs.

dimethoate [ORG CHEM] $C_5H_{12}NO_3PS_2$ A crystalline compound, soluble in most organic solvents; used as an insecticide.

1,4-dimethoxybenzene *See* hydroquinone dimethyl ether.

dimethoxymethane *See* methylal.

dimethoxy neotetrazolium *See* blue tetrazolium.

dimethoxy strychnine *See* brucine.

6,7-dimethoxy-1-veratrylisoquinoline *See* papaverine.

dimethrin [ORG CHEM] $C_{19}H_{28}O_2$ An amber liquid with a boiling point of 175°C; soluble in petroleum hydrocarbons, alcohols, and methylene chloride; used as an insecticide for mosquitoes, body lice, stable flies, and cattle flies. Also known as 2,4-dimethylbenzyl 2,2-dimethyl-3-(2-methylpropenyl)-cyclopropane carboxylate.

dimethyl [ORG CHEM] A compound that has two methyl groups.

***O,S*-dimethyl acetylphosphoramidothioate** *See* acephate.

dimethylamine [ORG CHEM] $(CH_3)_2NH$ Flammable gas with ammonia aroma, boiling at 7°C; soluble in water, ether, and alcohol; used as an acid-gas absorbent, solvent, and flotation agent, in pharmaceuticals and electroplating, and in dehairing hides.

4-dimethylaminoantipyrene *See* aminopyrine.

***para*-dimethylaminobenzaldehyde** *See* Ehrlich's reagent.

***para*-dimethylaminobenzalrhodanine** [ORG CHEM] $C_{12}H_{12}N_2OS_2$ Deep red, needlelike crystals that decompose at 270°C; soluble in strong acids; used in acetone solution for the detection of ions such as silver, mercury, copper, gold, palladium, and platinum.

4-dimethylaminobenzenecarbonal *See* Ehrlich's reagent.

***para*-dimethylaminobenzenediazo sodium sulfonate** *See* fenaminosulf.
